## BBA I Semester

### Quantitative Techniques

**SUBJECT CODE: BBA009B**

**CREDITS: (3L+1T = 4)**

**Objectives:** To understand & apply various statistical methods of data summarization and analysis, to gain ability to take decision in diverse aspects of business environment.

#### **UNIT I**

Meaning definition, functions, importance and limitations of Statistics – Collection of data – Primary and Secondary data – Schedule and questionnaire – Frequency distribution – Tabulation, Diagram and graphic presentation of data – Statistical system in India.

#### **UNIT II**

Definition, objectives and characteristics of Measures of Central Tendency – Types of Averages – Arithmetic Mean, Geometric Mean – Harmonic Mean, Median, Mode.

#### **UNIT III**

Meaning, definitions, objectives of Dispersion, Range Quartile Deviation, Mean deviation, Standard Deviation – Co-efficient of variation.

#### **UNIT IV**

Definition and objectives of Skewness – Karl Pearson's and Bowle's measures of skewness. Sets Theory: Meaning of Set - Set Operation – Venn Diagrams.

#### **UNIT V**

Meaning, Definition and use of correlation – types of correlation Karl Pearson's correlation co-efficient – Spearman's Rank correlation probable error – Meaning utility of regression analysis comparison between Correlation and Regression – Regression Equations – Interpretation of Regression Co-efficients.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Course outcomes(CO)**

- I CO1: To apply and understand various statistical methods of data summarization and analysis.
- II CO 2: To find ability to take decisions in diverse aspects of business environment.
- III CO3: To understand classification and tabulation of data.
- IV CO4: To know technical terms like skewness, measures of dispersion and co-relation.
- V CO5: To understand correlation and regression techniques.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i>Course Outcome</i>	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M				L		L
CO2		M		L		L	L

CO5		L		M		L	

H = Highly Related; M = Medium L = Low

**Reference books:**

1. Statistics: S P Gupta
2. Research Methodology: C R Kothari
3. Quantitative methods in management: Gupta, Agarwal, Khandelwal and Ahmed.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**BBA I SEMESTER**  
**PRINCIPLES OF MANAGEMENT**  
**SUBJECT CODE: BBA001A**  
**CREDITS: (3L)**

**Objective:** The objective is to provide an understanding of basic concepts, principles and practices of management. The aim is to inculcate the ability to apply multifunctional approach to organizational objectives.

**Unit I**

Introduction: Concept, Significance and Nature of Management, Management Process, Management and Administration, Functions and Principles of Management, Levels of Management, Functional areas of Management.

**Unit II**

Planning and Decision Making: Concept and Nature of planning, Objectives and Components of planning, Nature and Process of planning. Process of Planning, Dimensions / Types of Planning, Tools and Techniques of planning. Decision-Making – Nature, Significance and Process, Techniques of decision making.

**Unit III**

Organizing: Concept, Importance and Elements of Organization, Process and Principles of organization, Theories of Organization, Organization structure, Organization charts and manuals.

**Unit IV**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Directing and Communication: Concept, Nature, Scope, Principles and Techniques of direction, Concept and Process of communication, Channel / Media of communication, Barriers to effective communication.

## Unit V

Controlling: Concept, Objectives, Process and Principles of control, Various control techniques

### Course outcomes(CO)

- I CO1: Provide an understanding of principles and practices of management
- II CO 2: To understand about planning and decision making.
- III CO3: To know about importance and elements of organization.
- IV CO4: Providing knowledge regarding directing and communication.
- V CO5: To understand about various controlling techniques.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

**BBA I SEMESTER**  
**MANAGERIAL ECONOMICS**  
**SUBJECT CODE: BBA004C**  
**CREDITS: (3L)**

**Learning Objective:** The purpose of this course is to apply microeconomics concepts and techniques in evaluating business decisions taken by firms. The emphasis is on explaining how the tools of standard price theory can be employed to formulate a decision problem, evaluate alternative courses of action and finally choose among alternatives. Simple geometry and basic concepts of mathematics will be used in course of teaching.

**Unit I**

Introduction to Managerial economics, nature, significance, scope of managerial economics, role of economics in business decision making. Macro and Micro economics, Macro Economic Variables, Demand & Supply, determinants of demand and supply, movement vs. shift in demand curve, movement along a supply curve vs. shift in supply curve.

Elasticity of Demand & Supply. Price, Income & cross elasticity & advertising elasticity. Methods to calculate price elasticity.

**Unit II**

Utility: Cardinal & Ordinal, Law of diminishing marginal utility, law of equi-marginal utility. Theory of Consumer Behaviour, Indifference curve theory, Indifference curves & its properties

**Unit III**

Production: Technology of Production; Production with one variable input, Production with two variable input, Returns to Scale.

**Unit IV**

Cost: Measuring Costs, Costs in the Short & long run, Long run vs. Short run cost curves, profit maximization & cost minimization, equilibrium of the firm; Economies of Scale.

**Unit V**

Theory of Firm & Market Organization: Perfect Competition: Perfectly Competitive markets, Profit Maximization, Marginal revenue, Marginal Cost, Output in the short run & long run. Monopoly: Monopoly Power & its sources, Monopolistic Competition & Oligopoly. Kinked demand curve, price leadership of a firm

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Course outcomes(CO)**

I CO1: To understand how to apply microeconomics, concept, and technique in evaluating business decisions.

II CO 2: Understanding the nature, significance and scope of managerial economics

III CO3: Knowing to demand, supply and market equilibrium,

IV CO4: Knowing about production technology and theory of firm & market organization.

V CO5: To understand and analyze market structure.

Faculty of Management  
JECRC University, Jaipur-303905

**BBA I SEMESTER**  
**Web Development**  
**Course Code: DCA001**  
**Credits: (2L)**

**Course Objectives:**

1. Students will be able to understand and be familiar with client server architecture.
2. Students will be able to understand and able to develop a web application using java technologies.
3. Students will be able to learn the skills and project-based experience needed for entry into web application.
4. Students will be able to learn the concepts of developing a dynamic webpage by the use of java script and CSS
5. Students will be able to learn the concept of XML, MySql and server side scripting.

**Syllabus**

**Unit -1**

HTML5 and CSS3 HTML5- Basic Tags, Tables,Forms.HTML5 Tags,HTML Graphics, HTML media, HTML Graphics,HTML APIs. CSS - Background, Borders,margin, Box model. Styling text, fonts,list,links,tables. CSS overflow,float,inline blocks, pseudoclasses,pseudoelements.CSS border images,rounded corners

**Unit-2**

Java Script Client side scripting using java script, Introduction to java script, internal and external Java script files, variables, control statements, loops, Arrays , string handling , How to write functions in JavaScript, inputting and outputting from form elements to JavaScript. DOM concept, creating html elements using java script. Drawing 2D shapes, handling events. Introduction to AJAX

**Unit-3**

Building Single page applications with Angular JS Single page application – Introduction , two way data binding, MVC in angular JS, controllers, getting user inputs , loops , Client side routing – accessing URL data , various ways to provide data in angular JS.

**Unit -4**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Server Side Programming Server side scripting, Difference between client side and server side scripting languages. Introduction to PHP, variables, control statements, loops, Arrays, string handling, PHP forms, Global variables in PHP, Regular expression and pattern matching, Database programming: inputting and outputting data from MySQL using PHP, insertion , deletion and updating data. State management in web applications, cookies, Application and session state.

## Unit-5

Introduction to Xml, usage of XML, XML tags, elements and attributes, attribute type, XML validation: DTD and XSD, XML DOM Case study:-Application Development using Laravel framework

Textbook/Reference:

- The Complete Reference, HTML and CSS by Thomas A Powell latest edition

## Course Outcomes( CO's)

After the completion of the course the student will be able to

**CO1:**To create a dynamic webpage by the use of java script and DHTML.

**CO2:** To create a well formed / valid XML document.

**CO 3:** To connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.

**CO 4.** To create a server side java application called JSP to catch form data sent from client and store it on database.

**CO 5.** To write a server side java application called servlet to catch form data sent from client, process it and store it on database

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

B. Tech. (common to all disciplines)-I Semester Contact Hours (L-T-P): 2-0-2 L-T-P

### **Communication Skills**

Credits 2-0-1 3

#### **Course Objectives**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.
6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

Course Outcomes (CO): At the end of this course students will have:

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

Syllabus: Theory

UNIT 1 Basics of Organizational Communication: Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

UNIT 2 Basic Writing Skills: Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration

UNIT 3 Composition:, Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,

UNIT 4 Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms

UNIT 5 Professional and Technical Communication : Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

Syllabus: Lab

UNIT 1 Basics of Organizational Communication: Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Timemanagement, Following Deadlines etc

UNIT 2 Write Dialogue from the different contexts of corporate culture: Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc

UNIT 3 Composition:, Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of DraftingRedrafting, Proof Reading, Editing etc

UNIT 4 Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc

UNIT 5 Professional and Technical Communication : Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

Methodology for Evaluation

1. Internal Assessment (Theory) a) Home Assignments: One from each Unit : 15 Marks

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- b) In Semester Tests (Minimum two) : 30 Marks
- c) Attendance : 05 Marks
- 2. Term End (Theory) : 50 Marks
- 3. Internal Assessment (Lab) (a) Daily Performance in the Lab : 50 Marks
- 4. Term End (Lab) : 50 Marks

Suggested Reading:

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.

### **Cultural Education I**

#### **Semester-I B. Tech I Year B. Tech. (common to all disciplines)-I Semester**

Contact Hours (L-T-P): 2-0-0 L-T-P

Cultural Education I Credits 2-0-0 2

Course Objectives

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

Course Outcomes (CO): At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

UNIT-I Holy Scriptures-A 1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Hindu, Muslim, Christian, Bodh, Jain religions) 2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

UNIT-II Society and Culture-I 3. Introduction to Indian Culture and Major Symbols of Indian Culture 4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

UNIT-III India in Progress-I 5. Education , Science and Technology in Ancient India 6. Values from Indian History- War of Mahabhart, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

UNIT-IV Great Indian Personalities-I 7. Life and works of the Great People of Ancient India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

Suggested Reading:

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

**BBA II SEMESTER**  
**FINANCIAL MANAGEMENT**  
**SUBJECT CODE: BBA002C**  
**CREDITS: (3L+1T=4)**

**Objectives:**

To familiarize the students with the principles and practice of financial management.

**UNIT I**

Meaning, Importance and Objectives of Financial Management; Time value of money; Conflicts in profit versus value maximization principle; Functions of chief financial officer

**UNIT II**

Risk and Return- overview of capital market theory, Beta Estimation, CAPM, and APT.

**UNIT III**

Investment decisions: Capital budgeting- concept & theory; Risk analysis in capital budgeting And Cost of capital.

**UNIT IV**

Management of working capital; Cash and Marketable securities management; Treasury management, Receivables management, Inventory management, Financing of working capital

**UNIT V**

Financing decisions: Concepts of operating and financial leverage; Capital structure Theory and Policy; Dividend Policy Different sources of finance: Asset Based financing- Lease, Hire Purchase and Project Financing. Corporate Restructuring: Merger and Acquisition.

***Course Outcome (CO):***

At the end of this course students will be able:

CO1: To organize, analyze and interpret numerical and financial data.

CO2: proficiency in oral and written communications with the ability to explain complex financial transactions and data to others

CO3: demonstrate the ability to apply financial information to recommend and justify solutions to financial problems

CO4: To calculate the cost of debt, Cost of equity and Cost of Capital.

CO5: To assess the various sources of finance for capital expenditure and evaluate the merits of each proposal to decide which project is best.

**BBA II SEMESTER  
ACCOUNTING FOR MANAGERS  
SUBJECT CODE: BBA101A  
CREDITS: (3L+1T=4)**

**Objectives:**

To acquaint the students with concepts of Financial, Cost and Management Accounting and their applications in managerial decisions making.

**UNIT I**

Introduction to Financial Accounting: Accounting as an Information System; Importance, Scope and Limitations; Generally Accepted Accounting Principles; Basic Accounting Concepts, Techniques and Conventions; Accounting Cycle; Ethics in accounting; Basic Financial Statements; Understanding

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Corporate Annual Reports: Analysis of Financial statements through Ratios and Cash Flow Statement; Understanding and Analyzing Consolidated Financial Statements; Introduction to International Financial Reporting Standards (IFRS); Foreign Currency Accounting.

## **UNIT II**

Introduction to cost accounting: Cost concepts – Meaning, Scope, Objectives and Importance of Cost Accounting; Elements of Cost; Components of Total cost. Classification of Costs: Fixed, Variable, Semi-variable, and Step Cost; Product and Period Costs; Direct and Indirect Costs; Relevant and Irrelevant Costs; Sunk Costs; Controllable and Uncontrollable Costs; Avoidable and Unavoidable Costs; Out-of-pocket Costs; Opportunity Costs; Conversion Cost. Cost Ascertainment: Cost Unit and Cost Center; Cost Allocation; Cost Apportionment; Cost Control and Cost Reduction. Accounting for Overhead Costs; Brief introduction of Techniques and Methods of Costing.

## **UNIT III**

Cost-Volume-Profit Analysis: Contribution; PV Ratio; Margin of Safety; Break-Even Point; Composite Break-Even Point; Cash and Cost Break- Even Point. Decisions relating to key factor; Export order; Make or Buy, Pricing Decision, Cost plus pricing; Cost Management System and Activity-Based-Costing and Management; Target costing, Decisions related to deletion, Addition of products, Services or Departments; Joint Product Costs: Sell or Process further decisions.

## **UNIT IV**

Introduction to Budgets and preparing the Functional Budgets, and Master Budget; Flexible Budgets.

## **UNIT V**

Variance Analysis (Labor, Material): Management Control System and Responsibility Accounting; Management control in decentralized organizations

### ***Course Outcome (CO):***

At the end of this course students will be:

CO1: Able to understand the concepts of accounting theories.

CO2: Able to interpret the business implication of financial statement standard.

CO3: Able to Judge Product, project, divisional & organisational performance using managerial accounting information

CO4: Able to Identifying organisational information technology components and risks that can affect financial system and prescribe appropriate controls

CO5: Able to apply Cost Accounting methods to evaluate and project business performance.

**BBA II SEMESTER  
HUMAN RESOURCE MANAGEMENT  
SUBJECT CODE: BBA191B  
CREDITS: (3L)**

**Objectives:**

The objective of this course is to help the students to develop an understanding of the concept & techniques of essential functions of human resource management.

**Course Contents:**

**Unit I:**

Introduction, meaning and significance of HRM.Major functions of HRM.Line functions and staff functions.Principles of HRM. HR Competencies, Pre-recruitment functions of HRM,

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Organizational structure, Delaying, Right sizing, Job analysis, HR Planning and budget approval. Strategic decision to outsource, engage contract workers or to recruit people on company role.

### **Unit II:**

Human Resource Planning: Process, Forecasting demand & supply, Skill inventories Human Resource Information System (HRIS) succession planning, Job analysis – Uses, methods, Job description & Job specifications. Recruitment, selection and appointment, Meaning and significance of recruitment, process of recruitment, sources of recruitment, cost-benefit analysis of recruitment. Meaning and significance of selection, process of selection, selection techniques tests, interviews and salary negotiation. Meaning and significance of appointment, process of appointment, legal aspects of employment contract, joining formalities and induction.

### **Unit III:**

Training: Concept, Needs, Systematic approach to training, Methods of training. Management development: Concept & Methods. Performance management system: concept, uses of performance appraisal, performance management methods, factors that distort appraisal, appraisal interview. Career planning: career anchors, career life stages, career planning.

### **Unit IV:**

Compensation: Steps of determining compensation, job evaluation, components of pay structure, factors influencing compensation levels, wage differentials & incentives, profit sharing, gain sharing, employees' stock option plans. Brief introduction of social security, health, retirement & other benefits.

### **Unit V:**

Strategies of employee retention and emerging trend in HRM, Meaning and significance of employee relations. Employee relation in unionized and non-unionized organizations. Handling employee grievances. Employee discipline and domestic enquiry. Legal aspects of employee relations with reference to trade union Act, industrial employment standing orders Act and Industrial Disputes Act. Statutory aspects of health, welfare and safety of employees.

### **Course Outcome (CO):**

At the end of this course students will be able to:

CO1: Explain the importance of HR and their effective management in organisation.

CO2: Demonstrate a basic understanding of different tools used in forecasting and planning HR needs.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO3: Describe the meaning of terminology and tools used in managing employee's efficiency.

CO4: Record governmental regulations affecting employees and employers.

CO5: Analyze the key issues related to advertising the human elements such as motivation, compensation, appraisal, career planning, diversity, ethics and training.

**BBA II SEMESTER**  
**PRINCIPLES OF MARKETING MANAGEMENT**  
**SUBJECT CODE: BBA161B**  
**CREDITS: (3L)**

**Objectives:**

This course aims to familiarize students with the marketing function in organizations. It will equip the students with understanding of the Marketing Mix elements and sensitize them to certain emerging issues in Marketing.

**Unit I:**

Introduction: Nature, Scope and Importance of Marketing, Evolution of Marketing; Core marketing concepts; Company orientation - Production concept, Product concept, Selling concept, Marketing concept, Holistic marketing concept. Marketing Environment: Environment scanning – introduction to Marketing Information System; Demographic, economic, political, legal, socio cultural, technological environment (Indian context); Portfolio approach – Boston Consultative Group (BCG) matrix; Strength Weakness Opportunity Threat (SWOT) analysis, Ansoff's matrix.

**Unit II:**

Segmentation, Targeting and Positioning: Levels of Market Segmentation, Basis for Segmenting Consumer Markets, Difference between Segmentation, Targeting and Positioning; VALS 2 segmentation profile, Requirements for Effective Segmentation.

**Unit III:**

Product & Pricing Decisions: Concept of Product Life Cycle (PLC), PLC marketing strategies, Product Classification, Marketing of Services - Unique Characteristics of Services, Marketing strategies for service firms – 7Ps, Product Line Decision, Product Mix Decision, Branding Decisions, Packaging & Labelling, New Product Development. Pricing Decisions: Determinants of Price, Pricing Methods (Non-mathematical treatment), Adapting Price (Geographical Pricing, Promotional Pricing and Differential Pricing).

**Unit IV:**

Promotion Mix: Factors determining promotion mix, Promotional Tools – basics of Advertisement, Sales Promotion, Public Relations & Publicity and Personal Selling.

**Unit V:**

Place (Marketing Channels): Channel functions, Channel Levels, Types of Intermediaries: Types of Retailers, Types of Wholesalers.

**Course Outcome (CO):**

At the end of this course students will be able to:

CO1: Identify core concept of marketing and the role of marketing in business and society.

CO2: Knowledge of social, legal, ethical and technological forces on marketing decision making.

CO3: Develop marketing strategy based on product, price, place and promotion objectives.

CO4: Create an integrated marketing communication plan which includes promotional strategies and measures of effectiveness.

CO5: Analyze marketing problems and provide solutions based on a critical examination of marketing information.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**BBA II SEMESTER**  
**Operation Research**  
**SUBJECT CODE: BBA432C**  
**CREDITS: (3L)**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## Unit I

Nature, definition and characteristics of Operation Research. Methodology of Operation research, Models of operation research, scientific methodology of operations research, scope of operations research, operation research and managerial decision making, operation research techniques.

## Unit II

Linear Programming: Introduction – Mathematical formulation of a problem – Graphical solutions, standard forms the simplex method for maximization and minimization problems. Big-M Method, Method application to management decisions.

## Unit III

Transportation problem – Introduction – Initial basic feasible solution - NWC method – Least cost method – Vogel's method – MODI – moving towards optimality – solution procedure without degeneracy, Assignment problem – Algorithm – Hungarian method – simple problems.

## Unit IV

Decision analysis and Game Theory: Operations Scheduling: Scheduling problems, shop floor control, Gantt Charts, Principles of work center scheduling, principles of job shop scheduling, personnel scheduling, principles of job shop scheduling, personnel scheduling.

## Unit V

Networking: PERT & CPM, Importance of Networking, Guidelines for construction of network diagram, Float Analysis, Cost Analysis

### ***Course Outcome (CO):***

At the end of this course students -

1. CO1: Will have proficiency with tools from optimization, probability, statistics, simulation, and engineering economic analysis, including fundamental applications of those tools in industry and the public sector in contexts involving uncertainty and scarce or expensive resources.
2. CO2: Will be able to have facility with mathematical and computational modeling of real decision-making problems, including the use of modeling tools and computational tools, as well as analytic skills to evaluate the problems

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

3. CO3: To critically analyse and interpret results and present this in both oral and written form.
4. CO4: Ability to work in a team: specifically to solve larger problems, communicate technical knowledge, partition a problem into smaller tasks, and complete tasks on time.
5. CO5: Understand how to translate a real-world problem, given in words, into a mathematical formulation

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND COURSE OUTCOME:**

<i>Course Outcome</i>	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

3. Quantitative Techniques: N D Vohra
4. Production and Operation management: S N Charry

**BBA II SEMESTER**

**Course Name: Project Management Lab**

**Course Code (DCA002)**

<b>L (Hr.)</b>	<b>T (Hr.)</b>	<b>Pr (Hr.)</b>	<b>Credits</b>
----------------	----------------	-----------------	----------------

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

0	0	2	1
---	---	---	---

## Course Objective

1. To learn to Create the project
2. To learn the Task Breakdown, and utilization of resources
3. To learn how to Assign resources, calculating costs

## Lab Exercise based on given topic

1. Introduction to ProjectLibre and Project Management
2. Overview of ProjectLibre
3. Introduction to Project Management terminology
4. Tasks, Resources, and Costs
5. Installing ProjectLibre
6. Starting and Saving Projects
7. Navigation
8. Create a Project
9. Tasks
10. Resources
11. Cost
12. Calendars
13. WBS
14. RBS
15. Task Usage
16. Resource Usage
17. Baselines
18. Earned Value
19. Printing
20. Reporting

## Course Outcome( CO's)

After the completion of the course the student will be able to

CO1 Students will be able to identify basic concepts of Project Libre

CO2 Students will learn to describe the project, its cost etc.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO3 Students will be able to create installing, creating a project.

CO4 Students will be able to identify task, and resource usages.

CO5 Students will be able to combine Project Libre tasks and will be efficiently use cost and effects.

**BBA II SEMESTER**  
**ENVIRONMENTAL STUDIES**  
**SUBJECT CODE: DCH001**  
**CREDITS: (3L+1P = 4)**

**Objectives:**

Environmental studies deals with every issue that affects an organism. It is essentially a multidisciplinary approach that brings about an appreciation of our natural world and human impacts on its integrity. It is an applied science as it seeks practical answers to making human civilization sustainable on the earth's finite resources. Its components include biology, geology, chemistry, physics, engineering, sociology, health, anthropology, economics, statistics, computers and philosophy. As we look around at the area in which we live, we see that our surroundings were originally a natural landscape such as a forest, a river, a mountain, a desert, or a combination of these elements. Most of us live in landscapes that have been heavily modified by human beings, in villages, towns or cities. But even those of us who live in cities get our food supply from surrounding villages and these in turn are dependent on natural landscapes such as forests, grasslands, rivers, seashores, for resources such as water for agriculture, fuel wood, fodder, and fish.

The basis objective of this course is to provide basic understanding to the students with the nature and the environment.

**UNIT I**

The **Multidisciplinary** nature of environmental studies Definition; Scope and importance, Need for public awareness.

**UNIT II**

Natural Resources: Renewable and non-renewable resources: Natural resources and associated problems.

- a) Forest resources: Use and Over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
- b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
- c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
- d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, Case studies.

f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources. - Equitable use of resources for sustainable lifestyles.

### UNIT III

Concept of an ecosystem- Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem:

a. Forest ecosystem

b. Grassland ecosystem

c. Desert ecosystem

d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

### UNIT IV

Biodiversity and its Conservation

■ Introduction-Definition: genetic, species and ecosystem diversity.

■ Bio-geographical classification of India.

■ Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

■ Biodiversity at global, National and local levels.

■ India as a mega-diversity nation.

■ Hot-spots of biodiversity.

■ Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

■ Endangered and endemic species of India.

■ Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

### UNIT V

Environmental Pollution:

Definition, Causes, effects and control measures of: -

a. Air pollution

b. Water pollution

c. Soil pollution

d. Marine pollution

e. Noise pollution

f. Thermal pollution

g. Nuclear hazards

- Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. - Disaster management: floods, earthquake, cyclone and landslides

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**UNIT-VI: Social Issues and the Environment**

- From Unsustainable to Sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.
- Air (Prevention and Control of Pollution) Act.
- Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act. - Forest Conservation Act.
- Issues involved in enforcement of environmental legislation.
- Public awareness.

**UNIT-7: Human Population and the Environment**

- Population growth, variation among nations. Population explosion-Family welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare.
- Role of information Technology in Environment and human health.
- Case Studies.

**UNIT-8: Field Work (Practical).**

- Visit to a local area to document environmental assets-river/forest/grassland/ hill/mountain.
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural.
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

**Course outcomes(CO)**

- I CO1: It deals with every issue that affects the organization.
- II CO 2: To understand the multidisciplinary nature of environmental studies.
- III CO3: To understand about the renewable and non renewable resources.
- IV CO4: Knowing about the concept of the ecosystem.
- V CO5: To know impact of population on environment.

## **BBA I SEMESTER**

### **Principles of Banking**

**SUBJECT CODE: BBA603A**

**CREDITS: (3L)**

**Learning Objective:** Banking systems and processes have undergone a paradigm change during the last couple of decades. With the ever increasing economic pressures, banking has assumed paramount importance. The course aims at acquainting the students with the basic banking structure India and the rules and laws that govern banking as a structure. Further, the course introduces the students with the recent changes and developments in the banking processes and their impact on various stakeholders.

Unit 1: Introduction to Financial Systems: Introduction to Financial Systems, structure of financial systems, financial markets and financial intermediaries. taxonomy of financial intermediaries, structure of financial markets.

Unit 2: Evolution of Financial Systems: Market based vs bank based systems, financial crises and bubbles

Unit 3: Role of financial Intermediation: Why do financial intermediaries exist? Asset transformation, transaction costs, liquidity, future of financial intermediaries

Unit 4: Regulation of Banks: Why regulate/, traditional regulation mechanisms, international regulation. Risk Management in Banking: Types of risk, how to manage risk, challenges

Unit 5: Forex and Derivatives: Foreign exchange markets, derivatives, hedging. Money: What is money and how this has changed over time, future of money.

**Course Outcomes:** At the end of the course, students will be able to

**[CO.1]** Understand banking structure of the country and the various functions performed by the banks.

**[CO 2]** Understand the various dimensions of special and general relationship between customer and banker and the various functions performed by the banks.

**[CO.3]** Elaborate Banking Regulation Act, 1949 and RBI Act, 1934 in terms of Indian Banking System.

**[CO.4]** Understand the importance of Negotiable Instrument Act and its provisions which are applicable to Banks in India.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**[CO.5]** Narrate various types of services offered by the banks to the customers and their related attributes to develop their employability. Describe Retail Banking and its various dimensions.

**BBA I SEMESTER**  
**Fundamentals of Travel and Tourism**  
**SUBJECT CODE: BBA801A**  
**CREDITS: (3L)**

**Learning Objective:** This course shall introduce learner to tourism phenomenon. The course also highlights the role of tourism as an economic intervention and its significance in economy; Course discusses the global nature of tourism and government support to it. It is also important to appreciate the socio- economic, ecological impacts of tourism.

**Syllabus**

Unit –1: Tourism: Concepts:

Definitions and Historical development of tourism; Types of tourist-Visitor-Excursionist, Types and Forms of Tourism; Tourism system: Nature, Historical development of tourism, Components of tourism and its characteristics and classification of tourist

Unit – 2: Domestic and International tourism:

Domestic tourism; features, pattern of growth, profile. International tourism; Generating and Destination regions. Pattern of growth and Profile. Historical development of tourism of Himachal Pradesh, Madhya Pradesh, Gujarat, Goa & Kerala and analysis of International destination of USA, UK, France, China & Malaysia

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Unit – 3: Travel statistics & Motivation

Tourism Statistics, type and method of measurement. Classification on elements of tourism. Types of tourist motivation and classification.

Unit – 4: Tourism Impacts:

Impacts: Positive and Negative Impacts of Tourism; Socio Cultural, Economic, Environmental and Political- Impact Assessment: Social Impact Assessment, Environmental Impact Assessment and Environmental Impact Assessment. – Environmental and Social Accounting and Auditing-Tourism Satellite Accounting (TSA)

Unit – 5: Tourism Organizations:

Objectives and Role of ITDC, ASI, TFCI, Ministries of Railways and Civil Aviation in development; an overview of National and International organizations and associations: IATO, TAAI, FHRAI, WTO, ICAO and IATA, FAITH.

**Course Outcomes:** At the end of the course, students will be able to

[CO 1]. Describe the Historical development of tourism&Historical development of tourism.

[CO.2]. To understand the Domestic and International tourism.

[CO.3]. Describe and apply Tourism Statistics, type and method of measurement. Classification on elements of tourism

[CO.4]. Recognize the importance and Positive and Negative Impacts of Tourism

[CO.5]. Tounderstandoverview of National and International organizations and associations of Tourism.

**BBA II SEMESTER**  
**Fundamentals of Hospitality Management**  
**SUBJECT CODE: BBA802A**  
**CREDITS: (3L)**

**Learning Objective:** The purpose of this course is to acquire an indepth knowledge about the Mice Management and to become familiar with the techniques and approaches for successful MICE Management.

**Syllabus**

**Unit – 1**

Introduction to Hospitality– Concept, Historical evolution of Hospitality industry – Global and Indian Context

**Unit – 2**

Hotel – Definition, classification of accommodation establishments based on – Location, Size, Affiliation and Accreditation, Ownership, Management contracts. Grading Star category of hotels in India. Major National/international hotels chains in India Hotel plans (AP, MAP, CP, EP) Hotel guest room types and status: Menu types of menu

**Unit -3**

Departments/Functional units in Hotel and organizational Structure  
Hotel Organisation – Organisational Structure- Front of the house and back office departments in a hotel, function of the core departments of the hotel- Room division and food and beverage depts.

**Unit – 4**

Timeshare and vacation ownership- Concept of Vacation ownership, Definition of time share and condominiums, marketing of timeshares, exchange companies-RCI and Intervals international, developing Vacation ownership concept in India, Government's/industry role

**Unit – 5**

Guest Relationship Management – Skills and personality traits of hospitality staff, complaint handling emergencies importance and use of PMS in hospitality industry-Opera/IDS.

**Course Outcomes:**

CO 1: To provide students with the supervisory skills and competencies necessary to meet the needs of the ever demanding Hospitality industry.

CO 2: Identify and assess relationships and networks relative to National/international hotels chains in India Hotel.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO 3: To understand the departments and functional units in Hotel and organizational Structure of Hospitality industry

CO 4: To provide a broad understanding of the basic principles of guest relationship Management related to the Tourism.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## **JECRC University Cultural Education II**

### **Semester-II B. Tech I Year B. Tech. (common to all disciplines)-II Semester**

Contact Hours (L-T-P): 2-0-0 L-T-P Cultural Education II

Credits 2-0-0 2

Objectives 1. To make the students feel gratitude towards the rich religious and cultural heritage of India.

2. To understand the role of great personalities and movements in the progress of India.

Course Outcomes (CO): At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

UNIT-I Holy Scriptures-II 1. Bhagavad Gita and Life Management 2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Saheb, Bible, Quran, Jain Scriptures, Bodh Scriptures 3. Historicity of Ramayana and Mahabharata

UNIT-II Society and Culture-II 4. Indian Society: Its Strengths and Weaknesses 5. Health and Lifestyle related issues 6. Conservation of cultural heritage

UNIT-III India in Progress-II 7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights 8. Indian Models of Economy, Business and Management

UNIT-IV Great Indian Personalities-II 9. Life and works of the Great People of Modern India- Raja Ram Mohan Roy, Swami Vivekanand, Madan Mohan Malviya, Ishwarchand VidyaSagar, JyotibaPhule, HomiBhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, Vir Haqiqat Rai, Subhash Chandra Bose, Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada Saheb Phalke, Major Dhayan Chand, A P J Abdul Kalam, Kailash Satyarthi, Aruna Roy, Mahasweta Devi, Udaya Kumar, Narayan Murthy, Azim Premji

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by a committee of teachers.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Suggested Reading:

**BBA III SEMESTER  
ORGANISATION BEHAVIOUR  
SUBJECT CODE: BBA007B  
CREDITS: 3L (3)**

#### **Objectives:**

This course is designed to equip the students with the tools necessary to understanding the dynamics of individual and group behavior for efficient and effective utilization of human resources in the organizations.

#### **UNIT I: Introduction**

Definition, Need and Importance of Organizational Behavior, Contributing disciplines of OB, Nature and Scope, Organizational Behavior Models

#### **UNIT II: Individual Behaviour**

Personality – Type A and B, Big five personality types, Factors influencing personality.  
Values and Attitudes– Concept and types of values: Terminal value and instrumental value.  
Components of attitude, job related attitudes, measurement of attitude.  
Learning – Concept and learning theories and reinforcement.  
Perceptions And Emotions – Importance, factors influencing perception, perpetual distortions, emotional intelligence.

#### **UNIT III: Motivation and Interpersonal Behaviour**

Motivation – Meaning and importance of motivation, Maslow's need hierarchy theory, Herzberg's two factor theory, Theory X Theory Y, Intrinsic and Extrinsic motivation by Ken Thomas, Measurement of motivation using standard questionnaire. Communication and feedback, Transactional Analysis (TA), Johari Window.

#### **UNIT IV: Group Behaviour**

Conflict: Sources of conflict, resolution strategies  
Leadership: Meaning and concept of leadership, trait theory, transactional, charismatic and transformational leadership.

#### **UNIT V: Dynamics of Organisational Behaviour**

Organizational Climate and Culture – Concept, Factors affecting organizational climate and culture and developing organizational culture

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Organizational Change – Importance, Stability vs. Change, Proactive vs Reaction change, Change process, Resistance to change, Managing change.

Stress – Work Stressors, Consequences, Prevention and Management of stress

**Course Outcome (CO):**

At the end of this course students will be:

CO1: Able to understand the fundamental concepts and importance of Organizational Behavior.

CO2: Able to identify and understand the various types of employee behavior and measures to control such behavior.

CO3: Able to understand the concept of Leadership and to develop critical thinking skills.

CO 4: Able to understand and develop the positive organisational behavior.

CO 5: Able to understand and control the measures of organisational climate & climate change.

**BBA III SEMESTER  
CORPORATE STRATEGY  
SUBJECT CODE: BBA017A  
CREDITS: 3L**

**Objective:** To understand the concepts underlying how strategy is implemented in the business environment.

**Unit I**

Introduction to Strategy: Nature & importance of business policy & strategy, Introduction to the strategic management process, Strategic Management & related concepts, Characteristics of corporate, business & functional level strategic management decisions. Company's mission statement, Need for a mission statement, Criteria for evaluating a mission statement, Formulation of a mission statement

**Unit II**

Environmental Analysis & Diagnosis: Analysis of company's external environment-Environmental impact on organization's policy and strategy, Organization's dependence on the environment. Analysis of remote environment, Analysis of specific environment- Michael E.Porter's 5 Forces model, Positioning against five forces.Analysis of internal environment-Importance of organization's capabilities, competitive advantage and core competence, Michael E. Porter's Value Chain Analysis.

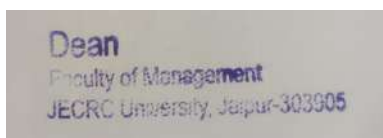

**Unit III**

Competitive Strategies: Perspectives to competition- industry, marketing & strategic group; Competitive strategies- Michael E. Porter's generic competitive strategies, Implementing competitive strategies- offensive & defensive moves.

**Unit IV**

Corporate Strategies: Formulating corporate strategies, Introduction to strategies of growth, stability and renewal, types of growth strategies – concentrated growth, product development, integration, diversification, international expansion (multi domestic approach, franchising, licensing and joint ventures), strategic fundamentals of merger & acquisitions(M&A), types of renewal strategies – retrenchment and turnaround.

**Unit V**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Strategic Frameworks: Strategic analysis & choice, Strategic gap analysis, Portfolio analysis – MECE approach, BCG, GE, product market evolution matrix, experience curve, directional policy matrix, life cycle portfolio matrix, Grand strategy selection matrix; Behavioral considerations affecting choice of strategy. Culture and strategic leadership: Implementing & operationalizing strategic choice, Impact of structure, culture & leadership; Functional strategies & their link with business level strategies.

**BBA III Semester**  
**RESEARCH METHODOLOGY**  
**SUBJECT CODE: BBA011A**  
**CREDITS: (3L+1T=4)**

**Unit I**

Meaning, Objective and Motivation in research, Type of research, research approaches, Significance of research, research process, criteria for good research, Define the research problem, selecting a problem, research design, meaning of research design, need of research design, features of good design.

**Unit II**

Sampling Designing: Census and sample survey, implications of sample design, steps in sample design, criteria of selecting a sample, characteristic of a good sample design, Different type of sample design, random sampling. Data collection techniques: collection of data, interview, schedule and questionnaire method, difference between questionnaires and schedules, Collection of secondary data, selection of appropriate method for data collection.

**Unit III**

Processing and analysis of data, type of analysis, statistics in research, type of series, measurement of central tendency, measurement of dispersion, regression analysis, least square method, Mean based method, correlation analysis, Karl Pearson coefficient of correlation, Spearman single rank method, repeated rank method, relationship between correlation and regression analysis.

**Unit IV**

Hypothesis Design, Basic concept concerning hypothesis testing, procedure of hypothesis testing, Important Parametric test: Z test, T test and F test, Non parametric test: Chi square test, Sign test, run test, mann- whitney U test, Limitation of the testing of hypothesis.

**Unit V**

Scaling technique, measurement in research, type of measurement scales, techniques of developing measurement tools, Interpretation and report writing, technique of interpretation, Significance of report writing, Different steps in writing a report, Lay out of the research report, types of report.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Course outcomes(CO)**

- I CO1: To know about the various approaches to research and its significance.  
 II CO 2: To understand the various implications of various parameters of research.  
 III CO3: To help in analysis of various datas and their corelation  
 IV CO4: To help students in knowing design and procedure of hypothesis and subsequent research.  
 V CO5: To understand the report writing in research

 Faculty of Management  
 JECRC University, Jaipur-303905

**Course Name: Advanced Spread Sheet Lab**

**Course Code (DCA003)**

<b>L (Hr.)</b>	<b>T (Hr.)</b>	<b>Pr (Hr.)</b>	<b>Credits</b>
0	0	2	1

**Course Objective:**

1. Students will be able to understand the basics of Excel.
2. Students will be able to understand the concepts of working with the functions of advanced excel.

**Syllabus**

**Advanced Excel Course - Overview of the Basics of Excel**

Customizing common options in Excel, Absolute and relative cells, Protecting and un-protecting worksheets and cells

**Advanced Excel Course - Working with Functions**

Writing conditional expressions (using IF), Using logical functions (AND, OR, NOT),

Using lookup and reference functions (VLOOKUP, HLOOKUP, MATCH, INDEX), VlookUP with Exact Match, Approximate Match, Nested VlookUP with Exact Match

VlookUP with Tables, Dynamic Ranges, Nested VlookUP with Exact Match, Using VLookUP to consolidate Data from Multiple Sheets

**Advanced Excel Course - Data Validations**

Specifying a valid range of values for a cell, Specifying a list of valid values for a cell, Specifying custom validations based on formula for a cell

**Advanced Excel Course - Working with Templates**

Designing the structure of a template, Using templates for standardization of worksheets

**Advanced Excel Course - Sorting and Filtering Data**

Sorting tables, Using multiple-level sorting, Using custom sorting, Filtering data for selected view (AutoFilter), Using advanced filter options

**Advanced Excel Course - More Functions**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Date and time functions, Text functions, Database functions, Power Functions  
(CountIf, CountIFS, SumIf, SumIFS)

#### **Advanced Excel Course – Formatting**

Using auto formatting option for worksheets, Using conditional formatting option for rows, columns and cells

#### **Advanced Excel Course – Macros**

Relative & Absolute Macros, Editing Macro's

#### **Advanced Excel Course - WhatIf Analysis**

Goal Seek, Data Tables, Scenario Manager

#### **Advanced Excel Course – Charts**

Using Charts, Formatting Charts, Using 3D Graphs, Using Bar and Line Chart together, Using Secondary Axis in Graphs, Sharing Charts with PowerPoint / MS Word, Dynamically, (Data Modified in Excel, Chart would automatically get updated)

#### **Advanced Excel Course - Working with Reports**

Creating subtotals, Multiple-level subtotals, Creating Pivot tables, Formatting and customizing Pivot tables, Using advanced options of Pivot tables, Pivot charts, Consolidating data from multiple sheets and files using Pivot tables, Using external data sources, Using data consolidation feature to consolidate data, Show Value As ( % of Row, % of Column, Running Total, Compare with Specific Field), Viewing Subtotal under Pivot, Creating Slicers ( Version 2010 & Above), Designing the structure of a template, Print Titles Repeat Rows / Columns

#### **Analysis ToolPak**

Use of the Analysis ToolPak to perform complex data analysis

#### **Course Outcome( CO's)**

- CO1.** Students will learn to use spreadsheet concepts and explore the Microsoft Office Excel environment.
- CO2.** Students will apply the concepts of to create, open and view a workbook.
- CO 3.** Students will Illustrate different advanced excel formatting.
- CO 4.** Students will be apply date and time functions
- CO 5.** Students will learn to describe basic uses of advanced excel functions

Dean

**Value Education and Ethics I Semester-III**

**B. Tech II Year B. Tech. (common to all disciplines)-III Semester**

**Contact Hours (L-T-P): 1-0-0 L-T-P**

**Value Education and Ethics I Credits 1-0-0 1**

**Course Objectives**

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

Course Outcomes (CO): At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

Lessons from the Ramayana Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

Lessons from the Mahabharata Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

Lessons from the Upanishads Introduction to the Upanishads: Sruti versus Smrti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

Message of the Bhagavad Gita Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

Life and Message of Swami Vivekananda Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

Life and Teachings of Spiritual Masters India Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

Insights into Indian Arts and Literature

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce.

Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

On the basis of the above points, a panel of experts from the department will award the credits.

## Life Skills I Credits 1-0-1 2

### Objectives

1. To prepare the students as per the industry demands.
2. Switching to Activity and Task based Teaching modules.
3. To focus on the linguistic aspects in relation to life situations.
4. Facilitating the aspects of behavioral skills in language.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

Course Outcomes (CO): At the end of this course students will have:

CO1: Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.

CO2: Ability to learn by doing it practically in the classroom.

CO3: Ability to learn by creating an environment and adapting to the environment.

CO4: The ability to prepare the students as per the need of the Multi-cultural scenario around.

### Syllabus: Theory

UNIT 1 Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion  
Basics of Narrating and describing things

UNIT 2 Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview advance theory Basics of Video Interviews and Video Profiles for Job

UNIT 3 Types of listening, advantages and disadvantages

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

UNIT 4 Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report

UNIT 5 Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

Syllabus: Lab L-T-P Life Skills I Lab Credits 1-0-1 2

UNIT 1 Debates / Speeches / Addressing the public / Extempore/Group Discussion  
Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids

UNIT 2 Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand Video Interviews and Video Profiles for Job-Practice session for Online Interviews

UNIT 3 Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives

UNIT 4 Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report

UNIT 5 Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

Methodology for Evaluation

1. Internal Assessment (Theory)

a) Home Assignments: One from each Unit : 15 Marks

b) In Semester Tests (Minimum two) : 30 Marks

c) Attendance : 05 Marks

2. Term End (Theory) : 50 Marks

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

3. Internal Assessment (Lab) (a) Daily Performance in the Lab : 50 Marks

4. Term End (Lab) : 50 Marks

Suggested Readings:

1. A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.

2. Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.

3. Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa& Co.

4. The Hard Truth about Soft Skills, by Amazone Publication.

5. 101 Great Answers to the Toughest Interview Questions. Ron Fry. High Bridge Company. 1996.

6. Michael Swan. Practical English Usage, Oxford University Press.

**BBA IV Semester**  
**OPERATION MANAGEMENT**  
**SUBJECT CODE: BBA431A**  
**CREDITS: 3L**

**Unit I**

Introduction to Production and Operation Management: Products & Services, The product/Process Continuum, The Transformation Process, Product Design, Process Design, Automation, The Production Manager, Services Scenario in India, Medical Tourism in India, Characteristic of Services, Classification of Services, Service Capacity, Designing Service Processes, Service Blueprinting, Service Quality. Measuring Service Quality using SERVQUAL.

**Unit II**

Demand Forecasting: Quantitative methods of Forecasting, Qualitative methods of Forecasting, Aggregate Planning, Nature, Aggregate Production Planning, Production Planning Strategies, Disaggregating the Aggregate Plan, Assembling Line Balancing.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### Unit III

Facility Location Planning: Introduction, Operations Strategies for Multiple Facilities, Factors Affecting Facility Location Planning, Locating Foreign Operation Planning. Facility Capacity and Layout Planning: Capacity and Capacity Planning, Facility Layout Planning.

### Unit IV

Inventory Management: Introduction, Uses of Inventory, Role of Other Functional Department, Types of Cost, Inventory Management System, Material Requirement Planning, Just-in-time, Supply Chain Management. Work Design: Job Design, Work Measurement.

### Unit V

Quality Management: A conceptual Framework, Dimensions of Quality, Cost of Quality, Quality at Average Stage, Quality System Standards, Bureau of Indian Standards, International Organization for Standardization, ISO 14000, COPC-2000. Project Management: Introduction, Role of Project management in other functional areas of management, Network Diagrams, Critical Path Method, Programme evaluation and review techniques, Limitations of PERT and CPM, Crashing of the project.

### Reference books:

1. Operation Research : V K Kapoor
2. Quantitative Techniques: Khandelwal, Gupta, Agarwal and Ahmed
3. Quantitative Techniques: N D Vohra
4. Production and Operation management: S N Charry

Corse Outcomes :Operation Management:

CO1: To acquaint the students with the basic manufacturing terms and technicality.

CO2: To increase the analytical skills with respect to the technicality.

CO3: To enable the students with the analytical skills in manufacturing process.

CO4: To make students understand the close relation between production process and cost control.

CO5: To understand the importance of planning with respect to the outcomes required.

**BBA IV Semester**  
**Tourism Trends & Issues (Domestic & International)**

**SUBJECT CODE: BBA807A**

**CREDITS: 4L**

**Learning Objectives:** To acquaint the students with concepts of Travel and Tourism Industry. To provide a broad understanding of the basic principles of management related to the Travel and Tourism Industry in Domestic & International

**Syllabus**

Unit I :Indian Culture: General Features, Sources, Relationship of culture and tourism. Cultural Heritage: Meaning, Scope and Significance of Heritage, Criteria for selection as heritage sites, Monuments and zone by UNESCO (WHO), Types of heritage property.

Unit II: World famous heritage sites and monument in India and abroad, National and International Organizations engaged in Heritage Management (UNESCO, ICOMOS, ASI, and NGOs) Architecture Heritage: Hindu Architecture-Famous Temple in India, Islam and Indo-Islamic Architecture -Famous Monuments in India, British and Indo British Architecture-Famous Public Buildings and monuments.

Unit III: Indian Museums: Concept and classification. Heritage Hotels and its classification, Indian Music, Fair and Festivals, Classical dance Introduction to Tourism: Definition & concepts of Tourism, Components & linkages of Tourism, Growth of tourism industry and historical development, through ages, Future of tourism industry.

Unit IV: General Tourism Trends. Types of Tourists, Visitor, Traveler, and Excursionist-Definition and differentiation. Tourism, recreation and leisure, their inter-relationships, sustainable tourism. Tourism Products & Attraction: Nature, Characteristics and Components of Tourism Industry. Elements and characteristics of tourism products. Tourism Product Life Cycle. Typology of tourism product.

Unit V: Types and Forms of Tourism: Inter- regional and intra-regional tourism. Inbound and outbound tourism, domestic, international tourism. Forms of Tourism: religious, historical, social, adventure, health, business, conferences, conventions, incentives, sports and adventure, senior tourism, special interest tourism. Alternative Tourism like culture or nature oriented, ethnic or 'roots' tourism and VFR. A study of Tourism Organizations: Government

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Organizations- DOT, ITDC, MTDC, ASI, TFCL, Domestic Organizations- TAAI, FHRAI, IATO; International Organizations- WTO, IATA, PATA.

### Course Outcomes:

CO 1: To provide students with the supervisory skills and competencies necessary to meet the needs of the ever demanding Travel and Tourism industry.

CO 2: Identify and assess relationships and networks relative to building tourism capacity.

CO 3: To develop necessary skills & Manage travel industry operations, either as a professional or an entrepreneur, using professional communication skills and travel industry knowledge.

CO 4: To provide a broad understanding of the basic principles of management related to the Tourism

**BBA IV Semester**  
**Travel agency and Tour Operation**

**SUBJECT CODE: BBA808A**

**CREDITS: 4L**

**Learning Objective:** The course is very imperative as it shall orient the student with the basic understanding of the typical functioning of a travel concern. The course basically deals with various aspects of travel agency like its origin, setting up of travel agency, its functions like itinerary preparation, client handling etc.

**Unit -1**

History and growth of travel agency business, emergence of Thomas Cook. Emergence of Travel Intermediaries, Indian travel agents and tour operators - an overview.

Definition of travel agent and tour operator; differentiation, interrelationship of TA/TO and principles of present business trends and future prospects, problems and issues.

**Unit – 2**

How to set up principles of present business trends and future prospects, problems and issues  
Market research, sources of funding, Comparative study of various types of organisation proprietorship, partnership, private limited and limited , Govt. rules for getting approval, IATA rules, regulation for accreditation, Documentation, Practical exercise in setting up a TA/TO, Sources of earning : commissions, service charges etc., Entrepreneurial skill for travel, tourism and hospitality trade; problems of entrepreneurship in travel trade.

**Unit – 3**

Itinerary preparation, important considerations for preparing itinerary, costing, packaging and promotion.

**Unit - 4**

Tourism bills of Rights, tourism code, Manila declaration, International conventions: Warsaw convention 1924, Chicago convention 1944, Brussels convention 1961 and 1966 International convention on travel contract, Athens convention 1974, Helsinki accord 1976, The IATA general conditions of carriage (passenger and baggage)

**Unit - 5**

Consumer protection law, 1986, and Competition act applicable to the tourist as consumers. Master Key on customer care and master key proposed by WATA and ASTA. Corporate Travel Policy.

**Course Outcomes:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**[CO.1]** Understanding the growth of travel agency business, principles of present business trends and future prospects, problems and issues in tour industry.

**[CO.2]** Identifying and applying principles and regulations relating to principles of present business trends and future prospects, problems and issues in travel trade.

**[CO.3]** Understanding the Tourism bills of Rights, tourism code, Manila declaration, International conventions.

**[CO.4]** Understanding the processes of Consumer protection law, 1986 and Competition act applicable to the tourist as consumers.

**BBA IV Semester**

**Course Name :Python programming**

**Course Code (DCA004)**

<b>L (Hr.)</b>	<b>T (Hr.)</b>	<b>Pr (Hr.)</b>	<b>Credits</b>
2	0	2	3

**Course Objectives:**

1. Student will be able to understand the basic concepts of Python.
2. Student will be able to learn the concepts of programming by using loops and conditional blocks.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

3. Student will be able to demonstrate the use of complex data types, dictionary and codes.
4. Student will be able to describe the concepts of database.
5. Student will be able to understand the basics of python programming and packages.

## **Syllabus**

### **Unit 1**

Introduction to Python: Python variables, Python basic Operators, Understanding python blocks. Python Data Types, Declaring and using Numeric data types: int, float etc.

### **Unit 2**

Python Program Flow Control Conditional blocks: if, else and else if, Simple for loops in python, For loop using ranges, string, list and dictionaries. Use of while loops in python, Loop manipulation using pass, continue, break and else. Programming using Python conditional and loop blocks.

### **Unit 3**

Python Complex data types: Using string data type and string operations, Defining list and list slicing, Use of Tuple data type. String, List and Dictionary, Manipulations Building blocks of python programs, string manipulation methods, List manipulation. Dictionary manipulation, Programming using string, list and dictionary in-built functions. Python Functions, Organizing python codes using functions.

### **Unit 4**

Python File Operations: Reading files, Writing files in python, Understanding read functions, read(), readline(), readlines(). Understanding write functions, write() and writelines() Manipulating file pointer using seek Programming, using file operations. Database Programming: Connecting to a database, Creating Tables, INSERT, UPDATE, DELETE and READ operations, Transaction Control, Disconnecting from a database, Exception Handling in Databases.

### **Unit 5**

Python packages: Simple programs using the built-in functions of packages matplotlib, numpy, pandas etc. GUI Programming: Tkinter introduction, Tkinter and Python Programming, Tk Widgets, Tkinter examples. Python programming with IDE.

### **Text Book :**

- Introduction to Computing and Problem Solving Using Python, E. Balagurusamy McGrawHill Publication

### **Reference Books:**

- Wesley J. Chun, "Core Python Applications Programming", 3rd Edition, Pearson Education, 2016

- Mark Lutz, "Learning Python", 5th edition, O'Reilly Publication, 2013, ISBN 978-1449355739

### **Course Outcomes (CO's)**

After the completion of the course the student will be able to

CO1. To understand python variables, operators and data types

CO2. To apply python control structures

CO3. To use python complex data types

CO4. To apply Python files and databases

CO5. Student will apply python packages and GUI programming

### **BBA V SEMESTER (2020-21)**

### **INTERNATIONAL BUSINESS MANAGEMENT**

**SUBJECT CODE: BBA251A**

**CREDITS: 3L (3)**

### **Objectives:**

The basis objective of this course is to provide understanding to the students with the global dimensions of management.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **UNIT I**

Overview: International Business- Introduction, Concept, Definition, Scope, Trends, Challenges and opportunities; Nature, Meaning and Importance of International competitive advantage, Multidimensional view of Competitiveness- Financial Perspectives- International monetary systems and financial markets, IMF, World Bank, IBRD, IFC, IDA, existing international arrangements; Globalization and foreign investment- Introduction FDI, national FDI policy framework, FPI, Impact of globalization.

## **UNIT II**

Globalization- Technology and its impact, Enhancing technological capabilities, Technology, generation, Technology transfer, Diffusion, Dissemination and spill over, Rationale for globalization, Liberalization and Unification of World economics, International Business theories, Trade Barriers- Tariff and Non- Tariff Barriers.

## **UNIT III**

Strategy making and international business- Structure of global organizations, Types of strategies used in strategic planning for achieving global competitive advantage, Meaning, Concept and scope of distinctive competitive advantage, Financial Integration, Cross border merger and acquisitions.

## **UNIT IV**

Socio cultural Environment- Managing Diversity within and across cultures, Country risk analysis, Macro environmental risk assessment, Need for risk evaluation; Corporate governance, globalization with social responsibility- Introduction, Social responsibility of TNC, Recent development in corporate social responsibility and policy implications.

## **UNIT V**

Global Human Resource Management- Selection, Development, Performance Appraisal and compensation, Motivating employees in the global context and managing groups across cultures, Multicultural management.

**BBA V SEMESTER**  
**INVESTMENT AND RISK MANAGEMENT**  
**SUBJECT CODE: BBA105A**  
**CREDITS: 3L+1T (4)**

**Objective:** The aim of this course is to provide a conceptual framework for analysis from an investor's perspective of maximizing return on investment – a sound theoretical base with examples and references related to the Indian financial system.

**Unit I Lectures:**

Basics of risk and return, concept of returns, application of standard deviation, coefficient of variation, beta, alpha. Bonds-, present value of a bond, Yield to Maturity, yield to call, yield to put, systematic risk, Price Risk, Interest rate risk, Default risk. Yield curve. Unsystematic risk and non-risk factors that influence yields. Duration and Modified Duration; Bond Convexity, Immunization.

**Unit II Lectures:**

Fundamental analysis: EIC framework; Economic analysis: Leading lagging & coincident macro-economic indicators, Expected direction of movement of stock prices with macroeconomic variables in the Indian context; Industrial analysis: stages of life cycle, Porter's five forces model, SWOT analysis, financial analysis of an industry; Company analysis. Share valuation: Dividend discount models- No growth, constant growth, two stage growth model, multiple stages; Relative valuation models using P/E ratio, book value to market value.

**Unit III Lectures:**

Technical analysis: meaning, assumptions, difference between technical and fundamental analysis; Price indicators- Dow theory, advances and declines, new highs and lows- circuit filters. Volume indicators- Dow Theory, small investor volumes. Other indicators- futures, institutional activity, Trends: resistance, support, consolidation, momentum- Charts: line chart, bar chart, candle chart, point & figure chart. Patterns: head & shoulders, triangle, rectangle, flag, cup & saucer, double topped, double bottomed, Indicators: moving averages (no numerals in technical analysis) Efficient market hypothesis; Concept of efficiency: Random walk, Three forms of EMH and Implications for investment decisions (No numerals). Portfolio analysis: Portfolio risk and return, Markowitz portfolio model: 2 and 3 asset portfolio, concept of efficient frontier & Optimum portfolio. Market Model: concept of beta systematic and unsystematic risk. Investor risk and return preferences: Indifference curves and the efficient frontier, Traditional portfolio management for individuals: Objectives, constraints, time horizon, current wealth, tax considerations, liquidity requirements, and anticipated inflation, Asset allocation: Asset allocation pyramid, investor life cycle approach, Portfolio management services: Passive – Index funds, systematic investment plans. Active – market timing, style investing.

**Unit IV Lectures:**

Capital asset pricing model (CAPM): Single period classical model. Characteristic line, Capital Market Line, Security market Line. Mutual Funds-Introduction, Calculation of Net Asset Value of a Fund, Classification of Mutual Fund Schemes (Open end & closed end, income & growth schemes, sectorial schemes, index Schemes, Fund of Funds Schemes, Gold Exchange Traded Fund, Hedge Funds, Faith based funds, Arbitrage funds) Tracking Error, Tactical Asset Allocation, diversification

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

vs asset allocation, Portfolio Rebalancing . Performance Evaluation: Sharpe's Treynor's Jensen's & Sortino measures.

### Unit V Lectures:

Derivatives with respect to stocks and indices: Forwards and Futures, Options and related terminology; in the money, at the money and out of the money options. Calculating the payoff from options and diagrammatic representation. Factors that influence put and call prices. Black and Scholes Model demonstrated using templates in Excel (No Derivations or manual calculations of B& S model). Some motivations for buying and selling options; Simple combinations of underlying asset & options; Option spreads: Covered call, Bull & Bear spreads with puts and calls, Straddle, Collars.

### Text Books:

1. Fischer, D.E. & Jordan, R.J. (2006). *Security Analysis & Portfolio Management* (6th ed.). Pearson Education.
2. Sharpe, W.F., Alexander, G.J. & Bailey, J. (1998). *Investments* (6th ed.). Prentice Hall of India.

### References:

### Proposed Discipline Electives for BBA(Regular)

#### (3 Year Program)

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

It is proposed that the student will elect any two groups in the final year.

The Student will study one paper each of the elective group in Vth and VI th Semester.

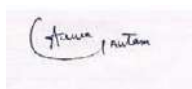

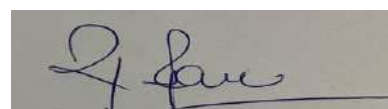

<b>Discipline Elective</b>	<b>Accounting and Finance</b>	<b>BSFI</b>	<b>Marketing</b>	<b>Information Technology</b>	<b>International Business</b>
<b>Discipline Elective 1</b>	E-Filing of Return (BCM107C)	Corporate Finance (BBA614A)	Advertising Management (BBA512A)	E-Commerce (BBA019B)	International Business Management (BBA251A)
<b>Discipline Elective 2</b>	Tax Planning for Business (BCM128A)	Regulatory Frame Work, Insurance Regulations (BBA610A)	Product & Brand Management (BBA422A)	Management of Technology Innovation and Change (BBA462A)	Global Business Environment (BBA482A)
<b>Discipline Elective 3</b>	Management Accounting (BCM128A)	Banking Laws and Practices (BBA612A)	Digital Marketing (BBA423A)	Database Management System (BBA463A)	Entrepreneurship Startups(BBA483A)
<b>Discipline Elective 4</b>	Cost Audit (BCM101B)	Introduction to International Banking and Forex (BBA613A)	Customer Relationship Management (BBA162B)	e-Supply Chain Management (BBA464A)	International Trade and Finance (BBA484A)
<b>Discipline Elective 5</b>	Financial derivatives (BCM 130A)	Financial derivatives (BBA405A)	International Marketing (BBA511A)	Management Information System(BBA 465A)	International Human Resource Management (BBA485A)

**\*Minimum of 20% must opt to start an elective. However, the department reserves the right to allow student to opt a particular Elective group in case of any issue.**

**The elective papers of any group may be changed if found necessary by BOS**

#### **Program Educational Objective (PEO)-B.Com**

- I. To build a strong footing of understanding in different areas of Commerce
- II. To develop the skill of applying concepts and practices used in Commerce
- III. To develop an attitude for working commendably and proficiently in a business surroundings
- IV. To integrate knowledge, skill and attitude that will stand an environment of learning and creativity among the students

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- V. To enable a student to be capable of making decisions at personal and professional level.

**Program Outcome (PO) – B.Com**

- [PO.1]. **Critical Thinking:** Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives. Ability to engage in reflective and independent thinking by understanding the concepts in every area of Commerce. Ability to examine the results and apply them to various problems appearing in different branches of Commerce and Business.
- [PO.2]. **Effective Communication:** Ability to communicate long standing unsolved problems in commerce. Ability to show the importance of commerce as precursor to various market developments since the beginning of the civilization.
- [PO.3]. **Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings
- [PO.4]. **Effective Citizenship:** Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering
- [PO.5]. **Ethics:** Ability to ascertain unethical behaviour, falsification, and manipulation of information. Ability to manage self and various social systems.
- [PO.6]. **Environment and Sustainability:** Understand the issues of environmental contexts and sustainable development
- [PO.7]. **Self-directed and Life-long Learning:** Capability to work independently in diverse projects and ensure detailed study of various facets of Commerce and Business. Capability of self-paced and self-directed learning aimed at personal development and for improving knowledge/skill development and reskilling in all areas of Commerce.

**BCOM I SEMESTER**  
**CORPORATE LAWS**  
**SUBJECT CODE: BCM001C**  
**CREDITS: 3L**

**Objective:** The objective of the course is to impart basic knowledge of the provisions of the Companies Laws and the Depository Laws along with relevant case law.

**Note** – The Companies Act, 1956 shall be replaced by the New Companies Bill 2012 as and when enacted.

#### **UNIT I:**

Important definitions: Prospectus and Share Capital, Allotment of securities, Private Placement, share capital, basic requirements, alteration of share capital, Sweat Equity, Bonus issue, issue of shares at premium and discount, Further issue of shares, buy-back of shares.

#### **UNIT II:**

Board Meetings, Annual General Meeting, Extra Ordinary General Meeting, Requisites of a valid meeting, Convening of Meetings, Minutes and Resolutions; Postal ballot; voting through electronic matters.

#### **UNIT III:**

Declaration and Payment of Dividend, Accounts of Companies, Maintenance and authentication of Financial Statement, Corporate social Responsibility, Appointment of Auditor, qualification, disqualifications, rotation, removal, duties and responsibilities, Auditors report, Constitution and functions of Audit committee.

#### **UNIT IV:**

Board of directors, appointment and qualifications of directors; Director Identification Number (DIN); Disqualifications, Removal of directors; Legal positions, Powers, Duties and responsibilities; Additional Director, Alternate Director, Nominee Director, Director appointed by casual Vacancy, Key Managerial Personnel, Managing Director, Manager and Whole Time Director.

#### **UNIT V:**

(a): Oppression, Mismanagement, Corporate Restructuring, and Winding Up Oppression, Mismanagement, Rights to apply, Powers of Tribunal, Provisions related to Compromises, Arrangement and Amalgamations, Concept and Modes of Winding Up; Provisions of winding up under Insolvency and Bankruptcy Code, 2016. (b): National Company Law Tribunal and Appellate Tribunal Definitions; Constitution of National Company Law Tribunal; Constitution of Appellate Tribunal; Appeal from orders of Tribunal; Power to punish for contempt.

#### **Course Outcomes(CO)**

I CO1: Explain relevant definitions and provisions relating to issue of prospectus and allotment of shares;

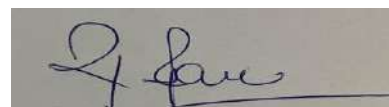

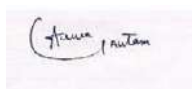

II CO 2: Synthesize company processes, meetings, and decisions;

III CO3: Describe the framework of dividend distribution, Accounts of the company and Audit and Auditors of company;

IV CO4: Determine the role of Board of directors and their legal position;

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## BCOM I SEMESTER

### FINANCIAL MANAGEMENT

SUBJECT CODE: BCM118B

CREDITS: 3L

**Objective:** To familiarize the students with the principles and practices of financial management.

#### Unit I:

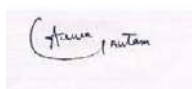

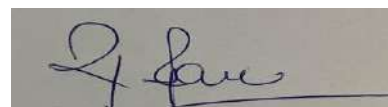

Nature, scope, and objectives of financial management- profit maximization Vs wealth maximization; Value maximization- concept and implications, Economic Value Added (EVA), Market Value Added (MVA). Functions and Responsibilities of Finance Manager. Responsible Investment – concept and significance; Triple Bottom Line Concept-People, Planet and Profit. Time value of money, Risk and Return Analysis; Emerging dimensions in finance area- Crypto currencies, block chain. b. Sources of Finance Different Sources of Finance including internal sources, external sources, other sources like Venture capital, Lease financing, Financial institution, Private equity, Bonds- Indian as well as International, Masala bond, Bridge finance

#### Unit II:

Capital Budgeting Process, Cash Flow Estimation, Payback Period Method, Discounted Payback Period Method, Accounting Rate of Return, Net Present Value (NPV), Net Terminal Value, Internal Rate of Return (IRR), Profitability Index, Capital budgeting under Risk & Uncertainty-Certainty Equivalent Approach and RiskAdjusted Discount Rate Method. Responsible Investment-Environmental, Social and governance (ESG) factors into investment decisions, to better manage risk and generate sustainable long-term returns. Use of expert system in Capital Budgeting Decisions.

#### Unit III:

Sources of long-term financing, Components of cost of capital, Method for calculating Cost of Equity, Cost of Retained Earnings, Cost of Debt and Cost of

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Preference Capital, Weighted Average Cost of Capital (WACC) and Marginal Cost of Capital. Capital Structure- Theories of Capital Structure (Net Income, Net Operating Income, MM Hypothesis, Traditional Approach). Operating Leverage, Financial Leverage and Combined Leverage. EBIT-EPS Analysis. Cost-Benefits Analysis including social cost. Determinants of Optimum Capital Structure. Use of expert system in financing decisions.

#### Unit IV:

Theories for relevance and irrelevance of dividend decision for corporate valuation- Walter's Model, Gordon's Model, MM Approach, Forms of dividend payment, types of dividend policies and Determinants of Dividend policy. Corporate Social Responsibility (CSR) –Policy, Strategy, Implications and Governance.

#### Unit V:

Concept of Working Capital, Operating & Cash Cycles, Risk-return Trade off, working capital estimation, cash management, an overview of receivables management, factoring and inventory management. Use of expert system in working capital decisions.

#### Course outcomes(CO)

- I CO1: Explain the nature and scope of financial management;
- II CO 2: Analyze capital budgeting process and apply capital budgeting techniques for business decisions;
- III CO3: Discuss the various sources of finance in today's competitive industry;
- IV CO4: Explain various capital structure theories and analyze factors affecting capital structure decisions;

**BCOM I SEM  
MANAGERIAL ECONOMICS  
SUBJECT CODE: BCM112B  
CREDITS: 3L**

**Learning Objective:** The purpose of this course is to apply microeconomics concepts and techniques in evaluating business decisions taken by firms. The emphasis is on explaining how the tools of standard price theory can be employed to formulate a decision problem, evaluate alternative courses of action and finally choose among alternatives. Simple geometry and basic concepts of mathematics will be used in course of teaching.

**Unit I**

Introduction to Managerial economics, nature, significance, scope of managerial economics, role of economics in business decision making. Macro and Micro economics, Macro Economic Variables, Demand & Supply, determinants of demand and supply, movement vs. shift in demand curve, movement along a supply curve vs. shift in supply curve.

Elasticity of Demand & Supply. Price, Income & cross elasticity & advertising elasticity. Methods to calculate price elasticity.

**Unit II**

Utility: Cardinal & Ordinal, Law of diminishing marginal utility, law of equi-marginal utility. Theory of Consumer Behaviour, Indifference curve theory, Indifference curves & its properties

**Unit III**

Production: Technology of Production; Production with one variable input, Production with two variable input, Returns to Scale.

**Unit IV**

Cost: Measuring Costs, Costs in the Short & long run, Long run vs. Short run cost curves,

profit maximization & cost minimization, equilibrium of the firm; Economies of Scale.

### Unit V

Theory of Firm & Market Organization: Perfect Competition: Perfectly Competitive markets, Profit Maximization, Marginal revenue, Marginal Cost, Output in the short run & long run. Monopoly: Monopoly Power & its sources, Monopolistic Competition & Oligopoly Kinked demand curve, price leadership of a firm

### Course outcomes(CO)

I CO1: To understand how to apply microeconomics, concept, and technique in evaluating business decisions.

II CO 2: Understanding the nature, significance and scope of managerial economics

III CO3: Knowing to demand, supply and market equilibrium,

IV CO4: Knowing about production technology and theory of firm & market organization.

V CO5: To understand and analyze market structure.

### B.COM I SEMESTER

#### Web Development

Course Code: DCA001

Credits: (2L)

### Course Objectives:

1. Students will be able to understand and be familiar with client server architecture.
2. Students will be able to understand and able to develop a web application using java technologies.
3. Students will be able to learn the skills and project-based experience needed for entry into web application.
4. Students will be able to learn the concepts of developing a dynamic webpage by the use of java script and CSS
5. Students will be able to learn the concept of XML, MySql and server side scripting.

## Syllabus

### Unit -1

HTML5 and CSS3 HTML5- Basic Tags, Tables,Forms.HTML5 Tags,HTML Graphics, HTML media, HTML Graphics,HTML APIs. CSS - Background, Borders,margin, Box model. Styling text, fonts,list,links,tables. CSS overflow,float,inline blocks, pseudoclasses,pseudoelements.CSS border images,rounded corners

### Unit-2

Java Script Client side scripting using java script, Introduction to java script, internal and external Java script files, variables, control statements, loops, Arrays , string handling , How to write functions in JavaScript, inputting and outputting from form elements to JavaScript. DOM concept, creating html elements using java script. Drawing 2D shapes, handling events. Introduction to AJAX

### Unit-3

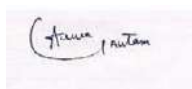

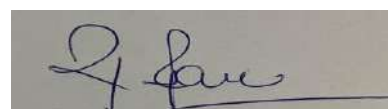

Building Single page applications with Angular JS Single page application – Introduction , two way data binding, MVC in angular JS, controllers, getting user inputs , loops , Client side routing – accessing URL data , various ways to provide data in angular JS.

### Unit -4

Server Side Programming Server side scripting, Difference between client side and server side scripting languages. Introduction to PHP, variables, control statements, loops, Arrays, string handling, PHP forms, Global variables in PHP, Regular expression and pattern matching, Database programming: inputting and outputting data from MySQL using PHP, insertion , deletion and updating data. State management in web applications, cookies, Application and session state.

### Unit-5

Introduction to Xml, usage of XML, XML tags, elements and attributes, attribute type, XML validation: DTD and XSD, XML DOM Case study:-Application Development using Laravel framework

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Textbook/Reference:

- The Complete Reference, HTML and CSS by Thomas A Powell latest edition

### Course Outcomes( CO's)

After the completion of the course the student will be able to

**CO1:**To create a dynamic webpage by the use of java script and DHTML.

**CO2:** To create a well formed / valid XML document.

**CO 3:** To connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.

**CO 4.** To create a server side java application called JSP to catch form data sent from client and store it on database.

**CO 5.** To write a server side java application called servlet to catch form data sent from client, process it and store it on database

### B.COM II SEMESTER COST ACCOUNTING SUBJECT CODE: BCM101C CREDITS: 3L

#### Objectives:-

- To understand the basic concepts and processes used to determine product cost.
- To be able to interpret cost accounting statements.

#### Unit 1: Concept and Nature of Cost Accounting

Concept of cost and costing, Importance and features of costing, Cost classification, Concept of cost unit, cost center, meaning of 'unit' from the view point of producer, Establishment of an

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

ideal cost accounting system, Cost Reduction, Cost Control, Installation of Costing System, Application of IT in Cost Accounting. Preparation of Cost Sheet for manufacturing and service sector. Material Cost Direct and indirect material, Valuation of materials, Principles of valuation of material as per AS- 2/ Ind AS- 2; CAS- VI, Material control, purchases, Objectives and functions of purchase department, Inventory control: Meaning and techniques including latest techniques like Just in Time (JIT) Inventory Management, Kanban, Kaizen, Determination of Economic Order Quantity (EOQ). Treatment of waste, scrap, spoilage, defective and obsolesce.

## Unit 2: Employee Cost and Overheads

Meaning and classification of employee cost, Requisite of a good wage and incentive system, Time and piece rate plans, Profit sharing, Employee productivity and cost. Labor cost control – techniques, Employee turnover, Remuneration and Incentive schemes (Rowan & Halsey Plan only).

Overheads: Definition and classification, Production overheads – allocation and apportionment of cost, Meaning and Methods of cost absorption, Treatment of over- absorption & under-absorption of overheads, Administration and selling & distribution overheads – methods of ascertainment, Treatment of Research & Development cost in Cost Accounting.

## Unit 3: Methods of Costing: Job Costing, Batch Costing and Process Costing

Meaning of Job Cost, its application and accounting, Preparation of Job cost sheet. Meaning of Batch Cost and its application in today's industry. Meaning and application of process costing, Methods of determination of cost in process costing, Normal and abnormal loss and gain, Inter process costing and profit ascertainment. Choice between process and job costing.

## Unit 4: Methods of Costing: Contract Costing, Service Costing

Meaning, features and types of contract, Methods of cost determination in contract costing, Escalation clause and cost-plus contract. Meaning and scope of service costing, Factors in ascertaining service cost, Ascertainment of service cost of following services: 1. Transport 2. Hospital 3. Canteen 4. Toll 5. Education institution 6. IT industry 7. Hotel Any other contemporary service industry.

## Unit 5: Activity Based Costing (ABC)

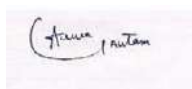

Concept, significance and salient features; Stages and flow of costs in ABC; Basic components of ABC - resource drivers and cost drivers; Application of ABC in a manufacturing organisation and service industry.

## Course outcomes(CO)

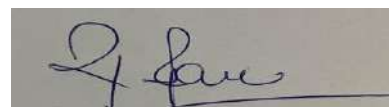

- I CO1: Determine various types of cost of production;
- II CO 2: Compute unit cost and total cost of production and prepare cost statement;.
- III CO3: Compute employee cost, employee productivity and employee turnover;
- IV CO4: Determine cost under job costing, batch costing, process costing, contract costing and service costing

**B.Com II SEMESTER**  
**Principles of Marketing Management**  
**SUBJECT CODE: BCM115A**  
**CREDITS: (3L)**  
**Principles of Marketing Management**  
**SUBJECT CODE: BCM115B**  
**CREDITS: (3L)**

**Objectives:**

This course aims to familiarize students with the marketing function in organizations. It will equip the students with understanding of the Marketing Mix elements and sensitize them to certain emerging issues in Marketing.

**UNIT I**

Fundamentals of marketing - Role of Marketing - Relationship of Marketing with other functional areas - concept of marketing mix-Marketing approaches - Various Environmental factors affecting the marketing functions.

**UNIT II**

Buyer Behaviour - Consumer goods and Industrial goods - Buying motives - Factors influencing buyer Behavior, Market segmentation - Need and basis of Segmentation - Targeting - positioning.

**UNIT III**

The Product - Characteristics - benefits - classifications - consumer goods - industrial goods - New Product Development process - Product Life Cycle - Branding –Packaging- Labeling– Pricing: Meaning, Objectives and Types of Pricing.

**UNIT IV**

Promotion –Meaning, Objectives – Types - A brief overview of: Advertising - Publicity - Public Relations - personal Selling - Direct selling and Sales promotion.

**UNIT V**

Physical Distribution: Importance – Channels of Distribution: Distribution of consumer goods, Distribution of industrial goods and Distribution of Agriculture goods – Levels of channels: Zero level, one level, two level and three level channel - distribution issues

**Text Books:**

1. Kotler, P. & Keller, K. L. (2012).  
*Marketing Management* (14th ed.). Pearson.

2. Kotler, P., Armstrong, G., Agnihotri, P. Y., & UlHaq, E. (2010). *Principles of Marketing - A South Asian Perspective*. (13th ed.). Pearson.

**B.Com II Semester**

## Business Statistics

SUBJECT CODE:BCM129A

CREDITS: (3L+1T)4

**Objectives:** To understand & apply various statistical methods of data summarization and analysis, to gain ability to take decision in diverse aspects of business environment.

### UNIT I

Meaning & Definition of Statistics, Functions, Applications, Limitations and Distrust of Statistics. Census and sampling, methods of sampling, Methods of collections of Primary and secondary data, Schedule & Questionnaire,

### UNIT II

Classification and tabulation of Data, Diagrams and Graphs, concept of central tendency: meaning, definition, determination of Mean including Geometric Mean and Harmonic Mean, Median, Mode.

### UNIT III

Measures of Dispersion, Meaning, Objectives, Importance, Absolute and relative measure of dispersion, essential characteristics of a good measure of dispersion, selective of an appropriate measure of dispersion.

### UNIT IV

Skewness: meaning, measures of Skewness, difference between Dispersion and Skewness.

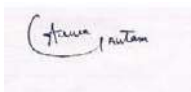

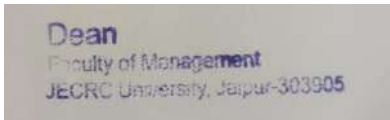

### UNIT V

Correlation: meaning, Definition, types, methods of determining correlation. Regression Analysis: meaning, utility, types, difference between correlation and regression, methods of computing regression lines, conceptual frame work and their application in business.

### Course outcomes(CO)

- I CO1: To apply and understand various statistical methods of data summarization and analysis.
- II CO 2: To find ability to take decisions in diverse aspects of business environment.
- III CO3:To understand classification and tabulation of data.
- IV CO4: To know technical terms like skewness, measures of dispersion and co-relation.

## B.Com II SEMESTER Organisational Behaviour SUBJECT CODE: BCM119A CREDITS: (3L)

### Objectives:

This course is designed to equip the students with the tools necessary to understanding the dynamics of individual and group behaviour for efficient and effective utilization of human resources in the organizations.

### UNIT I: Introduction and Individual Behaviour

Organisational Behaviour: concepts, determinants, challenges and opportunities of OB. Contributing disciplines of OB. Organisational Behaviour Models. Personality- Type A and B, Big Five personality types, Factors influencing personality. Values and Attitudes Concept and types of values: Terminal value and Instrumental Value. Components of attitude, job related attitudes. Learning- Concept, Learning theories, and reinforcement. Perception and Emotions- Concept, Perceptual process, Importance, Factors influencing perception, Emotional Intelligence

### UNIT II: Decision making and Communication

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Concept and nature of decision making process, Individual versus group decision making. Communication and Feedback, Transactional Analysis (TA), Johari Window.

### **UNIT III: Motivation**

Meaning and Importance, Equity theory of Motivation, Vroom's Valence Expectancy theory, Ken Thomas' Intrinsic Motivation theory, McClelland's theory of Motivation. Motivation and organisational effectiveness.

### **UNIT IV: Leadership, Power, and Conflict**

Meaning and concept of Leadership, Trait theory, Transactional, Charismatic, and Transformational Leadership. Power and conflict, Power tactics, Sources of conflict, Conflict Resolution Strategies.

### **UNIT V: Dynamics of Organisational Behaviour**

Organisational Culture and climate- Concept and determinants of organisational culture. Organisational change Importance, Managing Change. Individual and organisational factors to stress; Prevention and Management of stress. Organizational Change – Importance, Stability vs. Change, Proactive vs Reaction change, Change process, Resistance to change, Managing change.

### **Text Books:**

1. Robbins, S.P., *Organisational Behaviour*, Prentice Hall of India Pvt. Ltd., New Delhi.
2. Greenberg, Jerald, and Robert A Baron, *Organisational Behaviour*, Prentice Hall of India Pvt. Ltd., New Delhi.
3. Luthans, F., *Organisational Behaviour*, McGraw Hill International. New York.

4. Moshal, B.S., *Organisational Behaviour*, Ane Books Pvt. Ltd., New Delhi
5. Sekaran, Uma, *Organisational Behaviour: Text and Cases*, Tata McGraw Hill, New Delhi.

### **Course Outcome (CO):**

At the end of this course students will be:

- I. CO1: Differentiate between various types of personality using standard tools;
- II. CO2: Appreciate the applicability of decision making process in real life situations and use TA and Johari Window;
- III. CO3: Have knowledge to understand the level of motivation in employees;
- IV. CO 4: Describe characteristics of a leader;
- V. CO 5: Learn how to build a supportive organisational culture

**B.Com II SEMESTER**  
**Course Name: Project Management Lab**  
**Course Code (DCA002)**  
**CREDITS: (1L)**

**Course Objective**

1. To learn to Create the project
2. To learn the Task Breakdown, and utilization of resources
3. To learn how to Assign resources, calculating costs

**Lab Exercise based on given topic**

1. Introduction to ProjectLibre and Project Management
2. Overview of ProjectLibre
3. Introduction to Project Management terminology
4. Tasks, Resources, and Costs
5. Installing ProjectLibre
6. Starting and Saving Projects
7. Navigation
8. Create a Project
9. Tasks
10. Resources
11. Cost
12. Calendars
13. WBS
14. RBS
15. Task Usage
16. Resource Usage
17. Baselines
18. Earned Value
19. Printing
20. Reporting

**Course Outcome( CO's)**

After the completion of the course the student will be able to

CO1 Students will be able to identify basic concepts of Project Libre  
CO2 Students will learn to describe the project, its cost etc.  
CO3 Students will be able to create installing, creating a project.  
CO4 Students will be able to identify task, and resource usages.  
CO5 Students will be able to combine Project Libre tasks and will be efficiently use cost and effects.

**B.Com III SEMESTER  
CORPORATE ACCOUNTING  
SUBJECT CODE: BCM102C  
CREDITS: 3L**

**Objective:** To make the students familiar with corporate accounting procedures.

**Unit 1: Accounts of Holding Company**

Concept and meaning of different terms: holding company, subsidiary company, pre-acquisition profit/loss, postacquisition profit/loss, minority interest/non-controlling interest; cost of control/Goodwill or gain on bargain purchase. Meaning and need for consolidation of financial statements; Preparation of consolidated financial statements as per AS 21 / Ind AS 110 (with one subsidiary company).

**Unit 2: Winding up of a Company**

Meaning and modes of winding up; Types of winding up; Procedures of winding up; Contributories; Preferential payments; Voluntary winding up; Preparation of Liquidator's Final Statement of Account; Preparation of Statement of Affairs.

**Unit 3: Accounts of Banking Companies**

Statutory books to be maintained; Special features of Bank book keeping; Advances – its classification and provisions to be made against advances; Rebate on Bills Discounted, Income recognition; Preparation and presentation of Financial Statements using appropriate software

**Unit 4: Accounts of Insurance Companies**

Books maintained by a life insurance companies and general insurance companies. Accounts of Life insurance company – Revenue Account and Profit and loss Account and ascertainment of profit under Life insurance business; preparation of Balance Sheet using appropriate software; Accounts of general insurance business – Revenue Account, Profit and Loss Account, and Balance Sheet using appropriate software.

**Unit 5: Investment Accounts**

Meaning of Investment Accounts; cum-interest, ex-interest, cum-dividend and ex-dividend. Accounting for fixed interest earning securities and variable earning securities, bonus shares and right shares.

**READINGS:**

**Essential Readings:**

1. Monga, J.R., *Fundamentals of Corporate Accounting*, Mayur Paper Backs, New Delhi.

**Suggested Readings:**

1. Sehgal, Ashok and Deepak Sehgal, *Corporate Accounting*, Taxman Publication, New Delhi.  
2. Maheshwari, S.N. and S. K. Maheshwari, *Corporate Accounting*, Vikas Publishing House, New Delhi.

1. Corporate Accounting:

CO1: Prepare consolidated balance sheet of holding company with one subsidiary

CO2: Make accounting entries related to winding up of a company;.

CO3: Make accounting entries related to winding up of a company;

CO4: Provide services to corporate investors in preparing necessary accounts relating to investment in securities.

**B.COM III SEMESTER**  
**BANKING LAW AND PRACTICES**  
**SUBJECT CODE: BCM281B**  
**CREDITS: 3L**

**Objective:-**

- To acquaint the students with fundamental of banking & banking system in India.
- To familiarize them with the role of Negotiable Instruments, Non nationalized Banks, RBI in Banking development.

**Unit I Banking Business**

Definition and function of banks, need for banks; legal framework; structure, organisation and working of banks, need for proper regulation and supervision; banker and customer relationship, general and special types of customers. Types of Deposits: Types of banks in India; Role of Foreign Banks in India; Advantages and Disadvantages of Foreign banks, Road Map for Foreign Banks in India; India's approach to Banking Sector reforms; Achievements of financial sector reforms and areas of concern, Credit Allocation Policies of Commercial banks, Credit Market Reforms.

**Unit II Banking Operations**

Cheque: definition, features and types of cheque; Endorsement: meaning and essentials of a valid endorsement, types of endorsement; Era of Internet Banking and

its benefits, Mobile Banking, Home banking, Virtual Banking, Electronic Clearing System

(ECS), E-payments, Electronic Fund Transfer (EFT), E-money, Unified Payment Interface (UPI), Safeguard for internet banking, Critical comparison of traditional banking methods and ebanking; Balance Sheet of a Bank, special items of a Balance Sheet, off Balance Sheet Items; Anti-money Laundering Guidelines. Basics of Negotiable Instruments

### **Unit III Loans and Advances**

Principles of sound lending, Types of loans and advances, Advances against various securities; Securitization of Standard Assets and its Computation; Basel Accord: merits and weaknesses of the Basel II, Basel III, and Basel IV. Meaning of Non-performing assets, types of non-performing assets, treatment in balance sheet of bank and provisioning requirements, Non-performing assets in Indian Banking system- issues and resolution

### **Unit IV Insurance Business**

Basic concept of Risk-kinds of Business Risks; Insurance Business: concept, characteristics, functions; Fundamental principles- Indemnity, Insurable Interest, Utmost Good faith, Proximate Cause, Contribution, Subrogation. Reinsurance and Coinsurance: features, objectives, methods; Bancassurance: features and merits.

### **Unit V Life and Non-Life Insurance**

Types of Insurance, Life and Non-Life: Features, needs, policies of different types of Insurance, Control of Malpractices and Mis-Selling, Negligence, Loss Assessment and Loss control, Computation of Insurance Premium, Dematerialization of Insurance Policies; Claims and Settlement Procedure; Regulatory Framework of Insurance: IRDA Act, 1999; Objectives of IRDA, Composition of IRDA, Duties, Powers and Functions of IRDA; Role of IRDA: Delegation of Powers, establishment of Insurance Advisory Committee, Power to make Regulations

### **Course outcomes(CO)**

- I CO1: Explain the meaning, scope and functions of Banking along with legal framework;
- II CO 2: Assess the operations of banking and its services;
- III CO3: Evaluate the lending operations of banks and identify causes of NPA in banks;
- IV CO4: Explain the concept of insurance and its principles;

**D.M. Mithani;** Money, Banking & International Trade ,Himalya Publishing House, Mumbai.

**Trivedi, Choudhary& Kumar;** Indian Bank System; Ramesh Book Depot, Jaipur.

**Varshney P.N.;** Banking Law & Practice,

**B.COM III SEMESTER**  
**E- ACCOUNTING**  
**SUBJECT CODE: BCM103C**  
**CREDITS: 3L**

**Objective:** To impart conceptual and practical knowledge of E-Accounting that uses database system resources and also the software to store, maintain and process accounting data for providing various accounting reports.

**Unit I:**

Meaning, Basics of Computerized accounting, Concepts of Accounting groups, Hierarchy of accounts, Codification in accounting. Accounting package - Setting up an accounting entity, Creation of groups and accounts, Accounting standards.

**UNIT II**

Designing and creating vouchers Data Entry operations using the vouchers .Processing for reports to prepare ledger accounts, trial balance and balance sheet.

**Unit III:**

Identifying and appreciating the data content in accounting transactions; overview of database concepts, ER model; creating and implementing RDM for Financial Accounting; SQL to retrieve data and generate accounting information.

Documenting transactions using vouchers; System of vouchers and database design for accounting; Storing and maintain transaction data.

**Unit IV:**

Decomposing Accounting reports to appreciate information content, Identifying accounting, information and appropriate queries, Forming and executing the SQL , Generating Accounting information for a report

**Unit V**

Creating data table defining relationships and constraints

Designing Accounting Vouchers

Designing Accounting Reports;

☐ Cash Book

☐ Journal Book

☐ Ledger

☐ Trial Balance

☐ Profit & Loss Account

☐ Balance Sheet

Suggested Readings:-

- FINANCIAL ACCOUNTING : A MANAGERIAL PERSPECTIVE , R NARAYAN SWAMY, PHI LEARNING PVT. LTD
- E-Accounting:

CO1: To impart conceptual and practical knowledge of E-Accounting that uses database system resources.

CO2: To acquaint with the software to store, maintain and process accounting data for providing various accounting reports.

CO 3: Students will explore performance, liquid assets, inventories, fixed assets, intangible assets, long-term obligations, investments, equity, and cash flows using different kind of software.

CO 4: Identifying and appreciating the data content in accounting transactions.

CO5: Understanding the meaning, Basics of Computerized accounting, Concepts of Accounting groups.

**B.Com III SEMESTER  
RESEARCH METHODOLOGY  
SUBJECT CODE: BCM119B  
CREDITS: 3L**

**Unit I**

Meaning, Objective and Motivation in research, Type of research, research approaches, Significance of research, research process, criteria for good research, Define the research problem, selecting a problem, meaning of research design, need of research design, features of good design.

**Unit II**

Sampling Designing: Census and sample survey, implications of sample design, steps in sample design, criteria of selecting a sample, characteristic of a good sample design, Different type of sample design, random sampling. Data collection techniques: collection of data, interview, schedule and questionnaire method, difference between questionnaires and

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

schedules, Collection of secondary data, selection of appropriate method for data collection.

### Unit III

Processing and analysis of data, type of analysis, statistics in research, type of series, measurement of central tendency, measurement of dispersion, regression analysis, least square method, Mean based method, correlation analysis, Karl Pearson coefficient of correlation, Spearman single rank method, repeated rank method, relationship between correlation and regression analysis.

### Unit IV

Hypothesis Design, Basic concept concerning hypothesis testing, procedure of hypothesis testing, Important Parametric test: Z test, T test and F test, Non parametric test: Chi square test, Sign test, run test, mann- whitney U test.

### Unit V

Scaling technique, measurement in research, type of measurement scales, techniques of developing measurement tools, Interpretation and report writing, technique of interpretation, Significance of report writing, types of report, Different steps in writing a report, Lay out of the research report,

### Course outcomes(CO)

- I CO1: To know about the various approaches to research and its significance.
- II CO 2: To understand the various implications of various parameters of research.
- III CO3: To help in analysis of various data and their correlation
- IV CO4: To help students in knowing design and procedure of hypothesis and subsequent research

**B.COM III Semester**  
**Course Name: Advanced Spread Sheet Lab**  
**Course Code (DCA003)**  
**CREDITS: 2P**

**Course Objective:**

1. Students will be able to understand the basics of Excel.
2. Students will be able to understand the concepts of working with the functions of advanced excel.

**Syllabus**

**Advanced Excel Course - Overview of the Basics of Excel**

Customizing common options in Excel, Absolute and relative cells, Protecting and un-protecting worksheets and cells

**Advanced Excel Course - Working with Functions**

Writing conditional expressions (using IF), Using logical functions (AND, OR, NOT),

Using lookup and reference functions (VLOOKUP, HLOOKUP, MATCH, INDEX),

VlookUP with Exact Match, Approximate Match, Nested VlookUP with Exact Match

VlookUP with Tables, Dynamic Ranges, Nested VlookUP with Exact Match, Using VLookUP to consolidate Data from Multiple Sheets

**Advanced Excel Course - Data Validations**

Specifying a valid range of values for a cell, Specifying a list of valid values for a cell, Specifying custom validations based on formula for a cell

**Advanced Excel Course - Working with Templates**

Designing the structure of a template, Using templates for standardization of worksheets

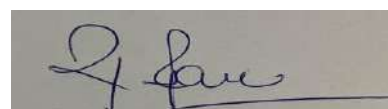

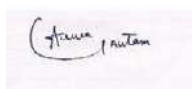

**Advanced Excel Course - Sorting and Filtering Data**

Sorting tables, Using multiple-level sorting, Using custom sorting, Filtering data for selected view (AutoFilter), Using advanced filter options

**Advanced Excel Course - More Functions**

Date and time functions, Text functions, Database functions, Power Functions (CountIf, CountIFS, SumIf, SumIFS)

**Advanced Excel Course – Formatting**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Using auto formatting option for worksheets, Using conditional formatting option for rows, columns and cells

### **Advanced Excel Course – Macros**

Relative & Absolute Macros, Editing Macro's

### **Advanced Excel Course - WhatIf Analysis**

Goal Seek, Data Tables, Scenario Manager

### **Advanced Excel Course – Charts**

Using Charts, Formatting Charts, Using 3D Graphs, Using Bar and Line Chart together, Using Secondary Axis in Graphs, Sharing Charts with PowerPoint / MS Word, Dynamically, (Data Modified in Excel, Chart would automatically get updated)

### **Advanced Excel Course - Working with Reports**

Creating subtotals, Multiple-level subtotals, Creating Pivot tables, Formatting and customizing Pivot tables, Using advanced options of Pivot tables, Pivot charts, Consolidating data from multiple sheets and files using Pivot tables, Using external data sources, Using data consolidation feature to consolidate data, Show Value As ( % of Row, % of Column, Running Total, Compare with Specific Field), Viewing Subtotal under Pivot, Creating Slicers ( Version 2010 & Above), Designing the structure of a template, Print Titles Repeat Rows / Columns

### **Analysis ToolPak**

Use of the Analysis ToolPak to perform complex data analysis

### **Course Outcome( CO's)**

- CO1.** Students will learn to use spreadsheet concepts and explore the Microsoft Office Excel environment.
- CO2.** Students will apply the concepts of to create, open and view a workbook.
- CO 3.** Students will Illustrate different advanced excel formatting.
- CO 4.** Students will be apply date and time functions
- CO 5.** Students will learn to describe basic uses of advanced excel functions

**B.COM V SEMESTER  
INCOME TAX  
SUBJECT CODE: BCM104B  
CREDITS: 3L+1T (4)**

**Objective:** The students should be able to demonstrate an understanding of the tax provisions enabling them to make use of legitimate tax shelters, deductions, exceptions, rebates and allowances.

#### **Unit 1: Basic Concepts**

Tax: concept, types – direct and indirect; canons of taxation; Direct Tax: Need, features and basis of charges. Income Tax (as per Income Tax Act 1961 and amendments): Basic Concepts; Residential status; Scope of Total Income, Heads of Income; Income which do not form a part of Total Income; Agriculture Income and its taxability.

### **Unit 2: Income from Salary and House Property**

- a. Meaning of salary, Basis of charge, conditions of chargeability, Allowances, Perquisites, Deductions and exemptions, Computation of taxable Income from Salary.
- b. Income from house property Basis of charge, Determinants of Annual Value, Deductions and exemptions, computation of taxable income House Property.

### **Unit 3: Profits and gains from business or profession, capital gains and income from other sources**

- a. Meaning of business income, methods of accounting, Deductions and Disallowances under the Act, Computation of presumptive income under Income-tax Act, Computation of taxable income from Business and profession.
- b. Meaning of Capital Asset, Basis of Charge, Exemptions related to capital gains; Meaning of Transfer, Computation of taxable capital Gain.
- c. Income from Other Sources Basis of charge - Dividend, Interest on securities, winning from lotteries, Crossword puzzles, Horse races, Card games etc., Permissible deductions, impermissible deductions.

### **Unit 4: Computation of Total income and Tax Liability of individual and HUF**

Income of other persons included in assessee's total income, Aggregation of income and set-off and carry forward of losses; Deductions from gross total income; Rebates and reliefs; Computation of total income and tax liability of individuals and HUF.

### **Unit 5: Preparation of Return of Income**

Filing of returns: Manually and on-line filing of Returns of Income & TDS; Provision & Procedures of Compulsory on-line filing of returns for specified assesses

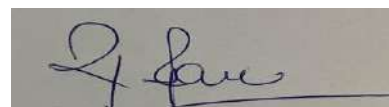

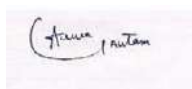

### **Books Recommended:**

- 1) Agarwal, Shah, Jain, Managal, Sharma – Income Tax (RBD, Jaipur)
- 2) Gupta, Khatri, Goyal –Income Tax (Kailash Book Depot)

## B.COM V SEMESTER

### Auditing & Assurance

Subject Code: BCM126A

Credit: 3

#### A.

**Introduction:** This course is offered by Dept. of Commerce as a compulsory subject, targeting students who wish to pursue a career in accounting and auditing. As Auditing is an independent investigation of some particular activity. Although auditing has a precise meaning only when used with a limited modifier, such as tax auditing or financial auditing, generally auditing is defined as a systematic process of objectively obtaining and evaluating evidence regarding assertions about economic actions and events to ascertain the degree of correspondence between those assertions and established criteria and communicating the results to interested users.

**B. Course Outcomes:** At the end of the course, students will be able to-

1. Describe the audit and other assurance engagements, corporate governance, internal and statutory audit.
2. Recognize risk assessment, audit planning, documentation and audit evidence.
3. Describe internal control, internal check, test of control and other audit procedures.
4. Explain sampling, audit of non-current assets, inventory, cash & bank.
5. Discuss the finalization of audit report and types of audit report for creating employability.

#### SYLLABUS

<b>Unit 1</b>	<b>Auditing:</b> Meaning, definition, Importance, Accounting and Auditing, Limitations, Detection and Prevention of Frauds and Errors: Fraud and fraudulent behavior and their prevention in business,
<b>Unit 2</b>	<b>Basic principles</b> governing an audit (SA200), Type of audit, Internal Control, Internal Check and Internal Audit, Evaluation of Internal Control System (SA-256), Internal Control System regarding Purchases, Sales, salaries and wages. <b>Audit Procedure:</b> Audit planning, Audit Programme, Audit working paper, Audit files, Audit Evidence: Methods of obtaining Audit evidence (SA-500 & 501), Financial statement assertions and audit evidence

**CREDITS: (3)**

**Objectives:**

This course sets up study in the field of investments related to options, futures and other derivative securities. The course will acquaint students with derivative securities, markets, pricing, hedging and trading strategies of derivative instruments.

**Unit I:**

Definition of Derivative Securities- Brief history of derivatives, Evolution of Commodity, Structure of derivative markets, forwards, futures, options, swaps etc.

**Unit II:**

Market Characteristics- Futures and Options contract specifications, underlying asset, contract size, and delivery specifications. Marking to market using margin accounts. Familiarizing with market quotes.

**Unit III:**

Trading Strategies involving Options and Futures. Interest rate derivatives, Contractual specification: floating and fixed rate. Valuation of interest rate derivatives. Derivatives Pricing Theory- Option Pricing: Black-Scholes formula for option pricing: derivation and properties..

**Unit IV:**

Continuous-Time Models. Futures Pricing: Pricing by arbitrage: relationship between futures and spot price (cost of carry and reverse cost of carry), difference between futures and forward price, futures on dividend-paying assets.

**Unit V:**

Risk Analysis and Management- Risk Measurement and Management Framework, Option's delta, gamma, Vega, theta, rho. Hedging with futures.

Course outcome-

1. CO1: Understanding of the motives, reasons and explanations for corporate hedging activity.
2. CO2: Knowledge of key financial building blocks, used in constructing complex derivative instruments (eg futures, forwards, options and swaps).
3. CO3: Analysis of payoffs and strategies involved in trading derivative instruments and combinations of derivatives.

**Faculty of Management**  
**Bachelor of Commerce**

**B.Com Scheme 2021-2024**

## **PROGRAM OUTCOMES (POs)**

A Management graduate will be able to demonstrate:

**PO1: Management Knowledge:** To provide students with comprehensive management knowledge that can help them to be a business leader and manager

**PO2: Analytical Skills:** To required conceptual, analytical, technical, entrepreneurial and human relation skills to be an effective management professional and ethical and responsible citizen.

**PO3: Research Aptitude:** An ability to demonstrate a critical awareness of current issues (diversity, social responsibility, sustainability, innovation, knowledge management, etc.) in business and management which is informed by leading edged research and practice in the field.

**PO4: Leadership Skills:** Display leadership competencies in implementing, coordinating and inspiring subordinates to manage change.

**PO5: Culture, Values and Ethics:** Naturalization with social responsibility issues that manager must address, including business ethics, cultural diversity, environmental concerns and sustainable development.

**PO6: Application Skills:** Demonstrate analytical skills applying business analysis, data management and diagnostic problem-solving skills in order to support management decision-making.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

**PO7: Entrepreneurship Skills:** Apply the entrepreneurial, analytical, managerial skills for effective business management.

**PO8 Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO9: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO10: Life Long Learning:** Ability to integrate business knowledge and management techniques and aid planning and control in a changing business environment.

**Program Specific outcomes- Human Resource Management**

- I. Students who undertake this programme will:
- II. PSO 1: Demonstrate an understanding of key terms, theories/concepts and practices within the field of HRM and Demonstrate competence in development and problem-solving in the area of HR Management;
- III. PSO 2: Provide innovative solutions to problems in the fields of HRM and Be able to identify and appreciate the significance of the ethical issues in HR.
- IV. PSO 3: Work effectively with colleagues with diverse skills, experience levels and way of thinking;
- V. PSO 4 Be able to evaluate HRM related social, cultural, ethical and environmental responsibilities and issues in a global context.

**Program Specific outcomes — Finance**

- I. PSO 1: Understanding of the concept of the time value of money and be able to use basic time value concepts to make basic capital investment decisions, and
- II. PSO 2: Analyse and value securities, including debt and equity instruments and Understanding of the relationship between risk and expected return generally and for specific security classes.
- III. PSO 3: Knowledge of the characteristics of the principle asset classes and key securities to be able to evaluate their appropriateness as investments in a broad range of portfolio applications.
- IV. PSO 4: Ability to use the concepts of the time value of money, the risk/expected return relationship and asset-class and security diversification, to construct an investment portfolio that satisfies a hypothetical client's objectives and constraints.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

**Program Specific outcomes — Marketing Management**

- I. PSO1: Identify core concepts of marketing and the role of marketing in business and society. To gain Knowledge of social, legal, ethical and technological forces on marketing decision-making.
- II. PSO 2: Appreciation for the global nature of marketing and appropriate measures to operate effectively in international settings. Ability to develop marketing strategies based on product, price, place and promotion objectives.
- III. PSO 3: Ability to communicate the unique marketing mixes and selling propositions for specific product offerings.
- IV. PSO 4: Ability to formulate marketing strategies incorporating psychological and sociological factors influencing consumers. Ability to collect, process, and analyze consumer data to make informed marketing decisions
- V. PSO 5: Ability to analyse marketing problems and provide solutions based on a critical examination of marketing information.

Market Channel Decisions: Meaning, Definition Functions and Types, Factors Affecting in Selection of Channel, Channel Process, Introduction to VMS, HMS, MLM. Managing the Marketing Promotion Decisions: Advertising, Sales Promotion, Personal Selling, Public Relations, Direct & Online Marketing

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

**Course Outcome (CO):**

At the end of this course students will have:

CO1: Identify and respond to marketing its objectives by applying principles of marketing and communications.

CO2: Develop a marketing plan and present and defend it persuasively.

CO3: Contribute to evaluating the effectiveness of marketing initiatives.

CO4: Participate in the development of creative solutions to address marketing challenges.

CO5: Explain Channel functions & flows, channel levels.

Course Outcome	Program Outcome

**Essential Readings:**

1. Marketing Management: A South Asian Perspective – Kotler, Keller, Koshy & Jha, 13/e, Pearson Education, 2012
2. Marketing Management, Ramaswamy V. S. & Namakumari S, 4/e, TMH, 2014
3. Fundamentals of Marketing Management, Etzel M.J BJ Walker & William J. Stanton, 14/e, TMH, 2012
4. Marketing Management Concepts & Cases, S.A.Sherlekar, HPH

**Suggested Readings:**

1. Marketing Management, Arun Kumar & Meenakshi N, 2/e, Vikas, 2012
2. Applied Case Studies in Marketing – Shajahan S, Primus BOOKS, 2011.
3. Marketing Management – Karunakaran, HPH.
4. Marketing in India: Text and Cases- Neelamegham S, 4/e, Vikas.

**Suggested Books: -**

1. Marketing In A Nutshell By Mike Meldrum, Elsevier Science Publications.
2. Marketing Management: An Indian Perspective By Prof. Vijay PrakashAnand, Wiley Publications.
3. Principles of Marketing By Prof. S.A. Sherlekar& R. Krishnamoorthy, Himalaya Publishing House Pvt. Ltd.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**MBA I Semester**

**PRINCIPLES AND PRACTICES OF MANAGEMENT**  
**PAPER CODE: MBA001A**  
**CREDITS: (3)**

**Objective:**

The objectives of this course is to expose the students to basic concepts of management and to enable them to gain appreciation for emerging ideas, techniques, procedures and practices in the field of management.

**UNIT I**

Management an Overview, Management Defined, Functions of Management, Managerial Roles and responsibilities, System and Contingency Approach for understanding organizations. Management Thought-Classical Perspective, Scientific Management, Administrative Management, Bureaucratic Management, Behavioral Perspective. Managerial processes, functions, skills and rules in an organization, social responsibilities of Business.:

**UNIT II**

Fundamentals of Planning – Objectives, Strategies, Policies, Decision making, Strategic organizing design, line and staff authority and decentralization:

**UNIT III**

Fundamentals of Organizing- Nature and purpose, departmentation, Span of Management.

**UNIT IV**

Direction-concept, Leadership- Meaning and Importance, transitions in leadership theories, trait theories, behavioral theories, contingency theories, leadership styles and skills, managerial culture and leadership.

**UNIT V**

Coordination. Control- concept, nature and purpose, control technique, control of overall performance, span of control.

**Course Outcomes:**

Upon successful completion of the requirements for this course, students will be able to:

CO1: Examine systematically the dynamics of entry, diagnosis, planning, intervention, and sustainability that occur during organization change efforts

CO2: Recognize and understand the intricate relationship between the strategic business plan of the organization and the role of organization development

CO3: Develop and enhance conceptual and behavioral skills to implement system-wide organization Control efforts.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

**MBA I Semester**  
**Business Statistics and Analytics for Decision Making**  
**SUBJECT CODE: MBA015A**  
**CREDITS: (3)**

**Objectives:** To understand & apply various statistical methods of data summarization and analysis, to gain ability to take decision in diverse aspects of business environment.

**UNIT I**

Meaning & Definition of Statistics, Functions, Applications, Limitations and Distrust of Statistics. Census and sampling, methods of sampling, Methods of collections of Primary and secondary data, Schedule & Questionnaire,

**UNIT II**

Classification and tabulation of Data, Diagrams and Graphs, concept of central tendency: meaning, definition, determination of Mean including Geometric Mean and Harmonic Mean, Median, Mode.

**UNIT III**

Measures of Dispersion, Meaning, Objectives, Importance, Absolute and relative measure of dispersion, essential characteristics of a good measure of dispersion, selective of an appropriate measure of dispersion.

**UNIT IV**

Correlation, introduction, types of correlation, Scatter Diagram, Karl Pearson Coefficient, Spearman's correlation.

**UNIT V**

Business forecasting introduction, theories of business forecasting, techniques of business forecasting and business statistics case studies.

**Course outcomes(CO)**

CO1: To apply and understand various statistical methods of data summarization and analysis.

CO2: To find ability to take decisions in diverse aspects of business environment.

CO3: To understand classification and tabulation of data.

CO4: To know technical terms like skewness, measures of dispersion and co-relation.

**MBA I Semester**  
**ANALYTICAL TOOLS FOR MANAGERS**  
**Paper Code: MBBA016A**  
**Credits: (2-0-2-3)**

**Course Objectives:**

1. This course aims to provide students with an exposure to the advanced features in MS Excel.
2. To equip students with knowledge on basic software for business communication with in-hands training.
3. To provide an understanding on how to analyse quantitative data using Microsoft excel.
4. To gain proficiency in creating solutions for Data Management and Reporting

**UNIT I**

**Introduction** Meaning of Data analytics tools, Introduction of MS excel, Excel interface (Title bar, Menu bar, Tool bar, Formula Bar, Calculation Bar), Data Entry and editing, formatting of data, Auto fill, Cell Referencing, Paste special

**UNIT II**

**Basic functions of excel** Mathematical function, Statistical functions, Logical functions, Date & Time Functions, Filters and sort (Standard, Custom, Multiple)

**UNIT III**

Charts ( Bar chart, Stock chart, Area chart, Statistic Chart, Combo chart, Pie chart), Graphs (Line scatter), Data tables, Tables, Page Layout & Views ( Margins, Break, Background, Landscape, Portrait, Theme colors, Theme effects, Fonts

**UNIT IV**

**Data Analysis using Lookup, Pivot table and Data Security** Lookup Functions, Introduction to Pivot table, Filter, sort and group Pivot table data, Uses of Pivot chart , Organizing & Presenting Data Interpretation using Pivot, Printing the sheet, Password protection

**UNIT V**

**Excel for Financial data and Dashboard** Working with Tables, Basic Financial Function, Loan amortization, Depreciation (SLN, SYD, DB, DDB, VDB), Capital budgeting, Dashboard, Types of dashboard.

# **II SEMESTER**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**MBA II Semester**  
**Quantitative Techniques and Analytics**  
**SUBJECT CODE: (MBA018A)**  
**CREDITS: (3)**

**Objectives**

The course is designed to make the students familiar with the basic quantitative and linear programming techniques. The focus of this paper is to enable the students to give an exposure to operations research techniques to support business decisions and to understand simulation and its application in decision making.

**UNIT I**

**Introduction to OR;** Scope, Techniques, Characteristics and Limitations of Operation Research; Methodology and Models in OR (only theory). **Theory of Games:** Introduction- Two Person Zero Sum Games – Pure Strategies – Games with Saddle Points – Rules to Determine Saddle Points – Mixed Strategies – Game Without Saddle Points – the Rules of Dominance – Methods of Solution for Games Without Saddle Points – Algebraic Methods, Graphical Methods.

**UNIT II**

**Transportation Problems:** Introduction: Mathematical Formulation of Transportation Problem, the Transportation Method for Finding Initial Solutions- North West Corner Method, Least Cost Method, Vogel's Approximation Method. **Assignment Problems:** Introduction, Mathematical Statement of the Problem, Hungarian Method of Solution, Maximization case in Assignment Problem, Unbalanced Assignment Problem

**UNIT III**

**Linear Programming:** Formulating Maximization/minimization Problems, Graphical Solution, Simplex Method, Artificial Variables – Big M – Method, Special Cases of LP, Duality of LP and its Interpretation, Post Optimality/Sensitivity Analysis, Applications of LP

**UNIT IV**

**Networking:** Terminology; Networking Concepts; Rules for drawing network diagram; CPM Computations: CPM Terminology, Finding critical path - Different Floats; PERT Computations: Computation of earliest and latest allowable times, Probability of meeting the scheduled dates; difference between PERT and CPM, Concept of Project Crashing (Theory only)

**UNIT V**

**Decision Theory:** Decision-making under uncertainty- Maximin, Maximax, Laplace and Hurwicz criteria; decision-making under Risk- Expected Value (EMV, EOL, EVPI), decision tree analysis

**Course Outcomes:**

- CO1: Apply quantitative tools in managerial decision making.
- CO2: Apply decision theory for business decisions.
- CO3: Effectively use networking tools in relevant application areas.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO4: Effectively use the resource allocation techniques as transportation and assignments in related areas.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM  
OUTCOMES AND PROGRAM-SPECIFIC OUTCOMES:**

Course Outcome	Program Outcomes									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

CO2	H		L	M	L	M		L	M	
CO3	H	L		H	M		L	M		M
CO4	M			L			H			H

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**MBA II SEMESTER**  
**FINANCIAL MANAGEMENT**  
**PAPER CODE: MBA102B**  
**CREDITS: (3)**

**Objective:** To familiarize the students with the principles and practice of financial management.

**UNIT I**

Financial Management: Meaning & Scope of FM. Objectives of FM, Functions of Financial Managers, Financial Decisions, Time value of money: Present Value & Future Value of Rupee one & Annuity. Risk and Return- overview of capital market theory, Beta Estimation, CAPM, and APT.

**UNIT II**

Funds Raising Decision: Cost of Capital: Cost of Debt Capital, Preference Capital, Equity Capital, Retained Earnings & Weighted Average Cost of Capital. Capital Structure – Determination of capital structure, optimum capital structure, over capitalization & under capitalization, return on capital employed, Capital Gearing, Trading on equity.

**UNIT III**

Capital Budgeting (Traditional & modern Techniques): Pay Back Period, ARR, NPV, IRR, PI & Terminal Value techniques. Theories of capital structure: Net Operating Income, Net Income, Traditional & MM Theory.

**UNIT IV**

Working Capital Management: Meaning, Components of WC, Operating Cycles Method of estimation of WC. Inventory Management: Concept, Objectives & Inventory Control Techniques. Receivable Management: Concept & Objectives.

**UNIT V**

Leverages: Meaning, Types of leverages, calculation of Leverages: Operating Leverage, Financial Leverage & Combined Leverage. Dividend Policy: Concept of Dividend & Dividend Policy, Determinants of Dividend Policy, Dividend Model: Gordon Model, Walter Model & M-M Model

**Suggested Books:**

- 1) Khan, M.Y. Jain, P.K. *Financial Management: Text, Problems and Cases*, Tata McGraw Hill Publishing Company Limited.
- 2) Pandey, I.M. *Finance: A Management Guide for Managing Company Funds and Profits*. Prentice Hall of India, New Delhi. (2003).
- 3) Bhattacharya, *Financial Accounting for Business Managers*. Prentice Hall of India, New Delhi 2003

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

- 4) Saraswat, Bhatnagar, *Financial Management*, Garima Publications, 2012.
- 5) M.R. Agarwal, *Financial Management*, Garima Publications Jaipur, 2009.

**Course outcome –**

At the end of this course the student will be able to learn

CO1: Apply and critically evaluate corporate finance techniques and critically evaluate theories of financial statements and related analysis;

CO2: Identify, define and analyse problems and identify and create process to solve them and Exercise critical judgement in creating new understanding;

CO3: Demonstrate advanced numeracy and quantitative skills and identify and evaluate social, cultural, global, ethical and environmental responsibilities and issues

CO4 : Select and apply techniques in assessing and managing working capital.

CO5 :Develop analytical skills this would facilitate the decision making in business situations.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM-SPECIFIC OUTCOMES:**

Course Outcome	Program Outcomes

**MBA Scheme 2022-2024**  
**MBA II Semester**

**HUMAN RESOURCE MANAGEMENT**  
**PAPER CODE: MBA 191A**  
**CREDITS: (3L)**

**Objective:**

The objective of this course is to help the students to develop an understanding of the concept & techniques of essential functions of human resource management.

**UNIT I**

**Introduction to Human Resource Management** HRM – Nature and Scope of HRM, Using HR Analytics for recognizing changing trends in HRM - Strategic HRM, Managing Global Human Resources Role of HR in Internationalization of Business - Staffing Global Organizations - Implementing Global HR System

**UNIT II**

**Recruitment and Selection** HR forecasting, Recruitment and Selection, Human Resource Planning - Job Analysis – Job Evaluation - Recruiting Talent – Selecting Right Talent Application Forms, Selection Test, Interviews, Evaluation, Placement, Induction

**UNIT III**

Training and development approaches, Training Budget, Training -ROI, Evaluation of Training and Management Development, Performance Management and Appraisal, Concept of Employee Growth, Managing Career Planning, Elements of a Career Planning Programme, Succession Planning.

**UNIT IV**

**Compensation** Concept of compensation, Elements of Compensation, Process of Determining Compensation , Managing Wages, Concept of Rewards and Incentives,

**UNIT V**

**Practical aspects of HRM** Preparing recruitment forms, Drafting offer letter, Appointment letters, Job Description and Specification Forms, Preparing Training & placement Doc, Performance Appraisal Forms

**Course outcome –**

At the end of this course the student will able to learn-

CO1: Demonstrate an understanding of key terms, theories/concepts and practices within the field of HRM;

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO2: Demonstrate competence in development and problem-solving in the area of HR Management; Provide innovative solutions to problems in the fields of HRM;

CO3: Work effectively with colleagues with diverse skills, experience levels and way of thinking and be able to identify and appreciate the significance of the ethical issues in HR

CO4: Be able to evaluate HRM-related social, cultural, ethical and environmental responsibilities and issues in a global context.

CO5: To develop the necessary skill set for application of various HR issues.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM  
OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

**MBA II Semester**  
**INFORMATION TECHNOLOGY FOR MANAGEMENT**  
**PAPER CODE: - MBA 221B**  
**CREDITS: (3)**

**Objectives**

The objective of this course is to develop micro-level individual competency amongst the participants with regard to contemporary Information Technology Tools and to develop an understanding of the data processing systems existing in organizations.

**UNIT I**

Information & System Concepts-Introduction --Concepts, Classification of Information, Methods of Data & Information Collection, Value of Information, Organization and Information.

**UNIT II**

System: A Definition. Types of Systems, System Decomposition, Integration of Sub Systems, Elements of a System, Human as an Information Processing System. International Business and IT. Management Information System-MIS: Definition, Nature & Scope, MIS Characteristics,

**UNIT III**

Functions, Structure of MIS, Role of MIS, MIS as a Control System, Process of Management, Application of MIS, ERP & IT's Benefits. Internet-Introduction to Internet, Why We Need Internet, Internet Tools & Services, www, Internet in India, Security, Web Browser, Future of Internet.

**UNIT IV**

E-Comm. an Introduction, E Business Fundamentals. New Information Technology: Interconnection and networking, Multimedia, Neural Networks,

**UNIT V**

Artificial Intelligence, Executive Information System, Decision Support System (DSS) and Expert Systems. Issues for Senior Management: Management Control, Management Issues, Security Issues: Viruses, Worms and other creatures, I T issues for Management, Management in a Technological Environment, the changing world of Information.

**Course Outcomes –**

At the end of this Course the students will

CO1: Able to develop micro-level individual competency of contemporary Information Technology Tools

CO2: able to develop an understanding of the data processing systems existing in organizations.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

# III SEMESTER

**MBA III SEM**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**MBA III SEMESTER**  
**Strategic Management and Social Capital**  
**Subject Code: MBA008A**  
**Credit: (3)**

**Objectives:**

The objective of this course is to develop a holistic perspective of an organization and to enable the students to analyse the strategic situation facing the organization, to access strategic options available to the organization and to implement the strategic choices made by it.

**UNIT I**

Introduction: Business policy-evolution of the concept. Difference between business policy and strategic management. Corporate governance- concept, issues, models, evolution and significance. Introduction to Strategic Management-Concept importance of strategic Management, Strategy & Competitive Advantage, Strategy Planning & Decisions, strategic Management Process.

**UNIT II**

Top management perspective: Establishing company direction-developing strategic vision, setting objectives and crafting a strategy-Internal & External Environment, Formulating Long Term objective & Strategy, Strategic Analysis & Choice.

**UNIT III**

Analysing business environment: Analysis of Business environment at 3 levels-Macro external environment analysis, external environment analysis (Industry analysis and competitor analysis) porter's five forces and competitor analysis framework, and firm level internal analysis. Identifying alternative strategies: Grand strategies: stability, growth, retrenchment & combination strategies, Generic strategies. Organization structures and strategy.

**UNIT IV**

Competitive strategy and competitive advantage: Industry and competitive analysis, strategy and competitive advantage, Principles of Competitive Advantage-Identifying Value Activities, Competitive Scope and the Value Chain.

**UNIT V**

Social Capital-Social theory and social structure, Concept and characteristics, concept of bonding-bridging & linking: Putnam's theory, A paradigm for social capital, Leveraging social capital in Business set-up & NGO's, Social capital in the organisation, social capital outside the organisation, social capital, exchange and contribution, social capital, intellectual capital and the organizational advantage.

**Course outcome-**

CO1: Analyse and evaluate an organization in its context from a strategic perspective.

CO2: Determine appropriate strategic directions for an organization.

CO3: Define and recommend a course of action that is consistent with the recommended strategic direction.

CO4: Ability to integrate and apply knowledge gained in basic concepts to the formulation and implementation of strategy from holistic and multi-functional perspectives.

CO5 : Acquisition of skills to analyze and evaluate critically real life company situations and develop creative solutions, using a strategic management perspective.

**MBA Scheme 2022-2024**  
**MBA III SEMESTER**

**MANAGEMENT RESEARCH METHODOLOGY**

**SUBJECT CODE: MBA013A**

**CREDITS: (3)**

**Objective**

Research methodologies tell the systematic method for acquiring data and studying it for deriving out crucial findings. This is an important process that helps in solving problems and making business decisions. It enables management for properly organizing their efforts in a right direction for generating an idea.

**UNIT I**

Meaning, Objective and Motivation in research, Type of research, research approaches, Significance of research, research process, criteria for good research, Define the research problem, selecting a problem, research design, meaning of research design, need of research design, features of good design.

**UNIT II**

Sampling Designing: Census and sample survey, implications of sample design, steps in sample design, criteria of selecting a sample, characteristic of a good sample design, Different type of sample design, random sampling. Data collection techniques: collection of data, interview, schedule and questionnaire method, difference between questionnaires and schedules, Collection of secondary data, selection of appropriate method for data collection.

**UNIT III**

Processing and analysis of data, type of analysis, statistics in research, type of series, measurement of central tendency, measurement of dispersion, regression analysis, least square method, Mean based method, correlation analysis, Karl Pearson coefficient of correlation, Spearmen single rank method, repeated rank method, relationship between correlation and regression analysis.

**UNIT IV**

Hypothesis Design, Basic concept concerning hypothesis testing, procedure of hypothesis testing, Important Parametric test: Z test, T test and F test, non-parametric test: Chi square test, Sign test, run test, Mann- Whitney U test, Limitation of the testing of hypothesis.

**UNIT V**

Scaling technique, measurement in research, type of measurement scales, techniques of developing measurement tools, Interpretation and report writing, technique of interpretation, Significance of report writing, Different steps in writing a report, Lay out of the research report, types of report.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

**Course outcome-**

CO1: Apply a range of quantitative and / or qualitative research techniques to business and management problems / issues

CO2: Understand and apply research approaches, techniques and strategies in the appropriate manner for managerial decision making

CO3: Demonstrate knowledge and understanding of data analysis and interpretation in relation to the research process

CO4: Conceptualise the research process

CO5: Develop necessary critical thinking skills in order to evaluate different research approaches utilised in the service industries

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM

**M.B.A. III SEMESTER**  
***Project Management***  
**Subject Code: MBA011A**  
**Credit: (3)**

**Objectives:**

The aim is to provide a suitable framework for gaining insight in the process of preparation, appraisal, monitoring and control of a project. The role project management techniques and how to mobilize finance for domestic and international projects shall be highlighted.

**UNIT I**

Introduction to Project Management: Definition, functions, evolution of Project Management, classification of projects, Project management in different environments. The Project Management Systems, Methodologies & Systems Development Cycle: Systems approach, systems analysis, systems development, project feasibility, project life cycle, project appraisal, project contracting, the phases of system development life cycle.

**UNIT II**

Project Feasibility Study: Developing a project plan, market and technical analysis, financial analysis evaluation of project proposals, risk analysis, sensitivity analysis, and social cost benefit analysis. Project Planning: Planning fundamentals, project master plan, work breakdown structure & other tools of project planning, work packages project organization structures & responsibilities, responsibility matrix.

**UNIT III**

PERT, CPM, Resource allocation: Tools & techniques for scheduling development, crashing of networks, time-cost relationship, and resource levelling multiple project scheduling.

**UNIT IV**

Cost Estimating Budgeting: Cost estimating process elements of budgeting, project cost accounting & management information systems, cost schedules & forecasts. Managing Risks in Projects: Risk concept & identification, risk assessment, risk priority, risk response planning, risk management methods.

**UNIT V**

Project Control: Information monitoring, internal & external project control, cost accounting systems for project control, control process, performance analysis, variance limits, and issues in project control. Project Management Information System: Computer based tools, features of PMIS, using project management software, (MS Projects) Project Evaluation, Reporting & Termination: Project reviews & reporting, closing the contract.

**Course outcome-**

CO1: Manage the scope, cost, timing, and quality of the project, at all times focused on project success as defined by project stakeholders.

CO2: Align the project to the organization's strategic plans and business justification throughout its lifecycle.

CO3: Identify project goals, constraints, deliverables, performance criteria, control needs, and resource requirements in consultation with stakeholders.

CO4: Adapt projects in response to issues that arise internally and externally.

CO5: Implement general business concepts, practices, and tools to facilitate project success.

**MBA Scheme 2022-2024**

**MBA III Semester**  
**PRODUCTION AND OPERATIONS MANAGEMENT**  
**PAPER CODE: MBA 431A**  
**CREDITS: (3)**

**Objectives:**

The course is designed to familiarize the students with decision making in planning, scheduling, control and productivity improvement in production and operations function in both manufactories and service organizations. Emphasis would be on to bring about effectiveness and efficiency of operations by job and work design, process design, layout design and design and control of systems related to production resources planning ,quality, scheduling, maintenance, inventory and environment and safety.

**UNIT I**

Operations Management: An Introduction: Introduction to Production & Operations Management: Definition, need, responsibilities, key decisions of OM, goods vs. services, Operations as a key functional area in an organization. Operation Strategies-Definition, relevance, strategy formulation process, order qualifying and order winning attribute. Definition of lean production, lean Demand, Pull logic, waste in operations, elements that address elimination of waste, 2 card Kanban Production Control system.

**UNIT II**

Forecasting and Scheduling: Forecasting-Definition, types, qualitative (grass roots, market research and Delphi method) and quantitative approach (simple moving average method, weighted moving average and single exponential smoothing method), forecast error, Mean Absolute Deviation (MAD). Scheduling: Operation scheduling, goals of short-term scheduling, job sequencing (First Cum First Serve (FCFS), Shortest Processing Time (SPT), Earlier Due Date (EDD), Longest Processing Time (LPT), Critical Ration (CR)) & Johnson's rule on two machines, Gantt charts.

**UNIT III**

Planning Techniques: Aggregate Planning: Definition, nature, strategies of aggregate planning, methods of aggregate planning (level plan, chase plan and mixed plan, keeping in mind demand, workforce and average inventory. Capacity Planning: Definition, measures of capacity (input and output), types of planning over time horizon, Decision trees analysis. Queuing and Inventory Models: Elementary Queuing Theory Models: Poisson- Exponential Single Server Model with Infinite Population; M/M/1, M/M/C, Inventory Management: Economic Order Quantity with finite and infinite supply

**UNIT IV**

Operations and Services Design: Process Selection: Definition, Characteristics that influence the choice of alternative processes (volume and variety), type of processes- job shop, batch, mass and continuous, product-process design Matrix and Services design matrix, technology issues in process design, flexible manufacturing systems (FMS), computer integrated manufacturing (CIM). Layout Decision: Layout planning – Benefits of good layout, importance, different types of layouts (Process, Product, Group technology and Fixed position layout). Assembly line balancing by using Longest Operating Time (LOT) rule. Location Decisions & Models: Facility Location – Objective, factors that influence location decision, location evaluation methods- factor rating method.

**UNIT V**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Maintenance Management & Quality Control: Maintenance Management: Need of maintenance management, equipment life cycle (Bathtub curve), measures for maintenance performance (Mean Time before Failure (MTBF), Mean Time to Repair (MTTR) and availability), Reliability: Definition and function of series and parallel. Statistical Quality control: Variations in process (common & assignable causes), Variable measures (mean and range chart), Attribute measures (proportion of defects and no. of defects) using control tables control charts, single sampling plan: OC curve Acceptance sampling.

**Course outcome –**

At the end of this course the student will able to learn-

CO1: To analyse the various process characteristics and identify how they support operations strategy through cases and Project work

CO2: Apply decision-making techniques in Business Management with emphasis on decision making under risk and sensitivity analysis, in business cases & Apply workforce management techniques with emphasis on Learning curves in business cases.

CO3: To explain the concept of capacity management and apply capacity techniques in business examples. Identify and apply layout techniques for different types of Process strategies in business examples.

CO4: Apply forecasting techniques as applied in the business environment. Through cases apply inventory Management techniques including Just - In Time (JIT) systems in optimizing inventory levels.

CO5: Apply network models and techniques in Project Management problems

**Event Management**  
**MBA406A (3 credits)**

**Objective**

Course Description: The purpose of this course is to enable the students to acquire a general knowledge about the "event management" and to become familiar with management techniques and strategies required for successful planning, promotion, implementation and evaluation of special events.

**UNIT I**

**Principles of Event Management** Historical Perspective, Introduction to event Management, Size & type of event, Event Team, Code of ethics Principles of event Management, concept & designing. Analysis of concept, Logistics of concept. Feasibility.

**UNIT II**

**Event Planning & Team Management** Aim of event, develop a mission, Establish Objectives Preparing event proposal, Use of planning tools Protocols, Dress codes, staging, staffing Unit III Leadership, Traits and characteristics

**UNIT III**

**Event Marketing and Advertising:** Nature of Marketing, Process of marketing, Marketing mix, Sponsorship Unit II Image, Branding, Advertising Publicity and Public relations

**UNIT IV**

**Organization of Events:** Concept, theme, Types and category, Sports, Rallies, Wedding, Fabrication of Events, light & sound, handling vendors

**UNIT V**

**EVENT LAWS & LICENSES:** Relevant legislations, liquor licenses, trade acts, stake holders and official bodies, contracts

**Course outcome**

CO1: Define the basic concepts related to event management in sports.

CO2: Analyse financial management in events.

CO3: Evaluate the event management process.

CO4: Compose a sample event.

CO5: understand relevant laws and licenses.

**MBA IV SEMESTER**

**Dissertation**

Project Report submission and viva – voce on six months industrial training done.

The objective is to develop their skills in identifying issues in concrete management situations, collecting and analysing data and apply management concepts and techniques to deal constructively with management problems and suggest solutions

During the months of January to June after completing 3<sup>rd</sup> Semester Examinations, students will have to undergo a 6 months internship/ in plant training on real life problems in business/ industrial organizations.

The programme six months industrial training requires that the candidate would be assigned a project work and guide(s) by the organization under whom the candidate would complete the assigned study. On the satisfactory completion of the work the organization would issue a completion certificate to the candidate concerned. However, the candidate in all cases would be under the joint guidance of a faculty adviser. If and when necessary, the organization guide and the faculty adviser may arrange meeting to discuss necessary details to supervise the study the candidate. On completion of internship, a student will have to submit a report on his work to the department (2 copies) and also a copy of the same to the organization concerned. The student will also have to defend his report at a viva voce examination arranged by the department. The break-up of full marks of 100 assigned for this paper is as follows: -

50 marks for the Report (to be jointly evaluated by the faculty guide and an External examiner)

50 marks for Viva-voce examination (to be awarded by External examiner)

**MBA Scheme 2022-2024**  
**M.B.A. (Elective-Finance)**

**FINANCIAL DERIVATIVES**

**PAPER CODE: MBA 104A**  
**CREDITS: (3)**

**Objectives:**

This course sets up study in the field of investments related to options, futures and other derivative securities. The course will acquaint students with derivative securities, markets, pricing, hedging and trading strategies of derivative instruments.

**UNIT I**

Definition of Derivative Securities- Brief history of derivatives, Evolution of Commodity, Currency, Stocks and Interest Rate Derivatives, Structure of derivative markets, forwards, futures, options, swaps etc. Examples of more sophisticated derivatives: barrier options, compound options, options on futures, swaptions, underlying assets: equities, currencies, commodities and interest rates. Reasons for trading: risk management, speculation and arbitrage.

**UNIT II**

Market Characteristics- Futures and Options contract specifications, underlying asset, contract size, and delivery specifications. Marking to market using margin accounts. Familiarizing with market quotes.

**UNIT III**

Trading Strategies involving Options and Futures. Interest rate derivatives, Contractual specification: floating and fixed rate. Valuation of interest rate derivatives. Derivatives Pricing Theory- Option Pricing: Black-Scholes formula for option pricing: derivation and properties. Volatility: estimated vs. implied, options on dividend-paying assets, warrants and convertibles. Binomial models for option prices: definitions and terminology.

**UNIT IV**

Continuous-Time Models. Futures Pricing: Pricing by arbitrage: relationship between futures and spot price (cost of carry and reverse cost of carry), difference between futures and forward price, futures on dividend-paying assets.

**UNIT V**

Risk Analysis and Management- Risk Measurement and Management Framework, Option's delta, gamma, Vega, theta, rho. Hedging with futures. Derivatives Disclosure: Accounting Issues in Derivatives. Options and Futures Applications in India- Structure of Indian stock markets and the operational efficiency of options and futures, determination of the fair value of futures and options prices, Interactions between spot equity trading and trading in derivatives.

**Course outcome-**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO1: Understanding of the motives, reasons and explanations for corporate hedging activity.

CO2: Knowledge of key financial building blocks, used in constructing complex derivative instruments (eg. futures, forwards, options and swaps).

CO3: Analysis of payoffs and strategies involved in trading derivative instruments and combinations of derivatives.

CO4: Application of the pricing of individual and combinations of derivative securities.

CO5: Use and benefits of derivatives in a portfolio context.

**MBA Scheme 2022-2024**  
**MBA (Elective-Finance)**  
**INSURANCE AND RISK MANAGEMENT**  
**PAPER CODE: MBA 106A**  
**CREDITS: (3)**

**Objectives:**

This course is intended to develop an understanding among students about identifying analyzing and managing various types of risk. Besides the students will be in a position to understand principles of insurance and its usefulness in business.

**UNIT I**

Concept of Risk, Types of Risk, Managing Risk, Sources and Measurement of Risk, Risk Evaluation and Prediction. Application of Statistical Techniques in Risk Avoidance. Disaster Risk Management.

**UNIT II**

Risk Retention and Transfer, Pooling, Loss Exposure, Legal Aspects of Insurance Contract, Principle of Indemnity, Estoppels, Endowment, Insurance.

**UNIT III**

Concept of Insurance, Need for Insurance, Insurance Industry in India, Globalization of Insurance Sector, Role of IRDA, Regulation of Risk Reduction by IRDA. Reinsurance, Co-insurance.

**UNIT IV**

Nature of Insurance Contract, Utmost Good Faith, Insurable Interest, Types of Insurance, Fire and Motor Insurance, Health Insurance, Distinction between Life Insurance and Marine Insurance.

**UNIT V**

Control of Malpractices, Negligence, Loss Assessment and Loss Control, Exclusion of Perils, Actuaries, Automobile Insurance, Computation of Insurance Premium.

**Course Outcomes**

The student will be able to learn

CO1: The exposures that constitute the overall risk faced by a firm or enterprise and the process of managing the various exposures that affect the firm or enterprise.

CO2: How insurance can be employed to avoid risk and protect the firm or enterprise. And explain how the insurance market is structured and regulated.

CO3: Will be able to Organize, model, and quantify the exposures and risks faced by the firm or enterprise and calculate the effects of the risks and exposures on the value of the firm or enterprise.

CO4: Understanding of the Insurance industry.

CO5: Understanding about calculation of insurance Premium.

**INDIAN FINANCIAL SYSTEM**  
**PAPER CODE: MBA 105A**  
**CREDITS: (3)**

**Objectives**

The objective of the course is to understand role of Financial Services in Business organizations and to give an insight into the strategic, regulatory, operating and managerial issues in Indian financial system.

**UNIT I**

Overview of Indian Financial System. Role of Financial Markets in capital formation and economic development; Indian Financial system- An overview. Commercial Banks and Industrial Finance- evolving role.

**UNIT II**

Reserve Bank of India as a Regulator of Banking System and its other functions. Basel –I and Basel-II norms.

**UNIT III**

Markets. Money Market Organization in India nature, constituents and instruments. Industries Securities Market in India: New Issue Market and Stock Exchange. Differences and similarities, functions, methods of New Issues, Regulatory Framework and SEBI.

**UNIT IV**

Mutual Funds, Insurance and others. Investment Policy and performance appraisal of Unit Trust of India,

**UNIT V**

Insurance Industry, IRDA Insurance Regulator. New Developments such as financial instruments, Private foreign investments, case studies and problems.

**Course Outcomes:**

CO1: Subjects gives overview of financial system to students such as flow of funds in financial system, financial system and economic development.

CO2: Students learn different financial system and their framework.

CO3: Students studies non-banking financial institutions, their role in financial system, sources of finance and RBI guidelines.

CO4: Students learn the concept of micro finance and its importance in rural economy

CO5: Students learn different sources of finance.

**INTERNATIONAL FINANCIAL MANAGEMENT**  
**PAPER CODE: MBA 107A**  
**CREDIT: (3)**

**Objectives:**

This course has been designed to acquaint the students with the conceptual framework of the key decision areas in international finance. The basic objective of the course is to provide an overview of the financial environment in which multinational firms operate.

**UNIT I**

Foreign Exchange Market and Risk Management: Environment of International Financial Management: Balance of Payments. Means of International Payments, Foreign Exchange Market, Currency Futures and Options Markets.

**UNIT II**

Foreign Exchange Risk Management, Exchange Risk, Political Risk, Interest Rate Risk, Measuring and Managing Foreign Exchange Exposure, Practical Problems.

**UNIT III**

Financing of International Operations: Determination of Exchange Rate, Exchange Market and Arbitrage, Exchange Rate Control, Financing of Exports and International Investments.

International Monetary Systems, European Monetary System, International monetary and Financial Institutions, Practical Problems.

**UNIT IV**

Financial Management of MNCs: Multinational Financial Management: Capital Budgeting Decisions for Multinational Corporation, Financing Decisions- Cost of Capital and Financial Structure.

**UNIT V**

Working Capital Management and Control International Banking, International Transfer Pricing, Cases and Problems.

**Course Outcome:**

CO1: Explain the meaning and concepts of international financial management.

CO2: To know the international monetary system and foreign exchange rate mechanism.

CO3: To estimate values of international investment projects and international investment corporate acquisitions.

CO4: Identify, discuss and various international investment strategies.

CO5: To understand the concept of Balance of Payments (BOP) and remedial measures for correcting the disequilibrium in BOPs.

**SECURITY ANALYSIS & PORTFOLIO MANAGEMENT**

**PAPER CODE: MBA 109A**

**CREDITS: (3)**

**Objective**

To familiarize students with different investment alternatives, introduce them to the framework of their analysis and valuation and also acquaint them with portfolio management and evaluation techniques.

**UNIT I**

**The Investment Environment** - The investment decision process, Types of Investments, the Indian securities market, the market participants, trading of securities, security market indices, Insider Trading.

**UNIT II**

**Security Analysis** – Concept of Return & Risk: Types & Sources.

**UNIT III**

**Fixed Income Securities:** Bond Fundamentals, Valuation of bonds, Estimating bond yields, Credit rating.

**UNIT IV**

**Equity Analysis:** Fundamental Analysis, Technical Analysis. Valuation of equity shares. Efficient Market Hypothesis

**UNIT V**

**Portfolio Management:** Portfolio & Diversification, Markowitz model (2 Security portfolios) & Capital Asset Pricing Model. Performance Evaluation Techniques: Sharpe, Treynor & Jensen Indices

**Course Outcome:**

- CO1: To provide a theoretical and practical background in the field of investments.  
 CO2: Designing and managing the bond as well as equity portfolios in the real world.  
 CO3: Valuing equity and debt instruments.  
 CO4: Computation of risk and return for securities.

**MERGERS, ACQUISITIONS AND CORPORATE RESTRUCTURING  
CREDITS: (3)**

**Objectives**

Liberalized economy has generated many opportunities of combining businesses to create wealth. The fundamental aim of the course is to prepare students to take advantage of the current scenario and understand how mergers, acquisition and corporate restructuring are implemented.

**UNIT I**

Corporate Restructuring: Concept and strategies, Mergers: Concept, Types of Mergers, Merger Strategy-Growth, Synergy, Operating Synergy, Financial Synergy, Diversification.

**UNIT II**

Takeover: Concept and types, Other Economic Motives, Hubris Hypothesis of Takeovers, Other Motives, Tax Motives Financial Evaluation, Joint Venture and Strategic Alliances.

**UNIT III**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Legal Aspects of Mergers/ Amalgamation and Acquisition / Labour, Provisions of Companies Act, Regulation by SEBI, Takeover Code: Scheme of Amalgamation, Approval from Court. Valuation of a Business.

**UNIT IV**

Due Diligence: Concept, process and types, Methods of Valuation – Cash-flow Basis, Earning Potential Basis, Growth Rate, Market Price etc. Computation of Impact on EPS and Market Price.

**UNIT V**

Determination of Exchange Ratio, Impact of Variation in Growth of the Firms, MBO, LBO, Boot Strapping; Criteria for Negotiating Friendly Takeover, Financing of Merger. Defence Against Hostile Takeover, Poison Pill, Bear Hug, Greenmail, Pacman. Post-Merger H.R. and Cultural Issues.

**Course Outcome:**

CO1: Understanding of different types of mergers and acquisitions and the process involved in executing their deals.

CO2: Develop an ability to understand factors influencing the valuation of a business and different methods used in Business Valuation.

CO3: Basic understanding about regulatory environment of mergers and acquisitions in India.

CO4: Analyze investment opportunities in fixed income securities.

CO5: Assess various case studies to analyze valuation strategies, pre and post-merger issues and challenges.

# Elective Marketing

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**MBA (Elective-Marketing)**  
**Advertising Management**  
**Subject Code: MBA162A**  
**Credit: (3)**

**Objectives**

To understand the process of marketing communications. To understand and integrate marketing communications theory and concepts with all elements of the promotional mix. To acquaint students with approaches and methods to develop, execute and evaluate advertising campaigns.

**UNIT I**

Mass communication theory and practices, marketing and promotion mix interrelationship and interdependence advertising. Sales Promotion, Publicity and Public Relations- Scope, Objectives, activities and creative role. Advertising, objectives tasks and process, market segmentation and target audience- Message and copy development.

**UNIT II**

Mass media, selection, planning, budgeting and scheduling. Integrated programme and budget planning. Implementing the programme, coordination and control.

**UNIT III**

Advertising Agencies in India, their services and terms, advertisement campaign development, Agency selection and appointment; Agency Organization and operation, Getting the best of the agency services. Analysis of effectiveness of advertisement and promotional campaign.

**UNIT IV**

Why and when sales promotion support, Sales promotion activities; Consumer Oriented-Sales channel Oriented-Sales staff oriented, Planning, budgeting, implementing and controlling campaigns.

**UNIT V**

Valuation and measurement of advertising and sales promotion effectiveness, Company organization for advertising: sales manager, Sales Promotion Manager, Market Development Manager- Role of Tasks, advertising ethics, economics and social relevance. The Public Relations Activities, Public relations and mass media.

**Course outcome:**

At the end of the course the students will be able to:

CO1: Identify and respond to clients' advertising and marketing communications objectives by applying principles of marketing and communications.

CO2: Develop an advertising plan and present and defend it persuasively. Contribute to evaluating the effectiveness of advertising and marketing communications initiatives.

CO3: Understand the sales promotion and controlling campaign.

CO4: Understand the role of market development manager and public relation

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO5: Collaborate in the development of advertising and marketing communications material, in compliance with industry standards and business practices.

**Objectives:**

The objective of this course is to provide an in-depth understanding to various stages in a training process and the catalytic role of training and development in the effective functioning of an organisation. The course also facilitates the participants to learn some of the tools and techniques of training process.

**UNIT I**

HRP concepts, importance, objective, type of HR plan, HRP approaches, Process, HR Forecasting: Concepts: Demand & Supply of manpower & methods of Forecasting.

**UNIT II**

Recruitment: Concept, Sources & Techniques, Selection: Concept & Process HRD, Concept system, HRD matrixes climate, elements, Interventions. Career planning: concept, objective, process, Career planning and Career development, Career planning Vs Succession planning., Career Anchors, Succession Planning: concept & Process, Management Development Program.

**UNIT III**

Job analysis: meaning and definition, job analysis process, techniques of job analysis, methods and practice of job analysis, competency-based approach. Job Analysis in Human Resource Planning, Recruitment and Selection.

**UNIT IV**

Learning: Principles of Learning, Theories of Learning, learning process; learning styles, Andragogy. Training – concept and rationale; training process of stakeholders in training programme; Organization and Management of training function; Training needs assessment-

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

organization analysis, operational analysis, person analysis; competency mapping. Designing the training programme: process of learning in training programme- attributed and factors influencing; training climate and pedagogy; developing training modules;

**UNIT V**

Training aids. Training methods and techniques, Trainers. Budgeting Of Training, Evaluation of training-need for evaluation, principles of evaluation, criteria and approaches; return on investment in training, process of calculating ROI in training; emerging trends in training and development; new perspectives on training –cross culture training, e-learning

**Course Outcomes:**

CO1: To learn the concept of Human Resource Planning, its objectives, different approaches to HRP and HRP process

CO2: To develop deep knowledge on the importance of job analysis, job description, job specification and job designing in Human Resources Management

CO3: To understand the issues relating to manpower sourcing in organizations

CO4: To gain knowledge on the legal aspects related to manpower sourcing

CO5: To understand training aids and evaluation.

**Talent Management**  
**Subject Code: MBA371A**  
**Credit: (3)**

**Objectives**

This course is aimed at helping students gain an insight into the basic concepts and application of Talent Management in business and industry. It involves deliberations on the basic processes and tools of managing Talent in organizations.

**Unit I**

Introduction to Talent Management: Introduction, Talent Management – Overview, Talent Management – History, the Scope of Talent Management, Need of Talent Management, Key Processes of Talent Management, Talent vs knowledge people, Source of Talent Management, Consequences of Failure in Managing Talent, Tools for Managing Talent

**Unit II**

Talent Management System: Introduction, Talent Management System, Critical Success Factors to Create Talent Management System, Some other critical success factors of best practice Talent Management System, Factors of unique talent management approach, Key Elements of Talent Management System

**Unit III**

Life Cycle of Talent Management: Introduction, Linkage between Talent Management Process and Workforce, Importance of Talent Management Process, Important Steps to Assess Talent Management Process, Stages of Talent Management, Essentials of Talent Management Process, And Approaches to Talent Management: Talent Management Approaches, Developing a Talent Management Strategy, Mapping Business Strategies and Talent Management Strategies, Post Recession Challenges of Talent Management

**Unit IV**

Talent Planning: Talent Planning, Objectives of Talent Planning, Steps in Strategic Talent Planning, Succession Planning Program, Innovative talent planning, Current Industry Practices for Strategic Talent Planning, Ensuring Leadership, Role of HR in Talent Management: Introduction, Overview of Human Resource Management, and Role of HR in Talent Management, Role of the HR Manager.

**Unit V**

Contemporary Talent Management Issues, Challenges, Best Practices: Introduction, Organisational Issues, Talent Management Challenges, Best Practices of Talent Management, Talent Management in India, Role of Information Technology in effective Talent Management Systems: Introduction, Role of Information Technology in Talent Management Systems, Talent Management Information System, Creating Business Value through Information Technology, Five Steps to a Talent Management Information Strategy, HR Analytics for TM Processes, Design Development through Rapid Prototype.

**Course Outcome:**

CO1: Talent Management: Students will be able to understand different approaches of talent management.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO2: They will be able to identify talent and develop retention strategies.

CO3: It will develop understanding to evaluate the talent management in the organization.

CO4: Recognise the business case for talent management and succession planning, Identify the need to have talent management integrated into the strategy of their organisation in order to retain talent.

CO5: Recognise the key steps required to implement the Talent Management Continuum

**INDUSTRIAL RELATION AND LABOR LAWS**  
**SUBJECT CODE: MBA193A**  
**CREDIT: (3)**

**Objectives:** To provide basic knowledge in industrial relations and labour laws and to enable the students understand the various provisions of Trade Union.

**UNIT I**

Industrial Relations: Definition, Importance & Scope. Trade Union-Growth, Objective, Function & Role in globalize Content. Governmental Measures – Ministry for labor, Commissioner of labour, Deputy Commissioner & labour Offices.

**UNIT II**

Industrial Disputes: Nature and causes of Industrial Dispute, Types of Conflict Resolution – Statutory & Non-Statutory Collective Bargaining – Meaning, Characteristics, Need, Importance, Process, Pre-requisites.

**UNIT III**

Workers Participation in Management: Concept & Pre-requisites. Forms & Levels of Participation. Benefit of workers participation in management. Industrial Relations: International Perspective. Industrial Health and Safety

**UNIT IV**

The Industrial Disputes Act, 1947: Definitions, Authorities under the Act, Power & Duties of Authorities. Strike & lockout, Lay-off and retrenchment. The Industrial Employment (Standing Orders) Act, 1946

**UNIT V**

The Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013. Factories Act, 1948: Provisions regarding Safety, regarding Health, Welfare, Leave with Wages and Working hours of adults.

**Course Outcome:**

CO1: To familiarize students with the basic concepts of industrial relations, its philosophy, origin and development.

CO2: To develop knowledge on trade unions and its formation, structure, functions and legal framework.

CO3: To gain insight into the process of collective bargaining, its origin and development.

CO4: To gain understanding on industrial disputes, its causes, manifestation and effects.

CO5: To develop Understanding about harassment in workplace.

**MBA (Elective – HR)**  
**Compensation Management**  
**Subject Code: MBA192A**  
**Credit: (3)**

**Objectives:**

This course is designed to promote understanding in issues related to compensation in corporate sector and impart skills in designing, analysis and restructuring compensation management system, policies and strategies.

Gain knowledge of different components of compensation • Understand different monetary and non-monetary benefits of compensation • Identify international components of compensation • Understand various factors required to design compensation

**UNIT I**

Compensation – Definition – Compensation Responsibilities – Compensation System Design Issues – Compensation Philosophies – Compensation Approaches,

**UNIT II**

Job Evaluation, Grading and Compensation Structure:

Job Evaluation Introduction to Nature and Objectives of Job Evaluation; Introduction to Principles and Procedure of Job Evaluation Programs; Introduction to Basic Job Evaluation Methods;  
Introduction to Implementation of Evaluated Job;

**UNIT III**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Compensation Classification – Types – Incentives – Fringe Benefits – Strategic Compensation Planning – Determining Compensation – The wage Mix – Development of Base Pay Systems – The Wage Curve – Pay Grades – Salary Matrix – Compensation as a Retention Strategy.

**UNIT IV**

Theories of Wages – Wage Structure – Wage Fixation – Wage Payment – Salary Administration – Executive Compensation – Incentive Plans – Team Compensation – Gain Sharing Incentive Plan – Enterprise Incentive Plan – Profit Sharing Plan- ESOPs – Compensation Management in Multi-National organizations.

**UNIT V**

Calculation of Income Tax implications while calculating the income of an individual - Cost to the Company - Valuation of Perquisites - Taxability of various components of salary and wages; Fixation of Tax Liability - Tax deduction at source - Deductions and Tax Rebates to be considered while deciding tax deducted at source - Tax Deduction Certificates.

**Course outcomes-**

- CO1: To learn basic compensation concepts and the context of compensation practice
- CO2: To illustrate different ways to strengthen the pay-for-performance link.
- CO3: To learn the concepts of Payment and employee benefits issues for contingent workers.
- CO4: To understand the legally required employee benefits.
- CO5: To understand the tax liability and various components of salary and wages.

# Elective –IT

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

**Data Base Management System**  
**Subject Code- MBA224A**  
**Credit – (3)**

**Objectives:**

This course has been designed to introduce the participants with applications of systems designed to manage the data resources of organizations. It provides the participants an opportunity to study the hands-on implementation of a database in a corporate environment.

**UNIT I**

File System and Databases: Introducing the database - files and file systems - database systems - introduction to database models - data base models and internet.

**UNIT II**

The Relational Database Model: A Logical view of data - keys - integrity rules - relational database operators - relationships within the relational database - data redundancy indexes.

**UNIT III**

Structured query language: SELECT Statement - distinct clause - handling of null values - ORDER BY clause, WHERE clause - relational operators - logical operators (AND, OR, NOT), SQL Operators - (BETWEEN, AND, IN, LIKE) - numeric functions - string functions - date functions - conversion functions - GROUP BY clause - group functions - HAVING clause - joining tables - SET Operators (UNION, INTERSECTION, MINUS) - Sub queries.

**UNIT IV**

Object oriented databases: Object oriented concepts - features of an object-oriented DBMS - How object orientation affects database design - Advantages and disadvantages of OODBMS. Web based databases

**UNIT V**

Database security and administration: Database security - access control - GRANT, REVOKE - GRANT, REVOKE on views and integrity constraint - data as a corporate asset - the evolution of database administration function - The DBA's managerial role.

**Course outcome-**

CO1: To understand the nature of change, the forces for change, resistance to change and approaches to managing organizational change

CO2: To understand the nature and concept of organizational transformation and transition

CO3: To gain an insight into the organizational development programs and techniques, emerging OD approaches and techniques and its application in organizations

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO4: To provide conceptual and practice-based approach on the implications of change tailoring the specific needs of the organization through organizational development techniques

CO5: Understand the concept of transactions and serialize ability in database management system.

**MBA (Elective – IT)**

**IT Strategy & E-Business**

**Subject Code- MBA228A**

**Credit – (3)**

**Objective:**

This course will provide the students with an analytical and technical framework to understand the emerging world of e-Business. E-Business poses both a challenge and an opportunity for managers.

**UNIT I**

Introduction, background and current status: digital economy, principles of e-business, e-business models.

**UNIT II**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

E-business frameworks: e-selling process, e-buying planning, e-procurement, convergence strategies, e-business design and e-markets: overview, steps in e-business design, reversing the value chain, knowledge building. E-market models, direct B2B markets, coalitions.

**UNIT III**

Integrating supply chain management process: definitions, components of e-supply chain, managing relations in e-supply chain.

**UNIT IV**

Integrating enterprise resource planning process: enterprise architecture planning, lead time reduction, improved supplier performance. Selling chain management process: definition, business and technology drivers, infrastructure, sales and distribution configuration.

**UNIT V**

E-CRM processes and their integration, e-banking, e-governance. E-Business strategy into action, Challenges, e-Transition and Summary. e-Security. Case and Problems

**Recommended Books**

- J Deitel, Deitel & Nieto Internet and World Web. How to Program
- Deitel, Deitel & Nieto e-Business and e-Commerce. How to Program
- E-Business and E-Commerce, 2/E, Dave Chaffey, Prentice Hall.

**Course Outcome:**

CO1: Understand the E-Commerce and E-business infrastructure and trends.

CO2: Analyze different types of portal technologies and deployment methodologies commonly used in the industry.

CO3: Analyze the effectiveness of network computing and cloud computing policies in a multi-location organization.

CO4: Analyze real business cases regarding their e-business strategies and transformation processes and choices.

CO5: Integrate theoretical frameworks with business strategies.

**MBA (Elective – IT)**  
**Strategic Management of Information Technology**  
**Subject Code- MBA229A**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**Credit – 3**

**Objective:** This course is aimed at developing an understanding of the use of Information Technology as a Strategic Tool for Business Management. The course focuses on the development of Information Technology Leadership.

**UNIT I**

Key Issues in Information system & Management, the Role of CEO. Analytical Framework for Strategic IT Initiatives.

**UNIT II**

Sustaining Competitive Advantage of use of IT & Management. I.T. & Intensive Strategic Growth

**UNIT III**

Creative Learning, Organizational Learning and Role of Information technology in Business Transformation

**UNIT IV**

Information Partnerships, Managing in the Market space- National Information Infrastructure and IT Policy at the National Level.

**UNIT V**

Planning for strategic IT resources. Managing the IT Function. Outsourcing IT Function  
.

**Recommended Books**

- Strategic Management in Information Technology, David B. Yoffie
- Executive Strategy: Strategic Management and Information Technology, Frederick Betz
  
- Management Strategies for Information Technology (Business Information Technology), Earl (Author)

**Course Outcome:**

CO1: Relate the basic concepts and technologies used in the field of management information systems;

CO2: Compare the processes of developing and implementing information systems.

CO3: Outline the role of the ethical, social, and security issues of information systems.

CO4: Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.

CO5: Apply the understanding of how various information systems like DBMS work together to accomplish the information objectives of an organization

**MBA (Elective – IT)**  
**Business Intelligence & Data mining**  
**Subject Code- MBA222A**  
**Credit-3**

**Objectives**

To appreciate e-Business as a significant business segment of the future. To develop capacity to initiate/lead an e-business venture/business segment, to understand the principles of BI and Analytics at conceptual level. To develop skills to design BI and Analytics projects

**UNIT I**

**Business Intelligence:** Definition and Examples in BI, Need, Features and use of BI, BI Components. Business Analytics – Introduction, Need, Components and Types

**UNIT II**

**Digital Data and Data warehouse:** Types of Digital Data – Definition, Sources and Characteristics of Structured, Semi-structured and Unstructured data. **Data Warehouse –** Definition, characteristics, framework

**UNIT III**

**Data Mining:** Concepts and applications, Data mining process. **Text & Web Analytics:** Text analytics and text mining overview, Text mining applications. Web mining overview, social media analytics, and Sentiment analysis overview

**UNIT IV**

**Big Data Analytics:** Definition and characteristics of Big data, Fundamentals of big data analytics

**UNIT V**

**Applications of BI in Business:** Sales and Marketing analytics, HR Analytics, Financial Analytics, Production & Operation Analytics. **Analytics in Industries:** Telecom, Retail, Healthcare, Financial Services

**Recommended Books**

- Business Intelligence: A Managerial Perspective on Analytics – Ramesh Sharda, Dursun Delen, Efraim Turban (Pearson)
- Fundamentals of Business Analytics – R.N. Prasad and Seema Acharya (Wiley)

**Course outcomes**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO1: To identify the major frameworks of computerized decision support: decision support systems (DSS),

CO2: To identify how data analytics and business intelligence works (BI).

CO3: To Explain the foundations, definitions, and capabilities of DSS, data analytics and BI.

CO4: To Identify principles of BI and Analytics at conceptual level.

CO5 :Develop skills to design BI and Analytics projects.

# **Elective Production**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**MBA (Elective – Production and Operation Management)**  
**Total Quality Management**  
**Subject Code- MBA441A**

**Credit - (3)**

**Objective:**

To introduce the students to the basic concepts of total quality management and how the focus of TQM has become so important for all companies in recent times.

**UNIT I**

Introduction: Concept of quality, Definition, Dimensions of quality, Evolution of TQM, Components of TQM, Developing quality Culture. Customer Focus and Satisfaction: Meeting Customer needs and Expectations, Translating customer needs into requirements (Kano Model) using customer complaints.

**UNIT II**

Philosophy of TQM: Philosophies of Deming, Crosby, Juran and Taguchi, PDCA Cycle, Costs of Quality, Measuring quality costs, Criteria for Malcolm Baldrige Quality Award.

**UNIT III**

Prerequisite for TQM: Quality Orientation, Leadership, Employee Involvement, Role of ISO9000 QMS , Organizing for quality.

**UNIT IV**

Quality by Design: Production and product development tools, Taguchi methods, Design of Experiments, Orthogonal Arrays. Benchmarking: Evolution, Process of benchmarking, Understanding current performance, Types of Benchmarking, issues in Benchmarking.

**UNIT V**

Tools of TQM: Management Tools, Design review, Pokayoke, Force field analysis, FMEA, FTA, 5S and 7M Principles.

**Course outcomes-**

CO1: Gaining knowledge about managing production processes. How to run operations effectively?

CO2: Better understanding of modern production techniques

CO3: Better understanding of quality management

CO4: Management skills needed for the effective operations management

CO5: Understand the importance of total quality management and management tools.

**MBA (Elective – Production and Operation Management)**  
**Purchasing & Materials Management**

**Subject Code: MBA438A**

**Credit :(3)**

**Objective**

This course will allow a student to understand basics and fundamentals of Materials Management, with primary focus on purchasing and material Management. At end of this course, students would be able to make decisions regarding practical aspects of Materials Management as practiced in

**UNIT I**

Introduction -Materials management – An overview – Introduction – ScopeObjective, Importance Integrated approach to Materials Management.

**UNIT II**

Material Planning – Introduction – Factors affecting material planning – Techniques of material planning - MRP

**UNIT III**

Purchasing, Procedure & Pricing Issues – Receipt – Storage - Issue

**UNIT IV**

Inventories – Definition-Classification of Inventories- Need for inventories – Merits & Demerits of Inventories

**UNIT V**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Inventory control techniques and principles - classification, codification, standardization – ABC analysis –VED, GOLF, FSN - HML 6 6 Economic order quantity concept – Derivation of EOQ formula, modified EOQ

**Course outcomes**

CO1: Develop an ability to perform the role of a materials manager in an organization.

CO2: Shall be able to manage the activities of materials manager like purchasing, inventory analysis, storage, etc. in a scientific manner.

CO3: Shall be able to improve due date performance through use of MRP techniques with in capacity constraints.

CO4 : Shall be able to analyze the inventory situation of a company and suggest improvements.

CO5 : Understand the importance of inventory control, inventory ordering policies and select appropriate inventory model to solve inventory problems.

**MBA (Elective – Production and Operation Management)**  
**Product Planning & Control**  
**Subject Code: MBA437A**  
**Credit :(3)**

**Objective:**

To get acquainted with the basic aspects of Production Management. The course attempts to discuss various important planning, organizing and controlling aspects of Operations Management.

**UNIT I**

History and Overview of Production Management. Capacity Planning, Location Planning, Types of Production Processes. Layout Planning, Productivity Management, Deterministic and Probabilistic Inventory Management models, Purchasing and Warehousing. Methods Study, Motion Study and Work Measurement. Job Evaluation. Wage Incentive Schemes. Value

**UNIT II**

Production systems, type of production, Functions of production, planning and control, production procedure. Sales forecasting: Nature and uses of forecast sources of data Forecasting techniques:

**UNIT III**

Production order: Process charts, Production master programme breakdown production order and preparation of various cards like job card, materials requisition from inspection card etc.

**UNIT IV**

Production -Planning: for continuous, batch and job order production: Capacity planning, planning models-static and dynamic.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**  
**UNIT V**

Scheduling: Forms of Schedules, Loading, and Scheduling, Basic scheduling problems: Flow production scheduling; job shop scheduling. Random order scheduling; product sequencing. Production control of processes and production activities.

**Course outcomes**

CO1: Recognize the objectives, functions, and applications of PPC and forecasting techniques.

CO2: Explain different Inventory control techniques.

CO3: Solve routing and scheduling problems.

CO4: Summarize various aggregate production planning techniques.

CO5: Describe way of integrating different departments to execute PPC functions.

**MBA III SEMESTER**  
**Strategic Human Resource Management**  
**Subject Code: MBA197A**  
**Credit: (3)**

**Objectives:**

The Primary concern to this course is to develop in depth understanding of the strategic role performed by HR in business organisation and to gain insight of the alignment between different HR systems and practices and organisation outcomes.

**UNIT I**

Introduction to SHRM: Definition, Need, Importance, and Steps, Human Resource Environment: Workforce Diversity, Demographic Changes, Organizational effectiveness, Changed Role of HR in Organizations

**UNIT II**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Recruitment & Retention Strategies: Online Recruitment, Outsourcing Recruitment, Head Hunting, Performance Management Strategies: Defining Key Result Areas, Seniority Vs. Merit-based Promotions, Pay for Performance, 3600 Feedback, Executive Performance

**UNIT III**

Compensation & Reward Strategies: Skill Based Pay, Broad banding, Variable Pay, Incentives and Benefits, Profit Sharing, ESOP, Executive Compensation, Training & Development Strategies: Cross-cultural Training, Multi-Skilling, Succession Planning, Learning Organizations and Organizational Learning

**UNIT IV**

Strategic management and strategy formulation; communicating strategy to staff, Competitive strategy, Competitive advantage, Competitive differentiators, Trends in HR mission and vision

**UNIT V**

Human Aspects of Strategies Implementation, Global HRM: Global and cultural effectiveness (SHRM competency), Linking HR strategy to organizational strategy; Managing workforce changes Mergers and acquisitions Outsourcing Rightsizing/downsizing

**Recommended Books:**

- 1.Strategic Human Resource Management by Tanuja Agarwala, Oxford University Press
- 2.Personnel Management - Text & Cases, By C. B. Mamoria & V. S. P. Rao, Himalaya
- 3.Strategic Human Resource Management by Rajib Lochan Dhar, Excel Books

**Course Outcomes:**

CO1:Have a general knowledge of the key HRM concepts, process and practices;

CO2:Have an appreciation of different theoretical perspectives and models used to understand HRM.

CO3: Be able to analyse key issues and challenges related to the implementation of and outcomes associated with HR strategies within the organization and the wider environment; and

CO4: Be familiar with key areas of interest to practitioners, policymakers and researchers.

CO5: To understand effectiveness and future of SHRM, Measure cost and benefit of HRM.

**A (Elective-HR)**  
**Organizational Development and Management of Change**  
**Subject Code: MBA194A**  
**Credit: (3)**

**Objectives:**

This course is designed to provide I depth understanding of behavioural interventions and enable the students to apply these intervention for building individual, team, system, systems and process related competencies and helping organizational to achieve peak performance and become self sustaining.

**UNIT I**

Process of Organization Development, Human process interventions, Techno-structural Interventions, HRM interventions, Competitive and Collaborative Strategies, Organization Transformation.

**UNIT II**

Coaching Developing human resources, Equipping the organization for present and future talent needs, Improving organizational effectiveness, Ongoing performance and productivity initiatives, Organizational structure and job design, Outsourcing employee development Social networking strategies for developing an organizational behaviour model, Workplace culture and trust building

**UNIT III**

Elements of change Achieving Systematic change, Domains of systematic change-strategy, technology, structure and people, Planning for change, Process of change and organization theory and practice.

**UNIT IV**

Change and the use of power, Nature and sources of power, Leadership and change- Transactional vs. Transformational change, Change cycle including participative and coerced change, Resistance to change, change through behaviour modification, Positive and negative reinforcement.

**UNIT V**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Training for change, managing resistance, implementing change, The change Dynamics: Leading, planning and implementing change, Stages of change management, Prerequisites and consequence of change.

**Reference Books:**

1. D.K.Bhattacharyya, *Organisational Change and Development*, OUP, New Delhi, 2011
2. Piers Myers, Sally Hulks, and Liz wiggins, *Organisational Change*, OUP, New Delhi, 2012.

**Course Outcome**

CO1: To understand the nature of change , the forces for change, resistance to change and approaches to managing organizational change

CO2: To understand the nature and concept of organizational transformation and transition

CO3: To gain an insight into the organizational development programmes and techniques, emerging OD approaches and techniques and its application in organizations

CO4: To provide conceptual and practice-based approach on the implications of change tailoring the specific needs of the organization through organizational development techniques

CO5: Gain knowledge of the conditions for optimal success of OD Understand planned change through models of change.

**MBA (Elective-HR)**  
**Sourcing, Training and Development**  
**Subject Code: MBA196A**  
**Credit: (3)**

**Objectives:**

The objective of this course is to provide an in-depth understanding to various stages in a training process and the catalytic role of training and development in the effective functioning of an organisation. The course also facilitates the participants to learn some of the tools and techniques of training process.

**UNIT I**

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Introduction to training and development, concept and rationale-training, Conducting training, Evaluating training, Calculating training return on investment (ROI), process of calculating ROI in training, Linking performance and career, Development needs to training

**UNIT II**

Assessment; design; development; implementation; evaluation; Conducting needs assessments and SWOT analysis, Linking organizational strategy with training and development strategies, Training as competitive advantage.

**UNIT III**

Job analysis: meaning and definition, job analysis process, techniques of job analysis, methods and practice of job analysis, competency based approach. Job Analysis in Human Resource Planning, Recruitment and Selection.

**UNIT IV**

Learning: Principles Of Learning, Theories of Learning, learning process; learning styles, Andragogy. Designing the training programme: process of learning in training programme-attributed and factors influencing; training climate and pedagogy; developing training modules.

**UNIT V**

Training aids. Training methods and techniques, Trainers Budgeting of Training, Evaluation of training-need for evaluation, principles of evaluation, criteria and approaches,; emerging trends in training and development; new perspectives on training –cross culture training.

**Course outcomes-**

CO1: To learn the concept of Human Resource Planning, its objectives, different approaches to HRP and HRP process

CO2: To develop deep knowledge on the importance of job analysis, job description, job specification and job designing in Human Resources Management

CO3: To understand the issues relating to manpower sourcing in organizations

CO4: To gain knowledge on the legal aspects related to manpower sourcing

CO5: To understand cross culture training and development.

**MBA (Elective-HR)**  
**Knowledge Management**  
**Subject Code: MBA371A**  
**Credit: (3)**

**Objectives:**

This course is aimed at helping students gain an insight into the basic concepts and application of Talent Management in business and industry. It involves deliberations on the basic processes and tools of managing Talent in organizations.

**UNIT I**

Introduction to KM, History of KM, Importance of KM, Information Management to Knowledge Management, K M Cycle, Industrial Economy to Knowledge Economy

**UNIT II**

Mechanics of Knowledge Management–Tools and Technologies, Communities of Practice and Knowledge conversion, The knowledge Management Matrix.

**Unit III**

Social Nature of Knowledge, Social Network Analysis, Obstacles to knowledge sharing, Organizational learning & Social Capital. Knowledge Application – Individual level, Group level & Organization Level.

**UNIT IV**

KM Strategy, Knowledge audit, GAP Analysis, Road Map, KM Metrics, Balance Score Card. KM Tools – Knowledge Capture & Creation tools, Knowledge sharing & Dissemination Tools, Knowledge Acquisition & Application tools.

**UNIT V**

Km Team–Roles & Responsibilities, Political issues in KM, Ethics in KM, Strategies issues in Knowledge Management, Future of Knowledge Management.

**Course Outcomes:**

CO1: Knowledge Management: Students will be able to understand different approaches of knowledge management.

CO2: They will be able to identify knowledge and develop retention strategies.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

CO3: It will develop an understanding to evaluate the knowledge management in the organization

CO4: To gain knowledge about Contemporary Knowledge Management Issues, Challenges,

CO5: To understand the roles and responsibility of knowledge Management

**MBA (Elective – HR)**  
**Compensation Management**  
**Subject Code: MBA192A**  
**Credit: (3)**

**Objectives:**

This course is designed to promote understand in issues related to compensation in corporate sector and impart skills in designing, analysis and restructure compensation management system, policies and strategies.

Course outcomes-

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Gain knowledge of different components of compensation • Understand different monetary and non-monetary benefits of compensation • Identify international components of compensation • Understand various factors required to design compensation

**UNIT I**

Compensation – Definition – Compensation Responsibilities – Compensation System Design Issues – Compensation Philosophies – Compensation Approaches,

**UNIT II**

Job Evaluation, Grading and Compensation Structure: Role of job analysis/job design in compensation decisions, Job Evaluation Introduction to Nature and Objectives of Job Evaluation; Introduction to Principles and Procedure of Job Evaluation Programs; Introduction to Basic Job Evaluation Methods; Introduction to Implementation of Evaluated Job

**UNIT III**

Compensation Classification – Types – Incentives – Fringe Benefits – Strategic Compensation Planning – Determining Compensation – The wage Mix – Development of Base Pay Systems – The Wage Curve – Pay Grades – Salary Matrix – Compensation as a Retention Strategy.

**UNIT IV**

Theories of Wages – Wage Structure – Wage Fixation – Wage Payment – Salary Administration – Executive Compensation – Incentive Plans – Team Compensation – Gain Sharing Incentive Plan – Enterprise Incentive Plan – Profit Sharing Plan- ESOPs – Compensation Management in Multi-National organizations.

**UNIT V**

Managing employee benefits (Cost control, monitoring future obligations, action planning, strategic planning) Educational benefits Life insurance Employee assistance programs Family-friendly benefits Domestic partner benefits Outsourcing benefits administration.

**Course outcomes**

CO1: To learn basic compensation concepts and the context of compensation practice

CO2: To illustrate different ways to strengthen the pay-for-performance link.

CO3: To learn the concepts of Payment and employee benefits issues for contingent workers.

CO4: To understand the Legally required employee benefits.

CO5: To Learn the concept of wage structure .

**MBA (Elective – HR)**  
**HR Analytics**  
**Subject Code: MBA190A**  
**Credit: (3)**

**UNIT I**

**HR Analytics in Perspective** Role of Analytics, Defining HR Analytics, HR Analytics: The Third Wave for HR value creation, HR Measurement journey in tune with HR maturity journey Understanding the organizational system (Lean) , Locating the HR challenge in the system , Valuing HR Analytics in the organizational system, Typical problems (working session)

**UNIT II**

**HRA Frameworks:** Current approaches to measuring HR and reporting value from HR contributions, Strategic HR Metrics versus Benchmarking, HR Scorecards & Workforce Scorecards and how they are different from HR Analytics, HR Maturity Framework: From level 1 to level 5, HR Analytics Frameworks: (a) LAMP framework; (b) HCM: 21 Framework and (c) Talent-ship Framework, 5 overarching components of an effective Analytics framework.

**UNIT III**

Basics of HR Analytics: Basics of HR Analytics, what is Analytics, Evolution, Analytical capabilities, Analytic value chain, Analytical Model, Typical application of HR analytics.

**Jaipur School of Business**  
**Master of Business Administration**  
**MBA Scheme 2022-2024**

Predictive Analytics: Steps involved in predictive analytics: Determine key performance indicator, analyze and report data, interpreting the results and predicting the future. Metrics and Regression analysis and Causation.

**UNIT IV**

**Insight into Data Driven HRA** Typical data sources, Typical questions faced (survey), Typical data issues, Connecting HR Analytics to business benefit (case studies), Techniques for establishing questions, Building support and interest, Obtaining data, Cleaning data (exercise), Supplementing data. **HR Scorecard:** Assessing HR Program, engagement and Turnover, Finding money in Analytics, Linking HR Data to operational performance, HR Data and stock performance. Creating HR Scorecard, develop an HR measurement system, guidelines for implementing a HR Scorecard.

**UNIT V**

**HR Metrics –** Defining metrics, Demographics, data sources and requirements, Types of data, tying data sets together, Difficulties in obtaining data, ethics of measurement and evaluation.

**HR Dashboards:** Statistical software used for HR analytics: MS-Excel, IBM- SPSS, IBMAMOS, SAS, and R programming and data visualization tools such as Tableau, Click view and Fusion Charts.

**Course Outcome:**

The students will be able to.

CO1: Have an understanding of How HR function adds value and demonstrates the value in business terms

CO2: Measure the value of Intangibles that HR helps builds for the organization given a particular business context to facilitate decision making.

CO3: Convert soft factors in a people management context into measurable variables across various domains.

CO4: Describe, conduct and analyze a study on employees or any other related to the HR context in an organization.

CO5: Understand the importance of HR Analytics ,Learn the metrics measured by HR analytics,Learn and effectively use the data to analyse trends.

## **LOGISTICS & SUPPLY CHAIN MANAGEMENT**

### **LOGISTICS**

**Course Objective:**

1. Develop knowledge about the interconnectedness of business units and organizations (via the flow of products, money, and information) within the supply chain.
2. Develop knowledge about key elements of logistics processes, such as logistics planning and strategy, customer service, procurement, transport, inventory, warehousing, and handling.

School of Business Studies  
Master of Business Administration  
(Corporate Management)

3. Enhance analytical skills and capability to synthesize information from several perspectives.
4. Enhance communication, reflection and teamwork skills.
5. Use computing software to solve various logistics decision-making problems, including inventory policies and vehicle routing.

<u>Ref No</u>	<u>Topics to be covered</u>
<u>Unit 1: Basics of Logistics management</u>	
<u>1.1</u>	<ul style="list-style-type: none"><li>● <u>Introduction to physical distribution</u></li><li>● <u>Logistics management</u></li><li>● <u>Logistics Management and its elements</u></li><li>● <u>Modern Concepts in Logistics</u></li><li>● <u>Role of logistics in strategy</u></li><li>● <u>Inbound and outbound supply chain management</u></li><li>● <u>Container – types</u></li><li>● <u>Different types of cargo</u></li><li>● <u>Packaging and Material Handling</u></li></ul>
<u>Unit 2: Basics of Multinational Transport</u>	
<u>2.1</u>	<ul style="list-style-type: none"><li>● <u>Introduction to Multimodal Transport</u></li><li>● <u>Carriage by Air</u></li><li>● <u>Carriage by Sea</u></li><li>● <u>Carriage by Road</u></li><li>● <u>Carriage by Rail</u></li><li>● <u>Types of Vessels</u></li><li>● <u>Operators (Vessel and other)</u></li><li>● <u>Freight Forwarders and NVOCC</u></li><li>● <u>Outsourcing of Logistics Services</u></li><li>● <u>Overview of MMTG Act (1993)</u></li><li>● <u>Shipping Intermediaries and Formalities</u></li></ul>

School of Business Studies  
Master of Business Administration  
(Corporate Management)

<b><u>Unit 3: Commercial Geography</u></b>	
<b><u>3.1</u></b>	<ul style="list-style-type: none"><li>● <u>Definition, Nature and Scope of Commercial Geography</u></li><li>● <u>Role of Industries in Economic Development.</u></li><li>● <u>Factors of Industrial Location</u></li><li>● <u>Weber's theory of Industrial Location</u></li><li>● <u>Major Industrial Regions of India</u></li><li>● <u>Need and importance of transportation in Commercial Development.</u></li><li>● <u>Geographical factors affecting International Trade</u></li><li>● <u>Major logistics routes in India</u></li><li>● <u>Major trade routes in world</u></li><li>● <u>International logistics and economic development</u></li><li>● <u>Role of intermediaries in international trade</u></li></ul>
<b><u>Unit 4: Trends in Logistics</u></b>	
<b><u>4.1</u></b>	<ul style="list-style-type: none"><li>● <u>Introduction – recent developments in logistics</u></li><li>● <u>Transport and mobility technologies</u></li><li>● <u>Green logistics</u></li><li>● <u>Reverse Logistics</u></li><li>● <u>Cold chain logistics</u></li><li>● <u>Block chain and big data analytics in logistics</u></li><li>● <u>3 D printing and wearable devices in logistics</u></li><li>● <u>Transport Services, Costing and Performance</u></li><li>● <u>Administration and Control and use of IT</u></li></ul>

**Course Outcome**

**CO1: Analyze how logistical decisions (e.g., facilities, inventory, and transportation) impact the performance of the firm as well as the entire supply chain.**

**CO2. Analyze the strengths and weaknesses of various transportation modes and perform cost analysis.**

School of Business Studies  
Master of Business Administration  
(Corporate Management)

**CO3. Develop the strategies that can be taken to find the best paths to route vehicles to deliver and collect goods at multiple stops.**

**CO4. Develop the strategies that can be taken to manage inventories, including deciding the timing and quantity for replenishments without hurting the level of product availability.**

**CO5 Interact with team members to achieve group objectives**

	<u>PO1</u>	<u>PO2</u>	<u>PO3</u>	<u>PO4</u>	<u>PO5</u>	<u>PO6</u>

4. Warehouse Management: A Complete Guide to Improving Efficiency and Minimizing Costs in the Modern Warehouse (2nd Edition): Gwynne Richards
5. The Handbook of Logistics and Distribution Management: Understanding the Supply Chain (5th Edition): Alan Rushton, Phil Croucher, Peter Baker

## SUPPLY CHAIN MANAGEMENT

### Course Objective:

1. The course intends to cover the fundamental aspects of Supply Chain Management for providing an insight to the student for designing and implementing effective supply chains.
2. The course discusses the tools and techniques of supply chain management and illustrates their applicability in cases.
3. The course will equip the participants with necessary skills to manage complex supply chains by leveraging on information technology.
4. This course is intended to provide an understanding of the components and processes of supply chain and logistics management as well as the performance drivers of supply chain.
5. It is also intended to help the students to learn about logistics, transportation, warehousing and outsourcing decisions.

<u>Ref No</u>	<u>Topics to be covered</u>
<u>Unit 1: Introduction to SCM</u>	
<u>1.1</u>	<ul style="list-style-type: none"><li>● <u>History</u></li><li>● <u>Development Chain</u></li><li>● <u>Global Optimization</u></li></ul>
<u>Unit 2: The Value of Information</u>	
<u>2.1</u>	<ul style="list-style-type: none"><li>● <u>Information sharing and Incentive</u></li><li>● <u>Forecast</u></li><li>● <u>Bullwhip effect</u></li><li>● <u>Information and supply chain trade-off</u></li></ul>

School of Business Studies

**SUMMER INTERNSHIP REPORT**

**Objective of the Subject:**

1. Internship work is the best way to practice what you have learnt.
2. The purpose of including Internship project report in the Program is to provide you an opportunity to summarize your learning in a systematic manner.
3. It will enable you to apply your conceptual knowledge in a practical situation and to learn the art of presenting your experience/findings in a coherent report.
4. As managers, you are constantly seeking information to base your decision.
5. The objective is to equip the students with the knowledge of actual functioning of an organization and problems faced by them for exploring feasible solutions.

<u>Ref No.</u>	<u>Topic to be Covered</u>
<u>Unit 1: Introduction</u>	
<u>1.1</u>	<ul style="list-style-type: none"><li>● <u>Summer Internship Report</u></li><li>● <u>Drafting Guidelines</u></li><li>● <u>Title Page</u></li><li>● <u>Internship Completion Certificate</u></li><li>● <u>Certificate</u></li><li>● <u>Declaration</u></li><li>● <u>Acknowledgement</u></li></ul>

## **BBA SYLLABUS**

### **Course: Fundamentals of Statistics**

#### **Semester 1**

**Credit: 4**

##### **Unit 1:**

Overview - Statistics in daily life, Brief history and everydayness of statistics, Introduction to statistics and its applications, Overview of statistics, key terms, and definitions, what is data, scales of measurement, Visualization of data, Histograms, stem and leaf plots, box and, whisker plots Basics of Data Visualization in Excel, Plotting various types of graphs in Excel

##### **Unit 2**

Measures of central tendency - Mean, median, mode, need for central tendency, limitations of central tendency. Measures of dispersion, absolute and relative, range, mean deviation, standard deviation, Dispersions Significance, kurtosis, skewness, Type I and Type II errors.

##### **Unit 3:**

Sampling and Distribution - Probability, Meaning, significance in daily lives, needs, basic calculations, Probability (contd.). Conditional probability, Bayes theorem, Discrete Probability Distributions, Binomial and Poisson distribution, Continuous Probability Distributions  
Meaning, significance, characteristics of exponential and normal distribution, central limit theorem. Sampling - Sampling theory, statistical inference, standard error. Sampling II estimates, expectation, sampling distribution. sampling III

##### **Unit 4:**

Confidence Intervals and Hypothesis Testing Confidence Interval Estimation, Estimation of the population mean, confidence intervals, introduction to hypothesis testing  
Hypothesis Testing, Process of hypothesis testing, significance levels. Types of tests - z test, t-test, ANOVA Non-parametric tests. Non-parametric tests, Kolmogorov-Smirnov test, Wilcoxon signed-rank test.

##### **Unit 5:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Correlation-Introduction to correlations, key terms, definitions, meaning, significance, types of correlation. Correlation analysis. Methods of studying simple correlations, scatter diagrams, Pearson's coefficient of correlation, Spearman's correlation coefficient  
Causation v Correlations, Difference between correlation and causation

### Primary Resources

1	Fundamental Statistics
2	Gupta S.P. (2017): Statistical Methods, Sultan Chand & Sons, 45h Revised Edition
3	Levin, R. and Rubin, D. (2017). Statistics for Management. 8th ed. New Delhi: Pearson.
4	Business Statistics in Practice using Data, Modeling, and Analytics by Bowerman, O'Connell & Murphree
5	Eugene Don, Joel Lerner, Basic Business Mathematics, Tata McGraw Hill Publication.

### Course: Organizational Behavior

#### Semester 1

Credit: 4

#### Unit 1:

Introduction- Introduction to Org Behavior, Overview of OB, key terms, and definitions  
Evolution of Org Behavior, Chronological explanation of the evolution of OB since its inception., Key Constraints of Org Behavior, Challenges faced by managers, Limitations of OB Theory

The contributions of behavioral sciences to Org Behavior, The intersection of behavioral sciences and business, Applications of Org Behavior. Practical applications of OB. Personality- Introduction to Personality, Defining personality, history of personality. Personality Theories, Trait, type, and mixed approaches to personality. Measuring Personality, MBTI, design, administration, scoring, interpretation.

#### Unit 2:

Attitudes- Overview of Attitudes, Definition, key terms, related constructs, characteristics of attitudes. Criticality of Attitudes- Attitude formation, attitude change, attitudes in the workplace, measuring attitudes. Motivation - Motivation. Key terms, types of motivation, expression of motivation, theories of motivation. Motivation (contd.) Using rewards, incentives to motivate employees

#### Unit 3:

Emotions- Overview of Emotions, Key terms, related constructs, stress in the workplace (GAS Model), stress management, introduction to emotional intelligence, Emotional Intelligence in the workplace, Theories of EI in the workplace. Group Dynamics, Group Characteristics

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Key terms, key processes - group formation, group cohesiveness, and related characteristics of groups. Group Processes. Understanding groups and related processes - social loafing, groupthink, free riding . Work Teams

Understanding teams, types, levels, what makes a good team player, team effectiveness

#### **Unit 4:**

Organizational Culture- Introduction to organizational culture, Defining culture, dimensions, levels and types, related constructs, Importance of Org Culture, Impact of OC on the individual, culture shift/change in the workplace. Organizational Structure- Introduction to organizational structure and design. Common organizational structures and designs, types

Structure's impact. Departmentalization, organizational life cycle, the impact of structure and design on employees.

#### **Unit 5:**

Organizational Change- Overview of organizational change, Key terms, definitions, related constructs, change, and the change process, Organizational change and associated impact

Types of change, the influence of change, change and the individual, responding to change

Power & Politics, Power structures, Key terms, hierarchy, politics in the workplace, leadership, and power, Understanding Leadership

Approaches to leadership, leadership theories, managers vs leaders, Leadership styles, types of leadership. Interpersonal Business Communication. Fundamentals of Communication

Key terms, psychological contract, trust-building, Conflict

Identifying conflict, types of conflicts, cooperation vs conflict, managing conflicts, Negotiations

Bargaining strategies, types of negotiations, differences in the effectiveness of negotiating, tactics

#### **Primary Resources**

1	Organizational Behavior by Robbins, Judge, and Vohra, 18th Edition (2018)
2	Essentials of Organizational Behavior   Fourteenth Edition   By Pearson. Robbins & Judge (2019)

Meaning, scope, measurement of cost of debt, cost of preference share capital, equity share capital, retained earnings, and weighted average

Dividends- Meaning, factors affecting dividend decision

#### **Unit 5:**

Working capital management- Cash management, Objectives, speeding up cash flows, slowing cash disbursement, Capital management, Determinants, operating cycle, estimation of working capital, Financing working capital, reserves, surplus, bonus shares, and retained earnings

Personal Finance, Financial goal-setting, Short term and long term financial goals

Personal Budgeting, Setting limits, effective allocation of funds, saving schemes

Tax Planning- Nature, scope, functions, Wealth Protection and Management, Estate planning, succession planning.

#### **Primary Resources:**

1	Financial Management (12th Edition) Pearson by IM Pandey
2	Financial Management: Theory and Practice (10th Edition) McGraw Hill by Prasanna Chandra

### **Course: Operations and Production Management**

#### **Semester 2**

#### **Credit: 4**

#### **Unit 1:**

Introduction- Operations Management, Definition, need, scope, Operations Managers

Roles, responsibilities, key decisions, Business & Operations Management, functional areas of organizations, operations management, and the linkage, Operation Strategies

Meaning, relevance, strategy formulation, Operation Strategies (contd.) The link between operations and organizational strategy, productivity, and associated factors. Maintenance Management. Need, relevance, equipment life cycle, measuring maintenance performance.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Unit 2:**

Capacity Planning- Introduction, Meaning, benefits, measuring capacity, determinants, considerations for capacity alternatives, Approaches to capacity planning, Steps used to resolve constraint issues, description of approaches, Decision-Making, Steps in the decision process, techniques to apply to decision making, decision tree

**Unit 3:**

Process Selection & Layout Decision- Introduction, What is process selection, characteristics influencing alternative processes (volume and variety), importance. Process types- Types of processes, factors influencing process selection, Layout Decision, layout planning, meaning, relevance, benefits, types of layouts, Layout Decision (contd.) Reasons for redesign, product layouts, and process layouts.

**Unit 4:**

Supply Chain Management- Introduction, Nature, scope, key aspects, current trends, Challenges, Complexities regarding global supply chains, ethical issues in supply chain management. Application, Concerns for small business owners, managing supply chain issues, Logistics, Supplier management, logistics of supply chain management including RFID Procurement. Purchasing interface, purchasing cycle, ethical considerations, decision making (centralized and decentralized) Inventory Management and Warehousing- Inventory Management, Definition, Types, main functions, costs related to inventory management, Approaches. ABC approach, EOQ model, economic production quantity model. Warehousing

**Unit 5:**

Forecasting- Introduction, Meaning, relevance, types - qualitative and quantitative Process, Forecasting process, what makes a good forecast, Techniques, Techniques of forecasting - average, weighted-average, exponential smoothing, linear trend, trend-adjusted exponential smoothing forecast. Aggregate Planning & Scheduling, Introduction Meaning, relevance, benefits, strategies of aggregate planning, Methods Methods of aggregate planning - level, chase and mixed plan, Scheduling Operation scheduling, short term vs long term, job sequencing, Master Scheduling Process, importance, inputs outputs, and MRP processing. Introduction Key terms, services, importance, determinants, need, costs, Methods TQM, Six sigma model, various quality tools, Analysis Control charts, control tables, quality control in finance, Elementary Queuing Theory

**Primary Resources:**

1	Mahadevan, B (2015). Operations Management: Theory & Practice, 3rd ed., Pearson
2	Operations Management (12th Edition) McGraw Hill by William J Stevenson

**Course: Politics & Society**  
**Semester 2**  
**Credit: 2**

**Unit 1:**

Politics - Introduction, Definitions, nature, scope, Indian and Western Political Thought, Fundamentals of political philosophy - India and western tradition, Global Politics

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## Unit 2

Globalization. Impact of globalization on politics and inter-state relations, Comparative Politics, Comparison of systems, tools to compare. Democratic Principles- Definition, evolution, contemporary political institutions and principles

## Unit 3:

Socio-Political Issues- Socio-political Movements in India, Features, evolution, collective action, Social Development, What constitutes development? Role of development in influencing policy, Caste, community, and politics, Relations, interrelations, intergroup conflict and the role of politics, Religion and politics. Critical debates in politics

## Unit 4:

Society- Social Theory, Nature, scope, functionalism, evolutionism, Social Theory (contd.) Structural functionalism, structuralism, post-structuralism.

## Unit 5:

The State, Law, and Society- Interrelations, power, corruption

Primary Resources:

1	Indian Politics and Society since independence by Bidyut Chakrabarty (2008)
2	Society & Politics in India: Understanding Political Sociology by Shefali Roy (2014)

## Course: Consumer Behavior

Semester 2

Credit: 2

## Unit 1:

Introducing to Consumer Behavior- Introduction, Definition, scope, significance, Marketing and STPs, Segmentation, targeting, positioning; how to select target market. Marketing and STPs (contd.) Bases of segmentation eg. Demographic, product benefits, product usage.

## Unit 2:

Consumer Attitudes- Motivation, Motives, needs, goals; types of motivation, Perception  
Consumer perception of a product, managing perceptions,

## Unit 3

Learning- How do consumers learn about the market? Methods of learning about the market, Attitudes  
Attitude formation, intensity, factors influencing attitudes, Attitude change, Can attitudes change? Strategies to drive attitude change.

## Unit 4:

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Factors- Cultures and subcultures, Importance of understanding cultural divisions and differences. Decision Making, Decision-making models, consumption behavior

**Unit 5:**

JECRC University, Jaipur-303905

**Program: Bachelors in Business Administration (B.B.A.)**

Course: Critical Thinking & Logic

**Semester 2**

**Credit: 2**

**Unit 1:**

Introducing critical thinking- What is critical thinking? Definition, associated terms, purpose, Introduction to Logic, Understanding mathematical logic and causality

**Unit 2:**

Arguments- Identifying arguments, Characteristics of arguments, argumentative writing, Strategies, Identifying reasons, conclusions, arguments applying critical thinking, Argument vs. non-argument, Differences, what is common, Analytical vs. descriptive writing, Types of writing, purpose, application, Consistency and clarity, Checking arguments for clarity, internal and logical consistency, order. Types of reasons

**Unit 3:**

Factors -Assumptions and persuasion, How to identify underlying assumptions, underlying methods of persuasion implied in arguments, Cognitive biases, Influencing individual judgment and decision-making, Flawed arguments, Difference between cause and effect

**Unit 4:**

Sources of evidence- Authenticity, relevance, validity, reliability, plagiarism- Note making, Selective reading and strategies for ensuring the accuracy of notes.

**Unit 5:**

Presentations.

Primary Resources:

1	Cottrell, S. (2017). Critical thinking skills (3rd ed.). London, UK: Palgrave Macmillan UK.
2	Van Den Brink-Budgen (2010). Critical Thinking for Students 4th Edition: Learn the Skills for Analyzing, Evaluating, and Producing Arguments

**Program: Bachelors in Business Administration (B.B.A.)**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Course: Everydayness|Banks, RTOs, and Courts

**Semester 2**

**Credit: 2**

**Unit 1:**

Introduction to practices- Banks and Court of Law, Learning the entire process of opening a bank account; benefits; How to file an FIR/Court case?, RTO and Development Authority/ Tehsildar, How to get a driver's license? How to get land?, Right to information, What is the 'right' kind of question?,

**Unit 2**

Tax Filing, Overview+activity to see what the website entails, Bank, Going to the bank, Putting the theory into practice will also consist of documenting the hardships/challenges and learnings from the entire process. They are required to get a slip showing that they have successfully opened a bank account. Presentation, presentations of their documented visit

**Unit 3**

RTO Getting a driver's license, Putting the theory into practice will also consist of documenting the hardships/challenges and learnings from the entire process. They are required to get a slip showing that they have applied for a driver's license, Presentation, presentations of their documented visit

**Unit 4**

Development Authority/ Tehsildar- Development Authority/ Tehsildar- Putting the theory into practice will also consist of documenting the hardships/challenges and learnings from the entire process. They are required to get a slip showing that they have understood how to get land Presentation presentations of their documented visit

**Unit 5**

Right to Information- Filing for RTI, Putting the theory into practice will also consist of documenting the hardships/challenges and learnings from the entire process. They are required to get an acknowledgment slip to show success in their task, Presentation. presentations of their documented visit; this presentation will also entail the idea of whether the individuals are asking the right questions or not and what is considered right

Primary Resources: An Introduction to Banking, 2nd Edition by Moorad Choudhry, Steen Blaafalk

## **SEMESTER - 3**

**Course: Business Analytics**

**Semester 3**

**Credit: 4**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### **Unit 1:**

Introduction- Overview of Business Analytics

### **Unit 2:**

Excel - Working with data, Data organization, management, and sorting, Pivot tables, Statistical Analysis, Using formulas for statistical analysis, Statistical Analysis, Using formulas for statistical analysis, Visualizations, Making visualizations:graphs, correlation, line charts, bar graphs, histograms, Macros, Datasets- keep getting difficult (progressing)

### **Unit 3:**

Powerpoint presentation- Basics, working with slides, texts, and objects, More objects, More Objects continue, customizations and transitions, Exercise

### **Unit 4:**

Power BI- Building a report, Data imports; Visualization; Manipulation of data; Interactive reports , Publish, Interactive reports; Dashboard basics- compiling, sharing report, Exercises, lecture, discussion, and activity, Exercise

### **Unit 5:**

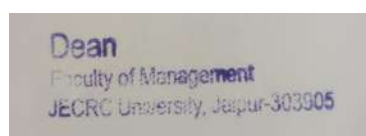

Tableau- Building a report, Data imports; Visualization; Manipulation of data; Interactive reports, Exercises, lecture, discussion, and activity

Publish, Interactive reports; Dashboard basics- compiling, sharing report, Exercises, lecture, discussion, and activity, Exercise. Presentation Presentation

Primary Resources : Business Analytics | Third Edition| By Pearson

**Course: Human Resource Management**  
**Semester 3**  
**Credit: 4**

### **Unit 1:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Introduction- How did HRM evolve? Definition and core concepts; Concepts and models of HRM; the Changing role of HRM due to Covid 19. How does the HRM function? Managerial and Operative responsibilities. HR structure and strategic HRM. Perspective to HRM; features; employment planning. Case study.

## **Unit 2:**

HRP, employments, Human resource planning- an overview, How would you define HRP? Objectives; HRP process and barriers, Forecasting. Overview; action plan wrt shortage, Job analysis, definition, objectives, and importance, Talent acquisition/ Head Hunting, How has HRM evolved into talent acquisition? What is headhunting? What is talent acquisition?

## **Unit 3:**

Staffing- Recruitment, Selection & Firing, Recruitment, Sources- internal and external; How to recruit someone? difference between recruitment and selection; what are the factors that influence recruitment? Selection, Interview technique; How is someone selected (stages)?; Types of tests taken while selecting?; Separation- Placement, Induction program, Firing, How do people get fired?; Consequences of getting fired; Case study

## **Unit 4:**

Train and Learn to develop- Training process, Who; why and hows of training?; why is training important?; on-job training and off-job training; soft skills, Career management, Definition, Methods, and challenges; Taking initiative at a job? How to do it? What are the stages?; Models for career management; Stages in Career Planning, Development in career, How can one develop in their career?; specific skill deficiencies; anticipated skillset. Case study

## **Unit 5:**

Evaluate Performance and compensation- Performance Appraisal, Overview; Methods and process of PA; Methods of PA; Stages, Compensation, bases for compensation, job evaluation, and compensation/evaluation systems, Incentives, Overview; managing employee benefits scope. Case study. Ethics in HRM- Workplace issues- Bullying, sexual harassment, and diversity, #Metoo. How did the #metoo movement change the role of HR, Grievance handling system, Trade unionizing collective bargaining; grievance handling, Labor law, Labor laws related to social security measures. The complete e-commerce book-Janice Reynolds

Building a StoryBrand: Clarify Your Message So Customers Will Listen

**Course: Writing & Communication 3**  
**Semester 3**  
**Credit: 2**

**Unit 1:**

Editing & Proofreading - Introduction to editing & proofreading, The importance of editing and proofreading one's writing- the first draft is never the best, it has to be reworked to make it impactful, Practice editing: flow, structure, and content,

**Unit 2**

Practice looking at one's writing critically using the cover letter written in semester 1 or the report written in semester 2. Check if the main point is coming across, if the flow is good, if the details are necessary. Ask yourself: how can the piece of writing be improved? Practice proofreading: spelling & grammatical errors

**Unit 3:**

Tools and techniques for proofreading one's work to spot and correct errors- Accuracy & Fact-checking, How to take information from reliable sources. Fake news/facts. The importance of accuracy in reports and presentations, How to fact-check information. Prepare Fact-checking final draft Group or pair activity in which students use the tools learned in the previous classes to edit, proofread and fact-check each other's writing (reports)

**Unit 4:**

Thinking Visually- A picture is worth a thousand words, Introduces the importance of visuals- images, graphs and video- in impactful communication, Create your own infographic part 1 Ideate & research the content to create your own infographic (individual/in pairs/in groups. Create your own infographic part 2. Use a free tool like Canva to select a template, place content onto the infographic, use design elements (color, font, placement) to make it impactful

**Unit 5:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Storytelling - The power of a good story, The importance of stories in communication, why they are impactful, some examples, Using stories to sell (advertisements), Analysis of famous advertisements and how they used stories and emotions to sell the product or service, Create your own advertisement part 1. Take your favorite product or service. Imagine it has made huge losses and is about to close. You need to help boost sales by making an advertisement to convince your classmates to use the product or service. How will you use a personal story, emotions and a catchy slogan to convince your classmates to use the product or service? Create your own advertisement part 2. Present your advertisement to the class or in groups. Conclusion. Discussion

**Course: Problem Solving**  
**Semester 3**  
**Credit: 4**

**Unit 1:**

Introduction to problem Solving- IDEAL problem solving, What is problem solving, Why is it Important. IDEAL problem solving model. Thinking like a problem solver. Activity: The 6 thinking hats, the method helps individuals as well as teams to think about a problem or a topic from different perspectives. Problem solving in the Industry. Case Studies: Problem solving experiences shared by industry professionals

**Unit 2:**

Barriers to Problem Solving- Introduction to Bias, Activity: 9 dot problem, Introduction to bias: Misdiagnosis, Communication barriers, Solution Bias, Lack of Empathy, Causes of problem solving barriers, Perspective, emotional, environment, cultural factors and, functional fixedness, mental sets. Case Study: The Cost of Poor Communication

**Unit 3:**

Problem Solving - Process, Identifying Problems, Causes of the problems (Difference in opinions, goals, interpretation, attitude towards solving a problem), Types of problems ( between teammates and two teams, within an organization and a team) Solving problems - Steps, Problem solving steps ( identify, evaluate, managing , taking decision, resolving the issue/problem) Activity: Define the six step problem solving model in your own words and give example Solving problems - Strategies Problem solving strategies (competitive , accommodating, compromising, collaborative. Solving problems- Industries. Case Studies: How companies use strategies and steps to solve problems. Short assessment

Problem Solving by Richard Rusczyk and Sandor Lehocz

### **Course: Expressions|Dance, Music, and Theater Semester 3 Credit: 4**

#### **Unit 1:**

Theater- Contemporary theater, Open-ended discussions on theater that are screened. The class will start with a 10 minute Kahoot game of students rating actors from the theater and Bollywood industry. The course will cover various forms of theater that are currently relevant. The discussion of each form will be facilitated through videos. The videos covered will be at the discretion of the faculty (whatever they deem as meaningful). The idea is to show performances that would shake the realities of the students and make them want to think about what they liked or disliked. The preferred outcome of this class is to have students break down and articulate their own opinions on works of art. Voice, Speech, and Diction. It will incorporate techniques that focus on speech clarity, enunciation, voice and tone modulation, and other such things that are linked to verbal cues.

#### **Unit 2:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Slam poetry - This will be a video-led discussion. This Unit/ Module will focus on Hindi and English slam poetry. There will be different videos shown which will be followed by group discussions concerning their likes and dislikes. The students will also be taught the techniques that incorporate slam poetry, making them practice a few skills focusing on enunciation and voice clarity.

### **Unit 3:**

Indian Cinema - This Unit/ Module incorporates the journey of Indian Cinema mainly tackling what is considered 'popular' currently. It will show the advent from Ramayana and Mahabharata (scenes) to the current films that are gaining momentum such as Shershaah, Kabir Singh, Raazi, and so on. Further, this Unit/ Module will compare the journey of cinema with the journey of advertisements and the roles celebrities/plotlines play in influencing the growth of the product. The aim of this class is for the students to discern their likes and dislikes. It is also for them to understand the factors that go into making a successful ad.

### **Unit 4:**

Music - Indian Music, Both classes will start with a 10 minute Kahoot game of students rating songs. This Unit/ Module will cover the structure of Indian music from the start and where it lies presently. Most forms that are covered will be followed by video-led examples. Post which, students will discuss their reflections on the song. Singing. This Unit/ Module will mainly consist of riyaz. There will be a practice of sa re ga ma, followed by different variations of the octave. Finally ending the class by learning a song. Karaoke. Connecting the music. Passages from books and videos with no sound will be shown and the students will be asked to think on spot and connect it to some song that could potentially play in the background. Music Videos - In this class, students will be required to take a video of their entire week of whatever they have been doing. The students will sit through class and collate all the videos in the first half adding the appropriate song for the week. The second half of the class will be a presentation class. During the presentation, the students will highlight the reason behind adding the song.

### **Unit 5:**

Dance - Forms of Dance , Incorporating a 10 minute Kahoot session of yes and no, where students share whether they liked the dance sequence in the movie or not. This class will focus on the different forms of dance that exist in India and a few internationally. The kind of influence international dances have had in India. Each form of dance will be followed by a video-led discussion. These discussions are mainly self-reflections designed for the student to annotate their thoughts and critique the dances. Movement - Guest-led lectures will focus on the students moving their bodies and learning basic dance moves. This Unit/ Module aims to help the students appreciate the art form through its application. Movement-focused workshops will also help the students be more comfortable with their body posture, nonverbal cues, and their bodily conduct. Moreover, dancing as a form of art also reduces stress levels and makes individuals more flexible in their thinking.

**Course: Corporate Governance and Ethics**  
**Semester 4**  
**Credit: 4**

**Unit 1:**

Conceptual Framework Of Corporate Governance - Overview: Corporate Governance, Meaning; theories and models of Corporate Governance, Overview: Ethics, various approaches, to business ethics; ethical theory, Ethics and Corporate governance, ethical governance; code of ethics; Key managerial Personnel (KMP), Corporate boards, Corporate boards and Powers, responsibilities disqualifications.

**Unit 2:**

Corporate Governance framework in India - Corporate Governance in India, regulatory framework of Corporate governance in India; Corporate governance in PSUs and banks.

**Unit 3:**

International Perspective on Corporate Governance, Corporate Governance in the international setting, Legislative framework of corporate governance in United Kingdom; general understanding for the foreign setting, Legislative framework of corporate governance in USA,, Australia, china, Legislative framework of corporate governance in china, South Africa; OECD Principles of Corporate Governance 1999

**Unit 4:**

Major Corporate Governance failures, International setting, Bank of credit and commerce International (UK), World.com (USA); common governance problems noticed in various corporate failures, National setting, Satyam computer, services ltd; Sahara (India); Kingfisher ltd (India); common governance problems noticed in various corporate failures

**Unit 5:**

Whistle –blowing and corporate Governance, What is whistle-blowing. The concept of whistle-blowing; types of whistle-blowers, Policy and India, whistle –blower policy; developments in India. Corporate Social responsibility (CSR). What is CSR? Meaning; CSR – an overlapping concept; corporate sustainability reporting. CSR and CG Relationship relation between CSR and Corporate governance; Initiatives in India. Ethics and business. When do you get unethical in business? Some unethical issues; benefits from managing ethics at the workplace, ethical. organizations. Finance and Ethics Overview of finance ethics; Agents,

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

fiduciaries and professionals; conflict of interest. Ethics in investing. Mutual funds; relationship investing; socially responsible investing and microfinance. Enron: Case study. Highlighting ethics in investing ethics and IT Accountability and liability issues, internet challenges to privacy, IPR, Copyrights and Patents. Case study - 2G Corruption/ Coal scam, Naresh Goyal (Jet), Nirav Modi, Dhirubhai Ambani, How to do it right in business? Theranos/WE works, Whistle blowing Facebook Vs govt., Lobbying, #metoo movement. Sexual Harassment at the workplace, Why do bad men win at work? Confidence Vs Competence. Presentation Primary Resources

The Power of Ethics: How to Make Good Choices in a Complicated World by Susan Liautaud

## **Course: Statistics 2**

**Semester 4**

**Credit: 4**

### **Unit 1:**

What do you think about data?- An introduction, Thinking Clearly in a Data-Driven Age An understanding of what is in store for this class; How is thinking and data complementary to each other, not substituting?

### **Unit 2:**

Establishing a common language - Correlation: What Is It and What Is It Good For? What is correlation?; Benefits of correlation; Measurement of correlation; Linearity, Measurement of correlation; Linearity; Exercise.Causation: What Is It and What Is It Good For? Definition; benefits; Causal inference and its problems; Conceptual issues; Exercises. Correlation Requires Variation, What is a dependent variable; selecting a dependent variable; How is the world organized to select a dependent variable?

### **Unit 3**

Basics of regression - Functions, philosophy and idea behind regressions, Regression analysis, Linear regression examples, Regression analysis, Interpretation of regression analysis with examples, ANOVA

Type 1,2 and 3 Exercises Reversion to the mean, an overview; the placebo effect; cosmic habituation

### **Unit 4:**

Is the relationship causal? Why Correlation Doesn't Impose Causation? how to diminish the bias and noise?; how to think clearly of potential outcomes? What are the different sources of bias? Confounders and reverse causality. Mechanisms vs Confounders Controlling for Confounders. How to control bias? Regressions role Randomized Experiments randomisation, causal

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

inference; estimation and inference in experiments; problems that arise with experiments; Natural experiments. Exercises, Regression Discontinuity Designs, implementation; continuity at threshold; non compliance.

### **Unit 5:**

From information to Decision - Turn Statistics into Substance, Visual presentation of data; how to illustrate statistical inferences

Measure Your Mission, On the Limits of Quantification, Decisions when evidence is limited; quantification and values.

### **Primary Resources**

----------	--

### **Course: Environment and Businesses**

**Semester 4**

**Credit: 2**

### **Unit 1:**

Introduction- Conceptual categories, Understanding sustainability, understanding Energy, Ecology and Biodiversity, Problems in ecology and biodiversity in general, Identifying our environment, Sensitizing towards the environment: trees, plants, and birds that surround us but we do not even identify them.

### **Unit 2:**

Impact and responsibilities of businesses on/for environment, Need for studying this subject, Why should businesses care about sustainability, Stakeholders v shareholders, The nature of businesses has changed. They now have huge impacts on people who are otherwise unconnected. The economy of Waste production. Env. impact of Fast Fashion, Internet Services

### **Unit 3:**

Law, Culture and Businesses- Legal Background, Various laws on the environment in India, Courts and environment, MC Mehta PILs and Godavarman PILs,

### **Unit 4:**

Why businesses must respect cultures, Case study: Vedanta Mining of Niyamgiri hills, International legal framework, Understanding Kyoto, COP, international treaties, and

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

commitments, Corporate Social Responsibility, What is the Indian law on CSR, and how have companies used it in environmental space

## **Unit 5:**

Presentations

**Course: SME Management**  
**Semester 4**  
**Credit: 2**

## **Unit 1:**

Setting up a small business, What is MSMF? Setting up a new venture or starting the business through franchising,

Factors influencing SME Location strategy, Preliminary Registration with State Directorate of Industries- To be explained through case studies, for each; Covid 19

## **Unit 2:**

Assessment of different forms of business organizations, Sole proprietorship, Partnership, and LLP, Major differentiating aspects- case studies, Joint-stock company and HUF

## **Unit 3:**

Policy Initiative and Laws for MSMEs, Policies and initiative, ASPIRE; MSME Development Act (2005 and 2006); Emerging trends and institution support, World Trade Organization, IPR, INSME, Barcoding, Indian Laws, Role of Business in the modern Indian Economy SMEs in India,

## **Unit 4:**

Entrepreneurship - What is entrepreneurial thinking? Mindset; recognition and skills and attributes, Women entrepreneurship, Women entrepreneurship in India: a case study of creative bee of Smita Desai, Rural entrepreneurship, User innovation and entrepreneurship: case studies from rural India.

## **Unit 5:**

Institutions for support- Financial Support; the role of institutional aids in entrepreneurship development; agencies for policy formulation and implementation- what is their role? Benefits of long-term and short-term financial support. What are the sources? DST, SIDCO, NSIC, IRI, NIDC, SIDBI, SISI, SIPCOT, Entrepreneurial guidance bureaus; objectives of DIC, SISI, and EDII

Enterprising - GAME: Global alliance on mass enterprising. How does the government promote entrepreneurial setups? Government schemes for MSME. Subsidies Support on ISO Certification

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

& skills upgrade. Does the state government support industrial infrastructure? GST and its exemption

**Course: Negotiations**  
**Semester 4**  
**Credit: 2**

**Unit 1:**

Understanding negotiation- Introduction. What is negotiation? The topic will be introduced through an activity to help overcome assumptions towards negotiation. Followed by brainstorming the need to negotiate. Identifying the characteristics of a confident negotiator and role of negotiation in career and business management. Types of Negotiation . Students will brainstorm and share the differences between negotiation and other social interactions followed by. Activity to determine ‘What kind of a negotiator am I?’

**Unit 2:**

Types of Negotiation - Difference between bargaining and negotiating, 4 negotiation scenarios: win-win, win-lose, lose-win, lose-lose, Role-playing/case studies of the different Negotiation styles and identifying the correct scenario, Elements of Negotiation, A brief overview of the steps needed to follow when negotiating- 5 stages of negotiation, Principled negotiation

**Unit 3:**

Preparing Barriers to Negotiations, How to handle negotiations emotionally, How to express your disagreement while maintaining the relationship- case studies

**Unit 4:**

How to prepare for Negotiations, Skills for Successful Negotiating: Negotiation Types: Distributive v/s Integrative negotiations.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Unit 5:**

Executing negotiations, Negotiation Strategies, Strategies- Evade, Comply, Assist, Settle, CNS, Negotiation, Styles, Case studies on: Distributive, Integrative, Multiparty, Team, Positional negotiation, BATNA, BATNA: Best Alternative to a Negotiated Agreement, Activity: The two-dollar game. Persuasion. Common Persuasion techniques: 'foot-in-the-door-technique', 'door-in-the-face' technique. Persuasive words. Activity: First Out of the Circle Loses. Negotiation tactics. The 8 hardball tactics in business negotiation. Negotiation Scenarios. Workshop of various negotiation scenarios that help to identify the best strategies for each of them.

Primary Resources : The Management of Small and Medium Enterprises

**Course: Situational Awareness**

**Semester 4**

**Credit: 2**

Course Manuals:

## **Unit 1:**

Acing Job Milestones, Negotiating A Job Offer, Students will learn how to negotiate a job offer to get a Win-Win outcome, which is a mutually acceptable outcome that makes them and their employer happy. They will learn how preparation, flexibility and patience can help them negotiate better job offers. Asking For A Promotion Or Raise. Students will learn how to gather and use data when asking their manager or boss for a promotion or raise. They will also practice using different scripts with different strategies for asking for a promotion or raise. Losing Your Job Students will learn how to deal with losing their job by managing negative emotions, staying focused and optimistic, and avoiding harmful behaviors.

## **Unit 2:**

Getting Along With Others, Networking, Students will learn how to prepare an elevator pitch to introduce themselves to peers as well as industry seniors when networking. Finding A Mentor. Students will learn how having a mentor can help them grow in their careers. They will learn how to follow up with an industry senior after making an elevator pitch at a networking event. They will also learn how to build trust using the Trust Equation. Healthy Competition. Students will role-play situations to learn how to build healthy competition by collaborating with peers,

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

being a team player and communicating assertively. Handling Disagreements. Students will role-play situations to learn how to handle disagreements at the workplace with empathy and express themselves following professional codes of conduct.

### **Unit 3:**

Working Efficiently With Others, Assigning Work To Others, Students will learn about effective delegation. They will learn how to use a tool to choose the right person for a task, how to give clear instructions, and how to stay accountable after delegating the work. Giving Feedback Students will learn how to use two tools to structure their feedback to others. They will also learn about the importance of keeping criticism of others' work constructive, and strategies for communicating it effectively. Accepting Feedback Positively Students will learn how to be open-minded and positive when getting feedback from others. They will learn how to listen carefully, put their feelings into words, and ask clarifying questions to understand the feedback better.

Engaging The Audience Students will learn how to read nonverbal cues to identify when their audience gets bored or disinterested. They will learn to use tools like storytelling and audience interaction to keep their audience

### **Unit 4:**

Standing Up For Yourself, Dealing With Harassment, Students will learn about the different forms of harassment in the workplace as well as tools they can use to deal with them. They will learn about their rights as employees and about laws about workplace bullying and harassment. Apologizing For Inappropriate Behavior. Students will learn how to craft a genuine apology to take accountability, express regret and focus on the well-being of the person who has been harmed. They will also learn through case studies of business leaders and companies that apologized for different things.

### **Unit 5:**

Project

**Primary Resources :** Situational Awareness A Clear and Concise Reference by Gerardus Blokdyk

JECRC University, Jaipur-303905

**Program: Bachelors in Business Administration (B.B.A.)**

Course: Imagination|Drawing and Fiction

**Semester 4**

**Credit: 2**

**Unit 1:**

ART- Modern Art, Students will be shown important modern art pieces and will be asked to criticize them. They will be asked to talk about what they enjoyed in the piece and whether they think the public liked the same things too, Drawing, This will be a drawing class. Students will be asked to draw a product and then a few students will be asked to sell their product, Photography. Students will be shown photographs and will be asked whether they liked it or not and to give reasonings for their opinion. The students will be asked to build a concept around each photograph. Click a picture. In the first 45 minutes of the class, students will be asked to go and take pictures of anything and then they will have to build a concept around the pictures they have taken

**Unit 2:**

Excursion- National Art Museum/virtual museum, Is this art or not? Students will be shown various stereotypical art pieces and will be asked to define whether it is art or not, Craft, The students will make something out of craft material

**Unit 3:**

Fiction - Story week, The students will be asked to read passages from stories and discuss whether they liked it or not and their reasons for holding such opinions, Writing a small story, Students will be given a topic. each student will be given a different one and they will have to make a 5 line story out of it. Write an ad. Students will be given a product. Each student will be given a different one and they will have to make a storyline for an ad to sell it

**Unit 4:**

Poem week, Students will participate in slam poetry, Selling a product, students will be given a product and they will have to sell it, the person they are selling to will keep changing. Excursion: Ghalib Museum

**Unit 5:**

Storytelling - each student will pick out a story and they will have to recite it in class in a monolog manner, Precis writing. Students will be given a 5500-word essay and will be asked to summarize it into 100 words.

Dean  
Faculty of Management

Primary Resources : Perspective made easy, by Ernest Norling

## **Semester 5**

**Course: Research Methods**

**Semester 5**

**Credit: 4**

### **Unit 1:**

Introduction- Writing a business research paper, Can a business paper be convincing and compelling? If yes. Then what makes it compelling? Writing an award-winning article

### **Unit 2:**

Data collection- Types of data, Introduction to Primary & Secondary data; Methods of primary data collection, Methods of secondary data collection; Advantages & disadvantages of data collection.

### **Unit 3:**

Theory and Hypothesis in Management Research, Integration of theory in research. How do you make out what is theory and what is not? How does a theory get incorporated into a research paper? Why should you incorporate? How is it beneficial? how is it not? How do you test theory?

How do we test our theories? How do we match our questions, theories, and methods?

### **Unit 4:**

Writing and ethics, Writing well, What constitutes good writing? Navigating the publishing process; Maintaining high ethical standards

Ethics. Can you just copy secondary data, research papers? If not, then why? How do you cite? What is plagiarism? What is not?

Collecting and handling data and research methods- Archival Research, Methods to handle big data

Laboratory Experiments, When are laboratory experiments necessary or sufficient for publishing in top-tier management journals? What are common errors in designing lab experiments? What are laboratory experiments most useful for? Field Experiments Quasi-Experiments-overview

Levels of Analysis, What are the levels of analysis? How do level issues influence theory, construct definitions, measurement, samples, and analyses? What are key steps in the analysis of multilevel data?

### **Unit 5:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Sampling and Probability - Sampling Technique, Population, Sampling Frame, Sample, Bias; Statistical Terms in Sampling: statistic, parameter, Sampling Distribution; Sampling & non-sampling errors

Probability and Non-Probability Sampling, Simple Random Sampling; Stratified Random Sampling; Cluster Random Sampling; Systematic Random Sampling, Multi-stage Sampling; Convenience Sampling; Judgment Sampling, Judgment Sampling; Quota Sampling; Snowball Sampling, methods of collecting data, Measurement & Scaling Technique, Scales of Measurement: Nominal, Ordinal, Interval, Ratio; General Issues in scaling; Likert Scaling, Questionnaire Designing, Types of questions; Question Content, Wording & Placement; Response Format; Criterion for a good questionnaire, Make a questionnaire and disseminate it- Google forms or KOBO, Analysis & Report Writing., Data Preparation & Report Writing. Data Aggregation; Data Accuracy; Data structure; Data transformation; Types of Research output; Key Elements of Report Writing.

---

**Primary resources :** Research Design: Qualitative, Quantitative, and Mixed Methods Approaches, 4th Edition, by John W. Creswell (Author)

**Course: Design Thinking**  
**Semester 5**  
**Credit: 4**

**Unit 1:**

Introduction - What is design thinking? An overview of what to expect with this subject, Does design thinking matter? Where all have design thinking been used- A bunch of case studies.

**Unit 2:**

Design Research, What is design research? How do you research? Has field research changed due to covid 19? Ethnography- in pandemic and non-pandemic times. What does design research depend on? Integrating empathy during the onset of the research process Empathy activity: A case study Personas

**Unit 3:**

Defining a problem and generating ideas, Does research depend on a problem? How do you define problems during design research? Framing a problem. Generating ideas Synthesizing ideas and making them make sense! Worst ideas- Activity.

**Unit 4:**

Team building and initiating a project process, Understanding research, Team division and understanding each other and the project Communication of ideas, How do you communicate

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

ideas? Defining a problem, Defining a problem and idea-generating period, Ideation, Ideation-case study, Stakeholders, Who are the stakeholders? Creating a stakeholder map on the basis of hypothetical case studies.

### **Unit 5:**

Prototyping and testing- What is prototyping? How do you prototype your idea? What is frog design? Discussion of project Testing your prototype Is your prototype working? How to test prototypes? What is a focus group? Activity to initiate prototype testing Development of prototypes. Buffer period meant for the development of prototype working and testing through their own experimental process. Does my idea work?- DO worksheet. Testing and reviewing, Testing process, Do final testing of the prototype to see its working, Feedback, Review the project final fixes. Storyboarding and communicating, Storyboarding, Learning the storyboarding process, Making a storyboard process- through video or ppt, Finish storyboarding, Communicating. How to communicate ideas to the bigger public?

**Primary Resources :** Change by design by Tim Brown

JECRC University, Jaipur-303905

**Course: Summarizing and Narrative Building**  
**Semester 5**  
**Credit: 2**

**Unit 1:**

Introduction - What is a summary? The introductory class will define what summarizing encompasses and talk about the steps required to create an effective summary. What is narrative building? The class will begin with the video followed by a discussion about what stood out to them.

Deciding when to summarize or build a narrative. Students will explore different situations and assess whether their idea should be summarized or presented as a narrative.

**Unit 2:**

How to be concise, Summarizing your story, Students will think of a memorable trip that they have taken and write two summaries targeting a different audience for each - one for their peers and one for a travel blog, Selling your product, Students will create a product and write down the idea behind it, its need/relevance in the market and the target audience. This will be followed by role play wherein they will summarize the aforementioned points for their peers. This can be done as a Just A Minute activity to ensure brevity

Writing an executive summary. Students will read a short report and write an executive summary for the same. Summarizing through infographics. Students will read an article, then summarize and present the content using infographics. The template will be shared with them.

**Unit 3:**

The art of storytelling, Building a strategic narrative, Students will explore the importance of creating a compelling story in order to sell their product/service (R2). They will then build a strategic narrative for the product created in the previous

**Unit 4 .**

Power of Humor in Storytelling- This topic will introduce humor as a storytelling tool. Students will learn how to create engaging and relatable narratives using different forms of humor such as self-deprecation, improvisational, observational and topical. Narrative building in advertisements: deconstructing a commercial, Through advertisements, students will explore the components required to convey a complex idea in a compelling and convincing manner. In small groups, students will create a commercial and enact a commercial for the product designed earlier. They can create a jingle/tag line as well.

**Unit 5:**  
Project.

**Primary Resources :** The Power of Storytelling: The Art of Influential Communication by Ty Bennett

---

**Course: Strategy and Decision Making**  
**Semester 5**  
**Credit: 2**

**Unit 1:**

Understanding Strategy- Strategy- Definition and Features, The Importance of Strategy, Strategic Thinking Competencies, Strategic Thinking Enablers. Strategic thinking. Activity: Reflecting on the environment; to understand the importance of reflective thinking, systems thinking as a fundamental skill for strategic thinking and skill building. Elements of Strategy  
The main elements of strategic thinking (Jean Liedtka). The GOST Framework- a distinct classification of all the interchangeable terms used while planning for strategy.

**Unit 2:**

Strategic planning- Strategic Process I, (Vision and Mission Statements), Vision and Mission statements(the dream, what and why) - The VMOSA Strategic Analysis Framework- Process of envisioning, Characteristics of Mission statements, Identifying various vision and mission statements of at least 4 large companies. SWOT Analysis  
Basic elements of the SWOT analysis- Internal/External strategies(SO, WO, ST, WT). Case study: Mc Donald's SWOT analysis

**Unit 3:**

Strategic Process II- (Objectives, Strategies, Action Plans), How much of what will be accomplished and by when; Setting Objectives- behavioral, community and process level, Setting strategies and action plans, Measuring Performance, Balanced scorecard and perspectives for measuring performance. Strategic Process III  
Class assignment: identifying all the components of Strategic planning for 2 major companies

**Unit 4:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Decision Making- Types of decisions in management, Strategic, tactical, operational, Decision making frameworks

What are decision making frameworks? Process of developing decision making frameworks

#### **Unit 5:**

Decision making tools, Decision trees, Decision Matrix, Introduction to AHP- Conditions Decision Makers face- Types of decisions made in business - prog/non prog, strategic, tactical, operational

Working with Risk, SWOT

---

Primary Resources : The Decision Book – 50 Models for Strategic Thinking by Mikael Krogeru

### **Course: Creativity | Visual Thinking and Cartography** **Semester 5** **Credit: 2**

#### **Unit 1:**

Visual Thinking Fundamentals- Introduction to Visual thinking, Visual thinking and importance, Visual thinking for critical thinking, Activity: Interpreting images creatively, Thinking Maps, The Brain-Based Foundations for Thinking Maps, Connect to the Eight Core Cognitive Processes

Visual Thinking Strategies, Using concept maps 1

#### **Unit 2:**

Activity: Circle Map for defining in context / brainstorming, Activity: Tree Map for categorizing, Using concept maps 2, Activity: Flow Map for sequencing. Activity: Multi-Flow Map for Cause / Effect. Applying Visual Thinking. Using Visual Thinking Strategies in organizations

Applying Visual Thinking, Activity: Examine own self-understanding, choose images that represented the current selves and the future selves in the academic, physical and social domains

#### **Unit 3:**

Visual Story-telling- Understanding metaphors in story-telling- I, What are metaphors, Using metaphors in story-telling, 8 metaphors of organization. Understanding metaphors in story-telling- II

#### **Unit 4:**

Activity: Narrate your career vision and story using metaphors- Digital Story- telling, Introduction to Digital Storytelling, Phases of storytelling

Six steps of digital story-telling, Using digital resources for story-telling.

**Unit 5:**

Introduction to storyboarding- Locating resources for story boarding, Applying digital story-telling, Picture Your Career: Visualize & Plan Your Career Path

## **SEMESTER 6**

**Course: Entrepreneurship**

**Semester 6**

**Credit: 4**

**Unit 1:**

Overview of entrepreneurship- Introduction, Entrepreneurship: Meaning, Nature & Scope, Entrepreneur vs. Manager, Entrepreneur vs. Entrepreneur, Concepts, Characteristics and qualities of a successful entrepreneur. Application. Case study. Entrepreneurship And Society. What is Consumer Behavior? The Entrepreneurial decision process. Role of Entrepreneurship in Economic Development. Theories of Entrepreneurship  
Ethics and Social responsibility of Entrepreneurs. Opportunities for Entrepreneurs in India and abroad. Woman as Entrepreneurship.

**Unit 2:**

Starting a new Venture- Creating And Starting The Venture, New Venture Development: Meaning and Stages, Sources of new Ideas  
Methods of generating ideas, Creating problem solving, Product planning and development process, Application, Quiz. Business Plan  
Nature and scope of Business plan, Writing Business Plan, Marketing plan, financial plan and the organizational plan, Launching formalities.  
Application. Activity for the student related to starting a new business.

**Unit 3:**

Finance and Entrepreneurship- Financing And Managing New Ventures, Sources of Financing Entrepreneurship.  
Record keeping Advantages Disadvantages, Limitations, Motivating and Leading Teams, Video - Followed by trainer debrief  
Marketing Control. Sales Control. E-commerce and Entrepreneurship, Application, Activity  
New Venture Expansion Strategies And Issues, Features and evaluation of joint ventures, Acquisitions, Merges ,Public issues, rights issues, bonus issues, Stock splits, Application, Activity. Quiz.

**Unit 4:**

Industrial And Organizational Support To Entrepreneurship, Evaluation Of Role, Evaluation of Role of Government. Role of Non Government Agencies in Promoting Entrepreneurship in

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

India, Industrial Supports, Role of Directorate of Industries, District Industries, Centers (DICs), Industrial Development Corporation (IDC), State Financial corporation (SFCs), Commercial banks Small Scale Industries Development Corporations (SSIDCs), Khadi and village Industries Commission (KVIC), National Small Industries Corporation (NSIC), Small Industries Development Bank of India (SIDBI)

### **Unit 5:**

Entrepreneurship In India- Entrepreneurial Strategies, Entrepreneurial Strategies and Business Plan, What makes a business successful?

Future Of Entrepreneurship, Future of Entrepreneurship in general, Future of Entrepreneurship in India

### **Primary Resources:**

1	Ten types of innovation: the discipline of building breakthroughs by Larry Keeley
2	Harvard Business Review Entrepreneur's Handbook: Everything You Need to Launch and Grow

#### **Program Outcomes:**

PO1: To provide students with comprehensive management knowledge that can help them to be a business leader and manager

PO2: To required conceptual, analytical, technical, entrepreneurial and human relation skills to be an effective management professional and ethical and responsible citizen.

PO3: Ability to integrate business knowledge and management techniques and aid planning and control in a changing business environment.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

PO4: Display leadership competencies in implementing, coordinating and inspiring subordinates to manage change.

PO5: Naturalization with social responsibility issues that manager must address, including business ethics, cultural diversity, environmental concerns and sustainable development.

PO6: Demonstrate analytical skills applying business analysis, data management and diagnostic problem-solving skills in order to support management decision-making.

PO7: Apply the entrepreneurial, analytical, managerial skills for effective business management.

## **Principles of Economics and Markets**

**SUBJECT CODE: MBA017A**

**CREDITS: 4**

### **Course Objective**

The objective of the course is, the fundamentals of economics and with relationship with business, to know and learn about the demand and Supply Analysis, to learn about the macroeconomic policies and financial investment markets.

### **Unit 1: The Economic Way of Thinking**

Introduction to economics: concept of scarcity- trade-offs, opportunity cost, basic economic problems, microeconomics and macroeconomics, managerial economics-meaning and nature. Business Cycle: Business Cycle- Features, Phases, Causes and Measures for Controlling Business Cycles. Concept of Inflation, Deflation, FDI, National Income- Concepts and Measurements.

Sectoral Composition: Contribution of Agriculture, industry and services sector towards economic development, Government Initiatives to boost up each sector

### **Unit 2: Demand & Supply Analysis and Estimation**

Demand Analysis- meaning of demand, determinants of demand, demand equation, Law of Demand, elasticity of demand, types of elasticity (numerical), measurement of elasticity, Demand forecasting-meaning, types and measurement, supply- meaning, determinants, Law of Supply, market equilibrium.

### **Unit 3: Production Analysis and Market Competition**

Production-meaning, production function, laws of production-law of variable proportions and laws of returns to scale, isoquants, economies of scale; Cost analysis- Meaning of cost, Cost concepts, (problems), cost function- SR & LR, LAC curve; Breakeven analysis- BEP (numerical), Cost & Economies of scale.

Types of markets: perfect competition, monopoly, monopolistic competition and oligopoly; profit-maximization-alternative forms of organization; marginal revenue, marginal cost, and profit maximization, profit maximization by a competitive firm: short-run profit maximization by a competitive firm and long-run profit maximization. Oligopoly Market: Oligopoly-price searchers-meaning, cartels, conditions for cartel success; advanced pricing- extensions of oligopolistic pricing: limit entry pricing, price rigidity and kinked demand; price leadership, volume pricing.

### **Unit 4: Indian Economy**

Introduction: Characteristics of Indian economy as developing economy, Economic growth vs Economic development, causes and solutions for economic development, Measurement of Development- Human Development Index (HDI) and other measurements.

Policy and Economic Reforms : Economic Policies- New Economic Policy (LPG); monetary policy, fiscal policy; Industrial Policy, Foreign Trade Policy, FDI, Economic reforms -

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

current economic reforms (SAP-Structural Adjustment Programs), privatization, disinvestment, Demonetization, GST.

Economic Planning: Need for Finance Commission, Role and functions of Finance commission of India, need for and importance of NITI Aayog, Functions of NITI Aayog.

### Unit 5: Financial System

Overview: Overview of the Financial System, Financial Institutions, Financial Markets, Financial Instruments and Services, Role of financial Intermediaries, Source of Funds, Application of Funds, Role of Financial Regulatory and Promotional Institutions like RBI, SEBI, IRDA, PFRDA.

Financial Markets:

Monetary policy-Tools, Goals and Targets, structure of interest rates – Nominal and real interest rate, Money Market- instruments, utility, eligibility: Call, Notice & Term Money Market, Commercial Bills, Commercial Paper, Certificate of Deposits, T-Bills issue & yield-computation, Repo, market for financial Guarantees, Discount market, Government (Gilt-edged) Securities Market & design, Banking institutes, Insurance companies

Equities Market-Primary Markets –SEBI norms (ICDR regulations), exit routes, introduction to public issues, types of issues, appointing Merchant Bankers & other intermediaries, Filing DRHP & types of prospectuses, book building mechanism, types of investors, ASBA, Secondary Markets-Purpose & procedures for listing (post-IPO); SEBI framework, role of stock exchanges-NSE, BSE, role of secondary market intermediaries, Depositories, Overview of Bond market and recent developments, Financial Services:

Various Savings plans, Non-Bank Financial intermediaries -Leasing, Hire purchase, Credit rating, Factoring, Forfaiting, Non-Bank Statutory Financial Organizations. Technology in Financial Services: Digital currencies, Emerging technologies, FinTech operational, technology, and regulatory risks, Block chain, Cryptocurrency and Bitcoins, Cyber-security law in India, Big data and Chat bots, Role of Artificial Intelligence.

### Course Outcomes

CO1: Identify the relationship between economic theories and business decisions.

CO2: Evaluate business decisions based on Demand and Supply concepts.

CO3: Assess market competition and structure for different products.

CO4: Interpret various macroeconomic policies for better understanding of the economy.

CO5: Apply financial market norms towards investment decisions.

### **Accounting and Finance** **SUBJECT CODE: MBA019A** **CREDITS: 4**

### **Course Objective**

The Objective of the Course is, to understand the basics of Cost and Financing Accounting, to know and learn about the labour costs and overheads and to understand the double entry system and to understand the concept of cost methods and planning control.

### **Unit 1: Basics of Cost and Financial Accounting**

Sources of data (internal & external) –concept of cost – cost classification based on nature of expenses, function, variability – cost behaviour with use of graphs – concept of cost objects, cost units & cost centres- Data analysis and statistical techniques.

Define financial accounting – purposes of financial statements for the users – main elements of financial reports – conceptual framework – definitions of asset, liability, equity, income & expenses-prudence.

Concepts of relevance, faithful presentation, materiality, substance over form, going concern, business entity, accruals, consistency, comparability, verifiability, understandability and timeliness

## **Unit 2: Accounting for costs – Materials, labour and overheads**

Accounting for material costs – ordering, receiving & issuing material – methods of valuing purchases and issues (FIFO & Weighted Average methods only) – EOQ – inventory levels –

Accounting for labour – direct & indirect cost of labour – remuneration methods (individual & group) – labour turnover – overtime & idle time – labour efficiency, capacity & volume ratios

Accounting for overheads – allocation of overheads to production & nonproduction departments – apportion service overheads to production departments – production overhead absorption rates – entries for accounting of material, labour & overhead costs

## **Unit 3: Accounting records, double entry accounting systems and Recording transactions:**

Main data sources for accounting – different business documents such as sales order, purchase order, goods received note, quotation, goods despatched note, invoice, credit & debit notes, receipt, remittance advice, cash vouchers – understand the double entry accounting & duality concept – types of transactions such as sales, purchases, payments & receipts.

Recording into journals – ledger accounts – balancing of ledger accounts – accounting for discounts, sales tax – recording cash transactions – accounting & valuation of inventories – accruals & prepayments – tangible & non-tangible assets – depreciation & amortisation accounting – receivables & payables – provisions & contingencies – errors & rectification – bank reconciliation statements

## **Unit 4 - Trial balance, financial statements:**

Statements of profit or loss and other comprehensive income, cash flow statements, balance sheet – events after reporting period – interpretation of financial statements – use of basic ratios related to profitability, liquidity, and activity and resource utilisation – Describe the principle of the equity method of accounting for Associate entities.

## **Unit 5: Methods and techniques of costing for different industries and planning and control**

### ***Costing methods for different industries***

Understanding of applying job & batch costing, Process costing (including joint products & by-products, equivalent production), service costing – understand the differences between absorption & marginal costing

### ***Costing techniques for planning and control***

Understand the use of budgets and standard costs for planning & control – flexible budgets – reconciliation budgeted profits with actuals – meaning & calculation of standard costs – computation of simple variances v/s budgets & standards.

### **Course outcomes:**

CO 1: Understanding the basics of cost and financial accounting and the related concepts, principles, and terminologies.

CO 2: Understanding the application of costing for various cost components.

CO 3: Understanding the accounting records maintenance rules and systems and record keeping aspects.

CO 4: Use of costing techniques under different types of industries for different circumstances and evaluating the costing techniques facilitating planning and control of activities that drive the performance of an organization.

CO 5: Understand the importance of preparation of trial balance and the different types of financial statements prepared for disclosure and further analytical purposes

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

### **Organizational Behaviour and Human Resources Management**

**SUBJECT CODE: MBA020A**

**CREDITS: 4**

#### **Course Objective**

The Objective of the course is, to equip students to analyse the organizational culture and conflict management and to impart the knowledge of leadership and motivational theories and to enable the students to evaluate the strategic human resource management and industrial relations emerging trends in IHRM.

#### **Unit 1: Organizational Behavior**

Introduction to Organizational Behavior, Meaning and Importance of OB, Historical developments, the importance of Interpersonal skills, Contributing Disciplines to OB, OB model, Challenges and Opportunities for OB, Workforce Diversity, Dynamics of diversity. Application of OB in organizations, OB in Global Context

Individual behavior: The basis for understanding Work Behavior. Factors responsible for Individual differences at workplace Attitudes- Meaning, components, Values- Meaning, Types of values, the importance of values in organization. Attitude, components, Factors affecting attitude formation, Ways to change employee attitude, Types of job-related attitudes, Job Satisfaction. Personality, Theories of personality, Personality traits that influence Work Behavior. Groups- Defining and classifying groups, need for group formation, Tuckman's

stages of group development, Group properties – Norm, Status, Size, Composition, Cohesiveness, Group decision making Techniques, Cost of working in groups, Teams v/s Groups, Importance of teams in contemporary workplace

## **Unit 2: Motivation and Leadership**

Motivation and Group dynamics: Theories of motivation - Content Theories - Need Hierarchy Theory, Hygiene Motivation Theory, Existence Relatedness Growth (ERG) Theory, Theory X-Y, Three needs theory. Process Theories- Equity Theory, Expectancy Theory, Application of motivation concepts at workplace settings – Discussion.

Leadership: Meaning and importance, Leader v/s Manager, Traits of a leader\*

Trait Approach to leadership – Traits of a leader, are leaders born or made? Behavioral Approach, Ohio and Michigan studies, Managerial Grid; Situational Approach - Fiedler's Contingency model, Hersey Blanchard situational leadership theory, Path Goal Theory, Contemporary leadership theories - Transactional, Transformational, Charismatic, Visionary Leadership. Leadership challenges in current context.

Power and Politics; Managing Conflict: Power – Meaning, Bases of power, Dependence – The key to power, consequences of power, Power tactics, Political tactics for increasing power base, Organizational Politics, Causes and consequences, Impact of power and politics in organizations. Meaning and importance of conflict in organizations, Views of conflict, functional and dysfunctional conflict, Conflict process and conflict handling styles, functional and dysfunctional conflicts, Conflict process.

## **Unit 3: Organizational Structure and Culture**

Organizations and Organization Theory: Introduction to organizations, importance, evolution of organization theory and design, dimensions of organizational design, characteristics and design, and organizational configuration, Mintzberg's Organizational types, contemporary design Ideas.

Strategy, Organization Design and Effectiveness: The role of strategic direction in organization design, organizational purpose, strategic intent, operative goals, importance; SWOT framework for selecting strategy; Porter's competitive forces and strategies; strategies and organization design; other factors affecting organization design; The Balanced Scorecard Approach to Effectiveness; identifying company strategies and effectiveness criteria.

Organization Structure: Organization structure; information-sharing perspective on structure vertical information sharing, horizontal information sharing; organization design alternatives, reporting relationships; departmental grouping options, functional, divisional, geographic, and matrix structure, conditions for the matrix, horizontal structure characteristics; virtual networks and outsourcing; external and internal factors impacting organization structure, hybrid structure, applications of structural design, structural alignment, symptoms of structural deficiency, Organization design essentials.

Organizational Culture: Meaning, definition of organization culture, and importance of organizational culture; uniform cultures; strong vs weak cultures, creating and sustaining culture, creating an ethical and positive organizational culture; Internal and external conflict management, progressive corporate culture that enables Innovation and change.

## **Unit 4: Human Resource Management and Industrial Relations**

Introduction to HRM, and Manpower Planning: Introduction to Human Resource Management, Evolution of HRM, Importance, HRM functions, Forces changing HRM, Human Resource Planning - Meaning, Process, HRP Models, Human Resource Forecasting methods, Challenges and relationship with other Human resource functions, Job analysis, Job Description, Job evaluation, Features of the competitive business environment (Globalization, Technology, E-

commerce, Demographic changes, Diversity), Global Human Resource Planning, Quality of work life. Cultural awareness – Iceberg Model of Culture. Business trends in HR.

International HRM and Emerging Horizons of HRM: Concept, importance, an model of International HRM; Challenges of International HR Managers; Global HR practices; E-HRM; HRIS (Human Resource Information System); Measuring intellectual capital; Impact of HRM practices on organizational performance; contemporary issues in Human Resource Management.

Basics of Industrial Relations and HR Analytics: Basics of Industrial Relations – meaning and importance, trade unions, workers participation in management, collective bargaining, HR Analytics – Introduction, Evolution, Steps in HRA, Applications of HRA, how analytics helps in negotiation and bargaining.

### **Unit 5: Talent Management**

Recruitment and Selection: Recruitment - meaning and process, Purpose of Recruitment, Types of Recruitment - Internal - Job postings, Employee Referral Programs, Temporary worker pools and External recruitment – Virtual Job Fairs, Executive Search Firms, Employment agencies, Recruitment advertising. Factors affecting Recruitment, Recent Trends in Recruitment. Human Capital Management – Meaning and definition, ROI of HCM – Human capital ROI, Training Investment Value, Turnover Rates, Selection- meaning, selection procedure, Types of tests used in Selection, Consequences of selection decisions, Interview and Types of interviews. Placement and Induction.

Talent Management: Training- meaning, need and importance of training, Distinction between training and development, methods of training – On the Job & Off the Job, process of training, recent developments in training, Succession Planning, Strategies for Accelerating Development for succession, Performance appraisal, meaning, importance, various performance appraisal methods, Drawbacks of Performance Management System, challenges and limitations. HR Metrics – Meaning, Key HR metrics, 5 W's of measuring ROI (Who, When, What, Where, Why), ROI of L&D..

Employee Rewards: Employee Rewards -meaning, concepts and definitions, Objectives of giving compensation to employees, Components of remuneration, types of employee benefits, financial and non-financial benefits, factors affecting wage and salary, salary components, salary structure, employee welfare, safety issues in organizations, work life balance and factors attributing to increased awareness for work life balance, Work Life Balance Intervention.

### **Course Outcomes**

CO1: Identify the challenges and opportunities in applying organizational behavior and develop understanding of self and others' behavior in organizations.

CO2: Describe the implications of motivational theories and the influence of different leadership styles on employees.

CO3: Develop an understanding of the principles and theory of organization; examine the reciprocal relationship between the organizational structure, strategies, and systems and the factors that impact organizational structures and design.

CO4: Comprehend the basic principles of strategic human resource management, and practices of talent acquisition and its management.

CO5: Develop the components of employee rewards and analyze the changing scenario of industrial relations and emerging trends in International Human Resource Management.

### Quantitative Techniques and Analytics

SUBJECT CODE: MBA021A

CREDITS: 4

### Course Objective:

The objective of this course is, to understand basic mathematical tools and techniques for solving complex business problems and explain the role of descriptive statistics and associate

the different aspects of probability, probability distributions and decision theory with business problems and hence solve them for better decisions and to describe various operation research techniques to get optimum solutions in business problems .

### **Unit 1: Descriptive Statistics**

Introduction to statistics and analytics, need for analytics, data types and scales, sources of data, types of classification of data. Frequency distribution grouped and ungrouped, frequency distribution, continuous distribution-diagrammatic and graphic representation: line diagram, bar diagram, rectangle diagram and pie diagram, Graphs- Histogram, frequency polygon, cumulative frequency curves, tabulation-one way and two way table. Various measures of central tendency, concepts and applications of Mean, Median, Mode, Geometric Mean and Harmonic Mean. Measure of Variation. Different measures of dispersion, significance of dispersion, requisites of a good measure of variation. Range, Inter-Quartile Distance, Standard Deviation, mean deviation, quartile deviation, Coefficient of variation

### **Unit 2: Introduction to Probability and Sampling**

Basic Concepts, relevance to management decisions, rules of probability, relevance of permutation and combinations to probability, theoretical Probability Distributions: Binomial, Poisson and normal Distributions

Sampling and Sampling Distributions, Population and Samples, Types of Sampling: Simple Random, Stratified, Systematic and Cluster Sampling, Sampling Distributions, Standard Errors, Sampling from Normal Populations, Central Limit Theorem

### **Unit 3: Hypothesis testing and Regression Analysis**

Correlation analysis: significance of measuring correlation, correlation and causation. Karl Pearson's coefficient of correlations, rank correlation. Regression analysis: need for regression, types of regression models, simple linear regression, concepts of multiple regression. Hypothesis Testing-Basic Concepts, One Tailed and Two Tailed Tests, Type I and Type II Errors, One Sample Tests, Hypothesis Testing of Means when Population Standard Derivation is Known and when Unknown, Hypothesis Testing of Proportions for Large Samples, Two Sample Tests for Equality of Means for Large and small Samples, Equality of Means for Dependent Samples, Difference between Proportions for Large Samples. Concepts and applications, Chi-square as a test of (a) independence (b) goodness of fit. Analysis of variance (ANOVA) - one way and two-way classifications

### **Unit 4: Operations Research**

Introduction to Operations Research, Application of LPP in Management, Advantages of LPP, Problem Formulation, Graphical Solution Procedure, Special Cases, Sensitivity Analysis. Transportation Problem: General Structure, Various methods for finding initial solution, Optimal Solution: Modified Distribution method; Variations: Unbalanced Transportation Problem, maximization case. Assignment Problem: General Structure, Finding Optimal Solution, Maximization problem, Restrictions on Assignments, Alternate Optimal solutions. Terminology; Networking Concepts; Rules for drawing network diagram; CPM Computations: CPM Terminology, Finding critical path – Different Floats; PERT Computations: Computation of earliest and latest allowable times, Probability of meeting the scheduled dates; Concept of Project Crashing, Time-Cost Tradeoff

### **Unit 5: Information Systems and Project Scheduling**

Overview, introduction to computers– Hardware, Software, impact of IS in business, digital divide, concept of systems, components of IS. MS Word - Introduction, Insert Menu options, Formatting, Tables and borders, Image handling, Insert Function, Hyperlink, , Track changes, Formatting & editing restrictions, Mail merge, Macro, Tables, Print ,Document Protection,

Bibliography, Citation. MS PowerPoint -Exploring the PowerPoint Window, Slide layouts, Formatting, Design template, Outline and slide sorter views, Speakers notes, Header & footer, Master Slide, Insert Function, Slide transition, Animation, Action Buttons, Custom Show, Set up Show, Keyboard tips during slide show. MS Excel-

Introduction, Custom fill, protection, Mathematical operations, Range, Formulas, linking worksheets - workbooks, short cut methods, Tables and Graphs, Data Functions in MS Excel - Functions in excel (Mathematical, Text, Date/time, Financial, Statistical, Logical functions, VLOOKUP and HLOOKUP, Situation Analysis (Scenario), Creation of Trial balance, P&L Accounts and Balance sheets. Terminology; Networking Concepts; Rules for drawing network diagram; CPM Computations: CPM Terminology, Finding critical path – Different Floats; PERT Computations: Computation of earliest and latest allowable times, Probability of meeting the scheduled dates; Concept of Project Crashing, Time-Cost Tradeoff

### Course Outcomes

CO1: Employ descriptive statistical techniques in managerial decision making.

CO2: implement and employ the use of probabilistic and sampling techniques with regards to problem solving.

CO3: Understand, classify and conceptualize various methods of hypothesis testing and regression modelling.

CO4: Describe and implement operation research techniques to make better business decisions.

CO5: Understand the concepts of managerial project scheduling and learn the usability of Microsoft Office suite effectively.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

### Information System for Managers

**SUBJECT CODE: MBA022A****CREDITS: 4****Course Objective**

The objective of the course is, to understand how information systems support business strategy, processes and how to analyse the framework of MIS (Management Information System) and how to access the business information systems and application of information system in a ERP.

**Unit 1: Introduction**

Management Information System Basics, Framework of MIS, Information Needs and its Economics, Systems Approach, Objectives of MIS, Advantages and Disadvantages of Information Systems, Approaches of MIS Development, Constraints in Developing MIS, Limitations of MIS, Computer Based Information Systems.

**Unit 2: Information Systems for Decision Making**

Introduction, Transaction Processing System, Decision Making in MIS, Intelligence Support Systems, Decision Support System, Executive Information System, AI and Expert System, Office Automation System, Computer Hardware and Software for Information Systems, Data Communications and Client Server Computing.

**Unit 3: Decision Support Systems**

Definition, Evolution of DSS, Objectives of DSS, Classification of DSS, Characteristics and Components of DSS, Functions of a DSS, Development of DSS, Group DSS, Relationship between MIS and DSS, DSS Measures of Success in Organizations, Applications of DSS, Future Developments in DSS.

**Unit 4: Information Systems in Business**

Office Information Systems, Types of Office Automation Systems, Manufacturing Information System, Marketing Information System, Quality Information System, Financial and Accounting Information System, Research and Development Information System, Human Resource Information System, Cross Functional Information System.

**Unit 5 :Applications of Information Systems**

Strategic Management Information System, Information Resources Management, Enterprise Resource Planning, Role of IT in Enterprise Modeling, ERP Selection and Applications, ERP Implementation, Applications of IT in Business, E-Commerce, E-Business, Information and Internet Security, E-Governance.

**Course Outcomes**

CO 1: Develop an understanding of Management Information Systems, their advantages and functionality.

CO 2: Identify and conceptualize diverse Information Systems for Decision Making processes.

CO 3: Learn how to use Decision Support Systems in business scenarios and demonstrate their usefulness.

CO 4: Assess different types of Business Information Systems by identifying, classifying, and categorizing them.

CO 5: Explain and assess different uses of Information Systems in a business setting.

## Entrepreneurship SUBJECT CODE: MBA023A CREDITS: 4

### Course Objective:

The objective of the Course is, to expose the students to the entrepreneurial cultural and industrial growth and understand the scope of an entrepreneurship and to know the importance of business plan and major elements of business plan.

### Unit 1: Introduction to Entrepreneurship

Introduction, importance of entrepreneurship, definitions of entrepreneurship, history and evolution of entrepreneurship, types of entrepreneurs, myths of entrepreneurship, women entrepreneurship in India. Qualities of successful entrepreneurs, motives and drives to take up entrepreneurship, careers in entrepreneurship, behavioral traits of entrepreneurs, entrepreneurial decision process

**Learning Outcome:** To understand the framework of entrepreneurial competence.

### Unit 2: Stages in entrepreneurship development

Opportunity Recognition, Identify problems and unmet needs, develop solutions to address problems, identify market gaps, sensing market opportunities, evaluation of opportunities. Sources of ideas, idea generation methods, brainstorming, secondary research, creativity and innovation, idea vs. opportunity matching, selection of ideas, ideas to market place, idea testing with potential customers

### Unit 3: Internal Environment Analysis

Identify the available resources, develop a unique selling proposition, identify strengths and weaknesses, assess the availability and advantage of resources, and assess the capability to attract investments. Elements of external environment, PEST to PESTEL to STEEPLE, identifying opportunities and threats in the external environment, matching internal environment factors to the external environment factors, political environment and government policies. Understand the existing competition both domestic and international, industry analysis using the tool Michael Porter's five forces, studying the competitor strategies

### Unit 4: Business Plan

Meaning of Business Plan, Entrepreneurial Process, Importance of Business Plan, Components of Business Plan, Reasons for Failure of Business Plan, Business Model Canvas, Value Proposition, Criteria for selection of Product/Service. Market Analysis, Market Research,

Feasibility Report, Market Segmentation, Developing the Product Mix, Developing the Marketing Mix, 4Ps and the 7Ps. Breakeven Analysis, Pro Forma Profit & Loss Statements, Pro Forma Balance Sheets, Cash flow and Funds Flow Statements. Incubation Centers, Approaching the Investors, Elevator Pitch, Seed capital, Angel Investors, Angel Networks, Venture Capitalists, Private Equity, LBO, Equity vs Debt Funding, Internal vs External Funds. Selection of Technology, Decision on Types of Processes, Plant Layout, Selection of Machinery, Capacity Planning, Quality Parameters, Make or Buy Decisions. Forms of Organization, Proprietorship, Partnership, LLP, Public Limited, Legal Issues, Organization Design, Organization Structure

### Unit 5: Institutions that Support Entrepreneurship

Role of SMEs in India, Classification of MSMEs, Government Support to SMEs, Problems for Indian SMEs, Sickness in SMEs, Causes of Sickness, Remedial Measure. SIDBI, KVIC, NIESBUD, IDBI, NSIC, NEN, AWAKE, CEDOK

### Course Outcomes

CO1: Define the concepts and explain the models of entrepreneurship.

CO2: Recognize the various stages in entrepreneurship development.

CO3: Articulate the characteristics required to become successful entrepreneurs. Identify and appraise strategies for growth of new ventures.

CO4: Create alternative Business Plans, appraise them and conclude on the most suitable Business Plan. Also prioritize on the next best alternatives.

CO5: Understand the institutional support.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

### MARKETING AND DIGITAL STRATEGY

Subject Code: MBA029A

Credits: 4

#### Course Objective:

- 1) To understand micro and macro environment analysis and the required inputs for strategic decision.
- 2) The learners will be able to understand how businesses achieve competitive advantage
- 3) To make learners understand about the resource requirement for delivering the strategic marketing plan including digital strategy.
- 4) To make learners understand about the strategic approach to marketing planning.
- 5) To make learners understand the risk assessment procedure of organisation.

#### COURSE DESIGN

##### Unit-1 (Environment Analysis, Resources and Competences, Marketing Analysis Techniques)

PESTEL, Porter's five forces, SWOT analysis, types of market orientation, organisation's culture using cultural web model, leadership style and management style, Differentiate about core and threshold competences and resources, Explain about long termism and ethics in marketing, Identify ways to achieve competitive advantage, Analysis of online and offline activity, Understanding the current skill requirement and challenges faced by the organisation in gathering the data and analysing it, Determine the barriers to competitive advantage, Compare and contrast between conventional and disruptive marketing models, Explain the concepts of having social presence.( 12 hours )

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## ***Unit 2 (Environmental Audit, Market Analysis, Digital Marketing)***

Concepts of AAA Bottom line audit , Social and Environmental Footprints , Difference between social and environmental Audit, ISO 140001 , Research Methodologies for Online and Offline Marketing Audits , Evaluate the changes in market conditions and demand , Guerrilla marketing , online and offline marketing environment. impact of digital market environment and its capabilities and limitations, concept of MIS, Identify and recommend about the risk and barriers and ways to overcome it in market planning.(10 hours)

## **Unit 3 (Goals, Strategic Marketing Plan, Market Strategic Decisions)**

Explain the relationship between objectives, mission, and vision statement of an organization. Explain about the elements of marketing objectives, digital strategy models such as Monday, Hive, clickup etc , nine key elements of brand strategy. how to develop strategic marketing plans with reference to strategic marketing framework. Construct profit and sales projections. Explain the concept of one-to-one marketing. Evaluate the suitability, feasibility and acceptability of strategic marketing decisions. Discuss different groups of stakeholders and their expectations using Mendelow's matrix.

Explain market intelligence and organizational dynamics Calculate the return on investment and interpret. (12 hours)

## **Unit 4 – (7Ps, Implementation of Marketing Strategy)**

How to develop a successful marketing mix strategy and understand the marketing mix models developed by Mc Carthy 4 P's and the later extension into 7p's Compare and contrast between traditional and digital marketing communication Identify the four steps involved in digital marketing strategy framework and steps to develop the action plan for traditional and digital marketing strategies. Understand the regulatory and legal factors. Explain the resource and competence requirements for implementation of strategy. Define the scope of other alternatives like outsourcing, franchising and other agencies. Explain the concept of CSF. (12 hours)

## **Unit 5-(RISK, FINANCIAL AND NON FINANCIAL INDICATORS, POST-IMPLEMENTATION)**

Explain risk, how to assess the risk faced by an organisation and ways adopted to mitigate with it. Explain the response of organisational risk towards risk. Explain the social and ethical aspects

of risk assessment process. Calculate and interpret ratio analysis. Determine the KPI's for CSF's and evaluate. Explain steps involved in project planning. Identify and explain other technical aspects of measuring and monitoring system of implementation. Define strategic gap and ways to reduce it. Explain methods involved in analyzing the post-implantation stage and how to deal with it. Identify different methods of collecting data.(12 hours)

## **COURSE OUTCOMES**

- 1) Ability to apply knowledge for financial and Non-Financial Indicators
- 2) Know about the Marketing Strategy in digital marketing
- 3) Identify the Goals and Objectives of Companies and implementing the strategies according to that.
- 4) Knowing the Risk factors in business and market.
- 5) Knowing the difference between Micro and Macro Environment.

### **Innovation in Marketing**

**Subject Code: MBA025A**

**Credits: 4**

### **Course Objective:**

- 1) Creates understanding to develop innovation to deal with challenges.
- 2) Understand the key factors to develop innovation in marketing function.
- 3) Ability to use internal and external marketing.
- 4) Ability to understand the case related to innovation of marketing.
- 5) Develop plan for communication of innovation.

## **COURSE DESIGN**

### **Unit-1 (BUSINESS OPPORTUNITIES & CHALLENGES, STUDY OF INNOVATION, IMPLEMENTING INNOVATION)**

Evaluating Environmental scanning, trends, discovery theory, Disruptive innovation and digital disruption, Emerging economies and innovations, Competitive advantage – new competitive approaches

Evaluate Intuitive, 'gut feel', insights, Discovery-driven planning, Traditional business plans, Developing business models, Internal and external approaches, Business process re-engineering

Identification of challenges like External environmental factors, Competition, Leadership buys, Budget/Capital requirements, Resistance to change (20 Hours)

## **Unit 2 (TYPES OF INNOVATION, INNOVATIVE ORGANISATION, FACTORS DEVELOPING INNOVATIVE APPROACHES)**

Discuss the salient features of most innovative organization such as Vision and styles of leadership, Organizational structures, Key individuals, and team working, Creative climate/culture, External focus – market orientation, boundary spanning and networks

- Invention, creativity and innovation
- Disruptive and sustaining innovations
- Product, process and platform innovation
- Open and closed approaches to innovation
- Radical and incremental forms of innovation
- Market pull vs. technology push
- Business model innovation
- Discuss and evaluate Cross-functional and self-managing teams, Role of Learning, training and development in building innovation, Information sharing, Support of innovative business models, use of Adaptive/flexible approaches, Use of appropriate market research techniques and sources of information and Use of innovation networks (25 HOURS)

## **Unit 3 (CUSTOMER RELATIONSHIP, OPTIONS FOR INNOVATION, SERVICE DEVELOPMENT)**

Study various innovative approaches such as Generating ideas, Screening, Business analysis, Development of a small-scale trial, Testing techniques, Commercial launch, Effective exit routes for unsuccessful ventures to enhance the service development

Discuss the methods to build better customer relationship ideagoras, crowdsourcing, online forums and other open platforms, conducting user trials, involving leading practitioners, supplier engagement, round table conferences.

Product/service/process/programme Business model Out-sourced vs internally implemented Adaptable/flexible/agile Benchmarking Collaborative/partnerships Assessing acceptability, feasibility or suitability ( 25hours)

## **Unit 4 – (INNOVATION PROPOSAL, BUSINESS CASE FOR CHANGE, LAUNCH OF INNOVATIVE APPROACHES)**

Assessing the risks and benefits of an innovation proposal Discuss the risks and benefits of the proposal - Strategic/operational/tactical, Financial, Reputational, Competition Understand the Factors driving change and the Scope of change required, evaluating the need for change and commitment from stakeholder groups, Structure the business case and Project proposal Understand the Background of the business plan, choosing right research techniques, Selection of relevant sources of information. Setting the objective and creating a strategy and tactics, action and evaluating measurement criteria. (25 hours)

***Unit 5- (MEASURING SUCCESS, SUPPORT CHOSEN INNOVATION, CULTURAL CHANGE AND INNOVATION OPTIONS)***

Discuss the impact of Current organisational culture, Levels of trust and openness, Space and support for ideas, Attitudes to risk taking, Degrees of freedom to experiment, Fit with business strategy, Strategies for culture change, Development of a culture for managing risk

- Internal communication plans
- External communication plans
- Target audiences
- Key messages
- Implementation
- Evaluation and measurement criteria
- Agency relationships

Discuss and evaluate - Soft and hard measures of success, Achievement of objectives, ROI, Metric dashboards, Latest trends in metrics and their impact. (25 hours)

**COURSE OUTCOMES-**

- 1)** Knowing about the strengths and weaknesses of organisation.
- 2)** Ability to cope up with the challenges of innovation.
- 3)** Knowing the qualities of innovative organisation.
- 4)** Understanding different factors that support innovation.
- 5)** Understanding Innovation in Customer Relationship.

**Digital Optimization**  
**Subject Code: MBA026A**  
**Credits: 4**

**Course Objective:**

CO1: Analyzing the factors that affect the digital environment of the organization

CO2: Creating knowledge and skill to optimise digital marketing performance.

CO3: Learning digital metrics and analytics

CO4: Knowledge of digital measures to analyse optimization.

CO5: Digital marketing innovation.

**COURSE DESIGN**

**Unit-1 (DIGITAL MICRO& MACRO ENVIRONMENT, DIGITAL ECOSYSTEM, AUDIT FINDINGS)**

Evaluate digital analysis tools and frameworks, understand the Digital culture framework such as Readiness, Essentials, Performance, Evaluate the impact and influence on key drivers within the digital environment, inside the organisation, within market sector and among the stakeholders.

Study the new trends in the business models and its impact on the organisation. Discuss the changes taking place in the Email, Websites, Online PR, Search Engine Optimisation, Blogs, Social networks, Online advertising, digital products/services, pricing models, distribution Understand the changes and emerging trends in digital platform. Evaluate the digital tools frameworks to evaluate the analysis. Discuss effective techniques of digital market research, Identification of reliable resources of data, Justification of findings through evidence (30 Hours)

**Unit 2 (DIGITAL ENVIRONMENT, INNOVATION, IMPACT OF INNOVATION)**

Discuss the opportunities and threats within the wider digital environment, elaborate the changes required to be adopted by the organisation, evaluate the business process re-engineering requirements. Evaluate the impact of wider digital environment on marketing activities, customer experience and ethical issues. Discuss the digital marketing evolution, role of AI, IOT, connected home, smart cities and crowd sourcing. Discuss the changes in the consumer behavior due to the innovation in the digital marketing. ( 25 HOURS)

**Unit 3 (CONVERSION RATES, CONVERTING CHANNELS, DIGITAL PERFORMANCE INDICATORS)**

Evaluate the role CRO audit, Online and offline integration, Visuals, copywriting, content Design and UX, online psychology on the conversion ratio Discuss the converting channels such as measuring A/B testing, Implementation and reporting, Return on marketing spend. Discuss on the measures to improve the conversion ratio. Discuss the digital performance indicators – evaluate the difference between analytics and insights, how to use vanity metrics and discuss the technique measuring return on investment. Elaborate the techniques of creating digital goals and objectives. ( 25hours)

#### **Unit 4 – (OPTIMIZATION OF DIGITAL MARKETING, USE OF DATA, ASSESS DIGITAL MATRIX)**

Discuss the methods of getting integration and improvement of digital marketing activities such as Testing, Different options and Gaining customer feedback Understand the Marketing automation and establishing trigger points for actions, study multi-touch attribution modelling and customer touchpoints. Elaborate the Application of data in improvement planning, evaluate Data versus Key Performance Indicators (KPIs), Use of Landing pages (25hours)

#### **Unit 5- (MEASURING DIGITAL INTEGRATION, MAXIMISING DIGITAL OPTIMISATION, TECHNICAL IMPLEMENTATION OF MONITORING SYSTEM)**

Relevant digital measurement tools, services and methods, Value of measuring digital integration Integration of digital measurement in organisations, Stages involved in maximising digital optimization Use findings to make improvements to marketing plans in the future. (20 hours)

#### **COURSE OUTCOMES-**

- 1) Understanding Digital metrics and analytics
- 2) Use of digital optimization
- 3) Assess the Digital Performance indicators
- 4) Analysing Audit Findings.
- 5) Knowing about the weaknesses to improvise marketing plans in future

**Digital Customer Experience**

**Subject Code: MBA030A**

**Credits:4**

#### **Course Objective:**

CO1: Develop skills to take strategic decisions.

CO2: Understand the digital customer and take decisions accordingly.

CO3: Management of digital channel selection

CO4: Understand the legal compliance involved in digital technology

CO5: Learning how to improve the digital experience of customers.

#### **COURSE DESIGN**

##### **Unit-1 (CHANNEL GOALS, CHANNEL SELECTION, DIGITAL CUSTOMER PERSONA)**

Explain the framework for setting business objective, define the purpose and mission, Setting goals for different channels, methods of customer acquisition, efforts to be taken for customer retention, Customer conversion, gathering and understanding customer experience, Efforts to attain organisation growth

Identification of qualities of an appropriate channel for the set objective, factors contributing to the success of the channel, Common mistakes – cautions to take, Types of channel, identification of target audience, Channel planning, selection of persons to handle the channel, risk involved in relation to channel usage.

Evaluate the various sources of customer data, identify online research sources, collection of customer behaviour, identifying current and changing consumer behaviour, importance of abandoned cart items, searching and browsing history, Technique of identifying consumer personas. (30 Hours)

## **Unit 2 (CUSTOMER AWARENESS, CUSTOMER EXPERIENCE MANAGEMENT, MEDIA CHANNELS)**

Using customer insight research techniques – qualitative and quantitative data, using AI, machine learning, social media shares and mentions, customer surveys, internal analytics from web properties, internal analytics, crowd sourcing, sentiment analysis.

Evaluate customer awareness through Digital Marketing Mix – paid, shared, owned and earned, Ad copy and creative – qualities, tactics of good ad copy, Content marketing to create customer awareness, Keyword and market trends research, Keyword journey (generic vs long tail terms) Introduction and uses of website and various types of landing pages, Digital communications, Affiliate marketing, discussion on risks and constraints and budget planning.

Selection of resources – distinguish between In-house vs agency, Brief understanding of Consultants and Briefing Agencies. (30 HOURS).

## **Unit 3 (IDENTIFYING CUSTOMER BEHAVIOUR, LEGAL COMPLIANCES OF DIGITAL CAMPAIGNS)**

Management of Recommend KPIs, dashboards and reports for assessing channels, Describe options and tools for monitoring channels, details of Attribution modelling, distinguish between Influencer channels vs converting channels

Brief discussion on Data protection, international privacy law, Industry codes of practice, Disability and discrimination, Brand and trademark protection, Intellectual property rights, Contract law, Online advertising law, Content, copyright, media, Channel terms and conditions

Usages of best practices to avoid legal complications during data collection, precautions to take during email and SMS campaigns, privacy statements, cookies, spam, opt-in. ( 25hours)

## **Unit 4 – (CONSUMER JOURNEY THROUGH DIGITAL EXPERIENCE)**

Discuss the role Websites, key phrase analysis and selection Search engine optimisation (SEO), Search engine marketing (SEM) in understanding consumer behaviour and there by developing customer acquisition and conversion

Discuss the role of paid search or pay per click marketing (PPC), Blogs, Online PR, partnerships/affiliates, online communities, Email, Social media, Content marketing, user generated content in understanding consumer behaviour and there by developing customer acquisition and conversion

Understanding Customer journey by mapping his search across multiple medias like mobile, tablet, desktop, planning of relevant content audit, content planning and content calendars, Techniques of The Honeycomb model for social media strategy, Social listening and sentiment analysis (25hours)

## **Unit 5- (EVALUATING USER EXPERIENCE, EFFORTS TO IMPROVE CUSTOMER EXPERIENCE)**

Use of various techniques in evaluating user experience -website structure, navigation and design, User experience (UX), Impact of social media

Understanding the level of personalization, usability, changing purchase behaviour, pay by mobile, wearable. Discuss user experience testing methods, evaluate and analyse campaign on the basis of the test, objective of improvements to customer experience, Strategic options to improve customer experience. Resource allocation and budgeting to improve customer experience (25 hours)

### **COURSE OUTCOMES-**

- 1) Acquiring the knowledge of digital customer
- 2) Able to develop the skills of customer experience
- 3) Understanding Digital Campaigns
- 4) To know about the legal compliances of digital campaigns
- 5) Knowledge of precautions to be taken during digital campaign

## **RESOURCE MANAGEMENT**

**Subject Code: MBA031A**

**Credits: 4**

### **Course Objective:**

CO1: To develop the skill to manage resources to handle marketing projects in a successful manner

CO2: Develop the skills to manage and develop the marketing team

CO3: Know how best you can allocate resources to get right resource mix

CO4: Evaluate the resource mix and plans to optimise the resource mix

CO5: Develop the techniques to manage the marketing budget and evaluating the financial performance.

## **Unit-1 (IMPROVING TEAM PERFORMANCE, EFFECTIVENESS OF MARKETING TEAM, TEAM BUILDING)**

Discuss and evaluate the marketing competencies, understand the marketing personal through Skill Audit, analyse the need for training, preparation of development, evaluation of outsourced connections.

Discuss about operational planning, elaborate how the internal process is important in achieving organizational goal, importance of marketing structure and contribution of good marketing structure in improving performance, Techniques of Team management and its role to enhance performance, Team development techniques, Importance of individual development to contribute team performance

Discuss the various criteria for increasing the effectiveness of the team. Techniques of relationship building, Techniques to dealing with conflicts such as Brainstorming, Achieving

Consensus, Conflict Resolution, Mediation, Negotiation, Problem Sensitivity, Analytical Skills, Flexibility, Importance of teamwork and motivation in enhancing performance (30 Hours)

## **Unit 2 (MARKETING INFORMATION, PERSONNEL PERFORMANCE, MEASURES TO IMPROVE PERFORMANCE)**

Discuss the role of Relevant marketing information such as Internal data, Competitive Intelligence, Marketing Research, Marketing decision support system.

Evaluate the role of personnel performance in organizational growth, Discuss the assessment of performance and measures to improve the performance. Elaborate the link between performance and result.

Evaluation of team performance, performance management, discuss the role and ways of motivational techniques, Requirements of disciplinary and grievance procedures to increase performance. (30 hours)

## **Unit 3 (BUILDING MARKETING TEAM, USE OF TECHNOLOGY IN MARKETING, USE OF DATA IN ORGANISATION)**

Understand the importance and methods of team selection, Elaborate the Recruitment strategy and its impact on the organisation, Managing Team resilience, handling Talent management, discuss the advantage and disadvantage of Out-sourcing.

Discuss the use of CRM in getting internal data and analyse the effectiveness, Evaluate the efficiency of Digital platforms and communities, Discuss the trends and advances in technology and evaluate the effectiveness, Discuss the impact of technology on marketing activities

Discuss the Compliance with relevant legislation, discuss the methods of data audit and its uses, elaborate the techniques of Data monitoring and control ( 30 hours)

## **Unit 4 – (BALANCE FOR RESOURCE MIX, PLAN PROVISIONAL BUDGET, SPECIFIC BUDGETING)**

Need for auditing resource mix and methods of auditing the resource mix, Balancing human, financial, physical, technology and data resources to achieve desired results. Evaluate the risk involved and elaborate the benefits of the resource mix.

Discuss various budget setting methods such as incremental budgeting, zero based budgeting, cash limited budgeting, resource restricted budgeting, activity based budgeting, contingency budgeting.

Planning for specific budgets such as New product launch, brand positioning, communications campaigns. Allocation of budget among various marketing activities. (25 hours)

## **Unit 5- (MARKETING OPERATIONS, FINANCIAL PERFORMANCE, MAKING REPORTS OF FINANCIAL PERFORMANCE)**

Discuss the need to take measures for effective cost management process for marketing operation by Planning, Estimating, Budgeting, Financing, Funding, Managing, Controlling costs, Digital cost management systems.

Discuss the methods of financial performance of the marketing such as Transparent record keeping, Variance analysis, Budgetary adjustments, Balance sheets, Profit and Loss

Discuss the methods of evaluation and report by ROMI, Sales, P & L, Cash flow, Market share, Key stakeholders with an interest in financial reports. (25 hours)

### **COURSE OUTCOMES-**

- 1) Understanding how to manage market reports and techniques of budget allocation.
- 2) Maintaining balance of resource mix.
- 3) To improve the Team Performance.
- 4) To understand the Use of MIS In developing performance.
- 5) Knowing how to handle the project carefully with limited resources and maximising production.

### **Corporate & Business Law**

**Subject Code: MBA028A**

**Credits: 4**

#### **Unit 1: Nature of the contract and consideration**

The Indian contract act 1872 – Definition of contract - Essential elements of a valid contract – clarification of contracts – offer and acceptance and Communication of offer and Acceptance and Revocation.

Consideration – Capacity to contract – Free consent - Legality of object –void agreement.

Performance of contract – offer to perform contracts which need not be performed – by whom contract must be performed who can demand performance. Discharge of Contract – meaning – methods – by performance –by agreement – impossibility of performance.

#### **Unit 2: Breach of contract and the sale of goods act**

Remedies for Breach of Contract – Introduction Recession – Damages – Specific Performance – injunction - Quasi contracts. Contract of Indemnity and guarantee – Contract of bailment and pledge – Contract of Agency – Creation of agency – Rights, duties and liabilities of an agent - Termination of agency.

Sale of Goods Act :

Formation of contract of Sale - caveat emptor - Express and implied conditions and warranties – Performance of Contract of Sale – Rights of an unpaid Seller.

#### **Unit 3: Companies act and memorandum of association**

Meaning, Definition & Salient Features of Companies Act, 2013 - Kinds of Companies - Promotion, Role of Promoters-Incorporation of a Company.

Memorandum of Association, Contents & Alteration - Articles of Association, Contents & Alteration - Prospectus, Contents & Consequences of misstatement - Doctrine of Ultra Virus & Indoor Management.

#### **Unit 4: Directors and corporate governance**

Directors-Appointment, Qualification-Disqualification - Membership in a Company, Modes of acquiring Membership - Rights and Liabilities of Members, Termination of Membership - Corporate Governance- Meaning, benefits of good governance, factors influencing corporate governance.

#### **Unit 5: General and Statutory Meeting, Extraordinary Meetings**

General and Statutory Meeting, Extraordinary Meetings -Resolutions, Meaning and Kinds - Role of Company Secretary with respect to meetings. Meaning and modes of winding up - Powers of court in winding up - Consequences and procedures for winding up - Powers, Liabilities and Duties of Liquidators.

### **Managing Finance in a Digital World**

**SUBJECT CODE: MBA027A**

**CREDITS: 4**

#### **Course Objective**

To understand the central role that finance plays in an organisation, and how and why technologies used impact the finance function, how to use and examine data collected and processed by machines to create and preserve value for organisations and how the finance function is structured and shaped, and how it interacts with other parts of the organisation to achieve the objectives of the whole organisation.

#### **Unit1 - ROLE OF FINANCE FUNCTION**

Different types of organisations – functions of an organisation – the roles of finance function – enabling value creation through planning, forecasting and resource allocation – data collection – types of analysis to produce insight – potential impact of technology - How finance communicates to influence key stakeholders

#### **Unit 2 – TECHNOLOGY IN DIGITAL WORLD**

Characteristics and Dynamics of Fourth Industrial Revolution – Cloud Computing – Big Data Analytics – Process Automation – Artificial Intelligence – Data Visualisation – Block chain – Internet of things – Mobile – 3-D Printing – New areas of Finance to focus on – Areas of Finance susceptible to automation – Digital mindsets for Finance – Ethics of the use of technology

#### **Unit 3 - DATA AND INFORMATION IN A DIGITAL WORLD**

Using Data for: Decision making, Understanding the customer, Developing-customer value proposition, Enhancing operational efficiency, Monitoring data, Ethics of Data usage – Assessment of Data needs – Extraction, Transformation and Loading (ETL) Systems - Business Intelligence (BI) systems – Big Data Analytics – Data visualization

#### **Unit 4 – SHAPE AND STRUCTURE OF FINANCE FUNCTION**

Structure of Finance function from the roles that generate information to the roles that turn information into insights and communicate insights to decision makers – Hierarchical shape of Finance function – Shared Services and Outsourcing of Finance Function – Retained Finance – Automation & Diamond shape of Finance Function – Finance operation to generate

information and preliminary insight – FP & A , Taxation, corporate reporting, decision support to produce insights – Business partnering to influence organisations to make appropriate decisions – Leading Finance team to create the required impact for the organisation.

### **Unit 5 – FINANCE INTERACTING WITH ORGANISATIONS:**

Process management – product and service management – supply chain management Market segmentation – big data analytics in marketing – channel management – sales forecasting & management Staff acquisition – staff development – performance management – motivation and reward systems IT infrastructure – IT systems support – cost and benefits of IT systems

### **Course Outcome:**

CO1: To understand how the finance function enables, shapes and narrates value creation thorough planning, forecasting, resource allocation, performance management and financial reporting.

CO2: To understand key technologies and their impact on an organisation including, cloud computing, big data, data analytics, process automation, artificial intelligence, data visualisation, block chain, internet of things.

CO3: To understand how the finance function can use data and information to assist operations in enhancing operational efficiency.

CO4: To understand the contemporary transformation of the finance function in the digital era from roles that generate information to roles that turn information into insight and how finance communicates that insight to decision-makers.

CO5: To understand how the finance function helps manage operations, marketing and Sales, HR and IT functions in creating and preserving value.

**Analytics for Finance**  
**SUBJECT CODE: MBA032A**  
**CREDITS: 4**

**Course Objective:**

This subject illustrates the aspects of Financial Data Analysis. The students will gain exposure towards important financial concepts such as Optimization, Exchange Rate Analysis, Sharpe-Ratio, Mean-Variance Optimization and Trading Strategy Designing based on application-oriented study.

**Unit 1 (Introduction to Financial Analytics)**

Computational Intelligence, Mathematically Purity versus Fundamental Weakness, Need of Pragmatic & Practical Approach, Overview of Optimization Techniques, Analytics Laboratory, Financial Statistics, Financial Statistics with R.

**Unit 2 (Security Analysis & Risk Measurement)**

Return Analysis, Visualization of Security Data, Adjusting Stock Splits & Mergers, Cleansing of Security Data, Analyzing Exchange Rate, Normal Mixture Models, Generating Prices from Log Returns.

**Unit 3 (Sharpe Ratio & Markowitz Mean-Variance Optimization)**

Time Periods & Annualizing, Ranking Investment Candidates, The Quantmod R Package, Measuring Income Statement Growth, Quadratic Programming, Data Mining with Portfolio Optimization, Lasso and Ridge Regression for Penalties.

**Unit 4 (Financial Data Clustering)**

K-Means Clustering, Dissecting K-Means Algorithm, Gaussian Graphical Models, Covariance & Precision Matrices, Visualizing Covariance, The Wishart Distribution, Glasso Algorithm, Decision Making Based on Clustering.

**Unit 5 (Simulation of Trading Strategies)**

Foreign Exchange Market, Chart Graphical Analytics, Momentum Indicators, Entries & Exits and Profitability, The State Machine, Simulation Summary.

**Marketing Management & Research****SUBJECT CODE: MBA033A****CREDITS: 4****Course Objective:**

This course focuses on the practical application of marketing orientation, techniques and methods inside enterprises and organizations and on the management of a firm's marketing resources and activities. The learners will be provided with a solid grounding in marketing management, which includes engaging projects. The learners will be able to analyse consumer data, create marketing campaigns, develop digital / social media content and make successful marketing decisions. The learners will emerge with the experience and expertise to embark on managerial roles in marketing and the transferable skills to make an impact in any organization.

**Module 1: Introduction to marketing management**

Definition of marketing – marketing planning and process – association of needs and offerings – selling and marketing – consumer behavior and buying decision process – marketing mix – marketing research – customer relationship management – sales – marketing environment – developing marketing strategies and plans – value and value chain – marketing planning – components of a marketing plan.

**Module 2: Marketing research**

Marketing research, analysis and forecasting - information gathering and analysis - process of marketing research - research planning - types of research design - data collection - sample size analysis - forecasting - demand forecasting methods and logic - understanding consumers - factors influencing consumer behaviour and purchase decisions.

### **Module 3: Shaping the market offerings**

Definition of product – definition of services - classification and attributes of products - differentiation and the 4Ps - steering the product life - product hierarchy - product system and mix – packaging, labelling, warranties and guarantees – pricing – types of prices – methods of pricing – new product development - distribution channel management – roles and types of channels – e-business – retailing and wholesaling – brand positioning – competition – brand identity – brand strength – brand equity – product life cycle.

### **Module 4: Communicating value**

Integrated marketing communication – advertising – sales promotion – public relations and publicity – direct and interactive marketing – word of mouth of marketing – sales promotion – technology and marketing: social media marketing, e-marketing, search engine optimization, email marketing, display advertising, pay per click, blogging, social and business networking, product opinion sites, affiliate marketing, syndication on the internet, trust in internet marketing, ethical and legal issues.

### **Module 5: Marketing ethics**

Marketing ethics - fundamental issues in the ethics of marketing - principles of ethical marketing - specific issues in marketing ethics - responsibilities of the marketer - ethical issues in political marketing - ethical challenges of social marketing - marketing in synchronization and synonymity with social relevance - strategic businesses with social relevance.

## **Financial Markets**

**SUBJECT CODE: MBA034A**  
**CREDITS: 4**

### **Course objective:**

This course will aid the learners in understanding and familiarizing the concepts of financial markets and systems and their importance to an effective economy. It encompasses the knowledge about the financial intermediaries and regulatory bodies in the financial market. This module will cover knowledge about various financial instruments, their features and valuations. The course also sheds light on how financial markets in the real world operate and how various financial markets differ from one another in practice. Further, it develops knowledge of rising Foreign Capital, various methods of rising and regulations.

### **Module 1: Introduction to Financial Markets**

Indian Financial System – Concept of Investment and Savings - Evolution of Financial System in India - Financial System and Economic Development – Financial System Structure – Credit Creation - Money Markets and their functions - Capital Markets and their functions

### **Module 2: Regulatory Bodies and Financial Intermediaries**

The Reserve Bank of India and their Functions - The Securities and Exchange Board of India and their Functions - Stock Exchanges in India and their Objectives, Functions and Significance and its working - Major international stock exchanges – Financial Intermediaries - Commercial Banks – Insurance Companies – Mutual Funds – NBFCs - Developments – Functions of Financial Intermediaries – Role of Intermediaries in a Financial System

### **Module 3: Financial Instruments and Stock Market**

Money Market Instruments - Capital Market Instruments – Primary Market and Secondary Market – Over the counter and Exchange Markets - – Features and Valuation of Financial Instruments - Issue of financial instruments - Stock Market – Types and Functions - Primary issue, book building process, private placement, offer for sale, buy back of shares - Various innovative financial instruments Crypto currencies (e.g., Bitcoin) and Distributed ledger technology

#### **Module 4: Financial Markets – Debt, Commodity, and FOREX Market**

Debt Market and its types – Debt Market Instruments – Bonds – Debentures – Treasury Bills – Yield Curve – Interbank Markets - Operational Mechanism – Difficulties for development of Debt market – Commodity Market and its types – MCX, NCDEX and ICEX - Functions, administration, regulations and general mechanism – International commodity Market - Foreign Exchange Markets and its Instruments – Hedging - FOREX Derivative Markets – FX Futures, Options and FRAs

#### **Module 5: Foreign Capital**

Forms of foreign capital – FDI and FPI – FIIs - International financial instruments – ADR, GDR, IDR and Euro bonds - Role of foreign capital in Indian financial system – Trends in foreign capital inflows to India – Regulatory framework for foreign capital flows – FERA and FEMA Acts

### **Managing Brands (CIM)** **SUBJECT CODE: MBA035A** **CREDITS: 4**

#### **Course Objective:**

The Objective is to provide the understanding of the key principles of branding, conduct the measurement of brand equity and brand performance, practically developing a brand including positioning and communication and preparation of coherent reports related to brand audit.

#### **Module 1: Brand elements, Brand positioning & Customer relations**

Understand the different elements in the concept of branding. Elements include. –Promise -- Perception—Trust –Values –Voice –Personality Analyze Soft and hard brands -- Brand architecture -- Product branding and services/customer experience branding, Evaluating the process of maintaining long term relationship with customers while catering to their needs with respect to --Customer motivation -- Customer journey and Brand touch points.

#### **Module 2: Digital techniques & Brand strategy**

Understand how digital techniques help in brand positioning and how they add value to organizations for the following concepts : Brand objectives, Relationships with customers, Positioning attributes, Personalization. Implementation of an effective brand strategy and defining the following aspects: Purpose, Consistency, Emotional impact, Brand activation.

#### **Module 3: Marketing tools & building competitive advantage**

Explain how different marketing tools can improvise in gaining competitive advantage Targeting -- Competitor analysis -- Product/service mix -- Digital tools and media --Positioning perceptions, Understanding Brand relationship to organizational vision, mission and organizational behavior -- Brand personality, profile and positioning --Relationships with employees and customers.

#### **Module 4: Corporate brand identity & Information and Data Analysis**

Analyze the factors that support the creation of a brand identity and image and help in creating Brand value and Brand equity. Managing and understanding the internal and external branding

activity and its portfolio management, External and internal branding activity, Pricing strategy –Distribution--Market share and retention plan –Campaigns --Synergy with organizational marketing plan, Resource management --Licensing/Trademarks/Global legislation. Marketing tools, Market research and evaluation techniques, Reliable information sources, Analytical techniques.

### **Module 5: Brand management And Brand metrics**

Application of a range of techniques to maintain the corporate reputation Identity and image - -Crisis management --Positive and negative impact on corporate reputation, Maximizing resources to achieve brand objectives, Digital and offline evaluation tools, Brand equity/strength, Brand measurement dashboard, Conversion tracking, KPIs.

## **Global Marketing Decisions (CIM)**

**SUBJECT CODE: MBA036A**

**CREDITS: 4**

### **Course Objective:**

The Objective is to provide the opportunity to begin to understand external marketing environment and implication this has for marketers, analyzing the marketing environment and marketing-related decisions for a firm entering non-domestic markets, understanding on the cultural, economic, ethical and political environments and anticipation of the influences each will have on marketing strategies and decision making.

### **Module 1: External marketing environment & Strategic uncertainty**

Understand the organizational sector's external marketing environment using analysis techniques such as PESTEL, Porter's five forces analysis, Competitor analysis, and SWOT. Evaluating a global organization's strategic position within the marketplace by using competitive positioning, benchmarking, segmental analysis, value proposition. Use of forecasting techniques and market sensing to assess market stability and attractiveness. Understanding the role of competitive advantage and value creation in strategic planning in uncertain external markets.

### **Module 2: Internal marketing environment & Its strengths and Weaknesses**

Understand the role of Mintzberg's organizational structures, perform portfolio analysis, Utilize technology and conduct innovation audit, Understanding the product life-cycle and the stakeholder analysis, Ensuring cost-effectiveness, Resources Based View (RBV) of a global organization, approach towards the environment, Corporate Social Responsibility (CSR), and ethics , Evaluate the internal strengths of the global organization by understanding the capabilities and flexibility within the global organization.

### **Module 3: Developing a marketing strategy & Organization's value and brand equity**

Understand the various determinants of strategic options, which include E-commerce, digital and social media strategic opportunities, link to values and culture of a global organization, models such as the Porters model for competitive advantage and Kotler's warfare analogies in strategy, Understand how marketing strategies are influenced by Corporate image, Branding, Value associations, and brand proposition, branding strategies in global contexts.

### **Module 4: Role of innovation management & Market entry strategies**

Impact of new product development in marketing, Managing marketing of new products and driving innovations to help market the products, Concept of big ideas, Impact of product customization in marketing strategies, Assessing the competitive potential of mergers, acquisitions, and strategic alliances. Strategic choices in alliances which include Milk, harvest, divest, liquidate and consolidate.

**Module 5: Customer relationship management**

Role of customer relationship management ineffective marketing strategy, customer retention by maintaining trusts, fulfilling promises, recognizing customer loyalty, and customer retention program.

**Module 6: Strategic Decision making & Evaluating financial benefits and risks**

Assess and justify strategic decisions taking into account the following factors such as Stability versus uncertainty, Competitive advantage, Cost-effectiveness, Position of competitors internationally, Barriers to trade, Feasibility and viability. Assess financial benefits across various strategic marketing choices using techniques such as Present Net Value (NPV), Ratios (INITIAL Financial Descriptors), Apply investment Appraisal Techniques that involve calculating Return on Investment.

**Corporate Digital Communications (CIM)**

**SUBJECT CODE: MBA037A**

**CREDITS: 4**

**Course Objective:**

The objective of the course is to develop knowledge for identifying key stakeholders and determining the influence they have on the role of corporate reputation management in organizations. The course will help to critically appraise the corporate brand and the importance of digital communication in developing corporate positioning and building brand equity.

**Module 1: Stakeholders analysis and corporate communication**

Understand the different types of stakeholders, stakeholder's relationships, the stakeholder's influence, the various forces that can influence the organization's stakeholders, and assess their current and potential influence levels (external forces, relational forces and internal forces), critically appraise the nature and characteristics of corporate communication

**Module 2: Corporate reputation and corporate reputation management**

Understand the context and concepts of corporate reputation, importance and significance of managing organization's corporate reputation, the role of different stakeholders of organization in the context of corporate reputation management, evaluate the way an organization develops its identity

**Module 3: Building corporate strategy and a corporate brand**

Understand the meaning, elements and drivers of corporate branding; assess the compatibility of an organization's strategy in relation to its positioning and reputation, evaluate the nature of corporate brands; understand the levels of corporate endorsement and the concept of gap analysis in corporate branding

**Module 4: Corporate reputation and building brand equity**

Understand the relationship between corporate reputation and brand equity, the impact of corporate character on corporate brand, use of corporate strategies for using corporate reputation to build brand equity, monitoring and measuring brand equity

**Module 5: Digital communication strategies**

Understand the meaning of digital communication, online audiences, the concept of stimulating and embracing change through digital strategies, the effective use of different digital communication tools, evaluate trends and innovation in digital experience, and evaluate use of effective digital channels to support corporate reputation, Appraising recent trends and

innovation in the digital experience and evaluating the effectiveness of integrated channels to support corporate reputation

**Creating Entrepreneurial Change (CIM)**  
**SUBJECT CODE: MBA038A**  
**CREDITS: 4**

**Course Objective:**

The objective of the Course is, to expose the students to the entrepreneurial culture, develop an entrepreneurial mindset, industrial growth and understand the theories of entrepreneurship, and know the importance of a business plan and the major elements of a business plan.

**Module 1: Introduction to Entrepreneurship and Problems faced by entrepreneurs**

History and evolution of entrepreneurship, Qualities of successful entrepreneurs, Behavioral traits of entrepreneurs, Legal issues to consider when starting your business, Women Entrepreneurs, working environment, challenges in the path of women entrepreneurs.

**Module 2: Types of entrepreneurs and entrepreneurial models**

According to Type of Business, According to Use of Technology, According to Motivation, According to Growth, According to Stages, The Opportunist Model, The Enabler Model, The Advocate Model, The Producer Model

**Module 3: Stages in entrepreneurship development**

Sensing Market Opportunities, Identifying market gaps, Idea vs Opportunity Matching, Idea Testing with Potential Customers

**Module 4: Internal Environment Analysis and Entrepreneurial Motivation**

PEST to PESTEL to STEEPLE, Unique selling proposition, Competition Analysis, Porter's five forces – competitor strategies, Motivation, Maslow's theory, Herzberg's theory, McGregor's Theory

**Module 5: Business Plan, Institutions that Support Entrepreneurship**

Components of Business Plan, Market research, and feasibility report, Marketing Mix, Pricing strategies, financial considerations, Export marketing, Types of Organizations, Role of SMEs in India, Government support to SME, Sickness in SMEs – causes / remedial measure

## **Program Objectives**

**POb1:** To educate students on comprehensive business administration concepts alongside business analytics specialization so as to develop them to be a business leader and successfully manage organizations.

**POb2:** To imbibe and train the students in the required analytical, technical, entrepreneurial, business skills to be an effective management professional.

**POb3:** To equip the students with the professional competence in the field of business analytics along with the several technologies and tools associated with it.

**POb4:** To prepare and develop the students technically and analytically with regards to various business domains and hone their managerial competencies and business acumen while attaining a holistic understanding.

**POb5:** To inculcate the view of the industrial and organizational establishments and their functionalities for taking viable decisions.

## **Program Outcomes**

**PO1:** Develop as an individual with the conceptual as well as practical knowledge in the field of analytics, comprising of business studies and metrics, statistics, information technology and management.

**PO2:** Develop the ability to adapt to the rapidly changing industry with the newly learned applied skills in the domains of analytics and business studies.

**PO3:** Develop critical thinking skills to take up the role as Business Analysts and Professionals in the Business Domains.

**PO4:** Apply analytics to analyze and interpret data using latest analytical tools to solve complex business problems pertaining to Finance, Marketing, Commerce, etc.

**PO5:** Perform Descriptive, Predictive and Prescriptive Analysis based on structured, semi-structured and unstructured data types.

**PO6:** Classify and employ the use of various tools and programming languages such as SQL, SAS, Python and R Programming to implement and deploy analytical models and algorithms.

**PO7:** Articulate, illustrate and demonstrate the ability to develop advanced analytical models based on specialized domains such as Social Media Analytics, Big Data Analytics, Machine Learning, etc.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**PO8:** Compare, evaluate and report the inferences obtained from different machine learning algorithms and gain the ability to incorporate them so as to achieve proper decision making with regards to the said business domain such as Finance, Marketing, Accounting, Commerce, etc.

**PO9:** Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

**PO10:** Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

**PO11:** Elicit views of others, mediate disagreements and help reach conclusions in group settings

**PO12:** Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering

## **JECRC University**

### **BBA – Detailed Syllabus**

#### **Semester I:**

**SUBJECT: PRINCIPLES OF MANAGEMENT**

**SUBJECT CODE: BBA615A**

**CREDITS: 4**

**Course Objective:** The objective is to provide an understanding of basic concepts, principles and practices of management. The aim is to inculcate the ability to apply multifunctional approach to organizational objectives.

#### **Unit I**

Management: Concept and Need, Managerial Functions – An overview; Coordination: Essence of Management. Evolution of Management Thought, Classical Approach – Taylor, Fayol, Neo-Classical and Human Relations Approaches – Mayo, Hawthorne Experiments, Behavioural Approach, Systems Approach, Contingency Approach, MBO, Hammer and Champy- Business Process Re-engineering, Porter's Five-forces' Model.

#### **Unit II**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Types of Plans; Strategic planning – Concept, process, Importance and limitations; Environmental Analysis and diagnosis (Internal and external environment) – Definition, Importance and Techniques (SWOT/TOWS/WOTSUP, BCG Matrix, Competitor Analysis); Decision-making: Process and Techniques; Perfect rationality and bounded rationality

### **Unit III**

Concept and process of organizing – An overview, Span of management, Different types of authority (line, staff and functional), Decentralization, Delegation of authority; Formal and Informal Structure; Principles of Organizing; Network Organisation Structure. Emerging types.

### **Unit IV**

a. Staffing: Concept of staffing - Recruitment and Selection; Orientation; Training and Development; Career Development; Performance Appraisal. b. Motivation & Leadership: Concept, Importance, extrinsic and intrinsic motivation; Major Motivation theories - Maslow's Need-Hierarchy Theory; Herzberg's Two-factor Theory, Vroom's Expectancy Theory. Leadership: Concept and Importance; Leadership Styles; c. Communication: Concept, purpose, process; Oral and written communication; Formal and informal communication networks, Barriers to communication, Overcoming barriers to communication. Emerging trends in communication.

### **Unit V**

Concept, Process, Limitations, Principles of Effective Control, Major Techniques of control - Accounting Ratio Analysis, HR Metrics, ROI, Budgetary Control, EVA, PERT/CPM. Emerging issues in Management.

**SUBJECT: BUSINESS MATHEMATICS & STATISTICS**

**SUBJECT CODE: BBA616A**

**CREDITS: 4**

**Course Objective:** The Objective is to provide, to expose students to basic statistical and mathematics concepts, to organize and present numerical data, to understand the Venn Diagrams, Sets, Intervals, Matrices, Vector Algebra and to compute correlation, interpret and to understand the construct various index numbers.

#### **Unit I - Set Theory**

Introduction to Sets, Sets and their Representation, Tabular or Roster Method, Rule Method or Set Builder, Empty or Void or Null Set, Finite sets and Infinite sets, Proper Subset, Improper Subset, Power Set, Universal Set, Open Interval, Closed Interval, Semi-Open or Semi Closed intervals, Infinite Intervals, Venn Diagrams, Operations on Sets, Union, Intersection of Sets, Disjoint Sets, Difference of Sets, Symmetric Difference of Sets, Complement of a Set, Laws of Algebra of Sets.

#### **Unit II- Matrices and Determinants**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Definition of a Matrix, Addition & Subtraction of Matrices, Multiplication of Matrices, Transpose of a Matrix. System of linear equations, Gauss elimination method, Inverse of a Matrix, Determinants, Determinants of order one and more, Properties of Determinants, Multiplication of two Determinants, Minors and Cofactors, Cramer's rule for solution of linear equations, Adjoint of a Matrix, Rank of a Matrix.

### **Unit III- Vector Algebra**

Vectors, Types of Vectors, Operations on Vectors, Addition of Vectors, Properties of Operation of Addition, Subtraction, Properties of Operation of Subtraction, Multiplication by a scalar, Orthonormal Bases, Product of Two Vectors, Scalar Product or Dot Product of Two Vectors, Properties of Scalar Product, Vector Product or Cross Product, Properties of Vector Product.

### **Unit IV - Statistics**

Introduction to Statistics, Scale of Measurement, Nominal, Ordinal, Interval & Ratio. Frequency Distribution, Bar Chart, Pie Chart, Histogram, Frequency Polygon, Ogive, Pareto Chart, Stem-and-leaf Chart, Scatter Plot, Measure of Central Tendency, Properties, Advantages and Disadvantages of Arithmetic Mean, Geometric Mean, Harmonic Mean. Positional Averages, Median, Quartiles, Deciles, Percentiles & Mode. Measure of Dispersion, Range, Interquartile Range, Standard Deviation.

### **Unit V - Probability**

Introduction to Probability, Experiment, Event, Compound Event, Independent and Dependent Events, Mutually Exclusive Events, Equally Likely Events, Marginal, Union, Joint, Conditional Probability, Basic Probability Rules, General Rule of Addition, General Rule of Multiplication, Concept of Bayes' Theorem.

**SUBJECT: BUSINESS ECONOMICS**

**SUBJECT CODE: BBA617B**

**CREDITS: 4**

**Course Objective:** The Objective is to provide, to understand the key concepts of macroeconomic concepts of business, to know the factors determining supply and demand in various market structure, to know the various cost and revenue concepts under the functioning of various types of industries and to know main financial markets and institutions in facilitating commerce & development.

### **Unit I – Macro Economic context of business**

Determination of macroeconomic phenomena – equilibrium national income – growth in national income, price, inflation, unemployment, trade deficits and surpluses – stages of trade cycle – principles of public finance – effects of changes in the economic growth rate, interest rates. Government expenditure and taxation – index numbers

Concept of balance of payments – free trade and protectionists instruments policy, impact of exchange rate policies on business

### **Unit II – Institutional context of business**

Nature of globalisation and factors driving it (improved communications, political realignments, growth of global industries and institutions, cost differentials). Major institutions promoting global trade and development - Principal institutions encouraging international trade – globalisation of business – offshoring – industrial relocation – emergence of growth markets

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

– main trading agreements and trading blocks. Identify the impacts of economic and institutional factors using the PESTEL framework.

### **Unit III – Micro Economic And Organisational Context Of Business**

Types of organisations – public, private & mutually owned organisations – types of Not for Profit Organisations – shareholders wealth management – principal – agent problem and its impact on the decisions of the organisation. Price mechanism – determinants of demand and supply – price elasticity of demand – effects of price elasticity of demand on Total revenue curve. Sources of internal and external economies of scale- outsourcing decisions and costs – minimum and maximum price policies in good and factor markets.

### **Unit IV – Informational context of business**

Data & information, graphs, charts and diagrams – scatter graphs, histograms, bar graphs, ogives. Big data and data analytics in business applications – time series analysis – correlation co-efficient – regression equation to predict the dependent variables – forecasting.

### **Unit V – Financial Context of Business**

Financial intermediaries – commercial banks – financial assets and financial markets – foreign exchange markets. Financial mathematics – simple & compound interests – annuities & perpetuities – Discounting techniques – NPV and IRR. Interest rates – interest rate changes on market demand – concepts of forwards, futures and options

## **SUBJECT: FUNDAMENTALS OF MANAGEMENT ACCOUNTING**

**SUBJECT CODE: BBA618A**

**CREDITS: 4**

**Course Objective:** The objective is to familiarise the students with the mechanics of to understand the management accounting, students learn the methods of costing, overheads and ascertain the various types of budget and approaches to analyse the profits.

### **Unit I - The Context of Management Accounting**

Purpose of management accounting and the role of the Management Accountant-need for management accounting-characteristics of financial information for operational, managerial and strategic levels within organisations- role of the management accountant-relationships between the management accountant and the organization's managers- The Global Management accounting principles. Role of CIMA as a professional body for Management Accountants-role of CIMA in developing the practice of management accounting

### **Unit II - Costing**

**Cost identification and classification**-classification of costs in relation to output classification of costs in relation to activity level appropriate costs having identified cost behaviour- classification of costs in relation to decisions – segregation of fixed and variable costs from semi-variable costs – relevant and irrelevant costs.

**Overheads** – overhead cost estimates – treatment of direct and indirect costs – overhead absorption rate – under and over absorption of overheads – Marginal cost pricing and full cost pricing.

### **Unit III – Planning and Control**

Preparation of budgets for planning and control-need for the preparation of forecasts and Plan-Preparation of functional budget- budget statements-impact of budgeted cash surpluses and shortfalls on business operations-preparation of flexible budget-Calculate budget variances – concepts of Zero-based Budget, Incremental budgeting, Rolling Budget.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Application of variance analysis to reconcile budgeted and actual profits in a marginal Format- Principles of standard costing- Calculation of variances for materials, labour, variable overheads, sales prices and sales volumes- Preparation of a statement that reconciles budgeted profit with actual profit calculated using marginal costing- reasons for variances and the inter-relationships between variances

#### **Unit IV – Performance Measurement and Reporting**

Calculation of appropriate financial and non-financial performance measures-need for appropriate performance measures- Calculation appropriate financial and nonfinancial performance measures in a variety of contexts

Preparation of accounts and reports for manager- integration of the cost accounts with the financial accounting system- Prepare a set of integrated accounts, showing standard cost variances- preparation of accounts related to Job and batch costing- Cost accounting statements for management information in manufacturing, service and not-for-profit organisations.

#### **Unit V - Decision Making**

**Risk and uncertainty** - use of expected values and joint probabilities in decision making- calculate summary measures of central tendency and dispersion for both grouped and ungrouped data- Arithmetic mean, median, mode, range, variance, standard deviation and coefficient of variation for both ungrouped and grouped data- Graphs/diagrams and use of normal distribution tables – decision tree approach.

**Short term decision making** - The use of appropriate techniques for short-term decision making- breakeven charts, profit volume graphs, breakeven point, target profit, margin of safety- Make or buy Decisions- Calculate the profit maximizing sales mix after using limiting factor analysis.

**Use of appropriate techniques for long-term decision making** - The time value of money- financial mathematics - Discounting, compounding, annuities and perpetuities- Calculate the net present value, internal rate of return and payback for an investment or project

**SUBJECT: FUNDAMENTALS OF FINANCIAL ACCOUNTING**

**SUBJECT CODE: BBA619A**

**CREDITS: 4**

**Course Objective:** To understand the basics of accounting and concepts of double entry system. The students understand book keeping and preparation of final accounting statements for business organizations.

#### **Unit I- Accounting Principles, Concepts and Regulations**

The principles and concepts of financial accounting - need for accounting records; Identify the needs of different user groups; Distinguish between the financial and management accounts; capital and revenue, cash and profit, income and expenditure, assets and liabilities; the underlying assumptions, policies; the accounting equation.

#### **Unit II - Recording Accounting Transactions**

Accounting records; Prepare the books of prime entry; Applications the principles of double-entry Bookkeeping; nominal ledger accounts; the trial balance; the nature of accounting errors, prepare accounting entries for the correction of errors; Prepare accounting entries for noncurrent assets; Prepare a non-current asset register.

#### **Unit III - Accounting Reconciliations**

Bank reconciliation statements; Prepare petty cash statements under an imprest system; Prepare sales and purchase ledger control account reconciliations.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**Unit IV- Preparation Of Accounting Entries For Specific Transactions**

Calculate sales of tax; Prepare accounting entries for sales tax; Prepare accounting entries for payroll; Prepare accounting entries for the issue of shares.

**Unit V - Preparation Of Financial Statements For Single Entities And Its Analysis**

Prepare accounting adjustments. Prepare accounting entries for accruals and prepayments; Prepare accounting entries for irrecoverable debts and allowances for receivables; Prepare accounting entries for inventories.

Prepare basic manufacturing accounts. Prepare financial statements from a trial balance; Prepare financial statements from incomplete records; Prepare a statement of cash flows. Identify information provided by accounting ratios the information provided by the calculation of accounting ratios reasons for the changes in accounting ratios.

Calculation of profitability ratios, liquidity ratios, risk ratios.

**SUBJECT: COMMUNICATION SKILLS****SUBJECT CODE: DEN001A****CREDITS: 3****\* BBA (common to all disciplines)-I Semester****Course Objectives :**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introducing the Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.
6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

**Course Outcomes (CO):****At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

**Syllabus: Theory**

<b>Unit I</b>	Basics of Organizational Communication: Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>Unit II</b>	Basic Writing Skills: Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration

<b>Unit III</b>	Composition:, Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>Unit IV</b>	Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>Unit V</b>	Professional and Technical Communication : Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

### Syllabus: Lab

<b>Unit I</b>	Basics of Organizational Communication: Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time Management, Following Deadlines etc
<b>Unit II</b>	Write Dialogue from the different contexts of corporate culture: Employee and Employer, Customer and Service Provider, Customer and Product Review, how to react on Day-to-day corporate interactions- Memo, Notice, Email, Circular etc
<b>Unit III</b>	Composition: Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting Redrafting, Proof Reading, Editing etc
<b>Unit IV</b>	Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>Unit V</b>	Professional and Technical Communication: Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, presenting projects, proposals etc through PPT Making.

### Methodology for Evaluation

#### 1. Internal Assessment (Theory)

- a) Home Assignments: One from each Unit : 15 Marks
- b) In Semester Tests (Minimum two) : 30 Marks
- c) Attendance : 05 Marks

#### 2. Term End (Theory) : 50 Marks

#### 3. Internal Assessment (Lab)

- (a) Daily Performance in the Lab : 50 Marks

#### 4. Term End (Lab) : 50 Marks

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

### **Suggested Reading:**

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
4. On Writing Well. William Zinsser. Harper Resource Book. 2001
5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006
6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

### **SUBJECT: CULTURE EDUCATION I**

**SUBJECT CODE: DIN001A**

**CREDITS: 2**

### **Course Objectives**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

### **Course Outcomes (CO):**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

### **Unit I- Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)
2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

### **Unit II- Society and Culture-I**

3. Introduction to Indian Culture and Major Symbols of Indian Culture
4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

### **Unit III- India in Progress-I**

5. Education, Science and Technology in Ancient India
6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India Major Farmer Movements, Major Religious and Social Upliftment Movements

### **Unit IV- Great Indian Personalities-I**

7. Life and works of the Great People of Ancient India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhata, Samudragupta, Ashoka, Chandragupta Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhari

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

**Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah

2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies

by SarojBala , Kulbhushan Mishra

**Semester II:**

**SUBJECT: ORGANIZATION BEHAVIOUR**

**SUBJECT CODE: BBA620A**

**CREDITS: 4**

**Course Objective:** Understand how the organisations can be managed effectively considering the behaviour of various stakeholders of an organisation and analysing the skills required for the future advantage of an organisation.

**Unit I Organization behaviour – an introduction**

Meaning of organizations – Nature of organization behaviour – Basics of organization behaviour – Scope and evolution of organizational behaviour – Organizational arrangements and Organization behaviour – Key terminologies in Organization Behaviour - Organizational Behaviour Model (OB Model).

**Unit II Individual behaviour, intelligence and personality**

Meaning of individual behaviour – personal and environmental factors – Models of individual behaviour – nature and types of intelligence – theories and measurement of intelligence – Intelligence factors – intelligence in the context of organizational behaviour.

Nature and determinants of personality – Personality traits – Personality in the context of Organization Behaviour.

**Unit III Motivation and work stress**

Nature and importance of motivation – challenges and theories of motivation – Motivation and organizational culture – quality of work life – rewards and behaviour modification – problem employees – employee engagement.

Meaning of work stress – work stress model – stress management – Stress and organizational behaviour.

**Unit IV Group and team behaviour**

Nature and types of groups – Group dynamics and Organization behaviour – determinants of group dynamics – Importance of group dynamics in an organization – group development strategies – Group motivation – Group structuring and decision making.

Meaning of team – differences between group and team – Types and benefits of teams – effective team management – team conflicts and resolution – Team development and Organizational Behaviour.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Unit V Organizational culture and leadership**

Meaning of leadership – leadership vs management – leadership styles and theories – formal and informal leadership – Ethics and leadership – leadership and organizational culture – Sustaining culture – changing organizational culture – workplace behaviour – Ethics of power.

### **Course outcomes:**

CO 1: Understand the basic of organizational behaviour in the context of the dynamic environment.

CO 2: Understanding the role of individual behaviour, intelligence and personality in the context of organizational development.

CO 3: Understanding importance of rewarding and motivating the stakeholders and managing the stress to effectively manage the organizational performance

CO 4: Understand the role of group and team dynamics in the current organizational environment

CO 5: Understand the importance of perception into organizational culture, leadership and ethics in an organizational development.

## **SUBJECT: PRINCIPLES OF MARKETING MANAGEMENT**

**SUBJECT CODE: BBA621A**

**CREDITS: 4**

**Course Objective:** To provide a holistic orientation of emerging marketing trends with the practical skills required to analyze consumer data, create marketing campaigns, develop digital/social media content and make successful marketing decisions and to equip students to be innovative, technically competent, and think critically through experiential and student-centric teaching approach.

## **Unit I: Fundamentals of Marketing Management**

Meaning & Definition of marketing -Role of Marketing -Relationship of Marketing with other functional areas -Market Concepts -Product concept -Selling concept -Marketing concept -Societal marketing concept -Approaches to marketing management -Functions of marketing -Scope of marketing: goods, services, events, organizations, etc. -Emerging trends in marketing.

## **Unit II: Marketing Plan**

Marketing Environment: Concept -Macro-environmental forces -The changing marketing environment -Analyzing needs and trends in Macro-Environment: Economic Environment, Technical Environment, Political, Environment and Socio-cultural Environment. Introduction to The Marketing Plan –Definition –Nature –Objectives -Structure of The Marketing Plan -The Process of marketing plan -Critical elements of external and internal analysis of Marketing Plan -Implementation of Marketing Plan.

## **Unit III: Marketing Mix**

Introduction to marketing mix -Marketing mix implementation: short term and long term tactics –Product: meaning, elements, product mix -Product mix strategies -Product line -Product lifecycle Product planning -New product development -Failure of new product -Product branding -Branding strategy and packaging –Pricing: Objectives -Factors influencing

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

pricing policy -Methods of pricing -Pricing strategy. Physical Distribution: Meaning -Factors affecting channel selection -Types of marketing channels -Promotion: Meaning and significance of promotion -Personal selling & advertising (meaning only).

#### **Unit IV: Buyer behavior**

Market Segmentation: Levels and patterns of market segmentation -Bases for segmenting markets -Market segmentation - Targeting - Product Positioning - Types and bases of positioning - Product Differentiation -Meaning of consumer, customer, consumer behaviour and buying motives -Factors influencing buyer

behavior -Factors that influence consumer purchasing decisions -Buying process -Stages of the consumer buying behavior -Business to Business (B2B) buying process -Key factors influencing B2B purchasing decisions -Differences between Consumer goods and Industrial goods

#### **Unit V: Digital Marketing**

Introduction to Digital Marketing -Concept of Digital Marketing -Difference between traditional marketing and digital marketing -Trends and scenarios of the industry -Planning and Creating a Website -Search Engine Optimization (SEO), Search Engine Marketing (SEM), of Social Media Marketing, Blogging, Content Strategy, Email Marketing.

##### **Course outcomes:**

CO1: To understand the role and importance of marketing

CO2: Develop a marketing plan to generate better sales and profits

CO3: Formulate the product and price mix based to serve consumer needs.

CO4: Identify the factors influencing consumer behavior and purchase decision

CO5: Outline the digital tools to develop marketing strategies for the new age consumer

**SUBJECT: HUMAN RESOURCES MANAGEMENT**

**SUBJECT CODE: BBA622A**

**CREDITS: 4**

**Course Objective:** The objective of the subject is to understand the importance of effective and efficient management of human people in an organization to help the business gain a strategic and competitive advantage.

#### **Unit I: Human Resource Management (HRM) - Introduction**

Meaning of Human resources - Meaning of HRM - nature and functions of HRM - HR Manager - qualities and qualifications - Strategic Human Resource Management - Strategic management - corporate level strategies - Strategic HR issues - Organizational and HR strategies -

#### **Unit II: Job Analysis, team analysis and Job Environment**

Meaning of HR terms - Job design, job rotation, job enlargement, job enrichment, team work - Need for job analysis and team analysis - Job description - job specification - job sharing - ergonomics - employee empowerment - Job redesign

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

### **Unit III: Human Resource Planning**

Meaning, features and scope of Human Resource Planning – process of and steps in Human Resource Planning – Barriers to effective implementation of Human Resource Planning – Human Resource Planning Vs Strategic planning – Human resource planning through people, finance and technology.

### **Unit IV: Performance appraisal and compensation management**

Meaning, need and purposes of performance appraisal – methods of performance appraisal – Group appraisal – Behavioral aspects of performance appraisal – Concept of MBO – the balanced score card – managerial appraisal – challenges of performance appraisal.

Concepts of transfer, promotion and demotion – types of promotions – types of transfer – reasons for demotion – concept of absenteeism – calculation and causes of absenteeism rate – measures to reduce absenteeism – concept of labour turnover – types and causes of labour turnover.

### **Unit V: Training and Development**

Assessment of training needs – training methods - Apprenticeship, understudy, job rotation, vestibule training, case study, role playing, sensitivity training, In-basket, management games, conferences and seminars, coaching and mentoring, management development programs; Training process outsourcing.

#### **Course Outcomes:**

CO1: Understand the role and importance of Human resource Management in effectively managing the human capital in an organization.

CO2: Understand the key terminologies in the context of Human Resource Management and their scope and benefits in a practical environment

CO3: Understand the importance of Human resource planning in the context of people, technology and finance

CO4: Understand the importance of performance appraisal and other concepts in the area of Human resource management

CO5: Understand the methods and purposes of training and development activities to gain a strategic advantage

### **SUBJECT: MANAGING FINANCE IN A DIGITAL WORLD**

**SUBJECT CODE: BBA623A**

**CREDITS: 4**

**Course Objective:** To understand the central role that finance plays in an organisation, and how and why technologies used impact the finance function, how to use and examine data collected and processed by machines to create and preserve value for organisations and how the finance function is structured and shaped, and how it interacts with other parts of the organisation to achieve the objectives of the whole organisation.

### **Unit I: Role Of Finance Function**

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Different types of organisations – functions of an organisation – the roles of finance function – enabling value creation through planning, forecasting and resource allocation – data collection – types of analysis to produce insight – potential impact of technology - How finance communicates to influence key stakeholders

## **Unit II: Technology In Digital World**

Characteristics and Dynamics of Fourth Industrial Revolution – Cloud Computing – Big Data Analytics – Process Automation – Artificial Intelligence – Data Visualisation – Block chain – Internet of things – Mobile – 3-D Printing – New areas of Finance to focus on – Areas of Finance susceptible to automation – Digital mindsets for Finance – Ethics of the use of technology

## **Unit III: Data And Information In A Digital World**

Using Data for: Decision making, Understanding the customer, Developing-customer value proposition, Enhancing operational efficiency, Monitoring data, Ethics of Data usage – Assessment of Data needs – Extraction, Transformation and Loading (ETL) Systems - Business Intelligence (BI) systems – Big Data Analytics – Data visualization

## **Unit IV: Shape And Structure Of Finance Function**

Structure of Finance function from the roles that generate information to the roles that turn information into insights and communicate insights to decision makers – Hierarchical shape of Finance function – Shared Services and Outsourcing of Finance Function – Retained Finance – Automation & Diamond shape of Finance Function – Finance operation to generate information and preliminary insight – FP & A, Taxation, corporate reporting, decision support to produce insights – Business partnering to influence organisations to make appropriate decisions – Leading Finance team to create the required impact for the organisation.

## **Unit V: Finance Interacting With Organisations**

Process management – product and service management – supply chain management

Market segmentation – big data analytics in marketing – channel management – sales forecasting & management

Staff acquisition – staff development – performance management – motivation and reward systems

IT infrastructure – IT systems support – cost and benefits of IT systems

## **Course Outcome:**

CO1: To understand how the finance function enables, shapes and narrates value creation through planning, forecasting, resource allocation, performance management and financial reporting.

CO2: To understand key technologies and their impact on an organisation including, cloud computing, big data, data analytics, process automation, artificial intelligence, data visualisation, block chain, internet of things.

CO3: To understand how the finance function can use data and information to assist operations in enhancing operational efficiency.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO4: To understand the contemporary transformation of the finance function in the digital era from roles that generate information to roles that turn information into insight and how finance communicates that insight to decision-makers.

CO5: To understand how the finance function helps manage operations, marketing and Sales, HR and IT functions in creating and preserving value.

### **Semester III:**

### **SUBJECT: STATISTICS WITH R**

**SUBJECT CODE: BBA625A**

**CREDITS: 4**

#### **Course Objective:**

The objective of this module is to make students exercise the fundamentals of statistical analysis in an R environment. They would be able to analyze data for the purpose of exploration using descriptive and inferential statistics. Students will understand probability and sampling distributions and learn the creative application of linear regression in multivariate context for predictive purpose.

#### **Unit I: Introduction to R Programming**

R and R Studio, Logical Arguments, Missing Values, Characters, Factors and Numeric, Help in R, Vector to Matrix, Matrix Access, Data Frames, Data Frame Access, Basic Data Manipulation Techniques, Usage of various apply functions – apply, lapply, sapply and tapply, Outliers treatment.

#### **Unit II: Descriptive Statistics**

Types of Data, Nominal, Ordinal, Scale and Ratio, Measures of Central Tendency, Mean, Mode and Median, Bar Chart, Pie Chart and Box Plot, Measures of Variability, Range, Inter-Quartile-Range, Standard Deviation, Skewness and Kurtosis, Histogram, Stem and Leaf Diagram, Standard Error of Mean and Confidence Intervals.

#### **Unit III: Probability, Probability & Sampling Distribution**

Experiment, Sample Space and Events, Classical Probability, General Rules Of Addition, Conditional Probability, General Rules For Multiplication, Independent Events, Bayes' Theorem, Discrete Probability Distributions: Binomial, Poisson, Continuous Probability Distribution, Normal Distribution & t-distribution, Sampling Distribution and Central Limit Theorem.

#### **Unit IV: Statistical Inference and Hypothesis Testing**

Population and Sample, Null and Alternate Hypothesis, Level of Significance, Type I and Type II Errors, One Sample t Test, Confidence Intervals, One Sample Proportion Test, Paired Sample t Test, Independent Samples t Test, Two Sample Proportion Tests, One Way Analysis of Variance and Chi Square Test.

#### **Unit V: Correlation and Regression**

Analysis of Relationship, Positive and Negative Correlation, Perfect Correlation, Correlation Matrix, Scatter Plots, Simple Linear Regression, R Square, Adjusted R Square, Testing of Slope, Standard Error of Estimate, Overall Model Fitness, Assumptions of Linear Regression, Multiple Regression, Coefficients of Partial Determination, Durbin Watson Statistics, Variance Inflation Factor.

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**SUBJECT: STRUCTURED QUERY LANGUAGE**  
**SUBJECT CODE: BBA626A**  
**CREDITS: 4**

**Course Objective:** This module will help students gain much needed knowledge pertaining to Relational Database Management Systems, Data Models, SQL query processing, Normalization along with an introduction to No SQL Database systems using Mongo DB.

**Unit I: Introduction to Database Management Systems**

Introduction-Database System Applications, Purpose of Database Systems, Views of Data, Data Abstraction, Instances and Schemas, Data Models, Database Languages, DDL, DML, Database Architecture, Database Users and Administrators, Database Design, ER Diagrams, Entities, Attributes and Entity Sets, Relationships and Relationship sets, Integrity Constraints, Views.

**Unit II: SQL Operators and Relational Theorems**

Relational Algebra and Calculus, Selection and Projection, Set Operations, Renaming, Joins, Division, Relational calculus, Tuple Relational Calculus, Domain Relational Calculus, Forms of Basic SQL Query, Nested Queries, Comparison Operators, Aggregate Operators, NULL values, Logical connectives, AND, OR and NOT, Outer Joins, Triggers.

**Unit III: Normalization**

Problems Caused by Redundancy, Decompositions, Functional Dependencies, Normal Forms, First, Second, Third Normal forms, BCNF, Properties of Decompositions, Loss less Join Decomposition, Dependency Preserving Decomposition, Multi Valued Dependencies, Fourth Normal Form, Join Dependencies, Fifth Normal Form.

**Unit IV: Transactions**

Transaction Management, Transaction Concept, Transaction State, Implementation of Atomicity and Durability, Concurrent, Executions, Serializability, Recoverability, Implementation of Isolation, testing for serializability, Concurrency Control, Lock, Timestamp Based Protocols, Validation Based Protocols, Recovery, Failure Classification, Storage Structure, Atomicity, Log Based Recovery, Remote Backup Systems.

**Unit V: No SQL**

Overview of No SQL, Types of No SQL Databases, No SQL Storage Architecture, CRUD Operations in MongoDB, Querying, Modifying and Managing No SQL Databases, Indexing and Ordering, Migrating from RDBMS to No SQL, No SQL in Cloud, Database Administration.

**SUBJECT: RESEARCH METHODOLOGY**  
**SUBJECT CODE: BBA627A**  
**CREDITS: 4**

**Course Objective:** This module enables learners to develop the basic principles of research methods. The learners focus how to do research, with an emphasis on student-centered activities and problem solving. Learners will develop insights the key concepts as the scientific method; operationalizing constructs; independent and dependent variables, data types and ways of measurement, confounding variables experimental and non-experimental design questionnaire construction; developing and testing hypotheses; descriptive statistics and describing data graphically; and the ethics of research.

**Unit I: Research Formulation and Design**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Motivation and objectives-Research methods and methodology. Types of research Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical, concept of applied and basic research process, criteria of good research. Defining and formulating the research problem, selecting the problem, necessity of defining the problem, importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, patents, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis.

#### **Unit II: Data Collection and Analysis**

Accepts of method validation, observation and collection of data, methods of data collection, sampling methods, data processing and analysis strategies and tools, data analysis with statically package (Sigma STAT, SPSS for student t-test, ANOVA, etc.), hypothesis testing.

#### **Unit III: Statistical Softwares**

Computer and its role in research, Use of statistical software SPSS, GRETL etc. in research. Introduction to evolutionary algorithms - Fundamentals of Genetic algorithms, Simulated Annealing, Neural Network based optimization, Optimization of fuzzy systems.

#### **Unit IV: Research Ethics and Scholarly Publishing**

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, commercialization, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing- IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

#### **Unit V: Interpretation and Report Writing**

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of writing Research Report Precautions for writing Research Reports, Conclusions.

### **SUBJECT: HUMAN RESOURCE DEVELOPMENT**

**SUBJECT CODE: BBA628A**

**CREDIT: 4**

**Course Objective:** This module will enable the learners to develop strong understanding and key skills which are required for human resource professionals. Learners will be able to understand the importance of human resource development and their role in effectively managing the personnel within the organization. Learners will develop insights into the fast-growing and emerging trends of Human Resource Development (HRD) in globalized economy.

#### **Unit I: Human Resource Development (HRD) -Macro Perspective**

Understand HRD Concept, Origin and Need of HRD, HRD as a Total System, Approaches to HRD; Human Development and HRD; HRD at Macro and Micro Climate

#### **Unit II: HRD–Micro Perspective**

Understand areas of HRD, HRD Interventions Performance Appraisal, Potential Appraisal, Feedback and Performance Coaching, Training, Career Planning, OD or Systems Development, Rewards, Employee Welfare and Quality of Work Life and Human Resource Information; Staffing for HRD: Roles of HR Developer; Physical and Financial Resources for HRD; HR Accounting; HRD Audit, Strategic HRD

#### **Unit III: Instructional Technology for HRD**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Learning and HRD; Models and Curriculum; Principles of Learning; Group and Individual Learning; Transactional Analysis; Assessment Centre; Behaviour Modeling and Self-Directed Learning; Evaluating the HRD

#### **Unit IV: Human Resource Training and Development**

Concept and Importance of training and development; Assessing Training Needs; Designing and Evaluating T&D Programmes; Role, Responsibilities and challenges to Training Managers

#### **Unit V: Training Methods**

Training within Industry (TWI): On the Job & Off the Job Training; Management Development: Lecture Method; Role Play; In-basket Exercise; Simulation; Vestibule Training; Management Games; Case Study; Programmed Instruction; Team Development; Sensitivity Training; Globalization challenges and Strategies of Training Program, Review on T&D Programmes in India

### **SUBJECT: COMP. APPLICATIONS III (MS PROJECT)**

**SUBJECT CODE: BBA629A**

**CREDITS: 3**

**Course Objective:** The goal of this module is to help students explore MS Project application, providing information on relevant project management concepts while also offering specific procedures to build and track a Project Schedule. The students will gain expertise towards the MS Project application by learning about the tasks and dependencies, estimating durations, and working with project Views. They will also understand the advanced customizations and reporting elements under MS Project application.

#### **Unit I: Introduction**

MS Project Application, Project Family, Features in Project 2016 & 2019, Comparative study on MS Project Versions (2013, 2016 & 2019), The Project Interface, Backstage View, Ribbons and Tabs, Views, Reports, Defining Project Manager, Starting a Project, Task Master, Co-dependent Nature of Tasks, Estimating Task Time, Introducing the Work Breakdown Structure (WBS).

#### **Unit II: Scheduling Basics**

Starting a New Plan and Setting its Start Date, Setting Non-Working Days in the Project Calendar, Entering Plan's Title and Other Properties, Entering Task Names, Task Durations, Milestone Task, Creating Summary Tasks to Outline the Plan, Task Dependencies with Links, Switching Task Scheduling from Manual to Automatic, setting up Resources, Work Resources Names and Maximum Capacity, Pay Rates, Adjusting Working Time in Resource Calendar.

#### **Unit III: Resources Assignment and Plan Sharing**

Assigning Work Resources to Tasks, Controlling Work when Adding or Removing Resource Assignments, Assigning Cost Resources to Tasks, Checking the Plan's Duration, Cost & Work, Customizing Gantt Chart View, Customizing Timeline View, Customizing Reports, Copying and Printing Views & Reports, Saving Plan Baseline, Tracking a Plan as Scheduled through a Specific Date, Entering a Task's Completion Percentage and Actual Values for Tasks.

#### **Unit IV: Advanced Scheduling Techniques**

Viewing Task Relationships with Task Path, Adjusting Task Link Relationships, Setting Task Constraints, Interruptions, Work Time Adjustments, Controlling Task Scheduling using Task Types, Setting Resource Availability at Different Times, Applying Contours, Pay Rates and Material Resources to Tasks & Assignments, Examining Resource Allocations, Levelling Overallocated Resources, Sorting-Grouping-Filtering Project Details, Creating New Tables &

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

New Views, Tracking Progress on Tasks and Assignments, Viewing and Reporting Project Status.

**Unit V: Advanced Formatting and Customizations**

Formatting Gantt Chart View, Timeline View, Network Diagram View, Calendar View, Printing and Exporting Views, Formatting Tables & Charts in a Report, Sharing Custom Elements between Plans, Recording & Editing Macros, Copying Project Data to other Programs, Opening & Saving to other File Formats from MS Project, creating a Resource Pool, Viewing Assignment Details in a Resource Pool. Updating Assignments in a Sharer Plan, updating a Resource's Information and Plan's Working Times in a Resource Pool, Linking New Plans to a Resource Pool, Creating Dependencies between Plans.

**SUBJECT: LIFE SKILLS-I**  
**SUBJECT CODE: DEN003A**  
**CREDIT: 2**

**Course Outcome:**

CO1: Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.

CO2: Ability to learn by doing it practically in the classroom.

CO3: Ability to learn by creating an environment and adapting to the environment.

CO4: The ability to prepare the students as per the need of the Multi-cultural scenario around.

**Syllabus: Theory**

<b>Unit I</b>	Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion Basics of Narrating and describing things
<b>Unit II</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview advance theory Basics of Video Interviews and Video Profiles for Job
<b>Unit III</b>	Types of listening, advantages and disadvantages
<b>Unit IV</b>	Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>Unit V</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk

	Taking, Conflict management, Stress management, Team Building etc
--	---

### Syllabus: Lab

<b>Unit I</b>	Debates / Speeches / Addressing the public / Extempore/Group Discussion Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids
<b>Unit II</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand Video Interviews and Video Profiles for Job-Practice session for Online Interviews
<b>Unit III</b>	Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives
<b>Unit IV</b>	Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>Unit V</b>	Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

### Methodology for Evaluation

#### 1. Internal Assessment (Theory)

- a) Home Assignments: One from each Unit : 15 Marks
- b) In Semester Tests (Minimum two) : 30 Marks
- c) Attendance: 05 Marks 2. Term End (Theory): 50 Marks

#### 3. Internal Assessment (Lab)

- (a) Daily Performance in the Lab: 50 Marks
- 4. Term End (Lab): 50 Marks

### Suggested Readings:

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

1. A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.
2. Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.
3. Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa& Co.
4. The Hard Truth about Soft Skills, by Amazone Publication.
5. 101 Great Answers to the Toughest Interview Questions. Ron Fry. High Bridge Company. 1996.
6. Michael Swan. Practical English Usage, Oxford University Press.

**SUBJECT: Value Education I**  
**SUBJECT CODE: DIN003A**  
**CREDIT: 2**

**Course Outcomes (CO):**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

**Lessons from the Ramayana**

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

**Lessons from the Mahabharata**

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

**Lessons from the Upanishads**

Introduction to the Upanishads: Sruti versus Smriti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

  
**Dean**  
**Faculty of Management**  
**JECRC University, Jaipur-303905**

## **Message of the Bhagavad Gita**

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

## **Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

## **Life and Teachings of Spiritual Masters India**

Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

## **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce.

Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

**SUBJECT: Open Elective\***  
**Semester IV:**  
**SUBJECT: OPERATION MANAGEMENT**  
**SUBJECT CODE: BBA630A**  
**CREDITS: 4**

  
**Dean**  
**Faculty of Management**  
**JECRC University, Jaipur-303905**

**Course Objective:** The objective is to provide the basic understanding of the methods and techniques of production and the economics of effective utilization of resources and the techniques employed to ensure the optimum use of resources.

### **Unit I: Introduction to Operations Management**

Definition – differences between operations management and production management – operations and productivity – operations strategy in global environment – using software for productivity analysis – Ethics, social responsibility and sustainability – developing missions and strategies – achieving competitive advantage through operations – strategic planning, core competencies and outsourcing – global operations strategy options.

### **Unit II: Designing operations**

Design of goods and services – product life cycle – generating new products – issues for product design – robust design, modular design, CAD and CAM, virtual reality technology, value analysis, sustainability and life cycle assessment (LCA) - product development continuum – acquisition, joint ventures and strategic alliances – defining a product – make or buy decisions, group technology – documents for production – service design – process chain network analysis (PCN), documents for service – application of decision tree to product design.

### **Unit III: Quality Management**

Defining quality – quality and strategy – total quality management (TQM) – continuous improvement, six sigma, benchmarking, JIT, Taguchi concepts – Tools of TQM – scatter diagrams, cause-and-effect diagrams – pareto charts – flowcharts – histograms – statistical process controls (SPC) – process capability ratio, process capability index – using software in SPX - role of inspection – TQM in services.

### **Unit IV: Supply Chain Management**

Importance of supply chain strategies – six sourcing strategies – many suppliers, few suppliers, vertical integration, joint ventures, keiretsu networks, virtual companies – supply chain risks – managing integrated supply chain – building the supply base – negotiations, contracting, centralized purchasing, e-procurement – logistics management – distribution management – ethics and sustainable supply chain management – measuring supply chain performance – asset committed to inventory, benchmarking the supply chain.

### **Unit V: Lean operations**

Lean Operations – elimination of wastages, throughput analysis and improving throughput – lean and just in time – lean layout, lean inventory, lean scheduling, lean quality – lean and the Toyota production system – continuous improvement, respect for people, processes and standard work practice – lean organizations – building a lean organization, lean sustainability – lean in services.

### **Course Outcomes:**

CO1: This course introduces the students with the concept and importance of operations management in an organization

CO2: The students will learn different techniques with regard to designing process for a product or a service

CO3: The students will get deep insight into the role of quality and the techniques available in the current age to manage the quality vis-à-vis managing the operations

CO4: The students will be able analyze and evaluate the importance of supply chain management in the current age of digital transformation

CO5: The student will be able understand the growing concept of Lean and lean management and the application in managing the operations in an organization

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF

2. Operations and Supply Chain Management – F Robert Jacobs & Richard Chase – Mc Graw Hill Education
3. Operations Management – processes and supply chains – J Krajewski Le and K Malhotra Manoj – Pearson Education

**Reference Books:**

1. Supply Chain Management – Sunil Chopra – Pearson Education
  2. Lean Management Systems handbook – Rich Charron, James Harrington, Frank Voehl and Hal Viggini - CRC Press
  3. Statistical Process Control in automated manufacturing – Bert Keats and Norma Faris Hubele – CRC Press
- Total quality management – Besterfield Dale & Besterfield Carol – Pearson Education

**SUBJECT: PYTHON PROGRAMMING**

**SUBJECT CODE: BBA631A**

**CREDITS: 4**

**Course Objective:** This module will help students gain much needed knowledge pertaining to Python Programming, so as to prepare them for the advanced modules such as ML. Python scripting is user-friendly and is the most used language in industry when it comes to designing and scripting applications with respect to Emerging Technologies.

**Unit I: Introduction**

History of Python, Need of Python Programming, Applications Basics of Python Programming Using the REPL(Shell), Running Python Scripts, Variables, Assignment, Keywords, Input-Output, Indentation.

**Unit II: Types, Operators and Expressions**

Types - Integers, Strings, Booleans; Operators- Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators, Expressions.

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

### Unit III: Data Structures and Control Flow

Lists, Operations, Slicing, Methods, Tuples, Sets, Dictionaries, Sequences, Comprehensions, Conditional blocks using If, Else and El-if, For Loop, For loop using Ranges, String, list and Dictionaries, While Loop, Loop Manipulation using Pass, Continue, Break and Else, Conditional and Loops Block.

### Unit IV: Functions Modules and Packages

Defining Functions, Calling Functions, Passing Arguments, Keyword Arguments, Default Arguments, Variable-length arguments, Anonymous Functions, Function Returning Values, Scope of the Variables in a Function - Global and Local Variables. Creating modules, Name Spacing, Introduction to PIP, Installing Packages via PIP, Using Python Packages.

### Unit V: Object Oriented Programming & Exception Handling

Classes, Self-Variable, Methods, Constructor Method, Inheritance, Overriding Methods, Data Hiding, Difference between an Error and Exception, Handling Exception, Try Except Block, Raising Exceptions, and User Defined Exceptions.

#### Course Outcomes:

CO1: To understand why Python is a useful scripting language.

CO2: To learn how to use lists, tuples, and dictionaries in Python programs.

CO3: To learn how to write loops and decision statements in Python.

CO4: To learn how to design object-oriented programs with Python classes.

CO5: To learn how to use exception handling in Python applications for error handling.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

**SUBJECT: SaS and TABLEAU**

**SUBJECT CODE: BBA632A**

**CREDITS: 4**

**Course Objective:** This course will provide students and exposure towards SaS, Tableau and its usability in the field of analytics. The course comprises an introduction to SaS, its procedures, visualizations along with Tableau application usage and visualization basics.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### Unit I: Introduction to SaS

Overview of SaS university edition, Deploying SaS Studio on virtual platform, File Management, SaS libraries, importing data, Structure of Data and Data Types, Program Syntax, saving data, PROC IMPORT and PROC CONTENTS, Displaying Data and Generating Logs, List Input.

### Unit II: SaS Programming

Variables and Syntax Rules, Data Set Options, Operators, In-File Statement, Input Styles, Select Statements, Leave and Continue, Decision Making via SaS, Where Statement, Looping Constructs, SaS Functions, Arrays and Array Processing, Modifying and Combining Data Sets.

### Unit III: SaS Procedures

Proc Data, Proc Sort, Proc Means Sort, Proc Means, Proc Univariate, Proc Freq, Proc Plot, Proc Sgplot, Proc Summary, Proc Contents, Proc Append, Proc Copy, Proc SQL, Proc Delete, Proc Format, Proc Import, Proc Export, Proc Transpose, Proc GChart, Proc GPlot, Proc Report.

### Unit IV: Visualization with Tableau - I

Tableau Software Ecosystem, Toolbar Icons, Data Window and Aggregation, Tableau Data Source, Data Extract, Connect to Data, Measure Names, Number of Records & Measures, Heat Maps, Tree maps, Bar Chart, Line Chart, Area Fill Charts, Pie Chart, Scatter Plot, Circle View, Bullet Graph, Packed Bubble, Histogram, Boxplot and Gantt Chart, Sorting Data, Enhancing Views with Filters, Sets, Groups & Hierarchies.

### Unit V: Visualization with Tableau – II

Cross-tabulation, Dashboard Designing, Dashboard Actions, Joining Database, Functions in Tableau, Aggregate Functions, Numeric Functions, Date Functions, Stories, Advanced Mapping, Advanced Parameters, Tableau Best Practices, Combining Multiple Dashboards into Stories, Publishing Stories and Dashboards.

### Course Outcomes:

CO1: Deploy SaS in a virtual environment and import data for analysis.

CO2: Prepare and manipulate datasets for analysis in SaS.

CO3: Perform exploratory data analysis within SaS environment using various procedures and functions.

CO4: Understand Tableau Interface, Panes and Implement Visualization Techniques.

CO5: Prepare, Deploy and Publish Stories, Dashboards based on Analytical Cases.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1		M		M			M
CO2			M		H	M	
CO3	M		H		M	H	
CO4	M				M	M	
CO5			M			M	H

H = Highly Related; M = Medium L = Low

### Textbooks:

1. Ron Cody, 2018, An Introduction to SaS University Edition, SaS Institute.

2. Ron Cody, 2018, Learning SaS by Example, SaS Institute.
3. Deepti Gupta. 2018, Applied Analytics through Case Studies Using SaS, Apress.

**SUBJECT: Natural Language Processing**

**SUBJECT CODE: BBA642A**

**CREDITS: 4**

**Course Objective:**

The course introduces the concepts of Text Analytics, Unstructured Information Analysis for better decision making by deriving valuable insights. The course will help the students understand the roots behind Text Mining which evolved from Machine Learning, Natural Language Processing and Statistics. Upon completion, students are expected to be able to describe basic concepts and methods of Text Mining, Information Extraction, Text Classification and Clustering, Topic Modelling.

**Module 1: Introduction to Text Mining**

Basics of Text Mining, Natural Language Content Analysis, Core Text Mining Operations, Associations, Using Background Knowledge for Text Mining, Domain Ontologies, Domain Lexicons. Text Mining Preprocessing Techniques, Task Oriented Approaches, NLP Tasks, Tokenization, Part-of-Speech Tagging, Syntactical Parsing and Shallow Parsing.

**Module 2: Extracting Features, Relations from Text**

Finding Implicit Features, Finding Opinion Phrases and their Polarity, Context-Specific Word Semantic Orientation, Analysis of Word and Document Frequency, tf-idf, Zipf's Law, bind tf\_idf Function, Subsequence Kernels for Relation Extraction, Capturing Relation Patterns with a String Kernel.

**Module 3: Text Categorization and Clustering**

Applications of Text Categorization, Document Representation, Knowledge Engineering Approach to Text Categorization, Machine Learning Approach to Text Categorization, Evaluation of Text Classifiers. Clustering Tasks in Text Analysis, Clustering Algorithms and Clustering of Textual Data.

**Module 4: Relationships between Words**

Tokenizing by N-gram, Counting and Filtering N-gram, Analyzing Bigrams to provide Context in Sentiment Analysis, visualizing a Network of Bigrams using graph, Counting and Correlating Pairs of Words with the widyr Package, Counting and Correlating among Sections, Examining Pairwise Correlation.

**Module 5: Topic Modelling and Probabilistic Models for Information Extraction**

Latent Dirichlet Allocation, Word Topic Probabilities, Per-Document Classification, By-words Assignments, Alternative LDA Implementations. Hidden Markov models, Stochastic Context Free Grammar, Conditional Random fields, Parallel Learning Algorithms.

**Course Outcomes:**

- CO1: Understand approaches to Syntax and Semantics in NLP.  
CO2: Understand various methods for Statistical approaches to Machine Translation.  
CO3: Build Models which extract information from Textual Unstructured Data.

CO4: Understand and implement Topic Modelling and Probabilistic Models for Information Extraction.

CO5: Implement and deploy programs based on Relationship Extraction, POS Tagging and Clustering Algorithms based on NLP.

**SUBJECT: CORPORATE GOVERNANCE AND SOCIAL RESPONSIBILITY**

**SUBJECT CODE: BBA633A**

**CREDITS: 3**

**Course Objective:**

This course aims to provide students with a thorough grounding in a number of key introductory and advanced topics of corporate governance and its relevance for corporate social responsibility. Content includes relevant applied theories, current research, and practice.

**Unit I: Introduction**

Definitions and the evolution of Corporate Governance Basic definitions in the field of Corporate Governance and the historical development of Corporate Governance from the Wall Street Crash until nowadays will be discussed.

**Unit II: Parties involved in Corporate Governance**

Corporate Governance is based on the relationship of many players (such as shareholders, management and board of directors, stakeholders) involved in governing a corporation. This meeting is devoted to discussing their rights, duties and responsibilities.

**Unit III: Corporate Governance Theories**

Organizational Theories (including Stewardship, Resource and Institutional Theory), Economic Theories (such as Agency, Finance and Managerial Theory) and the Stakeholder Theory will be presented on this meeting

**Unit IV: Corporate Social Responsibility (CSR)**

CSR is about how business takes account of its economic, social and environmental impacts in the way it operates – maximizing the benefits and minimizing the downsides. The course discussion will be based on these issues, Corporate Social Responsibility in India, Recent developments

**Unit V: The International Environment for Corporate Governance**

International Corporate Governance. OECD and BIS Principles. Implementation. Pitfalls. Final Review. The International Environment for CG

**Course Outcomes:**

CO1: Distinguish the various expectations and demands that emanate from stakeholders in business firms.

CO2: Corporate Governance is based on the relationship of many players.

CO3: Define governance in business and recognize the legitimacy of business as an institution in a global society.

CO4: Describe the ethical and current social responsibility issues and the influence of these issues on society.

CO5: International Corporate Governance

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i>Course Outcome</i>	Program Outcome

**SUBJECT: LEADERSHIP SKILLS**

**SUBJECT CODE: BBA641A**

**CREDITS: 2**

**Course Outcomes:**

On successful completion of this course, the students will be able:

CO1: To know the role, functions and different styles of leadership

CO2: To know and apply the theories of leadership

CO3: To know the meaning of power and politics in context of leadership

CO4: To make the students aware about developing leadership skills in themselves

CO5: To make the students aware about different and innovative leadership

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Unit I: Introduction to Leadership:**

Leadership, role and functions of a Leader, Leadership motives Characteristics of an Effective Leader, Leadership as a process – the complexities of leadership – Effective leadership behaviors and attitudes – Leadership and power, coercion, Management, Trait approach, Leadership Behaviour and styles – Lewins Leadership styles, Ohio state Leadership study, The University of Michigan Study, Blake and Moutons Managerial Grid.

## **Unit II: Leadership Theories:**

Traditional Theories (A Brief Overview) • Trait Theory • Behavioral Theories • Fiedler's Contingency Model • Path – Goal Leadership Theory • Situational Leadership Theory • The Managerial Grid Modern Theories • Charismatic Leadership • Transactional and Transformational Leadership • Substitutes for Leadership • Authentic Leadership

## **Unit III: Power and Politics:**

Meaning Power, Distinction between Power & Authority, Bases or Sources of Power, Acquisition of Power, Symbols of Power and Powerlessness, Organizational Politics, Reasons for Organizational Politics, Managing Organizational Politics

## **Unit IV: Developing Leadership Skills:**

What Skills do Leaders Need? ; Leadership Training Programs, Designing Effective Training, Special Techniques of Leadership Training: Behavior Role Model, Case, Discussion and Business Games & Simulation, Challenges in designing training programmes

## **Unit V: Innovative Leadership and Design Thinking**

Innovative Leadership, Concept of emotional and social intelligence, Synthesis of human and artificial intelligence, Why does culture matter for today's global leaders, Design Thinking, What is design thinking, Key elements of design thinking: - Discovery - Interpretation - Ideation - Experimentation - Evolution. ,How to transform challenges into opportunities? How to develop human-centric solutions for creating social good

5. Drucker, Peter and Maciariello, Joseph: 366 Days of Insight and Motivation for Getting the Right Things Done: Rutledge

**SUBJECT: OPEN ELECTIVE\***

**SUBJECT CODE:**

**CREDITS: 3**

**Life Skills 2 (Aptitude)**

**Subject Code: DEN004A**

**Credits: 2**

**Course Objectives:**

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

**Course Outcomes (CO):** At the end of this course students will have:

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

**Syllabus: Theory**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

UNIT 1	<p>Number System:</p> <ul style="list-style-type: none"> <li>a. Number system</li> <li>b. Power cycle</li> <li>c. Remainder cycle</li> <li>d. Factors, Multiples</li> <li>e. HCF and LCM</li> </ul>
UNIT 2	<p>Data Arrangements and Blood Relations:</p> <ul style="list-style-type: none"> <li>a. Linear Arrangement</li> <li>b. Circular Arrangement</li> <li>c. Multi-dimensional Arrangement</li> <li>d. Blood Relations</li> </ul>
UNIT 3	<p>Time and Work:</p> <ul style="list-style-type: none"> <li>a. Work with different efficiencies</li> <li>b. Pipes and cisterns</li> <li>c. Work equivalence</li> <li>d. Division of wages</li> </ul>
UNIT 4	<p>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</p> <ul style="list-style-type: none"> <li>a. Coding and Decoding</li> <li>b. Series</li> <li>c. Analogy</li> <li>d. Odd Man Out</li> <li>e. Visual Reasoning</li> </ul>

UNIT 5	<p>Percentages, Simple Interest and Compound Interest:</p> <p>a. Percentages as Fractions and Decimals</p> <p>b. Percentage Increase / Decrease</p> <p>c. Simple Interest</p> <p>d. Compound Interest</p> <p>e. Relation Between Simple and Compound Interest</p>
UNIT 6	<p>Permutation, Combination and Probability:</p> <p>a. Fundamental Counting Principle</p> <p>b. Permutation and Combination</p> <p>c. Computation of Permutation</p> <p>d. Circular Permutations</p> <p>e. Computation of Combination</p> <p>f. Probability</p>
UNIT 7	<p>Data Interpretation and Data Sufficiency:</p> <p>a. Data Interpretation – Tables</p> <p>b. Data Interpretation - Pie Chart</p> <p>c. Data Interpretation - Bar Graph</p> <p>d. Data Sufficiency</p>

UNIT 8	Profit and Loss, Partnerships and Averages:  a. Basic terminologies in profit and loss  b. Partnership  c. Averages  d. Weighted average  e. Mixtures and allegations
--------	---

### Methodology for Evaluation

#### 1. Internal Assessment

a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks

b) In Semester Tests (Minimum two) : 30 Marks

#### 2. Term End : 40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

### Suggested Reading:

1. Speed Mathematics, Secrets of Lightning Mental Calculations, by Bill Handley, Master Mind books;
2. The Trachtenberg Speed System of Basic Mathematics, Rupa& Co., Publishers;
3. How to Ace the Brainteaser Interview, by John Kador, Mc Graw Hill Publishers.
4. Quick Arithmetics, by Ashish Agarwal, S Chand Publ.;
5. Quicker Maths, by M tyra& K Kundan, BSC Publishing Co. Pvt. Ltd., Delhi;
6. Owl Purdue University online teaching resource

## Semester V

**SUBJECT: INTERNATIONAL BUSINESS MANAGEMENT**

**SUBJECT CODE: BBA634A**

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

## **CREDITS: 4**

**Course Objective:** The Objective is to provide the understanding of the international business environment and its competitive and investment climate and also would provide knowledge of international business and finance activities of the organization and the investigation of changes in firms strategies and accounting policies as per the change in business environment and also the understanding of various aspects of international trade, finance and currency derivatives.

### **Unit I: International business: An Overview**

Understand the evolution of international trade theories, Introduction to Forex Markets: Absolute advantage, Relative advantage, and H-O theory, Leontief Paradox, Porter's Diamond paradox; Foreign Exchange (Forex) Market, Communication in Forex Markets, Currency Quotes- both in global and domestic market, calculation of forward rates using spot rates, calculation of discount/premium on spot rate using spot and forward rates, Spot Rates with and without transaction costs.

### **Unit II: Principles and monetary systems of international trade**

Understand the theories of absolute cost advantage, comparative cost advantage theory, Interest rate Parity, PPP Principle, International Fisher Effect, The International Monetary System: Bretton Wood system, Exchange Rate Regimes, International Banking, Concept and Development of Universal banking, Global depository receipt, Indian depository receipt.

### **Unit III: Exposure of currency and its measurement**

Understand the fundamental functions of currency Exposure and its Management: Types of Forex Exposures: Transaction, Translation, and Economic Exposure and their management; Country Risk-Analysis and Management. Multinational payments Management: Leading, Lagging, Pooling and Netting, foreign exchange risk management system.

### **Unit IV: Financial derivatives**

Understanding the factors influencing costs and benefits of FDI, Financial Derivatives with respect to currency: Forwards and Futures, Interest rate futures and currency futures; Determination of forward and futures prices; Options and related terminology, Calculating the pay-off from options and its representation.

### **Unit V: Pricing & Its strategies**

Understanding on Pricing of Options- Binomial model and Black-Scholes model; trading strategies involving options; Introduction to Swaps, Interest rate swaps, currency swaps, cross currency swaps; Forward rate agreements (FRA). Interest rate caps, floors, collars, cost-oriented export pricing methods and market-oriented export pricing methods.

### **Course Outcomes:**

CO1: This course introduces the students with the understanding about the international business theories and introduction to forex markets.

CO2: The students will learn the different approaches used in the international monetary systems.

CO3: The students will get a sound understanding of the various financial derivatives and foreign direct investments.

CO4: The student will get a deep analysis of the various financial pricing techniques held in use for international trade.

CO5: The student will understand the impact of methods and principles introduced in international finance.

### **Textbooks:**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

1. Francis cherunilam, *International business*,
2. Charles W.L. Hill and G. Thomas M. hult, *International business*
3. John H. dunning, *Governments, globalization and International business*

**Reference Books:**

1. Paul R. Krugman and Maurice Obstfeld, *International Finance: Theory & Practice*.

**SUBJECT: LEGAL ENVIRONMENT FOR BUSINESS**

**SUBJECT CODE: BBA635A**

**CREDITS: 3**

**Course Objective:** To understand various laws applicable in India i.e. Contracts Act, Special Contracts, Partnerships, LLP's, companies etc. On completion of this course, learners will be able to: appreciate the relevance of business law to individuals and businesses and the role of law in an economic, political and social context.

**Unit I: (Law of Contracts, Special Contract, Indemnity & Guarantee)**

The Indian Contract Act, 1872 - Definition of contract -Law of contracts - Nature of contract - Classifications - Essential elements of a contract Offer and acceptance, consideration, capacity of parties- Minors-persons of unsound mind-persons disqualified by law- Free consent, legality of object and consideration, performance of contract, discharge of contract, breach of contract, remedies for breach of contract-Quasi contract- Performance. Special Contracts - Bailment and Pledge- Bailment Definition Essential elements Rights and duties of bailor and bailee Finder of lost goods. Pledge Essentials Rights and duties of Pawner and Pawnee. Indemnity and Guarantee- Indemnity - Definition, nature of liability of surety, rights of surety, discharge of surety. Meaning and definition of guarantee.

**Unit II: (Law of Agency & Sale of Goods Act)**

Essentials, kinds of agents, rights and duties of agent and principal, creation of agency, termination of agency-Sub agents and substituted agents-Relationship. **Sale of Goods Act, 1930** Formation of contract of sale - Essentials of contract of sale goods and their classifications- Conditions on warranties Transfer of property in goods Performance of contract of sale Unpaid seller and his rights

**Unit III: (The Indian Partnership Act 1932, The Limited Liability Partnership)**

Nature- rights and duties of partners- Registration and dissolution of firms- **The Limited Liability Partnership Act 2008**- Introduction- nature and scope- features- incorporation and differences with other forms of organization.

**Unit IV: (Companies Act and its Basics)**

- Company - Definition - Characteristics - Classifications -History and framework of Company Law in India - Companies Act 2013 - one person company, small company, associate company, dormant company, producer company; association not for profit; illegal association. Promotion and formation of a company- Body Corporate - promoter- legal position-duties remuneration- Memorandum of Association - Articles of Association - Contents and alteration -Incorporation of Company - On-line registration of a company - CIN

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

- Companies With Charitable Objects - Doctrines of Indoor Management, Constructive Notice, Ultra-vires - Lifting up of Corporate veil - Conversion of Companies. Share Capital – Types - Public Offer - Private Placement - Prospectus - Contents of Prospectus – Types of prospectus – Deemed prospectus - Shelf Prospectus - Red Herring Prospectus - Abridged prospectus-Liability for Misstatements in Prospectus – Issue and Allotment of Securities – Types - Voting Rights –DVR- Application of Premiums - Sweat Equity Shares - Issue and Redemption of Preference Shares-Transfer and Transmission of Securities- Punishment for impersonation of Shareholder - Further Issue of Share Capital- Bonus Shares- Debenture Issue

#### **Unit V: (Membership in company and meetings)**

Modes of acquiring membership-rights and liabilities of members- cessation of membership- Register of Members - Company meetings – Annual General Meeting - Extraordinary General Meeting- Notice Of Meeting - Quorum - Chairman - Proxies - Voting -Show of Hands – E-Voting - Poll- Postal Ballot- Motions - Resolutions - Types - Minutes - Books of accounts - Annual Return- Directors - Types - legal position – Appointment - Duties – Disqualifications- DIN - Vacation of Office - Resignation - Removal - Meetings of Board - Resolutions and Proceedings- Powers of Board - Key Managerial Personnel- CEO- CFO - Audit and Audit Committee – related party- transactions - Corporate Social Responsibility- Winding up - Contributory – Modes of winding up - Winding Up by Tribunal - Petition for Winding Up- Powers of Tribunal- Liquidators - Appointments- Submission of Report - Powers and Duties - Effect of Winding Up Order- Voluntary Winding Up - Circumstances - Declaration Of Solvency - Meeting of Creditors- Commencement of Voluntary Winding Up- Appointment of Company Liquidator- Final Meeting and Dissolution of Company Official Liquidators – Appointment -Powers - Functions - Winding up of unregistered companies.

#### **Course Outcomes**

CO1: Ability to apply knowledge of Indian Contract Act, Sale of Goods Act, Partnership Act and LLP. Ability to identify, and solve legal issues in connection with business.

CO2: Identify the fundamental legal principles behind contractual agreements.

CO3: Know about the concept of company and shares.

CO4: Know about the application of company law in India. Understand the use of the memorandum of association and article of association in a company, they also learn from this course.

CO5: Use of various documents and forms in a company. Understand the relationship between company and its stakeholders.

**SUBJECT: CORPORATE STRATEGY**

**SUBJECT CODE: BBA636A**

**CREDITS: 4**

**Course Outcomes:** On successful completion of the module students will be able to:

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

1. Analyze and evaluate critically real-life company situations and develop creative solutions, using a strategic management perspective.

2. To enable students to know and develop strategies for business to remain competitive

### **Unit I: Introduction to Strategy**

Concepts of strategy, Environmental issues (PESTLE), SWOT analysis, The internal resources, capabilities and competences of an organization, Strategic choices

### **Unit II: Managing growth and scale**

Strategic management process, Environment and Organizational Appraisal, Strategic Business Unit and levels of strategy.

### **Unit III: Strategy Formulation**

Industry life Cycle analysis, Corporate level strategies, Expansion and Stability, Integration and Diversification, Internationalization, Co-operative and Digitalization, Business Level Strategies, Cost leadership, Differentiation, Focus business strategy, Introduction to functional Level Strategies-Marketing, Financial, HRM, Product, Research and Development

### **Unit IV: Strategy Analysis and Implementation**

Process of Strategic Choice, Strategic Analysis, McKinsey 7s, Porter's five forces model, BCG Matrix, Nature of Strategy implementation and barriers to strategy implementation

### **Suggested Reference Books:**

1. Strategic Management by Kazmi
2. Entrepreneur Development New Venture Creation Satish Taneja and S.L Gupta Galgotia Publication
3. Entrepreneurship Management; Dr. Aruna Kaulgud; Thomson Publication
4. Essentials of Entrepreneurship and small business Management; Thomas Zimmerer and Norman S; Pearson Publication
5. Websites of corporates

**SUBJECT: CUSTOMER RELATIONSHIP MANAGEMENT**

**SUBJECT CODE: BBA639A**

**CREDITS: 3**

### **Course Outcomes:**

On successful completion of this course, the students will be able:

CO1: To be aware of the nuances of customer relationship

CO2: To analyze the CRM link with the other aspects of marketing

CO3: To impart the basic knowledge of the Role of CRM in increasing the sales of the company

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO4: To make the students aware of the different CRM models in service industry

CO5: To make the students aware and analyze the different issues in CRM

### **Unit I: Evolution of Customer Relationship**

CRM- Definition, Emergence of CRM Practice, Factors responsible for CRM growth, CRM process, framework of CRM, Benefits of CRM, Types of CRM, Scope of CRM, Customer Profitability, Features Trends in CRM , CRM and Cost-Benefit Analysis, CRM and Relationship Marketing.

### **Unit II: CRM Concepts**

Customer Value, Customer Expectation, Customer Satisfaction, Customer Centricity, Customer Acquisition, Customer Retention, Customer Loyalty, Customer Lifetime Value. Customer Experience Management, Customer Profitability, Enterprise Marketing Management, Customer Satisfaction Measurements, Web based Customer Support.

### **Unit III: Planning for CRM**

Steps in Planning-Building Customer Centricity, Setting CRM Objectives, Defining Data Requirements, Planning Desired Outputs, Relevant issues while planning the Outputs, Elements of CRM plan, CRM Strategy: The Strategy Development Process, Customer Strategy Grid.

### **Unit IV: CRM and Marketing Strategy**

CRM Marketing Initiatives, Sales Force Automation, Campaign Management, Call Centres. Practice of CRM: CRM in Consumer Markets, CRM in Services Sector, CRM in Mass Markets, CRM in Manufacturing Sector.

### **Unit V: Challenges of CRM Implementation**

CRM Planning and Implementation Issues and Problems in implementing CRM, Information Technology tools in CRM, Challenges of CRM Implementation. CRM Implementation Roadmap, Road Map (RM) Performance: Measuring CRM performance, CRM Metrics.

Text Books:

1. Francis Buttle, Stan Maklan, Customer Relationship Management: Concepts and Technologies, 3rd edition, Routledge Publishers, 2015
2. Kumar, V., Reinartz, Werner Customer Relationship Management Concept, Strategy and Tools, 1st edition, Springer Texts, 2014

## Reference Books:

1. Jagdish N.Sheth, Atul Parvatiyar & G.Shainesh, "Customer Relationship Management", Emerging Concepts, Tools and Application", 2010, TMH.
2. Dilip Soman & Sara N-Marandi," Managing Customer Value" 1st edition, 2014, Cambridge.
3. Alok Kumar Rai, "Customer Relationship Management: Concepts and Cases", 2008, PHI.
4. Ken Burnett, the Handbook of Key "Customer Relationship Management", 2010, Pearson Education.
5. Mukesh Chaturvedi, Abinav Chaturvedi, "Customer Relationship Management- An Indian Perspective", 2010 Excel Books, 2nd edition

## **SUBJECT: MACHINE LEARNING AND ARTIFICIAL INTELLIGENCE**

**SUBJECT CODE: BBA637A**

**CREDITS: 4**

**Course Objective:** After this course students will gain critical knowledge and understanding about major Data Mining procedures like Decision Tree, Cluster Analysis, Neural Networks, Support Vector Machine, Bayesian Networks and Machine Learning fundamentals. Students will be able to apply and practice this gained knowledge in a variety of Business Scenarios.

### **Unit I: Classification and Regression Tree**

Classification & Regression, working of a Decision Tree, Attribute Selection Measures, Information Gain, Gain Ratio, Gini Index, Building Decision Trees, CART, C5.0, and CHAID Trees, Prediction by Decision Tree, Advantages and Disadvantages of Decision Trees, Model Overfitting, Building Decision Trees in R.

### **Unit II: Clustering**

Cluster Analysis versus Factor Analysis, Overview of Basic Clustering Methods, Agglomerative Hierarchical Clustering, Within-Group Linkage, Nearest Neighbor or Single Linkage, Furthest Neighbor or Complete Linkage, Centroid Clustering, Ward's Method, K-Means Algorithm, Dendrogram, Profiling of Cluster, Cluster Evaluation.

### **Unit III: Support Vector Machine**

Decision Boundaries for Support Vector Machine, Maximum Margin Hyperplanes, Structural Risk Minimization, Linear SVM-Separable Case, Linear SVM-Non-Separable Case, Kernel Function, Kernel Trick, Kernel Hilbert Space, Model Evaluation.

### **Unit IV: Market Basket Analysis**

Market Basket Analysis and Association Analysis, Market Basket Data, Stores, Customers, Orders, Items, Order Characteristics, Product Popularity, Tracking Marketing Interventions, Association Rules, Support, Confidence, Lift, Chi-Square Value, Sequential Pattern Analysis.

### **Unit V: Introduction to Artificial Intelligence**

Current Trends in AI, Intelligent Agents, Environments, Problem Solving Agents, Searching Techniques, Knowledge and Reasoning in AI, Forms of Learning, Structure of a Neural Network, Analogy with Biological Neural Network, Activation Functions, Gradient Descent, Model Accuracy.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**Course Outcomes:**

CO1: Understand and employ a wide variety of Statistical and Machine Learning Algorithms.

CO2: Identify the characteristics of Datasets, Problem Statement and develop Machine Learning programs with reference to known Computing Techniques.

CO3: Understand the Model Performance Evaluation and select the best one based on the solution.

CO4: Implement Machine Learning techniques and the Programming Framework to obtain acceptable decisions for the Real-World problems.

CO5: Employ the use of Artificial Neural Networks to solve real time high sized input analysis and predictions.

**Textbooks:**

1. Kevin Knight, Elaine Rich, B.Nair, 2017, *Artificial Intelligence*, McGraw.

**References:**

1. Han, Jiawei and Kamber, Micheline, 2012, *Data Mining: Concepts and Techniques*, Morgan Kaufman Publishers.

2. Anand Rajaraman, 2011, *Mining of Massive Datasets*, Cambridge University Press.

3. Mitchell, 2013, *Machine Learning*, McGraw Hill.

Stuart Russell, Peter Norvig, 2004, *Artificial Intelligence – A Modern Approach*, Pearson.

**SUBJECT: BIG DATA ANALYTICS****SUBJECT CODE: BBA638A****CREDITS: 4**

**Course Objective:** This course will help students gain knowledge and understanding about Big Data Technology, Hadoop Ecosystem and various tools related to it. The students will learn about the HDFS File System, Map Reduce Framework, analysing data using Hbase and Hive along with the Integration of R with Hadoop.

**Unit I: Introduction to Big Data**

What Is Big Data? History of Data Management, Evolution of Big Data, Structuring of Big Data, Elements of Big Data, Application of Big Data in the Business Context, Careers in Big Data. Business Applications of Big Data: The Significance of Social Network Data, Financial Fraud and Big Data, Fraud Detection in Insurance, Use of Big Data in the Retail Industry.

**Unit II: Technologies for Handling Big Data**

Distributed and Parallel Computing for Big Data, Understanding Hadoop, Cloud Computing, Grid Computing and In-Memory Technology for Big Data. VMWare Installation of Hadoop, Linux and its Shell Commands, Different Hadoop Distributions and their advantages, Hortonworks, Cloudera, MapR.

**Unit III: Understanding the Hadoop Ecosystem**

The Hadoop Ecosystem, Storing Data with HDFS, Design of HDFS, HDFS Concepts, Command Line Interface to HDFS, Hadoop File Systems, Java Interface to Hadoop, Anatomy of a file read, Anatomy of a file write, Replica placement and Coherency Model. Parallel Copying with distcp, keeping an HDFS Cluster Balanced.

**Unit IV: Map Reduce Fundamentals**

Origins of Map Reduce, How Map Reduce Works, Optimization Techniques for Map Reduce Jobs, Applications of Map Reduce, Java Map Reduce classes (new API), Data flow, combiner functions, running a distributed Map Reduce Job. Configuration API, setting up the development environment, Managing Configuration.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

## **Unit V: Integrating R with Hadoop, Understanding Hive & Hbase**

Understanding R-Hadoop, Integration Procedure, Packages needed for R under Hadoop Ecosystem, Text Mining for Deriving Useful Information using R within Hadoop, Introduction to Hive & Hbase, Hive and Hbase Architecture, Understanding Queries, Mining Big Data with Hive & Hbase.

### **Course Outcomes:**

CO1: Understand the fundamentals of Big Data and its Applications in various Domains.

CO2: Conceptualize and Incorporate the Technologies behind Big Data.

CO3: Understand HDFS File Structure, Map Reduce Framework, the architectures related to them and to use them to solve complex problems.

CO4: Integrate R with Hadoop and solve analytical problems.

CO5: Understand and Use Hive/Hbase shell pertaining to relational data handling under Hadoop.

### **Textbooks:**

1. Arshdeep Bahga, 2016, *Big Data Science & Analytics: A Hands-On Approach*, VPT.

### **References:**

1. Tom White, 2012, *Hadoop: The Definitive Guide*, O'Reilly.
2. Adam Shook and Donald Miner, 2012, *Map Reduce Design Patterns: Building Effective Algorithms and Analytics for Hadoop and Other Systems*, O'Reilly.
3. Dean Wampler, Edward Capriolo & Jason Rutherglen, 2012, *Programming Hive*, O'Reilly.
4. Lars George, 2011, *HBase - The Definitive Guide: Random Access to Your Planet-Size Data*, O'Reilly.

## **SUBJECT: SOCIAL MEDIA ANALYTICS**

**SUBJECT CODE: BBA643A**

**CREDITS: 4**

**Course Objective:** This course aims at giving exposure on the advanced aspects with regards to Analytics. The course comprises Social-Media, Mobile, Text Analytics along with Web Scrapping and the future advancements in the field of Analytics.

### **Unit I: Overview**

Social Media, On-Line Social Network, Off-Line Social Network, Metrics and Measurement, Dashboard, Target Audience, Desired Action, Content, Market Research Online Communities, Cluster Analysis, Conjoint Analysis, Multidimensional Scaling, Social Media Listening, Social Media Scoring, Social Media Modelling.

### **Unit II: Mobile Analytics**

Understanding Mobile Analytics Concepts, difference between Mobile Analytics and Site Analytics, Natural language Processing with Mobile Analytics, Text Mining for Mobile Analytics, Mobile Analytics Tools, Churn Analytics.

### **Unit III: Text Analytics**

Text Data, Sources of Text Data, Information Clusters, Patterns, Trends, Tagging, Natural Learning Process, Lexical Analysis, Social Network Nodes, Linkage Structure, Node Labelling, Content-Based Classification, Word Stemming, Stemming Algorithms, Polarity of the Attitude, Psychological Profiling, Sentiment Analysis.

### **Unit IV: Web Scrapping**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Web Scrapping of unstructured data, Gathering data from HTTP and HTTPS format, Web Scrapping from XML and JSON file, Regular expressions, Extraction Strategies, Term Document Matrix, Data Cleansing, Data Manipulation and Data Transformation after Scrapping.

#### **Unit V: Future of Analytics**

Introduction to Big Data, Predictive Analysis for Business, Social Information Processing and Distributed Computing, Advances in Machine Learning, Traditional Data Models Evolve, Analytics to Solve Social Problems, Location Based Data Explosion, Data Privacy Backlash, Internet of Things, Artificial Intelligence.

#### **Course Outcomes:**

CO1: Apply and use Social Media Analytics for the betterment of the business.

CO2: Use Mobile Analytics for solving complex business problems and to stop churn.

CO3: Evaluate the business problem and apply analytics techniques for better output.

CO4: Analyze and understand patterns and techniques in Social Media & Mobile Analytics to solve complex problems.

CO5: Identify the areas of research with regards to future implementation of social media analytics based on managerial disciplines.

#### **Textbooks:**

1. Galit Shamuelli, 2017, *Data Mining for Business Analytics: Concepts, Techniques and Applications with R*, Wiley.

#### **References:**

1. Luis Torgo, 2017, *Data Mining with R: Learning Case Studies*, Chapman.
2. Zaki & Meira, 2014, *Data Mining and Analysis Fundamental Concepts and Algorithms*, Cambridge.
3. Han, Kamber & Pei, 2013, *Data Mining: Concepts and Techniques*, Morgan Kaufmann.
4. Han, Jiawei and Kamber, Micheline, 2012, *Data Mining: Concepts and Techniques*, Morgan Kaufman.

### **Program Educational Objective (PEO)- BBA- Digital Marketing (DMI)**

- I Demonstrate cognitive knowledge about the skills needed in online marketing campaigns, as well as in identifying, assessing and selecting digital market opportunities.
- II Gaining a understanding about emerging digital marketing trends and critically assess the use of digital marketing tools
- III Develop the skills to build an actionable digital marketing strategy that aligns with your business goals.
- IV Learn to develop a digital plan that breaks up group and thinks and aligns departments around a common vision
- V Understand the basic concepts of brand building and Marketing Analytics

### **Program Outcome (PO) – BBA- Digital Marketing (DMI)**

**PO 1:** Understanding of important marketing concepts, role and function of marketing within organisations

**PO 2:** Understand how marketing activities are planned and executed within organisation

**PO 3:** Understand the fundamentals of digital marketing along various tools and campaigns used in digital marketing

**PO 4:** Demonstrate the role of customer behavior in framing effective marketing campaigns

**PO 5:** Develop a successful marketing campaign plan including identifying the various resources required to deliver the campaign objective

**PO 6:** Understand the principles for customer relationship management and evaluate customer experience metrics.

**PO 7:** Develop the technique of integrating digital and offline marketing

**JECRC University**

**BBA – Detailed Syllabus**

**Semester 1:**

**SUBJECT: PRINCIPLES OF MANAGEMENT**

**SUBJECT CODE: BBA615A**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **CREDITS: 4**

**Course Objective:** The objective is to provide an understanding of basic concepts, principles and practices of management. The aim is to inculcate the ability to apply multifunctional approach to organizational objectives.

### **Unit I**

Management: Concept and Need, Managerial Functions – An overview; Coordination: Essence of Management. Evolution of Management Thought, Classical Approach – Taylor, Fayol, Neo-Classical and Human Relations Approaches – Mayo, Hawthorne Experiments, Behavioural Approach, Systems Approach, Contingency Approach, MBO, Hammer and Champy- Business Process Re-engineering, Porter's Five-forces' Model.

### **Unit II**

Types of Plan; Strategic planning – Concept, process, Importance and limitations; Environmental Analysis and diagnosis (Internal and external environment) – Definition, Importance and Techniques (SWOT/TOWS/WOTSUP, BCG Matrix, Competitor Analysis); Decision-making: Process and Techniques; Perfect rationality and bounded rationality

### **Unit III**

Concept and process of organizing – An overview, Span of management, Different types of authority (line, staff and functional), Decentralization, Delegation of authority; Formal and Informal Structure; Principles of Organizing; Network Organisation Structure. Emerging types.

### **Unit IV**

a. Staffing: Concept of staffing - Recruitment and Selection; Orientation; Training and Development; Career Development; Performance Appraisal. b. Motivation & Leadership: Concept, Importance, extrinsic and intrinsic motivation; Major Motivation theories - Maslow's Need-Hierarchy Theory; Herzberg's Two-factor Theory, Vroom's Expectancy Theory. Leadership: Concept and Importance; Leadership Styles; c. Communication: Concept, purpose, process; Oral and written communication; Formal and informal communication networks, Barriers to communication, Overcoming barriers to communication. Emerging trends in communication.

### **Unit V**

Concept, Process, Limitations, Principles of Effective Control, Major Techniques of control - Accounting Ratio Analysis, HR Metrics, ROI, Budgetary Control, EVA, PERT/CPM. Emerging issues in Management.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**SUBJECT: BUSINESS MATHEMATICS & STATISTICS**  
**SUBJECT CODE: BBA616A**  
**CREDITS: 4**

**Course Objective:** The Objective is to provide, to expose students to basic statistical and mathematics concepts, to organize and present numerical data, to understand the Venn Diagrams, Sets, Intervals, Matrices, Vector Algebra and to compute correlation, interpret and to understand the construct various index numbers.

**Unit I - Set Theory**

Introduction to Sets, Sets and their Representation, Tabular or Roster Method, Rule Method or Set Builder, Empty or Void or Null Set, Finite sets and Infinite sets, Proper Subset, Improper Subset, Power Set, Universal Set, Open Interval, Closed Interval, Semi-Open or Semi Closed intervals, Infinite Intervals, Venn Diagrams, Operations on Sets, Union, Intersection of Sets, Disjoint Sets, Difference of Sets, Symmetric Difference of Sets, Complement of a Set, Laws of Algebra of Sets.

**Unit II - Matrices and Determinants**

Definition of a Matrix, Addition & Subtraction of Matrices, Multiplication of Matrices, Transpose of a Matrix. System of linear equations, Gauss elimination method, Inverse of a Matrix, Determinants, Determinants of order one and more, Properties of Determinants, Multiplication of two Determinants, Minors and Cofactors, Cramer's rule for solution of linear equations, Adjoint of a Matrix, Rank of a Matrix.

**Unit III- Vector Algebra**

Vectors, Types of Vectors, Operations on Vectors, Addition of Vectors, Properties of Operation of Addition, Subtraction, Properties of Operation of Subtraction, Multiplication by a scalar, Orthonormal Bases, Product of Two Vectors, Scalar Product or Dot Product of Two Vectors, Properties of Scalar Product, Vector Product or Cross Product, Properties of Vector Product.

**Unit IV - Statistics**

Introduction to Statistics, Scale of Measurement, Nominal, Ordinal, Interval & Ratio. Frequency Distribution, Bar Chart, Pie Chart, Histogram, Frequency Polygon, Ogive, Pareto Chart, Stem-and-leaf Chart, Scatter Plot, Measure of Central Tendency, Properties, Advantages and Disadvantages of Arithmetic Mean, Geometric Mean, Harmonic Mean. Positional Averages, Median, Quartiles, Deciles, Percentiles & Mode. Measure of Dispersion, Range, Interquartile Range, Standard Deviation.

**Unit V - Probability**

Introduction to Probability, Experiment, Event, Compound Event, Independent and Dependent Events, Mutually Exclusive Events, Equally Likely Events, Marginal, Union, Joint, Conditional Probability, Basic Probability Rules, General Rule of Addition, General Rule of Multiplication, Concept of Bayes' Theorem.

**SUBJECT: BUSINESS ECONOMICS**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**SUBJECT CODE: BBA617B**  
**CREDITS: 4**

**Course Objective:**

The Objective is to provide, to understand the key concepts of macroeconomic concepts of business, to know the factors determining supply and demand in various market structure, to know the various cost and revenue concepts under the functioning of various types of industries and to know main financial markets and institutions in facilitating commerce & development.

**Unit I – Macro Economic context of business**

Determination of macroeconomic phenomena – equilibrium national income – growth in national income, price, inflation, unemployment, trade deficits and surpluses – stages of trade cycle – principles of public finance – effects of changes in the economic growth rate, interest rates. Government expenditure and taxation – index numbers

Concept of balance of payments – free trade and protectionists instruments policy, impact of exchange rate policies on business

**Unit II – Institutional context of business**

Nature of globalisation and factors driving it (improved communications, political realignments, growth of global industries and institutions, cost differentials). Major institutions promoting global trade and development - Principal institutions encouraging international trade – globalisation of business – offshoring – industrial relocation – emergence of growth markets – main trading agreements and trading blocks. Identify the impacts of economic and institutional factors using the PESTEL framework.

**Unit III – Micro Economic and Organisational Context Of Business**

Types of organisations – public, private & mutually owned organisations – types of Not-for-Profit Organisations – shareholders wealth management – principal – agent problem and its impact on the decisions of the organisation. Price mechanism – determinants of demand and supply – price elasticity of demand – effects of price elasticity of demand on Total revenue curve#. Sources of internal and external economies of scale- outsourcing decisions and costs – minimum and maximum price policies in good and factor markets.

**Unit IV – Informational context of business**

Data & information, graphs, charts and diagrams – scatter graphs, histograms, bar graphs, ogives. Big data and data analytics in business applications – time series analysis – correlation co-efficient – regression equation to predict the dependent variables – forecasting

**Unit V – Financial Context of Business**

Financial intermediaries – commercial banks – financial assets and financial markets – foreign exchange markets. Financial mathematics – simple & compound interests – annuities & perpetuities – Discounting techniques – NPV and IRR. Interest rates – interest rate changes on market demand – concepts of forwards, futures and options.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**SUBJECT: FUNDAMENTALS OF MANAGEMENT ACCOUNTING**  
**SUBJECT CODE: BBA618A**  
**CREDITS: 4**

**Course Objective:** The objective is to familiarise the students with the mechanics of to understand the management accounting, students learn the methods of costing, overheads and ascertain the various types of budget and approaches to analyse the profits.

**Unit I - The Context Of Management Accounting**

Purpose of management accounting and the role of the Management Accountant-need for management accounting-characteristics of financial information for operational, managerial and strategic levels within organisations- role of the management accountant-relationships between the management accountant and the organization's managers- The Global Management accounting principles. Role of CIMA as a professional body for Management Accountants-role of CIMA in developing the practice of management accounting

**Unit II - Costing**

**Cost identification and classification**-classification of costs in relation to output classification of costs in relation to activity level appropriate costs having identified cost behaviour-classification of costs in relation to decisions – segregation of fixed and variable costs from semi-variable costs – relevant and irrelevant costs.

**Overheads** – overhead cost estimates – treatment of direct and indirect costs – overhead absorption rate – under and over absorption of overheads – Marginal cost pricing and full cost pricing.

**Unit III– Planning And Control**

Preparation of budgets for planning and control-need for the preparation of forecasts and Plan-Preparation of functional budget- budget statements-impact of budgeted cash surpluses and shortfalls on business operations-preparation of flexible budget-Calculate budget variances – concepts of Zero based Budget, Incremental budgeting, Rolling Budget.

Application of variance analysis to reconcile budgeted and actual profits in a marginal Format-Principles of standard costing-Calculation of variances for materials, labour, variable overheads, sales prices and sales volumes-Preparation of a statement that reconciles budgeted profit with actual profit calculated using marginal costing- reasons for variances and the inter-relationships between variances

**Unit IV – Performance Measurement And Reporting**

Calculation of appropriate financial and non-financial performance measures-need for appropriate performance measures-Calculation appropriate financial and nonfinancial performance measures in a variety of contexts

Preparation of accounts and reports for manager-integration of the cost accounts with the financial accounting system-Prepare a set of integrated accounts, showing standard cost variances- preparation of accounts related to Job and batch costing-Cost accounting statements for management information in manufacturing, service and not-for-profit organisations.

**Unit V- Decision Making**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Risk and uncertainty** - use of expected values and joint probabilities in decision making- calculate summary measures of central tendency and dispersion for both grouped and ungrouped data-Arithmetic mean, median, mode, range, variance, standard deviation and coefficient of variation for both ungrouped and grouped data-Graphs/diagrams and use of normal distribution tables – decision tree approach.

**Short term decision making** - The use of appropriate techniques for short-term decision making-breakeven charts, profit volume graphs, breakeven point, target profit, margin of safety- Make or buy Decisions-Calculate the profit maximizing sales mix after using limiting factor analysis-

**Use of appropriate techniques for long-term decision making** - The time value of money-financial mathematics - Discounting, compounding, annuities and perpetuities-Calculate the net present value, internal rate of return and payback for an investment or project

**SUBJECT: FUNDAMENTALS OF FINANCIAL ACCOUNTING**  
**SUBJECT CODE: BBA619A**  
**CREDITS: 4**

**Course Objective:** To understand the basics of accounting and concepts of double entry system. The students understand book keeping and preparation of final accounting statements for business organizations.

**Unit I - Accounting Principles, Concepts And Regulations**

The principles and concepts of financial accounting - need for accounting records; Identify the needs of different user groups; Distinguish between the financial and management accounts; capital and revenue, cash and profit, income and expenditure, assets and liabilities; the underlying assumptions, policies; the accounting equation.

**Unit II - Recording Accounting Transactions**

Accounting records; Prepare the books of prime entry; Applications the principles of double-entry Bookkeeping; nominal ledger accounts; the trial balance; the nature of accounting errors, prepare accounting entries for the correction of errors; Prepare accounting entries for noncurrent assets; Prepare a non-current asset register.

**Unit III- Accounting Reconciliations**

Bank reconciliation statements; Prepare petty cash statements under an imprest system; Prepare sales and purchase ledger control account reconciliations.

**Unit IV - Preparation of Accounting Entries for Specific Transactions**

Calculate sales of tax; Prepare accounting entries for sales tax; Prepare accounting entries for payroll; Prepare accounting entries for the issue of shares.

**Unit V- Preparation of Financial Statements for Single Entities and Its Analysis**

Prepare accounting adjustments. Prepare accounting entries for accruals and prepayments; Prepare accounting entries for irrecoverable debts and allowances for receivables; Prepare accounting entries for inventories.

Prepare basic manufacturing accounts. Prepare financial statements from a trial balance; Prepare financial statements from incomplete records; Prepare a statement of cash flows.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Identify information provided by accounting ratios the information provided by the calculation of accounting ratios reasons for the changes in accounting ratios.  
Calculation of profitability ratios, liquidity ratios, risk ratios.

**SUBJECT: COMMUNICATION SKILLS**

**SUBJECT CODE: DEN001A**

**CREDITS: 3**

**BBA. (common to all disciplines)-I Semester**

**Course Objectives :** 1. To enhance English language competence in reading, writing, listening and speaking. 2. Switch the approach from teacher-centred to student-centred one. 3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.

4. Introducing the Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.

5. To link communication skills with the organizational behaviour.

6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

**Syllabus: Theory**

<b>Unit I</b>	Basics of Organizational Communication: Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>Unit II</b>	Basic Writing Skills: Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>Unit III</b>	Composition:, Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>Unit IV</b>	Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>Unit V</b>	Professional and Technical Communication : Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303905

**Syllabus: Lab**

<b>Unit I</b>	Basics of Organizational Communication: Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time Management, Following Deadlines etc
<b>Unit II</b>	Write Dialogue from the different contexts of corporate culture: Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>Unit III</b>	Composition:, Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of DraftingRedrafting, Proof Reading, Editing etc
<b>Unit IV</b>	Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>Unit V</b>	Professional and Technical Communication : Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

**Methodology for Evaluation**

## 1. Internal Assessment (Theory)

a) Home Assignments: One from each Unit : 15 Marks

b) In Semester Tests (Minimum two) : 30 Marks

c) Attendance : 05 Marks

2. Term End (Theory) : 50 Marks

## 3. Internal Assessment (Lab)

(a) Daily Performance in the Lab : 50 Marks

4. Term End (Lab) : 50 Marks

**Suggested Reading:**

1. Practical English Usage. Michael Swan. OUP. 1995

2. Remedial English Grammar. F.T. Wood. Macmillan. 2007

3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.

4. On Writing Well. William Zinsser. Harper Resource Book. 2001

5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006

6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.

7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.

8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**SUBJECT: CULTURE EDUCATION I**

**Semester-I**

**SUBJECT CODE: DIN001A**

**CREDITS: 2**

**Course Objectives:** 1. To make the students feel gratitude towards the rich religious and cultural heritage of India.

2. To understand the role of great personalities and movements in the progress of India.

**Course Outcomes (CO):**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

**Unit I- Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)

2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

**Unit II- Society and Culture-I**

3. Introduction to Indian Culture and Major Symbols of Indian Culture

4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

**Unit III- India in Progress-I**

5. Education , Science and Technology in Ancient India

6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India Major Farmer Movements, Major Religious and Social Upliftment Movements

**Unit IV- Great Indian Personalities-I**

7. Life and works of the Great People of Ancient India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupta Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

**Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah

2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### Semester II:

#### **SUBJECT: ORGANIZATION BEHAVIOUR**

**SUBJECT CODE: BBA620A**

**CREDITS: 4**

**Course Objective:** Understand how the organisations can be managed effectively considering the behaviour of various stakeholders of an organisation and analysing the skills required for the future advantage of an organisation.

#### **Unit I Organization behaviour – an introduction**

Meaning of organizations – Nature of organization behaviour – Basics of organization behaviour – Scope and evolution of organizational behaviour – Organizational arrangements and Organization behaviour – Key terminologies in Organization Behaviour - Organizational Behaviour Model (OB Model).

#### **Unit II Individual behaviour, intelligence and personality**

Meaning of individual behaviour – personal and environmental factors – Models of individual behaviour – nature and types of intelligence – theories and measurement of intelligence – Intelligence factors – intelligence in the context of organizational behaviour.

Nature and determinants of personality – Personality traits – Personality in the context of Organization Behaviour.

#### **Unit III Motivation and work stress**

Nature and importance of motivation – challenges and theories of motivation – Motivation and organizational culture – quality of work life – rewards and behaviour modification – problem employees – employee engagement.

Meaning of work stress – work stress model – stress management – Stress and organizational behaviour.

#### **Unit IV Group and team behaviour**

Nature and types of groups – Group dynamics and Organization behaviour – determinants of group dynamics – Importance of group dynamics in an organization – group development strategies – Group motivation – Group structuring and decision making.

Meaning of team – differences between group and team – Types and benefits of teams – effective team management – team conflicts and resolution – Team development and Organizational Behaviour.

#### **Unit V Organizational culture and leadership**

Meaning of leadership – leadership vs management – leadership styles and theories – formal and informal leadership – Ethics and leadership – leadership and organizational culture – Sustaining culture – changing organizational culture – workplace behaviour – Ethics of power.

**Course outcomes:**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO 1: Understand the basic of organizational behaviour in the context of the dynamic environment.

CO 2: Understanding the role of individual behaviour, intelligence and personality in the context of organizational development.

CO 3: Understanding importance of rewarding and motivating the stakeholders and managing the stress to effectively manage the organizational performance

CO 4: Understand the role of group and team dynamics in the current organizational environment

CO 5: Understand the importance of perception into organizational culture, leadership and ethics in an organizational development.

## **SUBJECT: PRINCIPLES OF MARKETING MANAGEMENT**

**SUBJECT CODE: BBA621A**

**CREDITS: 4**

**Course Objective:** To provide a holistic orientation of emerging marketing trends with the practical skills required to analyze consumer data, create marketing campaigns, develop digital/social media content and make successful marketing decisions and to equip students to be innovative, technically competent, and think critically through experiential and student-centric teaching approach.

### **Unit I: Fundamentals of Marketing Management**

Meaning & Definition of marketing -Role of Marketing -Relationship of Marketing with other functional areas -Market Concepts -Product concept -Selling concept -Marketing concept -Societal marketing concept -Approaches to marketing management -Functions of marketing -Scope of marketing: goods, services, events, organizations, etc. -Emerging trends in marketing.

### **Unit II: Marketing Plan**

Marketing Environment: Concept -Macro-environmental forces -The changing marketing environment -Analyzing needs and trends in Macro-Environment: Economic Environment, Technical Environment, Political, Environment and Socio-cultural Environment. Introduction to The Marketing Plan –Definition –Nature –Objectives -Structure of The Marketing Plan -The Process of marketing plan -Critical elements of external and internal analysis of Marketing Plan -Implementation of Marketing Plan.

### **Unit III: Marketing Mix**

Introduction to marketing mix -Marketing mix implementation: short term and long term tactics –Product: meaning, elements, product mix -Product mix strategies -Product line -Product lifecycle Product planning -New product development -Failure of new product -Product branding -Branding strategy and packaging –Pricing: Objectives -Factors influencing pricing policy -Methods of pricing -Pricing strategy. Physical Distribution: Meaning -Factors affecting channel selection -Types of marketing channels –Promotion: Meaning and significance of promotion – Personal selling & advertising (meaning only).

### **Unit IV: Buyer behavior**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Market Segmentation: Levels and patterns of market segmentation -Bases for segmenting markets -Market segmentation - Targeting - Product Positioning - Types and bases of positioning - Product Differentiation -Meaning of consumer, customer, consumer behaviour and buying motives -Factors influencing buyer

behavior -Factors that influence consumer purchasing decisions -Buying process -Stages of the consumer buying behavior -Business to Business (B2B) buying process -Key factors influencing B2B purchasing decisions -Differences between Consumer goods and Industrial goods

### **Unit V: Digital Marketing**

Introduction to Digital Marketing –Concept of Digital Marketing -Difference between traditional marketing and digital marketing -Trends and scenarios of the industry -Planning and Creating a Website -Search Engine Optimization (SEO), Search Engine Marketing (SEM), of Social Media Marketing, Blogging, Content Strategy, Email Marketing.

### **Course outcomes:**

CO1: To understand the role and importance of marketing

CO2: Develop a marketing plan to generate better sales and profits

CO3: Formulate the product and price mix based to serve consumer needs.

CO4: Identify the factors influencing consumer behavior and purchase decision

CO5: Outline the digital tools to develop marketing strategies for the new age consumer

**SUBJECT: HUMAN RESOURCES MANAGEMENT**

**SUBJECT CODE: BBA622A**

**CREDITS: 4**

**Course Objective:** The objective of the subject is to understand the importance of effective and efficient management of human people in an organization to help the business gain a strategic and competitive advantage.

### **Unit I: Human Resource Management (HRM) - Introduction**

Meaning of Human resources – Meaning of HRM – nature and functions of HRM – HR Manager – qualities and qualifications – Strategic Human Resource Management – Strategic management – corporate level strategies – Strategic HR issues – Organizational and HR strategies -

### **Unit II: Job Analysis, team analysis and Job Environment**

Meaning of HR terms – Job design, job rotation, job enlargement, job enrichment, team work – Need for job analysis and team analysis – Job description – job specification – job sharing – ergonomics – employee empowerment – Job redesign

### **Unit III: Human Resource Planning**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Meaning, features and scope of Human Resource Planning – process of and steps in Human Resource Planning – Barriers to effective implementation of Human Resource Planning – Human Resource Planning Vs Strategic planning – Human resource planning through people, finance and technology.

#### **Unit IV: Performance appraisal and compensation management**

Meaning, need and purposes of performance appraisal – methods of performance appraisal – Group appraisal – Behavioral aspects of performance appraisal – Concept of MBO – the balanced score card – managerial appraisal – challenges of performance appraisal.

Concepts of transfer, promotion and demotion – types of promotions – types of transfer – reasons for demotion – concept of absenteeism – calculation and causes of absenteeism rate – measures to reduce absenteeism – concept of labour turnover – types and causes of labour turnover.

#### **Unit V: Training and Development**

Assessment of training needs – training methods - Apprenticeship, understudy, job rotation, vestibule training, case study, role playing, sensitivity training, In-basket, management games, conferences and seminars, coaching and mentoring, management development programs; Training process outsourcing.

#### **Course Outcomes:**

CO1: Understand the role and importance of Human resource Management in effectively managing the human capital in an organization.

CO2: Understand the key terminologies in the context of Human Resource Management and their scope and benefits in a practical environment

CO3: Understand the importance of Human resource planning in the context of people, technology and finance

CO4: Understand the importance of performance appraisal and other concepts in the area of Human resource management

CO5: Understand the methods and purposes of training and development activities to gain a strategic advantage

**SUBJECT: MANAGING FINANCE IN A DIGITAL WORLD**

**SUBJECT CODE: BBA623A**

**CREDITS: 4**

**Course Objective:** To understand the central role that finance plays in an organisation, and how and why technologies used impact the finance function, how to use and examine data collected and processed by machines to create and preserve value for organisations and how the finance function is structured and shaped, and how it interacts with other parts of the organisation to achieve the objectives of the whole organisation.

#### **Unit I: Role Of Finance Function**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Different types of organisations – functions of an organisation – the roles of finance function – enabling value creation through planning, forecasting and resource allocation – data collection – types of analysis to produce insight – potential impact of technology - How finance communicates to influence key stakeholders

## **Unit II: Technology In Digital World**

Characteristics and Dynamics of Fourth Industrial Revolution – Cloud Computing – Big Data Analytics – Process Automation – Artificial Intelligence – Data Visualisation – Block chain – Internet of things – Mobile – 3-D Printing – New areas of Finance to focus on – Areas of Finance susceptible to automation – Digital mindsets for Finance – Ethics of the use of technology

## **Unit III: Data And Information In A Digital World**

Using Data for: Decision making, Understanding the customer, Developing-customer value proposition, Enhancing operational efficiency, Monitoring data, Ethics of Data usage – Assessment of Data needs – Extraction, Transformation and Loading (ETL) Systems - Business Intelligence (BI) systems – Big Data Analytics – Data visualization

## **Unit IV: Shape And Structure Of Finance Function**

Structure of Finance function from the roles that generate information to the roles that turn information into insights and communicate insights to decision makers – Hierarchical shape of Finance function – Shared Services and Outsourcing of Finance Function – Retained Finance – Automation & Diamond shape of Finance Function – Finance operation to generate information and preliminary insight – FP & A , Taxation, corporate reporting, decision support to produce insights – Business partnering to influence organisations to make appropriate decisions – Leading Finance team to create the required impact for the organisation.

## **Unit V: Finance Interacting With Organisations**

Process management – product and service management – supply chain management

Market segmentation – big data analytics in marketing – channel management – sales forecasting & management

Staff acquisition – staff development – performance management – motivation and reward systems

IT infrastructure – IT systems support – cost and benefits of IT systems

### **Course Outcome:**

CO1: To understand how the finance function enables, shapes and narrates value creation thorough planning, forecasting, resource allocation, performance management and financial reporting.

CO2: To understand key technologies and their impact on an organisation including, cloud computing, big data, data analytics, process automation, artificial intelligence, data visualisation, block chain, internet of things.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO3: To understand how the finance function can use data and information to assist operations in enhancing operational efficiency.

CO4: To understand the contemporary transformation of the finance function in the digital era from roles that generate information to roles that turn information into insight and how finance communicates that insight to decision-makers.

CO5: To understand how the finance function helps manage operations, marketing and Sales, HR and IT functions in creating and preserving value.

### **Semester III**

#### **SUBJECT: MARKETING PRINCIPLES & COMMUNICATION**

**SUBJECT CODE: BBA657A**

**CREDITS: 4**

**Course Objective:** The objective is to provide, Knowledge and understanding of the role and function of marketing within organizations, and the factors that influence customer behaviour,

#### **Unit I: Marketing Concepts – An Introduction**

Meeting the needs of the consumer by identifying, awaiting and satisfying their requirements – Understanding the management process – Customer retention – Customer acquisition (Secured)

#### **Unit II: Marketing Function**

Link between the organization and the customer – Marketing functions -- Consumer needs and wants, Communication--to provide internal information, support to customers and the supply chain, Internal service provision, Understanding the concept and elements of the marketing mix

#### **Unit III: Customer buying and decision-making process – Influencing factors.**

The process of need recognition, Information search, alternatives evaluation, Purchase decision, and post-purchase evaluation - Impulse purchases and high-value purchases. Customer needs/wants - Functional benefits - Emotional benefits - Physiological needs - Luxury or necessity - Other influences: Social, cultural, and Personal influences

#### **Unit IV: Elements of the extended marketing mix (7Ps)**

The 4Ps – Product, Price, Promotion, Place; The extended 3Ps – People, Process and Physical evidence. Coordinated marketing mix – Benefits. Building focus and preparation of budget economies – Ensuring brand positioning – Taking competitive advantage by understanding online and offline journeys

#### **Unit V: Application of extended marketing mix in a variety of contexts**

Importance of B2B - Price and negotiation, Personal selling and trade promotion, Relationships and service; Importance of Not-for-Profit - Ideas and services, Direct channels, Opportunity cost, Emphasis on public relations

#### **SUBJECT: FUNDAMENTALS OF DIGITAL MARKETING**

**SUBJECT CODE: BBA658A**

**CREDITS: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Course Objective:** The Objective is to Understand the fundamentals of digital Marketing, impact of digital technology in marketing, use of digital marketing tools, digital marketing campaigns and to know how to development of digital marketing content.

**Unit I: Evolution of digital technology.**

What is digital Marketing, Origin and evolution of digital marketing, introduction of online business, Growth of online business, impact of online transactions on business, effects of social media on business and marketing activities.

**Unit II: Digital Marketing platforms**

Available digital marketing platform - Purpose and functions of websites, Crowdsourcing and crowdfunding systems, Online auctions and third-party websites, Social media in customer buying and selling, Influencer Marketing, email marketing, SEO marketing, PPC.

**Unit III: Impact of digital technology on customer behaviour**

Consumer as researcher, Digital word of mouth, Brand shifting, Low tolerance level, Boost in customer engagement, Impact of AI, impulsive buying behaviour, Personalised shopping experience.

**Unit IV: Role of social media in customer engagement.**

What is social media engagement, Its Importance, Likes and Favourites, Comments, DMs, Replies, Shares and Retweets, Saves, Clicks, Mentions, Boosting social media engagement, advantages and disadvantages of social media platforms, Concerns of social media platforms.

**Unit V: Use of digital marketing tools in different customer contexts.**

Advantages and disadvantages of digital marketing tools, Opportunities and threats of these tools, Using the tools in different customer contexts, B2B, B2C, Not-for-Profit

**SUBJECT: RESEARCH METHODOLOGY**

**SUBJECT CODE: BBA627A**

**CREDITS: 4**

**Course Objective:** This module enables learners to develop the basic principles of research methods. The learners focus how to do research, with an emphasis on student-centered activities and problem solving. Learners will develop insights the key concepts as the scientific method; operationalizing constructs; independent and dependent variables, data types and ways of measurement, confounding variables experimental and non-experimental design questionnaire construction; developing and testing hypotheses; descriptive statistics and describing data graphically; and the ethics of research.

**Unit I: Research Formulation and Design**

Motivation and objectives-Research methods and methodology. Types of research Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical, concept of applied and basic research process, criteria of good research. Defining and formulating the research problem, selecting the problem, necessity of defining the problem, importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, patents, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis.

**Unit II: Data Collection and Analysis**

Accepts of method validation, observation and collection of data, methods of data collection, sampling methods, data processing and analysis strategies and tools, data analysis with statically package (Sigma STAT, SPSS for student t-test, ANOVA, etc.), hypothesis testing.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### **Unit III: Statistical Softwares**

Computer and its role in research, Use of statistical software SPSS, GRETl etc. in research. Introduction to evolutionary algorithms - Fundamentals of Genetic algorithms, Simulated Annealing, Neural Network based optimization, Optimization of fuzzy systems.

### **Unit IV: Research Ethics and Scholarly Publishing**

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, commercialization, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing- IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

### **Unit V: Interpretation and Report Writing**

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of writing Research Report Precautions for writing Research Reports, Conclusions.

## **SUBJECT: HUMAN RESOURCE DEVELOPMENT**

**SUBJECT CODE : BBA628A**

**CREDIT: 4**

**Course Objective:** This module will enable the learners to develop strong understanding and key skills which are required for human resource professionals. Learners will be able to understand the importance of human resource development and their role in effectively managing the personnel within the organization. Learners will develop insights into the fast-growing and emerging trends of Human Resource Development (HRD) in globalized economy.

### **Unit I: Human Resource Development (HRD) -Macro Perspective**

Understand HRD Concept, Origin and Need of HRD, HRD as a Total System, Approaches to HRD; Human Development and HRD; HRD at Macro and Micro Climate

### **Unit II: HRD–Micro Perspective**

Understand areas of HRD, HRD Interventions Performance Appraisal, Potential Appraisal, Feedback and Performance Coaching, Training, Career Planning, OD or Systems Development, Rewards, Employee Welfare and Quality of Work Life and Human Resource Information; Staffing for HRD: Roles of HR Developer; Physical and Financial Resources for HRD; HR Accounting; HRD Audit, Strategic HRD

### **Unit III: Instructional Technology for HRD**

Learning and HRD; Models and Curriculum; Principles of Learning; Group and Individual Learning; Transactional Analysis; Assessment Centre; Behaviour Modeling and Self Directed Learning; Evaluating the HRD

### **Unit IV: Human Resource Training and Development**

Concept and Importance of training and development; Assessing Training Needs; Designing and Evaluating T&D Programmes; Role, Responsibilities and challenges to Training Managers

### **Unit V: Training Methods**

Training within Industry (TWI): On the Job & Off the Job Training; Management Development: Lecture Method; Role Play; In-basket Exercise; Simulation; Vestibule Training; Management Games; Case Study; Programmed Instruction; Team Development; Sensitivity Training; Globalization challenges and Strategies of Training Program, Review on T&D Programmes in India

## **SUBJECT: COMP. APPLICATIONS III (MS PROJECT)**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**SUBJECT CODE: BBA629A**

**CREDITS: 3**

**Course Objective:** The goal of this module is to help students explore MS Project application, providing information on relevant project management concepts while also offering specific procedures to build and track a Project Schedule. The students will gain expertise towards the MS Project application by learning about the tasks and dependencies, estimating durations, and working with project Views. They will also understand the advanced customizations and reporting elements under MS Project application.

**Unit I: Introduction**

MS Project Application, Project Family, Features in Project 2016 & 2019, Comparative study on MS Project Versions (2013, 2016 & 2019), The Project Interface, Backstage View, Ribbons and Tabs, Views, Reports, Defining Project Manager, Starting a Project, Task Master, Co-dependent Nature of Tasks, Estimating Task Time, Introducing the Work Breakdown Structure (WBS).

**Unit II: Scheduling Basics**

Starting a New Plan and Setting its Start Date, Setting Non-Working Days in the Project Calendar, Entering Plan's Title and Other Properties, Entering Task Names, Task Durations, Milestone Task, Creating Summary Tasks to Outline the Plan, Task Dependencies with Links, Switching Task Scheduling from Manual to Automatic, setting up Resources, Work Resources Names and Maximum Capacity, Pay Rates, Adjusting Working Time in Resource Calendar.

**Unit III: Resources Assignment and Plan Sharing**

Assigning Work Resources to Tasks, Controlling Work when Adding or Removing Resource Assignments, Assigning Cost Resources to Tasks, Checking the Plan's Duration, Cost & Work, Customizing Gantt Chart View, Customizing Timeline View, Customizing Reports, Copying and Printing Views & Reports, Saving Plan Baseline, Tracking a Plan as Scheduled through a Specific Date, Entering a Task's Completion Percentage and Actual Values for Tasks.

**Unit IV: Advanced Scheduling Techniques**

Viewing Task Relationships with Task Path, Adjusting Task Link Relationships, Setting Task Constraints, Interruptions, Work Time Adjustments, Controlling Task Scheduling using Task Types, Setting Resource Availability at Different Times, Applying Contours, Pay Rates and Material Resources to Tasks & Assignments, Examining Resource Allocations, Levelling Overallocated Resources, Sorting-Grouping-Filtering Project Details, Creating New Tables & New Views, Tracking Progress on Tasks and Assignments, Viewing and Reporting Project Status.

**Unit V: Advanced Formatting and Customizations**

Formatting Gantt Chart View, Timeline View, Network Diagram View, Calendar View, Printing and Exporting Views, Formatting Tables & Charts in a Report, Sharing Custom Elements between Plans, Recording & Editing Macros, Copying Project Data to other Programs, Opening & Saving to other File Formats from MS Project, Creating a Resource Pool, Viewing Assignment Details in a Resource Pool. Updating Assignments in a Sharer Plan, Updating a Resource's Information and Plan's Working Times in a Resource Pool, Linking New Plans to a Resource Pool, Creating Dependencies between Plans.

**SUBJECT: LIFE SKILLS-I**

**SUBJECT CODE: DEN003A**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**CREDIT: 2****Course Objective:**

1. Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.
2. Ability to learn by doing it practically in the classroom.
3. Ability to learn by creating an environment and adapting to the environment.
4. The ability to prepare the students as per the need of the Multi-cultural scenario around.

**Syllabus: Theory**

<b>Unit I</b>	Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion Basics of Narrating and describing things
<b>Unit II</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview advance theory Basics of Video Interviews and Video Profiles for Job
<b>Unit III</b>	Types of listening, advantages and disadvantages
<b>Unit IV</b>	Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>Unit V</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

**Syllabus: Lab**

<b>Unit I</b>	Debates / Speeches / Addressing the public / Extempore/Group Discussion Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids
<b>Unit II</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand Video Interviews and Video Profiles for Job-Practice session for Online Interviews

<b>Unit III</b>	Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives
<b>Unit IV</b>	Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>Unit V</b>	Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

### **Methodology for Evaluation**

#### 1. Internal Assessment (Theory)

- a) Home Assignments: One from each Unit : 15 Marks
- b) In Semester Tests (Minimum two) : 30 Marks
- c) Attendance : 05 Marks

#### 2. Term End (Theory) : 50 Marks

#### 3. Internal Assessment (Lab)

- (a) Daily Performance in the Lab : 50 Marks

- 4. Term End (Lab) : 50 Marks

### **Suggested Readings:**

1. A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.
2. Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.
3. Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa & Co.
4. The Hard Truth about Soft Skills, by Amazone Publication.
5. 101 Great Answers to the Toughest Interview Questions. Ron Fry. High Bridge Company. 1996.
6. Michael Swan. Practical English Usage, Oxford University Press.

**SUBJECT: VALUE EDUCATION I**

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303905

**SUBJECT CODE: DIN003A**  
**CREDIT: 2**

**Course Outcomes (CO):**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

**Lessons from the Ramayana**

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

**Lessons from the Mahabharata**

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

**Lessons from the Upanishads**

Introduction to the Upanishads: Sruti versus Smriti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

**Message of the Bhagavad Gita**

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

**Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

**Life and Teachings of Spiritual Masters India**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

### **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce.

Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

**SUBJECT: Open Elective  
SUBJECT CODE:  
CREDITS:3**

**SEMESTER IV:  
SUBJECT: OPERATION MANAGEMENT  
SUBJECT CODE: BBA630A  
CREDITS:4**

### **Course Objective:**

The objective is to provide the basic understanding of the methods and techniques of production and the economics of effective utilization of resources and the techniques employed to ensure the optimum use of resources.

### **Unit I: Introduction to Operations Management**

Definition – differences between operations management and production management – operations and productivity – operations strategy in global environment – using software for productivity analysis – Ethics, social responsibility and sustainability – developing missions and strategies – achieving competitive advantage through operations – strategic planning, core competencies and outsourcing – global operations strategy options.

### **Unit II: Designing operations**

Design of goods and services – product life cycle – generating new products – issues for product design – robust design, modular design, CAD and CAM, virtual reality technology, value analysis, sustainability and life cycle assessment (LCA) - product development

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

continuum – acquisition, joint ventures and strategic alliances – defining a product – make or buy decisions, group technology – documents for production – service design – process chain network analysis (PCN), documents for service – application of decision tree to product design.

### **Unit III: Quality Management**

Defining quality – quality and strategy – total quality management (TQM) – continuous improvement, six sigma, benchmarking, JIT, Taguchi concepts – Tools of TQM – scatter diagrams, cause-and-effect diagrams – pareto charts – flowcharts – histograms – statistical process controls (SPC) – process capability ratio, process capability index – using software in SPX - role of inspection – TQM in services.

### **Unit IV: Supply Chain Management**

Importance of supply chain strategies – six sourcing strategies – many suppliers, few suppliers, vertical integration, joint ventures, keiretsu networks, virtual companies – supply chain risks – managing integrated supply chain – building the supply base – negotiations, contracting, centralized purchasing, e-procurement – logistics management – distribution management – ethics and sustainable supply chain management – measuring supply chain performance – asset committed to inventory, benchmarking the supply chain.

### **Unit V: Lean operations**

Lean Operations – elimination of wastages, throughput analysis and improving throughput – lean and just in time – lean layout, lean inventory, lean scheduling, lean quality – lean and the Toyota production system – continuous improvement, respect for people, processes and standard work practice – lean organizations – building a lean organization, lean sustainability – lean in services.

### **Course Outcomes:**

CO1: This course introduces the students with the concept and importance of operations management in an organization

CO2: The students will learn different techniques with regard to designing process for a product or a service

CO3: The students will get deep insight into the role of quality and the techniques available in the current age to manage the quality vis-à-vis managing the operations

CO4: The students will be able analyze and evaluate the importance of supply chain management in the current age of digital transformation

CO5: The student will be able understand the growing concept of Lean and lean management and the application in managing the operations in an organization

**SUBJECT: CAMPAIGNS PLANNING**

**SUBJECT CODE: BBA659A**

**CREDITS:4**

**Course Objective:** This course aims to provide students with thorough knowledge of campaign planning. It covers every aspect of campaign planning including identifying its components, analyzing the marketing environment, setting campaign objectives and strategy development, followed by monitoring the campaign and campaign development.

**Unit I: Campaign planning and its components**

Campaign planning – components of campaign planning – creative brief, situational analysis, marketing and communication objectives, communications strategy development, campaign tactics, and evaluation.

**Unit II: Marketing environment**

Analysis of internal marketing environment - planning campaigns – mission, vision, and strategies of organization - organizational structures - internal stakeholders - portfolios of products and services – marketing plans – inform decision making – pros and cons of campaigns. Analysis of external marketing environment - PESTLE analysis - external stakeholders - network analysis - customer & Competitor analysis.

**Unit III: Campaign objectives and strategy**

Recommendation of campaign objectives and strategy - brand building - understanding attitudes and behavior – product launch - customer retention & acquisition - marketing objective - marketing mix - campaign budget setting methods - cost identification and analysis

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- human resources - outsourced skills- resource constraints - preparation of media plan for effective campaigning - customer-value proposition - multichannel planning - integration of digital and offline communications tool - buying processes. Support campaign planning - project management - critical path analysis - resource scheduling - Gantt charts - internal support and engagement for the plan - presenting plans - engaging support from management and other stakeholders - internal communication mechanisms scheduling - prompt deliveries.

#### **Unit IV: Monitoring a campaign**

Monitoring a campaign - consumer satisfaction and retention - financial implications and adapting campaigns - performance metrics and KPIs - goal tracking - tracking marketing channels- online/offline measurement tools - customer feedback - real-time monitoring - communication process- effectiveness of media evaluation - evaluating the financials.

#### **Unit V: Campaign development**

The process of developing campaigns for future - collecting feedback from stakeholders - linking of objectives and preparation of reports.

#### **Course Outcomes:**

CO1: The students will obtain an understanding of the basics of campaign planning, its objectives, and strategies.

CO2: The students will be able to undertake an internal and external situational analysis

CO3: The students will get a sound understanding of the principles and methods of monitoring a campaign.

CO4: The student will learn the procedure for undertaking a post-campaign evaluation.

CO5: The students will be able to identify the key aspects for future campaign development.

**SUBJECT: DIGITAL MARKETING TECHNIQUES****SUBJECT CODE: BBA660A****CREDITS: 4**

**Course Objective:** This course aims to create awareness of the concepts of digital marketing and its impact on modern business. The students will learn the various digital marketing techniques including email advertising, social media advertising, Search Engine Optimization (SEO), Google Adwords and Adsense etc., and will be able to recognize its significance in communicating the value to the customers and building a strong brand for businesses.

**Unit I: Introduction to digital marketing**

Digital marketing – definition – platforms – email marketing – its importance and platforms – creating emails – creating a contact management and segmentation strategy - understanding email deliverability & tracking emails - how to create effective & unique email content, outlining the design of your marketing emails - open rates and CTR of email - drive leads from email - opt-in lists – developing relationships with lead nurturing & automation content marketing - understanding content marketing - generating content ideas - planning a long-term content strategy - building a content creation framework - becoming an effective writer - extending the value of your content through repurposing - how to effectively promote content - measuring and analyzing your content - developing a growth marketing mindset – creating a blog post, creating topic clusters and pillar pages – promotion of blog post – use of infographics in content.

**Unit II: Search Engine Optimization**

Search Engine Optimization (SEO) – meaning and importance - SEO growth in recent years- ecosystem of a search engine - kinds of traffic - keyword research & analysis (free and paid tool & extension) - recent google updates & how google algorithms works on page optimization (OPO) - off-Page optimization. Miscellaneous SEO tools: Google webmaster tools , site map creators , browser-based analysis tools, page rank tools, pinging and indexing tools, dead links identification tools , open site explorer, domain information tools, Quick Sprout, Google My Business.

**Unit III: Google Adwords and Google Adsense**

Google AdWords – fundamentals - account structure - key terminologies in Google AdWords - creating an AdWords account - different types of AdWords and its campaign & ads creation process - ad approval process – keyword match types - keyword targeting & selection (Keyword planner) - display planner - different types of extensions - creating location extensions - creating call extensions - create review extensions - bidding techniques – manual /auto – demographic targeting/bidding - CPC-based, CPA-based & CPM-based accounts - Google Analytics Individual Qualification (GAIQ) - Google AdSense : Understanding ad networks and AdSense's limitations - learning which situations are best for using AdSense - setting up an AdSense account - creating new ad units - displaying ads on a website, configuring channels and ad styles - allowing and blocking ads - reviewing the AdSense

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

dashboard - running AdSense reports and custom reports - exporting data - reviewing payee and account settings.

#### **Unit IV: Social media marketing and web analytics**

Social Media Marketing (SMM) - Facebook marketing - Twitter marketing - LinkedIn marketing - Google plus marketing - YouTube marketing - Pinterest marketing - Snapchat marketing - Instagram marketing - social media automation tools - social media Ad Specs - the ROI in social media marketing - tools and dashboards - reputation management - Web Analytics: The need & importance of Web Analytics - introducing Google Analytics - the Google Analytics layout - basic reporting - basic campaign and conversion tracking - Google tag manager - social media analytics - social CRM & analytics - other web analytics tools - making better decisions - common mistakes analysts make.

#### **Unit V: Youtube advertising (Video Ads) & conversions**

Youtube advertising (Video Ads) – meaning – benefits of advertising on Youtube - creating Youtube campaigns - choose the audience for video ads, Instream ads , Invideo ads , In-search ads, In-display ads - measuring your Youtube ad performance - drive leads and sales from Youtube ads conversions: understanding conversion tracking - types of conversions - setting up conversion tracking - optimizing conversions - track offline conversions - analyzing conversion data - conversion optimizer.

#### **Course Outcomes:**

CO1: The students will be able to gain knowledge on digital marketing, email marketing, and content marketing.

CO2: The students will be able to understand Search Engine Optimization tools and techniques.

CO3: The students will be equipped with skills in the creation of Google AdWords & Google AdSense.

CO4: The student will obtain knowledge of social media marketing and web analytics.

CO5: The students will be able to gain knowledge on Youtube advertising & conversions

### **SUBJECT: DIGITAL OPTIMISATION**

**SUBJECT CODE: BBA663A**

**CREDITS: 4**

**Course Objective:** 1. Analyzing the factors that affect the digital environment of the organization

2. Creating knowledge and skill to optimise digital marketing performance.
3. Learning digital metrics and analytics
4. Knowledge of digital measures to analyse optimization.
5. Digital marketing innovation.

#### **Unit I: Digital Micro& Macro Environment, Digital Ecosystem, Audit Findings**

Evaluate digital analysis tools and frameworks, understand the Digital culture framework such as Readiness, Essentials, Performance, Evaluate the impact and influence on key drivers within the digital environment, inside the organisation, within market sector and among the stakeholders.

Study the new trends in the business models and its impact on the organisation. Discuss the changes taking place in the Email, Websites, Online PR, Search Engine Optimisation, Blogs, Social networks, Online advertising, digital products/services, pricing models, distribution. Understand the changes and emerging trends in digital platform.

Evaluate the digital tools frameworks to evaluate the analysis. Discuss effective techniques of digital market research, Identification of reliable resources of data, Justification of findings through evidence.

#### **Unit II: Digital Environment, Innovation, Impact of Innovation**

Discuss the opportunities and threats within the wider digital environment, elaborate the changes required to be adopted by the organisation, evaluate the business process re-engineering requirements.

Evaluate the impact of wider digital environment on marketing activities, customer experience and ethical issues.

Discuss the digital marketing evolution, role of AI, IOT, connected home, smart cities and crowd sourcing.

Discuss the changes in the consumer behavior due to the innovation in the digital marketing.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### **Unit III: Conversion Rates, Converting Channels, Digital Performance Indicators**

Evaluate the role CRO audit, Online and offline integration, Visuals, copywriting, content Design and UX, online psychology on the conversion ratio

Discuss the converting channels such as measuring A/B testing, Implementation and reporting, return on marketing spend. Discuss on the measures to improve the conversion ratio.

Discuss the digital performance indicators – evaluate the difference between analytics and insights, how to use vanity metrics and discuss the technique measuring return on investment. Elaborate the techniques of creating digital goals and objectives.

### **Unit IV: Optimization Of Digital Marketing, Use Of Data, Assess Digital Matrix**

Discuss the methods of getting integration and improvement of digital marketing activities such as Testing, Different options and Gaining customer feedback

Understand the Marketing automation and establishing trigger points for actions, study Multi-touch attribution modelling and customer touchpoints .

Elaborate the Application of data in improvement planning, evaluate Data versus Key Performance Indicators (KPIs), Use of Landing pages

### **Unit V: Measuring Digital Integration, Maximizing Digital Optimization, Technical Implementation of Monitoring System**

Relevant digital measurement tools, services and methods, Value of measuring digital integration

Integration of digital measurement in organisations, Stages involved in maximising digital optimisation

Use findings to make improvements to marketing plans in the future.

### **COURSE OUTCOMES-**

CO1: Understanding Digital metrics and analytics

CO2: Use of digital optimization

CO3: Assess the Digital Performance indicators

CO4: Analysing Audit Findings.

CO5: Knowing about the weaknesses to improvise marketing plans in future.

### **SUBJECT: CORPORATE GOVERNANCE AND SOCIAL RESPONSIBILITY**

**SUBJECT CODE: BBA633A**

**CREDITS:3**

#### **Course Objective:**

This course aims to provide students with a thorough grounding in a number of key introductory and advanced topics of corporate governance and its relevance for corporate social responsibility. Content includes relevant applied theories, current research, and practice.

#### **Module 1: Introduction**

Definitions and the evolution of Corporate Governance Basic definitions in the field of Corporate Governance and the historical development of Corporate Governance from the Wall Street Crash until nowadays will be discussed.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**SUBJECT CODE:**  
**CREDITS: 3**

**Life Skills 2 (Aptitude)**  
**Subject Code: DEN004A**  
**Credits: 2**

#### **Course Objectives:**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

**Course Outcomes (CO):** At the end of this course students will have:

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

**Syllabus: Theory**

UNIT 1	<p>Number System:</p> <ol style="list-style-type: none"> <li>a. Number system</li> <li>b. Power cycle</li> <li>c. Remainder cycle</li> <li>d. Factors, Multiples</li> <li>e. HCF and LCM</li> </ol>
--------	---

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303905

UNIT 2	<p>Data Arrangements and Blood Relations:</p> <ul style="list-style-type: none"> <li>a. Linear Arrangement</li> <li>b. Circular Arrangement</li> <li>c. Multi-dimensional Arrangement</li> <li>d. Blood Relations</li> </ul>
UNIT 3	<p>Time and Work:</p> <ul style="list-style-type: none"> <li>a. Work with different efficiencies</li> <li>b. Pipes and cisterns</li> <li>c. Work equivalence</li> <li>d. Division of wages</li> </ul>
UNIT 4	<p>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</p> <ul style="list-style-type: none"> <li>a. Coding and Decoding</li> <li>b. Series</li> <li>c. Analogy</li> <li>d. Odd Man Out</li> <li>e. Visual Reasoning</li> </ul>
UNIT 5	<p>Percentages, Simple Interest and Compound Interest:</p> <ul style="list-style-type: none"> <li>a. Percentages as Fractions and Decimals</li> <li>b. Percentage Increase / Decrease</li> <li>c. Simple Interest</li> <li>d. Compound Interest</li> </ul>

	e. Relation Between Simple and Compound Interest
UNIT 6	Permutation, Combination and Probability: a. Fundamental Counting Principle b. Permutation and Combination c. Computation of Permutation d. Circular Permutations e. Computation of Combination f. Probability
UNIT 7	Data Interpretation and Data Sufficiency: a. Data Interpretation – Tables b. Data Interpretation - Pie Chart c. Data Interpretation - Bar Graph d. Data Sufficiency

UNIT 8	Profit and Loss, Partnerships and Averages:  a. Basic terminologies in profit and loss  b. Partnership  c. Averages  d. Weighted average  e. Mixtures and allegations
--------	---

### Methodology for Evaluation

#### 1. Internal Assessment

a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks

b) In Semester Tests (Minimum two) : 30 Marks

#### 2. Term End : 40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

### Suggested Reading:

2. The Trachtenberg Speed System of Basic Mathematics, Rupa& Co., Publishers;
3. How to Ace the Brainteaser Interview, by John Kador, Mc Graw Hill Publishers.
4. Quick Arithmetics, by Ashish Agarwal, S Chand Publ.;
5. Quicker Maths, by M tyra& K Kundan, BSC Publishing Co. Pvt. Ltd., Delhi;
6. Owl Purdue University online teaching resource

### Semester V:

**SUBJECT: INTERNATIONAL BUSINESS MANAGEMENT**

**SUBJECT CODE: BBA634A**

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303905

## CREDITS: 4

**Course Objective:** The Objective is to provide the understanding of the international business environment and its competitive and investment climate and also would provide knowledge of international business and finance activities of the organization and the investigation of changes in firms strategies and accounting policies as per the change in business environment and also the understanding of various aspects of international trade, finance and currency derivatives.

### **Unit I: International business: An Overview**

Understand the evolution of international trade theories, Introduction to Forex Markets: Absolute advantage, Relative advantage, and H-O theory, Leontief Paradox, Porter's Diamond paradox; Foreign Exchange (Forex) Market, Communication in Forex Markets, Currency Quotes- both in global and domestic market, calculation of forward rates using spot rates, calculation of discount/premium on spot rate using spot and forward rates, Spot Rates with and without transaction costs.

### **Unit II: Principles and monetary systems of international trade**

Understand the theories of absolute cost advantage, comparative cost advantage theory, Interest rate Parity, PPP Principle, International Fisher Effect, The International Monetary System: Bretton Wood system, Exchange Rate Regimes, International Banking, Concept and Development of Universal banking, Global depository receipt, Indian depository receipt.

### **Unit III: Exposure of currency and its measurement**

Understand the fundamental functions of currency Exposure and its Management: Types of Forex Exposures: Transaction, Translation, and Economic Exposure and their management; Country Risk-Analysis and Management. Multinational payments Management: Leading, Lagging, Pooling and Netting, foreign exchange risk management system.

### **Unit IV: Financial derivatives**

Understanding the factors influencing costs and benefits of FDI, Financial Derivatives with respect to currency: Forwards and Futures, Interest rate futures and currency futures; Determination of forward and futures prices; Options and related terminology, Calculating the pay-off from options and its representation.

### **Unit V: Pricing & Its strategies**

Understanding on Pricing of Options- Binomial model and Black-Scholes model; trading strategies involving options; Introduction to Swaps, Interest rate swaps, currency swaps, cross currency swaps; Forward rate agreements (FRA). Interest rate caps, floors, collars, cost-oriented export pricing methods and market- oriented export pricing methods.

### **Course Outcomes:**

CO1: This course introduces the students with the understanding about the international business theories and introduction to forex markets.

CO2: The students will learn the different approaches used in the international monetary systems.

CO3: The students will get a sound understanding of the various financial derivatives and foreign direct investments.

CO4: The student will get a deep analysis of the various financial pricing techniques held in use for international trade.

CO5: The student will understand the impact of methods and principles introduced in international finance.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Textbooks:**

**SUBJECT: LEGAL ENVIRONMENT FOR BUSINESS****SUBJECT CODE: BBA635A****CREDITS: 3**

**Course Objective:** To understand various laws applicable in India i.e. Contracts Act, Special Contracts, Partnerships, LLP's, companies etc. On completion of this course, learners will be able to: appreciate the relevance of business law to individuals and businesses and the role of law in an economic, political and social context.

**Unit I: (Law of Contracts, Special Contract, Indemnity & Guarantee)**

The Indian Contract Act, 1872 - Definition of contract -Law of contracts - Nature of contract - Classifications - Essential elements of a contract Offer and acceptance, consideration, capacity of parties- Minors-persons of unsound mind-persons disqualified by law- Free consent, legality of object and consideration, performance of contract, discharge of contract, breach of contract, remedies for breach of contract-Quasi contract- Performance. Special Contracts - Bailment and Pledge- Bailment Definition Essential elements Rights and duties of bailor and bailee Finder of lost goods. Pledge Essentials Rights and duties of Pawner and Pawnee. Indemnity and Guarantee- Indemnity - Definition, nature of liability of surety, rights of surety, discharge of surety. Meaning and definition of guarantee.

**Unit II: (Law of Agency & Sale of Goods Act)**

Essentials, kinds of agents, rights and duties of agent and principal, creation of agency, termination of agency-Sub agents and substituted agents-Relationship. **Sale of Goods Act, 1930** Formation of contract of sale - Essentials of contract of sale goods and their classifications- Conditions on warranties Transfer of property in goods Performance of contract of sale Unpaid seller and his rights

**Unit III: (The Indian Partnership Act 1932, The Limited Liability Partnership)**

Nature- rights and duties of partners- Registration and dissolution of firms- **The Limited Liability Partnership Act 2008**- Introduction- nature and scope- features- incorporation and differences with other forms of organization.

**Unit IV: (Companies Act and its Basics)**

- Company - Definition – Characteristics – Classifications –History and framework of Company Law in India - Companies Act 2013 - one person company, small company, associate company, dormant company, producer company; association not for profit; illegal

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

association. Promotion and formation of a company- Body Corporate - promoter- legal position-duties remuneration- Memorandum of Association – Articles of Association - Contents and alteration -Incorporation of Company - On-line registration of a company – CIN - Companies With Charitable Objects - Doctrines of Indoor Management, Constructive Notice, Ultra-vires - Lifting up of Corporate veil - Conversion of Companies. Share Capital – Types - Public Offer - Private Placement - Prospectus - Contents of Prospectus – Types of prospectus – Deemed prospectus - Shelf Prospectus - Red Herring Prospectus - Abridged prospectus-Liability for Misstatements in Prospectus – Issue and Allotment of Securities – Types - Voting Rights –DVR- Application of Premiums - Sweat Equity Shares - Issue and Redemption of Preference Shares-Transfer and Transmission of Securities- Punishment for impersonation of Shareholder - Further Issue of Share Capital- Bonus Shares- Debenture Issue

### **Unit V: (Membership in company and meetings)**

Modes of acquiring membership-rights and liabilities of members- cessation of membership- Register of Members - Company meetings – Annual General Meeting - Extraordinary General Meeting- Notice Of Meeting - Quorum - Chairman - Proxies - Voting -Show of Hands – E-Voting - Poll- Postal Ballot- Motions - Resolutions - Types - Minutes - Books of accounts - Annual Return- Directors - Types - legal position – Appointment - Duties – Disqualifications- DIN - Vacation of Office - Resignation - Removal - Meetings of Board - Resolutions and Proceedings- Powers of Board - Key Managerial Personnel- CEO- CFO - Audit and Audit Committee – related party- transactions - Corporate Social Responsibility- Winding up - Contributory – Modes of winding up - Winding Up by Tribunal - Petition for Winding Up- Powers of Tribunal- Liquidators - Appointments- Submission of Report - Powers and Duties - Effect of Winding Up Order- Voluntary Winding Up - Circumstances - Declaration Of Solvency - Meeting of Creditors- Commencement of Voluntary Winding Up- Appointment of Company Liquidator- Final Meeting and Dissolution of Company Official Liquidators – Appointment -Powers - Functions - Winding up of unregistered companies.

### **Course Outcomes**

CO1: Ability to apply knowledge of Indian Contract Act, Sale of Goods Act, Partnership Act and LLP. Ability to identify, and solve legal issues in connection with business.

CO2: Identify the fundamental legal principles behind contractual agreements.

CO3: Know about the concept of company and shares.

CO4: Know about the application of company law in India. Understand the use of the memorandum of association and article of association in a company, they also learn from this course.

CO5: Use of various documents and forms in a company. Understand the relationship between company and its stakeholders.

## **SUBJECT: CORPORATE STRATEGY**

**SUBJECT CODE: BBA636A**

**CREDITS: 4**

**Course Outcomes:** On successful completion of the module students will be able to:

1. Analyze and evaluate critically real-life company situations and develop creative solutions, using a strategic management perspective.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

2.To enable students to know and develop strategies for business to remain competitive

### **Unit I: Introduction to Strategy**

Concepts of strategy, Environmental issues (PESTLE), SWOT analysis, The internal resources, capabilities and competences of an organization, Strategic choices

### **Unit II: Managing growth and scale**

Strategic management process, Environment and Organizational Appraisal, Strategic Business Unit and levels of strategy.

### **Unit III: Strategy Formulation**

Industry life Cycle analysis, Corporate level strategies, Expansion and Stability, Integration and Diversification, Internationalization, Co-operative and Digitalization, Business Level Strategies, Cost leadership, Differentiation, Focus business strategy, Introduction to functional Level Strategies-Marketing, Financial, HRM, Product, Research and Development

### **Unit IV: Strategy Analysis and Implementation**

Process of Strategic Choice, Strategic Analysis, Mckinsey 7s , Porters five forces model BCG Matrix, Nature of Strategy implementation and barriers to strategy implementation

### **Suggested Reference Books:**

1. Strategic Management by Kazmi
2. Entrepreneur Development New Venture Creation Satish Taneja and S.L Gupta Galgotia Publication
3. Entrepreneurship Management; Dr. Aruna Kaulgud; Thomson Publication
4. Essentials of Entrepreneurship and small business Management; Thomas Zimmerer and Norman S; Pearson Publication
5. Websites of corporates

**SUBJECT: CUSTOMER RELATIONSHIP MANAGEMENT**

**SUBJECT CODE: BBA639A**

**CREDITS: 3**

### **Course Outcomes:**

On successful completion of this course, the students will be able:

CO1: To be aware of the nuances of customer relationship

CO2: To analyze the CRM link with the other aspects of marketing

CO3: To impart the basic knowledge of the Role of CRM in increasing the sales of the company

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO4: To make the students aware of the different CRM models in service industry

CO5: To make the students aware and analyze the different issues in CRM

### **Unit I: Evolution of Customer Relationship**

CRM- Definition, Emergence of CRM Practice, Factors responsible for CRM growth, CRM process, framework of CRM, Benefits of CRM, Types of CRM, Scope of CRM, Customer Profitability, Features Trends in CRM , CRM and Cost-Benefit Analysis, CRM and Relationship Marketing.

### **Unit II: CRM Concepts**

Customer Value, Customer Expectation, Customer Satisfaction, Customer Centricity, Customer Acquisition, Customer Retention, Customer Loyalty, Customer Lifetime Value. Customer Experience Management, Customer Profitability, Enterprise Marketing Management, Customer Satisfaction Measurements, Web based Customer Support.

### **Unit III: Planning for CRM**

Steps in Planning-Building Customer Centricity, Setting CRM Objectives, Defining Data Requirements, Planning Desired Outputs, Relevant issues while planning the Outputs, Elements of CRM plan, CRM Strategy: The Strategy Development Process, Customer Strategy Grid.

### **Unit IV: CRM and Marketing Strategy**

CRM Marketing Initiatives, Sales Force Automation, Campaign Management, Call Centres. Practice of CRM: CRM in Consumer Markets, CRM in Services Sector, CRM in Mass Markets, CRM in Manufacturing Sector.

### **Unit V: Challenges of CRM Implementation**

CRM Planning and Implementation Issues and Problems in implementing CRM, Information Technology tools in CRM, Challenges of CRM Implementation. CRM Implementation Roadmap, Road Map (RM) Performance: Measuring CRM performance, CRM Metrics.

### **SUBJECT: Marketing & Digital Strategy**

**SUBJECT CODE: BBA661A**

**CREDITS: 4**

#### **Course Objective:**

1. To understand micro and macro environment analysis and the required inputs for strategic decision.
2. The learners will be able to understand how businesses achieve competitive advantage
3. To make learners understand about the resource requirement for delivering the strategic marketing plan including digital strategy.
4. To make learners understand about the strategic approach to marketing planning.
5. To make learners understand the risk assessment procedure of organisation.

#### **Unit I : Environment Analysis, Resources and Competences, Marketing Analysis Techniques**

PESTEL, Porter’s five forces, SWOT analysis , types of market orientation, organisation’s culture using cultural web model, leadership style and management style, Differentiate about core and threshold competences and resources, Explain about long termism and ethics in marketing, Identify ways to achieve competitive advantage , Analysis of online and offline activity, Understanding the current skill requirement and challenges faced by the organisation in gathering the data and analysing it, Determine the barriers to competitive advantage , Compare and contrast between conventional and disruptive marketing models, Explain the concepts of having social presence.( 12 hours )

#### **Unit II: Environmental Audit, Market Analysis,Digital Marketing**

Concepts of AAA Bottom line audit , Social and Environmental Footprints , Difference between social and environmental Audit, ISO 140001 , Research Methodologies for Online and Offline Marketing Audits , Evaluate the changes in market conditions and demand , Guerrilla marketing , online and offline marketing environment. impact of digital market environment and its capabilities and limitations, concept of MIS, Identify and recommend about the risk and barriers and ways to overcome it in market planning.(10 hours)

#### **Unit III : Goals, Strategic Marketing Plan, Market Strategic Decisions**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Explain the relationship between objectives, mission and vision statement of an organization. Explain about the elements of marketing objectives, digital strategy models such as Monday, Hive, clickup etc , nine key elements of brand strategy. how to develop strategic marketing plans with reference to strategic marketing framework. Construct profit and sales projections.

Explain the concept of one-to-one marketing. Evaluate the suitability, feasibility and acceptability of strategic marketing decisions.

Discuss about different groups of stakeholders and their expectations using Mendelow's matrix.

Explain market intelligence and organizational dynamics.

Calculate the return on investment and interpret.

#### **Unit IV: 7Ps, Implementation of Marketing Strategy**

How to develop a successful marketing mix strategy and understand the marketing mix models developed by Mc Carthy 4 P's and the later extension into 7p's

Compare and contrast between traditional and digital marketing communication

Identify the four steps involved in digital marketing strategy framework and steps to develop the action plan for traditional and digital marketing strategies.

Understand the regulatory and legal factors.

Explain the resource and competence requirements for implementation of strategy.

Define the scope of other alternatives like outsourcing, franchising and other agencies.

Explain the concept of CSF.

#### **Unit V: Risk, Financial And Non-Financial Indicators, Post-Implementation**

Explain risk, how to assess the risk faced by an organisation and ways adopted to mitigate with it. Explain the response of organisational risk towards risk. Explain the social and ethical aspects of risk assessment process. Calculate and interpret ratio analysis.

Determine the KPI's for CSF's and evaluate.

Explain steps involved in project planning.

Identify and explain other technical aspects of measuring and monitoring system of implementation. Define strategic gap and ways to reduce it. Explain methods involved in analyzing the post-implantation stage and how to deal with it. Identify different methods of collecting data.

### **COURSE OUTCOMES**

CO1: Ability to apply knowledge for financial and Non-Financial Indicators

CO2: Know about the Marketing Strategy in digital marketing

CO3: Identify the Goals and Objectives of Companies and implementing the strategies according to that.

CO4: Knowing the Risk factors in business and market.

CO5: Knowing the difference between Micro and Macro Environment.

**SUBJECT: Innovation in Marketing**

**SUBJECT CODE: BBA662A**

**CREDITS: 4**

**Course Objective:**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

1. Creates understanding to develop innovation to deal challenges.
2. Understand the key factors to develop innovation in marketing function.
3. Ability to use internal and external marketing.
4. Ability to understand the case related to innovation of marketing
5. Develop plan for communication of innovation.

### **Unit I: Business Opportunities & Challenges, Study of Innovation, Implementing Innovation**

Evaluating Environmental scanning, trends, discovery theory, Disruptive innovation and digital disruption, Emerging economies and innovations, Competitive advantage – new competitive approaches. Evaluate Intuitive, ‘gut feel’, insights, Discovery-driven planning, Traditional business plans, Developing business models, Internal and external approaches, Business process re- engineering. Identification of challenges like External environmental factors, Competition, Leadership buys, Budget/Capital requirements, Resistance to change.

### **Unit II: Types Of Innovation, Innovative Organisation, Factors Developing Innovative Approaches**

Discuss the salient features of most innovative organization such as Vision and styles of leadership, Organizational structures, Key individuals, and team working, Creative climate/culture, External focus – market orientation, boundary spanning and networks

- Invention, creativity and innovation
- Disruptive and sustaining innovations
- Product, process and platform innovation
- Open and closed approaches to innovation
- Radical and incremental forms of innovation
- Market pull vs. technology push
- Business model innovation

Discuss and evaluate Cross-functional and self-managing teams, Role of Learning, training and development in building innovation, Information sharing, Support of innovative business models, use of Adaptive/flexible approaches, Use of appropriate market research techniques and sources of information and Use of innovation networks.

### **Unit III : Customer Relationship, Options For Innovation, Service Development**

Study various innovative approaches such as Generating ideas, Screening, Business analysis, Development of a small-scale trial, Testing techniques, Commercial launch, Effective exit routes for unsuccessful ventures to enhance the service development

Discuss the methods to build better customer relationship idea goras, crowdsourcing, online forums and other open platforms, conducting user trials, involving leading practitioners, supplier engagement, round table conferences.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- Product/service/process/programme Business model
- Out-sourced vs internally implemented
- Adaptable/flexible/agile Benchmarking
- Collaborative/partnerships

Assessing acceptability, feasibility or suitability

#### **Unit IV: Innovation Proposal, Business Case For Change, Launch Of Innovative Approaches**

Assessing the risks and benefits of an innovation proposal

Discuss the risks and benefits of the proposal - Strategic/operational/tactical, Financial, Reputational, Competition

Understand the Factors driving change and the Scope of change required, evaluating the need for change and commitment from stakeholder groups, Structure the business case and Project proposal

Understand the Background of the business plan, choosing right research techniques, Selection of relevant sources of information. Setting the objective and creating a strategy and tactics, action and evaluating measurement criteria.

#### **Unit V: Measuring Success, Support Chosen Innovation, Cultural Change And Innovation Options**

Discuss the impact of Current organisational culture, Levels of trust and openness, Space and support for ideas, Attitudes to risk taking, Degrees of freedom to experiment, Fit with business strategy, Strategies for culture change, Development of a culture for managing risk

- Internal communication plans
- External communication plans
- Target audiences
- Key messages
- Implementation
- Evaluation and measurement criteria
- Agency relationships

Discuss and evaluate - Soft and hard measures of success, Achievement of objectives, ROI, Metric dashboards, Latest trends in metrics and their impact.

#### **COURSE OUTCOMES-**

CO1: Knowing about the strengths and weaknesses of organisation.

CO2: Ability to cope up with the challenges of innovation.

CO3: Knowing the qualities of innovative organisation.

CO4: Understanding different factors that support innovation.

CO5: Understanding Innovation in Customer Relationship.

**SUBJECT: Digital Customer Experience**

**SUBJECT CODE: BBA650A**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **CREDITS: 4**

- Course Objective:**
1. Develop skills to take strategic decisions.
  2. Understand the digital customer and take decisions accordingly.
  3. Management of digital channel selection
  4. Understand the legal compliance involved in digital technology
  5. Learning how to improve the digital experience of customers.

### **Unit I : Channel Goals, Channel Selection, Digital Customer Persona**

Explain the framework for setting business objective, define the purpose and mission, Setting goals for different channels, methods of customer acquisition, efforts to be taken for customer retention, Customer conversion, gathering and understanding customer experience , Efforts to attain organisation growth

Identification of qualities of an appropriate channel for the set objective, factors contributing to the success of the channel, Common mistakes – cautions to take, Types of channel, identification of target audience, Channel planning, selection of persons to handle the channel, risk involved in relation to channel usage.

Evaluate the various sources of customer data, identify online research sources, collection of customer behaviour, identifying current and changing consumer behaviour, importance of abandoned cart items, searching and browsing history, Technique of identifying consumer personas.

### **Unit II: Customer Awareness, Customer Experience Management, Media Channels**

Using customer insight research techniques – qualitative and quantitative data, using AI, machine learning, social media shares and mentions, customer surveys, internal analytics from web properties, internal analytics, crowd sourcing, sentiment analysis. Evaluate customer awareness through Digital Marketing Mix – paid, shared, owned and earned, Ad copy and creative – qualities, tactics of good ad copy, Content marketing to create customer awareness, Keyword and market trends research, Keyword journey (generic vs long tail terms). Introduction and uses of website and various types of landing pages, Digital communications, Affiliate marketing, discussion on risks and constraints and budget planning. Selection of resources – distinguish between In-house vs agency, Brief understanding of Consultants and Briefing Agencies.

### **Unit III: Identifying Customer Behaviour, Legal Compliances Of Digital Campaigns**

Management of Recommend KPIs, dashboards and reports for assessing channels, Describe options and tools for monitoring channels, details of Attribution modelling, distinguish between Influencer channels vs converting channels.

Brief discussion on Data protection, international privacy law, Industry codes of practice, Disability and discrimination, Brand and trademark protection, Intellectual property rights, Contract law, Online advertising law, Content, copyright, media, Channel terms and conditions.

Usages of best practices to avoid legal complications during data collection, precautions to take during email and SMS campaigns, privacy statements, cookies, spam, opt-in.

### **Unit IV: Consumer Journey Through Digital Experience**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Discuss the role Websites, key phrase analysis and selection Search engine optimisation (SEO), Search engine marketing (SEM) in understanding consumer behaviour and there by developing customer acquisition and conversion.

Discuss the role of paid search or pay per click marketing (PPC), Blogs, Online PR, partnerships/affiliates, online communities, Email, Social media, Content marketing, user generated content in understanding consumer behaviour and there by developing customer acquisition and conversion.

Understanding Customer journey by mapping his search across multiple medias like mobile, tablet, desktop, planning of relevant content audit, content planning and content calendars, Techniques of The Honeycomb model for social media strategy, Social listening and sentiment analysis

#### **Unit V: Evaluating User Experience, Efforts To Improve Customer Experience**

Use of various techniques in evaluating user experience -website structure, navigation and design, User experience (UX), Impact of social media

Understanding the level of personalization, usability, changing purchase behaviour, pay by mobile, wearable

Discuss user experience testing methods, evaluate and analyse campaign on the basis of the test, objective of improvements to customer experience, Strategic options to improve customer experience. Resource allocation and budgeting to improve customer experience.

#### **COURSE OUTCOMES-**

CO1: Acquiring the knowledge of digital customer

CO2: Able to develop the skills of customer experience

CO3: Understanding Digital Campaigns

CO4: To know about the legal compliances of digital campaigns

CO5: Knowledge of precautions to be taken during digital campaign

#### **Semester VI:**

**Program Educational Objective (PEO)- BBA Finance and Leadership**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- I. Develop leadership skills, creativity and entrepreneurship
- II. Analyse and develop solutions for business problems and issues by integrating knowledge from various disciplines.
- III. To be able to take effective decisions in the organisation with respect to a dynamic business environment.
- IV. Enabling success through technology and other modern digital finance techniques.
- V. Demonstrating professional expertise and possessing deep level of knowledge and commitment to the area of practice

**Program Outcome (PO) – BBA Finance and Leadership**

**PO 1:** An understanding of the knowledge of finance, accounting, reporting, quantitative analysis and statistics, Human Resource management, Technology and Management topics to enable the students to apply the topics to short term business decision making.

**PO2:** Enables the students to identify and develop appropriate strategies that can be used for different business circumstances by integrating knowledge from various disciplines – effective leadership, organizational management, competencies and skills management, cultural and behavioral analysis.

**PO3:** Application of management accounting tools and technical to assist the management in planning and decision making

**PO 4:** Enable the students to understand the governance practices followed globally and the importance of ethical practices and ethical code of conduct in finance and accounting profession

**PO 5:** Demonstrate the importance of IT systems enabling success in Operations management, Finance management, HR Management, Customer Relationship Management, Project Management

**PO 6:** Enables students to understand the importance of Governance, Regulations and Legal compliances in reporting a socially responsible strategy enhancing the value of the entire organization.

**PO 7:** Helps students update with the life skills, business computing expertise, professionalism skills, research & development skills and communication skills towards their professional development

**JECRC University**

**BBA – Detailed Syllabus**

**Semester 1:**

**SUBJECT: PRINCIPLES OF MANAGEMENT**

**SUBJECT CODE: BBA615A**

**CREDITS: 4**

**Course Objective:** The objective is to provide an understanding of basic concepts, principles and practices of management. The aim is to inculcate the ability to apply multifunctional approach to organizational objectives.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Unit I**

Management: Concept and Need, Managerial Functions – An overview; Coordination: Essence of Management. Evolution of Management Thought, Classical Approach – Taylor, Fayol, Neo-Classical and Human Relations Approaches – Mayo, Hawthorne Experiments, Behavioural Approach, Systems Approach, Contingency Approach, MBO, Hammer and Champy- Business Process Re-engineering, Porter's Five-forces' Model.

## **Unit II**

Types of Plan; Strategic planning – Concept, process, Importance and limitations; Environmental Analysis and diagnosis (Internal and external environment) – Definition, Importance and Techniques (SWOT/TOWS/WOTSUP, BCG Matrix, Competitor Analysis); Decision-making: Process and Techniques; Perfect rationality and bounded rationality

## **Unit III**

Concept and process of organizing – An overview, Span of management, Different types of authority (line, staff and functional), Decentralization, Delegation of authority; Formal and Informal Structure; Principles of Organizing; Network Organisation Structure. Emerging types.

## **Unit IV**

a. Staffing: Concept of staffing - Recruitment and Selection; Orientation; Training and Development; Career Development; Performance Appraisal. b. Motivation & Leadership: Concept, Importance, extrinsic and intrinsic motivation; Major Motivation theories - Maslow's Need-Hierarchy Theory; Herzberg's Two-factor Theory, Vroom's Expectancy Theory. Leadership: Concept and Importance; Leadership Styles; c. Communication: Concept, purpose, process; Oral and written communication; Formal and informal communication networks, Barriers to communication, Overcoming barriers to communication. Emerging trends in communication.

## **Unit V**

Concept, Process, Limitations, Principles of Effective Control, Major Techniques of control - Accounting Ratio Analysis, HR Metrics, ROI, Budgetary Control, EVA, PERT/CPM. Emerging issues in Management.

**SUBJECT: BUSINESS MATHEMATICS & STATISTICS**

**SUBJECT CODE: BBA616A**

**CREDITS: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**Course Objective:** The Objective is to provide, to expose students to basic statistical and mathematics concepts, to organize and present numerical data, to understand the Venn Diagrams, Sets, Intervals, Matrices, Vector Algebra and to compute correlation, interpret and to understand the construct various index numbers.

### **Unit I - Set Theory**

Introduction to Sets, Sets and their Representation, Tabular or Roster Method, Rule Method or Set Builder, Empty or Void or Null Set, Finite sets and Infinite sets, Proper Subset, Improper Subset, Power Set, Universal Set, Open Interval, Closed Interval, Semi-Open or Semi Closed intervals, Infinite Intervals, Venn Diagrams, Operations on Sets, Union, Intersection of Sets, Disjoint Sets, Difference of Sets, Symmetric Difference of Sets, Complement of a Set, Laws of Algebra of Sets.

### **Unit II - Matrices and Determinants**

Definition of a Matrix, Addition & Subtraction of Matrices, Multiplication of Matrices, Transpose of a Matrix. System of linear equations, Gauss elimination method, Inverse of a Matrix, Determinants, Determinants of order one and more, Properties of Determinants, Multiplication of two Determinants, Minors and Cofactors, Cramer's rule for solution of linear equations, Adjoint of a Matrix, Rank of a Matrix.

### **Unit III- Vector Algebra**

Vectors, Types of Vectors, Operations on Vectors, Addition of Vectors, Properties of Operation of Addition, Subtraction, Properties of Operation of Subtraction, Multiplication by a scalar, Orthonormal Bases, Product of Two Vectors, Scalar Product or Dot Product of Two Vectors, Properties of Scalar Product, Vector Product or Cross Product, Properties of Vector Product.

### **Unit IV - Statistics**

Introduction to Statistics, Scale of Measurement, Nominal, Ordinal, Interval & Ratio. Frequency Distribution, Bar Chart, Pie Chart, Histogram, Frequency Polygon, Ogive, Pareto Chart, Stem-and-leaf Chart, Scatter Plot, Measure of Central Tendency, Properties, Advantages and Disadvantages of Arithmetic Mean, Geometric Mean, Harmonic Mean. Positional Averages, Median, Quartiles, Deciles, Percentiles & Mode. Measure of Dispersion, Range, Interquartile Range, Standard Deviation.

### **Unit V - Probability**

Introduction to Probability, Experiment, Event, Compound Event, Independent and Dependent Events, Mutually Exclusive Events, Equally Likely Events, Marginal, Union, Joint, Conditional Probability, Basic Probability Rules, General Rule of Addition, General Rule of Multiplication, Concept of Bayes' Theorem.

**SUBJECT: BUSINESS ECONOMICS**

**SUBJECT CODE: BBA617B**

**CREDITS: 4**

### **Course Objective:**

The Objective is to provide, to understand the key concepts of macroeconomic concepts of business, to know the factors determining supply and demand in various market structure, to know the various cost and revenue concepts under the functioning of various types of industries and to know main financial markets and institutions in facilitating commerce & development.

### **Unit I – Macro Economic context of business**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Determination of macroeconomic phenomena – equilibrium national income – growth in national income, price, inflation, unemployment, trade deficits and surpluses – stages of trade cycle – principles of public finance – effects of changes in the economic growth rate, interest rates. Government expenditure and taxation – index numbers

Concept of balance of payments – free trade and protectionists instruments policy, impact of exchange rate policies on business

## **Unit II – Institutional context of business**

Nature of globalisation and factors driving it (improved communications, political realignments, growth of global industries and institutions, cost differentials). Major institutions promoting global trade and development - Principal institutions encouraging international trade – globalisation of business – offshoring – industrial relocation – emergence of growth markets – main trading agreements and trading blocks. Identify the impacts of economic and institutional factors using the PESTEL framework.

## **Unit III – Micro Economic and Organisational Context Of Business**

Types of organisations – public, private & mutually owned organisations – types of Not-for-Profit Organisations – shareholders wealth management – principal – agent problem and its impact on the decisions of the organisation. Price mechanism – determinants of demand and supply – price elasticity of demand – effects of price elasticity of demand on Total revenue curve#. Sources of internal and external economies of scale- outsourcing decisions and costs – minimum and maximum price policies in good and factor markets.

## **Unit IV – Informational context of business**

Data & information, graphs, charts and diagrams – scatter graphs, histograms, bar graphs, ogives. Big data and data analytics in business applications – time series analysis – correlation co-efficient – regression equation to predict the dependent variables – forecasting

## **Unit V – Financial Context of Business**

Financial intermediaries – commercial banks – financial assets and financial markets – foreign exchange markets. Financial mathematics – simple & compound interests – annuities & perpetuities – Discounting techniques – NPV and IRR. Interest rates – interest rate changes on market demand – concepts of forwards, futures and options.

### **SUBJECT: FUNDAMENTALS OF MANAGEMENT ACCOUNTING**

**SUBJECT CODE: BBA618A**

**CREDITS: 4**

**Course Objective:** The objective is to familiarise the students with the mechanics of to understand the management accounting, students learn the methods of costing, overheads and ascertain the various types of budget and approaches to analyse the profits.

## **Unit I - The Context Of Management Accounting**

Purpose of management accounting and the role of the Management Accountant-need for management accounting-characteristics of financial information for operational, managerial

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

and strategic levels within organisations- role of the management accountant-relationships between the management accountant and the organization's managers- The Global Management accounting principles. Role of CIMA as a professional body for Management Accountants-role of CIMA in developing the practice of management accounting

## **Unit II - Costing**

**Cost identification and classification**-classification of costs in relation to output classification of costs in relation to activity level appropriate costs having identified cost behaviour-classification of costs in relation to decisions – segregation of fixed and variable costs from semi-variable costs – relevant and irrelevant costs.

**Overheads** – overhead cost estimates – treatment of direct and indirect costs – overhead absorption rate – under and over absorption of overheads – Marginal cost pricing and full cost pricing.

## **Unit III– Planning And Control**

Preparation of budgets for planning and control-need for the preparation of forecasts and Plan-Preparation of functional budget- budget statements-impact of budgeted cash surpluses and shortfalls on business operations-preparation of flexible budget-Calculate budget variances – concepts of Zero based Budget, Incremental budgeting, Rolling Budget.

Application of variance analysis to reconcile budgeted and actual profits in a marginal Format-Principles of standard costing-Calculation of variances for materials, labour, variable overheads, sales prices and sales volumes-Preparation of a statement that reconciles budgeted profit with actual profit calculated using marginal costing- reasons for variances and the inter-relationships between variances

## **Unit IV – Performance Measurement And Reporting**

Calculation of appropriate financial and non-financial performance measures-need for appropriate performance measures-Calculation appropriate financial and nonfinancial performance measures in a variety of contexts

Preparation of accounts and reports for manager-integration of the cost accounts with the financial accounting system-Prepare a set of integrated accounts, showing standard cost variances- preparation of accounts related to Job and batch costing-Cost accounting statements for management information in manufacturing, service and not-for-profit organisations.

## **Unit V- Decision Making**

**Risk and uncertainty** - use of expected values and joint probabilities in decision making-calculate summary measures of central tendency and dispersion for both grouped and ungrouped data-Arithmetic mean, median, mode, range, variance, standard deviation and coefficient of variation for both ungrouped and grouped data-Graphs/diagrams and use of normal distribution tables – decision tree approach.

**Short term decision making** - The use of appropriate techniques for short-term decision making-breakeven charts, profit volume graphs, breakeven point, target profit, margin of safety- Make or buy Decisions-Calculate the profit maximizing sales mix after using limiting factor analysis-

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Use of appropriate techniques for long-term decision making** - The time value of money- financial mathematics - Discounting, compounding, annuities and perpetuities- Calculate the net present value, internal rate of return and payback for an investment or project

**SUBJECT: FUNDAMENTALS OF FINANCIAL ACCOUNTING**  
**SUBJECT CODE: BBA619A**  
**CREDITS: 4**

**Course Objective:** To understand the basics of accounting and concepts of double entry system. The students understand book keeping and preparation of final accounting statements for business organizations.

**Unit I - Accounting Principles, Concepts And Regulations**

The principles and concepts of financial accounting - need for accounting records; Identify the needs of different user groups; Distinguish between the financial and management accounts; capital and revenue, cash and profit, income and expenditure, assets and liabilities; the underlying assumptions, policies; the accounting equation.

**Unit II - Recording Accounting Transactions**

Accounting records; Prepare the books of prime entry; Applications the principles of double-entry Bookkeeping; nominal ledger accounts; the trial balance; the nature of accounting errors, prepare accounting entries for the correction of errors; Prepare accounting entries for noncurrent assets; Prepare a non-current asset register.

**Unit III- Accounting Reconciliations**

Bank reconciliation statements; Prepare petty cash statements under an imprest system; Prepare sales and purchase ledger control account reconciliations.

**Unit IV - Preparation of Accounting Entries for Specific Transactions**

Calculate sales of tax; Prepare accounting entries for sales tax; Prepare accounting entries for payroll; Prepare accounting entries for the issue of shares

**Unit V- Preparation of Financial Statements for Single Entities and Its Analysis**

Prepare accounting adjustments. Prepare accounting entries for accruals and prepayments; Prepare accounting entries for irrecoverable debts and allowances for receivables; Prepare accounting entries for inventories.

Prepare basic manufacturing accounts. Prepare financial statements from a trial balance; Prepare financial statements from incomplete records; Prepare a statement of cash flows. Identify information provided by accounting ratios the information provided by the calculation of accounting ratios reasons for the changes in accounting ratios. Calculation of profitability ratios, liquidity ratios, risk ratios.

**SUBJECT: COMMUNICATION SKILLS**  
**SUBJECT CODE: DEN001A**  
**CREDITS: 3**

**BBA. (common to all disciplines)-I Semester**

**Course Objectives :**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introducing the Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.
6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

#### **Course Outcomes (CO):**

##### **At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within

realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

#### **Syllabus: Theory**

<b>Unit I</b>	Basics of Organizational Communication: Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>Unit II</b>	Basic Writing Skills: Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>Unit III</b>	Composition:, Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>Unit IV</b>	Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>Unit V</b>	Professional and Technical Communication : Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

#### **Syllabus: Lab**

<b>Unit I</b>	Basics of Organizational Communication: Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time Management, Following Deadlines etc
<b>Unit II</b>	Write Dialogue from the different contexts of corporate culture: Employee

	and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>Unit III</b>	Composition:, Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of DraftingRedrafting, Proof Reading, Editing etc
<b>Unit IV</b>	Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>Unit V</b>	Professional and Technical Communication : Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

### Methodology for Evaluation

1. Internal Assessment (Theory)
  - a) Home Assignments: One from each Unit : 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
2. Term End (Theory) : 50 Marks
3. Internal Assessment (Lab)
  - (a) Daily Performance in the Lab : 50 Marks
4. Term End (Lab) : 50 Marks

### Suggested Reading:

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
4. On Writing Well. William Zinsser. Harper Resource Book. 2001
5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006
6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

**SUBJECT: CULTURE EDUCATION I**  
**Semester-I**  
**SUBJECT CODE: DIN001A**  
**CREDITS: 2**

### Course Objectives:

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

2. To understand the role of great personalities and movements in the progress of India.

Course Outcomes (CO):

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

### **Unit I- Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)

2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

### **Unit II- Society and Culture-I**

3. Introduction to Indian Culture and Major Symbols of Indian Culture

4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudheva Kutumbakam

### **Unit III- India in Progress-I**

5. Education, Science and Technology in Ancient India

6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

### **Unit IV- Great Indian Personalities-I**

7. Life and works of the Great People of Ancient India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupta Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chanakya, Varahmihira, Bhishm, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

### **Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah

2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies

by Saroj Bala, Kulbhushan Mishra

## **Semester II**

**SUBJECT: ORGANIZATION BEHAVIOUR**

**SUBJECT CODE: BBA620A**

**CREDITS: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Course Objective:** Understand how the organisations can be managed effectively considering the behaviour of various stakeholders of an organisation and analysing the skills required for the future advantage of an organisation.

**Unit I Organization behaviour – an introduction**

Meaning of organizations – Nature of organization behaviour – Basics of organization behaviour – Scope and evolution of organizational behaviour – Organizational arrangements and Organization behaviour – Key terminologies in Organization Behaviour - Organizational Behaviour Model (OB Model).

**Unit II Individual behaviour, intelligence and personality**

Meaning of individual behaviour – personal and environmental factors – Models of individual behaviour – nature and types of intelligence – theories and measurement of intelligence – Intelligence factors – intelligence in the context of organizational behaviour.

Nature and determinants of personality – Personality traits – Personality in the context of Organization Behaviour.

**Unit III Motivation and work stress**

Nature and importance of motivation – challenges and theories of motivation – Motivation and organizational culture – quality of work life – rewards and behaviour modification – problem employees – employee engagement.

Meaning of work stress – work stress model – stress management – Stress and organizational behaviour.

**Unit IV Group and team behaviour**

Nature and types of groups – Group dynamics and Organization behaviour – determinants of group dynamics – Importance of group dynamics in an organization – group development strategies – Group motivation – Group structuring and decision making.

Meaning of team – differences between group and team – Types and benefits of teams – effective team management – team conflicts and resolution – Team development and Organizational Behaviour.

**Unit V Organizational culture and leadership**

Meaning of leadership – leadership vs management – leadership styles and theories – formal and informal leadership – Ethics and leadership – leadership and organizational culture – Sustaining culture – changing organizational culture – workplace behaviour – Ethics of power.

**Course outcomes:**

CO 1: Understand the basic of organizational behaviour in the context of the dynamic environment.

CO 2: Understanding the role of individual behaviour, intelligence and personality in the context of organizational development.

CO 3: Understanding importance of rewarding and motivating the stakeholders and managing the stress to effectively manage the organizational performance

CO 4: Understand the role of group and team dynamics in the current organizational environment

CO 5: Understand the importance of perception into organizational culture, leadership and ethics in an organizational development.

**SUBJECT: PRINCIPLES OF MARKETING MANAGEMENT**

**SUBJECT CODE: BBA621A**

**CREDITS: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**Course Objective:** To provide a holistic orientation of emerging marketing trends with the practical skills required to analyze consumer data, create marketing campaigns, develop digital/social media content and make successful marketing decisions and to equip students to be innovative, technically competent, and think critically through experiential and student-centric teaching approach.

### **Unit I: Fundamentals of Marketing Management**

Meaning & Definition of marketing -Role of Marketing -Relationship of Marketing with other functional areas -Market Concepts -Product concept -Selling concept -Marketing concept -Societal marketing concept -Approaches to marketing management -Functions of marketing -Scope of marketing: goods, services, events, organizations, etc. -Emerging trends in marketing.

### **Unit II: Marketing Plan**

Marketing Environment: Concept -Macro-environmental forces -The changing marketing environment -Analyzing needs and trends in Macro-Environment: Economic Environment, Technical Environment, Political, Environment and Socio-cultural Environment. Introduction to The Marketing Plan –Definition –Nature –Objectives -Structure of The Marketing Plan -The Process of marketing plan -Critical elements of external and internal analysis of Marketing Plan -Implementation of Marketing Plan.

### **Unit III: Marketing Mix**

Introduction to marketing mix -Marketing mix implementation: short term and long term tactics –Product: meaning, elements, product mix -Product mix strategies -Product line -Product lifecycle Product planning -New product development -Failure of new product -Product branding -Branding strategy and packaging –Pricing: Objectives -Factors influencing pricing policy -Methods of pricing -Pricing strategy. Physical Distribution: Meaning -Factors affecting channel selection -Types of marketing channels –Promotion: Meaning and significance of promotion –Personal selling & advertising (meaning only).

### **Unit IV: Buyer behavior**

Market Segmentation: Levels and patterns of market segmentation -Bases for segmenting markets -Market segmentation - Targeting - Product Positioning - Types and bases of positioning - Product Differentiation -Meaning of consumer, customer, consumer behaviour and buying motives -Factors influencing buyer

behavior -Factors that influence consumer purchasing decisions -Buying process -Stages of the consumer buying behavior -Business to Business (B2B) buying process -Key factors influencing B2B purchasing decisions -Differences between Consumer goods and Industrial goods

### **Unit V: Digital Marketing**

Introduction to Digital Marketing –Concept of Digital Marketing -Difference between traditional marketing and digital marketing -Trends and scenarios of the industry -Planning and Creating a Website -Search Engine Optimization (SEO), Search Engine Marketing (SEM), of Social Media Marketing, Blogging, Content Strategy, Email Marketing.

**Course outcomes:**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

CO1: To understand the role and importance of marketing  
CO2: Develop a marketing plan to generate better sales and profits  
CO3: Formulate the product and price mix based to serve consumer needs.  
CO4: Identify the factors influencing consumer behavior and purchase decision  
CO5: Outline the digital tools to develop marketing strategies for the new age consumer

**SUBJECT: HUMAN RESOURCES MANAGEMENT**

**SUBJECT CODE: BBA622A**

**CREDITS: 4**

**Course Objective:** The objective of the subject is to understand the importance of effective and efficient management of human people in an organization to help the business gain a strategic and competitive advantage.

**Unit I: Human Resource Management (HRM) - Introduction**

Meaning of Human resources – Meaning of HRM – nature and functions of HRM – HR Manager – qualities and qualifications – Strategic Human Resource Management – Strategic management – corporate level strategies – Strategic HR issues – Organizational and HR strategies -

**Unit II: Job Analysis, team analysis and Job Environment**

Meaning of HR terms – Job design, job rotation, job enlargement, job enrichment, team work – Need for job analysis and team analysis – Job description – job specification – job sharing – ergonomics – employee empowerment – Job redesign

**Unit III: Human Resource Planning**

Meaning, features and scope of Human Resource Planning – process of and steps in Human Resource Planning – Barriers to effective implementation of Human Resource Planning – Human Resource Planning Vs Strategic planning – Human resource planning through people, finance and technology.

**Unit IV: Performance appraisal and compensation management**

Meaning, need and purposes of performance appraisal – methods of performance appraisal – Group appraisal – Behavioral aspects of performance appraisal – Concept of MBO – the balanced score card – managerial appraisal – challenges of performance appraisal.

Concepts of transfer, promotion and demotion – types of promotions – types of transfer – reasons for demotion – concept of absenteeism – calculation and causes of absenteeism rate – measures to reduce absenteeism – concept of labour turnover – types and causes of labour turnover.

**Unit V: Training and Development**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Assessment of training needs – training methods - Apprenticeship, understudy, job rotation, vestibule training, case study, role playing, sensitivity training, In-basket, management games, conferences and seminars, coaching and mentoring, management development programs; Training process outsourcing.

**Course Outcomes:**

CO1: Understand the role and importance of Human resource Management in effectively managing the human capital in an organization.

CO2: Understand the key terminologies in the context of Human Resource Management and their scope and benefits in a practical environment

CO3: Understand the importance of Human resource planning in the context of people, technology and finance

CO4: Understand the importance of performance appraisal and other concepts in the area of Human resource management

CO5: Understand the methods and purposes of training and development activities to gain a strategic advantage

**SUBJECT: MANAGING FINANCE IN A DIGITAL WORLD**

**SUBJECT CODE: BBA623A**

**CREDITS: 4**

**Course Objective:** To understand the central role that finance plays in an organisation, and how and why technologies used impact the finance function, how to use and examine data collected and processed by machines to create and preserve value for organisations and how the finance function is structured and shaped, and how it interacts with other parts of the organisation to achieve the objectives of the whole organisation.

**Unit I: Role Of Finance Function**

Different types of organisations – functions of an organisation – the roles of finance function – enabling value creation through planning, forecasting and resource allocation – data collection – types of analysis to produce insight – potential impact of technology - How finance communicates to influence key stakeholders

**Unit II: Technology In Digital World**

Characteristics and Dynamics of Fourth Industrial Revolution – Cloud Computing – Big Data Analytics – Process Automation – Artificial Intelligence – Data Visualisation – Block chain – Internet of things – Mobile – 3-D Printing – New areas of Finance to focus on – Areas of Finance susceptible to automation – Digital mindsets for Finance – Ethics of the use of technology

**Unit III: Data And Information In A Digital World**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Using Data for: Decision making, Understanding the customer, Developing-customer value proposition, Enhancing operational efficiency, Monitoring data, Ethics of Data usage – Assessment of Data needs – Extraction, Transformation and Loading (ETL) Systems – Business Intelligence (BI) systems – Big Data Analytics – Data visualization

#### **Unit IV: Shape And Structure Of Finance Function**

Structure of Finance function from the roles that generate information to the roles that turn information into insights and communicate insights to decision makers – Hierarchical shape of Finance function – Shared Services and Outsourcing of Finance Function – Retained Finance – Automation & Diamond shape of Finance Function – Finance operation to generate information and preliminary insight – FP & A, Taxation, corporate reporting, decision support to produce insights – Business partnering to influence organisations to make appropriate decisions – Leading Finance team to create the required impact for the organisation.

#### **Unit V: Finance Interacting With Organisations**

Process management – product and service management – supply chain management

Market segmentation – big data analytics in marketing – channel management – sales forecasting & management

Staff acquisition – staff development – performance management – motivation and reward systems

IT infrastructure – IT systems support – cost and benefits of IT systems

#### **Course Outcome:**

CO1: To understand how the finance function enables, shapes and narrates value creation through planning, forecasting, resource allocation, performance management and financial reporting.

CO2: To understand key technologies and their impact on an organisation including, cloud computing, big data, data analytics, process automation, artificial intelligence, data visualisation, block chain, internet of things.

CO3: To understand how the finance function can use data and information to assist operations in enhancing operational efficiency.

CO4: To understand the contemporary transformation of the finance function in the digital era from roles that generate information to roles that turn information into insight and how finance communicates that insight to decision-makers.

CO5: To understand how the finance function helps manage operations, marketing and Sales, HR and IT functions in creating and preserving value.

#### **Semester III:**

**SUBJECT: MANAGEMENT ACCOUNTING (CIMA P1)**

**SUBJECT CODE: BBA675A**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

## **CREDIT: 4**

**Course Objective:** The Objective is to provide the purpose and types of organization structure, the management functions, theories, and their applications, to comprehend the role of managers and the decision-making process and to know the various leadership styles and their significance.

### **Unit I: Cost Accounting for Decision and Control**

Inventory control – profit reporting – cost and management transformation – costing applied to different types of organizations – costing applied to digital cost objects. Marginal costing – absorption costing – product and service costing under ABC – features of digital costing

### **Unit II: Budgeting and Budgetary Control**

The purposes of forecasts, plans and budgets - the purposes of budgets, including planning, communication, coordination, motivation, authorization, control and evaluation, and how these may conflict. Forecasts of financial results - projected product/service volumes, revenue and costs employing appropriate forecasting techniques and taking account of cost structures.

Budgets based on forecasts – preparation of a budget for any account in the master budget, based on projections/forecasts and managerial target - alternative approaches to budgeting.

The principles that underlie the use of budgets for control – the concept of the budget as a control system and the use of responsibility accounting and its importance in the construction of functional budgets that support the overall master budget. Analysis performance using budgets, recognizing alternative approaches and sensitivity to variable factors - analysis the consequences of 'what if' scenarios.

### **Unit III: Short Term Decision Making – I**

Concepts of cost and revenue relevant to pricing and product decisions - principles of decision making, including the identification and use of relevant cash flows and qualitative factors - conflicts between cost accounting for profit reporting and inventory valuation, and information required for decision making - issues that arise in pricing decisions and the conflict between marginal cost principles, and the need for full recovery of all costs incurred. Marginal costing, full cost recovery for pricing decisions,

### **Unit IV: Short Term Decision Making – II**

Analyse short-term pricing and product decisions – application of relevant cost analysis to various types of short-term decisions - break-even analysis in multiple product contexts - product mix decisions, including circumstances where linear programming methods are needed to identify 'optimal' solutions - explain why joint costs must be allocated to final products for financial reporting purposes but why this is unhelpful when decisions concerning process and product viability have to be taken.

### **Unit V: Dealing with Risk and Uncertainty**

Analysis of information to assess risk and its impact on short-term decisions - the nature of risk and uncertainty and the attitudes to risk by decision makers – analysis of risk using sensitivity analysis, expected values, standard deviations and probability tables – application decision models to deal with uncertainty in decision making

**SUBJECT: FINANCIAL REPORTING (CIMA F1)**

**SUBJECT CODE: BBA676A**

**CREDITS: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Course Objective:** Financial Reporting is designed to cover the regulation and preparation of financial statements and how the information contained in them can be used. It provides the competencies required to produce financial statements for both individual entities and groups using appropriate international financial reporting standards. It also gives insight into how to effectively source and manage cash and working capital, which are essential for both the survival and success of organizations. The final part focuses on the basic principles and application of business taxation.

**Unit I: Regulatory environment of financial reporting**

Identify the major regulators and their purpose - National regulators, IFRS Foundation, IASB, IOSCO. Standard setting process, Difference between rule based and principle based standard, Introduction corporate governance principles financial reporting. Need and Scope of corporate governance. Different approaches to corporate governance.

**Unit II: Framework and International Accounting Standards**

Identify the main elements of financial statements contained in the IFRS conceptual framework, Objectives and overall purpose of financial reporting, Qualitative characteristics of financial information, Reporting entity and its boundaries, Recognition (and derecognition), Measurement bases, Presentation and disclosure, Concept of capital maintenance  
Specific financial reporting standards related to: Non-current assets, Leases, Impairment, Inventory, Events after the period.

**Unit III: Preparation of financial statements**

Application of financial reporting standards to prepare: Statement of financial position, Statement of comprehensive income, Statement of changes in equity, Statement of cash flows.

**Unit IV: Principle of taxation**

Features of direct & indirect taxation, corporate and personal taxes. Basis of taxation, Computation of corporate tax. Exempt income, Income taxed under different rules, Allowable expenditure, Capital allowances, Tax reliefs, Tax on sale of asset. Taxation across international borders including corporate residence, Types of overseas operations, Double taxation, Transfer pricing. Ethics of taxation - Tax avoidance and tax evasion.

**Unit V: Managing cash and working capital**

Distinguish between the types and sources of short-term finance which includes, Trade payables, Overdrafts, Short term loans, Debt factoring, Trade terms, Tradepartners, Banks. Calculation of Operating cycle and Cash flow cycle. Application of techniques to manage Receivables, Payables and Inventory management, Risks relating to working capital. Short-term cash flow forecast.

**SUBJECT: RESEARCH METHODOLOGY**

**SUBJECT CODE: BBA627A**

**CREDITS: 4**

**Course Objective:** This module enables learners to develop the basic principles of research methods. The learners focus how to do research, with an emphasis on student-centered activities and problem solving. Learners will develop insights the key concepts as the scientific method; operationalizing constructs; independent and dependent variables, data types and ways of measurement, confounding variables experimental and non-experimental design questionnaire construction; developing and testing hypotheses; descriptive statistics and describing data graphically; and the ethics of research.

**Unit I: Research Formulation and Design**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Motivation and objectives-Research methods and methodology. Types of research Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical, concept of applied and basic research process, criteria of good research. Defining and formulating the research problem, selecting the problem, necessity of defining the problem, importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, patents, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis.

#### **Unit II: Data Collection and Analysis**

Accepts of method validation, observation and collection of data, methods of data collection, sampling methods, data processing and analysis strategies and tools, data analysis with statically package (Sigma STAT, SPSS for student t-test, ANOVA, etc.), hypothesis testing.

#### **Unit III: Statistical Softwares**

Computer and its role in research, Use of statistical software SPSS, GRETL etc. in research. Introduction to evolutionary algorithms - Fundamentals of Genetic algorithms, Simulated Annealing, Neural Network based optimization, Optimization of fuzzy systems.

#### **Unit IV: Research Ethics and Scholarly Publishing**

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, commercialization, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing- IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

#### **Unit V: Interpretation and Report Writing**

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of writing Research Report Precautions for writing Research Reports, Conclusions.

### **SUBJECT: HUMAN RESOURCE DEVELOPMENT**

#### **SUBJECT CODE: BBA628A**

#### **CREDIT: 4**

**Course Objective:** This module will enable the learners to develop strong understanding and key skills which are required for human resource professionals. Learners will be able to understand the importance of human resource development and their role in effectively managing the personnel within the organization. Learners will develop insights into the fast-growing and emerging trends of Human Resource Development (HRD) in globalized economy.

#### **Unit I: Human Resource Development (HRD) -Macro Perspective**

Understand HRD Concept, Origin and Need of HRD, HRD as a Total System, Approaches to HRD; Human Development and HRD; HRD at Macro and Micro Climate

#### **Unit II: HRD–Micro Perspective**

Understand areas of HRD, HRD Interventions Performance Appraisal, Potential Appraisal, Feedback and Performance Coaching, Training, Career Planning, OD or Systems Development, Rewards, Employee Welfare and Quality of Work Life and Human Resource Information; Staffing for HRD: Roles of HR Developer; Physical and Financial Resources for HRD; HR Accounting; HRD Audit, Strategic HRD

#### **Unit III: Instructional Technology for HRD**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Learning and HRD; Models and Curriculum; Principles of Learning; Group and Individual Learning; Transactional Analysis; Assessment Centre; Behaviour Modeling and Self Directed Learning; Evaluating the HRD

#### **Unit IV: Human Resource Training and Development**

Concept and Importance of training and development; Assessing Training Needs; Designing and Evaluating T&D Programmes; Role, Responsibilities and challenges to Training Managers

#### **Unit V: Training Methods**

Training within Industry (TWI): On the Job & Off the Job Training; Management Development: Lecture Method; Role Play; In-basket Exercise; Simulation; Vestibule Training; Management Games; Case Study; Programmed Instruction; Team Development; Sensitivity Training; Globalization challenges and Strategies of Training Program, Review on T&D Programmes in India.

**SUBJECT: COMP. APPLICATIONS III (MS PROJECT)**

**SUBJECT CODE: BBA629A**

**CREDITS: 3**

#### **Course Objective:**

The goal of this module is to help students explore MS Project application, providing information on relevant project management concepts while also offering specific procedures to build and track a Project Schedule. The students will gain expertise towards the MS Project application by learning about the tasks and dependencies, estimating durations, and working with project Views. They will also understand the advanced customizations and reporting elements under MS Project application.

#### **Unit I: Introduction**

MS Project Application, Project Family, Features in Project 2016 & 2019, Comparative study on MS Project Versions (2013, 2016 & 2019), The Project Interface, Backstage View, Ribbons and Tabs, Views, Reports, Defining Project Manager, Starting a Project, Task Master, Co-dependent Nature of Tasks, Estimating Task Time, Introducing the Work Breakdown Structure (WBS).

#### **Unit II: Scheduling Basics**

Starting a New Plan and Setting its Start Date, Setting Non-Working Days in the Project Calendar, Entering Plan's Title and Other Properties, Entering Task Names, Task Durations, Milestone Task, Creating Summary Tasks to Outline the Plan, Task Dependencies with Links, Switching Task Scheduling from Manual to Automatic, setting up Resources, Work Resources Names and Maximum Capacity, Pay Rates, Adjusting Working Time in Resource Calendar.

#### **Unit III: Resources Assignment and Plan Sharing**

Assigning Work Resources to Tasks, Controlling Work when Adding or Removing Resource Assignments, Assigning Cost Resources to Tasks, Checking the Plan's Duration, Cost & Work, Customizing Gantt Chart View, Customizing Timeline View, Customizing Reports, Copying and Printing Views & Reports, Saving Plan Baseline, Tracking a Plan as Scheduled through a Specific Date, Entering a Task's Completion Percentage and Actual Values for Tasks.

#### **Unit IV: Advanced Scheduling Techniques**

Viewing Task Relationships with Task Path, Adjusting Task Link Relationships, Setting Task Constraints, Interruptions, Work Time Adjustments, Controlling Task Scheduling using Task Types, Setting Resource Availability at Different Times, Applying Contours, Pay Rates and Material Resources to Tasks & Assignments, Examining Resource Allocations, Levelling

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Overallocated Resources, Sorting-Grouping-Filtering Project Details, Creating New Tables & New Views, Tracking Progress on Tasks and Assignments, Viewing and Reporting Project Status.

#### **Unit V: Advanced Formatting and Customizations**

Formatting Gantt Chart View, Timeline View, Network Diagram View, Calendar View, Printing and Exporting Views, Formatting Tables & Charts in a Report, Sharing Custom Elements between Plans, Recording & Editing Macros, Copying Project Data to other Programs, Opening & Saving to other File Formats from MS Project, Creating a Resource Pool, Viewing Assignment Details in a Resource Pool. Updating Assignments in a Sharer Plan, Updating a Resource's Information and Plan's Working Times in a Resource Pool, Linking New Plans to a Resource Pool, Creating Dependencies between Plans.

**SUBJECT: LIFE SKILLS-I**

**SUBJECT CODE: DEN003A**

**CREDIT: 2**

#### **COURSE OBJECTIVE**

1. Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.
2. Ability to learn by doing it practically in the classroom.
3. Ability to learn by creating an environment and adapting to the environment.
4. The ability to prepare the students as per the need of the Multi-cultural scenario around.

#### **Syllabus: Theory**

<b>Unit I</b>	Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion Basics of Narrating and describing things
<b>Unit II</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview advance theory Basics of Video Interviews and Video Profiles for Job
<b>Unit III</b>	Types of listening, advantages and disadvantages
<b>Unit IV</b>	Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>Unit V</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

## Syllabus: Lab

<b>Unit I</b>	Debates / Speeches / Addressing the public / Extempore/Group Discussion Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids
<b>Unit II</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand Video Interviews and Video Profiles for Job-Practice session for Online Interviews
<b>Unit III</b>	Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives
<b>Unit IV</b>	Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>Unit V</b>	Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

### Methodology for Evaluation

#### 1. Internal Assessment (Theory)

- a) Home Assignments: One from each Unit : 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
- #### 2. Term End (Theory) : 50 Marks

#### 3. Internal Assessment (Lab)

- (a) Daily Performance in the Lab : 50 Marks
- #### 4. Term End (Lab) : 50 Marks

### Suggested Readings:

- 1. A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

2. Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.
3. Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa& Co.
4. The Hard Truth about Soft Skills, by Amazone Publication.
5. 101 Great Answers to the Toughest Interview Questions. Ron Fry. High Bridge Company. 1996.
6. Michael Swan. Practical English Usage, Oxford University Press.

**SUBJECT: Value Education I**  
**SUBJECT CODE: DIN003A**  
**CREDIT: 2**

**Course Outcomes (CO):**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

**Lessons from the Ramayana**

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

**Lessons from the Mahabharata**

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

**Lessons from the Upanishads**

Introduction to the Upanishads: Sruti versus Smriti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

**Message of the Bhagavad Gita**

  
**Dean**  
**Faculty of Management**  
**JECRC University, Jaipur-303305**

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

### **Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendranath – Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception in India – Message from Swamiji's life.

### **Life and Teachings of Spiritual Masters India**

Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

### **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce.

Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

**SUBJECT: Open Elective**

**SUBJECT CODE:**

**CREDITS:3**

**SEMESTER IV:**

**SUBJECT: OPERATION MANAGEMENT**

**SUBJECT CODE: BBA630A**

**CREDITS:4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**Course Objective:**

The objective is to provide the basic understanding of the methods and techniques of production and the economics of effective utilization of resources and the techniques employed to ensure the optimum use of resources.

**Unit I: Introduction to Operations Management**

Definition – differences between operations management and production management – operations and productivity – operations strategy in global environment – using software for productivity analysis – Ethics, social responsibility and sustainability – developing missions and strategies – achieving competitive advantage through operations – strategic planning, core competencies and outsourcing – global operations strategy options.

**Unit II: Designing operations**

Design of goods and services – product life cycle – generating new products – issues for product design – robust design, modular design, CAD and CAM, virtual reality technology, value analysis, sustainability and life cycle assessment (LCA) - product development continuum – acquisition, joint ventures and strategic alliances – defining a product – make or buy decisions, group technology – documents for production – service design – process chain network analysis (PCN), documents for service – application of decision tree to product design.

**Unit III: Quality Management**

Defining quality – quality and strategy – total quality management (TQM) – continuous improvement, six sigma, benchmarking, JIT, Taguchi concepts – Tools of TQM – scatter diagrams, cause-and-effect diagrams – pareto charts – flowcharts – histograms – statistical process controls (SPC) – process capability ratio, process capability index – using software in SPX - role of inspection – TQM in services.

**Unit IV: Supply Chain Management**

Importance of supply chain strategies – six sourcing strategies – many suppliers, few suppliers, vertical integration, joint ventures, keiretsu networks, virtual companies – supply chain risks – managing integrated supply chain – building the supply base – negotiations, contracting, centralized purchasing, e-procurement – logistics management – distribution management – ethics and sustainable supply chain management – measuring supply chain performance – asset committed to inventory, benchmarking the supply chain.

**Unit V: Lean operations**

Lean Operations – elimination of wastages, throughput analysis and improving throughput – lean and just in time – lean layout, lean inventory, lean scheduling, lean quality – lean and the Toyota production system – continuous improvement, respect for people, processes and standard work practice – lean organizations – building a lean organization, lean sustainability – lean in services.

**Course Outcomes:**

CO1: This course introduces the students with the concept and importance of operations management in an organization

CO2: The students will learn different techniques with regard to designing process for a product or a service

CO3: The students will get deep insight into the role of quality and the techniques available in the current age to manage the quality vis-à-vis managing the operations

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO4: The students will be able analyze and evaluate the importance of supply chain management in the current age of digital transformation

CO5: The student will be able understand the growing concept of Lean and lean management and the application in managing the operations in an organization

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Total quality management – Besterfield Dale & Besterfield Carol – Pearson Education

**SUBJECT: MANAGING PERFORMANCE (CIMA E2)**

**SUBJECT CODE: BBA677A**

**CREDITS:4**

**Course Objective:** The objective is to provide knowledge of new business models in the digital ecosystem. Different styles of management along with managing relationships in an organization. Tools and techniques to manage projects and project leadership.

**Unit I: Business Models & Value Creation**

Definition of ecosystems - Participants and roles - Interactions and dynamics - Rules and governance - Technology - Risks and opportunities-Stakeholders and relevant value - Stakeholder analysis - Resources, process, activities, and people in creating value - Products, services, customer segments, channels, and platforms to deliver value - Distribution of value

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303905

to key stakeholders.-Disruption - Ways to build disruptive and resilient business models - Creating digital operating models - Types of digital operating models

### **Unit II: Managing Performance I**

Power, authority, delegation, and empowerment - Contingent and situational leadership - Transactional and transformational leadership - Leadership of virtual teams - Leadership and ethics-Target setting and employee alignment - Employee empowerment and engagement - Performance reporting and review - Rewards and sanctions in managing performance - Different approaches to coaching and mentoring to improve performance - Diversity and equity practices - Health and safety - Organisational culture

### **Unit III: Managing Performance II**

Characteristics of high-performing teams - Motivating team members - Communication process - Digital tools for communication - Negotiation process - Strategies for negotiation - Sources and types of conflicts - Strategies for managing conflicts - • Leadership and ethics

### **Unit IV: Managing Projects**

Overall project objectives - Objectives relating to time, cost, and quality - Purpose and activities associated with key stages of the project life cycle-Workstreams - Work breakdown schedule, Gantt charts, network analysis - PERT charts - Sources and types of project risks - Scenario planning - Managing project risks - Project management software

### **Unit V: Project Leadership**

Project structures and their impact on project performance - Role of project manager - Role of key members of the project team - Life cycle of project teams - Managing key stakeholders of projects - Leading and motivating the project team

### **Course Outcomes:**

CO1: To understand the fundamentals of business models and how new business and operating models can be developed to improve the performance of organizations.

CO2: To understand how to create and preserve value using Human capital as an intangible asset of the organization.

CO3: To understand how different styles of leadership can be used to improve the performance of individuals so they can achieve organizational goals

CO4: To understand how to use project management concepts and techniques to implement strategies effectively and efficiently.

CO5: The To understand how the management concepts are s linked to capital investment decision-making that is covered in other areas of the Management Level

3. The Ecosystem advantage – Charles Araujo

**SUBJECT: ADVANCED MANAGEMENT ACCOUNTING (CIMA P2)**

**SUBJECT CODE: 678A**

**CREDITS: 4**

**Course Objective:** The objective is to demonstrate the techniques for managing the costs using costing and cost driver analysis and controlling the performance of organizational units. It also aims to evaluate capital investment decisions to acquire the capacity to create value and understand the importance of risk and control in the medium term.

**Unit I: Managing the cost of creating value**

Engendering cost-conscious culture – Activity Based costing – activity-based management – Activity Based management as a tool to transform efficiency of repetitive overhead activities, analyze and improve customer profitability and improve channel performance – concepts of JIT and TQM – Kaizen costing – Business Process Re-engineering – target costing – value chain analysis – life cycle costing.

**Unit II: Capital Investment decision making**

Incremental cash flows - tax, inflation and other factors – perpetuities – qualitative issues – sources & integrity of data – role of business intelligence systems – investment decision making process – discounting – capital investments as real options – investment appraisal using payback, accounting rate of return, Net Present Value and Internal Rate of Return.

**Unit III: Managing and controlling the performance of organizational units**

Responsibility centers – objectives of each responsibility centre – controllable and uncontrollable costs and revenues – data analytics in performance management – Critical success factors and key performance indicators – benchmarking – non financial performance indicators – balanced score card -

**Unit IV: Behavioral aspects in performance management and transfer pricing**

Internal competition – internal trading – transfer pricing – transfer pricing for intermediate goods where market exists and where no market exists – types of transfer prices and when to use them – effects of transfer pricing on autonomy, responsibility centre and group profitability – use and ethics of transfer pricing

**Unit V: Risk and control**

Quantification of risk – use of probabilistic models to interpret distribution of project outcomes – stress testing of projects – decision trees – decision making under uncertainty – upside &

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

downside risks – TARA framework – business risks – information system and data in managing risks.

**Course Outcomes:**

CO1: This course introduces the student with the use of cost management, quality and process management and value management.

CO2: The students will learn different criteria, process and techniques that are used to decide which project to undertake.

CO3: The students will get deep insight into the structure and strategies of organizations and the alignment with each other to ensure effective implementation of strategies.

CO4: The student will get deep understanding of managing the performance of business units to ensure that they achieve the strategic and other organizational objectives.

CO5: The student will be able to analyze risks and uncertainties that organizations face in the medium term that are mainly operational in nature

**SUBJECT: STRATEGIC MANAGEMENT (E3 CIMA)**

**SUBJECT CODE: BBA681A**

**CREDITS: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Unit I : The Strategy Process**

Introduction to strategy process, Define strategy, explain the purpose of strategy, outline the rational and emergent processes of arriving at strategy generating strategic options – mission, vision, values and stakeholders, the role of governance and ethics in the strategy process.

## **Unit II: Analysing the organisational eco system**

External environmental analysis – markets and competitions, society and regulation, impact of strategic networks and platforms on organisational strategy, resources and value creation within the organisational ecosystem. Stakeholder analysis and network.

## **Unit III: Generating strategic options and Making strategic choices**

Framework for generating strategic options, strategic options and choice, develop criteria for evaluation of the options, value analysis and portfolio analysis, developing strategic performance management systems.

## **Unit IV: Strategic Control**

Develop detailed action plans, communicate action plans, align incentives to performance, advise on resource availability, assess impact of strategy on organisation, understanding the impact and context of change. Change management – the role of the leader in managing change.

## **Unit V: Digital Strategy**

Digital technologies, digital enterprise, digital strategy – governance and elements of digital strategies, economics of digitisation, digital ecosystem, digital consumption, data metrics.

### **Course Outcome:**

CO1: Explain the purpose of strategy, discuss the types and levels of strategy

CO2: Analyse the elements of the ecosystem, discuss the impact of the eco system on organisational strategy, discuss the drivers of change in the ecosystem.

CO3: How to generate and develop options, evaluating options, produce strategy by integration of choices into coherent strategy.

CO4: Develop strategic performance management system, advise on resource allocation to support strategy implementation, recommend change management techniques and methodologies.

CO5: Describe the governance of digital transformation, analyse digital transformation, discuss the various elements of digital strategies.

**SUBJECT: CORPORATE GOVERNANCE AND SOCIAL RESPONSIBILITY**  
**SUBJECT CODE: BBA633A**  
**CREDITS:3**

**Course Objective:**

This course aims to provide students with a thorough grounding in a number of key introductory and advanced topics of corporate governance and its relevance for corporate social responsibility. Content includes relevant applied theories, current research, and practice.

**Module 1: Introduction**

Definitions and the evolution of Corporate Governance Basic definitions in the field of Corporate Governance and the historical development of Corporate Governance from the Wall Street Crash until nowadays will be discussed.

**Module 2: Parties involved in Corporate Governance**

Corporate Governance is based on the relationship of many players (such as shareholders, management and board of directors, stakeholders) involved in governing of a corporation. This meeting is devoted to discuss their rights, duties and responsibilities.

**Module 3: Corporate Governance Theories**

Organizational Theories (including Stewardship, Resource and Institutional Theory), Economic Theories (such as Agency, Finance and Managerial Theory) and the Stakeholder Theory will be presented on this meeting

**Module 4: Corporate Social Responsibility (CSR)**

CSR is about how business takes account of its economic, social and environmental impacts in the way it operates – maximizing the benefits and minimizing the downsides. The course discussion will be based on these issues, Corporate Social Responsibility in India, Recent developments

**Module 5: The International Environment for Corporate Governance**

International Corporate Governance. OECD and BIS Principles. Implementation. Pitfalls. Final Review. The International Environment for CG

**Course Outcomes:**

CO1: Distinguish the various expectations and demands that emanate from stakeholders on business firms.

CO2: Corporate Governance is based on the relationship of many players.

CO3: Define governance in business and recognize the legitimacy of business as an institution in a global society.

CO4: Describe the ethical a current social responsibility issues and the influence of these issues on society.

CO5: International Corporate Governance

**SUBJECT: LEADERSHIP SKILLS**

**SUBJECT CODE: BBA641A**

**CREDITS: 2**

**Course Outcomes:**

On successful completion of this course, the students will be able:

CO1: To know the role, functions and different styles of leadership

CO2: To know and apply the theories of leadership

CO3: To know the meaning of power and politics in context of leadership

CO4: To make the students aware about developing leadership skills in themselves

CO5: To make the students aware about different and innovative leadership

**Unit I: Introduction to Leadership:**

Leadership, role and functions of a Leader, Leadership motives Characteristics of an Effective Leader, Leadership as a process – the complexities of leadership – Effective leadership behaviors and attitudes – Leadership and power, coercion, Management, Trait approach, Leadership Behaviour and styles – Lewins Leadership styles, Ohio state Leadership study, The University of Michigan Study, Blake and Moutons Managerial Grid.

**Unit II: Leadership Theories:**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Traditional Theories (A Brief Overview) • Trait Theory • Behavioral Theories • Fiedler's Contingency Model • Path – Goal Leadership Theory • Situational Leadership Theory • The Managerial Grid Modern Theories • Charismatic Leadership • Transactional and Transformational Leadership • Substitutes for Leadership • Authentic Leadership

### **Unit III: Power and Politics:**

Meaning Power, Distinction between Power & Authority, Bases or Sources of Power, Acquisition of Power, Symbols of Power and Powerlessness, Organizational Politics, Reasons for Organizational Politics, Managing Organizational Politics

### **Unit IV: Developing Leadership Skills:**

What Skills do Leaders Need? ; Leadership Training Programs, Designing Effective Training, Special Techniques of Leadership Training: Behavior Role Model, Case, Discussion and Business Games & Simulation, Challenges in designing training programmes

### **Unit V: Innovative Leadership and Design Thinking**

Innovative Leadership, Concept of emotional and social intelligence, Synthesis of human and artificial intelligence, Why does culture matter for today's global leaders, Design Thinking, What is design thinking, Key elements of design thinking: - Discovery - Interpretation - Ideation - Experimentation - Evolution. ,How to transform challenges into opportunities? How to develop human-centric solutions for creating social good

**Life Skills 2 (Aptitude)**  
**Subject Code: DEN004A**  
**Credits: 2**

**Course Objectives:**

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

**Course Outcomes (CO):** At the end of this course students will have:

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

**Syllabus: Theory**

UNIT 1	Number System:  a. Number system  b. Power cycle  c. Remainder cycle  d. Factors, Multiples  e. HCF and LCM
--------	---

UNIT 2	<p>Data Arrangements and Blood Relations:</p> <ul style="list-style-type: none"> <li>a. Linear Arrangement</li> <li>b. Circular Arrangement</li> <li>c. Multi-dimensional Arrangement</li> <li>d. Blood Relations</li> </ul>
UNIT 3	<p>Time and Work:</p> <ul style="list-style-type: none"> <li>a. Work with different efficiencies</li> <li>b. Pipes and cisterns</li> <li>c. Work equivalence</li> <li>d. Division of wages</li> </ul>
UNIT 4	<p>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</p> <ul style="list-style-type: none"> <li>a. Coding and Decoding</li> <li>b. Series</li> <li>c. Analogy</li> <li>d. Odd Man Out</li> <li>e. Visual Reasoning</li> </ul>
UNIT 5	<p>Percentages, Simple Interest and Compound Interest:</p> <ul style="list-style-type: none"> <li>a. Percentages as Fractions and Decimals</li> <li>b. Percentage Increase / Decrease</li> <li>c. Simple Interest</li> <li>d. Compound Interest</li> </ul>

	e. Relation Between Simple and Compound Interest
UNIT 6	Permutation, Combination and Probability: a. Fundamental Counting Principle b. Permutation and Combination c. Computation of Permutation d. Circular Permutations e. Computation of Combination f. Probability
UNIT 7	Data Interpretation and Data Sufficiency: a. Data Interpretation – Tables b. Data Interpretation - Pie Chart c. Data Interpretation - Bar Graph d. Data Sufficiency

UNIT 8	Profit and Loss, Partnerships and Averages:  a. Basic terminologies in profit and loss  b. Partnership  c. Averages  d. Weighted average  e. Mixtures and allegations
--------	---

### Methodology for Evaluation

#### 1. Internal Assessment

a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks

b) In Semester Tests (Minimum two) : 30 Marks

#### 2. Term End : 40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

4. Quick Arithmetics, by Ashish Agarwal, S Chand Publ.;
5. Quicker Maths, by M tyra& K Kundan, BSC Publishing Co. Pvt. Ltd., Delhi;
6. Owl Purdue University online teaching resource

### Semester V:

**SUBJECT: INTERNATIONAL BUSINESS MANAGEMENT**

**SUBJECT CODE: BBA634A**

**CREDITS: 4**

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

**Course Objective:** The Objective is to provide the understanding of the international business environment and its competitive and investment climate and also would provide knowledge of international business and finance activities of the organization and the investigation of changes in firms strategies and accounting policies as per the change in business environment and also the understanding of various aspects of international trade, finance and currency derivatives.

**Unit I: International business: An Overview**

Understand the evolution of international trade theories, Introduction to Forex Markets: Absolute advantage, Relative advantage, and H-O theory, Leontief Paradox, Porter's Diamond paradox; Foreign Exchange (Forex) Market, Communication in Forex Markets, Currency Quotes- both in global and domestic market, calculation of forward rates using spot rates, calculation of discount/premium on spot rate using spot and forward rates, Spot Rates with and without transaction costs.

**Unit II: Principles and monetary systems of international trade**

Understand the theories of absolute cost advantage, comparative cost advantage theory, Interest rate Parity, PPP Principle, International Fisher Effect, The International Monetary System: Bretton Wood system, Exchange Rate Regimes, International Banking, Concept and Development of Universal banking, Global depository receipt, Indian depository receipt.

**Unit III: Exposure of currency and its measurement**

Understand the fundamental functions of currency Exposure and its Management: Types of Forex Exposures: Transaction, Translation, and Economic Exposure and their management; Country Risk-Analysis and Management. Multinational payments Management: Leading, Lagging, Pooling and Netting, foreign exchange risk management system.

**Unit IV: Financial derivatives**

Understanding the factors influencing costs and benefits of FDI, Financial Derivatives with respect to currency: Forwards and Futures, Interest rate futures and currency futures; Determination of forward and futures prices; Options and related terminology, Calculating the pay-off from options and its representation.

**Unit V: Pricing & Its strategies**

Understanding on Pricing of Options- Binomial model and Black-Scholes model; trading strategies involving options; Introduction to Swaps, Interest rate swaps, currency swaps, cross currency swaps; Forward rate agreements (FRA). Interest rate caps, floors, collars, cost-oriented export pricing methods and market-oriented export pricing methods.

**Course Outcomes:**

CO1: This course introduces the students with the understanding about the international business theories and introduction to forex markets.

CO2: The students will learn the different approaches used in the international monetary systems.

CO3: The students will get a sound understanding of the various financial derivatives and foreign direct investments.

CO4: The student will get a deep analysis of the various financial pricing techniques held in use for international trade.

CO5: The student will understand the impact of methods and principles introduced in international finance.

**Textbooks:**

**SUBJECT: LEGAL ENVIRONMENT FOR BUSINESS**

**SUBJECT CODE: BBA635A**

**CREDITS: 3**

**Course Objective:** To understand various laws applicable in India i.e. Contracts Act, Special Contracts, Partnerships, LLP's, companies etc. On completion of this course, learners will be able to: appreciate the relevance of business law to individuals and businesses and the role of law in an economic, political and social context.

**Unit I: (Law of Contracts, Special Contract, Indemnity & Guarantee)**

The Indian Contract Act, 1872 - Definition of contract -Law of contracts - Nature of contract - Classifications - Essential elements of a contract Offer and acceptance, consideration, capacity of parties- Minors-persons of unsound mind-persons disqualified by law- Free consent, legality of object and consideration, performance of contract, discharge of contract, breach of contract, remedies for breach of contract-Quasi contract- Performance. Special Contracts - Bailment and Pledge- Bailment Definition Essential elements Rights and duties of bailor and bailee Finder of lost goods. Pledge Essentials Rights and duties of Pawner and Pawnee. Indemnity and Guarantee- Indemnity - Definition, nature of liability of surety, rights of surety, discharge of surety. Meaning and definition of guarantee.

**Unit II: (Law of Agency & Sale of Goods Act)**

Essentials, kinds of agents, rights and duties of agent and principal, creation of agency, termination of agency-Sub agents and substituted agents-Relationship. **Sale of Goods Act, 1930** Formation of contract of sale - Essentials of contract of sale goods and their classifications- Conditions on warranties Transfer of property in goods Performance of contract of sale Unpaid seller and his rights

**Unit III: (The Indian Partnership Act 1932, The Limited Liability Partnership)**

Nature- rights and duties of partners- Registration and dissolution of firms- **The Limited Liability Partnership Act 2008**- Introduction- nature and scope- features- incorporation and differences with other forms of organization.

**Unit IV: (Companies Act and its Basics)**

- Company - Definition - Characteristics - Classifications -History and framework of Company Law in India - Companies Act 2013 - one person company, small company, associate company, dormant company, producer company; association not for profit; illegal association. Promotion and formation of a company- Body Corporate - promoter- legal

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

position-duties remuneration- Memorandum of Association – Articles of Association - Contents and alteration -Incorporation of Company - On-line registration of a company – CIN - Companies With Charitable Objects - Doctrines of Indoor Management, Constructive Notice, Ultra-vires - Lifting up of Corporate veil - Conversion of Companies. Share Capital – Types - Public Offer - Private Placement - Prospectus - Contents of Prospectus – Types of prospectus – Deemed prospectus - Shelf Prospectus - Red Herring Prospectus - Abridged prospectus-Liability for Misstatements in Prospectus – Issue and Allotment of Securities – Types - Voting Rights –DVR- Application of Premiums - Sweat Equity Shares - Issue and Redemption of Preference Shares-Transfer and Transmission of Securities- Punishment for impersonation of Shareholder - Further Issue of Share Capital- Bonus Shares- Debenture Issue

#### **Unit V: (Membership in company and meetings)**

Modes of acquiring membership-rights and liabilities of members- cessation of membership- Register of Members - Company meetings – Annual General Meeting - Extraordinary General Meeting- Notice Of Meeting - Quorum - Chairman - Proxies - Voting -Show of Hands – E-Voting - Poll- Postal Ballot- Motions - Resolutions - Types - Minutes - Books of accounts - Annual Return- Directors -Types - legal position – Appointment - Duties – Disqualifications- DIN - Vacation of Office - Resignation - Removal - Meetings of Board - Resolutions and Proceedings- Powers of Board - Key Managerial Personnel- CEO- CFO - Audit and Audit Committee – related party- transactions - Corporate Social Responsibility- Winding up - Contributory – Modes of winding up - Winding Up by Tribunal - Petition for Winding Up- Powers of Tribunal- Liquidators - Appointments- Submission of Report - Powers and Duties - Effect of Winding Up Order- Voluntary Winding Up - Circumstances - Declaration Of Solvency - Meeting of Creditors- Commencement of Voluntary Winding Up- Appointment of Company Liquidator- Final Meeting and Dissolution of Company Official Liquidators – Appointment -Powers - Functions - Winding up of unregistered companies.

#### **Course Outcomes**

CO1: Ability to apply knowledge of Indian Contract Act, Sale of Goods Act, Partnership Act and LLP. Ability to identify, and solve legal issues in connection with business.

CO2: Identify the fundamental legal principles behind contractual agreements.

CO3: Know about the concept of company and shares.

CO4: Know about the application of company law in India. Understand the use of the memorandum of association and article of association in a company, they also learn from this course.

CO5: Use of various documents and forms in a company. Understand the relationship between company and its stakeholders.

#### **SUBJECT: CORPORATE STRATEGY**

**SUBJECT CODE: BBA636A**

**CREDITS: 4**

**Course Outcomes:** On successful completion of the module students will be able to:

1. Analyze and evaluate critically real-life company situations and develop creative solutions, using a strategic management perspective.
- 2.To enable students to know and develop strategies for business to remain competitive

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

## **Unit I: Introduction to Strategy**

Concepts of strategy, Environmental issues (PESTLE), SWOT analysis, The internal resources, capabilities and competences of an organization, Strategic choices

## **Unit II: Managing growth and scale**

Strategic management process, Environment and Organizational Appraisal, Strategic Business Unit and levels of strategy.

## **Unit III: Strategy Formulation**

Industry life Cycle analysis, Corporate level strategies, Expansion and Stability, Integration and Diversification, Internationalization, Co-operative and Digitalization, Business Level Strategies, Cost leadership, Differentiation, Focus business strategy, Introduction to functional Level Strategies-Marketing, Financial, HRM, Product, Research and Development

## **Unit IV: Strategy Analysis and Implementation**

Process of Strategic Choice, Strategic Analysis, Mckinsey 7s, Porters five forces model BCG Matrix, Nature of Strategy implementation and barriers to strategy implementation

**SUBJECT: Advanced Financial Reporting Cima F2**

**SUBJECT CODE: BBA679A**

**CREDITS:4**

**Course Objective:** The objective of the course is to acquaint students with sources of long-term finance and to enhance the analysis, application and evaluation skills in financial and non-financial reporting

**Unit I: Financing Capital Projects**

Characteristics of different types of shares: Ordinary and preference shares, Characteristics of long-term debts: Bonds and other types of long-term debt, Operations of stock and bond markets including the role of advisors.

Calculate cost of equity and debts using weighted average cost of capital, Cost of equity using dividend valuation model (with or without growth in dividends), post-tax cost of bank borrowing. Yield to maturity of bonds and post-tax cost of bonds. Post-tax costs of convertible bonds up to and including conversion.

**Unit II: Financial Reporting Standards**

Explain the financial reporting standards for: Revenue (IFRS 15), Leases (IFRS 16), Provisions (IAS 37), Financial instruments (IAS 32 and IFRS 9), Intangible assets (IAS 38), Income taxes (IAS 12), Effect of changes in foreign currency rates (IAS 21).

Discuss disclosure requirements related to: Transaction between related parties (IAS 24) and Earnings per share (IAS 33)

**Unit III: Group Accounts**

Explain relevant financial reporting standards for group accounts which include: IAS 1 - Presentation of Financial Statements, IAS 27 - Separate Financial Statements, IAS 28 - Investment in Associates and Joint Ventures, IFRS 3 - Business Combinations, IFRS 5 - Non-current Assets Held for Sale or Discontinued Operations, IFRS 10 - Consolidated Financial Statements, IFRS 11 - Joint Arrangements.

Prepare the following based on financial reporting standards: Consolidated statement of financial position, consolidated statement of comprehensive income, consolidated statement of changes in equity, consolidated statement of cash flows.

**Unit IV: Integrated Reporting**

Describe the role of the International Integrated Reporting Council, Discuss the International <IR> Framework. Benefits and Limitations of Framework.

Explain the measurement and disclosure issues of: Financial capital, Manufactured capital, Intellectual capital, Human capital, Social and relational capital and Natural capital.

**Unit V: Analysing Financial Statements**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Analyse financial statements to provide insight on: Performance, Position, Adaptability, Prospects. Reporting of ratios along the dimensions of the Gartner Data Analytics maturity Link to organization's business model. Recommend actions based on insights from the interpretation of financial statements. Discuss the limitations of data and the tools used for interpreting financial statements

### **Course Outcomes**

CO1: Acquaint students with how to effectively source long-term finance, particularly their capital investments.

CO2: Apply the financial reporting standards to more complex aspects of group accounting

CO3: Understand the recognition and measurements of various elements of the financial statements.

CO4: Acquire an understanding about Integrated reporting and its need.

CO5: Evaluate and analyse financial statements and provide insights about the financial performance and position of the organization over time and in comparison with other firms.

**SUBJECT: Strategic Management (E3 Cima)**

**SUBJECT CODE: BBA680A**

**CREDITS: 4**

**Course Objective:** The course aims at implementing the strategies by aligning their structures, people, process, projects and relationships. It aims to develop skills and abilities of the strategic leaders of organizations, enabling them to create the vision and direction for the growth and long-term sustainable success of the organization. It focuses on successfully managing and leading change within the process of strategy formulation and implementation.

### **Unit I: The strategy Process**

Meaning of strategy – levels of strategy – styles in strategic planning – the role of management accountant - Outline the rational and emergent processes of arriving at strategy- Different definitions of strategy - Essential features and characteristics of strategy - Intended and emergent strategy - Corporate, business and functional strategies - Analysis of organisational ecosystem - Generating options, Strategic choice, Strategic control.

### **Unit II: Analysing the organisational ecosystem**

Analyse the elements of the ecosystem - Impact of the ecosystem on organisational strategy - Analyse Markets and competition, Society and regulation - SWOT analysis - PESTEL analysis - Competitor analysis - Customer analysis - Wider ecosystems - Industry ecosystems - drivers of change in the ecosystem - Institutional and systemic, Social, Market, Technology, Sustainability – Globalization – Geopolitics – Demography - Customer empowerment - Digital technology – Automation - Value creation in ecosystems - Participants and interactions in networks and platforms - Technology enablers in networks - Process of creating networks and platforms - Stakeholder analysis in networks - Corporate social responsibility

### **Unit III: Generating strategic options and making strategic choices**

Generate and developing options – Roles and responsibility of leaders of organisations for strategy - Definition of purpose, vision and values of organisations - Linkage between purpose, vision and values to each other and to strategy - Product/market matrix - Generic strategies - Trend analysis - System modeling - Scenario planning - Tangible and intangible value drivers and data to measure them - Game theory perspectives - Real option perspectives - Evaluate options - Produce strategy by the integration of choices into coherent strategy - Suitability, acceptability and feasibility framework - Value chain analysis - Managing product portfolio

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

#### **Unit IV: Strategic control**

Strategic performance management system - resource allocation to support strategy implementation - change management techniques and methodologies - Action plans - Target setting - Critical success factors (CSFs) - Key performance indicators (KPIs) - Audit of key resources and capabilities required to implement strategy - Matching resources to strategy - Types of change - Impact of change on organisational culture - Resistance to change - Approaches and styles of change management - Role of change leader in communication.

#### **Unit V: Digital strategies**

Governance of digital transformation - Analyse digital transformation - various elements of digital strategies - Role of board and senior leadership in digital strategy - Digital disruption – Surviving digital disruption – Artificial intelligence – Cloud and mobile computing – Internet of Things – Big Data – Block chain – Data visualisation – Data visualisation - Describe the roles and responsibilities of the board and executive leadership in digital strategy – digital disruption – roles of leaders – economics of digitalisation – digital ecosystems – digital consumption – data and metrics.

#### **Course Outcomes:**

CO1: To under the role of strategic management accountant in the current competitive environment.

CO2: It aims to throw light of the strategic management process.

CO3: To be able to understand the importance of governance, ethics, and values.

CO4: The workings of digital transformation in managing the strategies in the digital era.

CO5: To understand the strategic performance management system and change management.

#### **Textbooks:**

1. CIMA study material by Kaplan.
2. CIMA Exam Kit by Kaplan

#### **Reference Books:**

1. Strategic Management - planning for domestic and global competition - John A Pearce, Richard B Robinson - Himalaya Publications
2. Strategic Management - Azhar Kazmi - McGraw Hill Education

**SUBJECT: Risk Management (P3 - Cima)**

**SUBJECT CODE: BBA682A**

**CREDITS: 4**

#### **Unit I: Enterprise risk**

Analyse the sources of risks, types of risks, evaluate the impact of risk, assess the likelihood of risks, analyse the interaction of different risks. Roles and responsibilities, risk tolerance, appetite and capacity, risk management frameworks, risk analytics.

Learning outcome: Analyse the sources and types of risk, evaluate risk, discuss ways of managing risks.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Unit II: Strategic risk**

Analyse relevance of the assumptions on which strategy is based, Discuss potential sources and types of disruptions to strategy, sources of reputational risk, impact of reputational risk on strategy. The role of board and its committees in managing risk, failure of governance and its impact on strategy.

Learning outcome: Analyse risks associated with formulating strategy, evaluate the sources and impact of reputational risks, explain governance risks.

## **Unit III: Internal Controls**

Discuss the roles and responsibilities for internal control, purpose of internal control, feature of internal control. Committees of sponsoring organisations of the Treadway Commission (COSO) internal control and risk management framework. Assess control weakness, assess compliance failure, recommend internal controls for risk management. Forms of internal audit, internal audit process, effective internal audit and internal audit report.

Learning outcome: Analyse internal control system, recommend internal controls for risk management, discuss various issues relating to internal audit in organisations.

## **Unit IV: Cyber risk**

Nature and impact of cyber risks, types of cyber risks, risk of security vulnerabilities. Review cyber security objectives security controls, centralisation in cyber security. Forensic analysis, malware analysis, penetration testing, software security, evaluate cyber risk reporting framework.

Learning objective: Analyse cyber threats, review cyber security processes, discuss cyber security tools and techniques, evaluate cyber risk reporting.

Sub Code	Sub Name	L	T	P	C	Type
BCM799A	Internship	-	-	32	16	C
	<b>TOTAL</b>	-	-	<b>32</b>	<b>16</b>	

**Program Educational Objective (PEO)-B.Com Finance and Analytics**

- To build a strong footing of understanding in different areas of Commerce
- To develop the skill of applying concepts and practices used in Commerce
- To develop an attitude for working commendably and proficiently in a business surroundings
- To integrate knowledge, skill and attitude that will stand an environment of learning and creativity among the students.
- To enable a student to be capable of making decisions at personal and professional level.

**Program Outcome (PO) B.Com Finance and Analytics**

1. Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.
2. Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.
3. Elicit views of others, mediate disagreements and help reach conclusions in group settings
4. Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering
5. Develop as an individual with the conceptual as well as practical knowledge in the field of analytics, comprising of business studies and metrics, statistics, information technology and management.
6. Develop the ability to adapt to the rapidly changing industry with the newly learned applied skills in the domains of analytics and business studies.
7. Develop critical thinking skills to take up the role as Business Analysts and Professionals in the Business Domains.
8. Apply analytics to analyze and interpret data using latest analytical tools to solve complex business problems pertaining to Finance, Marketing, Commerce, etc.
9. Perform Descriptive, Predictive and Prescriptive Analysis based on structured, semi-structured and unstructured data types.

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

10. Classify and employ the use of various tools and programming languages such as SQL, SAS, Python and R Programming to implement and deploy analytical models and algorithms.
11. Articulate, illustrate and demonstrate the ability to develop advanced analytical models based on specialized domains such as Financial Predictive Analytics, Marketing Analytics, Machine Learning, etc.
12. Compare, evaluate and report the inferences obtained from different machine learning algorithms and gain the ability to incorporate them so as to achieve proper decision making with regards to the said business domain such as Finance, Marketing, Accounting, Commerce, etc.

### **Semester I**

<b>FIRST SEMESTER</b>						
<b>Sub Code</b>	<b>Sub Name</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>	<b>Type</b>
BCM615B	Business and Technology	3	-	-	3	F
BCM616A	Financial Accounting	3	1	-	4	C
BCM618A	Introduction To Business Analytics	2	1	2	3	S
BCM619A	Business Mathematics & Statistics	3	1	-	4	F
BCM617A	Corporate And Business Law	3	1	-	3	ID
DEN001A	Communication Skills	3	-	-	3	G
DIN001A	Culture Education – 1	-	-	4	2	G
	<b>TOTAL</b>	<b>17</b>	<b>4</b>	<b>6</b>	<b>22</b>	

**Business and Technology**  
**SUBJECT CODE: BCM615B**  
**CREDITS: 3**

**Unit 1: The business organisation, its stakeholders, and the external environment**

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

The purpose and types of business organisation -Stakeholders in business organisations -Political and legal factors affecting business -Macroeconomic factors -Micro economic factors -Social and demographic factors -Technological factors -Environmental factors -Competitive factors

### **Unit 2: Business organisational structure, functions and governance**

The formal and informal business organisation- Business organisational structure and design- Organisational culture in business -Committees in business organisations -Governance and social responsibility in business

### **Unit 3: Accounting and reporting systems, compliance, control, technology and security**

The relationship between accounting and other business functions -Accounting and finance functions within business organisations -Principles of law and regulation governing accounting and auditing -The sources and purpose of internal and external financial information, provided by business -Financial systems, procedures and related IT applications -Internal controls, authorisation, security of data and compliance within business -Fraud and fraudulent behaviour and their prevention in business, including money laundering. -The impact of Financial Technology (Fintech) on accounting systems

### **Unit 4: Leading and managing individuals and teams & Personal effectiveness and communication**

Leadership, management and supervision -Recruitment and selection of employees -Individual and group behaviour in business organisations -Team formation, development and management -Motivating individuals and groups -Learning and training at work -Review and appraisal of individual performance- The application and impact of Financial Technology (FinTech) in accountancy and audit -Personal effectiveness techniques- Consequences of ineffectiveness at work -Competence frameworks and personal development -Sources of conflicts and techniques for conflict resolution and referral -Communicating in business

### **Unit 5: Professional ethics in accounting and business**

Fundamental principles of ethical behaviour -The role of regulatory and professional bodies in promoting ethical and professional standards in the accountancy profession -Corporate codes of ethics- Ethical conflicts and dilemmas

## **Financial Accounting**

**SUBJECT CODE: BCM616A**

**CREDITS: 4**

### **Unit 1: Purpose of financial accounting**

Define financial accounting – purposes of financial statements for the users – main elements of financial reports – conceptual framework – definitions of asset, liability, equity, income & expenses-prudence.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**Unit 2: Qualitative characteristics of financial statements**

Concepts of relevance, faithful presentation, materiality, substance over form, going concern, business entity, accruals, consistency, comparability, verifiability, understandability and timeliness

**Unit 3: Accounting records & double entry accounting system**

Main data sources for accounting – different business documents such as sales order, purchase order, goods received note, quotation, goods despatched note, invoice, credit & debit notes, receipt, remittance advice, cash vouchers – understand the double entry accounting & duality concept – types of transactions such as sales, purchases, payments & receipts.

**Unit 4: Recording transactions**

Recording into journals – ledger accounts – balancing of ledger accounts – accounting for discounts, sales tax – recording cash transactions – accounting & valuation of inventories – accruals & prepayments – tangible & non-tangible assets – depreciation & amortisation accounting – receivables & payables – provisions & contingencies – errors & rectification – bank reconciliation statements

**Module 5: Trial balance, financial statements**

Statements of profit or loss and other comprehensive income, cash flow statements, balance sheet – events after reporting period – interpretation of financial statements – use of basic ratios related to profitability, liquidity, activity and resource utilisation-Describe the principle of the equity method of accounting for Associate entities

**Introduction to Business Analytics****SUBJECT CODE: BCM618A****CREDITS: 3****Module Overview**

This subject covers the complete life cycle of Business Intelligence/Analytics, covering Operational/Transactional Data Sources, Data Transformation, Data Mart/Warehousing design-build, Analytical Reporting and Dashboards. It will also help the students to develop deeper understanding on these concepts using Business Intelligence Tools.

**Unit 1: Introduction & Data Type**

Overview of Business Analytics, Key Purpose of Using IT in Business, Enterprise Applications (ERP/CRM) and Bespoke IT Applications, Digital Data, Overview of Database, Structured data, Unstructured data, Semi-Structured data, Difference between different types of data.

**Unit 2 : Introduction to OLTP, OLAP & BI**  
**Dean**  
Faculty of Management  
JECRC University, Jaipur-303305

OLTP (On-Line Transaction Processing), OLAP (On-Line Analytical Processing), OLAP Architecture, Data Models for OLTP and OLAP, Role of OLAP Tools in the BI Architecture, OLAP Operations on Multidimensional data, Leveraging ERP Data using Analytics, Defining Business Intelligence (BI), Evolution of BI and Roles of DSS, EIS, MIS, and Digital Dashboards, The BI Value Chain, BI component Framework, BI Applications, Roles & Responsibilities, Popular BI Tools.

### **Unit 3 :Basics of Data Integration & Multidimensional Data Modeling**

Data Warehousing, Data Mart, Operational Data Storage, Data Mapping & Data Staging, Data Integration & Technologies, Data Quality & Data Profiling, Data Modeling Basics, Types of Data Model & Data Modeling Techniques, Fact Table & Dimension Table, Typical Dimension Models and Dimension Modeling Life Cycle.

### **Unit 4:Measures, Metrics, KPIs, and Performance Management & BI Road Ahead**

Understanding Measure and Performance, Measurement System Terminology, Navigating a Business Enterprise, Role of Metrics, and Metrics Supply Chain, Fact based Decision Making and KPIs, Measures to Business Decisions and Beyond, Understanding BI and Mobility, BI and Cloud Computing, BI for ERP Systems, Social CRM & BI.

### **Unit 5 :Basics of Enterprise Reporting**

Reporting Perspectives, Report Standardization and Presentation Practices, Enterprise Reporting Characteristics in OLAP World, Balanced Scorecard, Dashboards, Creating Dashboard, Scorecards vs. Dashboards, The Buzz Behind Analysis, Creating Enterprise Reports.

### **Case Studies and Exercises**

## **Business Mathematics & Statistics**

**SUBJECT CODE: BCM619A**

**CREDITS: 4**

### **Unit 1: Set Theory**

Introduction to Sets, Sets and their Representation, Tabular or Roster Method, Rule Method or Set Builder, Empty or Void or Null Set, Finite sets and Infinite sets, Proper Subset, Improper Subset, Power Set, Universal Set, Open Interval, Closed Interval, Semi-Open or Semi Closed intervals, Infinite Intervals, Venn Diagrams, Operations on Sets, Union, Intersection of Sets, Disjoint Sets, Difference of Sets, Symmetric Difference of Sets, Complement of a Set, Laws of Algebra of Sets.

### **Unit 2: Matrices and Determinants**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Definition of a Matrix, Addition & Subtraction of Matrices, Multiplication of Matrices, Transpose of a Matrix. System of linear equations, Gauss elimination method, Inverse of a Matrix, Determinants, Determinants of order one and more, Properties of Determinants, Multiplication of two Determinants, Minors and Cofactors, Cramer's rule for solution of linear equations, Adjoint of a Matrix, Rank of a Matrix.

### **Unit 3: Vector Algebra**

Vectors, Types of Vectors, Operations on Vectors, Addition of Vectors, Properties of Operation of Addition, Subtraction, Properties of Operation of Subtraction, Multiplication by a scalar, Orthonormal Bases, Product of Two Vectors, Scalar Product or Dot Product of Two Vectors, Properties of Scalar Product, Vector Product or Cross Product, Properties of Vector Product.

### **Unit 4: Statistics**

Introduction to Statistics, Scale of Measurement, Nominal, Ordinal, Interval & Ratio. Frequency Distribution, Bar Chart, Pie Chart, Histogram, Frequency Polygon, Ogive, Pareto Chart, Stem-and-leaf Chart, Scatter Plot, Measure of Central Tendency, Properties, Advantages and Disadvantages of Arithmetic Mean, Geometric Mean, Harmonic Mean. Positional Averages, Median, Quartiles, Deciles, Percentiles & Mode. Measure of Dispersion, Range, Interquartile Range, Standard Deviation.

### **Unit 5: Probability**

Introduction to Probability, Experiment, Event, Compound Event, Independent and Dependent Events, Mutually Exclusive Events, Equally Likely Events, Marginal, Union, Joint, Conditional Probability, Basic Probability Rules, General Rule of Addition, General Rule of Multiplication, Concept of Baye's Theorem.

## **Corporate and Business Law**

**SUBJECT CODE: BCM617A**

**CREDITS: 3**

### **Unit 1: Nature of the contract and consideration**

The Indian contract act 1872 – Definition of contract - Essential elements of a valid contract – clarification of contracts – offer and acceptance and Communication of offer and Acceptance and Revocation.

Consideration – Capacity to contract – Free consent - Legality of object – void agreement.

Performance of contract – offer to perform contracts which need not be performed – by whom contract must be performed who can demand performance. Discharge of Contract – meaning – methods – by performance – by agreement – impossibility of performance.

### **Unit 2: Breach of contract and the sale of goods act**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Remedies for Breach of Contract – Introduction Recession – Damages – Specific Performance – injunction  
- Quasi contracts. Contract of Indemnity and guarantee – Contract of bailment and pledge – Contract of  
Agency – Creation of agency – Rights, duties and liabilities of an agent - Termination of agency.

Sale of Goods Act :

Formation of contract of Sale - caveat emptor - Express and implied conditions and warranties –  
Performance of Contract of Sale – Rights of an unpaid Seller.

### **Unit 3: Companies act and memorandum of association**

Meaning, Definition & Salient Features of Companies Act, 2013 - Kinds of Companies - Promotion, Role  
of Promoters-Incorporation of a Company.

Memorandum of Association, Contents & Alteration - Articles of Association, Contents & Alteration -  
Prospectus, Contents & Consequences of misstatement - Doctrine of Ultra Virus & Indoor Management.

### **Unit 4: Directors and corporate governance**

Directors-Appointment, Qualification-Disqualification - Membership in a Company, Modes of acquiring  
Membership - Rights and Liabilities of Members, Termination of Membership - Corporate Governance-  
Meaning, benefits of good governance, factors influencing corporate governance.

### **Unit 5: General and Statutory Meeting, Extraordinary Meetings**

General and Statutory Meeting, Extraordinary Meetings -Resolutions, Meaning and Kinds - Role of  
Company Secretary with respect to meetings. Meaning and modes of winding up - Powers of court in  
winding up - Consequences and procedures for winding up - Powers, Liabilities and Duties of Liquidators.

## **Communication Skills**

**SUBJECT CODE: DEN001A**

**CREDITS: 3**

### **Course Objectives**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

**Syllabus: Theory**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>UNIT 3</b>	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

**Syllabus: Lab**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time- management, Following Deadlines etc
<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Draftinga CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

## **Methodology for Evaluation**

### **Assesment Theory**

1. Internal Assessment (Theory)
  - a) Home Assignments: One from each Unit: 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
2. Term End (Theory) : 50 Marks

### **Assessment Lab**

1. Internal Assessment (Lab)
  - (a) Daily Performance in the Lab : 50 Marks
2. Term End (Lab) : 50 Marks

### **Suggested Reading:**

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
4. On Writing Well. William Zinsser. Harper Resource Book. 2001
5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

### **Cultural Education-1**

**SUBJECT CODE: DIN001A**

**CREDITS: 2**

### **Course Objectives**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

### **Course Outcomes (CO)**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

### **UNIT-I : Holy Scriptures -A**

Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions), Introduction to Yoga, Overview of Patanjali's Yoga Sutras

## **UNIT-II : Society and Culture-I**

Introduction to Indian Culture and Major Symbols of Indian Culture; Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

## **UNIT-III : India in Progress-I**

Education , Science and Technology in Ancient India; Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

## **UNIT-IV: Great Indian Personalities-I**

Life and works of the Great People of Ancient India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

### **Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

## **ORGANISATION BEHAVIOUR**

**SUBJECT CODE: BCM 620A**

**CREDITS: 4**

### **Course Objective:**

Understand how the organisations can be managed effectively considering the behaviour of various stakeholders of an organisation and analysing the skills required for the future advantage of an organisation.

### **Unit 1: Organization behavior – an introduction**

Meaning of organizations – Nature of organization behavior – Basics of organization behavior – Scope and evolution of organizational behavior – Organizational arrangements and Organization behavior – Key terminologies in Organization Behavior - Organizational Behavior Model (OB Model)

### **Unit 2: Individual behavior, intelligence and personality**

Meaning of individual behavior – personal and environmental factors – Models of individual behavior – nature and types of intelligence – theories and measurement of intelligence – Intelligence factors – intelligence in the context of organizational behavior.

Nature and determinants of personality – Personality traits – Personality in the context of Organization Behavior

### **Unit 3: Motivation and work stress**

Nature and importance of motivation – challenges and theories of motivation – Motivation and organizational culture – quality of work life – rewards and behavior modification – problem employees – employee engagement

Meaning of work stress – work stress model – stress management – Stress and organizational behavior

### **Unit 4: Group and team behavior**

Nature and types of groups – Group dynamics and Organization behavior – determinants of group dynamics – Importance of group dynamics in an organization – group development strategies – Group motivation – Group structuring and decision making.

Meaning of team – differences between group and team – Types and benefits of teams – effective team management – team conflicts and resolution – Team development and Organizational Behavior

### **Unit 5: Organizational culture and leadership**

Meaning of leadership – leadership vs management – leadership styles and theories – formal and informal leadership – Ethics and leadership – leadership and organizational culture – Sustaining culture – changing organizational culture – workplace behaviour – Ethics of power.

### **Course outcomes:**

CO 1: Understand the basic of organizational behaviour in the context of the dynamic environment.

CO 2: Understanding the role of individual behaviour, intelligence and personality in the context of organizational development.

CO 3: Understanding importance of rewarding and motivating the stakeholders and managing the stress to effectively manage the organizational performance

CO 4: Understand the role of group and team dynamics in the current organizational environment

CO 5: Understand the importance of perception into organizational culture, leadership and ethics in an organizational development.

**Management Accounting**  
**SUBJECT CODE: BCM622A**  
**CREDITS: 4**

**Course Objective:**

To understand the various types of management information and data. To understand the accounting of material labour and overheads. To understand various costing methods. To understand and solve questions of budgeting and its implication. To understand the standard costing concepts in detail and carry out variance analysis. To understand how to measure the performance of the organisation.

**Unit 1 (Characteristics of Management Information, Data analysis and Statistical Techniques)**

Accounting for Management, Source of Data, Cost Classification, Production and Nonproduction, Presentation of Information, Reports, Tables, Charts, Graphs and Interpretation of Information **Data Analysis & Statistical Techniques** - Sampling Methods. Forecasting Techniques – Equation, Linear Function- High/Low Analysis- Analysis of Cost Data- Historical and Forecasting Data - Index Numbers - Linear Regression-Series Analysis, Summarising and Analysing the Data, Spreadsheet

**Unit 2 (Accounting For Costs, Material, Labour & Overheads and various methods of Costing)**

Accounting for Material Costs – Ordering, Receiving & Issuing Material, Methods of Valuing Purchases and Issues (FIFO & Weighted Average Methods Only) – EOQ – Inventory Levels – Accounting for Labour – Direct & Indirect Cost of Labour – Remuneration Methods (Individual & Group) – Labour Turnover – Overtime & Idle Time – Labour Efficiency, Capacity & Volume Ratios

Accounting for Overheads – Allocation of Overheads to Production & Nonproduction Departments – Apportion Service Overheads to Production Departments - Production Overhead Absorption Rates – Entries for Accounting of Material, Labour & Overhead Costs. **Absorption, Marginal Costing & Cost Accounting Methods** - Concept of Contribution, Effects of Absorption and Marginal Costing, Reconcile the Profit – Advantages and Disadvantage of Absorption and Marginal Costing, Job and Batch Costing, Process Costing, Service and Operation Costing, Alternative Costing Principles

**Unit 3: Budgeting, Capital Budgeting and DCF techniques**

Nature, Purpose, Budget Preparation-Cash Budget – Sales Budget-Master Budget – What If Analysis, Flexible Budgets, Budgetary Control and Reporting, Behavioural Aspect of Budgeting. **Capital Budgeting & Discounted Cash Flows** - Capital Investing- Capital and Revenue Expenditure, Compounding and Discounting, NPV, IRR, Annuity and Perpetuity – Cash Flow

*Learning Outcome: Identifying Importance of Capital Budgeting & Cash Flows.*

#### **Unit 4 (Standard Costing)**

Standard Costing Systems, Variance Calculations and Analysis, Sales Price and Volume, Material Price and Usage, Labour Rate and Efficiency, Fixed Overhead, Reconciliation of Budgeting Profit and Actual Profit

#### **Unit 5 (Performance Measurement and its application)**

Performance Measurement Overview, Cost Reduction and Volume Enhancement, Monitoring Performance and Reporting. **Application of Performance Measurement** - Calculate and Measure of Financial Measurement, Balance Scorecard, Economy, Efficiency and Effectiveness, Unit Costs, Resource's Utilization, Profitability, Quality of Service

#### **Course Outcomes:**

CO1: Discuss the Principles of Cost & Management Accounting.

CO2: Demonstrating to Application of Management Functions.

CO3: Explain the Application of Accounting Methods.

CO4: Describing the role of Decision Making & Control.

CO5: Illustrate techniques to various Business Contexts.

### **Marketing Management**

**SUBJECT CODE: BCM621A**

**CREDITS: 3**

#### **Course Objective:**

To provide a holistic orientation of emerging marketing trends with the practical skills required to analyse consumer data, create marketing campaigns, develop digital / social media content and make successful marketing decisions and to equip students to be innovative, technically competent and think critically through experiential and student-centric teaching approach.

#### **Unit 1: Fundamentals of Marketing Management**

Meaning & Definition of marketing -Role of Marketing -Relationship of Marketing with other functional areas -Market Concepts -Product concept -Selling concept -Marketing concept -Societal marketing concept -Approaches to marketing management -Functions of marketing -Scope of marketing: goods, services, events, organizations, etc. -Emerging trends in marketing.

#### **Unit 2: Marketing Plan**

Marketing Environment: Concept -Macro-environmental forces -The changing marketing environment - Analyzing needs and trends in Macro-Environment: Economic Environment, Technical Environment, Political, Environment and Socio-cultural Environment. Introduction to The Marketing Plan –Definition – Nature –Objectives -Structure of The Marketing Plan -The Process of marketing plan -Critical elements of external and internal analysis of Marketing Plan -Implementation of Marketing Plan.

#### **Unit 3: Marketing Mix**

Introduction to marketing mix -Marketing mix implementation: short term and long term tactics –Product: meaning, elements, product mix -Product mix strategies -Product line -Product lifecycle Product planning -New product development -Failure of new product -Product branding -Branding strategy and packaging – Pricing: Objectives -Factors influencing pricing policy -Methods of pricing -Pricing strategy. Physical Distribution: Meaning -Factors affecting channel selection -Types of marketing channels –Promotion: Meaning and significance of promotion – Personal selling & advertising (meaning only).

#### **Unit 4: Buyer behavior**

Market Segmentation: Levels and patterns of market segmentation -Bases for segmenting markets -Market segmentation - Targeting - Product Positioning - Types and bases of positioning - Product Differentiation - Meaning of consumer, customer, consumer behaviour and buying motives -Factors influencing buyer behavior -Factors that influence consumer purchasing decisions -Buying process -Stages of the consumer buying behavior -Business to Business (B2B) buying process -Key factors influencing B2B purchasing decisions -Differences between Consumer goods and Industrial goods

#### **Unit 5: Digital Marketing**

Introduction to Digital Marketing –Concept of Digital Marketing -Difference between traditional marketing and digital marketing -Trends and scenarios of the industry -Planning and Creating a Website -Search Engine Optimization (SEO), Search Engine Marketing (SEM), of Social Media Marketing, Blogging, Content Strategy, Email Marketing.

#### **Course outcomes:**

CO1: To understand the role and importance of marketing

CO2: Develop a marketing plan to generate better sales and profits

CO3: Formulate the product and price mix based to serve consumer needs.

CO4: Identify the factors influencing consumer behavior and purchase decision

CO5: Outline the digital tools to develop marketing strategies for the new age consumer

### **Corporate Accounting**

**SUBJECT CODE: BCM623A**

**CREDITS: 4**

#### **Course Objective:**

To understand the advanced concepts that are critical for the finalisation of accounts. Advanced accounting of areas like shares and debentures along with restructuring, amalgamation and group accounting will be few of the topics around which the syllabus will be concentrated around.

#### **Unit 1: Accounting for shares & Debentures**

Accounting for Share Capital & Debentures, Issue, forfeiture and reissue of forfeited shares: concept & process of book building; Issue of rights and bonus shares; Buy back of shares; Redemption of preference shares. Issue of Debenture and Its classification. Different terms of issue of debenture. Redemption of debenture.

#### **Unit 2: Profit Prior to Incorporation & Company Financial Statements**

Process on incorporation of a company. Difference between incorporation and commencement of a company. Accounting of incomes and expenses during Pre- and Post-Incorporation period. Basis of allocation and apportionment of income and expenses for the Pre and Post-Incorporation period. Meaning – Preparation of Financial Statements of Companies as per Schedule III of the Companies Act, 2013 (excluding Cash Flow statement) - Treatment of special items: Depreciation, Interest on Debentures, Provision for Tax, Dividends, Interim, Proposed, Corporate Dividend Tax, Unclaimed dividend.

### **Unit 3: Preparation and Presentation of Cash flow statement & Accounting for Amalgamation**

Meaning of Cash flow, Types of Cash flow, Estimation of cash flow using Direct and Indirect methods. (Simple problems only). Amalgamation of Companies, Concepts and accounting treatment as per relevant Indian Accounting Standard (excluding intercompany holdings).

### **Unit 4: Reconstruction of a company & Preparing group financial statements**

Internal reconstruction: concepts and accounting treatment excluding scheme of reconstruction. Accounts of Holding Companies/Parent Companies, Preparation of simple consolidated balance sheet and income statement with one subsidiary company

### **Unit 5: Valuation of shares & Accounting for banking companies**

Concept of Valuation. Need for Valuation. Special Factors affecting valuation of Shares. Methods of Valuation – Net Assets Method, Yield Basis Method, Fair Value Method. Accounts of Banking Companies, Difference between balance sheet of banking and non-banking companies; Prudential norms; Asset structure of a commercial bank; non-performing assets (NPA), Cash Flow Statement Concept of funds, Preparation of cash flow statement as per Indian Accounting Standard (IndAS)

### **Course Outcomes:**

CO1: Illustrate the process of preparation of final accounts of a company as per Schedule III of the Companies Act 2013.

CO2: Develop understanding on the difference between commencement and incorporation of a company and the accounting treatment for transactions during the two phases.

CO3: To enable the students to develop awareness about mergers and acquisition.

CO4: Illustrate the accounting and reporting for group companies.

CO5: Understand and appreciate the need for share valuation and the various methods.

## **Business Analytics using Excel**

**Subject Code: BCM 624A**

**CREDITS: 3**

### **Course Objective:**

To comprehend and employ the use of MS Excel application for analysing, visualizing and reporting solutions based on business problems and tasks. This module aims at imparting hands-on training towards formulas and functions as well as how to use which formula for which particular problem scenario. The students will be equipped with the knowledge of various analytical procedures and tools which are available in MS Excel.

### **Unit 1: Introduction**

Spreadsheet Applications, MS Excel Overview, Advantage and Disadvantages, Introduction to Buzzwords – Dashboards, Reports, Data Visualization, Business Intelligence, Decision Support Systems, Business Analytics, Data Visualization, Storytelling and its importance in Business Analytics, Visual Perception.

## Unit 2: Working with Data

Excel Workbooks and Worksheets, Worksheet Cells, Selecting and Moving Cells, Excel Add-Ins, Data Formats, Formulas and Functions, Cell References, Range Names, Sorting Data, Querying Data, Importing Data, Data Filtering, Formatting, Highlighting, Aggregating, Operators.

## Unit 3: Data Cleaning

Editing Imported Workbook, Delete Unnecessary Columns & Rows, Resizing Columns & Rows, Copying, Moving Worksheet Data, Replacing Data in Fields, Text Functions – Clean, Concatenate, Exact, Find, Fixed, Left, Len, Lower, Mid, Proper, Replace, Rept, Right, Search, Substitute, Text, Trim, Upper, Value Functions, Converting Text Function Formulas to Text, Data Validation.

## Unit 4: Excel Data Presentation

Tables, Line and Bar Charts, Scatter Charts, Scatter Charts vs Line Charts, Correlation Analysis, Bullet Graphs, Pie Charts, Doughnut Charts, Surface Charts, Radar Charts, Interactive Charts and Dashboards, Conditional Formatting, Pivot Table, Customizing Pivot Table, Changing Layout, Renaming Fields, Formatting Numbers, Hiding or Showing Data, Sorting, Pivot Charts, Conditional Formatting with Pivot Tables.

## Unit 5: Advanced Excel

Counting Items in a Dataset, COUNT, COUNTA, COUNTBLANK, COUNTIFS, PERMUT & COMBIN, Descriptive Statistics, Mean, Mode and Median, AVEDEV, AVERAGE, AVERAGEA, AVERAGEIF & AVERAGEIFS, TRIMMEAN, MEDIAN, MODE, Finding Values, MAX, MAXA, MIN, MINA, LARGE, SMALL, FREQUENCY, PROB, Standard Deviation and Variance, STDEV, STDEV.S, STDEV.A, STDEV.P, VAR.S, VARA, VAR.P, What-If Analysis, Goal Seek & Solver.

### Course outcomes:

CO 1: Describe and demonstrate the importance of MS Excel and its functionalities.

CO 2: Identify, interpret and explain the fundamentals concepts pertaining to working with data in MS Excel.

CO 3: Employ the use of various text functions and techniques for pre-processing and cleaning the data.

CO 4: Create and demonstrate the working of interactive dashboards and charts using MS Excel application.

CO 5: Classify different techniques and functions for descriptive statistics and advanced-excel.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M		M				M
CO2		M				M	
CO3	M		H				
CO4			H	M		M	
CO5		M					M

H = Highly Related; M = Medium; L = Low

### **Professional Skills**

**Subject code: DEN002A**

**Credits: 3**

### **Course Objectives**

1. To enhance Professional competence in reading, writing, listening and speaking.
2. Switch the approach from providing information about the language to use the language.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student centred learning rather than on the teacher-centred learning.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

### **Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in professional scenario.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

### **Syllabus: Theory**

#### **UNIT 1 Professional Grooming and Professional Culture:**

Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**UNIT 2 Advanced Grammar:** Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**UNIT 3 Composition:** Memo, Notice, Circular, Book Review, Research Article, Reports

**UNIT 4 Vocabulary Building:** Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms

**UNIT 5 Reading Comprehension:** Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction

### **Syllabus: Lab**

#### **UNIT 1 Professional Grooming and Professional Culture**

Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**UNIT 2 Advanced Grammar:** Exercise Sessions for Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**UNIT 3 Composition:** Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics

**UNIT 4 Vocabulary Building:** Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms-Activities related to the appropriate use of words

**UNIT 5 Reading Comprehension:** Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc

### **Methodology for Evaluation**

1. Internal Assessment (Theory)
  - a) Home Assignments: One from each Unit : 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
2. Term End (Theory) : 50 Marks
3. Internal Assessment (Lab)

- (a) Daily Performance in the Lab : 50 Marks  
4. Term End (Lab) : 50 Marks

**Suggested Readings:**

1. Felix Eskey. Tech Talk, University of Michigan. 2005
2. Michael Swan. Practical English Usage, Oxford University Press. 2005
3. Anderson, Paul. Technical Communication: A Reader Centered Approach, V Edition, Harcourt, 2003.
4. Thampi, G. Balamohan. Meeting the World: Writings on Contemporary Issues. Pearson, 2013.
5. Lynch, Tony. Study Listening. New Delhi: CUP, 2008.
6. Kenneth, Anderson, Tony Lynch, Joan Mac Lean. Study Speaking. New Delhi: CUP, 2008.
7. Marks, Jonathan. English Pronunciation in Use. New Delhi: CUP, 2007.
8. Syamala, V. Effective English Communication For You (Functional Grammar, Oral and Written Communication): Emerald, 2002.

**Cultural Education II**  
**Subject Code: DIN002A**  
**Credits: 2**

**Objectives**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

**UNIT-I Holy Scriptures-II**

1. Bhagavad Gita and Life Management
2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Sahib, Bible, Quran, Jain Scriptures, Bodhi Scriptures
3. Historicity of Ramayana and Mahabharata

**UNIT-II Society and Culture-II**

4. Indian Society: Its Strengths and Weaknesses
5. Health and Lifestyle related issues
6. Conservation of cultural heritage

**UNIT-III India in Progress-II**

7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights
8. Indian Models of Economy, Business and Management

**UNIT-IV Great Indian Personalities-II**

9. Life and works of the Great People of Modern India- Raja Ram Mohan Roy, Swami Vivekananda, Madan Mohan Malviya, Ishwarchand VidyaSagar, Jyotiba Phule, Homi Bhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, Vir Haqiqat Rai, Subhash Chandra Bose, Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada Saheb Phalke, Major Dhyan Chand, A.P.J. Abdul Kalam, Kailash Satyarthi, Aruna Roy, Mahasweta Devi, Udaya Kumar, Narayan Murthy, Azim Premji

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by a committee of teachers.

**Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala, Kulbhushan Mishra

## ENVIRONMENTAL STUDIES

SUBJECT CODE: DCH001A

CREDITS: 4

### Objectives:

Environmental studies deals with every issue that affects an organism. It is essentially a multidisciplinary approach that brings about an appreciation of our natural world and human impacts on its integrity. It is an applied science as it seeks practical answers to making human civilization sustainable on the earth's finite resources. Its components include biology, geology, chemistry, physics, engineering, sociology, health, anthropology, economics, statistics, computers and philosophy. As we look around at the area in which we live, we see that our surroundings were originally a natural landscape such as a forest, a river, a mountain, a desert, or a combination of these elements. Most of us live in landscapes that have been heavily modified by human beings, in villages, towns or cities. But even those of us who live in cities get our food supply from surrounding villages and these in turn are dependent on natural landscapes such as forests, grasslands, rivers, seashores, for resources such as water for agriculture, fuel wood, fodder, and fish.

The basic objective of this course is to provide basic understanding to the students with the nature and the environment.

### UNIT I

The **Multidisciplinary** nature of environmental studies Definition; Scope and importance, Need for public awareness.

### UNIT II

Natural Resources: Renewable and non-renewable resources: Natural resources and associated problems.

a) Forest resources: Use and Over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.

c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, Case studies.

f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources. - Equitable use of resources for sustainable lifestyles.

### UNIT III

Concept of an ecosystem- Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem:

a. Forest ecosystem

b. Grassland ecosystem

c. Desert ecosystem

d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

### UNIT IV

Biodiversity and its Conservation

□ Introduction-Definition: genetic, species and ecosystem diversity.

□ Bio-geographical classification of India.

□ Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

□ Biodiversity at global, National and local levels.

- India as a mega-diversity nation.
- Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India.
- Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

## **UNIT V**

### **Environmental Pollution:**

Definition, Causes, effects and control measures of: -

- a. Air pollution
- b. Water pollution
- c. Soil pollution
- d. Marine pollution
- e. Noise pollution
- f. Thermal pollution
- g. Nuclear hazards

- Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. - Disaster management: floods, earthquake, cyclone and landslides

## **UNIT-VI: Social Issues and the Environment**

- From Unsustainable to Sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.
- Air (Prevention and Control of Pollution) Act.
- Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act. - Forest Conservation Act.
- Issues involved in enforcement of environmental legislation.
- Public awareness.

## **UNIT-7: Human Population and the Environment**

- Population growth, variation among nations. Population explosion-Family welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare.
- Role of information Technology in Environment and human health.
- Case Studies.

## **UNIT-8: Field Work (Practical).**

- Visit to a local area to document environmental assets-river/forest/grassland/ hill/mountain.
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural.
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

## **Course outcomes(CO)**

- I CO1: It deals with every issue that affects the organization.
- II CO 2: To understand the multidisciplinary nature of environmental studies.
- III CO3:To understand about the renewable and non renewable resources.
- IV CO4: Knowing about the concept of the ecosystem.
- V CO5: To know impact of population on environment.

### **Banking & Financial Services**

**SUBJECT CODE: BCM625A**

**CREDITS: 3**

#### **Course Objective:**

The Banking& Financial Services module introduces the learners to the world of financial services and facilitates an understanding of the various financial services. The learners will be able to apply financial concepts, theories, and tools and will be in a position to evaluate the environment related to financial services. This module provides insights on the concepts of merchant banking, issue of securities, leasing, factoring, credit rating, etc. Additionally, it equips learners with the knowledge of the financial markets such as money markets and capital markets

#### **Module 1: Indian Banking System**

Introduction to banking: Nature of the Indian banking system, Banking concepts: Retail Banking, Corporate banking, wholesale banking, banking system in India, Relationship between banker and customer, types of Deposit account, Banking Sector reforms.

#### **Module 2: Electronic Banking**

Electronic Banking: Meaning and benefits of E Banking, Innovations in banking due to technology, Automated Teller Machines, Telebanking, Internet Banking, Mobile Banking, Electronic Funds Transfer, ECS, NEFT, RTGS, UPI, Risk Management of E-Banking.

#### **Module 3: Negotiable Instruments and Customer Relationship**

Meaning and characteristics of Negotiable instruments: Cheques, Bills of Exchange and Promissory notes. Legal Framework of Banker-Customer Relationship, Bankers Disclosure, Termination of relationship, Bankers Right of Lien and set-off

#### **Module 4: Financial Service management**

Introduction to financial services, financial services, concept, objectives, Financial services market, concept and constituents, Financial services sector problems, Financial services environment, forces and players in financial markets. Financial Services: Leasing, Merchant banking, Hire purchase and installment system, Consumer finance, Credit cards, Credit Mutual Fund, Factoring, Securitization of debts, Treasury management, Depositories and Pledge

#### **Module 5: Money market and Stock exchange**

Money market and stock exchange, Money market –characteristics and functions, money market instruments: call money, Treasury bills, certificates of deposits, commercial bills, trade bills, Indian capital market, constituents, New financial institutions and instruments, Investor protection. Stock exchange: functions, services, features and role. Stock exchange traders, Regulations of stock exchanges, Depository and SEBI functions and working.

**Course Outcomes:**

CO1: Acquaint the students with the knowledge of various banking concepts specifically, merchant banking and public issue management

CO2: Understand the fundamentals of financial services and financial markets.

CO3: Obtain an overview of money markets and stock exchange functioning.

CO4: Appreciate the relevance of leasing, factoring, and securitization to business

CO5: Understand the fundamentals of venture capital, credit rating, and pension fund.

**E-Business & Cyber Laws**

**SUBJECT CODE: BCM626A**

**CREDITS: 3**

**Course Objective:**

The objective of the course is to equip the students with the emerging trends in business. It further introduces the students with the impact of information technology on various aspects of business and also helps them familiarize with cyber world and cyber regulations

### **Module 1: E-Business**

E-business vs. E-commerce, transformation of business structure, Trends: E-Business Models, E-business Design: Knowledge building, capacity evaluation, design steps.

### **Module 2: E-Marketing**

Traditional Marketing, Identifying Web presence Goals – Browsing Behaviour Model, Online Marketing, E-advertising – Internet Marketing Trends – E branding– E marketing strategies. Concept and Definition of E-Retailing - Different Models of E-Retailing, Model for Web based Information System in E-Retailing; Key Technologies of B2C Model in E-Retailing – EPOS System, Functions of an EPOS system

### **Module 3: E-Business Technologies**

Customer relationship management (CRM) - Organizing around the customer; CRM design and infrastructure - CRM Trends; Selling-chain management - Need for selling-chain management - Order acquisition process – Trends, Enterprise resource planning (ERP) – Integration of information technology systems - Forces influencing ERP – Implementation strategies - ERP trends; Supply chain Management - Internet-enabled SCM - Supply-chain planning and execution - SCM issues and trends; E-procurement - Transformation to web based technology - Cost savings and return of investment - Buyer focus - Seller focus - Trends.

### **Module 4: Cyber World**

Cyber space–cybercrimes–types: cyber stalking, forgery and fraud, crime related to IPR (copyright issues, trademark issues, software patenting issues), cyber terrorism, & computer vandalism.

### **Module 5: Cyber Regulations**

Cyber Law, scope of cyber laws - e-commerce, online contracts, IPRs, E-taxation, e-governance and cybercrimes, issues relating to investigation, cyber forensic, relevant provisions under IT Act 2000

### **Course Outcomes:**

CO1: Understand the concepts and workings of E-Business

CO2: Understand the use and application of E-Marketing in E-Business

CO3: Understand different E-Technologies, their application, and drawbacks

CO4: Understand and learn about the Cyber World – opportunities and threats

CO5: Learn about various Cyber regulations and related laws application to E-business environments.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

2. E-Business and Commerce, Brahm Canzer, Dreamtech press, New Delhi
3. E-Business essentials, Rajat Chatterjee, Global India Publication, New Delhi

#### **Reference Books:**

1. E-Business essentials, Matt Haig, Kogan Page India Ltd
2. IT Act 2000, IT Amendment Bill 2006, IT Amendment Bill 2008
3. Ajit Prakashan's Information Technology Act, 2000 (Cyber Law) (IT Act 2000: Bare Acts with Short Notes)

### **Research Methodology** **SUBJECT CODE: BCM627A** **CREDITS: 4**

#### **Course Objective:**

This module enables learners to develop the basic principles of research methods. The learners focus on how to do research, with an emphasis on student-centered activities and problem solving. Learners will develop insights the key concepts as the scientific method; operationalizing constructs; independent and dependent variables, data types and ways of measurement, confounding variables experimental and non-experimental design questionnaire construction; developing and testing hypotheses; descriptive statistics and describing data graphically; and the ethics of research.

#### **Module 1: Research Formulation and Design**

Motivation and objectives-Research methods and methodology. Types of research: Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical, concept of applied and basic research process, criteria of good research. Defining and formulating the research problem, selecting the problem, necessity of defining the problem, importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, patents, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis.

#### **Module 2: Data Collection and Analysis**

Accepts of method validation, observation and collection of data, methods of data collection, sampling methods, data processing and analysis strategies and tools, data analysis with statically package (Sigma STAT, SPSS for student t-test, ANOVA, etc.), hypothesis testing.

#### **Module 3: Statistical Softwares**

Computer and its role in research, Use of statistical software SPSS, GRETL etc. in research. Introduction to evolutionary algorithms - Fundamentals of Genetic algorithms, Simulated Annealing, Neural Network based optimization, Optimization of fuzzy systems.

#### **Module 4: Research Ethics and Scholarly Publishing**

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, commercialization, copyright, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing- IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

#### **Module 5: Interpretation and Report Writing**

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of writing Research Report Precautions for writing Research Reports, Conclusions.

#### **Course Outcomes:**

CO1: Understand and apply the fundamental principles of the research process as they relate to answering research questions.

CO2: Describe the appropriate use of basic research techniques and research design as they apply to answering different questions.

CO3: Explain critically analyses information particularly in relation to identifying causal and spurious relations in research claims.

CO4: Identify appropriate techniques underlying different research approaches

CO5: Understand and effectively interpret and communicate research findings

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM**

**Programming for Business Analytics**

**SUBJECT CODE: BCM628A**

**CREDITS: 4**

**Course Objective:**

This module introduces Students to various programming languages in the field of Analytics like SQL, R, SAS, Python and forms the foundation for further analysis of Datasets. Students will learn the basics of these programming languages and learn data manipulation techniques.

**Module 1: Introduction: Database Management Systems**

Definition, Characteristics of DBMS, Architecture & Security, Types of Data Models, Concepts and constraints of RDBMS, Introduction to Structured Query Language, MySQL Installer, download sample Database, Loading Sample Database.

**Module 2: Data definition and Manipulation**

SQL Process, SQL Commands – DDL, DML, DCL, DQL, SQL Constraints, Data Integrity, Data Types, SQL Operators, Expressions, Querying Database, Retrieving result sets, Sub Queries, Syntax for various Clauses of SQL, Functions and Joins, Indexes, Views, Transactions.

**Module 3: Basics of SAS**

Introduction to SAS, Installation of SAS university Edition, prerequisites for data analysis using SAS, SAS Architecture, Data Types, Formats and Informats, SAS coding- Data step and proc step, Libraries, Importing external data, Reading and Manipulating Data, Functions, Data Transformations, Conditional Statements.

**Module 4: Python: Basics of Python**

Installation of Anaconda Navigator, Data types – string, tuples, set, lists, dictionary, Arrays. Spyder, Importing and Exporting Files, Data Manipulation, Descriptive Statistics and Documentation with Jupiter.

**Module 5: R Programming**

Basics of R, Installation of R studio, Vectors, Matrices, Data types, Importing files, Writing files, Merging Files, Data Manipulation, Creation and Deletion of New Variables, Sorting of Data, Functions, Graphical Presentation and Descriptive Statistics.

**Course outcomes:**

CO 1: Learn Data Models, Data Independence and Data Views and build custom Entity Relationship Diagrams based on different problem sets.

CO 2: Employ the use of Structured Query Language to perform DBMS related tasks and implement relational data query.

CO 3: Perform several tasks with regards to Data Analytics, Visualization, Data Manipulation using SAS programming.

CO 4: Employ and use Python packages and functions to deploy analytical systems/programs.

CO 5: Learn R programming and understand its effectiveness with respect to Data Analytics.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM**

### **Business Statistics with R**

**SUBJECT CODE: BCM629A**

**CREDITS:4**

#### **Course Objective:**

The objective of this module is to make students exercise the fundamentals of statistical analysis in an R environment. They would be able to analyze data for the purpose of exploration using descriptive and inferential statistics. Students will understand probability and sampling distributions and learn the creative application of linear regression in a multivariate context for predictive purposes.

#### **Module 1: Introduction to R Programming**

R and R Studio, Logical Arguments, Missing Values, Characters, Factors and Numeric, Help in R, Vector to Matrix, Matrix Access, Data Frames, Data Frame Access, Basic Data Manipulation Techniques, Usage of various apply functions – apply, lapply, sapply and tapply, Outliers treatment.

### **Module 2: Descriptive Statistics**

Types of Data, Nominal, Ordinal, Scale and Ratio, Measures of Central Tendency, Mean, Mode and Median, Bar Chart, Pie Chart and Box Plot, Measures of Variability, Range, Inter-Quartile-Range, Standard Deviation, Skewness and Kurtosis, Histogram, Stem and Leaf Diagram, Standard Error of Mean and Confidence Intervals.

### **Module 3: Probability, Probability & Sampling Distribution**

Experiment, Sample Space and Events, Classical Probability, General Rules Of Addition, Conditional Probability, General Rules For Multiplication, Independent Events, Bayes' Theorem, Discrete Probability Distributions: Binomial, Poisson, Continuous Probability Distribution, Normal Distribution & t-distribution, Sampling Distribution and Central Limit Theorem.

### **Module 4: Statistical Inference and Hypothesis Testing**

Population and Sample, Null and Alternate Hypothesis, Level of Significance, Type I and Type II Errors, One Sample t Test, Confidence Intervals, One Sample Proportion Test, Paired Sample t Test, Independent Samples t Test, Two Sample Proportion Tests, One Way Analysis of Variance and Chi Square Test.

### **Module 5: Correlation and Regression**

Analysis of Relationship, Positive and Negative Correlation, Perfect Correlation, Correlation Matrix, Scatter Plots, Simple Linear Regression, R Square, Adjusted R Square, Testing of Slope, Standard Error of Estimate, Overall Model Fitness, Assumptions of Linear Regression, Multiple Regression, Coefficients of Partial Determination, Durbin Watson Statistics, Variance Inflation Factor.

### **Course outcomes:**

CO 1: Install, Code and Use R Programming Language in R Studio IDE to perform basic tasks on Vectors, Matrices and Data frames.

CO 2: Describe key terminologies, concepts and techniques employed in Statistical Analysis.

CO 3: Define, Calculate, Implement Probability and Probability Distributions to solve a wide variety of problems.

CO 4: Conduct and Interpret a variety of Hypothesis Tests to aid Decision Making.

CO 5: Understand, Analyse, Interpret Correlation and Regression to analyse the underlying relationships between different variables.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM**

### **Life Skills 1 (Personality Development)**

**SUBJECT CODE: DEN003A**

**CREDITS: 2**

#### **THEORY**

##### **UNIT 1**

Basics of Organizational Communication: Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture

##### **UNIT 2**

Basic Writing Skills: Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration

##### **UNIT 3**

Composition:, Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,

##### **UNIT 4**

Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms

##### **UNIT 5**

Professional and Technical Communication : Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

#### **LAB**

##### **UNIT 1**

Basics of Organizational Communication: Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time management, Following Deadlines etc

## **UNIT 2**

Write Dialogue from the different contexts of corporate culture: Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc

## **UNIT 3**

Composition:, Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting Redrafting, Proof Reading, Editing etc

## **UNIT 4**

Vocabulary Building: Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc

## **UNIT 5**

Professional and Technical Communication: Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making

### **Value Education 1**

**SUBJECT CODE: DIN003A**

**CREDITS: 1**

### **Lessons from the Ramayana**

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

### **Lessons from the Mahabharata**

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

### **Lessons from the Upanishads**

Introduction to the Upanishads: Sruti versus Smriti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

### **Message of the Bhagavad Gita**

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana

Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

### **Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

### **Life and Teachings of Spiritual Masters**

India Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

### **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

## **Human Resource Development (Open Elective)**

**SUBJECT CODE: DBA628A**

**CREDITS: 3**

### **Module 1: Human Resource Development (HRD) -Macro Perspective**

Understand HRD Concept, Origin and Need of HRD, HRD as a Total System, Approaches to HRD; Human Development and HRD; HRD at Macro and Micro Climate

### **Module 2: HRD–Micro Perspective**

Understand areas of HRD, HRD Interventions Performance Appraisal, Potential Appraisal, Feedback and Performance Coaching, Training, Career Planning, OD or Systems Development, Rewards, Employee Welfare and Quality of Work Life and Human Resource Information; Staffing for HRD: Roles of HR Developer; Physical and Financial Resources for HRD; HR Accounting; HRD Audit, Strategic HRD

### **Module 3: Instructional Technology for HRD**

Learning and HRD; Models and Curriculum; Principles of Learning; Group and Individual Learning; Transactional Analysis; Assessment Centre; Behaviour Modelling and Self Directed Learning; Evaluating the HRD

### **Module 4: Human Resource Training and Development**

Concept and Importance of training and development; Assessing Training Needs; Designing and Evaluating T & D Programmes; Role, Responsibilities and challenges to Training Managers

### **Module 5: Training Methods**

Training within Industry (TWI): On the Job & Off the Job Training; Management Development: Lecture Method; Role Play; In-basket Exercise; Simulation; Vestibule Training; Management Games; Case Study; Programmed Instruction; Team Development; Sensitivity Training; Globalization challenges and Strategies of Training Program, Review on T&D Programmes in India

#### Entrepreneurship

**SUBJECT CODE: BCM 630A**

**CREDITS: 3**

#### Course Objective:

The objective of the course is to expose the students to the entrepreneurial cultural and industrial growth and understand the scope of an entrepreneurship and to know the importance of business plan and major elements of business plan. Learners will develop insights to facilitate the development of an entrepreneurial mind-set and equip them with necessary cutting-edge knowledge and skills vital for generating value in a knowledge-based economy.

#### Module 1: Introduction to Entrepreneurship

Understand the meaning and concept of Entrepreneurship, the history and evolution of entrepreneurship, qualities and behavioral traits of successful entrepreneurs, role of entrepreneurship in economic development, myths about entrepreneurs and agencies in entrepreneurship management

#### Module 2: Types of Entrepreneurs and Stages in Entrepreneurship development

Types of entrepreneurs based on factors such as type of business, use of technology, motivation, growth, stages; sensing Market Opportunities, identify market gaps, Idea vs Opportunity Matching, idea testing with potential customers

#### Module 3: Entrepreneurial Motivation

Understand Motivation, Maslow's theory, Herzberg's theory, McGregor's Theory, McClelland's Need – Achievement Theory, Culture & Society, Values / Ethics, Risk taking behavior

#### **Module 4: Environment Analysis and Business Plans**

Understand PEST to PESTEL to STEEPLE, Unique Selling Proposition (USP), Competition Analysis, Porter's five forces – competitor strategies, Components of Business Plan, Market research and feasibility report, Marketing Mix, Types of Organisations (sole proprietorship, partnership, corporations, Limited Liability company)

#### **Module 5: Organizations that Support Entrepreneurship**

Industrial Parks, Special Economic Zone, MSME Act, Role of SME in India, Government support to SME, Sickness in SMEs – causes / remedial measure, exemptions from Income Tax, financial assistance to MSME, modernisation assistance to small scale unit, the Small Industries Development Bank of India (SIDBI), the State Small Industries Development Corporation (SSIDC), Export oriented units, Khadi and Village Industries Commission (KVIC)

#### **Course Outcomes:**

CO1: Critically evaluate processes and organizational forms involved in co-creating value to solve complex challenges in collaboration with different types of entrepreneurs.

CO2: Understand theories of entrepreneurship, business development and entrepreneurship development

CO3: Articulate the characteristics required to become successful entrepreneurs. Identify and appraise strategies for growth of new ventures.

CO4: Create alternative Business Plans, appraise them, and conclude on the most suitable Business Plan. Also prioritize the next best alternatives.

CO5: Develop an entrepreneurial mind-set by understanding and applying key debates in the areas of entrepreneurial opportunity, motivation, marketing and finance

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i>Course Outcome</i>	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

2. Entrepreneurship Development by Monica Loss & F.L. Bascunan

#### **Reference Books:**

1. Knowledge Management: Enabling Business Growth by Ganesh Natarajan and Sandhya Shekhar
2. Supply Chain Management: Strategy, Planning, and Operations by Sunil Chopra and Peter  
Mind Secrets of Customer Relationship Management by James G. Barnes

**Business Variables Analytics**  
**SUBJECT CODE: BCM 631A**  
**CREDITS: 4**

**Course Objective:**

This course will enable students to exercise Multivariate Techniques in an R environment in different Business Cases. They will know the different techniques covered under the scope of Multivariate Analysis and will be able to apply and build select Predictive Models in the context of Binary Classification and Time Series.

**Module 1: Overview of Multivariate Statistics)**

Nature of Multivariate Analysis, Validity and Reliability, Types of Multivariate Techniques, PCA and Factor Analysis, Multiple Regression, Logistic Regression, Canonical Correlation, Conjoint Analysis, Cluster Analysis, Multi-Dimensional Scaling, Correspondence Analysis, Structural Equation Modeling, Multivariate Model Building.

**Module 2: Data Cleaning and Multivariate Techniques**

Graphical Examination of Data, Convert Un-Tidy Data into Tidy Data. Missing Data, Imputation of Missing Data by Central Tendency and kNN Method. Outliers, Winsorization of Outliers, Testing the Assumptions of Multivariate Analysis, Incorporating Non Metric Data with Dummy Variables, Managerial Overview of the Results.

**Module 3: Logistic Regression**

Binary Classification versus Point Estimation, Odds versus Probability, Logit Function, Classification Matrix, Individual Group Classification Efficiency, Overall Classification Efficiency, Nagelkerke R Square, Receiver Operating Characteristic Curve, Sensitivity, Specificity, Area Under ROC Curve, Cut-Offs, True Positive Rate and False Positive Rate.

**Module 4: Introduction to Time Series**

Nature of Time Series, Components of Time Series, Secular Trend, Seasonal Variations, Cyclical Variations, Irregular Variations, Time Series Decomposition, Smoothing Techniques, Moving Average, Weighted Moving Average, Exponential Smoothing, Double Exponential Smoothing, Regression Trend Analysis, Autocorrelation and Autoregression.

**Module 5: Univariate Time Series Models**

Tests for Stationarity, Graphical Method, Unit Root Test, Augmented Dickey Fuller Test, Phillips–Perron Test, Schmidt–Phillips Test, KPSS Test, Identification Of ARMA Model Parameter Estimation, Testing Significance with Forecasting, Stationary Restriction for ARMA Models, ARIMA Models, Model Parameter Estimation, Testing Parameter Significance.

**Course outcomes:**

CO 1: Understand and Implement Techniques of Multivariate Data Summary, Exploratory Data Analysis and Dimensionality Reduction.

CO 2: Apply different Data Cleansing Methods such as Outlier Removal, Missing Values Treatment involving Multivariate Data.

CO 3: Understand, Apply and Deploy Logistic Regression Models and present the findings using Classification Matrices, ROC Curves.

CO 4: Understand, Discuss and Describe Time Series, its Components, Forecasting based on different Smoothing Techniques.

CO 5: Understand and Implement Univariate Time Series Models, Perform several tests such as AD Fuller, KPSS, Parameter Significance.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM

**Audit and Assurance**

**SUBJECT CODE: BCM 632A**

**CREDITS: 4**

**Course Objective:**

The Objective of the paper is to develop the knowledge and skills required to carry out an audit and assurance assignment. It provides the working knowledge of the audit process and standards of auditing. It also covers the process of testing internal controls.

### **Module 1: Audit framework & regulation**

Concept of audit & assurance, professional ethics of an auditor, scope of internal & external audit, governance & audit, Ethical threats & Safeguards, discuss the importance and purpose of engagement letters and their contents

### **Module 2: Audit planning & risk assessment**

Planning audit assignments, identify and explain the need for, benefits of and importance of planning an audit, understanding the entity & its environment, assessing audit risk, fraud risk, interim audit, audit documentation, working papers and audit evidence

### **Module 3: Internal control & audit tests**

Internal control system assessment, control environment, risk assessment procedures, monitoring of controls, evaluation of internal control system by auditor, test of controls, communication on internal controls, explain how auditors record internal control systems including the use of narrative notes, flowcharts and questionnaires

### **Module 4: Audit evidence & reporting**

Techniques of collecting audit evidence, quality & quantity of audit evidence, audit sampling, explain the use of automated tools and techniques, review procedures including subsequent events, going concern, written representations, auditor's report contents & opinion, discuss the need for auditors to communicate with those charged with governance.

### **Module 5: Audit of specific items**

Audit of receivables, inventory, payables & accruals, bank & cash, tangible & intangible assets, share capital & reserves, directors' remuneration, details of audit checks for these items and reporting thereof, use of management representation

### **Course Outcomes:**

CO1: Explain the concept of audit & assurance, the functions of audit, ethics and professional conduct

CO 2: Demonstrate how the auditor obtains and accepts audit assignments, assesses audit risks

CO 3: Describe and evaluate internal controls, techniques and audit tests, including IT systems to identify and communicate control risks and their potential consequences

CO 4: Describe the way of gathering & managing audit evidence and review and reporting

CO 5: Managing the audit procedure for specific items

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM**

### **Financial Predictive Analytics**

**SUBJECT CODE: BCM633A**

**CREDITS: 4**

#### **Course Objective:**

The Financial Predictive analysis course blends easy-to-use statistical tools with complex machine learning tools and algorithms to equip the participants with the requisite skill set in analyzing data. By the end of this course, the participants should be able to perform financial analysis using powerful tools like R and Python. Whether it is with respect to stock market prediction or customer profitability, finance analytics provides a direction in predicting all.

#### **Module 1: Introduction for Financial Predictive Analytics)**

Types of Models, Supervised model, semi supervised model, reinforcement learning model, Regression and classification model, Defining the model objective, collecting the data, picking a model, Tidying data, Assessing regression model, assessing classification model, assessing binary classification model.

#### **Module 2: Regression Models**

Standard error of the estimate, Correlation coefficient, ANOVA table for simple linear regression model, Inference in Simple Linear regression model, prediction interval for randomly chosen value of y for given x. The multiple regression analysis equation, Inference in multiple regression, adjusting  $R^2$ , multicollinearity.

#### **Module 3: Classification Models**

Introduction, Binomial logistic regression, multinomial logistic regression, Linear discriminant analysis, Quadratic discriminant analysis, Decision Trees, Growing trees, Building decision trees, CART, C5.0 and CHAID Trees, Prediction by decision trees, Model Over fitting.

#### **Module 4: Dimensionality**

Introduction, Principal component analysis, the eigen value criterion, Profiling the principal component, communalities, Validation of the Principal component, Applying factor analysis, Factor rotation.

## Module 5: Clustering Financial Data

Custer Mechanism, Hierarchical and Non-Hierarchical Clustering, K Means Clustering, Normalizing of Data, Scaling of Data, Distances, Euclidean Distance, Distance Matrix Plot, Centroid, Total Within Sum Squared, Within-group Linkage, Nearest Neighbor, Furthest Neighbor, Centroid Clustering, Ward's Method, Optimum Number of Clusters, Cluster Membership, Agglomeration Schedule, Dendrogram.

### Course outcomes:

CO 1: Understand and Implement Techniques under Financial Predictive Analytics such as Model Requirement Specification, Tidying Data and Performance Benchmarking.

CO 2: Conceptualize and implement Financial Data Regression and its applicability based on ANOVA Testing.

CO 3: Implement and Employ the use of Classification Models such as Decision Trees and Logistic Regression based on Financial Data Prediction.

CO 4: Deploying Dimensionality Reduction Models based on Principal Component Analysis and Factor Analysis.

CO 5: Understand and employ the use of Financial Data Clustering based on Hierarchical and K-Mean Clustering Algorithms.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

### E-Accounting

**SUBJECT CODE: BCM 634A**

**CREDITS: 3**

**Course Objective:**

The Objective is to provide the understanding of the digital or computerized accounting system, Students will explore performance, liquid assets, inventories, fixed assets, intangible assets, long-term obligations, investments, equity, and cash flows using different kinds of software. conceptual and practical knowledge of E-Accounting that uses database system resources.

**Module 1: Computerized accounting and accounting database sources**

Understand the digital mode used for data feed, basics of Computerized accounting, Concepts of Accounting groups, Hierarchy of accounts, Codification in accounting. Accounting package - Setting up an accounting entity, Creation of groups and accounts, accounting standards.

**Module 2: Computerized financial accounting**

Understand the role of accountants in Designing and creating vouchers, Data Entry operations using the vouchers, Processing for reports to prepare ledger accounts, trial balance and balance sheet, Preparation of different formats and usage of different file types for report uploading and filing.

**Module 3: Digital accounting methods**

Understand the fundamental functions of Identifying and appreciating the data content in accounting transactions; overview of database concepts, ER model; creating and implementing RDM for Financial Accounting; SQL to retrieve data and generate accounting information, Analyzing forecasts, budgeting & budgetary control.

**Module 4: Reporting Analysis**

Analyzing and maintaining Accounting reports to appreciate reliability of information, Identifying accounting, information and appropriate queries, Forming and executing the SQL, Generating Accounting information for a report, Reports for expenditure analysis, tracking incomes and managing accounts.

**Module 5: Elements of Computerized accounting reporting**

Understanding the Creation of data table defining relationships and constraints, Designing Accounting Vouchers, Designing Accounting Reports, designing accounting reports in the form of Journal book, Cash book, Subsidiary books, Ledger, Trial balance, Profit & Loss account, Balance sheet, fund-flow statements.

**Course Outcomes:**

CO1: This course introduces the students with the understanding about Computerized accounting performed in the real time scenarios.

CO2: The students will learn the accounting process applied in the preparation of the financial reports.

CO3: The students will get a sound understanding of the database system used or maintained in the business for accounting and its procedures of recording.

CO4: The student will get a deep analysis of the various accounting skills that are used by the professional accountants.

CO5: The student will understand the impact of IT systems and financial systems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM****OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

**Logistics and Supply Chain Management**

**SUBJECT CODE: BCM635A**

**CREDITS: 3**

**Course Objective:**

The course provides knowledge about implementing, controlling, and planning the efficient flow of goods from the supplier to the customers. The course imparts students with an in-depth understanding of the functions and contributions of supply chain management, the concept of logistics management, information systems in logistics, warehousing, and logistics administration.

**Module 1: Overview of logistics and its impact on customer value**

Nature and concepts – the evolution of logistics concept – logistical mission and strategic issues – logistics in India – the growing importance of logistics management – logistical competitive advantage – strategic logistics planning process – components of logistics management – functions of logistics management - The marketing and logistics interface - delivering customer value – customer service and customer retention - the impact of running out-of-stock - market-driven supply chains - defining customer service objectives - setting customer service priorities - setting service standards - going to market- distribution channels are value delivery system - innovation in the distribution channel - the omni-channel revolution - omni-channel retailing.

**Module 2: Overview of supply chain management**

Introduction - value chain - functions and contributions - supply chain effectiveness and Indian infrastructure – the framework for supply chain solution - outsourcing and 3PLs - fourth-party logistics (4PLs) - supply chain relationships - conflict resolution strategies for harmonious relationships – the significance of supply chain in building competitive advantage.

### **Module 3: Elements of logistics & supply chain management**

Introduction - positioning of information in logistics and supply chain management - logistics information system (LIS) - operational logistical information system - emerging technologies in logistics and supply chain management.

### **Module 4: Warehousing and distribution centres**

Introduction - concepts of warehousing - types of warehouse - functions of warehousing - warehousing strategy - warehouse design - operational mechanism of warehouse - the omni-channel revolution - omni-channel retailing.

### **Module 5: Creating a sustainable supply chain & the future**

Introduction - evolutionary trends of logistics and supply chain organization - basic organization principles - factors influencing organizational structure - the triple bottom line, greenhouse gasses, and the supply chain - reducing the transport-intensity of supply chains - peak oil - beyond the carbon footprint - reduce, reuse, recycle - the impact of congestion - the supply chain of the future - emerging mega-trends - shifting centres of gravity - the multi-channel revolution - seeking structural flexibility - latest vision- waste in the supply chain - the new industrial revolution - seven major business transformations - the implications for tomorrow's logistics managers

### **Course Outcomes:**

CO1: To obtain an understanding of the basics of logistics and supply chain management.

CO2: To recognize the impact of logistics on creating customer value..

CO3: To obtain an understanding of the impact of technology in logistics and supply chain management.

CO4: To learn the concepts of warehousing and distribution centers.

CO5: To appreciate the significance of creating a sustainable supply chain.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM**

**Life Skills 2 (Aptitude)**  
**Subject Code: DEN004A**  
**Credits: 2**

**Course Objectives:**

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

**Course Outcomes (CO):** At the end of this course students will have:

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

**Syllabus: Theory**

UNIT 1	<p>Number System:</p> <ul style="list-style-type: none"> <li>a. Number system</li> <li>b. Power cycle</li> <li>c. Remainder cycle</li> <li>d. Factors, Multiples</li> <li>e. HCF and LCM</li> </ul>
UNIT 2	<p>Data Arrangements and Blood Relations:</p> <ul style="list-style-type: none"> <li>a. Linear Arrangement</li> <li>b. Circular Arrangement</li> <li>c. Multi-dimensional Arrangement</li> <li>d. Blood Relations</li> </ul>
UNIT 3	<p>Time and Work:</p> <ul style="list-style-type: none"> <li>a. Work with different efficiencies</li> <li>b. Pipes and cisterns</li> <li>c. Work equivalence</li> <li>d. Division of wages</li> </ul>
UNIT 4	<p>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</p> <ul style="list-style-type: none"> <li>a. Coding and Decoding</li> <li>b. Series</li> <li>c. Analogy</li> <li>d. Odd Man Out</li> <li>e. Visual Reasoning</li> </ul>

UNIT 5	<p>Percentages, Simple Interest and Compound Interest:</p> <ul style="list-style-type: none"> <li>a. Percentages as Fractions and Decimals</li> <li>b. Percentage Increase / Decrease</li> <li>c. Simple Interest</li> <li>d. Compound Interest</li> <li>e. Relation Between Simple and Compound Interest</li> </ul>
UNIT 6	<p>Permutation, Combination and Probability:</p> <ul style="list-style-type: none"> <li>a. Fundamental Counting Principle</li> <li>b. Permutation and Combination</li> <li>c. Computation of Permutation</li> <li>d. Circular Permutations</li> <li>e. Computation of Combination</li> <li>f. Probability</li> </ul>
UNIT 7	<p>Data Interpretation and Data Sufficiency:</p> <ul style="list-style-type: none"> <li>a. Data Interpretation – Tables</li> <li>b. Data Interpretation - Pie Chart</li> <li>c. Data Interpretation - Bar Graph</li> <li>d. Data Sufficiency</li> </ul>
UNIT 8	<p>Profit and Loss, Partnerships and Averages:</p> <ul style="list-style-type: none"> <li>a. Basic terminologies in profit and loss</li> <li>b. Partnership</li> <li>c. Averages</li> <li>d. Weighted average</li> </ul>

	e. Mixtures and allegations
--	-----------------------------

### **Methodology for Evaluation**

#### 1. Internal Assessment

a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks

b) In Semester Tests (Minimum two) : 30 Marks

#### 2. Term End : 40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

### **Suggested Reading:**

1. Speed Mathematics, Secrets of Lightning Mental Calculations, by Bill Handley, Master Mind books;
2. The Trachtenberg Speed System of Basic Mathematics, Rupa& Co., Publishers;
3. How to Ace the Brainteaser Interview, by John Kador, Mc Graw Hill Publishers.
4. Quick Arithmetics, by Ashish Agarwal, S Chand Publ.;
5. Quicker Maths, by M tyra& K Kundan, BSC Publishing Co. Pvt. Ltd., Delhi;
6. Owl Purdue University online teaching resource

### **Value Education II** **Subject Code: DIN004A** **Credits: 1**

#### **Course Objectives**

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

#### **Course Outcomes(CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

### **Yoga and Meditation**

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanjali's Yoga Sutra and Ashtanga Yoga. The coverage also includes the effect of yoga on integrated personality development.

### **Rajasthan Mural Art and Painting**

Mural painting is an offshoot of the devotional tradition in Rajasthan. A mural is any piece of artwork painted or applied directly on a wall, ceiling or other large permanent surface. In the contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Rajasthani mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples, principally in Rajasthan. Ancient temples and tourists places in different States of Rajasthan, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

### **Course on Organic Farming and Sustainability**

Organic farming is emerging as an important segment of human sustainability and healthy life. 'Haritamritam' is an attempt to empower the youth with basic skills in tradition of organic farming and to revive the culture of growing vegetables that one consumes, without using chemicals and pesticides. Growth of Agriculture through such positive initiatives will go a long way in nation development. It is a big step in restoring the lost harmony of nature.

### **Benefits of Indian Medicinal Systems**

Indian medicinal systems are one of the most ancient in the world. Even today society continues to derive enormous benefits from the wealth of knowledge in Ayurveda of which is recognized as a viable and sustainable medicinal tradition. This course will expose students to the fundamental principles and philosophy of Ayurveda and other Indian medicinal traditions.

### **Traditional Fine Arts of India**

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is 'Unity in Diversity' and it has led to the most diverse expressions of culture in India. Most art forms of India are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

### **Science of Worship in India**

Indian mode of worship is unique among the world civilisations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realisation of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India

### **Insights into Indian Classical Music**

The course introduces the students into the various terminologies used in Indian musicology and their explanations, like Nadam, Sruti, Svaram – svara nomenclature, Stayi, Graha, Nyasa, Amsa, Thala, Saptatalas and their angas, Shadangas, Vadi, Samavadi, Anuvadi. The course takes the students through Carnatic as well as Hindustani classical styles.

### **Insights into Traditional Indian Painting**

The course introduces traditional Indian paintings in the light of ancient Indian wisdom in the fields of aesthetics, the Shadanga (Six limbs of Indian paintings) and the contextual stories from ancient texts from where the paintings originated. The course introduces the painting styles such as Madhubani, Kerala Mural, Pahari, Cheriya, Rajput, Tanjore etc.

### **Insights into Indian Classical Dance**

The course takes the students through the ancient Indian text on aesthetics the Natyasastra and its commentary the Abhinava Bharati. The course introduces various styles of Indian classical dance such as Bharatanatyan, Mohiniyattam, Kuchipudi, Odissi, Katak etc. The course takes the students through both contextual theory as well as practice time.

### **Indian Martial Arts and Self Defense**

The course introduces the students to the ancient Indian system of self-defense and the combat through various martial art forms and focuses more on traditional Kerala's traditional Kalari Payattu. The course introduces the various exercise technique to make the body supple and flexible before going into the steps and techniques of the martial art. The advanced level of this course introduces the technique of weaponry.

#### **Social Awareness Campaign**

The course introduces the students into the concept of public social awareness and how to transmit the messages of social awareness through various media, both traditional and modern. The course goes through the theoretical aspects of campaign planning and execution.

#### **Organic Farming in Practice**

Organic agriculture is the application of a set of cultural, biological, and mechanical practices that support the cycling of farm resources, promote ecological balance, and conserve biodiversity. These include maintaining and enhancing soil and water quality; conserving wetlands, woodlands, and wildlife; and avoiding use of synthetic fertilizers, sewage sludge, irradiation, and genetic engineering. This factsheet provides an overview of some common farming practices that ensure organic integrity and operation sustainability.

#### **Ayurveda for Lifestyle Modification**

Ayurveda aims to integrate and balance the body, mind, and spirit which will ultimately leads to human happiness and health. Ayurveda offers methods for finding out early stages of diseases that are still undetectable by modern medical investigation. Ayurveda understands that health is a reflection of when a person is living in harmony with nature and disease arises when a person is out of harmony with the cycles of nature. All things in the universe (both living and non-living) are joined together in Ayurveda. This leaflet endow with some practical knowledge to rediscover our pre- industrial herbal heritage.

#### **Life Style and Therapy using Yoga**

Yoga therapy is the adaptation of yogic principles, methods, and techniques to specific human ailments. In its ideal application, Yoga therapy is preventive in nature, as is Yoga itself, but it is also restorative in many instances, palliative in others, and curative in many others. The therapeutic effect comes to force when we practice daily and the body starts removing toxins and the rest is done by nature.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce. Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, Marshal Arts etc. the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

### **Big data**

**Subject Code: BCM 644A**

**Credits: 4**

#### **Module Overview**

This module forms an introduction as well an in-depth study in the field of Big Data and Hadoop. It comprises of the fundamentals as well as advanced topics needed to progress in this technology. The

students will learn about the applications, usage and several use case scenarios pertaining to Big Data-Hadoop where they can use the knowledge and progress ahead.

### **Learning Objectives**

This course will help students gain knowledge and understanding about Big Data Technology, Hadoop Ecosystem and various tools related to it. The students will learn about the HDFS File System, Map Reduce Framework, analysing data using Hbase and Hive along with the Integration of R with Hadoop.

### **Learning Outcomes**

Upon successful completion of this module, students should be able to:

- Understand the fundamentals of Big Data and its Applications in various Domains.
- Conceptualize and Incorporate the Technologies behind Big Data.
- Understand HDFS File Structure, Map Reduce Framework, the architectures related to them and to use them to solve complex problems.
- Integrate R with Hadoop and solve analytical problems.
- Understand and Use Hive/Hbase shell pertaining to relational data handling under Hadoop.

### **Unit I : Introduction to Big Data**

What Is Big Data? History of Data Management, Evolution of Big Data, Structuring of Big Data, Elements of Big Data, Application of Big Data in the Business Context, Careers in Big Data. Business Applications of Big Data: The Significance of Social Network Data, Financial Fraud and Big Data, Fraud Detection in Insurance, Use of Big Data in the Retail Industry.

### **Unit II : Technologies for Handling Big Data**

Distributed and Parallel Computing for Big Data, Understanding Hadoop, Cloud Computing, Grid Computing and In-Memory Technology for Big Data. VMWare Installation of Hadoop, Linux and its Shell Commands, Different Hadoop Distributions and their advantages, Hortonworks, Cloudera, MapR.

### **Unit III : Understanding the Hadoop Ecosystem**

The Hadoop Ecosystem, Storing Data with HDFS, Design of HDFS, HDFS Concepts, Command Line Interface to HDFS, Hadoop File Systems, Java Interface to Hadoop, Anatomy of a file read, Anatomy of a file write, Replica placement and Coherency Model. Parallel Copying with distcp, keeping an HDFS Cluster Balanced.

### **Unit IV : Map Reduce Fundamentals**

Origins of Map Reduce, How Map Reduce Works, Optimization Techniques for Map Reduce Jobs, Applications of Map Reduce, Java Map Reduce classes (new API), Data flow, combiner functions, running a distributed Map Reduce Job. Configuration API, setting up the development environment, Managing Configuration.

### **Unit V : Hive, Hbase and R-Hadoop**

Understanding R-Hadoop, Integration Procedure, Packages needed for R under Hadoop Ecosystem, Text Mining for Deriving Useful Information using R within Hadoop, Introduction to Hive & Hbase, Hive and Hbase Architecture, Understanding Queries, Mining Big Data with Hive & Hbase.

### **Machine learning for business analytics**

**Subject Code: BCM 636A**

**Credits: 4**

**Learning Objectives:** After this course students will gain critical knowledge and understanding about major Machine Learning procedures like Decision Tree, Cluster Analysis, Neural Networks, Support Vector Machine, Bayesian Networks and Machine Learning fundamentals. Students will be able to apply and practice this gained knowledge in variety of Business Scenarios.

## **Unit 1**

### **Classification and Regression Tree**

Classification & Regression, working of a Decision Tree, Attribute Selection Measures, Information Gain, Gain Ratio, Gini Index, Building Decision Trees, CART, C5.0, and CHAID Trees, Prediction by Decision Tree, Advantages and Disadvantages of Decision Trees, Model Overfitting, Building Decision Trees in R.

## **Unit 2**

### **Clustering**

Cluster Analysis versus Factor Analysis, Overview of Basic Clustering Methods, Agglomerative Hierarchical Clustering, Within-Group Linkage, Nearest Neighbor or Single Linkage, Furthest Neighbor or Complete Linkage, Centroid Clustering, Ward's Method, K-Means Algorithm, Dendrogram, Profiling of Cluster, Cluster Evaluation.

### **Unit 3**

#### **Artificial Neural Networks**

Structure of a Neural Network, Input Layer, Hidden Layer, Output Layer, Nodes, Synaptic Weights, Analogy with Biological Neural Network, Scaling of Data, Activation Functions, Hyperbolic Tangent, Sigmoid, Identity, Softmax, Optimization Algorithms, Scaled Conjugate Gradient, Gradient Descent, Model Accuracy.

### **Unit 4**

#### **Support Vector Machine**

Decision Boundaries for Support Vector Machine, Maximum Margin Hyperplanes, Structural Risk Minimization, Linear SVM-Separable Case, Linear SVM-Non-Separable Case, Kernel Function, Kernel Trick, Kernel Hilbert Space, Model Evaluation.

### **Unit 5**

#### **Market Basket Analysis**

Market Basket Analysis and Association Analysis, Market Basket Data, Stores, Customers, Orders, Items, Order Characteristics, Product Popularity, Tracking Marketing Interventions, Association Rules, Support, Confidence, Lift, Chi-Square Value, Sequential Pattern Analysis.

#### **Reference Books:**

### **Direct Taxation**

#### **Subject Code: BCM 637 A**

#### **Credits: 4**

Generally, a commerce graduate is expected to have knowledge about taxation. After the implementation of GST in India, taxation structure has become quite simple and multiple taxation has substantially reduced. Whether in employment or having own business or profession, an individual has to pay income tax and file his income tax return once he starts earning taxable income. This paper aims at making the students understand and apply the basic provisions related to income tax and be able to compute his own income tax

liability, timely payment of such tax liability and comply with income tax return filing procedure on year-to-year basis

### **Unit 1:Income Tax Act, 1961**

Meaning, concept and definitions

Residential status and taxability of income

### **Unit 2: Computation of Taxable Income under different heads of Income**

- a. Income from Salary ← Salient features, meaning of salary, Allowances and their taxability, Perquisites and their valuation, Deductions from Salary
- b. Income from House Property ← Basis of chargeability, Annual Value, Valuation of Self Occupied, Let out and Deemed Let Out Properties, Deductions allowed
- c. Profits and Gains of Business or Profession ← Definitions, Deductions expressly allowed, Deductions expressly disallowed, disallowance on the basis TDS non-compliance, Block of Assets method of Depreciation
- d. Income from Capital Gains, Chargeability, Cost of Improvement, Short Term Capital Gains, Long Term Capital Gains, Deductions
- d. Income from Other Sources Chargeability, Deductions, Amounts not deductible

**Unit 3: Computation of Total Income** ← Gross Total Income, Deductions under Chapter VIA, Tax slabs for Individuals, New tax regime effective from A.Y.2021 -22, Choice of assessee to switch -over to new regime, Government philosophy behind new tax regime, Numerical sums on total computation under old and new tax regime

**Unit 4: Modes of Tax payment** ← Advance Tax, Tax Deducted at Source, Self Assessment Tax, Tax on Regular Assessment 06, Viewing Form 26AS on Income Tax site

**Unit 5:Income Tax Returns**← Various Income Tax Return Forms and their applicability, Due dates for filing Income Tax Returns, E-filing of Income Tax Returns, E-assessment of Income Tax Returns, Faceless assessment

***Note: Provisions as amended and made applicable to current Assessment Year will be considered to be part of the syllabus. Accordingly, for academic year 2021-2022 provisions relevant to A.Y.2021-2022 will apply and so on***

### **Course Learning Outcomes:**

On successful completion of the module students will be:

CO1. able to understand basic taxation structure in India as per the Constitution of India.

CO2. able to understand basic provisions regarding computation of taxable income of an individual for the current assessment year, whether from Salary or Business/Profession or other sources of Income.

CO3. able to make numerical calculations of taxable income and exempt income as per the method of calculation prescribed under Income Tax Act, and tax payable on the same.

CO4. acquire knowledge about submission of income tax return, payment of due taxes in the form of advance tax, self-assessment tax and tax deducted at source.

CO5. get acquainted with e-processes related to income tax filing and assessment.

**Financial econometrics**  
**Subject Code: BCM638A**  
**Credits: 4**

**Module Overview**

This subject covers the fundamentals of Financial Econometrics. The students will understand and be able to implement different Statistical Algorithms and Concepts based on Econometrics disciplines ranging from Least Squares Method, Multicollinearity, Non-Linear and Responsive Models to Panel Data Regressions.

**Learning Objectives**

This subject is designed to provide a holistic coverage and introducing the student to the field of Financial Econometrics. The students will learn and understand the implementation and usability of Financial Econometrics domain based on different Statistical Models and advanced Regression Algorithms.

**Learning Outcomes**

Upon successful completion of this module, students should be able to understand and implement ANOVA, ANCOVA Models, Regression Models in a deeper level. The students will understand the effects of Heteroscedasticity and Multicollinearity and will be able to detect and provide suitable remedies for the same. The students will gain expertise in Modeling Non-Linear, Responsive Models, Dynamic Models and Simultaneous Equation Models.

**Unit 1 Ordinary Least Square Regression & BLUE Properties**

Methodology of Econometrics. Types of Econometrics. Connection between Econometrics, Statistics and Finance. The Assumptions Underlying The Method of Least Squares. Dummy Variables Regression Models. ANOVA and ANCOVA Models. Problem of Estimation in Regression Models. BLUE property of estimators.

**Unit 2 Multicollinearity & Heteroscedasticity**

Nature of Multicollinearity. Estimation In The Presence of Perfect Multicollinearity. Estimation In The Presence of “High” But “Imperfect” Multicollinearity. Detection and Remedy of Multicollinearity. OLS Estimation In The Presence of Heteroscedasticity. Detection and Remedy of Heteroscedasticity. Detection and Remedy of Autocorrelation.

**Unit 3 Non-Linear & Qualitative Response Models**

Estimation of Linear and Nonlinear Regression Models. The Nature of Qualitative Response Models. Logistic Regression Model. PROBIT and TOBIT Models. Model Specification Error or Model Specification Bias. Model Selection Criteria. Types Of Specification Errors. Detecting the Presence of Overfitted Model. Ramsey’s RESET Test and Lagrange Multiplier (LM) Test for Adding Variables.

**Unit 4 Dynamic Models & Panel Data Regression**

Dynamic Econometric Models. The Role of “Time, ’or “Lag,” in Economics. The Koyck Model- The Adaptive Expectations Model. The Stock Adjustment, or Partial adjustment Model. Combination of Adaptive Expectations And Partial adjustment Models. Panel Data Regression. Fixed Effects Approach. Error Components Approach. Hausman test to decide between FEM and ECM.

### **Unit 5 Simultaneous Equation Models**

Simultaneous Equation Model. Limited Information Methods Versus Full Information Methods. Recursive, Triangular, or Causal Models. Estimation of a Just Identified Equation: The Method of Indirect Least Squares (ILs). Estimation of an Overidentified Equation: The Method Of Two-Stage Least Squares (2sls).

### **Marketing analytics**

**Subject Code: BCM 639A**

**Credits: 4**

### **Module Overview**

This subject demonstrates the aspects of consumer behaviour through novel analytical techniques like Market Basket Analysis, Multi-Dimensional Scaling, Conjoint Analysis, Cluster Analysis along with ethical dimension of reporting results of analysis. Besides theoretical understanding of concepts application on data sets will be covered in this module.

### **Learning Objectives**

Objectives of this module are around building of strong conceptual understanding of consumer behaviour and consumer preferences. Besides, theoretical understanding of concepts, application of the concepts through software is aimed in this module.

### **Learning Outcomes**

Upon successful completion of this modules, students should be able understand the key issues around consumer behaviour along with practical application of the learned concepts on data sets through popular software.

### **Unit I: Market Basket Analysis**

Association Rule Mining, Item & Item-set, Frequency of Transactions, Causal Transactions, Support, Confidence, Predictive Power & Accuracy, Lift – Measure of Association, Item-Transaction Matrix, Density, Length of Rule, Optimum Number of Rules, Apriori Function, Custom Queries, Saving Association Rules.

## **Unit II: Multi-Dimensional Scaling**

Consumer Preference, Distance- Measure of Dissimilarity/Similarity, Dissimilarity/Similarity Matrix, Square Symmetric Matrix, MDS Versus Factor and Cluster Analysis, Euclidean Distance, Iteration History, Stress and Squared Correlations, Stimulus Coordinates, Subject Weights, Derived Stimulus Configuration, Group Plots.

## **Unit III: Conjoint Analysis**

Products & Services Evaluation, Consumer Buying Behaviour, Attributes and Features, Consumer Preference versus Cost to Company, Values to Attributes, Contribution of Attribute, Ordinary Least Square for Contribution, Full-Profile Rating, Full-Profile Ranking, Choice-Based Conjoint Analysis, Hierarchical Bayes Estimation, Polyhedral Methods.

## **Unit IV: Clustering of Marketing Data**

Custer Mechanism, Hierarchical and Non Hierarchical Clustering, K Means Clustering, Normalising of Data, Scaling of Data, Distances, Euclidean Distance, Distance Matrix Plot, Centroid, Total Within Sum Squared, Within-group Linkage, Nearest Neighbour, Furthest Neighbour, Centroid Clustering, Ward's Method, Optimum Number of Clusters, Cluster Membership, Agglomeration Schedule, Dendrogram.

## **Unit V: Reporting & Ethical Issues**

Importance of Report, Report Preparation, Report Format, Oral Presentation, Research Follow-up, Research Integrity, Misusing Statistics, Falsifying Figures, Withholding Information, Honesty, Accuracy & Completeness in Reporting, Complete Disclosure by Client, American Marketing Association.

## **Logistics and supply chain analytics**

**Subject Code: BCM 641A**

**Credits: 4**

## **Module Overview**

This subject focuses on the interlinked processes that compose effective logistics and supply chain planning, demand planning, sales and operations planning, and inventory and supply planning with the help of advanced analytics techniques in effective decision making.

## **Learning objectives**

This subject helps the students in understanding the processes, interconnection, and the practical challenges of implementing the planning and the important ways in which analytical tools and methods can be utilized to make better logistics and supply chain planning decisions

### **Learning outcomes**

On successful completion of this module, the student will be able to implement the planning processes using analytical tools and make effective decisions, which will help a company to achieve its targeted balance between efficiency and responsiveness

### **UNIT I : Introduction**

Define Supply Chain and Logistics Analytics, Supply Chain Management Model and Integration, Key Strategic Matrix for Cycle Time and Response Time, the global Supply Chain, Information Integrated, Risk Management, Supply Chain Segmentation and Analytics.

### **UNIT II : Performance, Measures and Analytics**

The Role and Purpose of Measures and Control Systems, Level of Analytics and Business Intelligence, Analytics Strategy, Analytics and Business Intelligence Application, Analytics and Supply Chain Segmentation, Demand, Inventory and Supply Planning.

### **UNIT III: Supply Chain Segmentation Key Concepts and Change Management**

Forecast Analysis, Statistical Safety Stock (SSS), Optimal Service Level (OSL), Coefficient of Variation (COV), Re-Order Point Cycle (ROP), Economic Order Quantity (EOQ), Optimal Inventory Level (OIL), Min / Max (MM) Planning, Build to Order (BTO) / Manufacture to Order (MTO) Planning, Quality Function Deployment (QFD), Total Quality Management (TQM), Concept Management.

### **UNIT IV: Global Supply Chain Analytics**

Integrating Data into Supply Chain Intelligence, Global Sales, Promotion and Sourcing Analytics, Contract Manufacturing Analytics, Distribution Analytics, Transportation and Logistics Analytics, Integrating Functional Analytics into Global Supply Chain Management.

### **UNIT V: Metrics and KPI's**

Increase Profitability, Forecast Accuracy, Working Capital Improvement, operating Margin Improvement, Positive and Negative Variance, Maturity Models, Reference Models, Benchmarking, Applying Goals to Supply Chain, Demand Forecasting, Invoice Reporting, Inventory Visibility, Procurement Reporting.

### **Accounting and fraud analytics**

**Subject Code : BCM 642A**

**Credits : 4**

#### **Module Overview**

This subject covers the fundamentals of Accounting and Fraud Analytics, the strategies involved in detecting, identifying and assessing financial frauds, conceptualizing several algorithms which are implemented to detect frauds and assess them along with a Case Study in R Programming to detect frauds using several approaches.

#### **Learning Objectives**

This subject is designed to provide a holistic coverage and introducing the student to the field of Accounting and Fraud Analytics. The students will develop an understanding of its importance, the practical use of analytical algorithms and their analysis to aid in Detecting Frauds.

#### **Learning Outcomes**

Upon successful completion of this module, students should be able to Recognize the types of Data Anomalies and Signs of Fraud, Implement Data Mining Algorithms to Detect, Identify and Assess Frauds within a Financial Statement, Apply numerous fundamental, advanced and non-traditional mining techniques.

#### **Unit I: Introduction**

Accounting Fraud Data Analytics, Fraud Scenarios, Critical Fraud Concepts, Understanding Auditors Fraud related responsibilities, Identifying Corporate Vulnerabilities, Risks and Threats, Financial Fraud Data Analytics Methodology, Critical Considerations for the Fraud Data Analytics, False Positive Conundrum, Axioms of Fraud Analytics.

#### **Unit II : Data Mining Strategies**

Strategies for Financial Fraud Analysis, Pattern Recognition and Frequency Analysis, Using Critical Data Elements, building a Fraud Analytics Plan, Data Issues, Availability, Reliability, Usability, Defining the Scope, Creating Planning Reports, Data Mining for Shell Companies, Building Search Routines, Correlation to Transactional Data.

#### **Unit III : Fraud Detection Algorithms**

Clustering with Financial Data, Clustering Methods- K-Means, Hierarchical, Comparative Study, Dimensionality Reduction, Parametric Approach to Dimension Reduction, Apriori Algorithm, Expectation-Maximization for Knowledge Discovery, Classification and Regression Tree, Adaboost, Naïve Bayes, Understanding Outlier Rankings.

#### **Unit IV : Data Analysis Tests**

Detecting Billing and Checking Tampering Schemes, Finding Frauds within Payroll and Expense Reimbursement Functions, Detecting Theft of Cash Receipts and Inventory, Corruption Scheme Detection, Analysing External Financial Records, Detecting Financial Statement Frauds, Identifying Anomalies, Uncovering Financial Statement Manipulation.

### **Unit V : Detecting Fraudulent Transactions: Case Study**

Problem Description and Objectives, Available Data and Features, Loading the Dataset, Exploring, Data Problems, Defining Data Mining Tasks, Evaluation Criteria, Experimental Methodology, Obtaining Outlier Rankings using Supervised and Unsupervised Approaches, Reporting Summary Statistics.

### **HR analytics**

**Subject Code: BCM 644A**

**Credits: 4**

### **Module Overview**

This subject provides a practical approach of using data to solve real HR challenges in organizations and demystifies analytics with clear guidelines and recommendations for making the business case, HR analytics function, avoiding common pitfalls, presenting data through visualization and storytelling.

### **Learning objectives**

This subject helps in understanding all the key elements of HR including recruitment, employee engagement, performance management, and examines the ways data can contribute to organizational success by optimizing processes, driving performance and improving HR decision making.

### **Learning outcomes**

On Successful Completion, the student will be able to access framework with analytics, advanced statistical technique, key trends and patterns in order to develop effective evidence-based HR strategies and business decisions.

### **UNIT I : Introduction**

Define the Business Challenge, Understand the Analytics Domain, Human Capital Analytics, Forming Hypothesis, Explore Complex Analysis, Using Data for Informed Decision, Evaluating the Intervention and Data, Business Strategy, Competitive Advantage and Integration, Develop Hypothesis, HR Matrix, Various Statistical Test.

## **UNIT II : Articulating Business Value and Analytical Problem Solving**

Analytics Business Model, Analytics Value Chain, Training Value Measurement Model, Structure and Team Building, Analytics Capabilities and Effectiveness, Linkage to Business Outcome, Measuring Analytics Impact on Business Outcome, Research Evidence on Impact HR Program, Deep and Wide Approach, Building the Cube.

## **UNIT III : Workforce Analytics**

Business Levers of Organization Structure, Strategy and Manpower Planning, Traditional Measures of Organization Structure, Competitive Usage of Organization Structure, Organization shaping and Employee Growth, Measuring the Aspect of Organization Structure, Design and Supervisory Ratios, Demographics and Succession Planning.

## **UNIT IV : Acquiring High-Quality Talent and Development**

Effective and Emerging Measures of Talent Acquisition, Opportunity Cost of Cycle Time, Validity of Hiring Specifications, Importance of Quality of Hire, Measuring and Improving Process Capability, Measuring Returns on Investments on Talent Development Initiatives, Right Metrics and Measures for Strategic Alignment.

**UNIT V : Talent Engagement, Measure, Retention and Compensation** Measuring Attrition, LTM (Analytical Problem Solving) or YTD (Year to Date), Employee Retention. Predictive Modelling for Attrition Analysis, Competency Baseline and Usage, Leadership Development, Valuing Benefits using CTC Statement, Portfolio Management of Benefits, Tailoring Variable Pay to Performance Based on Data.

**Program Educational Objective (PEO)- Bcom- Financial Marketing (IFM)**

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303305

- I To introduce students to the world of financial services
- II To enrich student's understanding of the fundamental concepts and working of financial service institutions
- III To equip students with the knowledge and skills necessary to become employable in the financial service industry.
- IV To develop ethical business professionals with a broad understanding of business from an interdisciplinary perspective
- V To sharpen the students' analytical and decision making skills.

**Program Outcome (PO) – Bcom- Financial Marketing (IFM)**

**PO 1:** Understand the role and function of the financial system in reference to the macro economy

**PO 2:** Understand the concepts of derivatives including the key features of futures, options and swaps and the terminology associated with them.

**PO 3:** Understand the impact of macroeconomics on the behaviour of markets, sectors, companies, and investment themes

**PO 4:** Understand the main types of assets including the range of financial markets that exist for example money markets, property markets and foreign exchange markets.

**PO 5:** Understand different methods for the valuation of asset portfolios and explain their appropriateness in different situations.

**PO 6:** Understand the factors that a company has to consider when deciding its capital structure

**PO 7:** Analyse the process through which trading takes place and the role of clearing, settlement, lending, and custody process

**Semester I**

<b>FIRST SEMESTER</b>

**Business and Technology**

**SUBJECT CODE: BCM615B**

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

## **CREDITS: 3**

### **Unit 1: The business organisation, its stakeholders, and the external environment**

The purpose and types of business organisation -Stakeholders in business organisations -Political and legal factors affecting business -Macroeconomic factors -Micro economic factors -Social and demographic factors -Technological factors -Environmental factors -Competitive factors.

### **Unit 2: Business organisational structure, functions and governance**

The formal and informal business organisation- Business organisational structure and design- Organisational culture in business -Committees in business organisations -Governance and social responsibility in business

### **Unit 3: Accounting and reporting systems, compliance, control, technology and security**

The relationship between accounting and other business functions -Accounting and finance functions within business organisations -Principles of law and regulation governing accounting and auditing -The sources and purpose of internal and external financial information, provided by business -Financial systems, procedures and related IT applications -Internal controls, authorisation, security of data and compliance within business -Fraud and fraudulent behaviour and their prevention in business, including money laundering. -The impact of Financial Technology (Fintech) on accounting systems

### **Unit 4: Leading and managing individuals and teams & Personal effectiveness and communication**

Leadership, management and supervision -Recruitment and selection of employees -Individual and group behaviour in business organisations -Team formation, development and management -Motivating individuals and groups -Learning and training at work -Review and appraisal of individual performance- The application and impact of Financial Technology (FinTech) in accountancy and audit -Personal effectiveness techniques- Consequences of ineffectiveness at work -Competence frameworks and personal development -Sources of conflicts and techniques for conflict resolution and referral -Communicating in business

### **Unit 5: Professional ethics in accounting and business**

Fundamental principles of ethical behaviour -The role of regulatory and professional bodies in promoting ethical and professional standards in the accountancy profession -Corporate codes of ethics- Ethical conflicts and dilemmas

## **Financial Accounting SUBJECT CODE: BCM616A CREDITS: 4**

### **Unit 1: Purpose of financial accounting**

  
**Dean**  
Faculty of Management  
JECRC University, Jaipur-303305

Define financial accounting – purposes of financial statements for the users – main elements of financial reports – conceptual framework – definitions of asset, liability, equity, income & expenses-prudence.

### **Unit 2: Qualitative characteristics of financial statements**

Concepts of relevance, faithful presentation, materiality, substance over form, going concern, business entity, accruals, consistency, comparability, verifiability, understandability and timeliness

### **Unit 3: Accounting records & double entry accounting system**

Main data sources for accounting – different business documents such as sales order, purchase order, goods received note, quotation, goods despatched note, invoice, credit & debit notes, receipt, remittance advice, cash vouchers – understand the double entry accounting & duality concept – types of transactions such as sales, purchases, payments & receipts.

### **Unit 4: Recording transactions**

Recording into journals – ledger accounts – balancing of ledger accounts – accounting for discounts, sales tax – recording cash transactions – accounting & valuation of inventories – accruals & prepayments – tangible & non-tangible assets – depreciation & amortisation accounting – receivables & payables – provisions & contingencies – errors & rectification – bank reconciliation statements

### **Module 5: Trial balance, financial statements**

Statements of profit or loss and other comprehensive income, cash flow statements, balance sheet – events after reporting period – interpretation of financial statements – use of basic ratios related to profitability, liquidity, activity and resource utilisation-Describe the principle of the equity method of accounting for Associate entities

## **Introduction to Business Analytics**

**SUBJECT CODE: BCM618A**

**CREDITS: 3**

### **Module Overview**

This subject covers the complete life cycle of Business Intelligence/Analytics, covering Operational/Transactional Data Sources, Data Transformation, Data Mart/Warehousing design-build, Analytical Reporting and Dashboards. It will also help the students to develop deeper understanding on these concepts using Business Intelligence Tools.

### **Unit 1: Introduction & Data Type**

Overview of Business Analytics, Key Purpose of Using IT in Business, Enterprise Applications (ERP/CRM) and Bespoke IT Applications, Digital Data, Overview of Database, Structured data, Unstructured data, Semi-Structured data, Difference between different types of data.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

## **Unit 2 :Introduction to OLTP, OLAP & BI**

OLTP (On-Line Transaction Processing), OLAP (On-Line Analytical Processing), OLAP Architecture, Data Models for OLTP and OLAP, Role of OLAP Tools in the BI Architecture, OLAP Operations on Multidimensional data, Leveraging ERP Data using Analytics, Defining Business Intelligence (BI), Evolution of BI and Roles of DSS, EIS, MIS, and Digital Dashboards, The BI Value Chain, BI component Framework, BI Applications, Roles & Responsibilities, Popular BI Tools.

## **Unit 3 :Basics of Data Integration & Multidimensional Data Modeling**

Data Warehousing, Data Mart, Operational Data Storage, Data Mapping & Data Staging, Data Integration & Technologies, Data Quality & Data Profiling, Data Modeling Basics, Types of Data Model & Data Modeling Techniques, Fact Table & Dimension Table, Typical Dimension Models and Dimension Modeling Life Cycle.

## **Unit 4:Measures, Metrics, KPIs, and Performance Management & BI Road Ahead**

Understanding Measure and Performance, Measurement System Terminology, Navigating a Business Enterprise, Role of Metrics, and Metrics Supply Chain, Fact based Decision Making and KPIs, Measures to Business Decisions and Beyond, Understanding BI and Mobility, BI and Cloud Computing, BI for ERP Systems, Social CRM & BI.

## **Unit 5 :Basics of Enterprise Reporting**

Reporting Perspectives, Report Standardization and Presentation Practices, Enterprise Reporting Characteristics in OLAP World, Balanced Scorecard, Dashboards, Creating Dashboard, Scorecards vs. Dashboards, The Buzz Behind Analysis, Creating Enterprise Reports.

## **Case Studies and Exercises**

### **Business Mathematics & Statistics**

**SUBJECT CODE: BCM619A**

**CREDITS: 4**

## **Unit 1:Set Theory**

Introduction to Sets, Sets and their Representation, Tabular or Roster Method, Rule Method or Set Builder, Empty or Void or Null Set, Finite sets and Infinite sets, Proper Subset, Improper Subset, Power Set, Universal Set, Open Interval, Closed Interval, Semi-Open or Semi Closed intervals, Infinite Intervals, Venn Diagrams, Operations on Sets, Union, Intersection of Sets, Disjoint Sets, Difference of Sets, Symmetric Difference of Sets, Complement of a Set, Laws of Algebra of Sets.

## **Unit 2: Matrices and Determinants**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Definition of a Matrix, Addition & Subtraction of Matrices, Multiplication of Matrices, Transpose of a Matrix. System of linear equations, Gauss elimination method, Inverse of a Matrix, Determinants, Determinants of order one and more, Properties of Determinants, Multiplication of two Determinants, Minors and Cofactors, Cramer's rule for solution of linear equations, Adjoint of a Matrix, Rank of a Matrix.

### **Unit 3: Vector Algebra**

Vectors, Types of Vectors, Operations on Vectors, Addition of Vectors, Properties of Operation of Addition, Subtraction, Properties of Operation of Subtraction, Multiplication by a scalar, Orthonormal Bases, Product of Two Vectors, Scalar Product or Dot Product of Two Vectors, Properties of Scalar Product, Vector Product or Cross Product, Properties of Vector Product.

### **Unit 4: Statistics**

Introduction to Statistics, Scale of Measurement, Nominal, Ordinal, Interval & Ratio. Frequency Distribution, Bar Chart, Pie Chart, Histogram, Frequency Polygon, Ogive, Pareto Chart, Stem-and-leaf Chart, Scatter Plot, Measure of Central Tendency, Properties, Advantages and Disadvantages of Arithmetic Mean, Geometric Mean, Harmonic Mean. Positional Averages, Median, Quartiles, Deciles, Percentiles & Mode. Measure of Dispersion, Range, Interquartile Range, Standard Deviation.

### **Unit 5: Probability**

Introduction to Probability, Experiment, Event, Compound Event, Independent and Dependent Events, Mutually Exclusive Events, Equally Likely Events, Marginal, Union, Joint, Conditional Probability, Basic Probability Rules, General Rule of Addition, General Rule of Multiplication, Concept of Baye's Theorem.

## **Corporate and Business Law**

**SUBJECT CODE: BCM617**

**CREDITS: 3**

### **Unit 1: Nature of the contract and consideration**

The Indian contract act 1872 – Definition of contract - Essential elements of a valid contract – clarification of contracts – offer and acceptance and Communication of offer and Acceptance and Revocation.

Consideration – Capacity to contract – Free consent - Legality of object – void agreement.

Performance of contract – offer to perform contracts which need not be performed – by whom contract must be performed who can demand performance. Discharge of Contract – meaning – methods – by performance – by agreement – impossibility of performance.

### **Unit 2: Breach of contract and the sale of goods act**

Dean  
Faculty of Management  
JECRC University, Jaipur-303305

Remedies for Breach of Contract – Introduction Recession – Damages – Specific Performance – injunction  
- Quasi contracts. Contract of Indemnity and guarantee – Contract of bailment and pledge – Contract of Agency – Creation of agency – Rights, duties and liabilities of an agent - Termination of agency.

Sale of Goods Act :

Formation of contract of Sale - caveat emptor - Express and implied conditions and warranties –  
Performance of Contract of Sale – Rights of an unpaid Seller.

### **Unit 3: Companies act and memorandum of association**

Meaning, Definition & Salient Features of Companies Act, 2013 - Kinds of Companies - Promotion, Role of Promoters-Incorporation of a Company.

Memorandum of Association, Contents & Alteration - Articles of Association, Contents & Alteration - Prospectus, Contents & Consequences of misstatement - Doctrine of Ultra Virus & Indoor Management.

### **Unit 4: Directors and corporate governance**

Directors-Appointment, Qualification-Disqualification - Membership in a Company, Modes of acquiring Membership - Rights and Liabilities of Members, Termination of Membership - Corporate Governance-Meaning, benefits of good governance, factors influencing corporate governance.

### **Unit 5: General and Statutory Meeting, Extraordinary Meetings**

General and Statutory Meeting, Extraordinary Meetings -Resolutions, Meaning and Kinds - Role of Company Secretary with respect to meetings. Meaning and modes of winding up - Powers of court in winding up - Consequences and procedures for winding up - Powers, Liabilities and Duties of Liquidators.

## **Communication Skills**

**SUBJECT CODE: DEN001A**

**CREDITS: 3**

### **Course Objectives**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.
6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

### **Course Outcomes(CO):**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303305

**At the end of this course students will have :**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

**Syllabus: Theory**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>UNIT 3</b>	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

**Syllabus: Lab**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time- management, Following Deadlines etc
---------------	---

<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

## **Methodology for Evaluation**

### **Assessment Theory**

1. Internal Assessment (Theory)
  - a) Home Assignments: One from each Unit: 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
2. Term End (Theory) : 50 Marks

### **Assessment Lab**

#### Internal Assessment (Lab)

- (a) Daily Performance in the Lab : 50 Marks
- Term End (Lab) : 50 Marks

### **Suggested Reading:**

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
4. On Writing Well. William Zinsser. Harper Resource Book. 2001
5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

### **Cultural Education-1**

**SUBJECT CODE: DIN001A**

**CREDITS: 2**

### **Course Objectives**

To make the students feel gratitude towards the rich religious and cultural heritage of India.

To understand the role of great personalities and movements in the progress of India.

### **Course Outcomes (CO)**

At the end of this course students will have:

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

### **UNIT-I : Holy Scriptures-A**

Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions), Introduction to Yoga, Overview of Patanjali's Yoga Sutras

### **UNIT-II : Society and Culture-I**

Introduction to Indian Culture and Major Symbols of Indian Culture; Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

### **UNIT-III : India in Progress-I**

Education , Science and Technology in Ancient India; Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

### **UNIT-IV: Great Indian Personalities-I**

Life and works of the Great People of Ancient India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shaikanwar, Panna Dhai

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

### **Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

### ORGANISATION BEHAVIOUR

SUBJECT CODE: BCM 620A

CREDITS: 4

#### Course Objective:

Understand how the organisations can be managed effectively considering the behaviour of various stakeholders of an organisation and analysing the skills required for the future advantage of an organisation.

#### Unit 1: Organization behavior – an introduction

Meaning of organizations – Nature of organization behavior – Basics of organization behavior – Scope and evolution of organizational behavior – Organizational arrangements and Organization behavior – Key terminologies in Organization Behavior - Organizational Behavior Model (OB Model)

#### Unit 2: Individual behavior, intelligence and personality

Meaning of individual behavior – personal and environmental factors – Models of individual behavior – nature and types of intelligence – theories and measurement of intelligence – Intelligence factors – intelligence in the context of organizational behavior.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Nature and determinants of personality – Personality traits – Personality in the context of Organization Behavior

### **Unit 3: Motivation and work stress**

Nature and importance of motivation – challenges and theories of motivation – Motivation and organizational culture – quality of work life – rewards and behavior modification – problem employees – employee engagement

Meaning of work stress – work stress model – stress management – Stress and organizational behavior

### **Unit 4: Group and team behavior**

Nature and types of groups – Group dynamics and Organization behavior – determinants of group dynamics – Importance of group dynamics in an organization – group development strategies – Group motivation – Group structuring and decision making.

Meaning of team – differences between group and team – Types and benefits of teams – effective team management – team conflicts and resolution – Team development and Organizational Behavior

### **Unit 5: Organizational culture and leadership**

Meaning of leadership – leadership vs management – leadership styles and theories – formal and informal leadership – Ethics and leadership – leadership and organizational culture – Sustaining culture – changing organizational culture – workplace behaviour – Ethics of power.

### **Course outcomes:**

CO 1: Understand the basic of organizational behaviour in the context of the dynamic environment.

CO 2: Understanding the role of individual behaviour, intelligence and personality in the context of organizational development.

CO 3: Understanding importance of rewarding and motivating the stakeholders and managing the stress to effectively manage the organizational performance

CO 4: Understand the role of group and team dynamics in the current organizational environment

CO 5: Understand the importance of perception into organizational culture, leadership and ethics in an organizational development.

### **Management Accounting**

**SUBJECT CODE: BCM622A**

**CREDITS: 4**

### **Course Objective:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

To understand the various types of management information and data. To understand the accounting of material labour and overheads. To understand various costing methods. To understand and solve questions of budgeting and its implication. To understand the standard costing concepts in detail and carry out variance analysis. To understand how to measure the performance of the organisation.

### **Unit 1 (Characteristics of Management Information, Data analysis and Statistical Techniques)**

Accounting for Management, Source of Data, Cost Classification, Production and Nonproduction, Presentation of Information, Reports, Tables, Charts, Graphs and Interpretation of Information **Data Analysis & Statistical Techniques** - Sampling Methods. Forecasting Techniques – Equation, Linear Function- High/Low Analysis- Analysis of Cost Data- Historical and Forecasting Data - Index Numbers - Liner Regression-Series Analysis, Summarising and Analysing the Data, Spreadsheet

### **Unit 2 (Accounting For Costs, Material, Labour & Overheads and various methods of Costing)**

Accounting for Material Costs – Ordering, Receiving & Issuing Material ,Methods of Valuing Purchases and Issues (FIFO & Weighted Average Methods Only) – EOQ – Inventory Levels – Accounting for Labour – Direct & Indirect Cost of Labour – Remuneration Methods (Individual & Group) – Labour Turnover – Overtime & Idle Time – Labour Efficiency, Capacity & Volume Ratios

Accounting for Overheads – Allocation of Overheads to Production & Nonproduction Departments – Apportion Service Overheads to Production Departments - Production Overhead Absorption Rates – Entries for Accounting of Material, Labour & Overhead Costs. **Absorption, Marginal Costing & Cost Accounting Methods** - Concept of Contribution, Effects of Absorption and Marginal Costing, Reconcile the Profit – Advantages and Disadvantage of Absorption and Marginal Costing, Job and Batch Costing, Process Costing, Service and Operation Costing, Alternative Costing Principles

### **Unit 3: Budgeting, Capital Budgeting and DCF techniques**

Nature, Purpose, Budget Preparation-Cash Budget – Sale Budget-Master Budget – What If Analysis, Flexible Budgets, Budgetary Control and Reporting, Behavioural Aspect of Budgeting. **Capital Budgeting & Discounted Cash Flows** - Capital Investing- Capital and Revenue Expenditure, Compounding and Discounting, NPV, IRR, Annuity and Perpetuity – Cash Flow

*Learning Outcome: Identifying Importance of Capital Budgeting & Cash Flows.*

### **Unit 4 (Standard Costing)**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Standard Costing Systems, Variance Calculations and Analysis, Sales Price and Volume, Material Price and Usage, Labour Rate and Efficiency, Fixed Overhead, Reconciliation of Budgeting Profit and Actual Profit

#### **Unit 5 (Performance Measurement and its application)**

Performance Measurement Overview, Cost Reduction and Volume Enhancement, Monitoring Performance and Reporting. **Application of Performance Measurement** - Calculate and Measure of Financial Measurement, Balance Scorecard, Economy, Efficiency and Effectiveness, Unit Costs, Resource's Utilization, Profitability, Quality of Service

#### **Course Outcomes:**

CO1: Discuss the Principles of Cost & Management Accounting.

CO2: Demonstrating to Application of Management Functions.

CO3: Explain the Application of Accounting Methods.

CO4: Describing the role of Decision Making & Control.

CO5: Illustrate techniques to various Business Contexts.

### **Marketing Management** **SUBJECT CODE: BCM621A**

**CREDITS: 3**

#### **Course Objective:**

To provide a holistic orientation of emerging marketing trends with the practical skills required to analyse consumer data, create marketing campaigns, develop digital / social media content and make successful marketing decisions and to equip students to be innovative, technically competent and think critically through experiential and student-centric teaching approach.

#### **Unit 1: Fundamentals of Marketing Management**

Meaning & Definition of marketing -Role of Marketing -Relationship of Marketing with other functional areas -Market Concepts -Product concept -Selling concept -Marketing concept -Societal marketing concept -Approaches to marketing management -Functions of marketing -Scope of marketing: goods, services, events, organizations, etc. -Emerging trends in marketing.

#### **Unit 2: Marketing Plan**

Marketing Environment: Concept -Macro-environmental forces -The changing marketing environment - Analyzing needs and trends in Macro-Environment: Economic Environment, Technical Environment,

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Political, Environment and Socio-cultural Environment. Introduction to The Marketing Plan –Definition – Nature –Objectives -Structure of The Marketing Plan -The Process of marketing plan -Critical elements of external and internal analysis of Marketing Plan -Implementation of Marketing Plan.

### **Unit 3: Marketing Mix**

Introduction to marketing mix -Marketing mix implementation: short term and long term tactics –Product: meaning, elements, product mix -Product mix strategies -Product line -Product lifecycle Product planning -New product development -Failure of new product -Product branding -Branding strategy and packaging – Pricing: Objectives -Factors influencing pricing policy -Methods of pricing -Pricing strategy. Physical Distribution: Meaning -Factors affecting channel selection -Types of marketing channels –Promotion: Meaning and significance of promotion – Personal selling & advertising (meaning only).

### **Unit 4: Buyer behavior**

Market Segmentation: Levels and patterns of market segmentation -Bases for segmenting markets -Market segmentation - Targeting - Product Positioning - Types and bases of positioning - Product Differentiation - Meaning of consumer, customer, consumer behaviour and buying motives -Factors influencing buyer behavior -Factors that influence consumer purchasing decisions -Buying process -Stages of the consumer buying behavior -Business to Business (B2B) buying process -Key factors influencing B2B purchasing decisions -Differences between Consumer goods and Industrial goods

### **Unit 5: Digital Marketing**

Introduction to Digital Marketing –Concept of Digital Marketing -Difference between traditional marketing and digital marketing -Trends and scenarios of the industry -Planning and Creating a Website -Search Engine Optimization (SEO), Search Engine Marketing (SEM), of Social Media Marketing, Blogging, Content Strategy, Email Marketing.

### **Course outcomes:**

CO1: To understand the role and importance of marketing

CO2: Develop a marketing plan to generate better sales and profits

CO3: Formulate the product and price mix based to serve consumer needs.

CO4: Identify the factors influencing consumer behavior and purchase decision

CO5: Outline the digital tools to develop marketing strategies for the new age consumer

### **Corporate Accounting**

**SUBJECT CODE: BCM623A**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **CREDITS: 4**

### **Course Objective:**

To understand the advanced concepts that are critical for the finalisation of accounts. Advanced accounting of areas like shares and debentures along with restructuring, amalgamation and group accounting will be few of the topics around which the syllabus will be concentrated around.

### **Unit 1: Accounting for shares & Debentures**

Accounting for Share Capital & Debentures, Issue, forfeiture and reissue of forfeited shares: concept & process of book building; Issue of rights and bonus shares; Buy back of shares; Redemption of preference shares. Issue of Debenture and Its classification. Different terms of issue of debenture. Redemption of debenture.

### **Unit 2: Profit Prior to Incorporation & Company Financial Statements**

Process on incorporation of a company. Difference between incorporation and commencement of a company. Accounting of incomes and expenses during Pre- and Post-Incorporation period. Basis of allocation and apportionment of income and expenses for the Pre and Post-Incorporation period. Meaning – Preparation of Financial Statements of Companies as per Schedule III of the Companies Act, 2013 (excluding Cash Flow statement) - Treatment of special items: Depreciation, Interest on Debentures, Provision for Tax, Dividends, Interim, Proposed, Corporate Dividend Tax, Unclaimed dividend.

### **Unit 3: Preparation and Presentation of Cash flow statement & Accounting for Amalgamation**

Meaning of Cash flow, Types of Cash flow, Estimation of cash flow using Direct and Indirect methods. (Simple problems only). Amalgamation of Companies, Concepts and accounting treatment as per relevant Indian Accounting Standard (excluding intercompany holdings).

### **Unit 4: Reconstruction of a company & Preparing group financial statements**

Internal reconstruction: concepts and accounting treatment excluding scheme of reconstruction. Accounts of Holding Companies/Parent Companies, Preparation of simple consolidated balance sheet and income statement with one subsidiary company

### **Unit 5: Valuation of shares & Accounting for banking companies**

Concept of Valuation. Need for Valuation. Special Factors affecting valuation of Shares. Methods of Valuation – Net Assets Method, Yield Basis Method, Fair Value Method. Accounts of Banking Companies, Difference between balance sheet of banking and non-banking companies; Prudential norms; Asset

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

structure of a commercial bank; non-performing assets (NPA), Cash Flow Statement Concept of funds, Preparation of cash flow statement as per Indian Accounting Standard (IndAS)

**Course Outcomes:**

CO1: Illustrate the process of preparation of final accounts of a company as per Schedule III of the Companies Act 2013.

CO2: Develop understanding on the difference between commencement and incorporation of a company and the accounting treatment for transactions during the two phases.

CO3: To enable the students to develop awareness about mergers and acquisition.

CO4: Illustrate the accounting and reporting for group companies.

CO5: Understand and appreciate the need for share valuation and the various methods.

**Business Analytics using Excel**

**Subject Code : BCM 624A**

**CREDITS: 3**

**Course Objective:**

To comprehend and employ the use of MS Excel application for analysing, visualizing and reporting solutions based on business problems and tasks. This module aims at imparting hands-on training towards formulas and functions as well as how to use which formula for which particular problem scenario. The students will be equipped with the knowledge of various analytical procedures and tools which are available in MS Excel.

**Unit 1: Introduction**

Spreadsheet Applications, MS Excel Overview, Advantage and Disadvantages, Introduction to Buzzwords – Dashboards, Reports, Data Visualization, Business Intelligence, Decision Support Systems, Business Analytics, Data Visualization, Storytelling and its importance in Business Analytics, Visual Perception.

**Unit 2: Working with Data**

Excel Workbooks and Worksheets, Worksheet Cells, Selecting and Moving Cells, Excel Add-Ins, Data Formats, Formulas and Functions, Cell References, Range Names, Sorting Data, Querying Data, Importing Data, Data Filtering, Formatting, Highlighting, Aggregating, Operators.

**Unit 3: Data Cleaning**

Editing Imported Workbook, Delete Unnecessary Columns & Rows, Resizing Columns & Rows, Copying, Moving Worksheet Data, Replacing Data in Fields, Text Functions – Clean, Concatenate, Exact, Find, Fixed, Left, Len, Lower, Mid, Proper, Replace, Rept, Right, Search, Substitute, Text, Trim, Upper, Value Functions, Converting Text Function Formulas to Text, Data Validation.

**Unit 4: Excel Data Presentation**

Tables, Line and Bar Charts, Scatter Charts, Scatter Charts vs Line Charts, Correlation Analysis, Bullet Graphs, Pie Charts, Doughnut Charts, Surface Charts, Radar Charts, Interactive Charts and Dashboards, Conditional Formatting, Pivot Table, Customizing Pivot Table, Changing Layout, Renaming Fields,

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Formatting Numbers, Hiding or Showing Data, Sorting, Pivot Charts, Conditional Formatting with Pivot Tables.

### Unit 5: Advanced Excel

Counting Items in a Dataset, COUNT, COUNTA, COUNTBLANK, COUNTIFS, PERMUT & COMBIN, Descriptive Statistics, Mean, Mode and Median, AVEDEV, AVERAGE, AVERAGEA, AVERAGEIF & AVERAGEIFS, TRIMMEAN, MEDIAN, MODE, Finding Values, MAX, MAXA, MIN, MINA, LARGE, SMALL, FREQUENCY, PROB, Standard Deviation and Variance, STDEV, STDEV.S, STDEV.A, STDEV.P, VAR.S, VARA, VAR.P, What-If Analysis, Goal Seek & Solver.

#### Course outcomes:

CO 1: Describe and demonstrate the importance of MS Excel and its functionalities.

CO 2: Identify, interpret and explain the fundamentals concepts pertaining to working with data in MS Excel.

CO 3: Employ the use of various text functions and techniques for pre-processing and cleaning the data.

CO 4: Create and demonstrate the working of interactive dashboards and charts using MS Excel application.

CO 5: Classify different techniques and functions for descriptive statistics and advanced-excel.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M		M				M
CO2		M				M	
CO3	M		H				
CO4			H	M		M	
CO5		M					M

H = Highly Related; M = Medium; L = Low

#### Professional Skills

Subject code: DEN002A

Credits: 3

#### Course Objectives

1. To enhance Professional competence in reading, writing, listening and speaking.
2. Switch the approach from providing information about the language to use the language.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in professional scenario.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

**Syllabus: Theory**

**UNIT 1 Professional Grooming and Professional Culture:**

Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**UNIT 2 Advanced Grammar:** Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**UNIT 3 Composition:**, Memo, Notice, Circular, Book Review, Research Article, Reports

**UNIT 4 Vocabulary Building:** Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms

**UNIT 5 Reading Comprehension:** Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction

**Syllabus: Lab**

**UNIT 1 Professional Grooming and Professional Culture**

Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**UNIT 2 Advanced Grammar:** Exercise Sessions for Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**UNIT 3 Composition:**, Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics

**UNIT 4 Vocabulary Building:** Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words

**UNIT 5 Reading Comprehension:** Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc

**Methodology for Evaluation**

1. Internal Assessment (Theory)

a) Home Assignments: One from each Unit : 15 Marks

b) In Semester Tests (Minimum two) : 30 Marks

c) Attendance : 05 Marks

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

2. Term End (Theory) : 50 Marks
3. Internal Assessment (Lab)
- (a) Daily Performance in the Lab : 50 Marks
4. Term End (Lab) : 50 Marks

**Cultural Education II**  
**Subject Code: DIN002A**  
**Credits: 2**

**Objectives**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

**UNIT-I Holy Scriptures-II**

1. Bhagavad Gita and Life Management
2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Sahib, Bible, Quran, Jain Scriptures, Bodhi Scriptures
3. Historicity of Ramayana and Mahabharata

**UNIT-II Society and Culture-II**

4. Indian Society: Its Strengths and Weaknesses
5. Health and Lifestyle related issues
6. Conservation of cultural heritage

**UNIT-III India in Progress-II**

7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights
8. Indian Models of Economy, Business and Management

**UNIT-IV Great Indian Personalities-II**

9. Life and works of the Great People of Modern India- Raja Ram Mohan Roy, Swami Vivekananda, Madan Mohan Malviya, Ishwarchand VidyaSagar, Jyotiba Phule, Homi Bhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, Vir Haqiqat Rai, Subhash Chandra Bose, Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada Saheb Phalke, Major Dhyan Chand, A.P.J. Abdul Kalam, Kailash Satyarthi, Aruna Roy, Mahasweta Devi, Udaya Kumar, Narayan Murthy, Azim Premji

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by a committee of teachers.

**Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

**ENVIRONMENTAL STUDIES**

**SUBJECT CODE: DCH001A**

**CREDITS: 4**

**Objectives:**

Environmental studies deals with every issue that affects an organism. It is essentially a multidisciplinary approach that brings about an appreciation of our natural world and human impacts on its integrity. It is an applied science as it seeks practical answers to making human civilization sustainable on the earth's finite resources. Its components include biology, geology, chemistry, physics, engineering, sociology, health, anthropology, economics, statistics, computers and philosophy. As we look around at the area in which we live, we see that our surroundings were originally a natural landscape such as a forest, a river, a mountain, a desert, or a combination of these elements. Most of us live in landscapes that have been heavily modified by human beings, in villages, towns or cities. But even those of us who live in cities get our food supply from surrounding villages and these in turn are dependent on natural landscapes such as forests, grasslands, rivers, seashores, for resources such as water for agriculture, fuel wood, fodder, and fish.

The basic objective of this course is to provide basic understanding to the students with the nature and the environment.

**UNIT I**

The **Multidisciplinary** nature of environmental studies Definition; Scope and importance, Need for public awareness.

**UNIT II**

Natural Resources: Renewable and non-renewable resources: Natural resources and associated problems.

a) Forest resources: Use and Over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.

c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, Case studies.

f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources. - Equitable use of resources for sustainable lifestyles.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

### UNIT III

Concept of an ecosystem- Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).

### UNIT IV

Biodiversity and its Conservation

- ☐ Introduction-Definition: genetic, species and ecosystem diversity.
- ☐ Bio-geographical classification of India.
- ☐ Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.
- ☐ Biodiversity at global, National and local levels.
- ☐ India as a mega-diversity nation.
- ☐ Hot-spots of biodiversity.
- ☐ Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- ☐ Endangered and endemic species of India.
- ☐ Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

### UNIT V

Environmental Pollution:

Definition, Causes, effects and control measures of: -

- a. Air pollution
- b. Water pollution
- c. Soil pollution
- d. Marine pollution
- e. Noise pollution
- f. Thermal pollution
- g. Nuclear hazards

- Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. - Disaster management: floods, earthquake, cyclone and landslides

### UNIT-VI: Social Issues and the Environment

- From Unsustainable to Sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.

- Air (Prevention and Control of Pollution) Act.
- Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act. - Forest Conservation Act.
- Issues involved in enforcement of environmental legislation.
- Public awareness.

#### **UNIT-7: Human Population and the Environment**

- Population growth, variation among nations. Population explosion-Family welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare.
- Role of information Technology in Environment and human health.
- Case Studies.

#### **UNIT-8: Field Work (Practical).**

- Visit to a local area to document environmental assets-river/forest/grassland/ hill/mountain.
- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural.
- Study of common plants, insects, birds.
- Study of simple ecosystems-pond, river, hill slopes, etc.

#### **Course outcomes(CO)**

- I CO1: It deals with every issue that affects the organization.
- II CO 2: To understand the multidisciplinary nature of environmental studies.
- III CO3: To understand about the renewable and non renewable resources.
- IV CO4: Knowing about the concept of the ecosystem.
- V CO5: To know impact of population on environment.

### **B.Com\_Financial Marketing (IFM)**

#### **III SEMESTER**

#### **Banking & Financial Services**

**SUBJECT CODE: BCM625A**

**CREDITS: 3**

#### **Course Objective:**

Banking & Financial Services module introduces the learners to the world of financial services and facilitates an understanding of the various financial services. The learners will be able to apply financial concepts, theories, and tools and will be in a position to evaluate the environment related to financial services. This module provides insights on the concepts of merchant banking, issue of securities, leasing, factoring, credit rating, etc. Additionally, it equips learners with the knowledge of the financial markets such as money markets and capital markets

#### **Module 1: Indian Banking System**

Introduction to banking: Nature of the Indian banking system, Banking concepts: Retail Banking, Corporate banking, wholesale banking, banking system in India, Relationship between banker and customer, types of Deposit account, Banking Sector reforms.

#### **Module 2: Electronic Banking**

Electronic Banking: Meaning and benefits of E Banking, Innovations in banking due to technology, Automated Teller Machines, Telebanking, Internet Banking, Mobile Banking, Electronic Funds Transfer, ECS, NEFT, RTGS, UPI, Risk Management of E-Banking.

#### **Module 3: Negotiable Instruments and Customer Relationship**

Meaning and characteristics of Negotiable instrument: Cheques, Bills of Exchange and Promissory notes. Legal Framework of Banker-Customer Relationship, Bankers Disclosure, Termination of relationship, Bankers Right of Lien and set-off.

#### **Module 4: Financial Service management**

Introduction to financial services, financial services, concept, objectives, Financial services market, concept and constituents, Financial services sector problems, Financial services environment, forces and players in financial markets. Financial Services: Leasing, Merchant banking, Hire purchase and installment system, Consumer finance, Credit cards, Credit Mutual Fund, Factoring, Securitization of debts, Treasury management, Depositories and Pledge

#### **Module 5: Money market and Stock exchange**

Money market and stock exchange, Money market –characteristics and functions, money market instruments: call money, Treasury bills, certificates of deposits, commercial bills, trade bills, Indian capital market, constituents, New financial institutions and instruments, Investor protection.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Stock exchange: functions, services, features and role. Stock exchange traders, Regulations of stock exchanges, Depository and SEBI functions and working.

**Course Outcomes:**

CO1: Acquaint the students with the knowledge of various banking concepts specifically, merchant banking and public issue management

CO2: Understand the fundamentals of financial services and financial markets.

CO3: Obtain an overview of money markets and stock exchange functioning.

CO4: Appreciate the relevance of leasing, factoring, and securitization to business

CO5: Understand the fundamentals of venture capital, credit rating, and pension fund.

**III SEMESTER**

**E-Business & Cyber Laws**

**SUBJECT CODE: BCM625A**

**CREDITS: 3**

**Course Objective:**

The objective of the course is to equip the students with the emerging trends in business. It further introduces the students with the impact of information technology on various aspects of business and also helps them familiarize with cyber world and cyber regulations

**Module 1: E-Business**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

E-business vs. E-commerce, transformation of business structure, Trends: E-Business Models, E-business Design: Knowledge building, capacity evaluation, design steps.

### **Module 2: E-Marketing**

Traditional Marketing, Identifying Web presence Goals – Browsing Behaviour Model, Online Marketing, E-advertising – Internet Marketing Trends – E branding– E marketing strategies. Concept and Definition of E-Retailing - Different Models of E-Retailing, Model for Web based Information System in E-Retailing; Key Technologies of B2C Model in E-Retailing – EPOS System, Functions of an EPOS system

### **Module 3: E-Business Technologies**

Customer relationship management (CRM) - Organizing around the customer; CRM design and infrastructure - CRM Trends; Selling-chain management - Need for selling-chain management - Order acquisition process – Trends, Enterprise resource planning (ERP) – Integration of information technology systems - Forces influencing ERP – Implementation strategies - ERP trends; Supply chain Management - Internet-enabled SCM - Supply-chain planning and execution - SCM issues and trends; E-procurement - Transformation to web based technology - Cost savings and return of investment - Buyer focus - Seller focus - Trends.

### **Module 4: Cyber World**

Cyber space – cybercrimes – types: cyber stalking, forgery and fraud, crime related to IPR (copyright issues, trademark issues, software patenting issues), cyber terrorism, & computer vandalism.

### **Module 5: Cyber Regulations**

Cyber Law, scope of cyber laws - e-commerce, online contracts, IPRs, E-taxation, e-governance and cybercrimes, issues relating to investigation, cyber forensic, relevant provisions under IT Act 2000

### **Course Outcomes:**

CO1: Understand the concepts and workings of E-Business

CO2: Understand the use and application of E-Marketing in E-Business

CO3: Understand different E-Technologies, their application, and drawbacks

CO4: Understand and learn about the Cyber World – opportunities and threats

CO5: Learn about various Cyber regulations and related laws application to E-business environments.

**B.Com\_Financial Marketing (IFM)**

**III SEMESTER**

**Research Methodology**

**SUBJECT CODE: BCM627A**

**CREDITS: 4**

**Course Objective:**

This module enables learners to develop the basic principles of research methods. The learners focus how to do research, with an emphasis on student-centered activities and problem solving. Learners will develop insights the key concepts as the scientific method; operationalizing constructs; independent and dependent variables, data types and ways of measurement, confounding variables experimental and non-experimental design questionnaire construction; developing and testing hypotheses; descriptive statistics and describing data graphically; and the ethics of research.

**Module 1: Research Formulation and Design**

Motivation and objectives-Research methods and methodology. Types of research Descriptive vs. Analytical, Applied vs. Fundamental, Quantitative vs. Qualitative, Conceptual vs. Empirical, concept of applied and basic research process, criteria of good research. Defining and formulating the research problem, selecting the problem, necessity of defining the problem, importance of literature review in defining a problem, literature review-primary and secondary sources, reviews, monograph, patents, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis.

**Module 2: Data Collection and Analysis**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Accepts of method validation, observation and collection of data, methods of data collection, sampling methods, data processing and analysis strategies and tools, data analysis with statically package (Sigma STAT, SPSS for student t-test, ANOVA, etc.), hypothesis testing.

### **Module 3: Statistical Softwares**

Computer and its role in research, Use of statistical software SPSS, GRETL etc. in research. Introduction to evolutionary algorithms - Fundamentals of Genetic algorithms, Simulated Annealing, Neural Network based optimization, Optimization of fuzzy systems.

### **Module 4: Research Ethics and Scholarly Publishing**

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, commercialization, copy right, royalty, trade related aspects of intellectual property rights (TRIPS); scholarly publishing- IMRAD concept and design of research paper, citation and acknowledgement, plagiarism, reproducibility and accountability.

### **Module 5: Interpretation and Report Writing**

Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of writing Research Report Precautions for writing Research Reports, Conclusions.

### **Course Outcomes:**

CO1: Understand and apply the fundamental principles of the research process as they relate to answering research questions.

CO2: Describe the appropriate use of basic research techniques and research design as they apply to answering different question.

CO3: Explain the critically analyses information particularly in relation to identifying causal and spurious relations in research claims.

CO4: Identify appropriate techniques underlying different research approaches

CO5: Understand the effectively interpret and communicate research findings

**B.Com\_Financial Marketing (IFM)****III SEMESTER****Introduction to Securities & Investment****SUBJECT CODE: BCM647A****CREDITS: 4****Course Objective:**

The course objective is to provide learners with a basic introduction to the financial services industry with a focus on investments. Imparting the knowledge and understanding of financial assets and markets, instruments in the financial markets.

**Module 1: Introduction to Investments and Securities**

Understanding the causes and needs of investments and defining the term interest, understanding of stock exchange and national stock exchange, and explaining the role of retail banks, savings institutions, pension funds, insurance companies, fund managers, and stockbrokers.

**Module 2: Financial Securities and participants in the securities market**

Understanding the function of the securities market, characteristics of fixed-term and instant access deposit accounts, and introduction to crypto-currencies. Understanding the difference between primary market and secondary market, understanding the terms initial public offer and further public offer, prospectus, American Depository Receipts, and Global Depository Receipts.

**Module 3: Equities, Fixed Income securities, and other financial products**

Understanding the difference between a public company and a private company. Features of ordinary and preference shares, understanding of price risk, liquidity risk, and issuer's risk. Understanding of bonus shares, rights shares, and buybacks. Understanding the characteristics and terminology of coupon, redemption, nominal value, and yields. Understanding the difference between government bonds and corporate bonds. Introduction to mutual funds.

**Module 4: Derivatives**

Understanding the uses and application of derivatives, understanding the function and function of futures, understanding the terms exercise price, and option premium, understanding the definition and functions of options, and understanding the call and put options. Understanding the commodity derivatives.

  
**Dean**  
Faculty of Management  
JECRC University, Jaipur-303905

### Module 5: Financial Market Regulators and Depositories

Understanding the need of regulators in the securities market, understanding who regulates the securities market. Understanding the Securities Exchange Board of India and the roles of the Securities Exchange Board of India. Understand the role of the depository and understand the term International Securities Number.

#### Course Outcomes:

CO1: Introduction to financial securities and the basic terminologies.

CO2: Analyzing the nature and scope of the financial assets and participants in financial markets.

CO3: Analyzing the nature and scope of equity, fixed income securities, and other financial instruments.

CO4: Understand the nature and scope of derivatives and basic terminologies.

CO5: Understanding the financial services regulators and introduction to depositories.

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Global Securities Operations**  
**SUBJECT CODE: BCM648A**  
**CREDITS: 4**

**Course objective:**

The course gives an overview of global securities, with a focus on the key industry participants, settlement features, supplementary investment services, taxes, and risk factors. The purpose of the course is to verify that learners will have a fundamental grasp of global securities services and administration as it relates to the needs of operations.

**Module 1: Securities**

Definition of Securities Investment - Shares (Equities) - Debt Instruments - Warrants - Depositary Receipts (DRs) - Collective Investment Vehicles - Securities Identification Numbers - Issue Methods in the UK Principles of Trading - Exchange-Traded and Over-The-Counter (OTC) Transactions - Order-Driven and Quote-Driven Markets - Programme and Algorithmic Trading - Multi-Listed Shares - Settlement Periods for Equities and Bonds in the Selected Markets.

**Module 2: Main Industry Participants & settlement characteristics**

Definition of participants - Investment Administration and Operations: Custody - Central Securities Depositories (CSDs) and International Central Securities Depositories (ICSDs) - Straight-Through Processing (STP) - Society for Worldwide Interbank Financial Telecommunication (SWIFT)- The Trade Cycle - Pre-Settlement - Settlement - Failed Settlement.

**Module 3: Other Investor Services**

Definition of safekeeping - Substantial Shareholder Reporting - The Nominee Concept - Custodian Fee Schedules Corporate Actions - Cash Management - Securities Lending

**Module 4: Aspects of Taxation**

Definition of tax Credit on Dividends - Tax Treatment of Bond Interest - Calculating Capital Gains and Losses - Tax Treatment of Discount Securities - Withholding Tax (WHT) and Double Taxation Treaties (DTTs)- Transaction Taxes

**Module 5: Risk**

Definition of risk - Risk Reviews of Market Infrastructure and Custodian - Sub-Networks - Global Custody Risks - Reporting on Internal Control Environments - Shareholder Limits and Restrictions on Foreign Investment - Mitigating Risk Through Reconciliation.

**Course outcomes:**

CO1: Know the concept of security markets and its functions.

CO2: Analyse different secondary market operations and risk management practices.

CO3: Develop a practical approach and understanding towards clearing and settlement processes in the security market.

CO4: Learn and Analyse the working of participants and their role in global securities operations.

CO5: Develop an idea of inherent risks in stock market and securities.

### **B.Com\_Financial Marketing (IFM)**

#### **IV SEMESTER**

#### **Operational Risk**

**SUBJECT CODE: BCM649A**

**CREDITS: 3**

#### **Course Objective:**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

The aim of this course is to provide students with an introduction to operational risk management, the tools used in the process, and how operational risk management fits into the wider risk management of the firm.

### **Module 1: Fundamentals of operational risk management**

Definition of operational risk – the common types of risk – the relationship between operational risk and other types of risks – the different manifestations of operational risk within a firm – the relationship between cause, event, and impact – the key components of the operational risk framework and governance structures.

### **Module 2: The nature and role of governance in the management of operational risk**

The components of a risk governance framework interact - the roles and responsibilities of the operational risk function - the accountabilities, roles, and responsibilities in the management of operational risk - the needs and expectations of external stakeholders in relation to operational risk - the nature of risk appetite - the elements of an effective operational risk appetite framework - the purpose and content of an operational risk appetite statement - the nature and uses of qualitative and quantitative expressions of operational risk appetite - Differences between risk appetite, risk tolerance and risk capacity in relation to operational risk appetite - the process for setting operational risk appetite - the process for monitoring and reporting operational risk in relation to appetite - the role of operational risk appetite in risk culture.

### **Module 3: The nature and role of risk and control self-assessments in the assessment and management of operational risk**

The nature of risk and control self-assessments in the management of operational risk - the benefits of risk and control self-assessments - the role of risk and control self-assessments in identifying operational risk - the advantages and disadvantages of different methods for undertaking risk and control self-assessments - the concepts of likelihood and impact in assessing operational risk and controls - the nature and role of controls - the roles and relationships between risk owners and control owners - common methods of reporting risk and control self-assessments - role and purpose of different forms of operational risk indicators - the nature and use of operational risk indicators - the challenges surrounding operational risk indicators.

### **Module 4: The role of events and losses in the management of operational risk**

Types of events – the attributes of event data and their use - the importance of root cause analysis - the role and implication of thresholds in relation to reporting event data – the issues, roles and responsibilities in relation to reporting event data - the role and implication of thresholds in relation to reporting event data - the uses and limitations of internal event data - the benefits and limitations of sources of external loss event data - the uses of external loss event data.

### **Module 5: The role of regulation in the development and management of operational risk**

The key regulatory influences on operational risk – the evolving approaches to regulation and supervision - regulatory interest in specific operational risk categories - the capital adequacy implications of operational risk management.

### **Course Outcomes:**

CO1: The students will be able to explain the role of operational risk management.

CO2: The students will be able to understand operational risk governance arrangements.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO3: The students will be able to understand and know how to use the key operational risk tools.  
CO4: The students will get an understanding of the role of events and losses in the management of operational risk.

CO5: The student will be able to describe the impact of regulation on operational risk.

**IV SEMESTER**

**Financial Accounting for Capital Accounts**

**SUBJECT CODE: BCM650A**

**CREDITS: 4**

**Course Objective:**

The objective is to understand the financial accounting concepts, transactions and to prepare financial statements. Knowledge of shares accounting and regulations governing the listed companies.

**Module 1: Introduction to Financial Accounting and Accounting Transactions**

Meaning and definition, objectives and functions of accounting, users of accounting information, accounting principles, accounting standards, limitations of accounting. Rules of debit and credit,

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

accounting period / cycle, journal entries, journal and ledgers, rules of posting, sub divisions of journal, trial balance

### **Module 2: Single Entry/Double Entry Accounting System and how to account for business income**

Definitions of single entry and double entry, conversion of single entry into double entry, purpose for conversion, preparing cashbooks, total debtors accounts, total creditors accounts, bills receivable & bills payable accounts. Classification of income / receipts, measurement of business income, concepts of revenue, revenue recognition principles, recognition of expenditure, concept of inventories and accounting inventories, inventory valuation

### **Module 3: Depreciation accounting and Final Accounts**

Depreciation concepts, depreciation accounting, different types of depreciation, purpose of depreciation in accounting, depreciation/depletion/amortization concepts, depreciation accounting as per accounting standards. Concept of final accounts, manufacturing account, trading account, profit and loss account, balance sheet, adjustment entries, concepts of errors, suspense accounts

### **Module 4: Accounting for shares and Listed Companies Accounting procedure along with accounting terminologies**

Different types of issue of shares, forfeiture of shares, reissue of shares, issue of bonus shares, effect of corporate actions – stock split, bonus, rights, buyback of shares, redemption of preference shares. Concepts of unlisted and listed companies, private limited v/s public limited, procedures of listing company accounting, SEBI regulations for listed companies accounting and disclosures. Concepts of EBIT, EBITDA, operating expenses, operating profits, non-operating expenses, interest accounting, profit before taxes, profit after taxes, accounting reserves and surplus, current assets, non-current assets, current liabilities, non-current liabilities, fixed assets, contingent liabilities

### **Module 5: Income Statements, cash flow statement and financial ratios**

Quarterly, half-yearly, annual account statements; items to be accounted and disclosed; consolidated and standalone income statements; concepts of other income; distinguishing other income from regular income. Concepts of cash flow, cash flow from operating activities, cash flow from investing activities, cash flow from financing activities, concepts of basic and diluted EPS, book value, operating profit margins, net profit margins, calculations of return on equity / return on capital employed / return on assets, concepts of price to book, price to cash, price to sales, concepts of liquidity ratios and solvency ratios, concepts of turnover ratios – asset turnover ratio / inventory turnover ratio

### **Course Outcomes:**

CO1: Define and recall the meaning of financial accounting

CO2: Analyse the basic accounting terms and entries important for companies

CO3: Evaluate various methods of entries, adjustments and accounting

CO4: Analyse financial statements

CO5: Evaluate and appraise important accounting procedures for listed companies on stock exchanges

**IV SEMESTER**

**Audit and Assurance**

**SUBJECT CODE: BCM632A**

**CREDITS: 4**

**Course Objective:**

The Objective of the paper is to develop the knowledge and skills required to carry out an audit and assurance assignment. It provides the working knowledge of the audit process and standards of auditing. It also covers the process of testing internal controls.

**Module 1: Audit framework & regulation**

Concept of audit & assurance, professional ethics of an auditor, scope of internal & external audit, governance & audit, Ethical threats & Safeguards, discuss the importance and purpose of engagement letters and their contents

**Module 2: Audit planning & risk assessment**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Planning audit assignments, identify and explain the need for, benefits of and importance of planning an audit, understanding the entity & its environment, assessing audit risk, fraud risk, interim audit, audit documentation, working papers and audit evidence

### **Module 3: Internal control & audit tests**

Internal control system assessment, control environment, risk assessment procedures, monitoring of controls, evaluation of internal control system by auditor, test of controls, communication on internal controls, explain how auditors record internal control systems including the use of narrative notes, flowcharts and questionnaires

### **Module 4: Audit evidence & reporting**

Techniques of collecting audit evidence, quality & quantity of audit evidence, audit sampling, explain the use of automated tools and techniques, review procedures including subsequent events, going concern, written representations, auditor's report contents & opinion, discuss the need for auditors to communicate with those charged with governance.

### **Module 5: Audit of specific items**

Audit of receivables, inventory, payables & accruals, bank & cash, tangible & intangible assets, share capital & reserves, directors' remuneration, details of audit checks for these items and reporting thereof, use of management representation

### **Course Outcomes:**

CO1: Explain the concept of audit & assurance, the functions of audit, ethics and professional conduct

CO 2: Demonstrate how the auditor obtains and accepts audit assignments, assesses audit risks

CO 3: Describe and evaluate internal controls, techniques and audit tests, including IT systems to identify and communicate control risks and their potential consequences

CO 4: Describe the way of gathering & managing audit evidence and review and reporting

CO 5: Managing the audit procedure for specific items

**IV SEMESTER**

**MS Excel & Statistics for Capital Markets**

**SUBJECT CODE: BCM651A**

**CREDITS:4**

**Course objective:**

This course will provide course participants with knowledge of the basics of Microsoft Excel. Participants will learn how to navigate the program, input and format data, write formulas and create charts. Participants will become much more productive by learning to effectively organize data, set up spreadsheets, and copy formulas for efficiency. Many exercises will be provided to help reinforce concepts.

**Module 1: Introduction to MS Excel Functions**

Basics of Excel functions - introduction to shortcuts, formatting, functions, correlations, interface, tabs & ribbons, navigation, buttons and save functions - Entering data, introduction to fonts, fills and alignments, cut & paste and special paste functions- undo and redo functions-replacing a value-cell styles-inserting comments-conditional formatting

**Module 2: Numbers Formatting and Managing Worksheets**

Currency formatting-format painter-date formatting-custom and special formats - Naming & moving worksheets-page breaks-inserting worksheets-adding/deleting/hiding worksheets-grouping worksheets

**Module 3: Formulas and Modifying Functions**

Creating formulas-understanding how to use fx-auto sum, calculation options-common formulas-searching and copying formulas-relative and absolute references-Inserting / deleting columns and rows-inserting and deleting cells-inserting multiple columns and rows, modifying cell width and height-hiding and unhiding functions.

**Module 4: Lookups, Conditional Logics and Graphs, Charts & Financial Functions**

VLOOKUP, VLOOKUP exact match, HLOOKUP, HLOOKUP exact match, sums, averages, max, min, sqrt, sumif, countif, averageif, measure of central tendency, dispersion, correlation, regression functions - PV-FV-PMT-NPER-pivot tables-filters-chart styles-layouts-add labels-axis options-chart titles-legends and data labels.

**Module 5: Referencing Formulas, Data Tools and statistics for Financial Markets**

Multiple sheet referencing, consolidating data, tracing the precedents and dependents, using watch window, data validation methods, text to columns, goal seek, scenario manager, removing duplicates-drop-down list-Statistical averages-arithmetic mean-geometric mean, medians-mean deviation-coefficient of variance-probability theory-sampling-hypothesis testing methods-basics

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

of ANOVA-time value of money-CAGR calculations-absolute returns, simple and compounded returns calculations.

### Course Outcomes

CO1: Analyse the elements and process of MS Excel

CO2: Examine various kinds of MS Excel functions

CO3: Evaluate the utility of MS Excel across various research and analysis requirements

CO4: Develop various formats and measure the outcomes

CO5: Effective use of statistical skills required in financial markets across stock market, mutual funds, insurance and personal finance areas.

**IV SEMESTER**  
**E-Accounting**  
**SUBJECT CODE: BCM634A**  
**CREDITS: 3**

**Course Objective:**

The Objective is to provide the understanding of the digital or computerized accounting system, Students will explore performance, liquid assets, inventories, fixed assets, intangible assets, long-term obligations, investments, equity, and cash flows using different kind of software. conceptual and practical knowledge of E-Accounting that uses database system resources.

**Module 1: Computerized accounting and accounting database sources**

Understand the digital mode used for data feed, basics of Computerized accounting, Concepts of Accounting groups, Hierarchy of accounts, Codification in accounting. Accounting package - Setting up an accounting entity, Creation of groups and accounts, accounting standards.

**Module 2: Computerized financial accounting**

Understand the role of accountants in Designing and creating vouchers, Data Entry operations using the vouchers, Processing for reports to prepare ledger accounts, trial balance and balance sheet, Preparation of different formats and usage of different file types for report uploading and filing.

**Module 3: Digital accounting methods**

Understand the fundamental functions of Identifying and appreciating the data content in accounting transactions; overview of database concepts, ER model; creating and implementing RDM for Financial Accounting; SQL to retrieve data and generate accounting information, Analyzing forecasts, budgeting & budgetary control.

**Module 4: Reporting Analysis**

Analyzing and maintaining Accounting reports to appreciate reliability of information, Identifying accounting, information and appropriate queries, Forming and executing the SQL, Generating Accounting information for a report, Reports for expenditure analysis, tracking incomes and managing accounts.

**Module 5: Elements of Computerized accounting reporting**

Understanding the Creation of data table defining relationships and constraints, Designing Accounting Vouchers, Designing Accounting Reports, designing accounting reports in the form of Journal book, Cash book, Subsidiary books, Ledger, Trial balance, Profit & Loss account, Balance sheet, fund-flow statements.

**Course Outcomes:**

CO1: This course introduces the students with the understanding about the Computerized accounting performed in the real time scenarios.

CO2: The students will learn the accounting process applied in the preparation of the financial reports.

CO3: The students will get a sound understanding of the data base system used or maintained in the business for accounting and its procedures of recording.

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

CO4: The student will get a deep analysis of the various accounting skills that is used by the professional accountants.

CO5: The student will understand the impact of IT systems and financial systems.

**IV SEMESTER**

**Logistics and Supply Chain Management**

**SUBJECT CODE: BCM635A**

**CREDITS: 3**

**Course Objective:**

The course provides knowledge about implementing, controlling, and planning the efficient flow of goods from the supplier to the customers. The course imparts students with an in-depth understanding of the functions and contributions of supply chain management, the concept of logistics management, information systems in logistics, warehousing, and logistics administration.

**Module 1: Overview of logistics and its impact on customer value**

Nature and concepts – the evolution of logistics concept – logistical mission and strategic issues – logistics in India – the growing importance of logistics management – logistical competitive advantage – strategic logistics planning process – components of logistics management – functions

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

of logistics management - The marketing and logistics interface - delivering customer value – customer service and customer retention - the impact of running out-of-stock - market-driven supply chains - defining customer service objectives - setting customer service priorities - setting service standards - going to market- distribution channels are value delivery system - innovation in the distribution channel - the omni-channel revolution - omni-channel retailing.

### **Module 2: Overview of supply chain management**

Introduction - value chain - functions and contributions - supply chain effectiveness and Indian infrastructure – the framework for supply chain solution - outsourcing and 3PLs - fourth-party logistics (4PLs) - supply chain relationships - conflict resolution strategies for harmonious relationships – the significance of supply chain in building competitive advantage.

### **Module 3: Elements of logistics & supply chain management**

Introduction - positioning of information in logistics and supply chain management - logistics information system (LIS) - operational logistical information system - emerging technologies in logistics and supply chain management.

### **Module 4: Warehousing and distribution centres**

Introduction - concepts of warehousing - types of warehouse - functions of warehousing - warehousing strategy - warehouse design - operational mechanism of warehouse - the omni-channel revolution - omni-channel retailing.

### **Module 5: Creating a sustainable supply chain & the future**

Introduction - evolutionary trends of logistics and supply chain organization - basic organization principles - factors influencing organizational structure - the triple bottom line, greenhouse gasses, and the supply chain - reducing the transport-intensity of supply chains - peak oil - beyond the carbon footprint - reduce, reuse, recycle - the impact of congestion - the supply chain of the future - emerging mega-trends - shifting centres of gravity - the multi-channel revolution - seeking structural flexibility - latest vision- waste in the supply chain - the new industrial revolution - seven major business transformations - the implications for tomorrow's logistics managers

### **Course Outcomes:**

CO1: To obtain an understanding of the basics of logistics and supply chain management.

CO2: To recognize the impact of logistics on creating customer value..

CO3: To obtain an understanding of the impact of technology in logistics and supply chain management.

CO4: To learn the concepts of warehousing and distribution centers.

CO5: To appreciate the significance of creating a sustainable supply chain.

**Value Education II**

**Subject Code: DIN004A**

**Credits: 1**

**Course Objectives**

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

**Yoga and Meditation**

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanjali's Yoga Sutra and Ashtanga Yoga. The coverage also includes the effect of yoga on integrated personality development.

**Rajasthan Mural Art and Painting**

Mural painting is an offshoot of the devotional tradition in Rajasthan. A mural is any piece of artwork painted or applied directly on a wall, ceiling or other large permanent surface. In the contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Rajasthani

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples, principally in Rajasthan. Ancient temples and tourists places in different States of Rajasthan, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

#### **Course on Organic Farming and Sustainability**

Organic farming is emerging as an important segment of human sustainability and healthy life. 'Haritamritam' is an attempt to empower the youth with basic skills in tradition of organic farming and to revive the culture of growing vegetables that one consumes, without using chemicals and pesticides. Growth of Agriculture through such positive initiatives will go a long way in nation development. It is a big step in restoring the lost harmony of nature.

#### **Benefits of Indian Medicinal Systems**

Indian medicinal systems are one of the most ancient in the world. Even today society continues to derive enormous benefits from the wealth of knowledge in Ayurveda of which is recognized as a viable and sustainable medicinal tradition. This course will expose students to the fundamental principles and philosophy of Ayurveda and other Indian medicinal traditions.

#### **Traditional Fine Arts of India**

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is 'Unity in Diversity' and it has led to the most diverse expressions of culture in India. Most art forms of India are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

#### **Science of Worship in India**

Indian mode of worship is unique among the world civilisations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realisation of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India.

#### **Insights into Indian Classical Music**

The course introduces the students into the various terminologies used in Indian musicology and their explanations, like Nadam, Sruti, Svaram – svara nomenclature, Stayi, Graha, Nyasa, Amsa, Thala, Saptatalas and their angas, Shadangas, Vadi, Samavadi, Anuvadi. The course takes the students through Carnatic as well as Hindustani classical styles.

#### **Insights into Traditional Indian Painting**

The course introduces traditional Indian paintings in the light of ancient Indian wisdom in the fields of aesthetics, the Shadanga (Six limbs of Indian paintings) and the contextual stories from ancient texts from where the paintings originated. The course introduces the painting styles such as Madhubani, Kerala Mural, Pahari, Cheriya, Rajput, Tanjore etc.

#### **Insights into Indian Classical Dance**

The course takes the students through the ancient Indian text on aesthetics the Natyasastra and its commentary the Abhinava Bharati. The course introduces various styles of Indian classical dance such as Bharatanatyan, Mohiniyattam, Kuchipudi, Odissi, Katak etc. The course takes the students through both contextual theory as well as practice time.

#### **Indian Martial Arts and Self Defense**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

The course introduces the students to the ancient Indian system of self-defense and the combat through various martial art forms and focuses more on traditional Kerala's traditional Kalari Payattu. The course introduces the various exercise technique to make the body supple and flexible before going into the steps and techniques of the martial art. The advanced level of this course introduces the technique of weaponry.

### **Social Awareness Campaign**

The course introduces the students into the concept of public social awareness and how to transmit the messages of social awareness through various media, both traditional and modern. The course goes through the theoretical aspects of campaign planning and execution.

### **Organic Farming in Practice**

Organic agriculture is the application of a set of cultural, biological, and mechanical practices that support the cycling of farm resources, promote ecological balance, and conserve biodiversity. These include maintaining and enhancing soil and water quality; conserving wetlands, woodlands, and wildlife; and avoiding use of synthetic fertilizers, sewage sludge, irradiation, and genetic engineering. This factsheet provides an overview of some common farming practices that ensure organic integrity and operation sustainability.

### **Ayurveda for Lifestyle Modification**

Ayurveda aims to integrate and balance the body, mind, and spirit which will ultimately leads to human happiness and health. Ayurveda offers methods for finding out early stages of diseases that are still undetectable by modern medical investigation. Ayurveda understands that health is a reflection of when a person is living in harmony with nature and disease arises when a person is out of harmony with the cycles of nature. All things in the universe (both living and non-living) are joined together in Ayurveda. This leaflet endow with some practical knowledge to rediscover our pre- industrial herbal heritage.

### **Life Style and Therapy using Yoga**

Yoga therapy is the adaptation of yogic principles, methods, and techniques to specific human ailments. In its ideal application, Yoga therapy is preventive in nature, as is Yoga itself, but it is also restorative in many instances, palliative in others, and curative in many others. The therapeutic effect comes to force when we practice daily and the body starts removing toxins and the rest is done by nature.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce. Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, Marshal Arts etc. the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Life Skills 2 (Aptitude)**  
**Subject Code: DEN004A**  
**Credits: 2**

**Course Objectives:**

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

**Course Outcomes (CO):** At the end of this course students will have:

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

**Syllabus: Theory**

UNIT 1	Number System:  a. Number system  b. Power cycle  c. Remainder cycle  d. Factors, Multiples
--------	---

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

	e. HCF and LCM
UNIT 2	<p>Data Arrangements and Blood Relations:</p> <p>a. Linear Arrangement</p> <p>b. Circular Arrangement</p> <p>c. Multi-dimensional Arrangement</p> <p>d. Blood Relations</p>
UNIT 3	<p>Time and Work:</p> <p>a. Work with different efficiencies</p> <p>b. Pipes and cisterns</p> <p>c. Work equivalence</p> <p>d. Division of wages</p>

Dean  
Faculty of Management

UNIT 8	Profit and Loss, Partnerships and Averages: a. Basic terminologies in profit and loss b. Partnership c. Averages d. Weighted average e. Mixtures and allegations

### Methodology for Evaluation

#### 1. Internal Assessment

a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks

  
 Dean  
 Faculty of Management  
 JECRC University, Jaipur-303905

b) In Semester Tests (Minimum two) : 30 Marks

2. Term End : 40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

**Commodities and Currency Derivatives**

**Subject Code: BCM657A**

**Credits: 4**

**Unit 1: Introduction to Commodities and Currency Markets**

Overview of commodities and currency markets: Definition, participants, and key features Understanding the role of commodities and currencies in the global economy Exploring the factors that influence commodity prices and currency exchange rates Introduction to commodity and currency derivatives Analyzing the risks and opportunities associated with commodities and currency trading

**Unit 2: Commodity Market Operations**

Introduction to commodity markets: Spot markets, futures markets, and options markets Understanding the supply and demand dynamics of different commodities (e.g., energy, metals, agriculture) Examining the role of commodity exchanges and regulatory frameworks Analyzing commodity price formation and the impact of geopolitical events Strategies for trading commodities and managing price risk

**Unit 3: Currency Market Operations**

Introduction to currency markets: Spot markets, forward markets, and currency derivatives Understanding currency exchange rates and their determinants (e.g., interest rates, inflation, economic indicators) Examining the role of central banks and monetary policies in currency markets Exploring different currency trading strategies and techniques Analyzing the impact of global economic and political events on currency markets

**Unit 4: Commodity and Currency Market Instruments**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Overview of commodity and currency derivatives: Futures, options, and swaps Understanding the mechanics and pricing of commodity and currency derivatives Evaluating the use of derivatives for hedging and speculation purposes Analyzing case studies of commodity and currency derivative strategies Exploring the regulatory frameworks and risk management practices in derivatives markets

### Unit 5: Commodity and Currency Market Analysis

Fundamental and technical analysis of commodities and currencies Using economic indicators and market trends to assess investment opportunities Analyzing market sentiment and investor behavior in commodities and currencies Introduction to algorithmic trading and automated strategies in commodity and currency markets Ethical considerations and responsible trading practices in commodities and currencies.

**Bcom- Financial Marketing (IFM)**  
**Semester 5**  
**Start -up Eco System & Valuations**  
**Subject Code: BCM652A**  
**Credits: 4**

#### Course Outcomes

CO1: Examine the idea of a start-up

  
**Dean**  
 Faculty of Management  
 JECRC University, Jaipur-303905

CO2: Analyse different types of start-ups and regulatory approvals required

CO3: Evaluate and dissect the challenges and opportunities of start-ups

CO4: Develop pitch decks for investor presentation for fund raising

CO5: Understand the valuation approaches for start-up companies

### **Unit 1: Introduction to Start-Ups**

Defining a start-up, understanding disruption, understanding incubation, difference between small & new businesses and start-ups, ideation stage, registration process, government regulations

Learning Outcome: Students will be able to clearly understand about a start-up company and how to proceed with commencement of a new company under the start-up opportunity

### **Unit 2: Building Traction**

Brainstorming, bootstrapping, estimating funds required, proof of concept stage, survey and external review of the project, market testing, market mapping, testing

Learning Outcome: Students will be able to evaluate the initial stages of a start-up

### **Unit 3: Building Pitch Deck**

Preparing pitch deck and a business plan, market size, market potential, USP of the idea, peer comparison, estimating penetration potential, market validation

Learning Outcome: Students will be able to build pitch deck and design business plan with required data inputs

### **Unit 4: Technology**

Setting up of technology / digital platform, understanding and evaluating customer perception for digital access, defining app-based functions, hiring tech team

Learning Outcome: Students will be able to analyse the importance of building tech- driven platform essential for start-ups

### **Unit 5: Partnering**

Evaluate about complementary partnerships, pros and cons of collaborations, evaluating future conflicts

Learning Outcome: Students will be able to evaluate and study the advantages and disadvantages of partnering with another business

### **Unit 6: Fund Raising**

Introduction to fund raising activities, evaluating fund raising through debt or equity routes, evaluating angel or VC investing, examining the extent of funds required, sustenance of funding over different horizons of growth, series based funding, pros and cons of each type of funding entities

Learning Outcome: Students will be able to assess the fund raising aspect of a start-up and decide of the type of funds required

### **Unit 7: Understanding Start-up Ecosystem**

Understanding the role of entrepreneurs, financing companies, seed stage investing concepts, growth stage investing concepts, role of angel, VC and PE investors and differentiating each type of investor, choosing mentors and advisors essential for a start-up, understanding the concept of unicorns in start-up

Learning Outcome: Students will be able to understand the role of all stakeholders of a start-up ecosystem

### **Unit 8: Revenue Models**

Understanding the revenue models, customer acquisition, cash burn, promotion & advertisement methods, milestone management

Learning Outcome: Students will be able to develop revenue models and prepare estimations

### **Unit 9: Valuation Concepts**

Is start-up valuation a myth? Promoters' valuation, diluting stake, issuing new shares, seed stage valuations, valuations at growing, flourishing stages, investing rounds and understanding the failures of start-ups

Learning Outcome: Students will be able to analyse how to arrive at valuations of a start-up at different stages of the company

### **Unit 10: Pre-IPO and IPO Preparation**

Decision on IPO, exit strategy for pre-IPO investors, IPO valuations, basis of issue price, appointing merchant bankers and procedures of seeking approvals to go public

Learning Outcome: Students will be able to understand the exit strategy of pre-IPO investors and processes involved in going public

## **Direct Taxation**

**Subject Code: BCM637A**

**Credits: 4**

Generally, a commerce graduate is expected to have knowledge about taxation. After the implementation of GST in India, taxation structure has become quite simple and multiple taxation has substantially reduced. Whether in employment or having own business or profession, an individual has to pay income tax and file his income tax return once he starts earning taxable income. This paper aims at making the students understand and apply the basic provisions related to income tax and be able to compute his own income tax liability, timely payment of such tax liability and comply with income tax return filing procedure on year-to-year basis

### **Unit 1:**

#### **Income Tax Act, 1961**

Meaning, concept and definitions

Residential status and taxability of income

### **Unit 2**

#### **Computation of Taxable Income under different heads of Income**

. Income from Salary

- ← Salient features, meaning of salary
- ← Allowances and their taxability
- ← Perquisites and their valuation

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- ← Deductions from Salary
- b. Income from House Property
  - ← Basis of chargeability
  - ← Annual Value
  - ← Valuation of Self Occupied, Let out and Deemed Let Out Properties
  - ← Deductions allowed
- c. Profits and Gains of Business or Profession
  - ← Definitions
  - ← Deductions expressly allowed
  - ← Deductions expressly disallowed, disallowance on the basis TDS non-compliance
  - ← Block of Assets method of Depreciation
- d. Income from Capital Gains
  - ← Chargeability
  - ← Cost of Improvement
  - ← Short Term Capital Gains
  - ← Long Term Capital Gains
  - ← Deductions
- d. Income from Other Sources Chargeability, Deductions, Amounts not deductible

### **Unit 3:**

#### **Computation of Total Income**

- ← Gross Total Income
- ← Deductions under Chapter VIA
- ← Tax slabs for Individuals
- ← New tax regime effective from A.Y.2021 -22
- ← Choice of assessee to switch -over to new regime
- ← Government philosophy behind new tax regime

- ← Numerical sums on total computation under old and new tax regime

#### **Unit 4:**

##### **Modes of Tax payment**

- ← Advance Tax
- ← Tax Deducted at Source
- ← Self Assessment Tax
- ← Tax on Regular Assessment 06
- ← Viewing Form 26AS on Income Tax site

#### **Unit 5:**

##### **Income Tax Returns**

- ← Various Income Tax Return Forms and their applicability
- ← Due dates for filing Income Tax Returns
- ← E-filing of Income Tax Returns
- ← E-assessment of Income Tax Returns
- ← Faceless assessment

***Note: Provisions as amended and made applicable to current Assessment Year will be considered to be part of the syllabus. Accordingly, for academic year 2021-2022 provisions relevant to A.Y.2021-2022 will apply and so on***

Course Learning Outcomes:

On successful completion of the module students will be:

CO1. able to understand basic taxation structure in India as per the Constitution of India.

CO2. able to understand basic provisions regarding computation of taxable income of an individual for the current assessment year, whether from Salary or Business/Profession or other sources of Income.

CO3. able to make numerical calculations of taxable income and exempt income as per the method of calculation prescribed under Income Tax Act, and tax payable on the same.

CO5. get acquainted with e-processes related to income tax filing and assessment.

**Angel, VC & PE Entry and Exit Strategies**

**Subject Code: BCM653A**

**Credits: 4**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Course Objectives:**

This module on "Angel, VC & PE Entry and Exit Strategies" is designed to students with the knowledge and skills required to navigate the complex world of angel investing, venture capital (VC), and private equity (PE). Students will gain a deep understanding of how to identify promising investment opportunities, structure deals, and maximize returns through effective entry and exit strategies. This module will help you provide sound advice to aspiring entrepreneur seeking funding or an investor looking to make informed investment decisions, and give insights and tools needed to succeed in the dynamic landscape of early-stage and growth-stage investments.

### **Module 1: Introduction to Venture Capital, Private Equity and Angel Investing**

What Is Private Equity and Venture Capital - Why Companies Need Private Equity and Venture Capital - Difference between private equity and venture Capital – Different functions of Private equity firm - How a Private Equity PE firm works in the age of high-tech digital banking - Different participants of PE firms - Strategies and Product Services offered by PE Firms - How to select a suitable PE firm

Angel investor profiles and motivations - Identifying and evaluating promising startups - Due diligence and risk assessment - Deal structuring and negotiation - Angels vs. Seed funds vs. Traditional VC

### **Module 2: The management of Private Equity and Venture Capital Funds**

Managerial Process for Equity Fund – Fundraising - Investing: The Decision-Making Phase - Investing: The Deal Making Phase - Managing and Monitoring: Supporting the Company - Managing and Monitoring: Covenants Usage – Compare private equity with public equity  
Risk assessment in early-stage and growth-stage investments - Conducting comprehensive due diligence - Legal and regulatory considerations - Post-investment monitoring and support

### **Module 3: Tax aspects of PE investments**

Tax provisions under Income Tax Act 1961 under Section 10(23FB) and Section 10(47) - Income Types - Securities Transaction Tax (STT) - Tax on Distributed Profit (Dividend Distribution Tax) - Taxability of Interest - Taxability of Short-Term Capital Gains on Debt and equity - Taxability of Long-Term Capital Gains on Debt and equity - Taxation of Non-Residents

### **Module 4: Venture Capital and Private Equity Entry and Exit strategies**

Venture capital funding stages and structures - Investment thesis and portfolio management – Type of Exit strategies: IPOs, M&A, and secondary sales - Case studies of successful VC investments  
Private equity investment models (e.g., buyouts, growth equity) - Leveraged buyouts (LBOs) and management buyouts (MBOs) - Exit strategies in the private equity space - Case studies of PE-backed companies

### **Module 5: Company Valuations and deal making in Private Equity Settings**

Company Valuation Fundamentals - Company Valuation: The Pillars of DCF – Case Study on Company Valuation for PE Investment - Applying Company Valuation to Private Equity Settings - Applying Company Valuation to Venture Capital Settings: The Venture Capital Method

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

**Technical Analysis**

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

## **Subject Code: BCM655A**

**Credits: 4**

### **Course Outcomes**

CO1: Describe the fundamental concepts and approaches to trading and speculation concepts.

CO2: Identify charts, patterns and indicators that assist in prediction of price direction

CO3: Appreciate the need of analysis for trading in various markets

CO4: Assess the concepts of Candlestick Analysis

CO5: Implement trading techniques using technical analysis

### **Unit- I: Introduction to key financial markets**

Introduction to equity markets, commodities markets and currency markets; explore trading opportunities in these markets; margin requirements; margin management; stockbroker expectations; settlements; margin funding concepts.

Learning outcome: To recognize the opportunities of trading in key financial markets conducive for trading and speculating

### **Unit 2: Introduction to Technical Analysis**

Difference between trading, speculating and gambling; introduction to technical analysis; history of technical analysis practices world over; basic assumptions in technical analysis.

Learning outcome: To distinguish between trading, speculating and gambling.

### **Unit 3: Trading Rules and Behavioral Concepts**

Differentiating between trading and investing; distinguish between fundamental analysis and technical analysis; important trading rules recommended for traders; managing trading psychology; risk-reward ratio analysis; dos and don'ts for traders; discipline trading techniques

Learning outcome: To articulate what it takes to be a successful trader

### **Unit 4: Strengths and Weaknesses of Technical Analysis**

Defining the strengths and weaknesses of technical analysis; what traders have to be aware before following technical analysis to trade?

Learning outcome: To identify strengths and weakness of technical analysis.

### **Unit 5: Dow Theory and Elliott Wave Theory**

Introduction to Dow Theory trading concepts; practical application of Dow Theory; advantages and disadvantages of Dow Theory; introduction to Elliott Wave Theory; practical application of Elliott Wave Theory;

Learning Outcome: To describe the role of Dow's Theory and Elliot Wave Theory as a diagnostic tool to identify trading opportunities.

### **Unit 6: Candlestick Chart**

Introduction to Charts; introduction to candlestick patterns of analysis; different types of candlestick patterns with explanation of each pattern and its utility

Learning outcome: To evaluate different candlestick patterns and utility of candlestick chart patterns

### **Unit 7: Introduction to Support and Resistance**

Dean  
Faculty of Management  
JECRC University, Jaipur-303905

Introduction to concepts of Support Price and Resistance Prices; why do such lines occur; identifying support and resistance zones; the importance of support and resistance lines for trading  
Learning outcome: To articulate the importance of following support and resistance lines as part of technical analysis

#### **Unit 8: Introduction to Patterns**

Head and Shoulder Patterns; head and shoulder top reversal; inverted head and shoulder; head and shoulder bottom; Double top and double bottom; rounded top and bottom

Learning outcome: To recognize the utility of head and shoulder and other patterns.

#### **Unit 9: Gap Theory**

Identifying Gaps before trading; common Gaps; breakaway Gaps; runaway Gaps; continuation Gaps; exhaustion Gaps; island Gaps

Learning outcome: To identify Gaps as part of trading opportunities

#### **Unit 10: Introduction to Indicators and Oscillators - I**

Introduction to technical indicator; utility of indicators; types of indicators; simple moving averages and exponential moving averages

Learning Outcome: Identify technical indicators and different types of moving averages

#### **Unit 11: Introduction to Indicators and Oscillators -II**

Concepts of moving averages, Oscillators, Relative Strength Index or RSI identifying momentum; identifying overbought and oversold position

Learning Outcome: Recognize different trends and indicators.

### **Goods And Service Tax SUBJECT CODE: BCM656A CREDITS:4**

#### **Unit 1: Constitutional background of Indirect Taxes in India**

- a) Powers of various Governments to levy and collect taxes.
- b) Constitutional amendment for bringing GST in force,
- c) Schedule 7 of Constitution (List 1,2,3)

#### **Unit 2: Goods and Service Tax**

##### 1) Introduction to Goods and Service Tax Act

- a) Constitutional amendment – GST vis-à-vis earlier tax laws
- b) Important definitions – Consideration, Continuous supply of goods, Continuous supply of services, goods, Central Tax, Integrated Tax, State Tax, Input, Input Service, Input Tax, Input Tax Credit, Intra-state supply of goods, Intra-state supply of services, Output tax, Outward supply, place of supply, place of business

##### 2) Levy and collection of tax

- a) Scope of supply
- b) Levy and collection of tax
- c) Tax liability on composite and mixed supplies

##### 3) Time and Value of supply

  
Dean  
Faculty of Management  
JECRC University, Jaipur-303905

- a) Time of supply of goods
- b) Time of supply of services
- c) Value of taxable supply

#### 4) Input Tax Credit

- a) Eligibility and conditions for taking input tax credit
- b) Apportionment of credit and blocked credit
- c) Availability of credit in special circumstances
- d) Input credit in respect of inputs and capital goods sent for job-work
- e) Manner of distribution of credit by input service distributor

#### 5) Registration

- a) Person liable for registration
- b) Persons not liable for registration
- c) Procedure for registration
- d) Deemed registration
- e) Amendment of registration.
- f) Cancellation of registration
- g) Revocation of cancellation of registration

#### 6) Tax Invoice, Credit and Debit Notes

- a) Tax Invoice
- b) Credit and debit notes
- c) Prohibition of unauthorized collection of tax
- d) Amount of tax to be indicated in tax invoice and other documents

#### 7) Returns

- a) Furnishing details of outward supplies
- b) Furnishing details of inward supplies
- c) Returns
- d) Claim of input credit and provisional acceptance thereof
- e) Matching, reversal and reclaim of input tax credit
- f) Matching, reversal and reclaim of reduction in output tax liability
- g) Annual Return
- h) First Return
- i) Levy of late fees

#### 8) Payment of Tax

- a) Payment of tax, interest, penalty and other amounts
- b) Interest on delayed payment of tax
- c) Transfer of input tax credit

#### 9) Numerical sums on calculation of tax

#### 10) Introduction to concept of Advance Rulings, few important rulings and their impact

Note: Amendments relevant to syllabus in GST Act and rules and regulations as incorporated and made effective up to 30th September before the beginning of the 2nd term of the academic year (sixth semester) will be applicable and deemed to be incorporated in the syllabus for that academic year

**Course Outcomes:** On successful completion of the module students will be:

**CO1.** Able to understand taxation structure in India.

**CO2.** Able to understand basic provisions regarding two major acts contributing to Government Funds .

**CO3.** acquire knowledge about valuation of goods under Customs Act and clarity about the concept of “ One Nation One Tax “. Availability of Input tax credit

**CO4.** get acquainted with basic knowledge of registration and e-filing process under GST Act.

## **CORE PAPERS**

1. INTRODUCTORY MICROECONOMICS
2. INTRODUCTORY MACROECONOMICS
3. MATHEMATICAL METHODS FOR ECONOMICS
4. INTERMEDIATE MICROECONOMICS
5. INTERMEDIATE MACROECONOMICS
6. STATISTICAL METHODS FOR ECONOMICS
7. ANALYSIS OF INDIAN ECONOMY I
8. DEVELOPMENT ECONOMICS
9. ANALYSIS OF INDIAN ECONOMY II
10. BASIC ECONOMETRICS
11. ADVANCED ECONOMETRICS
12. INTERNATIONAL ECONOMICS I
13. INTERNATIONAL ECONOMICS II

## **DISCIPLINE SPECIFIC ELECTIVE (DSE) PAPERS**

### **TRACK 1- FINANCIAL ECONOMICS**

1. ECONOMICS OF MONEY AND BANKING
2. BEHAVIOURAL FINANCE
3. FINANCIAL MARKETS AND INSTRUMENTS
4. INTERNATIONAL FINANCE
5. PUBLIC FINANCE
6. ANATOMY OF FINANCIAL CRISIS, RISK MANAGEMENT AND REGULATION

Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **TRACK 2- AGRICULRAL ECONOMICS**

1. INTRODUCTION TO AGRICULTURAL ECONOMICS
2. AGRICULTURAL POLICY FRAMEWORK IN INDIA
3. AGRICULTURAL FINANCE
4. AGRICULTURAL RISK MANAGEMENT AND INSURANCE
5. INTERNATIONAL TRADE IN AGRICULTURE
6. AGRO-PROCESSING INDUSTRIES

## **TRACK 3- ECONOMICS AND PUBLIC POLICY**

1. INTRODUCTORY PUBLIC POLICY
2. MARKET FAILURES AND POLICY INTERVENTIONS
3. BIG DATA AND PUBLIC POLICY
4. PUBLIC POLICY ANALYSIS
5. IMPACT EVALUATION
6. PUBLIC POLICY CAPSTONE

## **TRACK 4 - MISCELLANEOUS**

1. ECONOMICS OF INFRASTRUCTURE
2. DEMOGRAPHY
3. ENVIRONMENTAL ECONOMICS
4. ECONOMY OF RAJASTHAN
5. HEALTH ECONOMICS
6. INDUSTRIAL ECONOMICS

## **OPEN ELECTIVE PAPERS**

1. BEHAVIOURAL FINANCE
2. ECONOMICS OF HEALTH AND EDUCATION
3. ECONOMICS FOR ENGINEERS
4. SUSTAINABLE DEVELOPMENT
5. MANAGERIAL ECONOMICS

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

### **Programme Outcomes (POs):**

**PO1 Domain knowledge:** Apply the knowledge of domain subjects, science, computer fundamentals, and humanities & social science specialization to the solution of complex individual & social problems.

**PO2 Critical Thinking:** Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

**PO3 Problem Analysis:** Stimulate into adopting an enquiring attitude towards the problems encountered, developing solutions & appreciation of the different contexts

**PO4 Design/development of solutions:** Design solutions for complex psychological, economical, political & social problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO5 Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO6 Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern IT tools including prediction and modeling to complex activities with an understanding of the limitations.

**PO7 Environment and sustainability:** Understand the impact of the professional solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8 Ethics:** Recognize the diversity and complexity of ethical dilemmas in the real world, and educate oneself to base one's actions on responsibility, and respect for human rights

**PO9 Multidisciplinary approach:** To develop multidisciplinary perspective in reference to historical, social, psychological, economical, political & cultural context.

**PO10 Effective Communication:** Articulate ideas and perspectives, by developing and enhancing the communicative skills of listening, speaking, reading, and writing in interpersonal and interactive contexts, in print and in electronic media, for various audiences and purposes.

**PO11 Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO12 Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context of socio-technological change.

### **PROGRAMME SPECIFIC OUTCOMES FOR B.A. (HONS) ECONOMICS**

**PSO-1:** Develops strong competencies in under graduate level students in broad fields of Economics and its interactive environment.

**PSO-2:** Acquainting with collection, organization, tabulation and analysis of empirical data and ability to use basic mathematical and statistical tools to solve realistic economic problems

**PSO-3:** Develops ability to deal with basic and applied econometric tools and methods used in economics. Acquainting with statistical concepts of hypothesis testing, estimation and diagnostic testing of simple and multiple regression models.

**PSO-4:** Develops the ability to analyze, synthesize and disseminate large amount of complex and disparate information.

**PSO-5:** Acquainting with basic issues and prospective suggestions relating to the Indian economy and learn the basic concept of monetary analysis and financial marketing in Indian financial markets.

JECRC University, JAIPUR

## Core Papers

### **PAPER 1** **BEC001C: INTRODUCTORY MICROECONOMICS**

#### Course Objectives

1. To understand the basic concepts and principles related to micro economics.
2. To understand that about the allocation of scarce resources and their trade-offs.
3. To lay emphasis and follow on the microeconomic concepts that can be applied to real life situations.

<b>UNIT I</b>	Introduction , Basic Economic Problems; Micro & Macro Economics; Equilibrium – Partial & General, Stable & Unstable; Static, Comparative static & Dynamic analysis.
<b>UNIT II</b>	Cardinal Utility Analysis Demand – Meaning, Demand schedule & Demand curve, Law of Demand, Changes in demand, Market demand; Total and Marginal utility; Law of diminishing marginal utility; Consumer's equilibrium – law of equi-marginal utility.
<b>UNIT III</b>	Ordinal Utility Analysis, Indifference curves; Budget line; Consumer's equilibrium.
<b>UNIT IV</b>	Topics on Consumer Behavior, Price, substitution and income effect: Normal, Inferior and Giffen Goods (Hicksian Approach); Engel's Curve; Elasticity of demand: Price, Income and Cross – meaning & measurement; Consumer's surplus – Marshallian Concept.
<b>UNIT V</b>	Theory of Production, Production with one variable input: Total, average and marginal product curves; Law of returns to variable factor-Stages of Production; Production with two variable inputs: Isoquants and Iso-cost; Producer's equilibrium; Expansion Path; Ridge Lines; Law of Returns to scale.

#### Course Outcomes

Student will

1. Be acquainted with the methodology and approach of Microeconomics.
2. Learn the principles of micro economic theory.
3. Understand the behaviour of an economic agent, namely a consumer and a producer.
4. Develop insights for the application of micro-economic analysis to economic and social problems.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2												3				
CO2		1		1													
CO3				1						2	1		1				
CO4			2											1			

3 = Highly Related; 2 = Medium; 1 = Low

### Essential Readings:

1. H.L. Ahuja, Micro Economic Theory, S. Chand & Company, New Delhi.
2. Seth, M.L., Micro Economics, Laxmi Narayan Agarwal, Agra.

### Reference Books:

1. Gould J.P. and C.F. Ferguson, Micro Economic Theory, All India Traveler Book Sellers, Delhi.
2. N. Gregory Mankiw, Principles of Microeconomics (5th ed.), 2009, South-Western (Cengage Learning).
3. Koutsoyiannis, A. (1999), Modern Microeconomics, Macmillan.
4. Varian, H.R. (2000), Intermediate Microeconomics: A Modern Approach, East west Press, New Delhi.
5. Lipsey, R.G. (Latest edition), An Introduction to positive Economics.
6. Stonier, A.W. and D.C. Hague (1972), A Textbook of Economics Theory, ELBS and Longman Group, London.

**PAPER 2**  
**BEC002C: INTRODUCTORY MACROECONOMICS**

**Course Objective**

1. To introduce to the students the basic principles of macroeconomic theory.
2. To enable the students to understand the characteristics of major macroeconomic variables.
3. To make the students aware of the basic theoretical framework underlying the field of Macroeconomics.
4. To equip students to analyse the dynamic interactions between the major macroeconomic variables.

<b>UNIT I</b>	National Income ,Circular flow of Income, Concepts and methods of measuring the National Income; Concept of Real and Nominal income; Problems in measuring National Income; National Income and welfare.
<b>UNIT II</b>	Classical Economics :Say's Law; Determination of Equilibrium output and employment in simple Classical Model; Classical model involving Savings and Investment; Keynes' attack on the Classical Model.
<b>UNIT III</b>	Keynesian Economics, Consumption Function; Investment Function; Determination of equilibrium income and output in a three sector model
<b>UNIT IV</b>	Multiplier & Accelerator, Multiplier – Meaning & Working; Static & Dynamic Multiplier; Concept of Tax Multiplier, Government Expenditure Multiplier & Balanced, Budget Multiplier; Accelerator – Meaning & Operation; Super Multiplier.
<b>UNIT V</b>	Trade Cycles, Trade Cycles – Definition & Phases; Theories of Trade Cycles – Hicks, Samuelson and Kaldor; Measures to control trade cycles.

**Course Outcomes**

Student will

1. Be aware with the mainstream approaches to the study of macroeconomics.
2. Be able to distinguish between the various approaches and the merits and critiques of each of them.
3. Acquire the ability to understand the dynamic interactions between the macroeconomic variables and their impact on the economy.
4. Demonstrate the knowledge of different concepts in contemporary macro issues.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2												3				
CO2		3		2													
CO3								1		2	1			2			
CO4			2											1			

3 = Highly Related; 2 = Medium; 1 = Low

### Essential Readings:

1. Shapiro, E. (1996), Macroeconomic Analysis, Galgotia Publications, New Delhi.
2. Vaish, M.C., Macro Economics, Wishwa Prakashan.
3. Ahuja, H.L., Macro Economic Analysis, S. Chand.

### Reference Books:

1. Ackley, G. (1976), Macroeconomics: Theory and Policy, Macmillan Publishing Company, New York.
2. Keynes, J.M. (1936), The General Theory of Employment, Interest and Money, Macmillan, London.
3. Rastogi, S. and S. Aiyar (1997), National Income and Accounting, Lotus Books.
4. Froyen R., Macro Economics, Pearson Education.
5. Fatianni M., Salvatore D., and Hagen JU (1997), "Macro Economic Policies in Open Economy", Green Wood press.

### **PAPER 3**

#### **BEC003C: MATHEMATICAL METHODS FOR ECONOMICS**

##### **Course Objective**

1. To introduce the students to mathematical methods required to analyse economic problems.
2. To enable the students to understand various concepts of set theory, matrix algebra and calculus.
3. To make the students aware of integration of mathematical methods with other courses of microeconomics as well as macroeconomics.

<b>UNIT I</b>	Logic and proof techniques. Basic set operations, convex sets. Real numbers, lowest upper bound, greatest lower bound, maximum, minimum. Functions and correspondences, into and onto functions, inverse functions, composition of functions, one to one correspondence between sets, convex, concave, quasi concave, homogeneous and homothetic functions
<b>UNIT II</b>	Vector spaces: algebraic and geometric properties, scalar products, norms, orthogonality. Linear transformations: properties, matrix representations and elementary operations. Systems of linear equations and Cramer's Rule. Determinants: characterization, properties and applications.
<b>UNIT III</b>	Continuous functions of different types and their graphs- quadratic, polynomial, power, exponential, and logarithmic. Derivatives of first and second order and their properties.
<b>UNIT IV</b>	Differentiable functions: characterizations, properties with respect to various operations and applications Second order derivatives: properties and applications The implicit function theorem, and application to comparative statics problems Homogeneous and homothetic functions
<b>UNIT V</b>	Implicit functions and their derivatives. Unconstrained optimization, necessary and sufficient conditions, global optima of convex and concave functions. Constrained optimization, equality constraints: Lagrange's method, the meaning of Lagrange multiplier, maximum value function and Envelope Theorem.

##### **Course Outcomes**

Students will

1. Use mathematical techniques to analyse economic problems
2. Model economic questions in mathematical framework
3. Evaluate range of problems using mathematical techniques
4. Acquire mathematical skills used in economic analysis.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1			3										3				
CO2		1				2											
CO3				2							1				2		
CO4			2											2			

**3 = Highly Related; 2 = Medium; 1 = Low**

### Essential Readings:

1. K. Sydsaeter and P. Hammond, Mathematics for Economic Analysis, Pearson Educational Asia: Delhi, 2002.
2. A. Chiang & K. Wainwright: Fundamental Methods of Mathematical Economics, McGrawHill.
3. E. Silberberg & Suen: The Structure of Economics, McGrawHill.
4. Simon & Blume, Mathematics for Economists, VivaBooks.
5. Rudin W.: Principles of Mathematical Analysis, McGraw-Hill

## SEMESTER II

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **PAPER 4**

### **BEC004D: INTERMEDIATE MICROECONOMICS**

#### **Course Objectives:**

1. To understand the over view of microeconomic concepts and theory.
2. To illustrate the process of determination of equilibrium price and output in different market situations.
3. To understand and recognize the concepts used in factor pricing.
4. To understand the application of the macroeconomic theory to analyse the implication of the macroeconomic policies

<b>UNIT I</b>	Cost and Revenue, Short- run cost curves and their relationship; Cost in the long- run: LAC and LMC; Economies and diseconomies of scale; Revenue: Total, average and marginal revenue and their relationships; Relationship between TR, MR, AR and elasticity.
<b>UNIT II</b>	Theory of Firm I ,Equilibrium of the firm: TR - TC approach and MR - MC approach; Perfect competition: Determination of price and output in the short and long run; Monopoly: Determination of price and output in the short and long run.
<b>UNIT III</b>	Theory of Firm II, Monopoly: Price discrimination, measure of monopoly power; Monopolistic competition: determination of price and output in the short- and long-run, excess capacity; Oligopoly: Basic concept of non-collusive and collusive oligopoly, Paul M. Sweezy model.
<b>UNIT IV</b>	Factor Pricing I, Marginal Productivity Theory of Distribution: Factor pricing in perfectly competitive markets; Factor pricing in imperfectly competitive markets. Interest: Classical & Keynesian Theories.
<b>UNIT V</b>	Factor Pricing II, Rent: Ricardian theory of rent; Modern theory of rent; quasi rent. Profit: Innovation, risk and uncertainty theories. Theories of Interest.

## Course Outcomes

Student will

1. Be able to recognize the microeconomic concepts like cost and revenue concepts.
2. Learn the determination of equilibrium price and output in various market situations.
3. Be able to state marginal productivity theory of distribution, different theories of interest, profits and rent.
4. Apply the microeconomic concepts to analyze the various issues at macro level.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2		3										3				
CO2		2												2			
CO3				2	1						1						
CO4						1										2	

3 = Highly Related; 2 = Medium; 1 = Low

## Essential Readings:

1. H.L. Ahuja, Micro Economic Theory, S. Chand & Company, New Delhi.
2. Seth, M.L., Micro Economics, Laxmi Narayan Agarwal, Agra.

## Reference Books:

3. Gould J.P. and C.F. Ferguson, Micro Economic Theory, All India Traveler Book Sellers, Delhi.
4. Koutsoyiannis, A. (1999), Modern Microeconomics, Macmillan.
5. Varian, H.R. (2000), Intermediate Microeconomics: A Modern Approach, Eastwest Press, New Delhi.
6. Lipsey, R.G. (Latest edition), An Introduction to positive Economics.

## **PAPER 5**

### **BEC005D: INTERMEDIATE MACROECONOMICS**

#### **Course Objectives**

1. To learn and understand the formal modelling of macroeconomic theory in terms of analytical tools.
2. To recognise the various alternative theories of output and employment.
3. To introduce the students to various theoretical issues related to an open economy.
4. To understand and learn the macroeconomic policies.
- 5.

<b>UNIT I</b>	Aggregate Demand and Aggregate Supply Curves Derivation of aggregate demand and aggregate and supply curves; interaction of aggregate demand and supply.
<b>UNIT II</b>	Inflation, Unemployment and Expectations Phillips curve; adaptive and rational expectations; policy ineffectiveness debate.
<b>UNIT III</b>	Macroeconomic Policy, Active or Passive Policy Debate; Fiscal Policy: Public-Choice and Partisan Theories, Automatic Fiscal Stabilizers, Pros and Cons of Balanced Budget Rules, Traditional and Ricardian View of Public debt, crowding in and crowding out effect, Ricardian equivalence; Monetary Policy: Goals of Monetary Policy and Intermediate Targets, Choosing Intermediate Targets in the case of Supply and Demand Shocks, Targeting Monetary Aggregates and its Implications, Targeting Interest Rates and its Implications; Recent International Experience: Discretion versus Policy Rules Debate, Taylor's Rule and Monetary Policy – Inflation Targeting – Issues Relating to Inflation Targeting – Country Experiences with Inflation Targeting
<b>UNIT IV</b>	Open Economy Models Short-run open economy models; Mundell-Fleming model; exchange rate determination; purchasing power parity; asset market approach; Dornbusch's overshooting model; monetary approach to balance of payments; international financial markets.
<b>UNIT V</b>	Economic Growth Harrod-Domar model; Solow model; golden rule; technological progress and elements of endogenous growth.

#### **Course Outcomes**

Student will

1. Learn the formal modelling of macroeconomic theory.
2. Be acquainted with various theories of output and employment.
3. Be able to relate various theoretical issues to open economy.
4. Recognize and relate to the implications of macroeconomic policies.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2		3										3				
CO2									2								
CO3				2							1	1					
CO4									2							1	2

3 = Highly Related; 2 = Medium; 1 = Low

### Essential Readings:

1. Shapiro, E. (1996), Macroeconomic Analysis, Galgotia Publications, New Delhi.
2. Vaish, M.C., Macro Economics, Wishwa Prakashan.
3. Ahuja, H.L., Macro Economic Analysis, S. Chand.

### Reference Books:

1. Dornbusch, R., Fischer, S., & Startz, R. (2015). Macroeconomics. (11th ed.). McGraw Hill Education. Froyen, R. (2014).
2. Macroeconomics: Theories and Policies (10th ed.). Pearson Education. Mankiw, N. G. (2015).
3. Macroeconomics (9th ed.). USA: Worth Publishers. McConnell, C. R., & Brue, S. L. (2011).
4. Macroeconomics, Principles, Problems and Policies. New York: McGraw Hill Inc. Snowden, B. & Vane, H. R. (2005). Modern Macroeconomics: Its Origins, Development and Current State. United Kingdom: Edward Elgar Publishing.

**PAPER 6**  
**BEC006C: STATISTICAL METHODS FOR ECONOMICS**

**Course Objectives**

1. To acquire basic skills in applied statistics.
2. To develop skills in the field of economic analysis and reasoning.
3. To develop skills in the analysis and presentation of data.
4. To understand and apply the various statistical methods to problems.

<b>UNIT I</b>	Scope of statistics; Importance and limitation of statistics Collection of Data: Planning and organizing a statistical enquiry; Methods of collecting primary data; Sources of secondary data; Sampling: Census method vs. sample method; Classification of data: Meaning, methods of classification; Tabulation of data: meaning, role, parts of a table; General rules of tabulation; Presentation of data; Diagrams and graphs: General rules for construction a diagram; Types of diagrams; Types of graphs; Software Applications.
<b>UNIT II</b>	Measures of Central Tendency and Dispersion, Measures of Central Tendency: Mean, median and mode; Geometric and Harmonic means; Partition Values: Quartiles; deciles; percentiles; Measures of Dispersion: Range, inter-quartile range and quartile deviation, mean deviation, standard deviation and Lorenz curve, coefficient of dispersion; Software applications.
<b>UNIT III</b>	Moments, Skewness and Kurtosis; Correlation and Linear Regression Model , Correlation Analysis: Meaning, types of correlation; Methods of studying correlation: Scatter diagram method, Karl Pearson's co-efficient of correlation, Spearman's rank method, concurrent deviation method; Testing the significance of the correlation coefficient.
<b>UNIT IV</b>	Time Series Statistics, Measurement of Secular trend: Free hand curve method or eye inspection method - Semi average method, Moving Average Method.
<b>UNIT V</b>	Meaning and importance; problems in the construction of index numbers; Types of index numbers: price index; quantity index; value index; construction of price index numbers: unweighted and weighted indices (Laspeyre's index, Paasche's index, Fishers ideal index); construction of quantity and value indices; tests of index numbers: Time reversal test; Factor reversal test; Splicing: Deflating process; Consumer Price Index (CPI): meaning and uses; problems in the construction of cost of living index; Methods of constructing cost of living index: Aggregate expenditure and family budget methods; Limitations of index numbers; Software applications.

## Course Outcomes

Student will

1. Understand the concepts and methods of Statistics, for application in data analysis.
2. Acquire statistical skill required for the analysis of socio-economic data.
3. Be able to handle on training in data analysis (along with computer applications)
4. Be able to interpret the results and conclusions of statistical analysis.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2												1		2		
CO2			2		2										3		
CO3						3					1						
CO4				2		1										1	

3 = Highly Related; 2 = Medium; 1 = Low

## Essential Readings

1. Anderson, D. R., Sweeney, D. J., Williams, T. A., Camm, J. D., & Cochran, J. J. (2014).
2. Essentials of Statistics for Business and Economics. Boston: Cengage Learning. Lind, D. A., Waite, C. A., Marchal, W. G., & Wathen, S. A. (2005).
3. Basic Statistics for Business & Economics. New York: McGraw-Hill. Sharma, J. K. (2010). Fundamentals of Business Statistics. (2nd ed.). New Delhi: Vikas Publishing House.
4. Croxton, F. E., & Cowden, D. J. (1964). Applied General Statistics. (2nd ed.). New Delhi: Prentice Hall of India Private Limited. Freund, J. E., & Perles, B. M. (2007).
5. Modern Elementary Statistics. (12th ed.). New Jersey: Prentice Hall.
6. Gupta, S. C., & Kapoor, V. K. (2007). Fundamentals of Applied Statistics. (4th ed.). New Delhi: Sultan Chand & Sons. Larsen, R. J., & Marx, M. L. (2012).
7. GS Monga (2003), Mathematics and statistics for economics, (2<sup>nd</sup> rev. ed.), Vikas Publication House (New Delhi).

8. An Introduction to Mathematical Statistics and its Applications. (5th ed.). New Jersey: Prentice Hall.

## SEMESTER III

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **PAPER 7**

### **BEC007C: ANALYSIS OF INDIAN ECONOMY -I**

#### **Course Objectives**

1. To provide an overall understanding of major challenges faced by Indian economy.
2. To understand the features and structural changes of Indian economy and compare with the growth pattern and challenges of other economies.
3. The course enables the student to apply the theoretical knowledge in the actual working of Indian economy.

<b>UNIT I</b>	Economic Development since Independence; Major features of Indian Economy at independence and characteristics of economic underdevelopment of India (with reference to colonial rule of India); Trend in National Income and Per capita income; Sectoral composition (output and employment) - Primary, Secondary and Tertiary. Development under different policy regimes—goals, constraints, institutions and policy framework Economic Development since Independence. Major features of the economy, role of agriculture in Indian Economy- causes of low productivity, measures to increase productivity.
<b>UNIT II</b>	Industrialization- role, industrial policies, public sector and private sector, small scale industries- importance and problems.
<b>UNIT III</b>	Population and Human Development; Broad demographic features — Population size and growth rates, Sex and age composition, occupational distribution. Density of population, Urbanization and economic growth in India. Population growth as a factor of economic development, National Population Policy, Progress of human development in India. Development of education in India, health and family welfare and the development of health infrastructure. Population and Human Development, Demographic trends and issues; education, causes of rapid population, development of human resources.
<b>UNIT IV</b>	Structural Change of Post Independent Indian Economy; Growth, Distribution and Trends of national income, sectoral distribution. An assessment of performance— sustainability and regional contrasts; structural change, savings and investment. Trends, measurement and policies in poverty; Inequality-measurement, causes and effects, Unemployment-Types, Causes and Employment policies in India.
<b>UNIT V</b>	Economy in Post Reform Period ; Background of Indian Economic Reforms – New Economic Policy; Redefining India's development strategy; Changing Role of State and Market Industrial Policy, Disinvestment policy and Privatization; Financial sector reforms including banking reform. External sector reforms: Foreign Exchange market, Balance of Payments, reform, convertibility, export-import policy, foreign direct investment; Post-reform Agricultural Performance and its

	Crisis; Appraisal of Indian Economic Reform Growth and Distribution, Trends and policies in poverty; inequality, alleviation programs and unemployment.
--	---

### Course Outcomes

Student will

1. Be able to understand the various sectors and features of Indian economy.
2. Be able to understand the various policy debates and economic indicators in the post-independence era with special emphasis on paradigms shifts and turning points.
3. Be able to recognise the structural changes before and after economic reforms in 1991.
4. Be able to critically evaluate various industrial policies in India.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

5. J.B.G. Tilak, 2007, "Post Elementary Education, Poverty and Development in India", *International Journal of Educational Development*.

## **PAPER 8**

### **BEC008C: DEVELOPMENT ECONOMICS**

#### **Course Objectives**

1. To give an understanding of the theoretical perceptions of economic growth and development together with the forces bringing about them.
2. To broaden the awareness of the challenges in the developmental process and thus motivate the students towards the thinking of alternative solutions.
3. To understand the concept and measurement of Poverty.
4. To demonstrate the knowledge of various concepts of development and growth while solving the problems of developing economy.

<b>UNIT I</b>	Meaning of Development and Relevant Concepts; Economic growth and development -Meaning, differences and Measures – PQLI- Physical Quality of Life Index, HDI - Human Development Index, GDI- Gender Development Index, GII- Gender Inequality Index, MDPI- Multidimensional Poverty Index, GNHI – Gross National Happiness Index, Sen’s Capabilities Approach; Environmental Sustainability and Sustainable Development- Concept and strategy; Market and State as agencies of development; Common characteristics of developing nations.
<b>UNIT II</b>	Classical Theories of Development; Contributions of Adam Smith, Ricardo, Karl Marx, Schumpeter, and Rostow.
<b>UNIT III</b>	Important Growth Models; Harrod and Domar: Instability of equilibrium; Neo-Classical Growth Model: Solow; Theories of Endogenous Growth with special reference to Romer’s model.
<b>UNIT IV</b>	Theories of Development; Balanced and Unbalanced Growth; Nelson’s Low Income Equilibrium Trap; Underdevelopment as Coordination failure, multiple Equilibria: A Diagrammatic Approach; the Big Push theory and Leibenstein’s Theory of Critical Minimum Efforts, Dual Economy model of Lewis.
<b>UNIT V</b>	Poverty, Inequality and Development; Concept of Poverty and Poverty Line; Measurement of poverty – absolute and relative, Head-Count Index and Poverty Gap Indices, recent measures of Poverty; Recent Poverty Alleviation Schemes; Concept of inequality and recent measures; Economic growth and income inequality – Kuznets’ inverted Hypothesis, the impact of inequality on development.

## Course Outcome

Student will

1. Recognize and examine the role of theories of the economics of development in a number of existing development issues.
2. Be able to reflect on the links between various development economic theories and approaches
3. Explore the prospects of the course to improve the quality of life in developing countries.
4. Recognize important role of macroeconomic policies for economic development.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

CO2		2	1		2							1		2			
CO3									2						2		
CO4					1								3				

3 = Highly Related; 2 = Medium; 1 = Low

## Essential Readings:

1. Debraj Ray, Development Economics, Oxford University Press, 2009.
2. Partha Dasgupta, Economics, A Very Short Introduction, Oxford University Press, 2007.
3. Abhijit Banerjee, Roland Benabou and Dilip Mookerjee, Understanding Poverty, Oxford University Press, 2006.
4. Kaushik Basu, The Oxford Companion to Economics in India, OUP, 2007.
5. Amartya Sen, Development as Freedom, OUP, 2000.

## BEC038C RESEARCH METHODOLOGY

### Course Objectives:

1. To understand the importance of research in creating and extending the knowledge base in their area of research interest;

2. To develop their ability to distinguish between the strengths and limitations of different research approaches in general and in their research area specifically
3. To gain skills required to work independently, so that they can plan and carry out a small- scale research project.

<b>UNIT I</b>	Meaning and Definition of Research, Meaning and definition of research; criteria for good research; objectives of research; difficulties in social research; utility of research; ;literature review, sources of literatures. Philosophy and Methods of Social Research.
<b>UNIT II</b>	Research Design and Ethics, Research design: Meaning, types and evaluation of research design; Research Ethics in designing, data collection and analysis; Deductive and inductive methods; classification of research.
<b>UNIT III</b>	Selection of Research Problem, Steps involved in selection of research problem; evaluation of the problem; Calculating sample size, Sampling and Sample Design , Meaning of sampling; Sampling process; Methods of sampling; Sampling errors

### .Course Outcomes

CO 1 Students will be able to analyze and evaluate the concepts critically underpinning different research methodologies suitable for

use within the economics and social sciences.

CO2 Students will be able to demonstrate in-depth knowledge of a range of research methods applicable to economics discipline and

decide how to choose a method guided by their research question.

CO3.Students will gain a clear understanding of the ethical considerations and the need for rigour in conducting research in social sciences.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

- 2 Kothari, C. R. (2014). Research Methodology: Methods and Techniques (2nd ed.). New Delhi: New Age International Publishers.
- 3 Walliman, N. (2016). Social Research Method: The Essentials. London: SAGE Publications.
- 4 Wellington, J. & Szczerbiński, M. (2007). Research Methods for the Social Sciences. New York: Continuum International Publishing Group.

**Syllabus for Open Elective-I**

**(Offered by Department of Economics, School of Humanities and Social Sciences)**

**BEC016C BEHAVIOURAL FINANCE****Course Objectives**

1. To provide students with in-depth understanding of Behavioural Finance and Bounded rationality concept.
2. To understand the key behavioral biases of individual and professional investors.
3. To analyze the theoretical and empirical foundations and challenges to the efficient market hypothesis.

<b>Module 1:</b>	Introduction to Behavioral finance – Nature, scope, objectives and application Psychology and market people. Investors, portfolio managers, analysts: are they rational? Bounded rationality in real market conditions. Decision-making process and behavioral biases. Simple experiments on anchoring.
<b>Module 2:</b>	Utility/ Preference Functions: Expected Utility Theory [EUT] and Rational Thought: Decision making under risk and uncertainty - Expected utility as a basis for decision-making – Theories based on Expected Utility Concept - Investor rationality and market efficiency
<b>Module 3:</b>	Behavioral Corporate Finance: Behavioral factors and Corporate Decisions on Capital Structure and Dividend Policy - Capital Structure dependence on Market Timing -. Systematic approach to using behavioral factors in corporate decision making.
<b>Module 4:</b>	Behavioral Factors and Financial Markets: The Efficient Markets Hypothesis – Fundamental Information and Financial Markets - Information available for Market Participants and Market Efficiency -Market Predictability

## Course Outcome

Student will

1. Identify and apply psychological concepts to financial markets and financial decision – making.
2. Understand the concepts to help promote more efficient financial decisions.
3. Explore behavioral corporate finance, considering financial, investment and dividend policy decisions.
4. Acquire knowledge to infer about human decisions influencing their financial decisions in domestic and global markets.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

14. Finance, Oxford University Press, Oxford.

## SEMESTER IV

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **PAPER 9**

### **BEC009C: ANALYSIS OF INDIAN ECONOMY II**

#### **Course Objectives:**

1. To understand the basic structure and sector-specific policies of Indian Economy.
2. To analyze various policies and their impact in shaping trends in key economic indicators in India. It highlights major policy debates and evaluates the Indian empirical evidence.
3. Students will be able to identify the determinants of various macroeconomic aggregates such as output, unemployment, inflation, productivity and the major challenges associated with the measurement of these aggregates.

<b>UNIT I</b>	Macroeconomic Policies and Their Impact Fiscal Policy; trade and investment policy; financial and monetary policies; labour regulation.
<b>UNIT II</b>	Policies and Performance in Agriculture Growth; productivity; agrarian structure and technology; capital formation; trade; pricing and procurement.
<b>UNIT III</b>	Policies and Performance in Industry Growth; productivity; diversification; small scale industries; public sector; competition policy; foreign investment.
<b>UNIT IV</b>	Trends and Performance in Services.
<b>UNIT V</b>	Foreign investment and foreign technology. Foreign direct investment in India: Policy, trend and impact, Labour relations and labour policy. Labour reforms since 1991.

#### **Course Outcomes**

Student will

1. Understand the structure of Indian Economy.
2. Be able to recognise the growth and contribution of service sector in India.
3. Be able to apply their knowledge of macroeconomic concepts in measuring various aggregates.
4. Understand the importance of agriculture as the foundation of economic growth and development in India.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2												3				
CO2														2			3
CO3			1	2	2						1						
CO4		3															2

**3 = Highly Related; 2 = Medium; 1 = Low**

### Essential Readings:

1. Shankar Acharya, 2010, "Macroeconomic Performance and Policies 2000-8", in Shankar Acharya and Rakesh Mohan, editors, India's Economy: Performances and Challenges: Development and Participation, Oxford University Press.
2. Rakesh Mohan, 2010, "India's Financial Sector and Monetary Policy Reforms", in Shankar Acharya and Rakesh Mohan, editors, India's Economy: Performances and Challenges: Development and Participation, Oxford University Press.
3. Pulapre Balakrishnan, Ramesh Golait and Pankaj Kumar, 2008, "Agricultural Growth in India Since 1991", RBI DEAP Study no. 27.
4. B.N. Goldar and S.C. Aggarwal, 2005, "Trade Liberalisation and Price-Cost Margin in Indian Industries", The Developing Economics, September.
5. P. Goldberg, A. Khandelwal, N. Pavcnik and P. Topalova, 2009, "Trade Liberalisation and New Imported Inputs", American Economic Review, Papers and Proceedings, May.

## **PAPER 10**

### **BEC0010C: BASIC ECONOMETRICS**

#### **Course Objectives**

1. To understand basic econometric concepts and techniques.
2. To have the ability to apply econometric techniques in the investigation of economic relationships and processes.
3. To understand and learn data analysis and to the specific econometric problems associated with economic statistics.

<b>UNIT I</b>	Definition and scope of econometrics; Methodology of econometric research; Historical origin of the term regression and its modern interpretation; Statistical vs. deterministic relationship; regression vs. causation, regression vs. correlation; Terminology and notation; The nature and sources of data for econometric analysis.
<b>UNIT II</b>	Simple Linear Regression Model, Two Variable Case Estimation of model by OLS method: Assumptions; Properties of Least Square Estimators: Gauss-Markov Theorem; Testing of regression coefficient; Test for regression as a whole: Coefficient of determination.
<b>UNIT III</b>	Multiple Linear Regression Model, Multiple Regression Analysis: The problem of estimation, notation and assumptions; meaning of partial regression coefficients; the multiple coefficient of determination: $R^2$ and the multiple coefficient of correlation; $R^2$ and adjusted $R^2$ ; partial correlation coefficients; interpretation of multiple regression equation.
<b>UNIT IV</b>	Relaxing the Assumptions of CLRM, Introduction to Multicollinearity, Heteroscedasticity & Autocorrelation: the nature of the problem; its detection and corrective measures.
<b>UNIT V</b>	Dummy Variable Regression Models., Dummy Variable technique: The Nature of Dummy Variables; Dummy Variable Trap; ANOVA; Use of Dummy variables: Structural Break; Seasonal Adjustment; and Interaction effects; Nature of Qualitative response models: Linear Probability Model; Logit Model; Probit Model.

## Course Outcomes

Student will

1. Have the knowledge and skills required for the construction and estimation of simple and multiple regression models.
2. Be able to perform econometric analysis and estimation, by understanding their application in economics.
3. Be able to analyse each economic problem in depth and also able to do testing of the hypotheses.
4. Understand the concept and types of theoretical and applied econometrics.

Course Outcome	Program Outcome												Program Specific Outcome

2. Basic Econometrics. (5th ed.). New Delhi: McGrawHill. Studenmund, A. H. (2016). Using Econometrics: A Practical Guide. (7th ed.). New Delhi: Pearson.

## **Syllabus for Open Elective-II**

(Offered by Department of Economics, School of Humanities and Social Sciences)

### **BEC015B ECONOMICS OF HEALTH AND EDUCATION**

#### **Course Objectives**

1. To provide students with ability to understand the implications of market and government failures in the context of health care.
2. To understand how many institutions and regulatory arrangements observed in the sector can be linked to different types of markets.
3. To give an introduction to health economics theory and methods and how they could be applied to analyse the functioning of health system and the determinants of health and use of health services.

<b>Module 1:</b>	Role of Health and Education in Human Development Importance in poverty alleviation; health and education outcomes and their relationship with macroeconomic performance.
<b>Module 2:</b>	Microeconomic Foundations of Health Economics Demand for health; uncertainty and health insurance market; alternative insurance mechanisms; market failure and rationale for public intervention; equity and inequality.
<b>Module 3:</b>	Evaluation of Health Programs Costing, cost effectiveness and cost-benefit analysis; burden of disease.
<b>Module 4:</b>	Health Sector in India: An Overview Health outcomes; health systems; health financing. Education: Investment in Human Capital Rate of return to education: private and social; quality of education; signalling or human capital; theories of discrimination; gender and caste discrimination in India.

## Course Outcomes

Student will

1. Have knowledge and understanding of the major theories and frameworks for core areas of health economics in terms of main issues, methods, results and unresolved problems.
2. Have a good understanding of how economic theory and methods are applied in the health care sector.
3. Understand the efficiency and equity considerations in health and health care.
4. Be aware of the advantages and problems of working across disciplines.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PP 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2					1							3				
CO2		2							3								
CO3			1	2													2
CO4												1

## Essential Readings:

1. William, Jack, Principles of Health Economics for Developing Countries, World Bank Institute Development Studies, 1999.
2. World Development Report, Investing in Health, The World Bank, 1993.
3. Ronald G., Ehrenberg and Robert S., Smith, Modern Labor Economics: Theory and Public Policy, Addison Wesley, 2005.

## SEMESTER V

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **PAPER 11**

### **BEC011C: ADVANCED ECONOMETRICS**

#### **Course Objectives**

1. To provide a comprehensive introduction to the advanced econometric concepts and techniques.
2. To discuss and analyze the application advanced econometric techniques in the investigation of complex economic relationships using time series and panel data.
3. To develop the skills to make economic forecasting.

<b>UNIT I</b>	Dynamic Econometric Models , Lags in econometric models; Distributed lag model; Autoregressive lag model; Reasons for lags; Estimation of distributed-lag model, The Koyck Approach to distributed-lag model; Rationalisation of koyck model: The adaptive expectations model, partial adjustment model; Estimation of autoregressive models; The method of instrument variable (IV); Causality in economics: The granger causality test.
<b>UNIT II</b>	Simultaneous-Equation Models ,Nature of simultaneous equations models; Simultaneous equation bias; Structural models; Reduced form models; Identification problem; Rules of identification; Tests for simultaneity and exogeneity; Method of indirect least squares (ILS); Method of two-stage least squares
<b>UNIT III</b>	Time Series Econometrics: Basic Concepts, Introduction to time series; Stationary and nonstationary time series; Spurious regression; Unit root tests: Dickey fuller and Augmented dickey fuller tests; Transforming nonstationary time series; Cointegration: Testing for cointegration, error correction mechanism.
<b>UNIT IV</b>	Time Series Econometrics: Forecasting , Approaches to economic forecasting; ARIMA models; The Box-Jenkins methodology; Vector autoregression; Forecasting with VAR; Testing causality using VAR.
<b>UNIT V</b>	Panel Data Regression Model Introduction to panel data; Constant coefficient model; Fixed effect LSDV model; Fixed effect WG model; Random effects model, Properties of estimators.

#### **Course Outcomes**

Student will

1. Learn the advanced econometric concepts and techniques.
2. Be able to apply economic techniques to study various economic relationships and models.
3. Develop skills to make economic forecasting.
4. Be able to apply econometric techniques for the analysis of time series and panel data.

## **PAPER 12**

### **BEC012C: INTERNATIONAL ECONOMICS-I**

#### **Course Objectives:**

1. To understand the theories governing international trade.
2. To study the various concepts and issues related to international economics.
3. To know and analyze the meaning and role of Economic Integration.

<b>UNIT I</b>	Inter-regional and international trade; Theories of absolute advantage, comparative advantage and opportunity cost; Empirical tests of Ricardian Model.
<b>UNIT II</b>	The Standard Theory of International Trade and Terms of Trade The Basis for and the Gains from Trade with Increasing Costs; Trade Based on Differences in Tastes; The Equilibrium Relative Commodity Price with Trade; Partial Equilibrium Analysis & General Equilibrium Analysis; Terms of trade.
<b>UNIT III</b>	The Heckscher - Ohlin Theory, Economies of Scale, Imperfect Competition and International Trade, Heckscher-Ohlin Theory; Factor-Price Equalization, Effect of Trade on Income Distribution; The Leontief Paradox; Empirical relevance of the H-O theory in the current period; Economies of Scale and International Trade; Imperfect Competition and International Trade-Intra industry trade; Technological gap and Product Cycle models.
<b>UNIT IV</b>	Trade Restrictions: Tariffs and Nontariff Trade Barriers. Partial Equilibrium Analysis of a Tariff; General Equilibrium Analysis of a Tariff in a Small Country; Import Quotas; Other Non-tariff Barriers; Neo- Protectionism
<b>UNIT V</b>	Economic Integration: Meaning of Economic Integration, Trade-Creating Customs Unions; Trade-Diverting Customs Unions; The Theory of the Second Best and Other Static Welfare Effects of Customs Unions; ASEAN, SAARC; Multilateralism; WTO; New outlook towards a global trading system.

#### **Course Outcomes**

Student will

1. Understand and learn various theories of International Trade.
2. Be able to analyze and discuss the issues related to International Economics.
3. Know the meaning and role of Economic Integration and International Institutions for International Trade.
4. Be able to analyse and understand various trade agreements.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

3 = Highly Related; 2 = Medium; 1 = Low

### Essential Readings:

1. Salvatore, D.L., 1997, International Economics, Prentice Hall, Upper Saddle River, N.J.
2. Vaish, M.C. & S. Singh, 1995, International Economics.

### Reference Books:

1. Mithani, D.M., Money, Banking, International Trade & Public Finance, Himalaya Publisher.
2. Sundaram, K.P.M., Money, Banking, & International Trade, Sultan Chand.
3. Kindleberger, C.P., 1973, International Economics, R.D. Irwin, Homewood.
4. Sodersten, B.O. 1991, International Economics, McMillan Press Ltd. London.
5. Lindert, International Economics, All India Traveller Book Seller.

### **Syllabus for Open Elective-III**

**(Offered by Department of Economics, School of Humanities and Social Sciences)**

#### **(DEC002A) ECONOMICS FOR ENGINEERS**

##### **Course Objectives**

4. To learn about the dimensions of evaluating economic alternatives
5. To make fundamentally strong base for decision making skills by applying the concepts of economics.
6. Educate the students on how to systematically evaluate the various cost elements of a typical manufactured product, an engineering project or service, with a view to determining the price offer.
7. Prepare engineering students to analyze profit/revenue data and carry out make economic analysis in the decision making process to justify or reject alternatives/projects.

<b>Module 1:</b>	Introduction to Economics- Flow in an economy, Law of supply and demand, Concept of Engineering Economics – Engineering efficiency, Economic efficiency, Scope of engineering economics
<b>Module 2:</b>	Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis- V ratio, Elementary economic Analysis – Material selection for product Design selection for a product, Process planning.
<b>Module 3:</b>	. Inflation And Price Change – Definition, Effects, Causes, Price Change With Indexes, Types of Index, Composite vs Commodity Indexes, Use of Price Indexes In Engineering Economic Analysis National Income: Circular Flow of Income, Meaning and Concept of National Income: GNP/GNI, NNP/NNI, Personal Income and Disposable Income; Methods of Computing National Income -Production Method, Income Method, Expenditure Method.
<b>Module 4:</b>	Economic Stabilization: Monetary Policy- Meaning, Objectives, Tools; Fiscal Policy Meaning, Objectives, Tools.

##### **Course Outcome**

Student will

5. Understand major principles of economic analysis for decision making among alternative courses of action in engineering.
6. Apply economic principles to prices and quantities in competitive supply and demand for goods and for money.
7. Solve economic problems involving comparison and selection of alternatives by using analytical techniques including benefit-cost ratio and breakeven analysis.

8. Describe the principles of economics that govern the operation of any organization under diverse market conditions

# SEMESTER VI

## PAPER 13

### BEC014C: INTERNATIONAL ECONOMICS –II

#### Course Objectives

- 1 To understand the major concepts and theories of International trade.
- 2 To analyze and discuss all the institutions which are responsible for the smooth operation of International trade.
3. To learn and analyze the various contemporary issues pertaining to International trade.

<b>UNIT I</b>	An overview of world trade, Basis for and Gains from trade - Arbitrage and basis of trade; Comparative (price) advantage; different sources of Comparative Advantage; Absolute versus comparative Advantage; Gains from Trade - Trade as a positive-sum game - Gains from Trade theorem, illustration and its meaning; GFT theorem and Pareto optimality; Decomposition of GFT; substitution possibilities in production and consumption and magnitudes of GFT; Necessary and sufficient conditions of GFT: Tangency and convexity conditions International Equilibrium - Offer curve under increasing opportunity costs: Derivation and Elasticity; International Equilibrium and determination of terms of trade; Offer curve under constant opportunity cost and distribution of GFT between large and small countries; Stability of International Equilibrium: Marshal-Lerner Condition
<b>UNIT II</b>	International Equilibrium - Offer curve under increasing opportunity costs: Derivation and Elasticity; International Equilibrium and determination of terms of trade; Offer curve under constant opportunity cost and distribution of GFT between large and small countries; Stability of International Equilibrium: Marshal-Lerner Condition, Effect of Growth on Trade. Factor growth and production possibility; trade and growth induced by technical progress; Growth, terms-of-trade and welfare
<b>UNIT III</b>	The Balance of Payments, Foreign Exchange Rates, Balance of Payments: Principles; Disequilibrium in BOP, BOP Crisis in India in 1991 Functions of the Foreign Exchange Markets; Foreign Exchange Rates; Purchasing Power Parity Theory; Stable and Unstable Foreign Exchange Markets. Currency Convertibility
<b>UNIT IV</b>	The International Monetary System and Macroeconomic Policy Coordination

	The Evolution of the Bretton Woods System; The IMF; Policy Coordination with Floating Exchange Rates; The Single Currency and Economic Integration; The European Monetary Union.
<b>UNIT V</b>	International Economic Issues, Financial liberalization, capital movements and economic crises. Sustainable trade; Issues in emerging markets, international trade and ethics.

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## Course Outcomes

Student will

1. Be able to discuss the major economic theories of international trade, and to analyze the economic implications of alternative trade policies.
2. Be able to trace the development of the international financial architecture and of the international monetary system, and to evaluate the implications of different exchange rate regimes for domestic macroeconomic policy.
3. Be able to identify major economic characteristics of selected world's regions.
4. Be able to trace the origins of various processes of international (global or regional) economic integration, and to discuss their implications for the international patterns of productive specialization.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2		3										3				
CO2		2												2			
CO3				2	1						1						
CO4						1										2	

3 = Highly Related; 2 = Medium; 1 = Low

## Essential Readings:

1. Salvatore, D.L., 1997, International Economics, Prentice Hall, Upper Saddle River, N.J.
2. Vaish, M.C. & S. Singh, 1995, International Economics.
3. Mithani, D.M., Money, Banking, International Trade & Public Finance, Himalaya Publisher.
4. Sundaram, K.P.M., Money, Banking, & International Trade, Sultan Chand.
5. Kindleberger, C.P., 1973, International Economics, R.D. Irwin, Homewood.
6. Sodersten, B.O. 1991, International Economics, McMillan Press Ltd. London.
7. Lindert, International Economics, All India Traveller Book Seller.

## **DISSERTATIONS/PROJECT**

### **Course Objectives**

1. To inculcate in students the rigour of research work.
2. To imbibe in students the spirit of inquiry.
3. To encourage students to do academic reading of journal articles
4. To be informed about new developments in the field of economics research.

### **Dissertation Description**

One of the requirements of Economics Honours students is the ability to conduct independent research under the guidance of a faculty. This course enables students to demonstrate an understanding of how to apply theoretical knowledge to practice by investigating and careful evaluation of real life problems.

The dissertation should be a minimum of 10,000 words in length (or approximately 35 pages). The word count includes the text, table, quotations, footnotes, title, table of content, and appendices. Abstract is excluded from the word count.

### **Course Outcome**

Student will

1. Identify research topics/areas and design and conduct an original and ethical research.
2. Be able to formulate a research problem statement and identify the sources and types of reference materials
3. Learn about researches that are empirical data based (qualitative, quantitative, or mixed methods)
4. Be able to critically review research and theory. Students will suggest recommendations and policies for solving the problems studied.

5.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PP 12	PSO 1	PS O2	PS O3	PS O4	PS O5

CO4		2		2													

**3 = Highly Related; 2 = Medium; 1 = Low**

### Text Books and Reference Books:

The references are the research studies and the books that the students find relevant to their research.

### Essential Reading / Recommended Reading

The references are the research studies and the books that the students find relevant to their research.

## **Syllabus for Open Elective-IV**

**(Offered by Department of Economics, School of Humanities and Social Sciences)**

### **BEC037C SUSTAINABLE DEVELOPMENT**

#### **About the course**

The Sustainable Development Goals (SDGs) of the United Nations, which were adopted in 2015, will determine the course of the global social, ecological and economic agenda until 2030.

Information about the different SDGs is abundantly available but a comprehensive framework that brings them all together coherently is often lacking. This course provides a general and accessible academic introduction to SDGs in all its facets.

#### **Course Objectives**

1. To understand the emergence and development of the SDGs
2. To understand the interlinkages of SDGs and the importance of triple bottom line.
3. To understand the structure of the SDGs in the United Nations context
4. To acquire an understanding of how the SDGs relate to addressing global challenges such as inequality, climate change, poverty, unsustainable consumption and production, and peace and security

<b>Module 1:</b>	<b>The origin, development and idea of the SDGs</b> History and origins of the Sustainable Development Goals. What are the SDGs : Aim, Methodology and Perspectives. Dimensions of Sustainable Development, 5 Ps of Sustainable Development.
<b>Module 2:</b>	<b>Sustainability as Knowledge Domain</b> Human, Economic, Social and Environmental Sustainability. Relationship between Increasing Population, Life Expectancy, Infant Mortality and Sustainable Development. GDP Ratings, Failure of Global Capitalism and Sustainability Crisis on Earth. Triple Bottom Line: Profit, People, Planet
<b>Module 3:</b>	<b>SDGs and Society: Ensuring resilience and primary needs in society</b> The SDG 2030 Agenda: 17 Sustainable Development Goals (No Poverty; Zero Hunger; Good Health and Well Being; Quality Education; Gender Equality; Clean Water and Sanitation; Affordable Clean Energy; Decent Work and Economic Growth; Industry, Innovation and Infrastructure; Reducing Inequality; Sustainable Cities and Communities; Responsible Consumption and Production; Climate Action; Life Below Water; Life on Land; Peace, Justice and Strong Institutions; Partnerships for the Goals )

<b>Module 4:</b>	<b>Realizing the SDGs: Implementation through Global Partnerships</b> Analysis of SDG 2030 which aims to implement the SDGs through partnerships, finance, technology and the development of coherence between policies.
------------------	---

### Course Outcomes

Student will

1. Understand the emergence and development of the SDGs
2. Understand the interlinkages of SDGs and the importance of triple bottom line.
3. Understand the structure of the SDGs in the United Nations context
4. Acquire an understanding of how the SDGs relate to addressing global challenges such as inequality, climate change, poverty, unsustainable consumption and production, and peace and security.

Course Outcome	Program Outcome												Program Specific Outcome

## **Syllabus for Open Elective-V**

(Offered by Department of Economics, School of Humanities and Social Sciences)

### **BEC025B: MANAGERIAL ECONOMICS**

#### **Course Objectives**

1. To understand the various concepts related to managerial economics.
2. To integrate the basic concepts of economics with the tools of mathematics and statistics in order to analyze and make optimal business decisions.
3. To acquire knowledge of Capital budgeting and its methods.

<b>Module 1:</b>	Demand, Cost and Profit Analysis, Demand for durable and non-durable products, demand forecasting techniques, Cost estimation, Cost-volume-profit analysis (break even analysis)- objectives and assumptions; determination of breakeven point, limitations of c-v-p analysis
<b>Module 2:</b>	Pricing Policies and practices, Factors governing prices, price discounts and differentials, price forecasting.
<b>Module 3:</b>	Capital Budgeting, meaning, need for capital budgeting, different steps in capital budgeting, Capital budgeting appraisal methods – payback method, accounting rate of return method, net present value method, interest rate of return method, benefit cost ratio method. Capital rationing, alternative methods of financing investments
<b>Module 4:</b>	Cost of capital, Cost of debt capital, cost of share capital, cost of equity capital, cost of retained earnings. Inventory Management, Inventory costs, concepts of average inventory, various inventory models- economic order quantity, optimum number of orders per year, optimum number of days' supply per order.

#### **Course Outcomes**

Student will

1. Understand the roles of managers in firms.
2. Be able to make the internal and external decisions to be made by managers.
3. Be able to analyse the demand and supply conditions and assess the position of a company in terms of money, cost, inventory management etc.
4. Acquire knowledge regarding capital budgeting techniques and its methods.

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

## **BEC015C: ECONOMICS OF MONEY AND BANKING**

### **Course Objectives**

1. To study the role played by banks in modern monetary economies and financial markets, including issues arising from bank regulation, the role of banks in financial intermediation, and the significance of bank behaviour in monetary policy.
2. To provide knowledge of the theory and functioning of the monetary and financial sectors of the economy.
3. To highlight the organization, structure and role of financial markets and institutions.
4. To discuss interest rates, monetary management and instruments of monetary control. Financial and banking sector reforms and monetary policy with special reference to India are also covered.

<b>UNIT I</b>	Money Concept, functions, measurement; theories of money supply determination.
<b>UNIT II</b>	Central Banking and Monetary Policy Functions, balance sheet; goals, targets, indicators and instruments of monetary control; monetary management in an open economy;
<b>UNIT III</b>	Interest Rate Determination; sources of interest rate differentials, interest rates in India.
<b>UNIT IV</b>	Balance sheet and Indian banking system: Changing role and structure; banking sector reforms. current monetary policy of India

### **Course Outcomes**

Students will

1. Understand the several key models and concepts of monetary economics and banking theory.
2. Understand articles concerned with monetary economics and banking theory.
3. Apply to current events key models and concepts of monetary economics and banking theory.
4. Appreciate the potential importance of monetary phenomenon in the economy.

1. F. S. Mishkin and S. G. Eakins, Financial Markets and Institutions, Pearson Education, 6th edition, 2009.
2. F. J. Fabozzi, F. Modigliani, F. J. Jones, M. G. Ferri, Foundations of Financial Markets and Institutions, Pearson Education, 3rd edition, 2009.
3. L. M. Bhole and J. Mahukud, Financial Institutions and Markets, Tata McGraw Hill, 5th edition, 2011.
4. M. Y. Khan, Indian Financial System, Tata McGraw Hill, 7th edition, 2011.
5. Various latest issues of R.B.I. Bulletins, Annual Reports, Reports on Currency Group, IMF Staff Papers.

## **BEC016C: BEHAVIOURAL FINANCE**

### **Course Objectives**

1. To provide students with in-depth understanding of Behavioural Finance and Bounded rationality concept.
2. To understand the key behavioral biases of individual and professional investors.
3. To analyze the theoretical and empirical foundations and challenges to the efficient market hypothesis.

<b>UNIT I</b>	Introduction to Behavioral finance – Nature, scope, objectives and application Psychology and market people. Investors, portfolio managers, analysts: are they rational? Bounded rationality in real market conditions. Decision-making process and behavioral biases. Simple experiments on anchoring.
<b>UNIT II</b>	Utility/ Preference Functions: Expected Utility Theory [EUT] and Rational Thought: Decision making under risk and uncertainty - Expected utility as a basis for decision-making – Theories based on Expected Utility Concept - Investor rationality and market efficiency
<b>UNIT III</b>	Behavioral Corporate Finance: Behavioral factors and Corporate Decisions on Capital Structure and Dividend Policy - Capital Structure dependence on Market Timing -. Systematic approach to using behavioral factors in corporate decision making.
<b>UNIT IV</b>	Behavioral Factors and Financial Markets: The Efficient Markets Hypothesis – Fundamental Information and Financial Markets - Information available for Market Participants and Market Efficiency -Market Predictability

### **Course Outcome**

Students will

1. Be able to identify and apply psychological concepts to financial markets and financial decision – making...
2. Be able to apply the understanding of the concepts to help promote more efficient financial decisions.
3. Be able to explore behavioral corporate finance, considering financial, investment and dividend policy decisions.
4. Be acquiring knowledge to infer about human decisions influencing their financial decisions in domestic and global markets.

5.

## **BEC017C: FINANCIAL MARKETS AND INSTRUMENTS**

### **Course Objectives**

1. To provide students with in-depth understanding of the operational issues of capital market and money market with its regulatory framework.
2. To understand the various regulations related to financial sector.
3. To analyze the various instruments of financial markets.

<b>UNIT I</b>	Introduction to Financial markets - Money vs. capital markets - Primary vs. secondary markets - Instruments in the money market - Instruments in the capital markets - Financial institutions; Banking and credit.
<b>UNIT II</b>	Financial Regulations and Financial Sector Reforms , Money Market regulations – Banking sector reforms – quarterly credit policy of RBI - Capital market regulations of SEBI- Legal issues in security trading - FERA & FEMA
<b>UNIT III</b>	Equity Market , IPO dematerialization, depositories, credit rating of financial instruments, financial institutions: development financial institutions, non-banking financial intermediaries, LIC of India and UTI, mutual funds, venture capital, bank-assurance
<b>UNIT IV</b>	Structure of banking industry, major developments in India, and in international capital markets 1975-1997: legal basis of corporate finance and investment banking

### **Course Outcome**

Students will

1. Be able to understand the various concepts and practical operations of the financial markets and apply them in real life.
2. Be able to recognize the various financial instruments and laws related to financial sector.
3. Be able to learn the topics of financial regulations, equity market and financial intermediaries.
4. Be acquiring knowledge of major development of investment banking in India.

## **BEC018C: INTERNATIONAL FINANCE**

### **Course Objectives**

1. To provide students with in-depth understanding of the Institutional Structure of International Finance
2. To understand the various exchange rate system.
3. To analyse the Balance of Payments mechanism.
4. To acquire in depth understanding of investment and movements.

<b>UNIT I</b>	Institutional Structure of International Finance The eurodollar, euro currency markets, multinational banking, international trader with letters of credit, financing international trade, institutions regulating international trade GATT, WTO, free – trade areas, customs union, NAFTA, ASEAN
<b>UNIT II</b>	Classical gold-standard system, Bretton woods, European money market, hybrid system of exchange rates. purchasing power parity principle, interest parity combination of PPP and covered interest parity
<b>UNIT III</b>	The principles of balance of payments, implications of the bop accounting identity balance of payments theory: different approaches and synthesis, imports, exports and deriving currency supply and demand curve
<b>UNIT IV</b>	Investment and borrowing with transaction costs, international dimension of cash management, portfolio investment international capital asset pricing, capital budgeting for foreign direct investment

### **Course Outcome**

Students will

1. Be able to understand the various concepts of institutional structure of International Finance.
2. Be able to analyze the various exchange rate systems and its implications.
3. Be able to learn the balance of payments mechanisms.
4. Acquire knowledge of international dynamics of investment and capital movements.

2. Pilbeam, K. International Finance, Macmillan, 1994

## **BEC019C: PUBLIC FINANCE**

### **Course Objectives**

1. To provide students with in-depth understanding of the Public Finance
2. To understand the classification and the basic principles of public expenditure.
3. To analyze the various sources of public revenue and its implications.

<b>UNIT I</b>	Meaning and Scope of Public Finance; Distinction between Private and Public Finance, Public goods and Private goods. Principle of Maximum Social Advantage.
<b>UNIT II</b>	Meaning, Classification and Principle of Public Expenditure; Effects of Public Expenditure on production and distribution; Trends in Public Expenditure and Causes of Growth of Public Expenditure in India
<b>UNIT III</b>	Sources of Public Revenue; Taxation: Meaning and Classification of Taxes; Principles of Taxation: Benefit and Ability to Pay Approaches; Impact and Incidence of Taxes; Effects of Taxation on production and distribution
<b>UNIT IV</b>	Public Budget: Economic and Functional Classification of Budget; Preparation of Budget in India; Centre-State Financial Relations in India; Fiscal Federalism

### **Course Outcome**

Students will

1. Be able to understand the various concepts of Public Finance.
2. Be able to analyze the Public Expenditure, its effects and trends.
3. Be able to know the various approaches to taxation as a source of public revenue.
4. Acquire knowledge of Budget formulation with reference to India and its pre-requisites.

4. R.A. Musgrave and P.B. Musgrave, Public Finance in Theory & Practice, McGraw Hill Publications, 5th edition, 1989. Bagchi, Amaresh (ed) Readings in Public Finance, OUP.
5. Report of the Finance Commission (Latest).
6. Economic Survey, Government of India (Latest).

## **BEC020C:ANATOMY OF FINANCIAL CRISIS, RISK MANAGEMENT AND REGULATION**

### **Course Objectives**

1. To describe the major U.S. financial crises over the last 100 years and their relationship to domestic and world economies.
2. To understand the various types financial risks associated and relevant management to the same.
3. To analyze the various regulatory mechanisms for the risk and market discipline.

<b>UNIT I</b>	Introduction: Financial Crisis-1929 Crash, Great Depression; The Mortgage Bubble and the Great Recession; Fall of Lehman, Bailout of everyone else: Money market funds
<b>UNIT II</b>	Introduction to Risk Management: Sources of risk, currency risk, fixed income risk, equity risk, commodity risk, market risk measurement; Hedging liner risk, optimal hedging; Settlement risk, introduction to credit risk, measuring credit risk, credit exposure,
<b>UNIT III</b>	Capital adequacy regulations Basel accord I & II. accounting standard, disclosure and relationship banking mark-to-market accounting, liquidity risk and contagion market discipline: issues and evidence market discipline in emerging economies: beyond bank fundamentals
<b>UNIT IV</b>	The ethics of finance and the economic function of financial markets – The purpose of regulation – levels of regulation – Securities Contract Regulation Act – Securities and Exchange Board of India (SEBI)

### **Course Outcome**

Students will

1. Understand the reasons of how the crises happened, grew out of one another, and apply that information to the nation's regulatory system.
2. Be able to analyze the various financial risk and their implications on the stability and sustainability.
3. Be able to know the various risk mitigating mechanisms for the financial discipline.
4. Acquire knowledge of regulatory framework for financial management and ethical functioning.

**TRACK 2**  
**AGRICULTURAL ECONOMICS**

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **BEC021C: INTRODUCTION TO AGRICULTURAL ECONOMICS**

### **Course Objectives**

1. To introduce the learner with Agricultural Economics.
2. To introduce the learner with the development of agriculture in India.
3. To make the learner familiar with use of yield increasing inputs, marketing and prices.
4. To introduce the learner with the credit system of Indian Agriculture.

<b>UNIT I</b>	Scope and Subject matter of Agricultural Economics, Nature and Utility of Agricultural Economics, Role and Importance of Agriculture in National Economy: share in National income, Source of livelihood, Employment, Industrial development and trade. Agricultural Growth in India during pre and post-Independence period
<b>UNIT II</b>	Factors responsible for agricultural development in India, Growth in use of technological factors in production such as irrigation, seed, fertilisers, capital during last five decades.
<b>UNIT III</b>	Land Utilization Pattern, Changes in agrarian structure in India, Patterns of Cropping in different regions, Shift in Cropping Pattern and its Implications on Food Security
<b>UNIT IV</b>	Credit in Indian agriculture: purposes of loans, Sources of finance and changes over the plan period. Factors determining demand for credit. Recent policy changes in regard to farm credit and their implications and critical points.

### **Course Outcomes**

Student will

1. Develop ideas of the basic characteristics of Indian Agriculture and its potential.
2. Understand agriculture as the foundation of economic growth and development.
3. Analyse the progress and changing nature of agricultural sector and its contribution to the economy.
4. Critically examine the change in cropping patterns and the availability of credit in India.

- Acharya and Agarwal, 1987, Agricultural Marketing in India, Oxford & IBH Publishing Company.
- Agricultural Research Data Book 2009, Indian Agricultural Statistics Research Institute, Pusa, New Delhi 110 012
- Agricultural Statistics at a Glance 2010, Directorate of Economics and Statistics, Ministry of Agriculture, Government of India, New Delhi.
- Bhalla, G. S. and Singh G., 2001, Indian Agriculture: Four Decades of Development, Sage Publications.
- Bhalla, G.S., 2007, Indian Agriculture since Independence, National Book Trust, India.
- Chadha, G.K.; S. Sen and H.R. Sharma, 2004, Land Resources, State of the Indian Farmer, Vol.2, Academic Foundation, New Delhi.
- Dantwala, M. L. and Others, 1991, Indian Agricultural Development since Independence: A Collection of Essays, Oxford & IBH Publishing Co., New Delhi.

## **BEC022C: AGRICULTURAL POLICY FRAMEWORK IN INDIA**

### **COURSE OBJECTIVES:**

1. To provide orientation to the learners regarding the agricultural policies and its effect on sustainable agricultural development.
2. To make the learners understand the concept of globalization and its impact on Indian Agricultural Development.
3. To make the learners acquaint with the various theories of Agricultural Development.
4. To introduce the learner with the recent and past policy framework of Indian Agriculture.

<b>UNIT I</b>	Agricultural and Economic Development, Role of Agriculture in Economic/ Rural Development, Theories of Agricultural Development: Resource Exploitation Model, Conservation Model, Location Model.
<b>UNIT II</b>	Need for sound Agricultural Policies. Planning for Agricultural Growth-Agricultural Policy and Programmes under Planning Periods.
<b>UNIT III</b>	Policy on Agrarian Reforms: Abolition of intermediaries, Tenancy Reform, Ceiling of Agricultural Land holdings, Impact of Land Reforms on Farming Community, Fragmentation of Land holdings
<b>UNIT IV</b>	Attainment of Self Sufficiency in Food grains: Policy initiatives in respect of Agricultural Inputs (Water, Seed, and Fertilizer Policy), Promotion of Plant nutrients, Fertiliser subsidy, Enforcement of Minimum Wage in Agriculture, policy options for sustainable agricultural development.

### **Course Outcomes**

Students will

1. Be well versed with theories of agricultural development
2. Understand the need for sound agricultural policies and the planning needed for agricultural growth.
3. Know the agrarian reforms and their impacts.
4. Have an insight into self-sufficiency in food grain production.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5
CO1	M												H				
CO2		M			L	H			M								
CO3							M									M	
CO4											M						H

H = Highly Related; M = Medium; L = Low

### Essential Readings:

## **BEC023C: AGRICULTURAL FINANCE**

### **COURSE OBJECTIVES**

1. To impart knowledge and expertise in the field of agricultural finance.
2. To acquaint with the business planning and financial management of an agri-business.
3. To create awareness about the role of institutions involved in the agricultural financing.
4. To impart knowledge relating to disbursement of institutional finance to priority sector.

<b>UNIT I</b>	Agricultural Finance: Concepts and Scope, Importance of Agricultural Finance, Characteristics of farm financial decisions, Steps in the process of farm financial management, classification of loans or credit, role of credit in agriculture and rural development.
<b>UNIT II</b>	Agencies of Agricultural Finance: Cooperative, Nationalized Banks, RRBs, NABARD, ARDC, AFC, Regional and All India Financial Institutions, Microfinance, outlines of recommendation of various committees, Programs of Rural development (SFA, MFAL), Comprehensive Crop Insurance Scheme.
<b>UNIT III</b>	Business Financing System in India, Money and Capital Markets, venture capital financing and its stages, and International financial management.
<b>UNIT IV</b>	Project Appraisal- B:C Ratio, Internal Rate of Return(IRR), Net Present Value (NPV), Pay Back period.

### **COURSE OUTCOMES**

Students will

1. Understand the concepts of the agricultural finance.
2. Have an insight into significance and limitations of Crop insurance.
3. Be acquainted with the types and roles of institutions involved in the agricultural financing.
4. Know the methods used to assess the feasibility of the projects.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5
CO1	H												M				
CO2		M															L
CO3									L		M						
CO4				M												M	

H = Highly Related; M = Medium; L = Low

## **BEC024C: AGRICULTURAL RISK MANAGEMENT AND INSURANCE**

### **COURSE OBJECTIVES**

1. To expose the students to the various kinds of risk in farming.
2. To make the students aware about laws or solutions relating to the risks.
3. To acquaint with risk management methods in agriculture.
4. To familiarise with the government introduced support measures.

<b>UNIT I</b>	Risks in Agriculture: Overview, Types of Risk, Risk Management Strategies and Mechanisms, decision making process in farm business management under risks and uncertainty.
<b>UNIT II</b>	Climatic Variability & Change: Climate Risks, Challenges in Climate Variability, Drought Risk, Floods & Cyclones, Catastrophe Protection for Non-Borrowing Farmers, Bankruptcy Law Production Risks, Technological Change -Improved Varieties and Fertiliser Use/Moisture Stress/Pests/Riskiness of Net Returns, Evidence on Aggregate Instability, Output Stability
<b>UNIT III</b>	Risk Management through Agricultural Insurance: Introduction, National Agricultural Insurance Scheme (NAIS), Crop Insurance as Risk Mitigation Tool, Impact of Crop Insurance on Farmers, Suicides by Farmers
<b>UNIT IV</b>	Price Support Measures: Introduction, Minimum Support Price (MSP), Market Intervention Scheme (MIS), Price Stabilization Fund Trust (PSFT), Credit Risk Fund

### **COURSE OUTCOMES**

Students will

1. Know about various risk management strategies.
2. Have an insight into various types of risks involved in farming.
3. Analyse the risks related insurance measures to be taken.
4. Understand the government introduced support measures.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5

## **BEC025C: INTERNATIONAL TRADE IN AGRICULTURE**

### **COURSE OBJECTIVES**

1. To provide insight into theoretical aspects and policy related issues in international trade in agricultural commodities.
2. To acquaint with various principles and theories of international trade and trade patterns.
3. To provide insights of AoA under WTO and its impact on agricultural trade.
4. To introduce issues relating to Indian agricultural trade and export import procedures.

<b>UNIT I</b>	Importance of Agriculture in development, trade and agriculture, Inter-regional verses international trade- importance of trade, case for free trade and for protectionism- globalization and agriculture –case of free trade and for protectionism in case of agriculture.
<b>UNIT II</b>	<p>Mercantilist doctrine of balance of trade - Adam Smith and absolute advantage theory of trade -Ricardo and comparative advantage, its limitations; Comparative advantage in Heckscher Ohlin Model - Factor price equalization theorem - Factor intensity reversal - the empirical evidence on Heckscher Ohlin theory - the Leontief Paradox. Stolper-Samuelson Theorem – Rybczynski Theorem- Trade theories and empirical evidence relating to trade patterns, applicability to India.</p> <p>Recent explanations of the basis of trade in terms of technological lead, domestic market size and product cycle approach–Linder’s hypothesis-Gravity models-empirical evidence.</p>
<b>UNIT III</b>	Brief history of GATT- provisions relating to agri trade- factors leading to establishment of WTO basic principles- functions and organization -Agreement on Agriculture - main provisions – market access- domestic support - export subsidies- special and differential treatment, sanitary and phyto-sanitary provisions, export standards, TRIPS, various rounds and Doha impasse - emergence of various country groups /alliances and their participation in negotiations -Issues for further negotiations- implications of WTO provisions on Indian Agriculture - reduction commitments for India.
<b>UNIT IV</b>	Formation of regional trade blocks- reasons, types and performance – impact on trade.Competitiveness of Indian Agriculture, measures of competitiveness, competitiveness of various crops, domestic and international prices, competitiveness and commodity trade flows, measures for improving competitiveness of Indian exports- policy recommendations.

## COURSE OUTCOMES

Students will

1. Know about the inter-regional and international trade and their importance.
2. Analyse various theories of International Trade and their relevance to the Agricultural sector.
3. Have insights of AoA under WTO and its impact on agricultural trade.
4. Develop insight for issues relating to Indian agricultural trade and export import procedures.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5
CO1								M			L						
CO2			M										M				
CO3	H				L												
CO4				H													H

H = Highly Related; M = Medium; L = Low

## **BEC026C: AGRO-PROCESSING INDUSTRIES**

### **COURSE OBJECTIVES**

1. To acquaint the students with structure and features of Agro processing industries in India.
2. To introduce different food processing techniques and their management.
3. To analyse various issues relating to food safety.

<b>UNIT I</b>	Case for Agro processing Industries-importance, farm -industry linkages, International perspective, Agro industries and developing countries-trends, impact of agro industrialization on markets and environment, challenges faced, various other issues..
<b>UNIT II</b>	India- Importance of Food Processing Industries, Women empowerment and food processing, Drivers of growth - supply, domestic demand, international demand, trade and policy support, emerging segments in food processing Problems and Opportunities
<b>UNIT III</b>	Organization in food industry; Introduction to operations of food industry; Deteriorative factors and hazards during processing, storage, handling and distribution.
<b>UNIT IV</b>	Basic principles and methods of food processing and food preservation by manipulation of parameters and factors and application of energy, radiations, chemicals and biotechnological agents; Food packaging materials and methods, labelling of food products.

### **COURSE OUTCOMES**

Students will

1. Develop an insight for the Agro Processing Industries.
2. Know the importance of Food Processing Industries.
3. Hold views on different food processing techniques and their management.
4. Analyse the facts about packaging materials and methods.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcomes	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5

**TRACK-3**  
**ECONOMICS AND PUBLIC POLICY**

*Ravinder*  
Head  
Jaipur School of Economics  
JECRC University, JAIPUR

## **BEC027C: INTRODUCTORY PUBLIC POLICY**

### **Course Description**

Public policy making constitutes the core of politics and government in any nation. As the governments are called upon to perform a wide array of functions, the policy making process has acquired considerable complexity. Policy analysis finds an important place in other social science disciplines. This course aims at familiarizing the students with the key concepts and theories of public policy.

### **Objectives of the Course:**

1. To understand why certain issues emerge as policy issues for the government to act upon.
2. To understand the different ideas and process of public policy-making.
3. To discuss how different actors play their role in shaping and influencing the policy process.
4. To examine how policy problems and issues are defined, formulated and implemented.

<b>Unit 1</b>	Public Policy: Meaning and Scope, Rise of Public Policy as a Discipline, Meta and Meso Analysis of Public Policy, Putting Policy as Public Agenda, Policy-makers and their environment, Policy formation: problems, agendas and formation, Policy impact, evaluation and change.
<b>Unit 2</b>	Analytical Framework: Classical, Neo-Classical, Marxist, Neo-Marxists, Keynesian Perspective, Welfare Economics, Institutional Economics, Behavioral Economics, Stages Approach to Policy process: Theoretical Narratives of Policy Cycle, General Systems Analysis, Social Fabric Matrix
<b>Unit 3</b>	Rationality in policy-making. Contributions of Weber, Simon and Public Choice theorists: Rationale Choice Theory, Public Choice Theory, Maslow's Theory, Cost-Benefit Analysis
<b>Unit 4</b>	Pluralist approach and role of institutions: Pluralism, Institutionalism, New Institutionalism, Complexity, Policy paradox- determining policy objectives equity and justice: Ideologies and institutional constraint, Translating Theory into practice, Exclusion and inclusion in public policy

### **Course Outcomes:**

Students will

1. Identify and explain the relationship between interests, ideas, and institutions in a policy-process.
2. Clearly articulate and frame a policy issue in a way that calls attention to it and mobilizes action.
3. Develop the competence to identify the key stakeholders on an issue.
4. Develop the capacity to evaluate and recommend a policy response to a specific policy problem.

## **BEC028C: MARKET FAILURES AND POLICY INTERVENTIONS**

Applies economic reasoning to public issues, policies and programs. It considers incentives and organizations; models of economic behavior, including markets, the absence of markets and interventions; the price system; policy objectives and instruments.

### **Objectives of the course:**

1. To enhance the understanding of micro-economic concepts for the larger understanding of the policy problems.
2. To develop the case-study methods through the application of economic data and analysis to gauge the gravity of policy problems.
3. To enhance discipline specific competencies relevant to academia, industry, and generic skills.
4. Recognize and apply the special features of externalities & public goods and their implications on the efficiencies of markets and government activities.

<b>Unit-1</b>	Scope and Methods of Public Economics, Economic Analysis of Public Policy, Market Economy and Mixed Economy, Ways of Government Intervention
<b>Unit-2</b>	Alternative Classifications of Public Goods, Optimal Provision of Public Goods, Private Provision of Public Goods, Nash-Cournot Solution, Preference Revelation, Samuelson and Lindahl Equilibrium, Club Goods Model
<b>Unit-3</b>	Positive and Negative Externalities, Negative Externalities and Social Cost, Choice of Policy Instruments, Pigouvian Tax, Coase Theorem and Private Negotiation (Private Property Solution) Tradable Permits, Subsidy Solution, externality Solutions and their Problems
<b>Unit-4</b>	Economic Rationale of Regulation, Concerns of Regulation like Environment, Health and Safety, Network Economies, Regulating Rate Structure, Public Utility Pricing, Marginal Cost Pricing and Two-Part tariff, Private Provision of Public Goods

### **Course Outcomes:**

Students will

1. Be able to define the concepts and conditions of resources allocation between different stakeholders.
2. Be able to interpret the main differences between public and private goods, and services, and recognize the economics of externalities.
3. Develop the case studies specific to the public policy problems.
4. Understand the concept and the use of various economic data in achieving society goals.

## **BEC029C: BIG DATA AND PUBLIC POLICY**

### **Course Description:**

The objective of the course is to familiarize students with big data analysis as a tool for addressing substantive research questions. The course begins with a basic introduction to big data and discusses what the analysis of these data entails, as well as associated technical, conceptual and ethical challenges. Strength and limitations of big data research are discussed in depth using real-world examples. Students then engage in case study exercises in which small groups of students develop and present a big data concept for a specific real-world case. This includes practical exercises to familiarize students with the format of big data. It also provides a first hands-on experience in handling and analysing large, complex data structures.

### **Objectives of the Course:**

1. To enhance interdisciplinary understanding with Big-Data.
2. To understand the use of Big-Data in policy making process.
3. To recognize and appreciate the importance of Big-Data and their application in academic, industrial, social, economic and environmental context.
4. Evaluate which data are appropriate to a given research question and statistical need.

### **Syllabus:**

<b>Unit 1</b>	Introduction – What is Big Data? Handling and Processing Big Data, Methodological Challenges and Problems, Ethics and Big Data, The Big Data and Public Policy: Inter-relationship and Challenges
<b>Unit 2</b>	Policy, Politics and Governance in Digital Era: Digital Government, Development of E-Governance, E-Democracy, Digital Citizenship, E-Parliament, E-Rulemaking, Digital Nation State.
<b>Unit 3</b>	Biases, Fairness, and Inference, Privacy, Confidentiality, and Ethics
<b>Unit 4</b>	Case Study Analysis: The Analysis of CMIE, Census, NFHS, NSS, Employment Data and other Economic Data Sets like RBI Data, India Public Finance Statistics.

### **Course Outcomes:**

Students will

1. Identify the different data quality frameworks and apply them to public policy problems.
2. Use a broad array of basic computational skills required for data analytics, typically not taught in social science, economics, statistics or survey courses.
3. Identify compelling uses of big data to solve social and economic problems.

4. Develop case studies related to big data and sustainable communities, and gain experience in presenting and defending research.

CO2					L									M			
CO3									H								
CO4								H									

H = Highly Related; M = Medium; L = Low

## **BEC030C: PUBLIC POLICY ANALYSIS**

### **Objectives of the Course:**

1. Understand the purpose and value of policy analysis, for both stakeholders and policymakers.
2. Cultivate a policy analysis toolkit while simultaneously critiquing the conventional assumptions that underlie how public policy is analyzed in India.
3. Complete a thorough, professional policy analysis project.
4. To develop the skill of writing policy memos, briefs along with academic writing.

### **Syllabus:**

<b>Unit 1</b>	Introduction to Policy Analysis: Basic Understanding of the Concepts and Skills required for policy analysis, Identifying and diagnosing policy problems along with their symptoms, stakeholders, and decision makers, Documenting policy problems; defining the problem and collecting evidence, Conceptualizing policy tools, designing policy options/alternatives, and considering appropriate criteria
<b>Unit 2</b>	Decision making under uncertainty, Tradeoffs: Analyzing costs and benefits, Analyzing Equity, Behavioral policy tools: From neoclassical to the nudge.
<b>Unit 3</b>	Policy Writing: Reasons for writing effective policy documents, Significance, Tools of Writings, Lessons and objectives achieved
<b>Unit 4</b>	Writing Policy Briefs, Writings Legislative Briefs, Policy Memos, Case Study for the Students: Writing Workshop

### **Course Outcomes:**

Students will

1. Recognize and articulate the promise and limitations of policy analysis.
2. Critically assess the use of evidence and data in policy analysis practices.
3. Select and apply the appropriate policy analysis techniques, with consideration of given policy problems, contexts, and goals.
4. Effectively communicate, in written and spoken formats, policy analysis procedures and their conclusions.

### Suggested Readings:

- “What Are Policy Briefs?” FAO Corporate Document Repository. United Nations.
- Bardach, Eugene. *A Practical Guide for Policy Analysis: The Eightfold Path to More Effective Problem-Solving*. 4th edition. Thousand Oaks, CA: Sage, 2012.

- The challenge of adapting to climate change: King County brings local action to a global threat.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	M																
CO2								L									L
CO3			H														
CO4											L		M				

H = Highly Related; M = Medium; L = Low

## **BEC031C: IMPACT EVALUATION**

### **Course Description:**

Through the course, the student will be able to build understanding of knowledge about the fields of policy evaluation, how government programmes are evaluated, programme monitoring strategies adopted by official and non-governmental evaluators, and what are various evaluation units and their domains of evaluation in various programmes citing varied practices from India and the world.

### **Objectives of the Course:**

1. To understand the meaning and concept of impact assessment.
2. To enhance the understanding of evaluation process policy/programme implementation.
3. To apply qualitative and quantitative research in evaluation of policy/programme in India.
4. To enhance the knowledge application that would create different type of evaluation professionals.

### **Syllabus:**

<b>Unit 1</b>	Fundamentals of Evaluation: Meaning, Brief History, Characteristics, Significance, Nature and Types of Evaluation
<b>Unit 2</b>	Approaches of Evaluation: Goal Based, Goal Free, Theory Based/Logic Model, Utilization, Collaborative, Balanced Score Card, Appreciative Inquiry, External, Kirkpatrick and CIPP Model, Cost-Benefit Analysis, Cost-Effective Analysis.
<b>Unit 3</b>	Impact Evaluation: Key Concepts, Theory of Change, Evaluation Designs and Methods, Experimental Design- Randomized Controlled Trials (RCTs), Quasi-Experimental Designs – Judgemental Matching, Propensity Score Matching, Propensity Score Matching (PSM), Good Practices.
<b>Unit 4</b>	Phases of Program Evaluation and Tools, Program Monitoring Meaning, Types of Program Monitoring: Process Monitoring, Outcome Monitoring and uses. Process Monitoring versus Process Evaluation. Phases of Outcome Monitoring, Outcome monitoring versus outcome evaluation, Strengths and limitations of outcome monitoring.

### **Course Outcomes:**

Students will

1. Be able to plan an impact assessment of various policies.
2. Be able to describe the various levels of impact assessment.
3. Identify and/or develop various indicators for impact assessment.

4. Identify how to measure the impact of public policies or programme.

### Suggested Readings:

- Bringham, Richard D and Claire L. Felbinger (2002), Evaluation in Practice: A Methodological Approach, New York: Chattam House Publishers.
- Carol H. Weiss, Evaluation: Methods for Studying Programs and Policies, 2nd Edition, Prentice Hall; 2nd edition (December 18, 1997).
- Ian Graham Ronald Shaw, Jennifer Greene, Melvin M Mark. (2006), The SAGE Handbook of Evaluation, SAGE Publications Ltd.
- Nagel, Stuary S. (ed) (2002), Handbook of Public Policy Evaluation, New Delhi: Sage Publication.
- Peter H. Rossi, Mark W. Lipsey, Howard E Freeman, Evaluation: A Systematic Approach, Edition 7, SAGE, 2004.
- The World Bank (2010), Handbook on Impact Evaluation: Quantitative Methods and Practices, Washington DC.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1		M											L				
CO2						H									H		
CO3												L					
CO4									L								L

H = Highly Related; M = Medium; L = Low

## **BEC032C: PUBLIC POLICY CAPSTONE**

The capstone is designed to test the hard skills of policy design and evaluation by using them in the analysis of a real-world problem. The course requires a research project that examines an existing public or nonprofit sector policy or managerial problem.

### **Objectives of the Course:**

1. To apply the knowledge acquired by learning.
2. To understand the policy analysis.
3. To analyze, synthesize, think critically, solve problems, and make decisions.
4. To communicate and interact productively with a diverse and changing workforce in contributing to the public policy process

### **Course Outcomes:**

Students will

1. Identify an organizational, program, or policy issue, problem, or concern, and present relevant contextual and background material.
2. Be able to articulate a research question regarding this issue; and can review relevant public policy literature, including theoretical frameworks and best practices.
3. Be able to select appropriate data sources, data collection methods, and analytical methods; Analyze data and interpret these results.
4. Develop conclusions and recommendations derived from the analytical findings; and complete a final written report and oral presentation, which effectively communicates this capstone research project.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5
CO1		M															L

## **BEC033C: ECONOMICS OF INFRASTRUCTURE**

### **Course Objectives**

1. To provide students with a thorough grounding in the key concepts of Infrastructure economics.
2. To study the necessity of infrastructure & its management
3. To illustrate how these concepts and standard economic tools can be used to analyse Infrastructure-related Theory and policy issues.
4. To be able to apply this knowledge to the analysis of specific infrastructure economics issues in India

<b>UNIT-I</b>	Infrastructure and Economic Development. Infrastructure as a public good. Social and Physical Infrastructure. Special Characteristics of Infrastructural Facilities. Green Infrastructures. Economics of scale of Joint Supply.
<b>UNIT-II</b>	Marginal Cost Pricing vs Other Methods of Pricing in Public Utilities. Cross Subsidization-Free Prices, Equity and Efficiency. Modal Cost of Transportation. Principle of Pricing. Public Transportation for Sustainable Development. Transport Management in India. Future Development in Transport Sector.
<b>UNIT-III</b>	Six Modern Transport System- Metro, Air Connectivity, Green Buses, Railways. Marine and River and Delivery by Drones.
<b>UNIT-IV</b>	Problems of Different Modes of Transport. Infrastructure Development and Reforms in Transport Sector in India. Structure of Telecommunication Sector. Price Determination. Infrastructure Development and Reforms in Communication. Characteristics and Problems of Postal Services. Fixation of Postal Rates in India. Significance of Telephone and Postal Services in India. Growth of Digital Communication Networks

### **Course Outcomes**

Students will

1. Be exposed to the concepts and models related to Infrastructure.
2. Understand basic Economics theories and models required for infrastructure sector understanding.
3. Be able to demonstrate clear understanding of concepts Infrastructure economics and policy.
4. Exhibit the ability to integrate technical, economic, social and regulatory frameworks for Infrastructure sector planning and resource management.

## Essential Readings

1. Dash L.N., Infrastructure Development and the Indian Economy. Atlantic Publisher, New Delhi.
2. Samanta P.K., Mohanty A.K., Ports Infrastructure and Economic Development.
3. India Infrastructure Report, OUP India Co. (Oxford)
4. Report of Ministry of Human Resources and Development.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5
CO1

## **BEC034C: DEMOGRAPHY**

### **Course Objectives**

1. Identify and compare the advantages and disadvantages of the different sources of demographic data.
2. Describe basic demographic indicators and elaborate on their computation and interpretation.
3. Introduce population projection calculations and analysis.
4. Describe the distribution of a population using various demographic characteristics.

<b>UNIT-I</b>	Introduction to Population Study: Its Nature and Scope; Relationship with other disciplines; Sources of Demographic Data: Census of India; Vital Registration System, Sample Surveys; Dual report system; Population registers; International Publications. Population growth in India. Recent census findings on demographic characteristics.
<b>UNIT-II</b>	Population theories: Malthus; Optimum population theory; Theory of Demographic Transition; Fertility: Basic Terms; sources of Data; Basic Measures: Crude Birth Rate, General Fertility Rate, Age specific fertility rate, Total Fertility Rate; Measures of Reproduction: Gross Reproduction Rate, Net Reproduction Rate.
<b>UNIT-III</b>	Bongaarts Proximate Determinants of Fertility; Social theories of fertility: Social Capillarity; Theory of diffusion, Theory of change and response, Liebenstein theory; Becker's theory, Caldwell wealth flows theory, UN Threshold hypothesis.
<b>UNIT-IV</b>	Mortality: Basic Concepts and terms; Measures: Crude Death rate, Age specific death rate, Infant mortality rate; Maternal mortality; Causes of death; Reasons for mortality decline in developing countries. Mosley and Chen's Framework for Child Survival. Morbidity: Concept and need; Measures: Incidence rate, Attack rate, Secondary Attack rate, Prevalence rate, Case fatality rate. Comparison of Demographic and epidemiological transition.

### **Course Outcomes**

Students will

1. Understand the basics of demography.
2. Understand the core social demographic variables, and how these variables influence population growth, composition, and structure
3. Use demographic tools in understanding public health issues Knowledge attitude and practices.
4. Identify appropriate sources of data, perform basic demographic analyses using various techniques and ensure their comparability across populations.

## Essential Readings

1. Bhende, Asha A. and Tara Kanitkar (2004) Principles of Population Studies, Mumbai: Himalaya Publishing House, Chapter8, Pp.241-288.
2. Jacob 8S. Siegel and David a. Swanson (2004): The Methods and Materials of Demography, Second Edition, Chapters 1, 2, 3, 7, 9,10, Elsevier Science, USA.
3. John Weeks (2005): Population: An Introduction to Concepts and Issues, Wordsworth Learning. Singapore 9" edition.
4. Pathak, K.B. and F.Ram (1998) Techniques of Demographic Analysis, Mumbai: Himalaya Publishing House, Chapter 4 Pp.108-153 and Chapter8, Pp.339-372.
5. National Family Health Surveys.
6. Srinivasan K. (1998) Basic Demographic Techniques and Applications. New Delhi: Sage Publications. Chapter IV, Pp.59-85
7. United Nations, (1973): The Determinants and Consequences of Population Trends, Vol. I, Population Studies, No. 50, Chapter VII, New York. United Nations, World Population Ageing, 1950-2050

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5

CO2																	
CO3																	
CO4																	

H = Highly Related; M = Medium; L = Low

## **BEC017B: ENVIRONMENTAL ECONOMICS**

### **Course Objectives**

1. To introduce the students to concepts, methods and policy options in managing the environment using tools of economic analysis.
2. To enable the students to understand the economic implications of environmental policies and environmental issues.
3. To understand the economic implications of environmental policies through practical applications.

<b>UNIT I</b>	Introduction to environmental economics; Definition, Nature and Scope; Tragedy of commons, common pooled resources,; Pareto optimality and market failure in the presence of externalities.
<b>UNIT II</b>	Pigovian taxes and effluent fees, tradable permits; Pollution control Boards; Legislative measures of environmental protection in India. Economics of climate change.
<b>UNIT III</b>	Valuation of non-market goods and services; measurement methods; Revealed preference methods – travel cost, hedonic pricing; Stated preference methods – Contingent valuation.
<b>UNIT IV</b>	Sustainable Development Concepts; Measurement; Indicators of sustainable development; Trade-off between environmental protection and economic growth; Environmental Kuznets' curve. Measuring the Benefits of Environmental Improvements Non-Market values and measurement methods; risk assessment and perception.

### **Course Outcomes**

Students will

1. Understand and acquire skills for identifying and solving environmental problems.
2. Learn about the environmental problems concerning with human activities and developmental processes.
3. Understand the strategies for conservation of nature and natural resources and to solve the emerging problems related to environment degradation.
4. Understand the environmental issues in relation to socio-economic growth and human development.

### **Essential Readings**

1. Bhattacharya, R. N. (2001). *Environmental Economics*. (1st ed.). New Delhi: Oxford India Paperbacks.
2. IPCC (Intergovernmental Panel on Climate Change), Fifth Assessment Report (2014).

3. Kenneth Arrow et al., (2004). Are We Consuming Too Much. *Journal of Economic Perspectives*, 18(3), 147-172.
4. Millennium Ecosystem Assessment Report. (2005). *Ecosystem Services and Human Well-being: Synthesis*. Washington DC: Island Press.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3	PS O4	PS O5

JECRC University, JAIPUR

## **BEC035C: ECONOMY OF RAJASTHAN**

### **Course Objectives**

1. To know and understand the population and occupational structure of Rajasthan Economy.
2. To recognize and discuss the importance of natural resources of Rajasthan.
3. To understand and discuss the rural development in India.
4. To analyze the role of Panchayats and NGOs in rural development.

<b>UNIT I</b>	Introduction to Economy of Rajasthan, Position of Rajasthan in Indian Economy: Population, Area, Agriculture, Industry and Infrastructure. Demographic features, Occupational structure, and human resource development.
<b>UNIT II</b>	Natural Resources Endowments: land, Water, Livestock and Wild Life, Minerals, Mineral Policy of the state. State Domestic Product: Trends and Composition, Importance of Livestock and Animal husbandry, Dairy Development Programmes.
<b>UNIT III</b>	Infrastructure in the State (Irrigation, Power, Road), Industrial Development of the State, Growth centres and Development of industrial areas. Role of different corporations in Industrial Development, (RIICO, RFC and RAJISCO), Tourism.
<b>UNIT IV</b>	Panchayats and Rural Development; Rural Credit and Self Help Groups (SHGs), Role National Bank for Agriculture and Rural Development (NABARD).
<b>UNIT V</b>	Critical Evaluation of Selected Government Programmes and Rural Development Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) and Rural Development. Woman Empowerment and Child Development. Problems of Poverty and Unemployment in Rajasthan.

### **Course Outcomes**

Students will

1. Understand the occupational structure of Rajasthan.
2. Recognize the importance of natural resources.
3. Understand the various concepts related to rural development.
4. Critically evaluate the various employment generation programmes and analyze the effectiveness of it.

### **Essential Reading**

1. Economic Review, Directorate of Economics and Statistics, Department of Planning, Rajasthan Jaipur.
2. Statistical Abstract Directorate of Economics and Statistics. Department of Planning, Rajasthan Jaipur.

3. Katar Singh , Rural Development : Principles, Policies and Management, Sage Publications, New Delhi
4. K.G. Karmakar, Rural Credit and Self-Help Groups, Sage Publications, New Delhi
4. S.Sau, Rural Industrialization –Development Trajectory in India, Farma K.L.M., Kolkata
5. Misra D. and Puri K. Indian Economy, Himalaya Publishing House
6. Datt and Sundharam (Revised by G.Datt and A. Mahajan), Indian Economy, 70th edition, S. Chand

## **BEC024B: HEALTH ECONOMICS**

### **Course Objectives**

- 1 To provide students an introduction to the various concepts regarding health care, cost and insurance
- 2 To enable students to do Cost Benefit analysis, Cost Effectiveness analysis and Cost Utility analysis on the various issues concerning health in India.
- 3 Students will learn various concepts related to health, insurance and cost analysis.

<b>UNIT I</b>	Definition and Scope; Health, good Health (Health as a good) and Quality of Life; Determinants of Good Health; Measurement of Health Status; Mortality, Morbidity and QUALY, HALY: Family of Summary measures.
<b>UNIT II</b>	Demand for Health and Demand for Medical Care; Supplier Induced Demand; Production of Health Care Providers: Physicians, Hospitals and Pharmaceuticals; Role of Technological Change in Health Care; Sustainability: Equity and Efficiency trade off
<b>UNIT III</b>	Health Cost Concepts; Opportunity cost. Fixed and variable costs; Incremental and Marginal cost; Direct and Indirect Medical costs: Time costs and Travel cost
<b>UNIT IV</b>	Economics of Health Insurance; Information Asymmetry: Adverse Selection; Risk Aversion; Moral Hazard; Health Insurance: Concepts and Challenges, Concepts: Co-insurance rates, Deductibles, Group Insurance, Co-payments.

### **Course outcomes**

Students will

1. Gain knowledge about the basics of health economics, distinguish between the demand for and supply of health and will be able to measure the quality of health.
2. Be able to apply the cost-benefit/cost-effective/cost-utility methods to measure health outcomes.
3. Be able to compare different cost concepts and interpret the functioning of economics of health insurance and manpower planning.
4. Be able to suggest measures for the problems in health sector.

### **Essential Readings:**

1. William, Jack, Principles of Health Economics for Developing Countries, World 24 Bank Institute Development Studies, 1999.
2. World Development Report, Investing in Health, The World Bank, 1993.
3. Ronald G., Ehrenberg and Robert S., Smith, Modern Labor Economics: Theory and Public Policy, Addison Wesley, 2005.

## **BEC036C: INDUSTRIAL ECONOMICS**

### **Course Objective**

1. To develop the students' comprehension of both industrial models and their links in practice, with a special accent on government policy.
2. To provide the various concepts and scope of Industrial Economics in Indian context.
3. To discuss the various stages of development in Industrial Sector.

<b>UNIT I</b>	Industrial Organisation and Ownership Structure Nature and scope of Industrial Economics; Concepts in industrial Economics; industry, market, market structure, market conduct and Market Power; Organisational Structure of a Firm; Objectives of firms.
<b>UNIT II</b>	Market Structure and Market Concentration , An overview of standard forms of market structure: Concept of Workable Competition; Definition of market concentration; Concentration indices; Market power measures; Concentration and market performance; Vertical integration: Types of vertical integration ; Incentives to vertical integration; Effects of vertical integration for the economy; Merger: types; Motives for merger and implication for public policies.
<b>UNIT III</b>	Industrial Finance and Location Analysis, Need of finance; Types of finance; sources of finance; Choice of funding; Development Banking: IDBI, IFCI and SFCs; Factors Influencing Location of Industries; Theories of Industrial Location: Weber, Sargent Florence; Industrial location trends in India.
<b>UNIT IV</b>	Industrial Productivity, Concept and measurement of productivity; Empirical evidence of productivity in Indian industries; Industrial sickness; Under-utilization of capacity; factors accounting for it and consequences.

### **Course Outcomes**

Student will

1. Have a vivid idea about the issues and policies pertaining to the industries environment.
2. Gain familiarity in productivity concepts and measurements.
3. Learn various industrial policies and impact of globalization.
4. Be able to analyse the pattern of industrial investment and government regulation.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome

# **JECRC UNIVERSITY**

**School of Allied Health Sciences**

**B.Sc. Radiography and Imaging  
Technology (BRIT)**

**Course Duration: - 4 years (3+1 Year Internship)**

**JECRC UNIVERSITY**  
**SCHOOL OF ALLIED HEALTH SCIENCES**  
**DEPARTMENT OF RADIATION AND IMAGING TECHNOLOGY**

**PROGRAM OUTCOMES (PO's) and its Attributes: BRIT Graduates will be able to-**

- **PO 1:** Apply the knowledge of clinical, diagnostic and Medical physics, Imaging technology, clinical sciences, as well as an understanding of health care delivery diagnostic imaging system.
- **PO 2:** Emphasizes the following key areas Human Anatomy, Human Physiology, Radiation Physics, Pathology, Radio Diagnosis, Medical Microbiology, Medical Biochemistry, Specialised Diagnostic Techniques, Radiological Technology, and Radiotherapy
- **PO 3:** Find, analyze, evaluate and apply the information systematically and shall make a appropriate diagnosis to provide quality of image along with patient care.
- **PO 4:** Demonstrate effective planning abilities including the prevention, detection, radiation protection, diagnosis, and management of patient without compromising image quality.
- **PO 5:** Apply ethical principles like radiation protection and commit to professional ethics and responsibilities and norms of the Imaging techniques practice.
- **PO 6:** Conduct and present research and clinical studies which will contribute to the advancement of Imaging techniques, quality, diagnosis and health sciences.
- **PO 7:** Explain theory of technology, instrumentation and physics in Medical Imaging using discipline specific terminology. Provide sufficient information effectively to the patient about the imaging options available, purpose of the procedure, benefits, possible adverse consequences, and limitations.
- **PO 8:** Demonstrate knowledge of specified imaging modalities, relevant anatomy, image quality assurance and diagnostic decision making.
- **PO 9:** Engage oneself in self-assessment and structure their continuing professional education to refine existing skills and acquire new skills for patient care and professional advancement. Practice professional and ethical responsibilities with high degree of credibility, integrity and social concern.
- **PO 10:** Communication Skills, Indian culture, Environment studies and basics and advance computer knowledge: Apply the communication and collaboration skills, values, ethics and attitudes that will enable them to effectively deal with patients, families and medical team.

- **PO 11:** Life Long Learning: An appreciation of responsibility to maintain standards of physiotherapy practice gives life learning process enables every individual to address problem solving and judgment in efficient manner.

#### **PROGRAMME SPECIFIC OUTCOME: PSO's**

**PSO1** The student will learn principles of tomographic imaging with different modalities such as xray, PET and SPECT, NMR/MRI, ultra sound and optical with non-diffracting and diffracting energy sources.

**PSO2** Learn principles of non-invasive medical imaging techniques and non destructive techniques for industrial imaging.

**PSO3** Various types of data acquisition in tomography and learn transform domain non-iterative 2D and 3D reconstruction techniques for non diffracting radiation sources

**School of Allied Health Sciences**  
**Scheme**  
**B.Sc. Radiography and Imaging Technology (BRIT)**

JECRC UNIVERSITY School of Allied Health Sciences	Program <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			Semester: 1
Course Human Anatomy-I Theory	Course Description Core	Credit per Semester 3 credits	Hours per Semester 3 hours	Subject Code BRA001A

### COURSE OBJECTIVES -

To provide an opportunity for radiographers who distinguish themselves in Human Anatomy -Dissection consistency, theoretical knowledge and knowledge application, to undertake research based training in Anatomy. To capture distinguished medical students and offer them such training as would enable them to sub-specialize in anatomy at an early stage of their career. To develop as research scientists and research based teachers for schools of allied health sciences both locally and externally. It also strengthens the research foundation of the students with broad.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

CO 1	To understand the importance of Basics of anatomy and joints
CO 2	Detail about muscles, lymphatic and cardiovascular system
CO 3	Knows the anatomical aspect of Nervous System, Skin and Fasciae, Connective Tissue, Ligaments
CO 4	Anatomical knowledge of Gastro-intestinal system
CO 5	Approach of Respiratory system

**Unit-1** 1. Introduction  
2. Skeleton  
3. Joints

**Unit-2** 1. Muscles  
2. General Cardiovascular System  
3. Lymphatic System

**Unit-3** 1. General Nervous System  
2. Skin and Fasciae  
3. Connective Tissue, Ligaments and Raphe

**Unit-4** **Gastro-intestinal system-** Parts of GIT (Oesophagus, stomach, small and large intestine, liver, gall bladder, pancreas )

**Unit-5** **Respiratory system-** Nose, nasal cavity, larynx, trachea, lungs, broncho-pulmonary segments, pleura and Names of paranasal air sinuses

JECRC UNIVERSITY School of Allied Health Sciences	Program <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			Semester: 1
Course Human Anatomy-I Practical	Course Description Core	Credit per Semester 1 credits	Hours per Semester 2 hours	Subject Code BRA002A

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

To understand the importance of Basics of anatomy and joints, Identification of bones, joints and soft parts

### PRACTICAL

Identification and demonstration of bones, joints and soft parts

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiography and Imaging Technology (BRIT)</u></b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Physiology-I Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Subject Code</b> <b>BRA003A</b>

**COURSE OBJECTIVE-** To learn and understand the fundamental scientific concepts relating to a broad range of topics in human physiology. To make the students familiar with the basic factual information concerning the mechanisms and functioning of humans body system. To develop investigative skills and to become familiar with standard techniques of measurement. To help the students to gain practice and confidence in applying this knowledge, in a quantitative manner where appropriate, to actual experiments.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Understand the importance cell and nerve physiological functions
<b>CO 2</b>	Understand the important aspect of blood
<b>CO 3</b>	Get the knowledge of cardiovascular system
<b>CO 4</b>	Physiological functions of respiration and its neural control
<b>CO 5</b>	To know about Digestive system of the body

- Unit-1**
1. Cell and cell organelle Structure & function , transport across cell membrane, homeostasis, membrane potential.
  2. Structure & functions of nerve tissues, physiological properties of nerve fibres, nerve fibre types & functions.
  3. Neuromuscular junction, Difference between skeletal muscle, smooth muscle & cardiac muscle.
- Unit-2**
1. Composition & functions of blood, plasma proteins & hemoglobin.
  2. Erythrocytes, leucocytes & platelets.
  3. Blood coagulation, blood groups & immunity
- Unit-3**
1. Heart Rate, Cardiac Output, Blood Pressure & Pulse
  2. Conducting system of heart, Heart sounds & ECG.
  3. Cardiac Muscle and cardiac cycle.
- Unit-4**
1. Functions of respiratory system, airways, dead space, graph of lung volume
  2. Transport of gases
  3. Regulation of respiration & Hypoxia
- Unit-5**
1. GIT, Saliva , Mouth & Oesophagus
  2. Stomach, Pancreas, Liver & Gall Bladder
  3. Small Intestine, Large Intestine, Digestion and Absorption in GIT.

JECRC UNIVERSITY School of Allied Health Sciences	Program <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			Semester: 1
Course Human Physiology-I Practical	Course Description Core	Credit per Semester 1 credits	Hours per Semester 2 hours	Subject Code BRA004A

**COURSE OBJECTIVES:** The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate procedures to determine hematology findings.
<b>CO 2</b>	Recognize the abnormalities in the hematology findings

#### Unit-1 Hematology:

- a) Study of Microscope and its uses
- b) Determination of Red Blood Corpuscle count
- c) Determination of White Blood Corpuscle count
- d) Differential leukocyte count
- e) Estimation of hemoglobin
- f) Estimation of platelets
- g) Absolute eosinophil count
- h) Reticulocyte count
- i) Determination of blood groups and Rh typing
- j) Determination of bleeding time
- k) Determination of clotting time

#### Unit-2 Demonstrations only

- a) Determination of Erythrocyte Sedimentation Rate
- b) Determination of Packed Cell Volume

JECRC UNIVERSITY School of Allied Health Sciences	Program <u>B.Sc. Radiography and Imaging Technology (BRIT)</u>			Semester: 1
Course Biochemistry-I Theory	Course Description Core	Credit per Semester 3 credits	Hours per Semester 3 hours	Course Code BRA005A

**COURSE OBJECTIVE-** This course provides the knowledge and skills in fundamental organic chemistry and introductory biochemistry that are essential for further studies. It covers basic biochemical, cellular, biological and microbiological processes, basic chemical reactions in the prokaryotic and eukaryotic cells, the structure of biological molecules, introduction to the nutrients i.e. carbohydrates, fats, enzymes, nucleic acids and amino acids.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Nutrition and its importance and requirement
<b>CO 2</b>	Functions and biochemistry of carbohydrate
<b>CO 3</b>	Functions and biochemistry of Lipid
<b>CO 4</b>	Functions and biochemistry of amino acid
<b>CO 5</b>	General characteristics of digestion and absorption carbohydrate, lipids and proteins

#### Unit-1 Nutrition

- Introduction, Importance of nutrition. Calorific values, Respiratory quotient – Definition, and its significance. BMR: Definition, factor affecting BMR. Special dynamic action of food.
- Physical activities - Energy expenditure for various activities. Calculation of energy requirement of a person.
- Concept of Balanced diet and Recommended dietary allowances
- Role of carbohydrates, lipids and protein in diet
- Nutritional disorders.

#### Unit-2 Carbohydrate Chemistry

- Definition, general classification of carbohydrates
- Composition, sources, properties and functions of carbohydrates

##### Carbohydrate Metabolism

- Glycolysis, gluconeogenesis, Krebs cycle and Cori cycle – General outline of cycle and introduction to enzymes involved
- Glycogenesis, Glycogenolysis (glycogen metabolism): General outline of cycle and introduction to enzymes involved

#### Unit-3 Lipid Chemistry

- Definition, general classification and functions of lipids and fatty acids
- Lipoproteins: Definition, classification, properties, Sources and function
- Introduction to ketone bodies

##### Lipid Metabolism

- Introduction to lipid metabolism, Lipolysis and lipogenesis general outline and enzymes involved
- General outline of beta oxidation of fatty acids

#### Unit-4 Amino-acid Chemistry

- Amino acid chemistry: Definition, Classification, Peptide bonds and Biologically important peptides
- Protein chemistry: Definition, Classification, Functions of proteins

##### Amino acid and Protein Metabolism

- Transamination and deamination general introduction
- Introduction to Urea cycle

#### Unit-5 Digestion and Absorption - General characteristics of digestion and absorption, Digestion and absorption of carbohydrates, proteins and lipids. Disorders of digestion and absorption

JECRC UNIVERSITY School of Allied Health Sciences	Program <u>B.Sc. Radiography and Imaging Technology (BRIT)</u>			Semester: 1
Course Environmental Sciences- Theory	Course Description Value added course	Credit per Semester 3 credits	Hours per Semester 3 hours	Course Code DCH001

**COURSE OBJECTIVES** -To impart knowledge of fundamentals of Environmental sciences. To educate the students to make them confident and to develop the skills of Environmental protection and to increase awareness in society through education. (Problem-Solving Skills). To train the student's with appropriate combinations of old and new emerging concepts in new technologies, techniques and latest developments for their current and potential uses in their profession (Successful Career and Entrepreneurship)

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Recognize the history, structure, function, interactions and trends of key socio-environmental systems on personal, organizational and intellectual level regarding our surroundings through different media.
<b>CO 2</b>	Examine the generation of scientific knowledge and how that knowledge is presented, evaluated, framed and applied for environmental protection by conservation of Natural resources.
<b>CO 3</b>	Articulate a coherent philosophy of the environment and consider ethical bases for responding to environmental questions.
<b>CO 4</b>	Understand the role of conservation of resources and public awareness in prevention of pollution and ultimately for the sustainable development of society.
<b>CO 5</b>	Understand the social responsibility towards protection of environment and society

**Unit-1** The Multidisciplinary Nature of Environmental Studies Definition, scope and importance need for public awareness.

**Unit-2** **Natural Resources Renewable and Non-renewable Resources**

- Natural resources and associated problems.

(a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

(b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

(c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

(d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, Case studies. (e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.

(f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

### Unit-3 Ecosystems

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem. Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following ecosystem: (a) Forest ecosystem (b) Grassland ecosystem (c) Desert ecosystem (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

#### **Biodiversity and Its Conservation**

- Introduction, definition: genetic, species and ecosystem diversity.
- Biogeographical classification of India.
- Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

- Biodiversity at global, National and local levels.
- India as a mega-diversity nation. Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India.
- Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

#### **Unit-4 Environmental Pollution**

- Definition
- Causes, effects and control measures of
  - (a) Air pollution                      (b) Water pollution                      (c) Soil pollution                      (d) Marine pollution
  - (e) Noise pollution                      (f) Thermal pollution                      (g) Nuclear hazards
- Solid waste management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution. •Pollution case studies.
- Disaster management: Floods, earthquake, cyclone and landslides.

#### **Unit-5 Social Issues and the Environment**

- From unsustainable to sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.
- Air (Prevention and Control of Pollution) Act.      • Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act.                                      •Forest Conservation Act.
- Issues involved in enforcement of environmental legislation.
- Public awareness.

#### **Human Population and the Environment**

- Population growth, variation among nations.
- Population explosion—Family Welfare Programme.
- Environment and human health.
- Human rights.
- Value education.

HIV/AIDS.

- Women and Child Welfare. •Role of Information Technology in environment and human health.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiography and Imaging Technology (BRIT)</u></b>			<b>Semester: 1</b>
<b>Course</b> <b>Environmental Sciences- Practical</b>	<b>Course</b> <b>Description</b> <b>Value added</b> <b>course</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DCH001</b>

Interactive sessions by experts of the field, case studies, field visit and projects.

### **Field Work**

- Visit to a local area to document environmental assets—river/forest/grassland/hill/ mountain.
- Visit to a local polluted site—Urban/Rural/Industrial/Agricultural.
- Study of common plants, insects, birds.
- Study of simple ecosystems—pond, river, hill slopes, etc.
- Case Studies.

JECRC UNIVERSITY School of Allied Health Sciences	<b>Program</b> <u><a href="#">B.Sc. Radiography and Imaging Technology (BRIT)</a></u>			<b>Semester: 1</b>
<b>Course</b> Communication Skills-Theory	<b>Course Description</b> Ability Enhancement	<b>Credit per Semester</b> 3 credits	<b>Hours per Semester</b> 3 hours	<b>Course Code</b> DEN001A

## COURSE OBJECTIVES

1	To enhance English language competence in reading, writing, listening and speaking.
2	Switch the approach from teacher-centred to student-centred one.
3	Minimize the Grammar Translation Method of ELT while trying to replace it with direct method.
4	Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centered learning rather than on the teacher-centered learning.
5	To link communication skills with the organizational behaviour
6	To inculcate skills that are very much required for employability and adjust in the professional Environment

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
<b>CO 2</b>	Ability to analyze the usage of English words in different contexts.
<b>CO 3</b>	An understanding of technical and academic articles' comprehension.
<b>CO 4</b>	The ability to present oneself at multinational levels knowing the type of different standards of English

**Unit-1 Basics of Organizational Communication:** Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture

**Unit-2 Writing Skills:** Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration

**Unit-3 Composition:** Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,

**Unit-4 Vocabulary Building:** Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms

**Unit-5 Professional and Technical Communication :** Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

<b>JECRC UNIVERSITY</b>	<b>Program</b>			<b>Semester: 1</b>
<b>School of Allied Health Sciences</b>	<b><u>B.Sc. Radiation and Imaging Technology (BRIT)</u></b>			
<b>Course</b>	<b>Course Description</b>	<b>Credit per Semester</b>	<b>Hours per Semester</b>	<b>Course Code</b>
<b>Communication Skills-Practical</b>	<b>Ability Enhancement</b>	<b>1 credits</b>	<b>2 hours</b>	<b>DEN001A</b>

<b>Unit-1</b>	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time- management, Following Deadlines etc
<b>Unit-2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>Unit-3</b>	<b>Composition:</b> Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>Unit-4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>Unit-5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

JECRC UNIVERSITY School of Allied Health Sciences	Program <b>B.Sc. Radiation and Imaging Technology (BRIT)</b>			Semester: 1
Course <b>Fundamentals of Computer-Theory</b>	Course Description <b>Foundation</b>	Credit per Semester <b>2 credits</b>	Hours per Semester <b>2 hours</b>	Course Code <b>BRA006A</b>

The students will be able to appreciate the role of computer technology. The course has focus on computer organization, computer operating system and software, and MS windows, Word processing, Excel data worksheet and PowerPoint presentation

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Introduction to computer and Input output devices
<b>CO 2</b>	Processor and memory and Storage Devices
<b>CO 3</b>	Introduction of windows and Introduction to MS
<b>CO 4</b>	Introduction to Excel and Introduction to power-point
<b>CO-5</b>	Introduction of Operating System, Computer networks and Internet and its Applications

### Unit-1

- **Introduction to computer:** Introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.
- **Input output devices:** Input devices(keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices(monitors, pointers, plotters, screen image projector, voice response systems).

### Unit-2

- **Processor and memory:** The Central Processing Unit (CPU), main memory.
- **Storage Devices:** Sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

### Unit-3

- **Introduction of windows:** History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.).
- **Introduction to MS-Word:** introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

### Unit-4

- **Introduction to Excel:** introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.
- **Introduction to power-point:** introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

### Unit-5

- **Introduction of Operating System:** introduction, operating system concepts, types of operating system.

- **Computer networks:** introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.
- **Internet and its Applications:** definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in clinical settings.

JECRC UNIVERSITY School of Allied Health Sciences	Program <b><u>B.Sc. Radiation and Imaging Technology (BRIT)</u></b>			Semester: 1
Course Fundamentals of Computer- Practical	Course Description Core Practical	Credit per Semester 1 credits	Hours per Semester 2 hours	Course Code BRA007A

## COURSE OBJECTIVES

The students will be able to learn all practical aspects of fundamental of computer

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Practical learning to use MS office: MS word, MS PowerPoint, MS Excel
<b>CO 2</b>	Practically To install different software
<b>CO 3</b>	How to do Data entry efficiency
<b>CO 4</b>	Practical related to all theory units of Fundamentals of Computer syllabus

**Unit 1-** Learning to use MS office: MS word, MS PowerPoint, MS Excel.

**Unit 2-** To install different software

**Unit 3-** Data entry efficiency

**Unit 4-** Practical related to all theory units of Fundamentals of Computer syllabus

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiography and Imaging Technology (BRIT)</u></b>			<b>Semester: 1</b>
<b>Course</b> <b>Cultural Education- I</b>	<b>Course</b> <b>Description</b> <b>Project</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DIN001A</b>

### **COURSE OBJECTIVES**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to acknowledge and appreciate the richness of Indian Culture
<b>CO 2</b>	Ability to represent the culture ethics in real life

### **UNIT-I**

#### **Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)
2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

### **UNIT-II**

#### **Society and Culture-I**

3. Introduction to Indian Culture and Major Symbols of Indian Culture
4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

### **UNIT-III**

#### **India in Progress-I**

5. Education, Science and Technology in Ancient India
6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

### **UNIT-IV**

#### **Great Indian Personalities-I**

7. Life and works of the Great People of India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Budhha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

**\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to she/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.**

<b>JECRC UNIVERSITY</b>	<b>Program</b>			<b>Semester:</b>
<b>School of Allied Health Sciences</b>	<b><u>B.Sc. Radiography and Imaging Technology (BRIT)</u></b>			<b>2nd</b>
<b>Course</b>	<b>Course</b>	<b>Credit per</b>	<b>Hours per Semester</b>	<b>Course Code</b>
<b>Human Anatomy-2 Theory</b>	<b>Description</b>	<b>Semester</b>	<b>3 hours</b>	<b>BRA008A</b>
	<b>core</b>	<b>3 credits</b>		

## COURSE OBJECTIVE

To provide an opportunity for radiation and imaging technologists who distinguish themselves in Human Anatomy - practical, theoretical knowledge and knowledge application, to undertake research based training in Anatomy. To capture distinguished medical students and offer them such training as would enable them to sub-specialize in anatomy at an early stage of their career. To develop as research scientists and research based teachers for schools of allied health sciences both locally and externally. It also strengthens the research foundation of the students with broad vision of leading in research based teaching of anatomy and stimulates the research attitudes and aptitudes of students.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the anatomy of Peritoneum
<b>CO 2</b>	To understand the anatomy of Urinary system
<b>CO 3</b>	To understand the anatomy of Reproductive system
<b>CO 4</b>	To understand the anatomy of Endocrine glands
<b>CO 5</b>	To understand the anatomy of Nervous system

### Unit-1 Peritoneum

- Description in brief

### Unit-2 Urinary system

- Kidney, ureter, urinary bladder, male and female urethra
- Histology of kidney, ureter and urinary bladder

### Unit-3 Reproductive system

- Parts of male reproductive system, testis, vas deferens, epididymis, prostate (gross & histology)
- Parts of female reproductive system, uterus, fallopian tubes, ovary (gross & histology)
- Mammary gland

### Unit-4 Endocrine glands

- Names of all endocrine glands in detail on pituitary gland, thyroid gland, parathyroid gland, suprarenal gland – (gross & histology)

**Unit-5 Nervous system**

- i. Neuron
- ii. Classification of NS
- iii. Cerebrum, cerebellum, midbrain, pons, medulla oblongata, spinal cord with spinal nerve
- iv. (gross & histology)
- v. Meninges, Ventricles & cerebrospinal fluid
- vi. Names of basal nuclei
- vii. Blood supply of brain
- viii. Cranial nerves
- ix. Sympathetic trunk & names of parasympathetic ganglia
- x. Skin: Skin-histology
- xi. Appendages of skin
- xii. Eye: Parts of eye & lacrimal apparatus
- xiii. Extra-ocular muscles & nerve supply
- xiv. Ear: parts of ear- external, middle and inner ear and contents
- xv. Spermatogenesis & oogenesis
- xvi. Ovulation, fertilization
- xvii. Fetal circulation
- xviii. Placenta

Course code – BRA09A

---

Unit-1 identification of bones and organs

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <a href="#"><b>B.Sc. Radiography and Imaging Technology (BRIT)</b></a>			<b>Semester:</b> <b>2nd</b>
	<b>Course</b> <b>Human Physiology-2</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>
				<b>Course Code</b> <b>BRA010A</b>

**COURSE OBJECTIVES:** The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –\

<b>CO 1</b>	Physiology of Excretory system
<b>CO 2</b>	Physiological functions of Endocrine system
<b>CO 3</b>	Physiological functions of Reproductive system
<b>CO 4</b>	Physiological functions of Nervous system
<b>CO 5</b>	Physiological functions of Nervous system

## Unit-1 Excretory system

- i. Physiological anatomy of kidney, structure and functions of excretory system, structure of nephron.
- ii. Mechanism of formation of Urine. & mechanism of concentration and dilution of urine.

- iii. The Counter Current System: Physiology of micturition and Regulation of Body temperature in Humans.

## **Unit-2 Endocrine system**

- i. General principles of endocrinology
- ii. The pituitary Gland.
- iii. The Thyroid Gland, The parathyroid, calcitonin and VitaminD.
- iv. The Adrenal Cortex & Pancreas.

## **Unit-3 Reproductive system**

- i. Changes during Puberty, Classification of Male sex hormones and their functions, Spermatogenesis & semen.
- ii. Changes during Puberty, Classification and Functions of female sex hormones, menstruation, ovulation and contraception.
- iii. Physiological changes during pregnancy, functions of placenta and physiology of lactation.

## **Unit-4 Nervous system**

- i. Organization of Nervous system, The Synapse , Physiology of receptor organs for special and general sensation, physiology of reflex action, classification and properties of reflexes.
- ii. Intro to Sensory and motor system. Functions of hypothalamus, thalamus, basal ganglia, cerebrum & cerebellum.
- iii. Autonomic nervous system, Cerebrospinal Fluid and Blood Brain Barrier.

## **Unit-5 Special Senses**

- i. Taste and Olfaction.
- ii. Vision—structure and function of eye, errors of refraction & their correction. Color blindness.
- iii. Hearing—structure and function of ear, general outline of mechanism of hearing and perception of sound.

JECRC UNIVERSITY School of Allied Health Sciences	Program <a href="#">B.Sc. Radiography and Imaging Technology (BRIT)</a>			Semester: 2nd
Course Biochemistry-2 Theory	Course Description Core	Credit per Semester 3 credits	Hours per Semester 3 hours	Course Code BRA011A

**COURSE OBJECTIVES:** This course provides the knowledge and skills in fundamental organic chemistry and introductory biochemistry that are essential for further studies. It covers basic biochemical, cellular, biological and microbiological processes, basic chemical reactions in the prokaryotic and eukaryotic cells, the structure of biological molecules, introduction to the nutrients.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

CO 1	Functions and biochemistry of Enzymes, Nucleotide and Nucleic acid
CO 2	Functions and biochemistry of Vitamins and Mineral Metabolism
CO 3	Functions and biochemistry of Connective tissue
CO 4	Functions and biochemistry of Hormone, Acid-Base balance and water balance
CO 5	Functions and biochemistry of Electrolyte balance and clinical aspect of biochemistry

**Unit-1 Enzymes** – Classification, definition, Active site, Cofactor (Coenzyme, Activator), Isoenzymes, Proenzyme. Factors effecting enzyme activity, Enzyme inhibition and significance.

**Nucleic Acids-** DNA and RNA chemistry and functions, Difference between DNA and RNA, Structure of DNA (Watson and Crick model) and tRNA, rRNA, mRNA.

**Unit-2 Vitamins** – general classification, sources of vitamin and functions, RDA and common deficiency symptoms

**Mineral Metabolism-** Definition, Sources, RDA, Digestion, absorption, transport, excretion, functions, common disorders associated with mineral metabolism.

**Unit-3 Water balance** - Water distribution in the body, Body water, water turnover and its regulation in brief.

**Electrolyte balance – Basic concept of** Osmolarity and distribution of electrolytes in brief.

Introduction to role of aldosterone, rennin angiotensin system and ANF in brief

**Unit-4 Hormone Action** - Definition, classification, Mechanism of hormone action. Receptors, signal transduction, second messengers and cell function.

**Unit-5 Acid-Base balance** - Acids, bases and buffers, pH. Buffer systems of the body, bicarbonate buffer system. Osmosis, dialysis, surface tension.

JECRC UNIVERSITY School of Allied Health Sciences	Program <u>B.Sc. Radiography and Imaging Technology (BRIT)</u>			Semester: 2nd
Course Conventional Radiological Equipment Theory	Course Description Core	Credit per Semester 3 credits	Hours per Semester 3 hours	Course Code BRA012A

**COURSE OBJECTIVES:** This course provides the knowledge and skills in Conventional Radiological Equipment to make the students understand about working of equipments

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

CO 1	The students understand about Production of x-rays
CO 2	The students understand about Meters and exposure timers
CO 3	The students understand about High tension circuits
CO 4	The students understand about Interlocking circuits and Control of scattered radiation
CO 5	The students understand about Fluorescence and phosphorescence and Care and Maintenance of X-ray equipment

### Unit-1

**Production of x-rays:** X-ray tube, gas filled x-ray tube, construction working and limitations; stationary anode x - ray tube; construction, working, methods of cooling the anode, rating chart and cooling chart; rotating anode x - ray tube: construction, working rating chart, speed of anode rotation, angle of anode inclination, dual focus and practical consideration in choice of focus, anode heel effect, grid controlled x - ray tube; effect of variation of anode voltage and filament temperature; continuous and characteristics spectrum of x - rays, inherent filter and added filter, their effect on quality of the spectrum.

### Unit-2

**Meters and exposure timers:** Moving coil galvanometer: construction and working/conversion to millimeter, ammeter and voltmeter, meters commonly used in diagnostic x-ray machines, pre reading kV meter and millimeter, digital panel meters. Clockwork timers, synchronous motor timer, electronic timers, photo metric timers (fluorescent and photoelectric effect as applied in timers), ion chamber based timers, integrated timer.

### Unit-3

**High tension circuits:** H.T. generator for x-ray machines, three phase half wave rectifier, three phase full wave rectifier, three phase six rectifier circuit, three phase 12 rectifier circuit, high and medium frequency circuits; capacitance filter control and stabilizing equipment; mains voltage compensator, mains resistance compensator, compensation for frequency variation, control of tube voltage, kV compensator; high tension selector switch, filament circuit, control of tube current, space charge compensation.

### Unit-4

**Interlocking circuits:** Relays: description and working, use of relays in diagnostic machines for over load protection, circuit diagram; simplified circuit and block diagrams illustrating sequence of events from mains supply to controlled emission of x-rays.

**Control of scattered radiation:** Beam limiting devices: cones, diaphragms, light beam collimator, beam centering device, methods to verify beam centering and field alignment; grids; design and

control of scattered radiation, grid ratio, grid cut-off, parallel grid, focused grid, crossed grid, grided cassettes, stationary and moving grid potter bucky

diaphragms, various types of grid movements; single stroke movement, oscillatory movement and reciprocatory movement.

## Unit-5

**Fluoroscopy: Fluorescence and phosphorescence-** description, fluorescent materials used in fluoroscopic screens, construction of fluoroscopic screen and related accessories, tilting table, dark adaptation. Image intensifier - Construction and working, advantages over fluoroscopic device, principles and methods of visualising intensified image, basic principles of closed circuit television camera and picture tube. Vidicon camera, CCD. Automatic brightness control, manual cassette changer, rapid automatic film changer, basic principles of cine fluoroscopy and angiography use of grid controlled x-ray tube.

**Care and Maintenance of X-ray equipment-**General care; functional tests; testing the performance of exposure timers, assessing the MA settings, testing the available KV, measurement of focal spot of an x-ray tube, testing the light beam diaphragm, practical precautions pertaining to Brakes and locks, H.T. cables, meters and controls, tube stands and tracks as well as accessory equipment.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiography and Imaging Technology (BRIT)</u></b>			<b>Semester:</b> <b>2nd</b>
<b>Course</b> <b>General &amp; Clinical Psychology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BRA013A</b>

**COURSE OBJECTIVES** -Human Psychology involves the study of various behavioral patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional and language development, communication and interaction skills appropriate to various age groups. The study of these subjects will help the student to understand their clients while assessment and while planning appropriate treatment methods.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basics and Introduction of Psychology and growth and development of humans on psychological aspects.
<b>CO 2</b>	Sensation, attention, perception motivational psychology
<b>CO 3</b>	Psychology of humans related to frustration, conflict, emotions and intelligence
<b>CO 4</b>	Thinking and learning on psychological basis and how to improve
<b>CO 5</b>	Improve personality by psychological aspect, social and clinical psychology for patient perspective

## • THEORY

### Unit-1 Introduction to Psychology

- Schools: Structuralism, functionalism, behaviorism, Psychoanalysis.
- Methods: Introspection, observation, inventory and experimental method.
- Branches: psychology and applied psychology
- Psychology and physiotherapy

#### **Growth and Development**

- Life span: Different stages of development (Infancy, childhood, adolescence, adulthood, middle age, old age).
- Heredity and environment: role of heredity and environment in physical and psychological development, “Nature v/s Nurture controversy”.

## **Unit-2    Sensation, attention and perception**

- a) Sensation: Vision, Hearing, Olfactory, Gustatory and Cutaneous sensation, movement, equilibrium and visceral sense.
- b) Attention: Types of attention, Determinants of attention (subjective determinants and objective determinants).
- c) Perception: Gestalt principles of organization of perception (principle of figure ground and principles of grouping), factors influencing perception (past experience and context).
- d) Illusion and hallucination: different types.

### **Motivation**

- a) Motivation cycle (need, drive, incentive, reward).
- b) Classification of motives.
- c) Abraham Maslow's theory of need hierarchy

**Unit-3 Frustration and conflict**

- a) Frustration: sources of frustration.
- b) Conflict: types of conflict.
- c) Management of frustration and conflict

**Emotions**

- a) Three levels of analysis of emotion (physiological level, subjective state, and overt behavior).
- b) Theories of emotion
- c) Stress and management of stress.

**Intelligence**

- a) Theories of intelligence.
- b) Distribution of intelligence.
- c) Assessment of intelligence

**Unit-4 Thinking**

- a) Reasoning: deductive and inductive reasoning
- b) Problem solving: rules in problem solving (algorithm and heuristic)
- c) Creative thinking: steps in creative thinking, traits of creative people

**Learning**

- a) Factors effecting learning.
- b) Theories of learning: trial and error learning, classical conditioning, Operant conditioning, insight learning, social learning theory.
- c) The effective ways to learn: Massed/Spaced, Whole/Part, Recitation/Reading, Serial/Free recall, Incidental/Intentional learning, Knowledge of results, association, organization, and mnemonic methods.

**Unit-5 Personality**

- a) Approaches to personality: type & trait, behavioristic, psychoanalytic and humanistic approach.
- b) Personality assessment: observation, situational test, questionnaire, rating scale, interview, and projective techniques.
- c) Defense Mechanisms: denial of reality, rationalization, projection, reaction formation, identification, repression, regression, intellectualization, undoing, introjection, acting out.

**Social psychology**

- a) Leadership: Different types of leaders. Different theoretical approaches to leadership.
- b) Attitude: development of attitude. Change of attitude.

**Clinical psychology**

Models of training, abnormal behavior assessment, clinical judgement, psychotherapy, self-management methods, physiotherapist patient interaction, aggression, self- imaging, stress management, assertive training, Group therapy, Body awareness, Pediatric, child and geriatric clinical psychology.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Radiation and Imaging Technology (BRIT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Professional Skills-Theory</b>	<b>Course Description</b> <b>Ability</b> <b>Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN002A</b>

## COURSE OBJECTIVES

<b>1.</b>	To enhance Professional competence in reading, writing, listening and speaking.
<b>2.</b>	Switch the approach from providing information about the language to use the language.
<b>3.</b>	Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
<b>4.</b>	Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
<b>5.</b>	Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
<b>6.</b>	Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to design a language component or process to meet desired need within realistic, Constraints such as environmental, social, political, ethical, scenario
<b>CO 2</b>	Ability to analyze the usage of English words in professional scenario.
<b>CO 3</b>	An understanding of technical and academic articles' comprehension.
<b>CO 4</b>	The ability to present oneself at multinational levels as per the demand of the corporate culture

**Unit-1** Professional Grooming and Professional Culture: Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**Unit-2** Advanced Grammar: Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**Unit-3** Composition:, Memo, Notice, Circular, Book Review, Research Article, Reports

**Unit-4** Vocabulary Building: Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms

**Unit-5** Reading Comprehension: Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Radiation and Imaging Technology (BRIT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Professional Skills-Practical</b>	<b>Course Description</b> <b>Ability Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN002B</b>

**Unit-1** Professional Grooming and Professional Culture: Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**Unit-2** Advanced Grammar: Exercise Sessions for Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**Unit-3** Composition:, Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics

**Unit-4** Vocabulary Building: Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words

**Unit-5** Reading Comprehension: Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Radiation and Imaging Technology (BRIT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Culture Education - 2</b>	<b>Course Description</b> <b>Value Added course</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DIN002A</b>

## OBJECTIVES

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**COURSE OUTCOMES (CO):** At the end of this course students will have:

<b>CO 1</b>	Ability to acknowledge and appreciate the richness of Indian Culture
<b>CO 2</b>	Ability to represent the culture ethics in real life

## Unit-1 Holy Scriptures-II

1. Bhagavad Gita and Life Management
2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Saheb, Bible, Quran, Jain Scriptures, Bodh Scriptures
3. Historicity of Ramayana and Mahabharata

## Unit-2 Society and Culture-II

4. Indian Society: Its Strengths and Weaknesses
5. Health and Lifestyle related issues
6. Conservation of cultural heritage

## Unit-3 India in Progress-II

7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights
8. Indian Models of Economy, Business and Management

## Unit-4 Great Indian Personalities-II

9. Life and works of the Great People of India- Raja Ram Mohan Roy, Swami Vivekananad, Madan Mohan Malviya, Ishwarchand VidyaSagar, JyotibaPhule, HomiBhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, Vir Haqiqat Rai, Subhash Chandra Bose, Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada Saheb Phalke, Major Dhayan Chand, A P J Abdul Kalam, Kailash Satyarthi, Aruna Roy, Mahasweta Devi, Udaya Kumar, Narayan Murthy, Azim Premji

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology (BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Basic Physics including Radiological Physics</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BRA014A</b>

**COURSE OBJECTIVE-** To make students understand about basics physics concept related to imaging instruments.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand Electricity and magnetism and Electromagnetic waves
<b>CO 2</b>	Learn concept of sound and heat physics
<b>CO 3</b>	Learn concept of semiconductors and diodes
<b>CO 4</b>	To understand basic physics of x-ray
<b>CO 5</b>	Understand X-ray generator circuits and Radiation quantities and units

### Unit-1

**Basic concepts :** Units and measurements-Force, work, power and energy-Temperature and heat-SI units of above parameters. Atomic structure-atom model-Nucleus-electronic configuration-periodic table-Isotopes-Ionization excitation- Binding energy-electron volt-Electromagnetic radiation-Quantum nature of radiation-mass energy equivalence- Fluorescence-electromagnetic spectrum.

**Electricity and magnetism:** Electric charges, Coulomb's law-Unit of charge-Electric potential, unit of potential-Electric induction, capacitance and Capacitors, series and parallel connection-electric current, unit, resistance, ohm's law, electric power, Joule's law. Varying currents-Growth and decay of current in LR circuit time constant, charge and discharge of a Capacitor through a resistance and inductance. Oscillations in an LC circuit. Alternating currents: Peak and RMS values and current and voltage, circuit containing LR, CR and LCR-Power factor, series and parallel LCR circuits, DC circuit, Ohm's law, resistivity, series and parallel combination, EMF, Kirchhoff's law, heating effect of current.

**Electromagnetic waves :** Introduction, Maxwell's equation, electromagnetic waves, energy density and intensity, momentum, electromagnetic spectrum and radiation in Atmosphere.

### Unit 2:-

#### Sound

a. The nature and propagation of sound wave (the characteristics of sound, wave theory), speed of sound in a material

medium, intensity of sound, the decibel, Interference of sound waves, beats, diffraction.

b. Doppler's effect, Ultrasonic wave, production of ultrasonic waves (piezo-electric effect) in ultrasonography.

c. Use of principle of Doppler's effect in Diagnostic Radiology (e.g. Echo, blood flow measurement).

#### Heat

Definition of heat, temperature, Heat capacity, specific heat capacity, Heat transfer-conduction, convection, radiation, thermal conductivity, equation for thermal conductivity (k), the value of k of various material of interest in radiology, thermal expansion, Newton's law of cooling, Heat radiation, perfect black body, Stefan law, application in Diagnostic Radiology (Heat dissipation in both stationary and rotating X-ray tubes).

### Unit-3

#### Electronics

a. Semiconductors; Conduction in crystals, Energy bands. Intrinsic and Extrinsic semiconductors n-type and p-type semiconductors, majority and minority carriers.

b. Semiconductor diodes: p-n junction-properties forward and reverse bias, characteristics of p-n junction Rectifiers-Half- wave and full wave, ripple factor, Efficiency of HW and FW rectifiers.

Filter circuits; Zenerdiode, regulated power supply.

c. Transistors-Symbols, Transistor connections and characteristics, Transistor as an amplifier, load line analysis, operating point, types of amplifiers-voltage and power amplifiers. Feedback-negative feedback in amplifiers.

#### Unit-4

- a. X-rays: Discovery of x-rays-X-ray production and properties: Bremsstrahlung radiations-Characteristics X-Rays, factors affecting X-ray emission spectra, X-ray quality and quantity, HVL measurements, heel effect, soft and hard X-Rays, added and inherent filtration, reflection and transmission targets.
- b. Interaction of ionizing radiation with matter-Types of interactions of X-and gamma radiation, Photoelectric & Compton, Pair production, annihilation radiation.
- c. Interaction of X and gamma rays: Transmission through matter, law of exponential attenuation, half value layer, and linear attenuation coefficient-coherent scattering-photonuclear disintegration-Particle interactions. Interactions of X rays and Gamma rays in the body; fat-soft tissue-bone-contrast media-total attenuation coefficient-relative clinical importance.
- d. Exponential attenuation (linear/mass attenuation coefficients), Half Value Thickness (HVT), Tenth Value Thickness (TVT), dependence on energy and atomic number.
- e. Radiation intensity and exposure, photon flux and energy flux density.
- f. LET, range of energy relationship for alpha, beta particles with X-Rays.
- g. X-ray tube: historical aspects, construction of X-ray tubes, requirements for X-ray production(Electron source, target and anode material), tube voltage, current, space charge, early X-ray tubes(Coolidge tubes, tube envelop and housing) cathode assembly, X-ray production efficiency, advances in X-ray tubes, anode angulation and rotating tubes-line focus principle-space charge effect, tube cooling-Modern X-ray tubes-stationary anode, rotating anode, grid controlled X-ray tubes, heel effect, off focus radiation, tube insert and housing-Tube rating-Quality and intensity of x-rays-factors influencing them.

#### Unit-5

- a) Grid controlled and high speed tubes, focal spot size, speed of anode rotation, target angle, inherent filtration, radiation leakage and scattered radiation). Interlocking and X-ray tube overload protection.
- b) Heat dissipation methods, tube rating, heat units, operating conditions and maintenance and Q.A procedures.
- c) Filament current and voltage, X-ray circuits (primary circuit, auto transformer), types of exposure switch and timers, principle of automatic exposure control (AEC) and practical operation, filament circuit, high voltage circuits, half wave, full wave rectification, three phase circuits. Types of generators, 3 phase, 6 and 12 pulse circuits-high frequency generators-falling load generators, Capacitors discharge and grid control systems.
- d) X-ray generator circuits: Vacuum tube diodes-semi-conductor diodes-transistor-Rectification-half and full wave- self rectification-X-ray generator; filament circuit-kilo Voltage circuit-single phase generator-three phase generator-constant potential generator-Fuses, switches and interlocks-Exposure switching and timers-HT cables- earthing.
- e) Physical quantity, its unit and measurement: Fundamental and derived quantity, SI unit, various physical/radiation quantity used in Diagnostic Radiology and its unit (for example, KVp, mA, mAS, Heat unit (HU).
- f) Radiation quantities and units: Radiation intensity-exposure, roentgen, its limitations-kerma and absorbed dose- electronic equilibrium-rad, gray, conversion factor for roentgen to rad-quality factor-dose equivalent-rem, Sievert. Quality factor, dose equivalent, relationship between absorbed dose and equivalent dose.
- g) Radiation detection and measurements: Principle of radiation detection-Basic principles of ionization chambers, proportional counters, G.M counters and scintillation detectors. Measuring system: free ionization chamber- thimble ion chamber-condenser chamber-

secondary standard dosimeter-film dosimeter-chemical dosimeter- Thermo Luminescent Dosimeter-  
Pocket dosimeter.

<b>JECRC UNIVERSITY</b> School of Allied Health Sciences	<b>Program</b> <u><b>B.Sc. Radiation and Imaging Technology</b></u> <u><b>(BRIT)</b></u>			<b>Semester: 3</b>
<b>Course</b> <b>Radiographic and Image</b> <b>Processing Techniques</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA015A</b>

**COURSE OBJECTIVE-** Student should learn how the Radiographic and Image Processing Techniques are using in investigation purpose.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Learn about Radiographic Film, Sensitometer and Control of scattered radiation
<b>CO 2</b>	Learn about Intensifying screens, Cassettes and Photochemistry
<b>CO 3</b>	Students able to learn Automatic and manual Film Processor
<b>CO 4</b>	Factors affecting Image Quality, Presentation of radiographs-opaque and Monitor images
<b>CO 5</b>	Learn about processing room and dark room planning

#### Unit-1

1. Appreciation and application of all the factors listed below will enable the student/technologist to produce X-ray films of good quality and diagnostic value. The lectures to be linked with practical demonstration to illustrate the importance of all that goes to make up correct exposure conditions.
2. Radiographic Film: Structure of film emulsion-film characteristics (speed, base + fog, gamma, latitude)-effect of grain size on film response to exposure, interpretation of characteristics curve-Grain technology-Gelatin-Basic film types-Film formats and packing-Direct exposure duplitised films-Single coated emulsions-Films for specialized use-manufacturing process. Structure, properties of different parts, handling, film wrappings. Handling of exposed and unexposed films. Types, applications, advantages/limitations of different types, safe light requirements.

#### Unit-2

1. Intensifying screens: Structure and functions, common phosphors used-types, screen mounting, care and maintenance of film screen contact. Intensifying factor-speed and detail-cross-over effect-resolution-mottle- reciprocity-screen asymmetry-cleaning. New phosphor technology-influence of kilo voltage. Photo-stimulable phosphor Imaging.
2. Cassettes: Structure and function-Types-single, gridded, film holder-Design features and consideration with loading/unloading-Care and maintenance (cleaning).

#### Unit-3

1. Processing: manual processing-care of processing equipment-automatic processor-manual VS automatic processing-principles and typical equipment Microprocessor controlled-Cine processing-Daylight systems- Processing faults-maintenance.
2. Radiographic image-components of image quality-unsharpness in radiographic image-contrast of the radiographic image-distinctness of the radiographic image-size, shape and spatial relationships.

#### Unit-4

1. Factors affecting Image Quality: Meaning of radiographic image contrast, density, resolution, sharpness, magnification and distortion of image, noise and blur. Radiographic illuminators and viewing conditions, visual acuity and resolution.
2. Presentation of radiographs-opaque letters and markers-Identification of dental films-preparation of stereo radiographs-viewing conditions.
3. Monitor images-Characteristics of the video image-television camera-imaging camera. Laser-light and laser-laser imaging-laser imagers-imaging plates-Dry cameras.

## Unit-5

1. Photochemistry: Principles: Acidity, alkalinity, pH, the processing cycle, development, developer solution. Fixing, fixer solution, washing, drying replenishment, checking and adjusting-latent image formation--nature of development-constitution of developer-development time-factors in the use of developer. Fixers-constitution of fixing solution-factors affecting the fixer-replenishment of fixer-silver conservation-Drying-developer and fixer for automatic film processor-rinsing-washing and drying. Replenishment rates in manual and automatic processing-Silver recovery-Auto and manual chemicals.
2. Sensitometer: Photographic density-characteristic curve-information from the characteristic curve-speed Vs definition. Storage of X-ray film

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Clinical Radiography-</b> <b>Positioning Part-1</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA016A</b>

**COURSE OBJECTIVE-** Student should learn Clinical Radiography Positioning of various musculoskeletal parts

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Clinical Radiography Position of upper limb, lower limb, scoliosis and kyphosis and other disorders and deformities
<b>CO 2</b>	Clinical Radiography Position of metabolic bone diseases, skull and congenital deformities
<b>CO 3</b>	Learn about Dental Radiography and upper respiratory system
<b>CO 4</b>	Lungs, Mediastinum and Abdominal viscera
<b>CO 5</b>	Learn Radiography using mobile X-ray equipment at bed side

### Unit-1

- Upper limb: Technique for hand, fingers, thumb, wrist joint carpal bones, forearm, elbow joint, radio ulnar joints and humerus supplementary techniques for the above. E.g. Carpal tunnel view, ulnar groove, head of the radius, supracondylar projections.
- Lower limb: Technique for foot, toes, great toe, tarsal bones, calcaneum, ankle joint, lower leg, knee, patella & femur. Supplementary techniques: Stress view for torn ligaments,
- Subtalar joint and talo calcaneal joint.
- Inter condylar projection of the knee.
- Tibial tubercle.
- Length measurement technique.
- Shoulder girdle and thorax: Technique for shoulder joint, scapular, clavicle, acromio clavicular joints, sternum, ribs, sterno-clavicular joint. Supplementary projections and techniques
- Recurrent dislocation of shoulder.
- Traumatic dislocation of shoulder.
- Cervical ribs.
- Vertebral column: Technique for atlanto-occipital joint, cervical spine, cervico thoracic spine, thoracic spine, thoraco-lumbar spine, lumbo sacral spine, sacrum and coccyx. Supplementary techniques to demonstrate:
  - Scoliosis
  - Kyphosis
  - Spondylolisthesis
  - Disc lesion
  - Union of spinal graft

### Unit-2

- Pelvic girdle and hip region: Technique for whole pelvis. Ilium, ischium, pubic bones, sacro iliac joint, symphysis pubis, hip joint, acetabulum neck of femur, greater and lesser trochanter. Supplementary techniques-
- Congenital dislocation of hips
- Epiphysis of femur
- Lateral projections for hip joints to show femoral head and neck relationship.
- Skeletal survey: Skeletal survey for metabolic bone disease, metastases, hormonal disorder, renal disorders.

f) Skull: Basic projections for cranium, facial bones, nasal bones and mandible. Technique for

- g) Petrous temporal for mastoids. Internal auditory canal. - Accessory nasal sinuses.
- h) Temporo - mandibular joint. - Orbits and optic foramen.- Zygomatic arches.
- i) Styloid process. - Pituitary fossa. - Jugular foramen.

### Unit-3

- a) Dental Radiography- Technique for intra oral full mouth.- Occlusal projections.- Extra oral projections including orthopantomography.- Supplementary techniques.
- b) Upper respiratory system- Technique for post nasal airways, larynx, trachea, thoracic inlet, Valsalva manoeuvre. -Phonation.

### Unit-4

- a) Lungs and Mediastinum: Technique for routine projections- Supplementary projections: Antero-posterior, obliques, lordotic, apical projection, use of penetrated postero-anterior projection. - Expiration technique. - Technique for pleural fluid levels and adhesions.
- b) Abdominal viscera- Technique for plain film examination. - Projection for acute abdomen patients. - Technique to demonstrate: Foreign bodies, Imperforate anus.

### Unit-5

Radiography using mobile X-ray equipment- Radiography in the ward: Radiography in the specialized unit, such as: Intensive care unit, Coronary care, Neonatal unit.- Radiography in the operating theatre.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Clinical Radiography-</b> <b>Positioning Part-1 Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BRA017A</b>

**COURSE OBJECTIVE-** Student should learn practical positioning of different body parts to enrich clinical practice. Radiographic positioning of all parts of the body as mentioned theory syllabus with course code BRA016A

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Law &amp; Ethics</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA018A</b>

**COURSE OBJECTIVE-** Legal and ethical considerations are firmly believed to be an integral part of medical practice in planning patient care. Advances in medical sciences, growing sophistication of the modern society's legal framework, increasing awareness of human rights and changing moral principles of the community at large, now result in frequent occurrences of healthcare professionals being caught in dilemmas over aspects arising from daily practice.

Medical ethics has developed into a well based discipline which acts as a "bridge" between theoretical bioethics and the bedside. The goal is "to improve the quality of patient care by identifying, analyzing, and attempting to resolve the ethical problems that arise in practice". Radiation and Imaging technicians are bound by, not just moral obligations, but also by laws and official regulations that form the legal framework to regulate medical practice. Hence, it is now a universal consensus that legal and ethical considerations are inherent and inseparable parts of good medical practice across the whole spectrum. Few of the important and relevant topics that need to focus on are as follows:

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Students able to learn Introduction and Code of conduct Medical ethics
<b>CO 2</b>	Learn about Basic principles and Malpractice and negligence
<b>CO 3</b>	Learn about consent and right of patient
<b>CO 4</b>	Learn about organ transplant and Medico legal aspects of medical record
<b>CO 5</b>	Professional Indemnity insurance policy and informed consent

#### **Unit-1**

1. Medical ethics - Definition - Goal - Scope
2. Introduction to Code of conduct

#### **Unit-2**

1. Basic principles of medical ethics – Confidentiality
2. Malpractice and negligence - Rational and irrational drug therapy

#### **Unit-3**

1. Autonomy and informed consent - Right of patients
2. Care of the terminally ill- Euthanasia

#### **Unit-4**

1. Organ transplantation
2. Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.

#### **Unit-5**

1. Professional Indemnity insurance policy
2. Development of standardized protocol to avoid near miss or sentinel events
3. Obtaining an informed consent.

#### 4. Ethics in the profession of Radiation and Imaging Technology

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Professional values</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA019A</b>

**COURSE OBJECTIVE-** The module on professionalism will deliver the concept of what it means to be a professional and how a specialized profession is different from a usual vocation. It also explains how relevant is professionalism in terms of healthcare system and how it affects the overall patient environment.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Learn Professional values- Integrity, Objectivity, Professional competence and due care, Confidentiality
<b>CO 2</b>	Learn ethical or moral values
<b>CO 3</b>	Learn professional behavior
<b>CO 4</b>	Learn professional accountability and responsibility
<b>CO 5</b>	Learn Cultural issues in the healthcare environment and team efforts

#### **Unit-1**

Professional values- Integrity, Objectivity, Professional competence and due care, Confidentiality

#### **Unit-2**

Personal values- ethical or moral values

#### **Unit-3**

Attitude and behavior- professional behavior, treating people equally

#### **Unit-4**

Code of conduct, professional accountability and responsibility, misconduct

#### **Unit-5**

Differences between professions and importance of team efforts  
Cultural issues in the healthcare environment

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Life Skills – 1 (Personality</b> <b>Development)</b>	<b>Course</b> <b>Description</b> <b>Ability</b> <b>Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per</b> <b>Semester</b> <b>1 hours</b>	<b>Course</b> <b>Code</b> <b>DEN003A</b>

**COURSE OBJECTIVE-** To prepare the students as per the industry demands. Switching to Activity and Task based Teaching modules. To focus on the linguistic aspects in relation to life situations. Facilitating the aspects of behavioral skills in language. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields
<b>CO 2</b>	Ability to learn by doing it practically in the classroom
<b>CO 3</b>	Ability to learn by creating an environment and adapting to the environment.
<b>CO 4</b>	The ability to prepare the students as per the need of the Multi-cultural scenario around.

- UNIT 1**
- Debates / Speeches / Addressing the public / Extempore/Group Discussion
  - Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids
- UNIT 2**
- Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview
  - CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand
  - Video Interviews and Video Profiles for Job-Practice session for Online Interviews
- UNIT 3**
- Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives
- UNIT 4**
- Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report
- UNIT 5**
- Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester: 3</b>
<b>Course</b> <b>Value Education and Ethics - 1</b>	<b>Course Description</b> <b>Value added course</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>1 hours</b>	<b>Course Code</b> <b>DIN003A</b>

### **COURSE OBJECTIVES**

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to acknowledge and appreciate the ethical beauty of India
<b>CO 2</b>	Ability to incorporate the values of human lives in real life applications

### **Lessons from the Ramayana**

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

### **Lessons from the Mahabharata**

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

### **Lessons from the Upanishads**

Introduction to the Upanishads: Sruti versus Smriti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

### **Message of the Bhagavad Gita**

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

### **Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception in India – Message from Swamiji's life.

### **Life and Teachings of Spiritual Masters India**

Sri Rama, Sri Krishna, Sri Buddha, Adi Shankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

### **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian

Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Thea

#### IV-

#### SEMESTER

##### **Subjects:**

- |  |            |
|--|------------|
| 1. Modern Radiological Equipment including Physics     | 3- credit  |
| 2. Contrast & Special Radiography Procedures           | 3- credit  |
| 3. Contrast & Special Radiography Procedures-Practical | 1 - credit |
| 4. Clinical Radiography Positioning Part 2             | 3- credit  |
| 5. Clinical Radiography Positioning Part 2 Practical   | 1- credit  |
| 6. Physics of Newer Imaging Modalities                 | 3- credit  |

##### **Extra:**

- |  |           |
|--|-----------|
| 1. Life Skills - 2 (Aptitude)            | 1-credit  |
| 2. Life Skills - 2 (Aptitude)- Practical | 1- credit |
| 3. Value Education and Ethics – 2        | 1-credit  |

<b>JECRC UNIVERSITY</b> School of Allied Health Sciences	<b>Program</b> <u><b>B.Sc. Radiation and Imaging Technology</b></u> <u><b>(BRIT)</b></u>			<b>Semester:</b> <b>4th</b>
<b>Course</b> <b>Modern Radiological</b> <b>Equipment including Physics</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA020A</b>

### **Modern Radiological Equipment including Physics**

**3- credit**

- CO-1** : Special radiological equipment  
**CO-2** : Concept of tomography, stich radiography and DEXA  
**CO-3** : Concepts of computed and digital radiography  
**CO-4** : Vascular imaging equipment  
**CO-5** : Picture Archiving and Communication System.

#### **Unit-1**

**Special Radiological Equipment:** Portable and mobile x-ray units, dental x-ray machine, skull table mammographic device - Technical aspects of Mammography; High Tension Generators, x-ray tubes-their types and advancements; Accessories; Resolution; Quality control; Application and role in medicine, digital radiography equipment, digital subtraction techniques

#### **Unit-2**

**Tomography:** Body section radiography, basic principle and equipment, multi section tomography, various types of tomographic movements, Tomosynthesis, Stich radiography, Dual energy x-ray absorptionmetry (DEXA) scan.

#### **Unit-3**

**Computed radiography:** its principle, physics & equipment. Digital Radiography. Flat panel digital fluoroscopy and radiography system, Direct and indirect digital radiography and fluoroscopy systems. Digital radiography and Computed radiography its advantages, disadvantages and applications.

#### **Unit-4**

**Vascular Imaging Equipment:** Introduction, historical developments, Principle, scanned projection radiography, digital subtraction angiography, applications and definition of terms.

#### **Unit-5**

**Picture archiving and communication system (PACS);** components of PACS, HIS system, RIS System, DICOM, Application and importance.

<b>JECRC UNIVERSITY</b> School of Allied Health Sciences	<b>Program</b> <u><b>B.Sc. Radiation and Imaging Technology</b></u> <u><b>(BRIT)</b></u>			<b>Semester:</b> <b>4th</b>
<b>Course</b> <b>Contrast &amp; Special</b> <b>Radiography Procedures-</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA021A</b>

### **Contrast & Special Radiography Procedures- Theory                      3- credit**

<b>CO-1</b> : Special radiography, Responsibilities of radiographer, contrast media
<b>CO-2</b> : Gastro-intestinal tract contrast and special procedures
<b>CO-3</b> : Salivary gland, Biliary system contrast and special procedures
<b>CO-4</b> : Urinary system contrast and special procedures
<b>CO-5</b> : Soft tissue radiography, High Kv, Respiratory system.

**Note:** For each examination/Procedure; Anatomy of the region, patient preparation, clinical indication, contraindication, Contrast type must be included with detailed explanation of the procedure.

#### **Unit-1**

Introduction to the special radiography procedure, Responsibility of Radiographer during Radiological Procedures. Preparation of Patient for Different Procedures.

**Contrast Media:** Definition, classification, Adverse Reactions to Contrast Media and Patient Management, Brief introduction to Emergency Drugs in the Radiology Department

#### **Unit-2**

Gastrointestinal Tract: Fluoroscopy, general considerations, responsibility of radiographers, Barium swallow, pharynx and oesophagus, Barium meal and follow through, Barium Enema routine projections for colon and rectum, colonic activators; double contrast studies; colostomy. Special techniques for specific disease to be examined.

#### **Unit-3**

Salivary glands: – sialography, Biliary system: Plain film radiography, Intravenous cholangiography, Percutaneous cholangiography, Endoscopic retrograde cholangio-pancreatography (ERCP), Operative cholangiography, post-Operative cholangiography (T - tube Cholangiography).

#### **Unit-4**

Urinary system: Intravenous urography, Retrograde pyelography, Antegrade pyelography, Cystography and micturating cystourethrography, Urethrography (ascending), Female reproductive system: Hysterosalpingography. Microradiography.

#### **Unit-5**

Soft Tissue Radiography: High and low kilo voltage technique; differential filtration. Uses of soft tissue radiography.

Respiratory system: Bronchography

High kV Radiography: General principles, Relation to patient dose, Change in radiographic contrast. Scatter elimination; beam collimation; grid ratio. Speed and type of grid movement. Radiographic factor; application and uses.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester:</b> <b>4th</b>
<b>Course</b> Contrast & Special Radiography Procedures- Practical	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BRA022A</b>

**Contrast & Special Radiography Procedures- Practical      1- credit**

#### **Course Outcome**

- Student will be able to understand All the procedure mentioned in the theory.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>4th</b>
<b>Course</b> <b>Clinical Radiography</b> <b>Positioning Part 2 – Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BRA024A</b>

**Clinical Radiography Positioning Part 2 – Practical                      1- credit**

**Course Outcome**

- Student will be able to understand All the procedure mentioned in the theory.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester: 4th</b>
<b>Course</b> <b>Physics of Newer Imaging Modalities</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BRA025A</b>

### Physics of Newer Imaging Modalities

**3- credit**

<b>CO-1</b> : Computed Tomography
<b>CO-2</b> : Magnetic Resonance Imaging
<b>CO-3</b> : Ultrasonography, Digital Radiography
<b>CO-4</b> : Fusion Imaging.
<b>CO-5</b> : Digital Mammography

#### Unit-1

Computed Tomography its principle, various generations and advancements

#### Unit-2

Magnetic Resonance Imaging- its principle, advancements and applications.

#### Unit-3

Ultrasonography, Color Doppler- its principle, advancements and applications. Digital Radiography and Digital subtraction angiography equipment- principle, advancements and applications.

#### Unit-4

Fusion Imaging including PET-CT, PET- MRI.

#### Unit-5

Digital Mammography: CR mammography, DR mammography, Tomosynthesis, COMPUTED TOMOGRAPHY LASERMAMMOGRAPHY (CTLM)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Radiation and Imaging Technology</u></b> <b><u>(BRIT)</u></b>			<b>Semester:</b> <b>4th</b>
<b>Course</b> <b>Value Education and Ethics -</b> <b>2</b>	<b>Course</b> <b>Description</b> Value Added course	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>1 hours</b>	<b>Course</b> <b>Code</b> <b>DIN004A</b>

### Course Objectives

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

### Course Outcomes (CO):

**At the end of this course students will have:**

- CO1: Ability to acknowledge and appreciate the ethical beauty of India  
CO2: Ability to incorporate the values of human lives in real life applications

### Yoga and Meditation

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanjali's Yoga Sutra and Ashtanga Yoga. The coverage also includes the effect of yoga on integrated personality development. **Rajasthan Mural Arts and Paintings**

Mural painting is an offshoot of the devotional tradition in Rajasthan. A mural is any piece of artwork painted or applied directly on a wall, ceiling or other large permanent surface. In the contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Rajasthani mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples, principally in Rajasthan. Ancient temples and tourists places in different States of Rajasthan, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

### Course on Organic Farming and Sustainability

Organic farming is emerging as an important segment of human sustainability and healthy life. 'Haritamritam' is an attempt to empower the youth with basic skills in tradition of organic farming and to revive the culture of growing vegetables that one consumes, without using chemicals and pesticides. Growth of Agriculture through such positive initiatives will go a long way in nation development. It is a big step in restoring the lost harmony of nature.

### Benefits of Indian Medicinal Systems

Indian medicinal systems are one of the most ancient in the world. Even today society continues to derive enormous benefits from the wealth of knowledge in Ayurveda of which is recognised as a viable and sustainable medicinal tradition. This course will expose students to the fundamental principles and philosophy of Ayurveda and other Indian medicinal traditions.

### Traditional Fine Arts of India

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is ‘Únity in Diversity” and it has led to the most diverse expressions of culture in India. Most art forms of India are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

### **Science of Worship in India**

Indian mode of worship is unique among the world civilisations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realisation of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India

### **Insights into Indian Classical Music**

The course introduces the students into the various terminologies used in Indian musicology and their explanations, like Nadam, Sruti, Svaram – svara nomenclature, Stayi, Graha, Nyasa, Amsa, Thala,- Saptatalas and their angas, Shadangas, Vadi, Samavadi, Anuvadi. The course takes the students through Carnatic as well as Hindustani classical styles.

### **Insights into Traditional Indian Painting**

The course introduces traditional Indian paintings in the light of ancient Indian wisdom in the fields of aesthetics, the Shadanga (Six limbs of Indian paintings) and the contextual stories from ancient texts from where the paintings originated. The course introduces the painting styles such as Madhubani, Kerala Mural, Pahari, Cheriya, Rajput, Tanjore etc.

### **Insights into Indian Classical Dance**

The course takes the students through the ancient Indian text on aesthetics the Natyasastra and its commentary the Abhinava Bharati. The course introduces various styles of Indian classical dance such as Bharatanatyan, Mohiniyattom, Kuchipudi, Odissi, Katak etc. The course takes the students through both contextual theory as well as practice time.

### **Indian Martial Arts and Self Defense**

The course introduces the students to the ancient Indian system of self-defense and the combat through various martial art forms and focuses more on traditional Kerala’s traditional Kalari Payattu. The course introduces the various exercise technique to make the body supple and flexible before going into the steps and techniques of the martial art. The advanced level of this course introduces the technique of weaponry.

### **Social Awareness Campaign**

The course introduces the students into the concept of public social awareness and how to transmit the messages of social awareness through various media, both traditional and modern. The course goes through the theoretical aspects of campaign planning and execution.

### **Organic Farming in Practice**

Organic agriculture is the application of a set of cultural, biological, and mechanical practices that support the cycling of farm resources, promote ecological balance, and conserve biodiversity. These include maintaining and enhancing soil and water quality; conserving wetlands, woodlands, and

wildlife; and avoiding use of synthetic fertilizers, sewage

sludge, irradiation, and genetic engineering. This factsheet provides an overview of some common farming practices that ensure organic integrity and operation sustainability.

### **Ayurveda for Lifestyle Modification**

Ayurveda aims to integrate and balance the body, mind, and spirit which will ultimately leads to human happiness and health. Ayurveda offers methods for finding out early stages of diseases that are still undetectable by modern medical investigation. Ayurveda understands that health is a reflection of when a person is living in harmony with nature and disease arises when a person is out of harmony with the cycles of nature. All things in the universe (both living and non-living) are joined together in Ayurveda. This leaflet endow with some practical knowledge to rediscover our pre-industrial herbal heritage.

### **Life Style and Therapy using Yoga**

Yoga therapy is the adaptation of yogic principles, methods, and techniques to specific human ailments. In its ideal application, Yoga therapy is preventive in nature, as is Yoga itself, but it is also restorative in many instances, palliative in others, and curative in many others. The therapeutic effect comes to force when we practice daily and the body starts removing toxins and the rest is done by nature.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce. Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, Marshal Arts etc. the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credit**

### **Course Objectives**

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

### **Course Outcomes (CO):**

**At the end of this course students will have:**

- CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.
- CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.
- CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

## Syllabus: Theory

<b>UNIT 1</b>	<b>Number System:</b> a. Number system b. Power cycle c. Remainder cycle d. Factors, Multiples e. HCF and LCM
<b>UNIT 2</b>	<b>Data Arrangements and Blood Relations:</b> a. Linear Arrangement b. Circular Arrangement c. Multi-dimensional Arrangement d. Blood Relations
<b>UNIT 3</b>	<b>Time and Work:</b> a. Work with different efficiencies b. Pipes and cisterns c. Work equivalence d. Division of wages
<b>UNIT 4</b>	<b>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</b> a. Coding and Decoding b. Series c. Analogy d. Odd Man Out e. Visual Reasoning
<b>UNIT 5</b>	<b>Percentages, Simple Interest and Compound Interest:</b> a. Percentages as Fractions and Decimals b. Percentage Increase / Decrease c. Simple Interest d. Compound Interest e. Relation Between Simple and Compound Interest
<b>UNIT 6</b>	<b>Permutation, Combination and Probability:</b> a. Fundamental Counting Principle b. Permutation and Combination c. Computation of Permutation d. Circular Permutations e. Computation of Combination f. Probability
<b>UNIT 7</b>	<b>Data Interpretation and Data Sufficiency:</b> a. Data Interpretation – Tables b. Data Interpretation - Pie Chart c. Data Interpretation - Bar Graph d. Data Sufficiency

<b>UNIT 8</b>	<b>Profit and Loss, Partnerships and Averages:</b> <ul style="list-style-type: none"> <li>a. Basic terminologies in profit and loss</li> <li>b. Partnership</li> <li>c. Averages</li> <li>d. Weighted average</li> <li>e. Mixtures and allegations</li> </ul>

**SEMESTER**

**Subjects:**

- |  |           |
|--|-----------|
| 1. Newer Imaging Techniques including Patient Care-Theory              | 4- credit |
| 2. Newer Imaging Techniques including Patient Care-Practical           | 1- credit |
| 3. Quality Control in Radiology and Radiation Safety: Part-1           | 4- credit |
| 4. Quality Control in Radiology and Radiation Safety: Part-1 Practical | 1- credit |
| 5. Cross Sectional Anatomy and Physiology.                             | 4- credit |
| 6. Cross Sectional Anatomy and Physiology. Practical                   | 1- credit |
| 7. Physics of Advanced Imaging Technology                              | 4- credit |

- Directed clinical education – I (Clinical Posting/Studentship)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			<b>Semester:</b> <b>5th</b>
<b>Course</b> <b>Newer Imaging Techniques</b> <b>including Patient Care-</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BRA026A</b>

### **Newer Imaging Techniques including Patient Care- Theory 4- credit**

<b>CO-1</b> : Introduction to Interventional Radiography
<b>CO-2</b> : Interventional radiological procedures of Angiography and CNS
<b>CO-3</b> : Interventional radiological procedures of Venography
<b>CO-4</b> : Hospital organisation procedure, infection
<b>CO-5</b> : Care of patient, first aid.

#### **UNIT-1**

Interventional Radiography: Basic angiography and DSA: History, technique, patient care, Percutaneous catheterisation, catheterization sites, Asepsis, Guidewire, catheters, pressure injectors, accessories, Use of digital subtraction- single plane and bi-plane.

#### **UNIT-2**

Angiography: Carotid Angiography (4 Vessel angiography), Thoracic and Arch Aortography, Selective studies: Renal, SMA, Coeliac axis, Vertebral angiography, Femoral arteriography, Angiocardiography  
Central Nervous System: Myelography. Ventriculography. Arthrography.

#### **UNIT-3**

Venography: Peripheral venography, Cerebral venography, Inferior and superior vena-cavography, Relevant visceral phlebography

Cardiac catheterization procedures: PTCA, BMV, CAG, Pacemaker, Electrophysiology

#### **UNIT-4**

Hospital procedure: Hospital staffing and organization; records relating to patients and departmental statistics; professional attitude of the technologist to patients and other members of the staff; medico- legal aspects; accidents in the departments, appointments.

Infection: Universal precautions, hospital acquired infections- HIV, Hepatitis B, C, and MRSA etc.  
Principles of asepsis: Sterilization - methods of sterilization; use of central sterile supply department;

#### **UNIT-5**

Care of the patient : FIRST contact with patients in the department; management of chair and stretcher patients and aids for this, management of the unconscious patient; elementary hygiene; personal cleanliness; hygiene in relation to patients (for example clean linen and receptacles , nursing care; temperature pulse and respiration; essential care of the patient who has a tracheostomy; essential care of the patient who has a colostomy; bedpans and urinals; simple application of a sterile dressing.

First aid: Aims and objectives of first aid; wounds and bleeding, dressing and bandages; pressure and splints, supports etc. Shock; insensibility; asphyxia; convulsions; resuscitation, use of suction apparatus, drug reactions; prophylactic measures; administration of oxygen; electric shock; burns; scalds; hemorrhage; pressure points; compression band. Fractures; splints, bandaging; dressing, foreign bodies; poisons

Drugs in the department: Storage: classification; labelling and checking, regulations regarding dangerous and other drugs; units of measurement, special drugs, anti-depressive, anti-hypertensive

etc.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			<b>Semester: 5h</b>
<b>Course</b> <b>Newer Imaging Techniques</b> <b>including Patient Care-</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BRA027A</b>

**Newer Imaging Techniques including Patient Care-Practical 1- credit**

#### **Course Outcome**

- Student will be able to understand All the procedure mentioned in the theory.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			<b>Semester:</b> <b>5th</b>
<b>Course</b> <b>Quality Control in Radiology</b> <b>and Radiation Safety: Part-1</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BRA028A</b>

### **Quality Control in Radiology and Radiation Safety: Part-1 4- credit**

<b>CO-1</b> : Quality control and assurance; objectives and program
<b>CO-2</b> : QA tests, maintenance and care of equipment
<b>CO-3</b> : Radiation quantities, units and measurements and Radiation detection and Measurements
<b>CO-4</b> : Biological effects of radiation.
<b>CO-5</b> : Radiation protection, ALARA concepts and awareness.

### **UNIT-1**

Objectives of quality Control: Improve the quality of imaging thereby increasing the diagnostic value; to reduce the radiation exposure; Reduction of film wastage and repeat examination; to maintain the various diagnostic and imaging units at their optimal performance.

Quality assurance activities: Equipment selection phase; Equipment installation and acceptance phase; Operational phase; Preventive maintenance.

Quality assurance programme at the radiological faculty level: Responsibility; Purchase; Specifications; Acceptance; Routine testing; Evaluation of results of routine testing; Quality assurance practical exercise in the X ray generator and tube; Image receptors from processing; Radiographic equipment; Fluoroscopic equipment; Mammographic equipment; Conventional tomography; Computed tomography; Film processing, manual and automatic; Consideration for storage of film and chemicals; Faults tracing; Accuracy of imaging- image distortion for digital imaging devices. LASER printer calibration

### **UNIT-2**

Quality assurance programme tests: General principles and preventive maintenance for routine, daily, weekly, monthly, quarterly, annually – machine calibration. Basic concepts of quality assurance – LASER printer - Light beam alignment; X-ray out-put and beam quality check; KVp check; Focal spot size and angle measurement; Timer check; mAs test; Grid alignment test; High and low contrast resolutions; Mechanical and electrical checks; Cassette leak check; Proper screen-film contact test; Safe light test; Radiation proof test; Field alignment test for fluoroscopic device; Resolution test; Phantom measurements - CT, US and MRI.

Maintenance and care of equipment: Safe operation of equipment; Routine cleaning of equipment and instruments; Cassette, screen maintenance; Maintenance of automatic processor and manual processing units; Routine maintenance of equipment; Record keeping and log book maintenance; Reject analysis and objectives of reject analysis programme.

### **UNIT-3**

Radiation Quantities and Units: Radiation- Radioactivity- Sources of radiation – natural radioactive sources -cosmic rays' terrestrial radiation - - man made radiation sources. Units of radiation - Quality factor - Flux- Fluence-Kerma- Exposure- Absorbed dose- Equivalent Dose- Weighting Factors-Effective Dose - Occupational Exposure Limits - Dose limits to public.

Radiation detection and Measurements: Advantages & disadvantages of various detectors & its appropriateness of different detectors for different type of radiation measurement. Dose and Dosimetry, CT Dose Index (CTDI, etc.), Multiple Scan Average Dose (MSAD), Dose Length Product (DLP), Dose Profile, Effective Dose, Phantom Measurement Methods, Dose for Different Application Protocols, Technique Optimization. Dose area.

#### UNIT-4

Biological Effects of radiation: Ionization, excitation and free radical formation, hydrolysis of water, action of radiation on cell-Chromosomal aberration and its application for the biological dosimetry- Effects of whole body and acute irradiation, dose fractionation, effects of ionizing radiation on each of major organ system including foetus -Somatic effects and hereditary effects- stochastic and deterministic effects-Acute exposure and chronic exposure-LD50 - factors affecting radio sensitivity. Biological effects of non-ionizing radiation like ultrasound, lasers, IR, UV and magnetic fields.

#### UNIT-5

Radiation protection: Radiation protection of self and patient- Principles of radiation protection, time - distance and shielding, shielding - calculation and radiation survey

ALARA- personnel dosimeters (TLD and film batches) - occupational exposure.

Radiation Hazard evaluation and control: Philosophy of Radiation protection, effects of time, Distance & Shielding. Calculation of Work load, weekly calculated dose to radiation worker & General public good work practice in Diagnostic Radiology. Planning consideration for radiology, including Use factor, occupancy factors, and different shielding material.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Radiography and Imaging Technology (BRIT)</b>			<b>Semester:</b> <b>5th</b>
<b>Couse</b> <b>Quality Control in Radiology</b> <b>and Radiation Safety: Part-</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BRA029A</b>

**Quality Control in Radiology and Radiation Safety: Part-Practical      1-credit**

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>5th</b>
<b>Course</b> <b>Cross Sectional Anatomy and</b> <b>Physiology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BRA030A</b>

#### Course Outcome

- Student will be able to understand All the procedure mentioned in the theory.

#### Cross Sectional Anatomy and Physiology.

4- credit

<b>CO-1</b> : Introduction to sectional anatomy.
<b>CO-2</b> : Sectional Anatomy of upper thorax, mid thorax, heart and oesophagus.
<b>CO-3</b> : CT/MRI Images of the Thorax
<b>CO-4</b> : Sectional anatomy of reproduction system.
<b>CO-5</b> : Neuro anatomy CT/MR

#### UNIT-1

Introduction to Sectional Anatomy & Terminology- Sectional planes, Anatomical relationships/terminology. Brief introduction to subdivisions of anatomy. Somatic and visceral parts and systems.

#### UNIT-2

Sectional Anatomy of the upper thorax- Surface anatomy relationships, Bony structures and muscles, vessels. Divisions of the mid-thorax, heart and great vessels- Lungs, heart and great vessels, Oesophagus.

#### UNIT-3

CT/MRI Images of the Thorax - Normal and pathologic Anatomy of the Abdomen- Major organs and their accessories, Abdominal blood vessels. CT/MR Images of Abdomen - Normal and pathologic. Anatomy of the Pelvis- Bony structures and associated muscles, Digestive and urinary systems

#### UNIT-4

Reproductive Organs CT/MR Images of the Male/Female Pelvis- Normal and pathological anatomy.

#### UNIT-5

Neuro Anatomy- Scan planes Brain - Cerebral hemispheres, Sinuses, Ventricles, Brainstem and associated parts, Arterial/venous systems, Basal ganglia, Cranial nerves. Spine- Vertebra and disc, Spinal cord and meninges. Neck- Arterial/venous systems, Muscles, Glands and pharynx.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>5th</b>
<b>Course</b> <b>Cross Sectional Anatomy and</b> <b>Physiology. Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BRA031A</b>

#### Cross Sectional Anatomy and Physiology. Practical

1- credit

#### Course Outcome

- Student will be able to understand All the procedure mentioned in the theory.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>5th</b>
<b>Course</b> <b>Physics of Advanced Imaging</b> <b>Technology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BRA032A</b>

### Physics of Advanced Imaging Technology

4- credit

<b>CO-1</b> : Basic Computed tomography, instrumentation and image formation
<b>CO-2</b> : Advanced computed tomography
<b>CO-3</b> : Advance MRI principle and sequences
<b>CO-4</b> : MRI instrumentation, image formation and contrast
<b>CO-5</b> : Ultrasound

#### UNIT-1

Basic Computed Tomography- Basic principles of CT, generations of CT, CT instrumentation, image formation in CT, CT image reconstruction, Hounsfield unit, CT image quality, CT image display

#### UNIT-2

Advanced Computed Tomography, Helical CT scan: Slip ring technology, advantages, multi detector array helical CT, cone – beam geometry, reconstruction of helical CT images, CT artifact, CT angiography, CT fluoroscopy, HRCT, post processing techniques: MPR, MIP, Min IP, 3D rendering: SSD and VR, CT Dose, patient preparation, Imaging techniques and protocols for various parts of body.

#### UNIT-3

Introduction to Advanced technique of MRI, Basic Principles: Spin precession – relaxation time – pulse cycle – T1 weighted image – T2 weighted image – proton density image.

Pulse sequence: Spin echo pulse sequence – turbo spin echo pulse sequence - Gradient echo sequence – Turbo gradient echo pulse sequence – Inversion recovery sequence – STIR sequence – SPIR sequence – FLAIR sequence – Echo planar imaging – Advanced pulse sequences.

#### UNIT-4

MR Instrumentation: Types of magnets – RF transmitter – RF receiver – Gradient coils – shim coils – RF shielding – computers. Image formation: 2D Fourier transformation method – K-space representation – 3D Fourier imaging – MIP.

MR contrast media – MR angiography – TOF & PCA – MR Spectroscopy – functional MRI

#### UNIT-5

Ultrasonography Basic Acoustics, Ultrasound terminologies: acoustic pressure, power, intensity, impedance, speed, frequency, dB notation: relative acoustic pressure and relative acoustic intensity. Interaction of US with matter: reflection, transmission, scattering, refraction and absorption, attenuation and attenuation coefficients, US machine controls, US focusing.

Production of ultrasound: Piezoelectricity, Medical ultrasound transducer: Principle, construction and working, characteristics of US beam. Ultrasound display modes: A, B, M

Real-time ultrasound: Line density and frame rate, Real-time ultrasound transducers: mechanical and

electronic arrays,ultrasound artifacts, ultrasound recording devices, and Distance, area & volume measurements.

Techniques for imaging different anatomic areas, ultrasound artifacts, biological effects and safety. Doppler Ultrasound- Patient preparation for Doppler, Doppler artifacts, vascular sonography

**Directed clinical education – I (Clinical Posting/Studentship)**

Students will gain additional skills in clinical procedures, interaction with patients and professional personnel. Students apply knowledge from previous clinical learning experience under the supervision of a radiologist or senior technologist Students are tested on intermediate clinical radiological skills

**Subjects:**

- |  |           |
|--|-----------|
| 1. Radiographic Techniques in Advanced Imaging Technology-Theory     | 4- credit |
| 2. Radiographic Techniques in Advanced Imaging Technology -Practical | 1- credit |
| 3. Regulatory Requirements in Diagnostic Radiology                   | 4- credit |
| 4. Quality Control in Radiology and Radiation Safety: Part-2         | 4- credit |
| 5. Quality Control in Radiology and Radiation Safety-2 Practical     | 1- credit |
| 6. Hospital Practice and Care of Patient                             | 3- credit |
| 7. Research Methodology  | 3- credit |
| 8. Seminars, Journal Clubs and Group Discussions                     | 3- credit |
- 
- Directed clinical education – II (Clinical Posting/Studentship)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>
<b>Course</b> <b>Radiographic Techniques in</b> <b>Advanced Imaging</b> <b>Technology-Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA035A</b>

### **Radiographic Techniques in Advanced Imaging Technology-Theory 3- credit**

<b>CO-1</b> : CT scan studies
<b>CO-2</b> : Ultrasonography, Doppler studies
<b>CO-3</b> : MR imaging methods
<b>CO-4</b> : <b>MRI for</b> Musculoskeletal imaging
<b>CO-5</b> : Additional MR techniques, advances and special procedures

#### **UNIT-1**

CT scan studies acquisition/ protocols /techniques: CT of head and neck – thorax – abdomen – pelvis – Musculo skeletal system – spine – PNS. Anatomy – clinical indications and contraindications – patient preparation – technique.

CT contrast enhanced protocols – CT angiography – (Aortogram, selective angiogram head, neck and peripheral) image documentation and Filing, maintenance of equipment and accessories.

contrast media-types, dose, injection technique; timing, sequence - image display – patient care – utilization of available techniques & image processing facilities to guide the clinician- CT anatomy and pathology of different organ systems.

#### **UNIT-2**

Ultrasonography/ Doppler studies: Techniques of sonography-selection- Preparations - instructions and positioning of patient for TAS, TVS, TRUS, neck USG and extremities.

patient care and maintenance protocols clinical applications display methods –quality image reproducible extend – biopsy procedures, assurance to patients.

#### **UNIT-3**

MRI Scanners: Methods of MRI imaging methods – Head and Neck, Thorax, Abdomen.

#### **UNIT-4**

MRI-Musculoskeletal System imaging - Clinical indications and contraindications- types of common sequences effects of sequence on imaging - Protocols for various studies- slice section- patient preparation-positioning of the patient -patient care-calibration. paramagnetic agents and dose,

#### **UNIT-5**

Additional techniques and recent advances in MRI - image acquisition-modification of procedures in an unconscious or un co-operative patient - plain studies- contrast studies,

special procedures- reconstructions- 3D images- MRS blood flow imaging,

diffusion/perfusion scans - strength and limitations of MRI- role of radiograph

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>

### **Radiographic Techniques in Advanced Imaging Technology-Practical 1- credit**

#### **Course Outcome**

- Student will be able to understand All the procedure mentioned in the theory.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>
<b>Course</b> <b>Regulatory Requirements in</b> <b>Diagnostic Radiology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA037A</b>

**Regulatory Requirements in Diagnostic Radiology                      3- credit**

<b>CO-1</b> : Radiation Regulatory Bodies
<b>CO-2</b> : Responsibilities and safety standards
<b>CO-3</b> : Role of Radiographer in QA
<b>CO-4</b> : Specification for site planning-AERB
<b>CO-5</b> : International and domestic guidelines for radiation protection

**UNIT-1**

Regulatory Bodies & regulatory Requirements: International Commission on Radiation Protection (ICRP) / National Regulatory body (AERB - Atomic Energy Regulatory Board).

**UNIT-2**

Responsibilities, organization, Safety Standard, Codes and Guides, Responsibilities of licenses, registrants & employers and Enforcement of Regulatory requirements.

**UNIT-3**

Role of Radiographer in Planning, QA & Radiation Protection: Role of technologist in radiology department - Personnel and area monitoring. Setting up of a new X-Ray unit, staff requirement.

**UNIT-4**

AERB specifications for site planning and mandatory guidelines – Planning of X-ray rooms, dark rooms – Inspection of X-Ray installations - Registration of X-Ray equipment installation- Certification. -Evaluation of workload versus radiation factors – Occupational exposure and protection Tools/devices.

**UNIT-5**

ICRP, NRPB, NCRP and WHO guidelines for radiation protection, pregnancy and radiation protection. NABH guidelines, AERB guidelines, PNDDT Act and guideline

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>
<b>Course</b> <b>Quality Control in Radiology</b> <b>and Radiation Safety: Part-2</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BRA033A</b>

### Quality Control in Radiology and Radiation Safety: Part-2

4- credit

<b>CO-1</b> : QA for computed and digital radiography
<b>CO-2</b> : QA for computed tomography
<b>CO-3</b> : QA for MRI
<b>CO-4</b> : Ultrasound quality assurance
<b>CO-5</b> : QA and image artefact, remedies for newer imaging modalities

### UNIT-1

Quality assurance for Digital Radiography and Computed Radiography including tests and protocols.

### UNIT-2

Quality control and quality assurance for Computed Tomography, including tests and calibration protocols with maintenances.

### UNIT-3

MRI Scan; Quality assurance and quality control and safety protocol in case of emergency. Patient handling.

### UNIT-4

Ultrasonography quality assurance and maintenances. Cleanliness and PACS related.

### UNIT-5

Image artifacts in different modalities, their different types, causes and remedies, Newer Radiation safety protocols and recent advances in radiation safety including AERB guidelines.

Student should collect all the latest and updated guidelines from domestic and international radiation safety agencies.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>
<b>Course</b> <b>Quality Control in Radiology</b> <b>and Radiation Safety</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BRA034A</b>

### Quality Control in Radiology and Radiation Safety -Practical 1- credit

#### Course Outcome

Student will be able to understand All the procedure mentioned in the theory

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>
<b>Course</b> <b>Hospital Practice and Care of Patient</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BRA038A</b>

### **Hospital Practice and Care of Patient**

**3- credit**

<b>CO-1</b> : Hospital staff and administration
<b>CO-2</b> : Understanding the patient needs
<b>CO-3</b> : Vital signs and patient homeostasis
<b>CO-4</b> : Patient management in emergency
<b>CO-5</b> : Aseptic and sterile procedures

#### **UNIT-1**

Hospital staffing and administration, records, professional, ethics, co-operation with other staff and departments.

Handling of the patients, seriously ill and traumatized patients, visually impaired, speech and hearing impaired, mentally impaired, drug addicts and non-English speaking patients.

#### **UNIT-2**

Understanding patient needs - patient dignity of inpatient and out patients. Interaction with the patient's relatives and visitors. Methods of effective communication - verbal skills, body language, professional appearance, visual contact etc

#### **UNIT-3**

Vital signs and oxygen - patient's Homeostasis status. Body temp, respiratory rate, pulse, blood pressure, oxygen therapy, oxygen devices, Chest tubes and lines. First aid - shock, electrical shock, haemorrhage, burns, Asphyxia, fractures, loss of consciousness.

#### **UNIT-4**

Emergency treatment to the collapsed patient. Artificial respiration and resuscitation. Preparation of patient for general and special radiological examinations.

Supervision of patients undergoing special examination. Administration of drugs and contrast media.

#### **UNIT-5**

Aseptic and sterile procedures. Handling of infections patients in the department or in the ward. Regulation of dangerous drugs. Trolley set up for special x-ray examinations, Radiation hazardous and protective measures.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> B.Sc. Radiation and Imaging Technology (BRIT)			<b>Semester:</b> <b>6th</b>
<b>Course</b> <b>Research Methodology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BRA039A</b>

## Research Methodology

**3- credit**

- CO-1** : Accessing research literature  
**CO-2** : Understanding research design  
**CO-3** : Analysis  
**CO-4** : Clinical audit  
**CO-5** : Research Skills and Management

### UNIT-1

Accessing research literature: Use of databases and other sources

### UNIT-2

Understanding research design: Qualitative and quantitative methodologies - their differences and potential integration. Evaluating research and its potential for informing practice. Developing research questions and devising methods for their investigation. Ethical issues in research

### UNIT-3

Analysis: Analysis of qualitative and quantitative data. Utilisation of appropriate software to assist in the retrieval of information and data analysis

### UNIT-4

Clinical audit: Distinctiveness of research and audit processes and their function

### UNIT-5

Research Skills and Management: The role of evidence-based practice within health and welfare

# **JECRC University**

## **School of Allied Health Sciences**

### **Department of Medical Laboratory Technology**

### **Undergraduate Syllabus (2020)**

### **B.Sc. Medical Laboratory Technology**

**Duration: 4 Years (3 Years Classroom teaching + 1 Year Internship)**

## **PROGRAM EDUCATIONAL OBJECTIVES (PEO's)**

- **PEO 1:** Acquire comprehensive knowledge of structure and functions of human body, physiological and biochemical mechanisms involved in normal and abnormal health condition, knowledge of light microscopic and ultra structure of human specimen. Knowledge of structure and functional correlation of blood constituents with disease process and be able to communicate the same clearly and with precision. The program broadly emphasizes the following key areas Human Anatomy, Human Physiology
- **PEO 2:** Be aware of contemporary advances and developments in the field of medical laboratory sciences.
- **PEO 3:** Acquire knowledge of modern research techniques and be familiar with the recent advances in medical laboratory tests.
- **PEO 4:** Inculcate habit of scientific enquiry and be able to identify lacunae in the existing knowledge in a given area.
- **PEO 5:** Have acquired skills in interpreting the results to medical and paramedical professionals as Laboratory manager/ supervisor or health care administrator.
- **PEO 6:** Have acquired skills in effectively communicating with the students and colleagues from various medical and paramedical fields as educational consultant or laboratory coordinator etc.
- **PEO 7:** Have acquired skills of integrating laboratory tests with other disciplines of medical sciences as and when needed.

## **PROGRAM OUTCOMES (PO's) and its Attributes**

**At the end of the program, BMLT graduates will be able to...**

- **PO 1:** Apply knowledge and technical skills associated with medical laboratory technology for delivering quality clinical investigations support. Knowledge of laboratory tests: Posses theoretical and practical knowledge of the laboratory test associated with diagnosis of diseases including biochemical, pathological and microbiological test in the laboratory.
- **PO 2:** Perform routine clinical laboratory procedures within acceptable quality control parameters in hematology, biochemistry, immunochemistry and microbiology. Sample Handling: Demonstrate proper technique in the collection, handling, testing, storage and reporting of all biological specimens in the laboratory. Diagnosis: Interpret laboratory test

**JECRC<sup>TM</sup>**  
UNIVERSITY  
BUILD YOUR WORLD

data for clinical significance Quality

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302003

Assurance: Calibrate, perform quality control testing on instruments and diagnostic analyzers. Data Maintenance : Maintain the records of diagnostic lab. Ethics: Demonstrate ethical standards of the laboratory profession in relation to medical information and patient care

- **PO 3:** Demonstrate technical skills, social behavior and professional awareness for functioning effectively as a laboratory technician.
- **PO 4:** Apply problem solving techniques in identification and correction of pre analytical, post analytical & analytical variables. Thinking abilities: Utilize the principles of scientific test, thinking analytically, clearly and critically, while solving laboratory problems and making patient reports after sample
- **PO 5:** Operate and maintain laboratory equipments utilizing appropriate quality control and safety procedures. Planning abilities: Demonstrate effective planning abilities including laboratory tests timing management, resource management, delegation skills and organizational skills. Develop
- **PO 6:** Recognize the impact of laboratory tests in a global and environmental context.
- **PO 7:** Communication Skills, Indian culture, Environment studies and basics and advance computer knowledge: Apply the communication and collaboration skills, values, ethics and attitudes that will enable them to effectively deal with patients, families and medical team. Communicate effectively by oral, written and graphical means.
- **PO 8:** Function as a leader / team member in diverse professional and industrial research areas.
- **PO 9:** Apply the fundamentals of research process to complete and present research studies that enrich the field of physical therapy.
- **PO 10:** Function in an ethical and professional manner without bias against any ethnicity, race, religion, caste or gender. Professional identity: Understand, analyze and communicate the value of their professional roles in society (e.g. health care professionals, laboratory supervisors and managers). Practice professional and ethical responsibilities with high degree of credibility, integrity and social concern.
- **PO 11:** Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of medical laboratory change.

**PSO 1:** Student will be able to demonstrate the theoretical knowledge and technical skills to ensure the accuracy of laboratory test result.

**PSO 2:** Student will be able to communicate courteously and effectively with laboratory personnel, other health care professionals, patients and the public.

**PSO 3:** Student will be able to demonstrate laboratory practice standards in safety, professional behavior and ethical conduct.

**Compulsory 6 Months Rotatory Clinical Internship (8 Hours per Day)**

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

JECRC UNIVERSITY	Program	Semester: 1
------------------	---------	-------------

<b>School of Allied Health Sciences</b>	<b>B.Sc. Medical Lab Technology (BMLT)</b>			
<b>Course</b> <b>Human Anatomy-I</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML001A</b>

**COURSE OBJECTIVE-** To provide an opportunity for lab technologists who distinguish themselves in Human Anatomy - consistency, theoretical knowledge and knowledge application, to undertake research based training in Anatomy. To capture distinguished medical students and offer them such training as would enable them to sub-specialize in anatomy at an early stage of their career. To develop as research scientists and research based teachers for schools of allied health sciences both locally and externally. It also strengthens the research foundation of the students with broad vision of leading in research based teaching of anatomy and stimulates the research attitudes and aptitudes of students.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the importance of Basics of anatomy and joints
<b>CO 2</b>	Detail about muscles, lymphatic and cardiovascular system
<b>CO 3</b>	Knows the anatomical aspect of Nervous System, Skin and Fasciae, Connective Tissue, Ligaments
<b>CO 4</b>	Anatomical knowledge of Gastro-intestinal system
<b>CO 5</b>	Approach of Respiratory system

**Unit-1**

1. Introduction
2. Skeleton
3. Joints

**Unit-2**

1. Muscles
2. General Cardiovascular System
3. Lymphatic System

**Unit-3**

1. General Nervous System
2. Skin and Fasciae
3. Connective Tissue, Ligaments and Raphe

**Unit-4**

**Gastro-intestinal system-** Parts of GIT (Oesophagus, stomach, small and large intestine, liver, gall bladder, pancreas )

**Unit-5**

**Respiratory system-** Nose, nasal cavity, larynx, trachea, lungs, broncho-pulmonary segments, pleura and Names of paranasal air sinuses

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Anatomy-I</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Subject Code</b> <b>BML002A</b>

**COURSE OBJECTIVES** - It is designed to provide students with the working knowledge of the structure of the human body which is essential foundation for their clinical studies.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

To understand the importance of Basics of anatomy and joints, Identification of bones, joints and soft parts

### **PRACTICAL**

Identification and demonstration of bones, joints and soft parts

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Physiology-I</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML003A</b>

**COURSE OBJECTIVE-** To learn and understand the fundamental scientific concepts relating to a broad range of topics in human physiology. To make the students familiar with the basic factual information concerning the mechanisms and functioning of humans body system. To develop investigative skills and to become familiar with standard techniques of measurement. To help the students to gain practice and confidence in applying this knowledge, in a quantitative manner where appropriate, to actual experiments.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Understand the importance cell and nerve physiological functions
<b>CO 2</b>	Understand the important aspect of blood
<b>CO 3</b>	Get the knowledge of cardiovascular system
<b>CO 4</b>	Physiological functions of respiration and its neural control
<b>CO 5</b>	To know about Digestive system of the body

- Unit-1**
1. Cell and cell organelle Structure & function, transport across cell membrane, homeostasis, membrane potential.
  2. Structure & functions of nerve tissues, physiological properties of nerve fibres, nerve fibre types & functions.
  3. Neuromuscular junction, Difference between skeletal muscle, smooth muscle & cardiac muscle.
- Unit-2**
1. Composition & functions of blood, plasma proteins & hemoglobin.
  2. Erythrocytes, leucocytes & platelets.
  3. Blood coagulation, blood groups & immunity
- Unit-3**
1. Heart Rate, Cardiac Output, Blood Pressure & Pulse
  2. Conducting system of heart, Heart sounds & ECG.
  3. Cardiac Muscle and cardiac cycle.
- Unit-4**
1. Functions of respiratory system, airways, dead space, graph of lung volume
  2. Transport of gases
  3. Regulation of respiration & Hypoxia
- Unit-5**
1. GIT, Saliva, Mouth & Oesophagus
  2. Stomach, Pancreas, Liver & Gall Bladder
  3. Small Intestine, Large Intestine, Digestion and Absorption in GIT.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Physiology-I</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BML004A</b>

**COURSE OBJECTIVES:** The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate procedures to determine hematology findings.
<b>CO 2</b>	Recognize the abnormalities in the hematology findings

## **PRACTICAL**

### **Unit-1 Hematology:**

#### **CO-1**

- Study of Microscope and its uses
- Determination of Red Blood Corpuscle count
- Determination of White Blood Corpuscle count
- Differential leukocyte count
- Estimation of hemoglobin
- Estimation of platelets
- Absolute eosinophil count
- Reticulocyte count
- Determination of blood groups and Rh typing
- Determination of bleeding time
- Determination of clotting time

### **Unit-2 Demonstrations only**

#### **CO-2**

- Determination of Erythrocyte Sedimentation Rate
- Determination of Packed Cell Volume

JECRC UNIVERSITY	Program	Semester: 1
------------------	---------	-------------

<b>School of Allied Health Sciences</b>	<b>B.Sc. Medical Lab Technology (BMLT)</b>			
<b>Course</b> <b>Biochemistry-I Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML005A</b>

**COURSE OBJECTIVE-** This course provides the knowledge and skills in fundamental organic chemistry and introductory biochemistry that are essential for further studies. It covers basic biochemical, cellular, biological and microbiological processes, basic chemical reactions in the prokaryotic and eukaryotic cells, the structure of biological molecules, introduction to the nutrients i.e. carbohydrates, fats, enzymes, nucleic acids and amino acids.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Nutrition and its importance and requirement
<b>CO 2</b>	Functions and biochemistry of carbohydrate
<b>CO 3</b>	Functions and biochemistry of Lipid
<b>CO 4</b>	Functions and biochemistry of amino acid
<b>CO 5</b>	General characteristics of digestion and absorption carbohydrate, lipids and proteins

### **Unit-1 Nutrition**

- Introduction, Importance of nutrition Calorific values, Respiratory quotient – Definition, and its significance. BMR: Definition, factor affecting BMR Special dynamic action of food.
- Physical activities - Energy expenditure for various activities. Calculation of energy requirement of a person.
- Concept of Balanced diet and Recommended dietary allowances
- Role of carbohydrates, lipids and protein in diet
- Nutritional disorders.

## **Unit-2 Carbohydrate Chemistry**

- a) Definition, general classification of carbohydrates
- b) Composition, sources, properties and functions of carbohydrates

### **Carbohydrate Metabolism**

- a) Glycolysis, gluconeogenesis, kerb cycle and Cori cycle – General outline of cycle and introduction to enzymes involved
- b) Glycogenesis, Glycogenolysis (glycogen metabolism): General outline of cycle and introduction to enzymes involved

### **Unit-3 Lipid Chemistry**

- a) Definition, general classification and functions of lipids and fatty acids
- d) Lipoproteins: Definition, classification, properties, Sources and function
- c) introduction to ketone bodies

#### **Lipid Metabolism**

- a) Introduction to lipid metabolism, Lipolysis and lipogenesis general outline and enzymes involved
- b) General outline of beta oxidation of fatty acids

### **Unit-4 Amino-acid Chemistry**

- a) Amino acid chemistry: Definition, Classification, Peptide bonds and Biologically important peptides
- c) Protein chemistry: Definition, Classification, Functions of proteins

#### **Amino acid and Protein Metabolism**

- a) Transamination and deamination general introduction
- b) Introduction to Urea cycle

### **Unit-5 Digestion and Absorption - General characteristics of digestion and absorption, Digestion and absorption of carbohydrates, proteins and lipids. Disorders of digestion and absorption**

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Environmental Sciences-</b> <b>Theory</b>	<b>Course</b> <b>Description</b> Value added course	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course Code</b> <b>DCH001</b>

**COURSE OBJECTIVES** -To impart knowledge of fundamentals of Environmental sciences. To educate the students to make them confident and to develop the skills of Environmental protection and to increase awareness in society through education. (Problem-Solving Skills). To train the student's with appropriate combinations of old and new emerging concepts in new technologies, techniques and latest developments for their current and potential uses in their profession (Successful Career and Entrepreneurship)

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Recognize the history, structure, function, interactions and trends of key socio-environmental systems on personal, organizational and intellectual level regarding our surroundings through different media.
<b>CO 2</b>	Examine the generation of scientific knowledge and how that knowledge is presented, evaluated, framed and applied for environmental protection by conservation of Natural resources.
<b>CO 3</b>	Articulate a coherent philosophy of the environment and consider ethical bases for responding to environmental questions.
<b>CO 4</b>	Understand the role of conservation of resources and public awareness in prevention of pollution and ultimately for the sustainable development of society.
<b>CO 5</b>	Understand the social responsibility towards protection of environment and society

**Unit-1**    **T**    The Multidisciplinary Nature of Environmental Studies Definition, scope and importance need for public awareness.

**Unit-2**    **N** **Natural Resources Renewable and Non-renewable Resources**

- Natural resources and associated problems.
  - (a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
  - (b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.
  - (c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
  - (d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, Case studies.
  - (e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.
  - (f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.
- Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

### **Unit-3 Ecosystems**

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem. Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following ecosystem: (a) Forest ecosystem (b) Grassland ecosystem (c) Desert ecosystem (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

#### **Biodiversity and Its Conservation**

- Introduction, definition: genetic, species and ecosystem diversity.
- Biogeographical classification of India.
- Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

- Biodiversity at global, National and local levels.
- India as a mega-diversity nation. Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India.
- Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

#### **Unit-4 Environmental Pollution**

- Definition
- Causes, effects and control measures of
  - (a) Air pollution                      (b) Water pollution                      (c) Soil pollution                      (d) Marine pollution
  - (e) Noise pollution                      (f) Thermal pollution                      (g) Nuclear hazards
- Solid waste management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution. •Pollution case studies.
- Disaster management: Floods, earthquake, cyclone and landslides.

## **Unit-5 Social Issues and the Environment**

- From unsustainable to sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.
- Air (Prevention and Control of Pollution) Act. • Water (Prevention and Control of Pollution) Act. • Wildlife Protection Act • Forest Conservation Act.
- Issues involved in enforcement of environmental legislation. • Public awareness.

### **Human Population and the Environment**

- Population growth, variation among nations.
- Population explosion—Family Welfare Programme.
- Environment and human health.

- Human rights.

- Value education.

HIV/AIDS.

- Women and Child Welfare.
- Role of Information Technology in environment and human health.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Communication Skills-</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Ability</b> <b>Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>DEN001A</b>

## COURSE OBJECTIVES

<b>1</b>	To enhance English language competence in reading, writing, listening and speaking.
<b>2</b>	Switch the approach from teacher-centred to student-centred one.
<b>3</b>	Minimize the Grammar Translation Method of ELT while trying to replace it with direct method.
<b>4</b>	Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centered learning rather than on the teacher-centered learning.
<b>5</b>	To link communication skills with the organizational behavior
<b>6</b>	To inculcate skills that are very much required for employability and adjust in the professional Environment

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
<b>CO 2</b>	Ability to analyze the usage of English words in different contexts.

<b>CO 3</b>	An understanding of technical and academic articles' comprehension.
<b>CO 4</b>	The ability to present oneself at multinational levels knowing the type of different standards of English

**Unit-1 Basics of Organizational Communication:** Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture

**Unit-2 Writing Skills:** Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration

**Unit-3 Composition:** Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,

**Unit-4 Vocabulary Building:** Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms

**Unit-5 Professional and Technical Communication :** Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Communication Skills-</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Ability</b> <b>Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>DEN001A</b>

**Unit-1 Basics of Organizational Communication:** Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time- management, Following Deadlines etc

**Unit-2 Write Dialogue from the different contexts of corporate culture:** Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc

**Unit-3 Composition:** Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc

**Unit-4 Vocabulary Building:** Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc

**Unit-5 Professional and Technical Communication :** Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Fundamentals of</b> <b>Computer-Theory</b>	<b>Course</b> <b>Description</b> <b>Foundation</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BML006A</b>

## COURSE OBJECTIVES

The students will be able to appreciate the role of computer technology. The course has focus on computer organization, computer operating system and software, and MS windows, Word processing, Excel data worksheet and PowerPoint presentation

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Introduction to computer and Input output devices
<b>CO 2</b>	Processor and memory and Storage Devices
<b>CO 3</b>	Introduction of windows and Introduction to MS
<b>CO 4</b>	Introduction to Excel and Introduction to power-point
<b>CO-5</b>	Introduction of Operating System, Computer networks and Internet and its Applications

## Unit-1

- **Introduction to computer:** Introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.
- **Input output devices:** Input devices(keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices(monitors, pointers, plotters, screen image projector, voice response systems).

## Unit-2

- **Processor and memory:** The Central Processing Unit (CPU), main memory.
- **Storage Devices:** Sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

### Unit-3

- **Introduction of windows:** History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.).
- **Introduction to MS-Word:** introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

### Unit-4

- **Introduction to Excel:** introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.
- **Introduction to power-point:** introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

### Unit-5

- **Introduction of Operating System:** introduction, operating system concepts, types of operating system.
- **Computer networks:** introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.
- **Internet and its Applications:** definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in clinical settings.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester:</b> <b>1</b>
<b>Course</b> <b>Fundamentals of</b> <b>Computer-Practical</b>	<b>Course</b> <b>Description</b> <b>Core Practical</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BML007A</b>

## **COURSE OBJECTIVES**

The students will be able to learn all practical aspects of fundamental of computer

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Practical learning to use MS office: MS word, MS PowerPoint, MS Excel
<b>CO 2</b>	Practically To install different software
<b>CO 3</b>	How to do Data entry efficiency
<b>CO 4</b>	Practical related to all theory units of Fundamentals of Computer syllabus

**Unit 1-**Learning to use MS office: MS word, MS PowerPoint, MS Excel.

**Unit 2-** To install different software

**Unit 3-** Data entry efficiency

**Unit 4-** Practical related to all theory units of Fundamentals of Computer syllabus

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Cultural Education- I</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Value added</b> <b>course</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DIN001A</b>

## **COURSE OBJECTIVES**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to acknowledge and appreciate the richness of Indian Culture
<b>CO 2</b>	Ability to represent the culture ethics in real life

## **UNIT-I**

### **Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different Dharm Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)
2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

## **UNIT-II**

### **Society and Culture-I**

3. Introduction to Indian Culture and Major Symbols of Indian Culture

4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

### **UNIT-III**

#### **India in Progress-I**

5. Education, Science and Technology in Ancient India

6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

### **UNIT-IV**

#### **Great Indian Personalities-I**

7. Life and works of the Great People of India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Buddha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

**\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to she/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.**

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Human Anatomy-2</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML008A</b>

### **COURSE OBJECTIVE**

To provide an opportunity for lab technologists who distinguish themselves in Human Anatomy - practical, theoretical knowledge and knowledge application, to undertake research based training in Anatomy. To capture distinguished medical students and offer them such training as would enable them to sub-specialize in anatomy at an early stage of their career. To develop as research scientists and research based teachers for schools of allied health sciences both locally and externally. It also strengthens the research foundation of the students with broad vision of leading in research based teaching of anatomy and stimulates the research attitudes and aptitudes of students.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the anatomy of Peritoneum
<b>CO 2</b>	To understand the anatomy of Urinary system
<b>CO 3</b>	To understand the anatomy of Reproductive system
<b>CO 4</b>	To understand the anatomy of Endocrine glands
<b>CO 5</b>	To understand the anatomy of Nervous system

## **THEORY**

### **Unit-1 Peritoneum**

- i. Description in brief

### **Unit-2 Urinary system**

- i. Kidney, ureter, urinary bladder, male and female urethra
- i. Histology of kidney, ureter and urinary bladder

### **Unit-3 Reproductive system**

- i. Parts of male reproductive system, testis, vas deferens, epididymis, prostate (gross & histology)
- i. Parts of female reproductive system, uterus, fallopian tubes, ovary (gross & histology)
- . Mammary gland

### **Unit-4 Endocrine glands**

- i. Names of all endocrine glands in detail on pituitary gland, thyroid gland, parathyroid gland, suprarenal gland – (gross & histology)

## **Unit-5 Nervous system**

- i. Neuron
- i. Classification of NS
- i. Cerebrum, cerebellum, midbrain, pons, medulla oblongata, spinal cord with spinal nerve
  - . (gross & histology)
  - . Meninges, Ventricles & cerebrospinal fluid
- i. Names of basal nuclei
- i. Blood supply of brain
- i. Cranial nerves
  - . Sympathetic trunk & names of parasympathetic ganglia
  - . Skin: Skin-histology
- i. Appendages of skin
- i. Eye: Parts of eye & lacrimal apparatus
- i. Extra-ocular muscles & nerve supply
  - . Ear: parts of ear- external, middle and inner ear and contents
  - . Spermatogenesis & oogenesis
- i. Ovulation, fertilization
- i. Fetal circulation

i. Placenta

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Human Anatomy-2</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BML009A</b>

**PRACTICAL**

<b>Unit-1</b>	Identification of Bones and Organs
---------------	------------------------------------

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Human Physiology-2</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML010A</b>

**COURSE OBJECTIVES:** The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiology of Excretory system
<b>CO 2</b>	Physiological functions of Endocrine system
<b>CO 3</b>	Physiological functions of Reproductive system
<b>CO 4</b>	Physiological functions of Nervous system
<b>CO 5</b>	Physiological functions of Nervous system

## **THEORY**

### **Unit-1 Excretory system**

- i. Physiological anatomy of kidney, structure and functions of excretory system, structure of nephron.
- i. Mechanism of formation of Urine. & mechanism of concentration and dilution of urine.
- i. The Counter Current System: Physiology of micturition and Regulation of Body temperature in Humans.

### **Unit-2 Endocrine system**

- i. General principles of endocrinology
- i. The pituitary Gland.
- i. The Thyroid Gland, The parathyroid, calcitonin and Vitamin D.
- . The Adrenal Cortex & Pancreas.

### **Unit-3 Reproductive system**

- i. Changes during Puberty, Classification of Male sex hormones and their functions, Spermatogenesis & semen.
- i. Changes during Puberty, Classification and Functions of female sex hormones, menstruation, ovulation and contraception.
- i. Physiological changes during pregnancy, functions of placenta and physiology of lactation.

#### **Unit-4    Nervous system**

- i. Organization of Nervous system, The Synapse , Physiology of receptor organs for special and general sensation, physiology of reflex action, classification and properties of reflexes.
- i. Intro to Sensory and motor system. Functions of hypothalamus, thalamus, basal ganglia, cerebrum & cerebellum.

i. Autonomic nervous system, Cerebrospinal Fluid and Blood Brain Barrier.

### Unit-5 Special Senses

i. Taste and Olfaction.

i. Vision—structure and function of eye, errors of refraction & their correction. Color blindness.

i. Hearing—structure and function of ear, general outline of mechanism of hearing and perception of sound.

JECRC UNIVERSITY School of Allied Health Sciences	Program B.Sc. Medical Lab Technology (BMLT)			Semester: 2
Course Biochemistry-2 Theory	Course Description Core	Credit per Semester 3 credits	Hours per Semester 3 hours	Course Code BML011A

**COURSE OBJECTIVES:** This course provides the knowledge and skills in fundamental organic chemistry and introductory biochemistry that are essential for further studies. It covers basic biochemical, cellular, biological and microbiological processes, basic chemical reactions in the prokaryotic and eukaryotic cells, the structure of biological molecules, introduction to the nutrients.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Functions and biochemistry of Enzymes, Nucleotide and Nucleic acid
<b>CO 2</b>	Functions and biochemistry of Vitamins and Mineral Metabolism
<b>CO 3</b>	Functions and biochemistry of Connective tissue
<b>CO 4</b>	Functions and biochemistry of Hormone, Acid-Base balance and water balance
<b>CO 5</b>	Functions and biochemistry of Electrolyte balance and clinical aspect of biochemistry

**Unit-1 Enzymes** – Classification, definition, Active site, Cofactor (Coenzyme, Activator), Isoenzymes, Proenzyme. Factors effecting enzyme activity, Enzyme inhibition and significance.

**Nucleic Acids-** DNA and RNA chemistry and functions, Difference between DNA and RNA, Structure of DNA (Watson and Crick model) and tRNA, rRNA, mRNA.

**Unit-2 Vitamins** – general classification, sources of vitamin and functions, RDA and common deficiency symptoms

**Mineral Metabolism-** Definition, Sources, RDA, Digestion, absorption, transport, excretion, functions, common disorders associated with mineral metabolism.

**Unit-3 Water balance** - Water distribution in the body, Body water, water turnover and its regulation in brief.

**Electrolyte balance – Basic concept of Osmolarity** and distribution of electrolytes in brief

Introduction to role of aldosterone, rennin angiotensin system and ANF in brief

**Unit-4 Hormone Action** - Definition, classification, Mechanism of hormone action. Receptors, signal transduction, second messengers and cell function.

**Unit-5 Acid-Base balance** - Acids, bases and buffers, pH. Buffer systems of the body, bicarbonate buffer system. Osmosis, dialysis, surface tension.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Basic Haematology</b> <b>Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML012A</b>

**COURSE OBJECTIVES:** This course provides the knowledge of the composition of blood and methods of estimating different components of blood. The basic concepts of Haematology & routine clinical investigations of Haematology laboratory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basics of Haematology
<b>CO 2</b>	Collection and preservation of blood sample and Anticoagulants
<b>CO 3</b>	Learn about Hemoglobin
<b>CO 4</b>	Physiological properties of coagulation factors
<b>CO 5</b>	To learn Urine analysis and Quality assurance in Haematology

### Unit-1

#### 1. Introduction to Haematology

- Definition
  - Importance
  - Important equipment used
- #### 2. Laboratory organization and safety measures in Haematology Laboratory
- #### 3. Introduction to blood, its composition, function and normal cellular components

### Unit-2

- #### 1. Anticoagulants: types, mode of action and preference of anticoagulants for different hematological studies
- #### 2. Collection and preservation of blood sample for various hematological investigations
- #### 3. Formation of cellular components of blood (Haemopoiesis)
- Erythropoiesis
  - Leucopoiesis
  - Thrombopoiesis

### Unit-3

- #### 1. Hemoglobin: definition, types, structure, synthesis and degradation
- #### 2. Morphology of normal blood cells

### Unit-4

- #### 1. Normal Hemostasis & physiological properties of coagulation factors
- #### 2. Radioactivity: definition, half-life, physical decay and units

### Unit-5

1. Urine analysis
2. Quality assurance in Haematology
  - Internal and external quality control including reference preparation
  - Routine quality assurance protocol
  - Statistical analysis i.e. Standard deviation, Co-efficient of variation, accuracy and precision

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Basic Haematology Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per Semester</b> <b>2hours</b>	<b>Course Code</b> <b>BML013A</b>

**COURSE OBJECTIVES:** The main objective of the course is to impart the knowledge of Basic Haematology Practical

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Preparation of various anticoagulants
<b>CO 2</b>	Collection of blood sample for various Lab Investigations
<b>CO 3</b>	Routine Haematology Lab Instruments
<b>CO 4</b>	Identification of Normal blood cells
<b>CO 5</b>	Urine Analysis

### Unit-1

Preparation of various anticoagulants:

- EDTA
- Sodium Citrate,
- Oxalate with Fluoride

### Unit-2

Collection of blood sample for various Lab Investigations

### Unit-3

Familiarization and working of routine Haematology Lab Instruments

- Microscopes
- Haemocytometers
- Colorimeter
- Spectrophotometer
- Glass pipettes & Auto pipettes
- Glassware
- Sahli's Apparatus

### Unit-4

Identification of Normal blood cells

### Unit-5

Urine Analysis:

- Routine biochemistry of Urine for:
- pH
- Specific Gravity
- Glucose
- Ketones
- Bilirubin
- Albumin
- Microscopic Examination of Urine

JECRC UNIVERSITY School of Allied Health Sciences	Program B.Sc. Medical Lab Technology (BMLT)			Semester: 2
Course General & Clinical Psychology	Course Description Core Theory	Credit per Semester 3 credits	Hours per Semester 3 hours	Course Code BML014A

**COURSE OBJECTIVES** -Human Psychology involves the study of various behavioral patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional and language development, communication and interaction skills appropriate to various age groups. The study of these subjects will help the student to understand their clients while assessment and while planning appropriate treatment methods.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basics and Introduction of Psychology and growth and development of humans on psychological aspects.
<b>CO 2</b>	Sensation, attention, perception motivational psychology
<b>CO 3</b>	Psychology of humans related to frustration, conflict, emotions and intelligence
<b>CO 4</b>	Thinking and learning on psychological basis and how to improve
<b>CO 5</b>	Improve personality by psychological aspect, social and clinical psychology for patient perspective

## THEORY

### Unit-1 Introduction to Psychology

- Schools: Structuralism, functionalism, behaviorism, Psychoanalysis.
- Methods: Introspection, observation, inventory and experimental method.
- Branches: psychology and applied psychology
- Psychology and physiotherapy

### Growth and Development

- Life span: Different stages of development (Infancy, childhood, adolescence, adulthood, middle age, old age).
- Heredity and environment: role of heredity and environment in physical and psychological development, “Nature v/s Nurture controversy”.

**Unit-2 Sensation, attention and perception**

- a) Sensation: Vision, Hearing, Olfactory, Gustatory and Cutaneous sensation, movement, equilibrium and visceral sense.
- b) Attention: Types of attention, Determinants of attention (subjective determinants and objective determinants).

c) Perception: Gestalt principles of organization of perception (principle of figure ground and principles of grouping), factors influencing perception (past experience and context).

d) Illusion and hallucination: different types.

### **Motivation**

a) Motivation cycle (need, drive, incentive, reward).

b) Classification of motives.

c) Abraham Maslow's theory of need hierarchy

## **Unit-3 Frustration and conflict**

a) Frustration: sources of frustration.

b) Conflict: types of conflict.

c) Management of frustration and conflict

### **Emotions**

a) Three levels of analysis of emotion (physiological level, subjective state, and overt behavior).

b) Theories of emotion

c) Stress and management of stress.

### **Intelligence**

a) Theories of intelligence.

b) Distribution of intelligence.

c) Assessment of intelligence

## **Unit-4 Thinking**

a) Reasoning: deductive and inductive reasoning

b) Problem solving: rules in problem solving (algorithm and heuristic)

c) Creative thinking: steps in creative thinking, traits of creative people

### **Learning**

a) Factors effecting learning.

b) Theories of learning: trial and error learning, classical conditioning, Operant conditioning, insight

learning, social learning theory.

c) The effective ways to learn: Massed/Spaced, Whole/Part, Recitation/Reading, Serial/Free recall, Incidental/Intentional learning, Knowledge of results, association, organization, and mnemonic methods.

**Unit-5    Personality**

- a) Approaches to personality: type & trait, behavioristic, psychoanalytic and humanistic approach.
- b) Personality assessment: observation, situational test, questionnaire, rating scale, interview, and projective techniques.
- c) Defense Mechanisms: denial of reality, rationalization, projection, reaction formation, identification, repression, regression, intellectualization, undoing, introjection, acting out.

**Social psychology**

a) Leadership: Different types of leaders. Different theoretical approaches to leadership.

b) Attitude: development of attitude. Change of attitude.

### **Clinical psychology**

Models of training, abnormal behavior assessment, clinical judgement, psychotherapy, self-management methods, physiotherapist patient interaction, aggression, self- imaging, stress management, assertive training, Group therapy, Body awareness, Pediatric, child and geriatric clinical psychology.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Professional Skills-Theory</b>	<b>Course</b> <b>Description</b> <b>Ability</b> <b>Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>2 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN002A</b>

### **COURSE OBJECTIVES**

<b>1.</b>	To enhance Professional competence in reading, writing, listening and speaking.
<b>2.</b>	Switch the approach from providing information about the language to use the language.
<b>3.</b>	Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
<b>4.</b>	Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
<b>5.</b>	Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
<b>6.</b>	Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
<b>CO 2</b>	Ability to analyze the usage of English words in professional scenario.
<b>CO 3</b>	An understanding of technical and academic articles' comprehension.
<b>CO 4</b>	The ability to present oneself at multinational levels as per the demand of the corporate culture

**Unit-1** Professional Grooming and Professional Culture: Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**Unit-2** Advanced Grammar: Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**Unit-3** Composition:, Memo, Notice, Circular, Book Review, Research Article, Reports

**Unit-4** Vocabulary Building: Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms

**Unit-5** Reading Comprehension: Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Professional Skills-Practical</b>	<b>Course</b> <b>Description</b> <b>Ability</b> <b>Enhancement</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN002A</b>

**Unit-1** Professional Grooming and Professional Culture: Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**Unit-2** Advanced Grammar: Exercise Sessions for Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**Unit-3** Composition:, Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics

**Unit-4** Vocabulary Building: Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words

**Unit-5** Reading Comprehension: Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Culture Education - 2</b>	<b>Course Description</b> <b>Value added course</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DIN002A</b>

### OBJECTIVES

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**COURSE OUTCOMES (CO):** At the end of this course students will have:

<b>CO 1</b>	Ability to acknowledge and appreciate the richness of Indian Culture
<b>CO 2</b>	Ability to represent the culture ethics in real life

### Unit-1 Holy Scriptures-II

1. Bhagavad Gita and Life Management
2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Saheb, Bible, Quran, Jain Scriptures, Bodh Scriptures
3. Historicity of Ramayana and Mahabharata

### Unit-2 Society and Culture-II

4. Indian Society: Its Strengths and Weaknesses
5. Health and Lifestyle related issues
6. Conservation of cultural heritage

### Unit-3 India in Progress-II

7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights
8. Indian Models of Economy, Business and Management

### Unit-4 Great Indian Personalities-II

9. Life and works of the Great People of India- Raja Ram Mohan Roy, Swami Vivekanand, Madan Mohan Malviya, Ishwarchand VidyaSagar, JyotibaPhule, HomiBhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, Vir Haqiqat Rai, Subhash Chandra Bose,

Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>General Clinical</b> <b>Microbiology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML015A</b>

**COURSE OBJECTIVE-** This subject gives a general insight into the history and basics of medical microbiology, imparts knowledge about equipment used in Medical Microbiology and basic procedures done in a medical microbiology laboratory i.e. microscopy, sterilization, disinfection, culture methods required to perform different microbiological tests in clinical microbiology lab and biomedical waste management.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the basics of microbiology, safety measures and glassware used in microbiology
<b>CO 2</b>	To understand the microscopes, sterilization and Antiseptics and disinfectants
<b>CO 3</b>	To understand the Biomedical waste management and microbes
<b>CO 4</b>	To understand the methods of culture media
<b>CO 5</b>	To understand the immunology and Care & handling of laboratory animals

## Unit-1

1. Introduction to Medical Microbiology:
  - i. Definition
  - ii. History
  - iii. Host – Microbe relationship
2. Safety measures in Clinical Microbiology
3. Glassware used in Clinical Microbiology Laboratory:
  - i. Introduction
  - ii. Care and handling of glassware
  - iii. Cleaning of glassware

- iv. Equipment used in clinical Microbiology Laboratory:
- v. Introduction
- vi. Care and maintenance including calibration

## **Unit-2**

### 1. Microscopy

- i. Introduction and history
- ii. Types, principle and operation mechanism of following microscopes
  - Light microscope
  - DGI
  - Fluorescent
  - Phase contrast
  - Electron microscope: Transmission/Scanning

### 2. Sterilization:

- Definition
- Types and principles of sterilization methods
- Heat (dry heat, moist heat with special Reference to autoclave)
- Radiation
- Filtration
- Efficiency testing to various sterilizers

### 3. Antiseptics and disinfectants:

- Definition
- Types and properties
- Mode of action - Uses of various disinfectants
- Precautions while using the disinfectants - Qualities of a good disinfectant
- Testing efficiency of various disinfectants

## **Unit-3**

### 1. Biomedical waste management in a Medical Microbiology laboratory:

Types of the waste generated – Segregation – Treatment –Disposal

### 2. General characteristics & classification of Microbes:

(Bacteria & fungi) Classification of microbes with special reference to prokaryotes & eukaryotes  
Morphological classification of bacteria

Bacterial anatomy (Bacterial cell structures)

### 3. Growth and Nutrition of Microbes:

- General nutritional & other requirements of the bacteria
- Classification of bacteria on the basis of their nutritional requirements
- Physical conditions required for growth.
- Normal growth cycle of bacteria (growth curve)
- Types of microbial cultures: Synchronous, Static, continuous culture.

## **Unit-4**

### 1. Culture media:

- Introduction
- Classification of culture media (Example & Uses) solid media, liquid media, semisolid, Media, routine/synthetic/defined media, basal media, enriched, enrichment, Selective differential media, sugar fermentation media, transport media, preservation media and anaerobic culture

**JECRC™**  
UNIVERSITY  
BUILD YOUR WORLD

media

  
**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302003

- Quality control in culture media
- Automation in culture media preparation
- 2. Aerobic & anaerobic culture methods:
  - Concepts
  - Methods Used for aerobic cultures
  - Methods used for anaerobic cultures

## **Unit-5**

1. Introductions to Immunology
  - Immunity
  - Antigens and Antibodies
2. Care & handling of laboratory animals:
  - Introduction, General care & handling
  - Ethics & legality in use of laboratory animals

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>General Clinical Microbiology</b> <b>–Practical</b>	<b>Course</b> <b>DescriptionCore</b>	<b>Credit per</b> <b>Semester2 credits</b>	<b>Hours per</b> <b>Semester4 hours</b>	<b>Course Code</b> <b>BML016A</b>

**COURSE OBJECTIVE-** This subject gives a general insight into the history and basics of medical microbiology practical, imparts knowledge about equipment used in Medical Microbiology and basic procedures done in a medical microbiology laboratory i.e. microscopy, sterilization, disinfection, culture methods required to perform different microbiological tests in clinical microbiology lab and biomedical waste management.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the how to work in microbiology laboratory, cleaning and sterilization of glassware, autoclave and use of microscopes
<b>CO 2</b>	To understand the methods of sterilizations, antiseptics and disinfectants
<b>CO 3</b>	To understand the uses and precautions while using disinfectants
<b>CO 4</b>	To understand the different morphological types of bacteria and preparation of culture media
<b>CO 5</b>	To understand the aerobic and anaerobic culture and laboratory animals

#### Unit-1

1. To demonstrate safe code of practice for a Microbiology laboratory
2. To prepare cleaning agents & to study the technique for cleaning & sterilization of glassware.
3. To demonstrate the working & handling of Compound microscope.
4. To demonstrate the method of sterilization by autoclave including its efficacy testing.

#### Unit-2

1. To demonstrate the method of sterilization by hot air oven including its efficacy testing
2. To demonstrate the method of sterilization of media/solution by filtration
3. Demonstration of Antiseptics, Spirit, Cetrimide & Povidone-Iodine
4. To demonstrate the use of disinfectants

#### Unit-3

1. Demonstrate the precaution while using disinfectants.
2. To prepare working dilution of commonly used disinfectants.
3. In-use test, Rideal-walker phenol co-efficient test

#### Unit-4

1. Kelsey-Sykes test, To demonstrate the different morphological types of bacteria
2. Preparation of one culture media from each type

#### Unit-5

1. To demonstrate aerobic culture, To demonstrate anaerobic culture
2. Visit to animal house & demonstrate about care of laboratory animals

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Basic Clinical Biochemistry</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML017A</b>

**COURSE OBJECTIVE-** The main objective of the subject is to impart the knowledge of apparatus, units, equipment, and volumetric analysis in the laboratory of clinical Biochemistry.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the Cleaning and care of general laboratory glass ware and equipment and Distilled water unit
<b>CO 2</b>	To understand the measurement and calibration of glass ware
<b>CO 3</b>	To understand the concept of pH and analytic balance
<b>CO 4</b>	To understand the solutions and reagents
<b>CO 5</b>	To understand the osmosis

## Unit-1

- Cleaning and care of general laboratory glass ware and equipment
  - Steps involved in cleaning soda lime glass
  - Steps involved in cleaning borosil glass
  - Preparation of chromic acid solution
  - Storage
- Distilled water
  - Method of preparation of distilled water
  - Type of water distillation plants
  - Storage of distilled water

## Unit-2

- Units of Measurement.
  - S.I unit and CGS units
  - Conversion
  - Strength, molecular weight, equivalent weight
  - Normality, Molarity, Molality
  - Numerical
- Calibration of volumetric apparatus
  - Flask
  - Pipettes
  - Burettes
  - Cylinders

### **Unit-3**

1. Analytical balance
  - Principle
  - Working
  - Maintenance
2. Concept of pH
  - Definition
  - Henderson Hassel batch equation
  - P a value
  - PH indicator
  - Methods of measurement of pH
  - pH paper
  - pH meter
  - Principle, working, maintenance and calibration of pH meter

### **Unit-4**

- Volumetric analysis
- Normal and molar solutions
- Standard solutions
- Preparation of reagents
- Storage of chemicals

### **Unit-5**

- Osmosis
- Definition
- Types of osmosis
- Factors affecting osmotic pressure
- Vant Hoff's equation
- Applications of osmosis
- Dialysis

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Basic Clinical Biochemistry –</b> <b>Practical</b>	<b>Course</b> <b>DescriptionCore</b>	<b>Credit per</b> <b>Semester2 credits</b>	<b>Hours per</b> <b>Semester4 hours</b>	<b>Course Code</b> <b>BML018A</b>

**COURSE OBJECTIVE-** The main objective of the subject is to impart the knowledge of apparatus, units, equipment, and volumetric analysis in the laboratory of clinical Biochemistry in practical aspect.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the Cleaning and care of general laboratory glass ware and Preparation of Distilled water
<b>CO 2</b>	To understand the pH meter and prepare 0.1 N NaOH solution
<b>CO 3</b>	To understand the preparation of .2N HCl solution and 0.1 molarH <sub>2</sub> SO <sub>4</sub>
<b>CO 4</b>	To understand the preparation of Sodium carbonate solution
<b>CO 5</b>	To understand the osmosis and dialysis

### Unit-1

1. Cleaning of the laboratory glass ware (Volumetric and non-volumetric)
2. Preparation of distilled water

### Unit-2

1. Principle, working and maintenance of pH meter.
2. To prepare 0.1 N NaOH solution.

### Unit-3

1. To prepare 0.2N HCl solution.
2. To prepare 0.1 molarH<sub>2</sub>SO<sub>4</sub>

### Unit-4

1. To prepare 0.2 Molar Sodium carbonate solution.

### Unit-5

1. Demonstration of osmosis and dialysis.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Law &amp; Ethics</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML019A</b>

**COURSE OBJECTIVE-** Legal and ethical considerations are firmly believed to be an integral part of medical practice in planning patient care. Advances in medical sciences, growing sophistication of the modern society's legal framework, increasing awareness of human rights and changing moral principles of the community at large, now result in frequent occurrences of healthcare professionals being caught in dilemmas over aspects arising from daily practice.

Medical ethics has developed into a well based discipline which acts as a "bridge" between theoretical bioethics and the bedside. The goal is "to improve the quality of patient care by identifying, analyzing, and attempting to resolve the ethical problems that arise in practice". Medical Lab technicians are bound by, not just moral obligations, but also by laws and official regulations that form the legal framework to regulate medical practice. Hence, it is now a universal consensus that legal and ethical considerations are inherent and inseparable parts of good medical practice across the whole spectrum. Few of the important and relevant topics that need to focus on are as follows:

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Students able to learn Introduction and Code of conduct Medical ethics
<b>CO 2</b>	Learn about Basic principles and Malpractice and negligence
<b>CO 3</b>	Learn about consent and right of patient
<b>CO 4</b>	Learn about organ transplant and Medico legal aspects of medical record
<b>CO 5</b>	Professional Indemnity insurance policy and informed consent

### Unit-1

1. Medical ethics - Definition - Goal - Scope
2. Introduction to Code of conduct

### Unit-2

1. Basic principles of medical ethics – Confidentiality
2. Malpractice and negligence - Rational and irrational drug therapy

### Unit-3

1. Autonomy and informed consent - Right of patients
2. Care of the terminally ill- Euthanasia

#### **Unit-4**

1. Organ transplantation
2. Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.

#### **Unit-5**

1. Professional Indemnity insurance policy
2. Development of standardized protocol to avoid near miss or sentinel events
3. Obtaining an informed consent.
4. Ethics in the profession of Medical Laboratory Technology

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Professional values</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BML020A</b>

**COURSE OBJECTIVE-** The module on professionalism will deliver the concept of what it means to be a professional and how a specialized profession is different from a usual vocation. It also explains how relevant is professionalism in terms of healthcare system and how it affects the overall patient environment.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Learn Professional values- Integrity, Objectivity, Professional competence and due care, Confidentiality
<b>CO 2</b>	Learn ethical or moral values
<b>CO 3</b>	Learn professional behavior
<b>CO 4</b>	Learn professional accountability and responsibility
<b>CO 5</b>	Learn Cultural issues in the healthcare environment and team efforts

### Unit-1

Professional values- Integrity, Objectivity, Professional competence and due care, Confidentiality

### Unit-2

Personal values- ethical or moral values

### Unit-3

Attitude and behavior- professional behavior, treating people equally

### Unit-4

Code of conduct, professional accountability and responsibility, misconduct

### Unit-5

Differences between professions and importance of team efforts

Cultural issues in the healthcare environment

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Life Skills – 1 (Personality Development)</b>	<b>Course Description</b> <b>Ability Enhancement</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN003A</b>

**COURSE OBJECTIVE-** To prepare the students as per the industry demands. Switching to Activity and Task based Teaching modules. To focus on the linguistic aspects in relation to life situations. Facilitating the aspects of behavioral skills in language. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields
<b>CO 2</b>	Ability to learn by doing it practically in the classroom
<b>CO 3</b>	Ability to learn by creating an environment and adapting to the environment.
<b>CO 4</b>	The ability to prepare the students as per the need of the Multi-cultural scenario around.

- UNIT 1**
- Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion
  - Basics of Narrating and describing things
- UNIT 2**
- Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview
  - CV/Resume Drafting and HR Interview advance theory
  - Basics of Video Interviews and Video Profiles for Job
- UNIT 3**
- Types of listening, advantages and disadvantages
- UNIT 4**
- Basics of Group Discussion, Presenting New Idea/Concept/Proposal/Project/ Report

## **UNIT 5**

Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Life Skills – 1 (Personality</b> <b>Development) Practical</b>	<b>Course</b> <b>Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN003B</b>

- UNIT 1**
- Debates / Speeches / Addressing the public / Extempore/Group Discussion
  - Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids
- UNIT 2**
- Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview
  - CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand
  - Video Interviews and Video Profiles for Job-Practice session for Online Interviews
- UNIT 3**
- Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives
- UNIT 4**
- Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/Project/ Report
- UNIT 5**
- Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Lab Technology (BMLT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Value Education and</b> <b>Ethics -1</b>	<b>Course</b> <b>Description</b> <b>Value added</b> <b>course</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>1 hours</b>	<b>Course</b> <b>Code</b> <b>DIN003A</b>

## COURSE OBJECTIVES

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to acknowledge and appreciate the ethical beauty of India
<b>CO 2</b>	Ability to incorporate the values of human lives in real life applications

### Lessons from the Ramayana

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

### Lessons from the Mahabharata

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

### Lessons from the Upanishads

Introduction to the Upanishads: Sruti versus Smrti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, SatyakamaJabala, Aruni, Shvetaketu.

## Message of the Bhagavad Gita

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

## Life and Message of Swami Vivekananda

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

## Life and Teachings of Spiritual Masters India

Sri Rama, Sri Krishna, Sri Buddha, AdiShankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

## Insights into Indian Arts and Literature

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Systematic Bacteriology</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML021A</b>

**COURSE OBJECTIVE- :** This subject will give information about the different types of bacterial culture procedures, staining procedures and biochemical tests used for identification of bacteria. The students will learn the morphology cultural characteristics, biochemical characteristics & laboratory diagnosis of various bacteria.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the basic of bacteriology and culture media.
<b>CO 2</b>	To understand the staining techniques, principle and reagent preparation.
<b>CO 3</b>	To understand the Biochemical tests for identification of different bacteria.
<b>CO 4</b>	To understand the Definition, classification, various characteristics, pathogenesis and laboratory diagnosis of various bacteria.
<b>CO 5</b>	To Understand the various characteristics of bacteria and their lab diagnosis

#### **Systematic Bacteriology**

##### **Unit 1:-**

1. Bacterial culture :- Instruments used to seed culture media
2. Culture procedures – seeding a plate
3. Staining techniques in bacteriology
4. Significance of staining in bacteriology

##### **Unit 2:-**

Principle, Reagent preparation, procedures and interpretation of the following

- 1 Simple staining and Negative staining
2. Gram stain ,Albert's stain , Neisser's stain, Ziehl –Neelsen staining, Capsule staining, Flagella staining, Spore staining, Fontana stain for spirochetes.

##### **Unit 3:-**

Principle, procedures and interpretation of the following biochemical tests for identification of different bacteria. Definition, Classification, Various characteristics

1 Catalase , Coagulase , Indole , Methyl Red , VogesProskauer , Urease, Citrate , Oxidase , TSIA  
Nitrate reduction , Carbohydrate fermentation , Hage and Leifson , Bile solubility , H<sub>2</sub> S production  
Demonstration of motility , Decarboxylases , CAMP , Hippurate hydrolysis , Nagler's reaction Cholera-  
red reaction.

#### **Unit 4:-**

Definition, Classification, Various characteristics (morphological, cultural and biochemical),  
pathogenesis and laboratory diagnosis of the following bacteria :-

1 Staphylococcus , Streptococcus , Pneumococcus , Neisseria gonorrhea and Neisseria meningitis,  
Haemophilis , Corynebacterium , Enterobacteriaceae: Escherichia coli, Klebsiella, Citrobacter,  
Enterobacter, Proteus, Salmonella, Shigella, Yersinia enterocolitica and Yersinia pestis.

#### **Unit 5:-**

Definition, Classification, Various characteristics of the following:-

Vibrio, Aeromonas and Plesiomonas , Clostridia of wound infection , Mycobacterium tuberculosis  
complex, Atypical Mycobacteria and M. leprae , Spirochetes – Treponema, Borrelia and leptospira  
Bordetella and brucella , Mycoplasma and Ureaplasma , Rickettsia , Chlamydia

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Systematic Bacteriology</b> <b>Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester 2 hours</b>	<b>Course Code</b> <b>BML022A</b>

**COURSE OBJECTIVE-** The subject gives a general insight into the history and basics of Systematic bacteriology practical, imparts knowledge about equipment used in Systematic bacteriology and basic procedures of staining done in a systematic bacteriology.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the basic instrument used in systematic bacteriology.
<b>CO 2</b>	To understand the staining techniques and reagent preparation.
<b>CO 3</b>	To understand the Biochemical tests and techniques.
<b>CO 4</b>	To understand the laboratory diagnosis of various bacteria.
<b>CO 5</b>	To Understand the various techniques about motility methods in bacteriology.

### **Systematic Bacteriology – Practical**

1. To demonstrate the instruments used to seed culture media
2. To learn techniques for Inoculation of bacteria on culture media
3. To isolate specific bacteria from a mixture of organisms.
4. To demonstrate simple staining (Methylene blue)
5. To prepare India ink preparation to demonstrate negative staining.
6. Bacterial identification: To demonstrate reagent preparation, procedure and interpretation for
  - 6.1 Gram stain
  - 6.2 Albert stain
  - 6.3 Neisser's staining
  - 6.4 Z-N staining
  - 6.5 Capsule staining
  - 6.6 Demonstration of flagella by staining methods
  - 6.7 Spore staining
  - 6.8 To demonstrate spirochetes by Fontana staining procedure
7. To prepare the reagent and demonstrate following biochemical tests with positive and negative control bacteria:
  - 7.1 Catalase
  - 7.2 Coagulase
  - 7.3 Indole
  - 7.4 Methyl Red (MR)
  - 7.5 VogesProskauer (VP)
  - 7.6 Urease
  - 7.7 Citrate
  - 7.8 Oxidase
  - 7.9 TSIA
  - 7.10 Nitrate reduction
  - 7.11 Carbohydrate fermentation
  - 7.12 Huger and Leifson
  - 7.13 Bile solubility
  - 7.14 H<sub>2</sub>S production
  - 7.15 Demonstration and motility
  - 7.16 Decarboxylases
  - 7.17 CAMP
  - 7.18 Hippurate hydrolysis
  - 7.19 Nagler's reaction

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Applied Clinical Bacteriology</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML023A</b>

**COURSE OBJECTIVE-** This part will cover the laboratory strategy in the diagnosis of various infective syndromes i.e. choice of samples, collection and transportation and processing of samples for isolation of bacterial pathogens and then to put antibiotic susceptibility testing. This will also cover bacteriological examination of water, milk, food, air, I/V fluids and nosocomial infections. Further it will make the candidate familiar to epidemiology, epidemiological markers and preservation of microbes.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the Laboratory strategy in the diagnosis of various infective syndromes.
<b>CO 2</b>	To understand the Antibiotic susceptibility testing in bacteriology.
<b>CO 3</b>	To understand the basics of nucleic acid techniques.
<b>CO 4</b>	To understand the bacteriological examination of water, milk, food and air.
<b>CO 5</b>	To Understand the sterility testing of fluid.

### **Applied Clinical Bacteriology**

#### **Unit-1**

1. Laboratory strategy in the diagnosis of various infective syndromes:  
Samples of choice, collection, transportation and processing of samples for laboratory diagnosis of the following complications:

- 1.1 Septicemia and bacteremia
- 1.2 Upper Respiratory tract infections
- 1.3 Lower respiratory tract infections
- 1.4 Wound, skin, and deep sepsis
- 1.5 Urinary tract infections
- 1.6 Genital Tract infections
- 1.7 Meningitis
- 1.8 Gastro intestinal infections
- 1.9 Enteric fever
- 1.10 Tuberculosis (Pulmonary and Extra-pulmonary)
- 1.11 Pyrexia of unknown origin

#### **Unit-2**

2. Antibiotic susceptibility testing in bacteriology

- 2.1 Definition of antibiotics
- 2.2 Culture medium used for Antibiotic susceptibility testing
- 2.3 Preparation and standardization of inoculum
- 2.4 Control bacterial strains
- 2.5 Choice of antibiotics
- 2.6 MIC and MBC: Concepts and methods for determination
- 2.7 Various methods of Antibiotic susceptibility testing with special reference to Stokes and Kirby-Bauer method

### **Unit-3**

Basics of Nucleic acid techniques in diagnostic microbiology with special reference to Polymerase chain reaction (PCR)

Automation in bacterial culture detection and antimicrobial susceptibility testing: Principles and importance.

### **Unit-4**

Bacteriological examination of water, milk, food and air

#### **1 Examination of water**

- 1.1 Collection and transportation of water sample
- 1.2 Presumptive coliform count
- 1.3 Eijkman test
- 1.4 Introduction and importance of other bacteria considered as indicators of fecal contamination
- 1.5 Membrane filtration tests
- 1.6 Interpretation of results

#### **2 Examination of Milk and milk products**

- 2.1 Basic Concepts regarding gradation of milk
- 2.2 Various tests for Bacteriological examination of milk

#### **3 Examination of food articles**

- 1 Basic Concepts regarding classification of food like frozen food, canned food, raw food, cooked food etc.
- 2 Various tests for Bacteriological examination with special reference to food poisoning bacteria

#### **4 Examination of Air**

- 1 Significance of air bacteriology in healthcare facilities
- 2 Settle plate method
- 3 Types of air sampling instruments
- 4 Collection processing and reporting of an air sample

## Unit-5

### Sterility testing of I/v fluids

- 1 Collection, transportation and processing of I/v fluids for bacterial contamination
- 2 Recording the result and interpretation

#### Nosocomial Infection:

- 1 Introduction, sources and types of nosocomial infections.
- 2 Surveillance of hospital environment for microbial load.
- 3 Role of microbiology laboratory in control of nosocomial infections

#### Epidemiological markers:

- 1 Introduction
- 2 Types
- 3 Serotyping
- 4 Phage typing and
- 5 Bacteriocin typing

### Preservation methods for microbes

- 1 Basic concepts of preservation of microbes
- 2 Why do we need to preserve bacteria?
- 3 Principle and procedures of various short term and long term preservation methods with special reference to Lyophilization

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Applied Clinical</b> <b>Bacteriology Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester 2hours</b>	<b>Course Code</b> <b>BML024A</b>

**COURSE OBJECTIVE-** This course deals with characteristic, properties and microbiological significance of clinical bacteria.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the isolation techniques of pure culture.
<b>CO 2</b>	To understand the clinical sample for identification of bacterial pathogens.
<b>CO 3</b>	To understand the automation of bacterial culture.
<b>CO 4</b>	To understand the antibiotic susceptibility testing of various methods.
<b>CO 5</b>	To Understand the various methods for sterility testing in clinical laboratory.

**Applied Clinical Bacteriology – Practical**

1. Inoculation of different culture media
2. Isolation of pure cultures
3. Processing of following clinical samples for culture and identification of bacterial pathogens:
  - 3.1 Blood
  - 3.2 Throat swab
  - 3.3 Sputum
  - 3.4 Pus
  - 3.5 Urine
  - 3.6 Stool for Salmonella, Shigella and Vibrio cholerae
  - 3.7 C.S.F. and other body fluids
4. Demonstration of PCR
5. Demonstration of automation in bacterial culture detection and antimicrobial susceptibility testing
6. Antimicrobial susceptibility testing
  - 6.1 Introduction and terms used
  - 6.2 Preparation and standardization of inoculum
  - 6.3 To demonstrate reference bacterial strains
  - 6.4 To determine MIC and MBC of known bacteria against a known antibiotic
  - 6.5 To perform antibiotic susceptibility testing of clinical isolates by using
    - 6.5.1 Stokes method
    - 6.5.2 Kirby-Bauer method
7. Collection, transportation and processing of following articles for bacteriological examination:
  - 7.1 Water
  - 7.2 Milk

7.3 Food and

7.4 Air

8. To demonstrate sterility testing of intravenous fluid with positive and negative controls

9. Demonstration of serotyping and bacteriocin typing

10. Demonstration of lyophilization and other available preservation methods

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b><u>B.Sc. Medical Laboratory Technology (BMLT)</u></b>			<b>Semester:</b> <b>4</b>
<b>Course</b> <b>Applied Haematology-I</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester 3</b> <b>hours</b>	<b>Course Code</b> <b>BML025A</b>

**COURSE OBJECTIVE-** The students will be made aware of the methods of estimating different components of blood. Students will learn the basic concepts of staining and coagulation in Haematology laboratory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the basic of Hemoglobin and Hemoglobin estimation method.
<b>CO 2</b>	To understand the Principle mechanism and different methods for the measuring Erythrocyte Sedimentation Rate(ESR)
<b>CO 3</b>	To understand the various method for packed cell volume/hematocrit value.
<b>CO 4</b>	To understand the staining techniques in haematology.
<b>CO 5</b>	To Understand the Preparation of Reagents for coagulation studies.

### **Applied Haematology-I**

#### **Unit-1**

1. Haemoglobinometry: Different methods to measure Haemoglobin with merits and demerits
2. Haemocytometry: Introduction, Principle, Reagent preparation, procedure, errors involved and means to minimize errors.

- 1 RBC Count,
- 2 Total leucocytes count(TLC)
- 3 Platelet Count.
- 4 Absolute Eosinophil count
- 5 Differential leucocytes count

#### **Unit-2**

Principle mechanism and different methods with merit and demerits for the measuring Erythrocyte Sedimentation Rate(ESR) and its significance

Macroscopic and microscopic examination of seminal fluid

Examination of CSF and other body fluids for cytology i.e. pleural, peritoneal and synovial fluid etc.

#### **Unit-3**

Different methods with merit and demerits for packed cell volume/Haematocrit value

Physiological variations in Hb, PCV, TLC and Platelets

Preparation of blood films

Types, Methods of preparation (Thick and thin smear/film) and utility

#### **Unit -4**

Staining techniques in Haematology (Romanowsky's stains): Principle, composition, preparation of staining reagents and procedure of the following

- 1 Giemsa's stain
- 2 Leishman's stain
- 3 Wright's stain
- 4 Field's stain
- 5 JSB stain.

Normal and absolute values in Haematology

#### **Unit-5**

1. Preparation of Reagents for coagulation studies:

M/40 Calcium chloride

Brain Thromboplastin

Cephalin

Adsorbed Plasma

2. Screening Tests for coagulation Studies and their significance

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>		<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>		<b>Semester: 4</b>
<b>Course</b> <b>Applied Haematology</b> <b>Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BML026A</b>

**COURSE OBJECTIVE-** To learn clinical and laboratory investigation, diagnosis and medical management of diseases of the blood and blood cell count methods.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the Hb estimation of various methods.
<b>CO 2</b>	To understand the varioud methods for differential cell count.
<b>CO 3</b>	To understand the techniques of wintrobe & wester gren ESR method.
<b>CO 4</b>	To understand the Cytological examination of csf & otherr body fluid.
<b>CO 5</b>	To Understand the various methods for coagulation studies.

#### **Applied Haematology-I – Practical**

1. Hb Estimation
  - 1.1 Sahli's method
  - 1.2 Cyanmetha haemoglobin method
  - 1.3 Oxyhaemoglobin method
2. Total leukocyte count
3. Platelets count
4. Absolute Eosinophil count
5. Preparation of smear and staining with Giemsa and Leishman stain.
6. ESR( Wintrobe and Wester gren method)
7. Packed cell volume (Macro & Micro)
8. Cytological examination of CSF and other body fluids
9. Physical and Microscopic examination of seminal fluid including sperm count
10. Perform normal DLC
11. Preparation of M/40 Calcium chloride
  - 11.1 Brain thromboplastin and standardization
  - 11.2 Cephalin 11.3 Adsorbed plasma
12. Perform BT, CT, Hess test, PT and APTT

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>		<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>		<b>Semester: 4</b>
<b>Course</b> <b>Analytical</b> <b>Biochemistry</b>	<b>Clinical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester 3</b> <b>hours</b>
<b>Course Code</b> <b>BML027A</b>				

**COURSE OBJECTIVE-** The students will learn basic principles/mechanisms, procedures and various types of techniques commonly performed in analytical biochemistry such as: spectrophotometry, colorimetry, photometry and chromatography, electrophoresis.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the basic principles/mechanisms, procedures and various types of Spectrophotometry.
<b>CO 2</b>	To understand the basic principles/mechanisms, procedures and various types of colorimetry
<b>CO 3</b>	To understand the basic principles/mechanisms, procedures and various types of photometry.
<b>CO 4</b>	To understand the basic principles/mechanisms, procedures and various types of chromatography.
<b>CO 5</b>	To understand the basic principles/mechanisms, procedures and various types of Electrophoresis.

### **Analytical Clinical Biochemistry**

#### **Unit-1**

##### Spectrophotometry

- 1.1 Introduction
- 1.2 Theory of spectrophotometry
- 1.3 Lambert's law and Beer's law

#### **Unit-2.**

- 1.1 Colorimetry
- 1.2 Introduction
- 1.3 Theory of colorimetry
- 1.4 Types of colorimetry and importance of colorimetry.

#### **Unit-3.**

##### Photometry

- 2.1 Introduction
- 2.2 General principles of flame photometry
- 2.3 Limitations of flame photometry

## 2.4 Instrumentation

## 2.5 Applications of flame photometry

## 2.6 Atomic absorption spectroscopy – Principle & applications

### **Unit-4.**

#### Chromatography

##### 3.1 Introduction

##### 3.2 Types of chromatography

3.3 Paper Chromatography: Introduction, principle, types, details for qualitative and quantitative analysis, application

3.4 Thin layer chromatography: Introduction, experimental techniques, application of TLC, limitations, High performance thin layer chromatography

3.5 Column chromatography: Introduction, principle column efficiency, application of column chromatography

3.6 Gas chromatography: Introduction principle, instrumentation, application

3.7 Ion exchange chromatography: Introduction, Definition and principle, cation and anion exchangers, application

3.8 Gel Chromatography: Introduction Principle and method, application and advantages

### **Unit-5.**

#### Electrophoresis:

##### 4.1 Introduction

##### 4.2 Principle

###### 4.2.1 Instrumentation

###### 4.2.2 Applications

##### 4.3 Types of electrophoresis

###### 4.3.1 Paper electrophoresis

###### 4.3.2 Gel electrophoresis

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Medical Laboratory Technology (BMLT)</u></b>			<b>Semester: 4</b>
<b>Course</b> <b>Analytical Clinical Biochemistry</b> <b>Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester 2 hours</b>	<b>Course Code</b> <b>BML028A</b>

**COURSE OBJECTIVE-** The scope of the subject is providing the principle to understand the experimental methods such as spectrophotometry, colorimetry, photometry and chromatography, electrophoresis.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the principle, working & maintenance of spectrophotometer.
<b>CO 2</b>	To understand the principle, working & maintenance of colorimeter.
<b>CO 3</b>	To understand the principle, working & maintenance of various types of photometer.
<b>CO 4</b>	To understand the principle, procedure of various types of chromatography.
<b>CO 5</b>	To Understand the principle & procedure of various types of Electrophoresis

Analytical Clinical Biochemistry- Practical

UNIT1:

1. To demonstrate the principle, working & maintenance of spectrophotometer.
2. To demonstrate the principle, working & maintenance of colorimeter.

UNIT2:

3. To demonstrate the principle, working & maintenance of flame photometer.
4. To demonstrate the principle, procedure of paper chromatography.

UNIT3:

5. To demonstrate the principle & procedure of Gas chromatography.
6. To demonstrate the principle & demonstration of TLC.

UNIT4:

7. To demonstrate the principle & procedure of column chromatography.

UNIT5:

8. To demonstrate the principle & procedure of Electrophoresis

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Basic Applied Histopathology</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML029A</b>

**COURSE OBJECTIVE-** this section, students will be made aware of terminology used in histotechnology, various instruments and their maintenance and also learn the processing of various samples for histopathological investigations.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the Histotechnology.
<b>CO 2</b>	To understand the Basic Concept of Fixation.
<b>CO 3</b>	To understand the method of decalcification.
<b>CO 4</b>	To understand the manual and automatic tissue processing.
<b>CO 5</b>	To Understand the staining, impregnation and mountants.

### Unit-1

Introduction to Histotechnology

Collection and transportation of specimens for histological examination

Processing of various tissues for histological examination

### Unit-2

Basic concepts of fixation

Various types of fixatives used in a routine histopathology laboratory

Simple fixatives

Compound fixatives

Special fixatives for demonstration of various tissue elements

### Unit-3

Decalcification

Criteria of a good decalcification agent

Technique of decalcification followed with selection of tissue, fixation, and decalcification, neutralization of acid and thorough washing

Various types of decalcifying fluids: Organic & Inorganic Acid, chelating agents, Use of Ion-exchange resins and Electrophoretic decalcification and treatment of hard tissues which are not calcified

#### **Unit- 4**

1 Procedure followed by Dehydration, Clearing, Infiltration and routine timing schedule for manual or automatic tissue processing.

2 Components & principles of various types of automatic tissue

4. Definition

Various types of embedding media, Section Cutting

Introduction regarding equipment used for sectioning

5 Microtome Knives, Sharpening of Microtome Knives, Honing, Stropping, various types of microtome and their applications

6. Freezing Microtome and various types of Cryostats.

Faults in paraffin section cutting with reason and remedy, spreading the sections and attachment or mounting of sections to glass slides.

#### **Unit-5**

Staining, Impregnation and Mountants

1 Theory of Staining, Classifications of Dyes, Principles of Dye Chemistry

2 Stains and Dyes and their uses

3 Types of Stains, Chemical Staining Action, Mordants and Accentuators, Metachromasia

4 Use of Controls in Staining Procedures

5 Preparation of Stains, solvents, aniline water and buffers etc.

6 Commonly used mountants in histotechnology lab

7 General Staining Procedures for Paraffin Infiltrated and Embedded tissue

8 Nuclear Stains and Cytoplasmic stains

9 Equipment and Procedure for manual Staining and Automatic Staining Technique

10 Mounting of Cover Slips, Labeling and Cataloguing the Slides

Routine Staining Procedures

1 Haematoxylin and Eosin Staining, various types of Haematoxylin

2 Mallory's Phosphotungstic Acid Haematoxylin (PTAH)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Basic Applied Histopathology</b> <b>Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester 2 hours</b>	<b>Course Code</b> <b>BML030A</b>

**COURSE OBJECTIVE-** This subject will examine the practice of basic routine histological techniques including fixation, processing , embedding , sectioning & stining of tissue.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the basic knowledge about instrument used in dissection.
<b>CO 2</b>	To understand the preparation of various fixative used in histopathology Lab.
<b>CO 3</b>	To understand the various methods and chemicals use in decalcification.
<b>CO 4</b>	To understand the processing of tissue by manual and automated processor.
<b>CO 5</b>	To Understand the various techniques of staining and mountanting of stained smear.

#### **Applied Histopathology-I - Practical**

##### **UNIT 1:**

1. Demonstration of instruments used for dissection
2. Use of antiseptics, disinfectants and insecticides in a tissue culture processing laboratory

##### **UNIT 2:**

2. Reception and labeling of histological specimens

##### **UNIT 3:**

#### **4 Preparation of various fixatives**

- 4.1 Helly's fluid
- 4.2 Zenker's fluid
- 4.3 Bouin's fluid
- 4.4 Corney's fluid
- 4.5 10% Neutral formalin
- 4.6 Formal saline
- 4.7 Formal acetic acid
- 4.8 Pereyn's fluid

**UNIT4:**

1. Testing of melting point of paraffin wax and perform embedding of given tissue in paraffin block
2. To process a bone for decalcification
3. To prepare ascending and descending grades of alcohol from absolute alcohol
4. Processing of tissue by manual and automated processor method
5. To demonstrate various part and types of microtome
6. To learn sharpening of microtome knife (Honing and stropping technique), and types of disposable blades in use (High and Low Profile).

**UNIT5:**

1. To perform section cutting (Rough and Fine)
2. To practice attachment of tissue sections to glass slides
3. To learn using tissue floatation bath and drying of sections in oven (60-65C)
4. To perform & practice the Haematoxylin and Eosin staining technique
5. To perform & practice the Mallory's Phospho tungstic Acid Haematoxylin (PTAH)
6. To learn mounting of stained smears.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 4</b>
<b>Course</b> <b>Life Skills - II</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester 2 hours</b>	<b>Course Code</b> <b>BML030A</b>

### Course Objectives

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

### Course Outcomes (CO):

**At the end of this course students will have:**

- CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.
- CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.
- CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

## **Syllabus: Theory**

- UNIT 1      Number System:**
- a. Number system
  - b. Power cycle
  - c. Remainder cycle
  - d. Factors, Multiples
  - e. HCF and LCM
- UNIT 2      Data Arrangements and Blood Relations:**
- a. Linear Arrangement
  - b. Circular Arrangement
  - c. Multi-dimensional Arrangement
  - d. Blood Relations
- UNIT 3      Time and Work:**
- a. Work with different efficiencies
  - b. Pipes and cisterns
  - c. Work equivalence
  - d. Division of wages
- UNIT 4      Coding & Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:**
- a. Coding and Decoding
  - b. Series, Analogy
  - d. Odd Man Out, e. Visual Reasoning
- UNIT 5      Percentages, Simple Interest and Compound Interest:**
- a. Percentages as Fractions and Decimals
  - b. Percentage Increase / Decrease
  - c. Simple Interest
  - d. Compound Interest
  - e. Relation Between Simple and Compound Interest
- UNIT 6      Permutation, Combination and Probability:**
- a. Fundamental Counting Principle
  - b. Permutation and Combination
  - c. Computation of Permutation
  - d. Circular Permutations
  - e. Computation of Combination
  - f. Probability
- UNIT 7      Data Interpretation and Data Sufficiency:**
- a. Data Interpretation – Tables
  - b. Data Interpretation - Pie Chart
  - c. Data Interpretation - Bar Graph
  - d. Data Sufficiency
- UNIT 8      Profit and Loss, Partnerships and Averages:**
- a. Basic terminologies in profit and loss
  - b. Partnership
  - c. Averages
  - d. Weighted average
  - e. Mixtures and allegations

## Methodology for Evaluation

1. Internal Assessment
  - a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
2. Term End :40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

3. How to Ace the Brainteaser Interview, by John Kador, Mc Graw Hill Publishers.
4. Quick Arithmetics, by Ashish Agarwal, S Chand Publ.;
5. Quicker Maths, by M tyra& K Kundan, BSC Publishing Co. Pvt. Ltd., Delhi;
6. Owl Purdue University online teaching resources

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b><u>Program</u></b> <b><u>B.Sc. Medical Laboratory Technology (BMLT)</u></b>			<b>Semester: 5</b>
<b>Course</b> <b>Applied Clinical</b> <b>Biochemistry-I</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML031A</b>

**COURSE OBJECTIVE-** The students will learn how to analyze various clinical patients' samples, for estimation of different components which are the cause of the disease or are the diagnostic/prognostic markers. This subject gives information about various clinically important enzymes & automation techniques.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand about Blood sugar estimation and G.T.T
<b>CO 2</b>	To understand about serum urea and cholesterol
<b>CO 3</b>	To understand about Serum bilirubin and Creatinine estimation
<b>CO 4</b>	To understand about Serum calcium and Uric acid estimation
<b>CO 5</b>	To understand about Electrolytes and trace elements, radioisotopes and radioactivity and Quality control in clinical bio-chemistry

### **UNIT1:-**

1. Blood sugar estimation and G.T.T
  - 1.1.Principle and methods of estimation
  - 1.2.Normal and abnormal values
  - 1.3.True and apparent sugar
  - 1.4.Metabolism of sugar
  - 1.5.Precautionary measures
  - 1.6.Renal threshold
  - 1.7.Importance and performance of GTT
  - 1.8.Clinical importance of blood sugar and GTT

## **UNIT2:-**

### **1. Serum urea**

- 1.1. Formation and excretion of urea
- 1.2. Principles and procedures of different methods of urea estimation
- 1.3. Normal and abnormal levels
- 1.4. Clinical importance

### **2. Serum cholesterol**

- 2.1. Formation and estimation of cholesterol
- 2.2. Various methods of estimation including principles and procedures
- 2.3. Normal and abnormal values
- 2.4. Clinical importance

## **UNIT3:-**

### **1. Serum bilirubin**

- 1.1. Formation and excretion of bilirubin
- 1.2. Metabolism of bile pigments
- 1.3. Conjugated and unconjugated bilirubin

### **2. Principles and procedures of serum bilirubin estimation**

- 2.1. Normal and abnormal values
- 2.2. Clinical importance

### **3. Creatinine estimation**

- 3.1. Principles and procedures of estimation
- 3.2. Normal and abnormal/ values
- 3.3. Clinical importance

## **UNIT4:-**

### **1. Serum calcium**

- 1.1.Principles and procedures estimation
- 1.2.Normal and abnormal values
- 1.3.Clinical importance
2. Uric acid estimation
  - 2.1.Principles and procedures estimation
  - 2.2.Normal and abnormal values
  - 2.3.Clinical importance

#### **UNIT5:-**

1. Electrolytes and trace elements
  - 1.1. Functions of electrolytes like Na<sup>+</sup>, K<sup>+</sup> and Cl<sup>-</sup>. Other essential trace elements like Ca<sup>2+</sup>, Fe<sup>2+</sup> etc. Metabolism of these ions
  - 1.2. Principles and procedures of estimation
  - 1.3. Normal and abnormal values
2. Clinical importance and Application of radioisotopes. Their brief description and use.
  - 2.1.Instruments for detection of Radioactivity
- 3.. Quality control in clinical bio-chemistry

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 5</b>
<b>Course</b> <b>Applied Clinical</b> <b>Biochemistry-I Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester 3 credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML032A</b>

**COURSE OBJECTIVE-** The students will be taught about Hazards & safety measures in a clinical biochemistry lab, Estimation of blood Sugar and Laboratory organization, management Principles of and procedures of serum tests.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn

<b>CO 1</b>	To understand the Estimation of blood Sugar and GTT
<b>CO 2</b>	To understand the Serum Urea and plasma Estimation
<b>CO 3</b>	To understand the Estimation of electrolyte and serum cholesterol.
<b>CO 4</b>	To understand the Estimation of Phosphorous and preparation of reagent
<b>CO 5</b>	To understand the Estimation of serum calcium and serum creatinine

### **Applied Clinical Biochemistry-I - Practical**

#### **UNIT 1:-**

1. Estimation of blood Sugar (Folin-Wu method, enzyme methods etc.)
2. Performance of GTT

#### **UNIT 2:-**

1. Serum Urea estimation
2. Plasma and serum protein estimation

#### **UNIT 3:-**

1. Serum cholesterol estimation
2. Estimation of electrolyte level (Na<sup>+</sup>, K<sup>+</sup> and Cl<sup>-</sup> by flame photometer and kit methods)

#### **UNIT 4:-**

1. Preparation all types of reagents
2. Estimation of Serum bilirubin
3. Estimation of Phosphorous

#### **UNIT 5:-**

1. Estimation of Serum calcium
2. Estimation of Serum creatinine
3. Estimation of Serum uric acid

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 5</b>
<b>Course</b> <b>Applied Histopathology-II</b>	<b>Course</b> <b>Description Core</b>	<b>C r e d i t</b> <b>perSemester</b> <b>3 c r e d i t s</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML033A</b>

**COURSE OBJECTIVE-** : Students will learn about various staining procedures for demonstration of different substances. The students will learn about special staining procedures, its handling & testing of various histological specimens in addition to cryostat sectioning and electron microscopic procedures

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand about Cryostat sectioning and Special Staining Procedures
<b>CO 2</b>	To understand about carbohydrate, lipids and protein. Bacteria and fungi tissue section. Tissue requiring special treatment
<b>CO 3</b>	To understand Enzyme histochemistry and Vital staining.
<b>CO 4</b>	To understand Neuro-pathological techniques. Museum techniques.
<b>CO 5</b>	To understand Electron Microscope. Micrometry and Morphometry

### **BMLS-504: Applied Histopathology-II**

#### **UNIT 1:-**

1. Cryostat sectioning, its applications in diagnostic histopathology.
2. Special Staining Procedures for detection of
  - 2.1 Connective tissue elements, Trichrome staining, muscle fibers, elastic, reticulin fibers, collagen fibers etc.
  - 2.2 Metachromatic staining such as Toluidine blue on frozen sections
  - 2.3 Principles of metal impregnation techniques.
  - 2.4 Demonstration and identification of minerals and pigments, removal of Pigments/artifacts in tissue sections

## **UNIT 2:-**

1. Demonstration of Proteins & nucleic acids.
2. Demonstration of Carbohydrates, lipids, fat & fat like substances.
3. Demonstration of bacteria and fungi in tissue section.
4. Tissue requiring special treatment i.e. eye ball, bone marrow, and muscle biopsy, under calcified or unclarified bones, whole brain, and whole lungs including other large organs.

## **UNIT 3:-**

1. Enzyme histochemistry: Diagnostic applications and the demonstration of Phosphatases, Dehydrogenases, Oxidases & Peroxidases.
2. Vital staining.

## **UNIT 4:-**

1. Neuro-pathological techniques.
2. Museum techniques.

## **UNIT 5:-**

1. Electron Microscope:
  - 1.1 working principle and its components
  - 1.2 Processing, embedding and ultra-microtomy
2. Micrometry and Morphometry

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Medical Laboratory Technology (BMLT)</u></b>			<b>Semester: 5</b>
<b>Course</b> <b>Applied Histopathology-II</b> <b>Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML034A</b>

**COURSE OBJECTIVE-** In this section, students will be made aware of terminology used in histo-technology, various instruments and the maintenance and also learn the processing of various samples for histo-pathological investigations.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand cut frozen section and to prepare Schiff reagent and ammonical reagent.
<b>CO 2</b>	To understand the stain a paraffin section for the demonstration of smooth muscle.
<b>CO 3</b>	To understand stain a paraffin section for Mucicarmine, Alcian blue and pearl stain.
<b>CO 4</b>	To understand the presence of bacteria and fungi in paraffin embedded sections using.
<b>CO 5</b>	To understand the stain for nucleic acid DNA and RNA.

### **BMLS-508: Applied Histopathology-II - Practical**

#### **UNIT 1:-**

1. To cut frozen section and stain for Haematoxylin and Eosin, Metachromatic stain  
Toluidine blue- \_o‘ and Oil Red \_O‘ staining for the demonstration of fat
2. To prepare Schiff’s reagent in the lab and do Periodic Acid Schiff’s (PAS) stain on a paraffin section
3. To prepare ammonical silver bath in the laboratory and stain paraffin embedded section for the demonstration of reticulin fibers.

#### **UNIT 2:-**

1. To stain a paraffin section for the demonstration of smooth muscle by Van Gieson’s Stain
2. To perform Masson’s trichrome stain on a paraffin section for the demonstration of collagen fiber, muscle fiber and other cell elements.
3. To stain the paraffin section for the demonstration of the elastic fibers (EVG).
4. To stain Decalcified paraffin embedded section for the presence of calcium salts (Von Kossa’s method).

### **UNIT 3:-**

1. To stain a paraffin section for the following Mucicarmine, Alcian blue.
2. To stain a paraffin section for the demonstration of iron (Perl's stain)

### **UNIT 4:-**

1. To demonstrate the presence of bacteria and fungi in paraffin embedded sections using the following staining procedures:
  - 1.1 Gram's staining
  - 1.2 AFB staining (Ziehl Neilson's staining) for M. tuberculosis and leprae
  - 1.3 Grocott's stain for fungi
  - 1.4 Schmorl's reaction for reducing substances (melanin)

### **UNIT 5:-**

1. To stain for nucleic acid (DNA and RNA)
  - 1.1 Feulgen Staining
  - 1.2 Methyl Green-Pyronin Staining
  - 1.3 Enzymatic methods

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 5</b>
<b>Course</b> <b>Applied Hematology-II</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML035A</b>

**COURSE OBJECTIVE-** The students will be made aware of the safety precautions in Haematology, basic concepts of Automation, quantitative assay of coagulation factors, Karyotyping etc. and will learn about concepts such as safety precautions, quality assurance, biomedical waste management and automation in haematology. It will also cover bone marrow examination, red cell anomalies, disorder of leucocytes, L.E. cell phenomenon.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand about Safety precautions in Haematology. Automation in Haematology. Bone marrow examination
<b>CO 2</b>	Red cell anomalies and Reticulocyte
<b>CO 3</b>	To understand about Lupus Erythematosus (L.E) cell phenomenon.
<b>CO 4</b>	Factor deficiency, coagulation factors and Screening of inhibitors
<b>CO 5</b>	Karyotyping, Cyto-chemical staining and Biomedical waste management in Haematology laboratory

## **BMLS-502: Applied Haematology-II**

### **UNIT 1:-**

1. Safety precautions in Haematology
2. Basic concepts of automation in Haematology with special reference to:
  - 2.1 Blood cell counter
  - 2.2 Coagulometer
3. Bone marrow examination
  - 3.1 Composition and functions
  - 3.2 Aspiration of bone marrow (Adults and children)
  - 3.3 Processing of aspirated bone marrow (Preparation & staining of smear)
  - 3.4 Brief knowledge about examination of aspirated bone marrow (differential cell counts)

and cellular ratios)

### 3.5 Processing and staining of trephine biopsy specimens

## **UNIT 2:-**

### 1. Red cell anomalies

1.1 Morphological changes such as variation in size shape & staining character.

### 2. Reticulocytes: Definition, different methods to count, Absolute reticulocyte count and IRF (Immature reticulocyte fraction) and significance of reticulocytes.

## **UNIT 3:-**

### 1. Lupus Erythematosus (L.E) cell phenomenon.

1.1 Definition of L.E. cell.

1.2 Demonstration of L.E. cell by various methods.

1.3 Clinical significance.

## **UNIT 4:-**

### 1. Correction studies for Factor deficiency

### 2. Quantitative assay of coagulation factors

2.1 Principle

2.2 Procedure

### 3. Screening of inhibitors

3.1 Inhibitors against coagulation factors

3.2 APLA

## **UNIT 5:-**

### 1. Karyotyping: Chromosomal studies in hematological disorders (PBL and Bone marrow)

11. Cyto-chemical staining: Principles, method and significance

12. Biomedical waste management in Haematology laboratory (Other than Radioactive material)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Applied Haematology-II</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester 1</b> <b>credits</b>	<b>Hours per</b> <b>Semester 2</b> <b>hours</b>	<b>Course</b> <b>Code</b> <b>BML036A</b>

**COURSE OBJECTIVE-** The students will be made aware of different anemia, Leukemia, chromosomal studies, bleeding disorders and radiation hazards and understand about Safety precautions in Haematology.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand the morphology of Normal and abnormal RBCs and WBCs
<b>CO 2</b>	To understand Calculating INR and determining the ISI of thromboplastin and quantitative factors
<b>CO 3</b>	To understand the Quantification of inhibitors by Bethesda method
<b>CO 4</b>	To understand the Anti-cardiolipin antibodies ACA and ELT
<b>CO 5</b>	To understand the Urea clot solubility test for factor XIII

### **BMLS-506: Applied Haematology-II – Practical**

#### **UNIT 1:-**

1. Review the morphology of Normal and abnormal RBCs
2. Review the morphology of normal and immature WBCs
3. WBCs anomalies

#### **UNIT 2:-**

1. Calculating INR and determining the ISI of thromboplastin
2. Quantitative Factor assays:
  - 2.1 Factor VIII
  - 2.2 Factor IX
  - 2.3 Factor VII
  - 2.4 Factor X
  - 2.5 Factor V

**UNIT 3:-**

1. Quantification of inhibitors (Bethesda method)
2. APLA : Lupus Anticoagulant (LA)

**UNIT 4:-**

1. Anti-cardiolipin antibodies (ACA)
2. Perform Euglobulin clot lysis test (ELT)

**UNIT 5:-**

1. Urea clot solubility test for factor XIII

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 5</b>
<b>Course</b> <b>Blood Banking &amp; Genetics</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester 1</b> <b>credits</b>	<b>Hours per Semester 2</b> <b>hours</b>	<b>Course Code</b> <b>BML037A</b>

**COURSE OBJECTIVE-** Blood banking will make students learn about blood grouping & blood transfusion. The students will learn about the concept of blood grouping, compatibility testing in blood transfusion & screening of donated blood for various infectious diseases. Genetics will make students learn about Fundamentals of Heredity. The students will learn about the concept of inheritance in various genetic diseases.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Introduction to Blood Banking and blood group systems.
<b>CO 2</b>	Blood transfusion, collection and cross matching
<b>CO 3</b>	Complications, precautions and hazards of blood transfusion. Various anticoagulants. Selection of donor and collection of blood from a healthy donor
<b>CO 4</b>	Preparation of various fractions of blood for transfusion and therapeutic purposes such
<b>CO 5</b>	Different tests of blood grouping, screening of blood from different diseases and screening of blood donors.

## **BMLS-702: Blood Banking and Genetics**

### **UNIT1:-**

1. Introduction to Blood Banking
2. History and discovery of various blood group systems
3. ABO blood group system
4. Rh and other major blood group system
5. Sources of error in blood grouping and their elimination.
6. ABO grouping: Forward and reverse grouping. Causes of discrimination between forward and reverse grouping
7. Rh grouping

## **UNIT2:-**

1. Compatibility test in blood transfusion
2. Collection of blood for cross matching from a blood bag
3. Major cross matching
4. Minor cross matching
5. Use of enzymes in blood bank specially Papain

## **UNIT3:-**

1. Complications and hazards of blood transfusion
2. Laboratory investigations of transfusion reactions and mismatched blood transfusion.
3. Precautions while procurement and storage of grouping antisera
4. Various anticoagulants used to collect blood for transfusion purposes
5. Selection of donor and procedure for collection of blood from a healthy donor

## **UNIT4:-**

1. Preparation of various fractions of blood for transfusion and therapeutic purposes such as:
  - 1.1 Packed red cells, washed red cells and FROZEN Red cells
  - 1.2 Platelet Rich Plasma (PRP), Platelet concentrate and frozen platelets.
  - 1.3 Fresh plasma (FP), Fresh Frozen Plasma (FFP) and cryoprecipitate
  - 1.4 Brief introduction of blood substitute/artificial blood
  - 1.5 Haemopheresis: pertaining to Leucocytes, platelets and plasma.

## **UNIT5:-**

1. Direct and Indirect Coomb's test
2. Rh grouping and determination of Du in case of Rh negative
3. Screening of blood for Malaria, Microfilaria, HBs Ag, Syphilis and HIV
4. Acid Citrate Dextrose (ACD) and Citrate Phosphate Dextrose (CPD) Solutions
5. Screening of blood donor: physical examination including medical history of the donor

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 5</b>
<b>Course</b> <b>Immunology &amp; Bacterial</b> <b>Serology (T)</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>(BML038A)</b>

**COURSE OBJECTIVE-** : This section will cover the basic aspects of immunity, antigens, antibodies, various serological reactions, techniques and their utility in laboratory diagnosis of human diseases. It will also cover medically important fungi, infections caused by them and their laboratory diagnosis.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	History and introduction to immunology and Medical Microbiology:
<b>CO 2</b>	Various serological tests
<b>CO 3</b>	Complement system and Immune response
<b>CO 4</b>	Understand about Hypersensitivity
<b>CO 5</b>	Understand about Vaccines

## **BMLS-501: Immunology and Bacterial Serology**

### **UNIT 1:-**

1. History and introduction to immunology
2. Principle, procedure and applications of under mentioned in Medical Microbiology:
  - 2.1 Complement fixation test
  - 2.2 Immuno- fluorescence
  - 2.3 ELISA
  - 2.4 SDS-PAGE
  - 2.5 Western blotting

### **UNIT 2:-**

1. Principle, procedure and interpretation of various serological tests:
  - 1.1 Widal
  - 1.2 VDRL

1.3 ASO

1.4 CRP

1.5 Brucella tube agglutination

1.6 Rose-Waaler

### **UNIT3:-**

1. Complement system:

1.1 Definition

1.2 Basic concepts about its components

1.3 Complement activation pathways

2. Immune response:

2.1 Introduction

2.2 Basic concepts of Humoral and Cellular immune responses

### **UNIT4:-**

1. Hypersensitivity:

1.1 Definition

1.2 Types of hypersensitivity reactions

1.3 Basic concepts of autoimmunity and brief knowledge about autoimmune diseases

1.4 Automation in diagnostic serology

### **UNIT5:-**

1. Vaccines:

1.1 Definition

1.2 Types

1.3 Vaccination schedule

1.4 Brief knowledge about ‘Extended programme of immunization’ (EPI) in India

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 5</b>
<b>Course</b> <b>Immunology &amp; Bacterial</b> <b>Serology Practical</b>	<b>Course</b> <b>Description Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>(BML039A)</b>

**COURSE OBJECTIVE-** The student will be able to identify antibodies. These are proteins made by a type of white blood cell in response to a foreign substance (antigen) in the body. Investigating problems with the immune system.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand Collection of blood sample and to perform haemolysin titration.
<b>CO 2</b>	To understand the Preparation of Phosphate buffers and Standardization of cell concentration by Spectrophotometer .
<b>CO 3</b>	To understand how to Perform the different Serological tests .
<b>CO 4</b>	To understand the Latex agglutination and Rheumatoid factor .
<b>CO 5</b>	To understand the antigen/antibody determination by Immuno fluorescence.

### **BMLS-505: Immunology and Bacterial Serology – Practical**

#### **UNIT 1:-**

1. Collection of blood sample by vein puncture, separation and preservation of serum
2. Performing Haemolysin titration for Rose-Waaler test

#### **UNIT 2:-**

1. Preparation of Phosphate buffers, Verinol buffer, ASO buffer, Richardson's buffer, Buffers of different pH and Molarity, Tris buffer, Standardization of cell concentration by Spectrophotometer

#### **UNIT 3:-**

1. Performance of Serological tests i.e.
  - 1.1 Widal,
  - 1.2 Brucella Tube Agglutination,
  - 1.3 VDRL (including Antigen Preparation),
  - 1.4 ASO (Anti-Streptolysin \_O')

**UNIT 4:-**

- 1.C-Reactive Protein (Latex agglutination)
- 2.Rheumatoid factor (RF) Latex agglutination
- 3.Rose Waaler test,

**UNIT 5:-**

1. Demonstration of antigen/antibody determination by Immuno fluorescence (IF),  
Immuno-diffusion, precipitation in Agarose gel (Ouchterlony), CCIEP, ELISA, SDS -  
PAGE and Western blotting

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Immunology &amp; Molecular</b> <b>Biology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credits per</b> <b>semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3</b> <b>hours</b>	<b>Course</b> <b>Code</b> <b>(BML047A)</b>

**COURSE OBJECTIVE- :** This section will cover the basic aspects of immunity, antigens, antibodies, various serological reactions, techniques and their utility in laboratory diagnosis of human diseases. It will also cover medically important fungi, infections caused by them and their laboratory diagnosis.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	History and introduction to immunology and Molecular biology
<b>CO 2</b>	Various immunology and molecular biology tests
<b>CO 3</b>	Complement system and Immune response
<b>CO 4</b>	Understand about Hypersensitivity and Autoimmunity
<b>CO 5</b>	Understand about molecular biology

### **BMLS-501: Immunology and Molecular Biology**

#### **UNIT 1:-**

1. Introduction to immunology
2. Cell of the immune system

#### **UNIT 2:-**

1. Types and mechanism of immune response
2. Lymphoid organs of the immune system

#### **UNIT3:-**

1. MHC I & II
2. HLA Typing and Crossmatching
3. Transplant immunology
4. Hypersensitivity: Definition, Types and Mechanisms

#### **UNIT4:-**

1. Autoimmunity
2. Immune tolerance basic concepts
3. Introduction to molecular biology
4. Relationship of molecular biology with other science

## **UNIT5:-**

1. Molecular biology techniques: Principles, Reagent used, procedure and application in medical diagnostics.
  2. Polymerase chain reaction and it's advanced version.
  3. Gel electrophoresis
  4. Western blotting
  5. Chemical composition of DNA
- 
- 5.1 DNA Replication
  - 5.2 DNA Damage and Repair
  - 5.3 Regulation of prokaryotic and Eukaryotic Gene expression
  - 5.4 Cell cycle

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 6</b>
<b>Course</b> <b>Immunology &amp; Molecular</b> <b>Biology Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per</b> <b>Semester 2</b> <b>hours</b>	<b>Course</b> <b>Code</b> <b>(BML048A)</b>

**COURSE OBJECTIVE-** The student will be able to identify antibodies. These are proteins made by a type of white blood cell in response to a foreign substance (antigen) in the body. Investigating problems with the immune system.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To Understand immunology and molecular biology test
<b>CO 2</b>	To understand how to separate the immune system cell.
<b>CO 3</b>	To understand the antigen/antibody determination by western blotting
<b>CO 4</b>	To understand the test of polymerase chain reaction, HLA typing and western blotting
<b>CO 5</b>	To understand the estimation and isolation of DNA and RNA

#### **UNIT 1:-**

1. Peripheral blood mononuclear cell(PBMC) isolation by gradient centrifugation
2. T and B cell separation
3. Immunofluorescence

#### **UNIT 2:-**

1. Anti-Nuclear Antibody (ANA)
2. Anti-Neutrophil Cytoplasmic Antibody (ANCA)
3. AIDS Immunology and Pathogenesis (AIP)

#### **UNIT 3:-**

1. Thyroid Microsomal Antigen (TMA)-Agglutination reactions
2. Electrophoresis
3. Gel diffusion

#### **UNIT 4:-**

1. Nephelometry
2. HLA: Typing Serology & Cross match

## Molecular typing

3. Nitro blue Tetrazolium Chloride Test (NBT)
4. FACS for CD4 and CD8
5. ELISA for lab, diagnosis for AIDS

## UNIT 5:-

1. Polymerase Chain Reaction and it's advanced versions
2. Gel electrophoresis
3. Western blotting
4. Isolation of DNA and RNA
5. Estimation of DNA and RNA

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 6</b>
<b>Course</b> <b>Applied Clinical</b> <b>Biochemistry-I</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>BML040A</b>

**COURSE OBJECTIVE-** The students will learn how to analyze various clinical patients' samples, for estimation of different components which are the cause of the disease or are the diagnostic/prognostic markers. This subject gives information about various clinically important enzymes & automation techniques.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	To understand about automation and method of estimation in clinic biochemistry
<b>CO 2</b>	To understand about gastric and renal functions
<b>CO 3</b>	To understand about liver function test and thyroid hormone test
<b>CO 4</b>	To understand about enzymes and its function
<b>CO 5</b>	To understand about renal calculi cerebrospinal fluid and rapid techniques in clinical biochemistry

### Unit1.

- 1 Automation in clinical biochemistry
- 2 Method of estimation and assessment for:
  - 2.1 Glucose tolerance test
  - 2.2 Insulin tolerance test
  - 2.3 Xylose excretion test.

### UNIT-2

1. Gastric analysis.
2. Clearance test for renal function.

### UNIT3

1. Qualitative test for:
  - 1.1 Urobilinogen
  - 1.2 Barbiturates
  - 1.3 T3, T4 and TSH
  - 1.4 Ketosteroid

### UNIT-4

1. Enzymes:
  - 1.1 Principles
  - 1.2 Clinical significance
2. Procedures for estimation

- 2.1 Acid phosphatase
- 2.2 Alkaline phosphatase
- 2.3 Lactate dehydrogenase aspartate transaminase
- 2.4 Alanine transaminase
- 2.5 Creatine phosphokinase

## **UNIT-5**

- 1. Qualitative analysis of Renal calculi.
- 2. Chemical examination of Cerebrospinal fluid.
- 3. Brief knowledge about rapid techniques in clinical biochemistry

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Applied Clinical</b> <b>Biochemistry-I Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester 1</b> <b>credits</b>	<b>Hours per</b> <b>Semester 2</b> <b>hours</b>	<b>Course</b> <b>Code</b> <b>BML041A</b>

### **Applied Clinical Biochemistry-I - Practical**

**COURSE OBJECTIVE-** The students will be taught about Hazards & safety measures in a clinical biochemistry lab, Estimation of blood Sugar and Laboratory organization, management Principles of and procedures of serum tests.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn

<b>CO 1</b>	To understand the Estimation of blood Sugar and GTT
<b>CO 2</b>	To understand the Estimation of uric acid in urine
<b>CO 3</b>	To understand the Estimation Serum lactate dehydrogenase
<b>CO 4</b>	To understand the Estimation of alkaline phosphatase
<b>CO 5</b>	To understand the Estimation of creatinine clearance

#### **Unit 1**

1. Estimation of Glucose tolerance test (GTT).
2. Estimation of Insulin tolerance test (ITT).

#### **Unit 2**

3. Determination of Uric acid in Urine.
4. Determination of Creatinine clearance.
5. Determination of Urea clearance.

#### **Unit 3**

6. Determination of Serum acid phosphatase.
7. Determination of Serum Alkaline phosphatase.

#### **Unit 4**

8. Determination of Serum Lactate dehydrogenase.

#### **Unit 5**

9. Determination of T3, T4 and TSH

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b><u>B.Sc. Medical Laboratory Technology (BMLT)</u></b>			<b>Semester: 6</b>
<b>Course</b> <b>Research Methodology</b> <b>and Biostatistics</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>(BML042A)</b>

### Research Methodology and Biostatistics

**COURSE OBJECTIVE:-** The objective of this module is to help the students understand the basic principles of research and methods applied to draw inferences from the research findings. The students will also be made aware of the need of biostatistics and understanding of data, sampling methods, in addition to being given information about the relation between data and variables.

Research Methodology:

Course Outcome:-

CO-1:- To understand the research method and research problem.
CO-2:- To understand the types of data and Data collection methods.
CO-3:- To understand the Basic Concepts of Bio-statistics and Understanding of data in bio-statistics
CO-4:- To understand the Relation between data & variables and Understanding of statistical analysis.
CO-5:- To understand the Derivation of medical terms and Data entry and management

### UNIT1:

1. Introduction to research methods
2. Identifying research problem
3. Ethical issues in research
4. Research design

### UNIT2:

1. Types of Data
2. Research tools and Data collection methods
3. Sampling methods
4. Developing a research propos

### UNIT3:

1. Basic Concepts of Biostatistics
2. Need of biostatistics
3. What is biostatistics: beyond definition

#### 4. Understanding of data in biostatistics

#### 5. How & where to get relevant data

#### **UNIT4:**

- 1.. Relation between data & variables
2. Type of variables: defining data set
3. Collection of relevant data: sampling methods
4. Construction of study: population, sample, normality and its beyond (not design of study, perhaps)
5. Summarizing data on the pretext of underlined study
6. Understanding of statistical analysis (not methods)

#### **UNIT5:**

1. Derivation of medical terms.
2. Conventions for combined morphemes and the formation of plurals.
3. Form medical terms utilizing roots, suffixes, prefixes, and combining roots.
4. Interpret medical orders/reports.
5. Data entry and management on electronic health record system.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 6</b>
<b>Course</b> <b>Cytology and</b> <b>Cytotechniques</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3</b> <b>hours</b>	<b>Course Code</b> <b>(BML043A)</b>

**COURSE OBJECTIVE:-** The students will learn about various staining procedures for demonstration of different substances & various cytological investigations. This will include special staining procedures & handling & testing of various cytological specimens.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn

<b>CO 1</b>	To understand the cryostat and cytochemistry
<b>CO 2</b>	To understand the vital staining and Aspiration cytology
<b>CO 3</b>	To understand the Role of cytotechnologist and Fluid Cytology
<b>CO 4</b>	To understand the Body Fluids Pleural, Pericardial, Ascitic
<b>CO 5</b>	To understand the Automation in cytology

## UNIT1

1. Cryostat sectioning, its applications in diagnostic cytopathology
2. Enzyme Cytochemistry:
  - 2.1 Diagnostic applications
  - 2.2 Demonstration of Phosphatases, Dehydrogenases, Oxidases & Peroxidases

## UNIT2

1. Vital staining for Sex Chromatin
2. Aspiration cytology
3. Principle

## UNIT3

1. Indications & utility of the technique with special emphasis on role of cytotechnologist in FNAC clinics
2. Exfoliative cytology (Papanicolaou technique for the staining of cervical smears)
3. Cervical cytology
4. Fluid Cytology

#### **UNIT 4**

- 1 Urine
- 2 CSF
- 3 Body Fluids (Pleural, Pericardial, Ascitic)

#### **UNIT 5**

1. Automation in cytology
2. Liquid based cytology: Principles and preparation, Cytocentrifuge, molecular cytology, Cell Block and Immune-cytochemistry

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 6</b>
<b>Course</b> <b>Cytology and</b> <b>Cytotechniques practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per</b> <b>Semester 2hours</b>	<b>Course Code</b> <b>(BML044A)</b>

**COURSE OBJECTIVE:-** The students will learn about various staining procedures for demonstration of different substances & various cytological investigations. This will include special staining procedures & handling & testing of various cytological specimens.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn

<b>CO 1</b>	To understand the cryostat and cytochemistry
<b>CO 2</b>	To understand the vital staining and Aspiration cytology
<b>CO 3</b>	To understand the Role of cytotechnologist and Fluid Cytology
<b>CO 4</b>	To understand the Body Fluids Pleural, Pericardial, Ascitic
<b>CO 5</b>	To understand the Automation in cytology

#### Cytopathology – Practical

1. To perform Papnicolaou's stain on cervical smear
2. To perform Guard's staining for demonstration sex chromatin (Barr bodies on a buccal smear)
3. To perform Shorr's staining for Hormonal assessment
4. To cut frozen sections of Gynaec tissue
5. . To perform CSF sample and body fluids by cytospin
6. Should know the various stains used in Cytology lab:l
7. May Grunwald Giemsa, H&E,

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 6</b>
<b>Course</b> <b>Medical Parasitology &amp;</b> <b>Virology</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester 3</b> <b>credits</b>	<b>Hours per</b> <b>Semester 3 hours</b>	<b>Course Code</b> <b>(BML045A)</b>

**COURSE OBJECTIVE:-**The student will be taught about introduction, general characteristics, life cycle and laboratory diagnosis of various Medically important Viruses and medically important parasites.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn

CO1: To understand general characteristics, life cycle and laboratory diagnosis of various.
CO2: To understand the Processing of samples for viral culture and various staining for virus.
CO3: To understand general characteristics, life cycle and laboratory diagnosis of parasites.
CO4: To understand the Processing of samples for Helminthology/ Helminthic parasites
CO5: To understand Examination of blood film for Malarial parasite and Microfilariae and preservation of parasitological sample.

#### **UNIT1:-**

1. Introduction to medical virology
2. Introduction to medically important viruses
3. Structure and Classification of viruses.
4. Multiplication of viruses

#### **UNIT2:-**

5. Collection, transportation and storage of sample for viral diagnosis
6. Staining techniques used in Virology
7. Processing of samples for viral culture (Egg inoculation and tissue culture)
8. Rapid diagnosis of viral infections with special reference to HIV, HBV and HCV

### **UNIT3:-**

1. Introduction to Medical Parasitology with respect to terms used in Parasitology.
2. Protozoology/ Protozoal parasites:
  - 2.1 General characteristics of protozoa.
  - 2.2 Geographical distribution, Habitat, Morphology, life cycle, Mode of infection and laboratory diagnosis of Entamoeba sp.
  - 2.3 Geographical distribution, Habitat, Morphology, life cycle, Mode of infection and laboratory diagnosis of Intestinal and vaginal flagellates Intestinal and vaginal flagellates i.e. Giardia, Trichomonas sp.

### **UNIT 4:-**

1. Helminthology/ Helminthic parasites:

General characteristics of Cestodes, Trematodes and Nematodes
- 2 Geographical distribution, Habitat, Morphology, life cycle, Mode of infection and laboratory diagnosis of
  - 2.1 Taenia solium and saginata
  - 2.2 Echinococcus granulosus
  - 2.3 Hymenolepis nana
  - 2.4 Enterobius vermicularis
3. Diagnostic procedures:
  - 3.1 Examination of Stool for parasites
  - 3.2 For intestinal protozoal infections
  - 3.3 General rules for microscopic examination of stool samples 3.4 Collection of stool samples

### **UNIT 5:-**

1. Examination of blood film for Malarial parasite and Microfilariae 2. Collection, Transport, processing and preservation of samples for routine parasitological investigations
3. Morphology, life cycle and lab-diagnosis of Giardia and Entamoeba
4. Morphology, life cycle and lab-diagnosis of Roundworms and Hookworms
5. Morphology, life cycle and lab-diagnosis of T. solium and T. saginata 10. Morphology, life cycle and lab-diagnosis of Malarial parasite with special reference to P. vivax and P. falciparum
6. Concentration techniques for demonstration of Ova and Cysts (Principles and applications)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>B.Sc. Medical Laboratory Technology (BMLT)</b>			<b>Semester: 6</b>
<b>Course</b> <b>Medical Parasitology &amp;</b> <b>Virology practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1credits</b>	<b>Hours per</b> <b>Semester 2 hours</b>	<b>Course Code</b> <b>(BML046A)</b>

**COURSE OBJECTIVE:-**The student will be taught about introduction, general characteristics, life cycle and laboratory diagnosis of various Medically important Viruses and medically important parasites.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn

CO1: To understand general characteristics, life cycle and laboratory diagnosis of various.
CO2: To understand the Processing of samples for viral culture and various staining for virus.
CO3: To understand general characteristics, life cycle and laboratory diagnosis of parasites.
CO4: To understand the Processing of samples for Helminthology/ Helminthic parasites
CO5: To understand Examination of blood film for Malarial parasite and Microfilariae and preservation of parasitological sample.

- 1.To perform KOH preparation, Gram stain, Potassium Hydroxide - Calcofluor White method, India Ink preparation, Modified Kinyoun Acid Fast Stain for Nocardia, LCB preparation.
- 2.To demonstrate structure of viruses and their multiplication from charts etc.
3. To perform Giemsa stain, Seller's stain, immunofluorescent staining procedures for diagnosis of viral infections
- 4.. Demonstration of fertilized hen egg
5. Demonstration of various inoculation routes in fertilized hen egg
- 6.Routine stool examination for detection of intestinal parasites with concentration methods:
  - 6.1 Saline preparation
  - 6.2 Iodine preparation
  - 6.3 Floatation method
  - 6.4 Centrifugation method
  - 6.5 Formal ether method
  - 6.6 Zinc sulphate method

# **JECRC UNIVERSITY**

**School of Allied Health Sciences**

**Department of Physiotherapy**

**Bachelor In Physiotherapy**

**Course Duration: - 4 years + 6 months compulsory rotatory internship**

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

**PROGRAMME EDUCATIONAL OBJECTIVES (PEO'S)**

- **PEO 1:** Demonstrate knowledge of the theoretical basis of physiotherapy.
- **PEO 2:** Demonstrate clinical competency in evaluation, treatment planning and implementation.
- **PEO 3:** Integrate knowledge of basic sciences and physiotherapy in order to modify treatment approaches that reflect the breadth and scope of physiotherapy practice.
- **PEO 4:** Integrate the use of basic principles of research in critical analysis of concepts and findings generated by self and others.
- **PEO 5:** Actively recognize the rights and dignity of individuals in planning and administering programs of care.
- **PEO 6:** Identify with and contribute to the aims and ideals of the profession.
- **PEO 7:** Function as competent physical therapists in any health care setting.
- **PEO 8:** Demonstrate command of knowledge which is necessary to function as an independent problem solver and learner in the practice environment.
- **PEO 9:** Practice in an ethical and legal manner.

## **PROGRAMME OUTCOMES (POs) POs and its Attributes: Physiotherapy Graduates will be able to-**

- **PO 1:** System Of Health Care: Recognize the role of Physiotherapy in the context of health need of the community and National priorities in the health sectors. Understanding the rules, responsibility and expertise of all health professionals and how they work as a team member to delivered health care with their expertise and ability to communicate effectively with them.
- **PO 2:** Fundamental Knowledge: Basic knowledge comprises Human Anatomy, Physiology, pathology, Pharmacology, Medicine, Surgical Conditions and their Physiotherapeutic management. Students will be able to know about the physiotherapy concepts and skills related to basic medical knowledge, therapeutic modalities, electrotherapy and special techniques and executes particular task and understanding the factor that might disturb normal structure and function with proper rehabilitation how to overcome from underlying problem.
- **PO 3:** Assessment: A holistic approach of patient assessment through various learning process with physical therapy domain from impairment to disability and categorized to store towards normal ADL. The student able to learn Physiotherapy assessment, treatment, plan and its outcome for appropriate tailored program in effective care and rehabilitation.
- **PO 4:** Critical Thinking: Indentify, define and deal with problems of professional practice through logical, analytical and critical thinking. Acquire the necessary knowledge and skills to help them practice efficiently and accurately. Apply the methods of evaluation and differential diagnosis in Physiotherapy and develop the appropriate rehabilitation program for patients. Student learns in analyzing evaluating information and bridging the gap from theoretical knowledge to clinical practice by critical reasoning and problem solving in physiotherapy practice.
- **PO 5:** Manual Approaches: Physical therapy a non invasive approach an idea lies behind manual therapy by including articular, myomanual, and neural, sensorimotor, gross skill development and along with respiratory exercise to be restoring their normal functioning.
- **PO 6:** Physiotherapy and Society: Applying the medical knowledge with contextual frame work to assess societal, health, safety legal and cultural issues and consequent responsibilities relevant to the professional physical therapist.
- **PO 7:** Individual And Team Work: Students will be able to work with the medical team in a creative and flexible manner and show responsibility, commitment and leadership in various treatment approaches.
- **PO 8:** Professional Ethics: Physical therapy encompasses broad ethical principle and commit to professional ethics providing sound platform to maintain dignity and accountability without medical negligence. Students will be able to apply ethical principles and commit to professional ethics and responsibilities and norms of physiotherapy practice.
- **PO 9:** Communication Skills, Indian culture, Environment studies and basics and

advance computer knowledge: Apply the communication and collaboration skills, values, ethics and attitudes that will enable them to effectively deal with patients, families and medical team.

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

- **PO 10: Research Possesses:** Studies by incorporate from practice based evidence to evidence based practice. Research strategies and techniques that develop their problem oriented learning, evidence based problem solving and decision making skills in the field of Physiotherapy. Understand the need of research in formulation of new approach with rational the evidence based practice to provide sound platform to meet high standard of care and rehabilitation.
- **PO 11: Management & Finance:** Through an understanding of organizational governance, the ability to be an active participant in professional organization where one can use KSA to manage projects and in multidisciplinary environment by using various resources and infrastructure from government NGO.
- **PO 12: Life Long Learning:** An appreciation of responsibility to maintain standards of physiotherapy practice gives life learning process enables every individual to address problem solving and judgement in efficient manner.

### **PROGRAM SPECIFIC OUTCOMES (PSOS)**

**PSO 1:** Develop the ability to collect history, perform relevant clinical assessment and frame appropriate electrotherapeutic and exercise therapy management for the patients

**PSO 2:** Demonstrate clinical decision making ability and provide appropriate patient care.

**PSO 3:** Able to counsel the patients, family, colleagues and students regarding all necessary aspects of physiotherapy treatment protocol.

**PSO 4:** Promote health education and improved quality of life through socially accepted and ethical practice of the profession.

**PSO 5:** Work effectively in various inter professional collaborative settings like hospitals, Rehabilitation Centers, Special Schools, Health and Fitness Centers, Geriatric Centers, Ergonomic Consultant in different Sectors, such as corporate, Private Consultation, Home Care Services, Industrial Sectors, Sports Injuries management.

**JECRC University School of Allied Health Sciences**

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Anatomy-I Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY001A</b>

**COURSE OBJECTIVES** - It is designed to provide students with the working knowledge of the structure of the human body which is essential foundation for their clinical studies. The study of anatomy will include identification of all gross anatomical structures. Particular emphasis will be placed on description of bones, joints, muscles, the brain, cardio pulmonary and nervous system, as these are related to the application of physiotherapy in patients.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basic Anatomical aspect of Skeleton, Joints, Muscles, Cardiovascular System, Lymphatic System, Nervous System, Skin and Fasciae, Connective Tissue, Ligaments and Raphe and positions of body, axes, planes, common anatomical terminologies.
<b>CO 2</b>	Basic anatomical human development and growth related to histology and embryology

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

<b>CO 3</b>	Anatomy of bones and soft parts of thorax including cardio vascular system, lungs, respiratory system, diaphragm and respiratory muscles.
<b>CO 4</b>	Anatomy of abdomen including all soft viscera and their functions
<b>CO 5</b>	Anatomical aspect of reproductive system and endocrine glands

## **Unit-1 General Anatomy**

1. Introduction
2. Skeleton
3. Joints
4. Muscles
5. Cardiovascular System
6. Lymphatic System
7. Nervous System
8. Skin and Fasciae
9. Connective Tissue, Ligaments and Raphe

**Unit-2 Histology-** General Histology, study of the basic tissues of the body; Microscope, Cell, Epithelium, Connective Tissue, Cartilage, Bone, Muscular tissue, Nerve Tissue – Transverse section & Longitudinal Section, Circulatory system – large sized artery, medium sized artery, large sized vein, lymphoid tissue, Skin and its appendages.

### **Embryology**

1. Ovum, Spermatozoa, fertilization and formation of the Germ layers and their derivations.
2. Development of skin, Fascia, blood vessels, lymphatic,
3. Development of bones, axial and appendicular skeleton and muscles,
4. Neural tube, brain vessels and spinal cord,
5. Development of brain and brain stem structures

## **Unit-3 Thorax**

1. Cardio – Vascular System Mediastinum: Divisions and contents; Pericardium: Thoracic Wall: position, shape and parts of the heart; conducting System; blood Supply and nerve supply of the heart; names of the blood vessels and their distribution in the body – region wise.
2. Respiratory system - Outline of respiratory passages: Pleura and lungs: position, parts, relations, blood supply and nerve supply; Lungs – emphasize on broncho-pulmonary segments.
3. Diaphragm: Origin, insertion, nerve supply and action, openings in the diaphragm.
4. Intercostal muscles and Accessory muscles of respiration: Origin, insertion, nerve supply and action.

## **Unit-4 Abdomen**

1. Peritoneum: Parietal peritoneum, visceral peritoneum, folds of peritoneum, functions of peritoneum.
2. Large blood vessels of the gut.
3. Location, size, shape, features, blood supply, nerve supply and functions of the following: stomach, liver, spleen, pancreas, kidney, urinary bladder, intestines, gall bladder

## **Unit-5 Reproductive System**

Position, shape, size, functions, blood supply and nerve supply of the male and female reproductive system.

### **Endocrine glands**

Position, shape, size, function, blood supply and nerve supply of the following glands: Hypothalamus and pituitary gland, thyroid glands, parathyroid glands, Adrenal glands, pancreatic islets, ovaries and testes, pineal glands, thymus.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Anatomy-I Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BPY002A</b>

**COURSE OBJECTIVES** - It is designed to provide students with the working knowledge of the structure of the human body which is essential foundation for their clinical studies.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Practical aspect of general anatomy
<b>CO 2</b>	Learn the basics of histology and embryology
<b>CO 3</b>	Various structures of the Respiratory and Circulatory System
<b>CO 4</b>	Different parts of abdomen related to practical approach
<b>CO 5</b>	Various structures of the Reproductive System and Endocrine glands

**Unit-1 General Anatomy-** (Slides, Models and charts)

**Unit-2 General Histology –** (Slides, Models and charts)

**Embryology –** (Models and charts)

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

**Unit-3    Respiratory and Circulatory System**—(Slides, Models and charts)

**Unit-4 Abdomen-** (Slides, Models and charts)

**Unit-5 Reproductive System and Endocrine glands-**(Slides, Models and charts)

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Physiology-I Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY003A</b>

**COURSE OBJECTIVES** - The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basic structure and function of cell and nerve muscle physiology
<b>CO 2</b>	Function of blood and its content
<b>CO 3</b>	Physiology of respiration and disorders of respiration
<b>CO 4</b>	Function and structure of heart and blood vessels
<b>CO 5</b>	Physiological functions of digestive system

  
**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

**Unit-1 Cell:**

1. Morphology. Organelles: their structure and functions
2. Transport Mechanisms across the cell membrane
3. Body fluids: Distribution, composition.

**Nerve Muscle Physiology:**

1. Introduction: Resting membrane potential. Action potential – ionic basis and properties.
2. Nerve: Structure and functions of neurons. Classification, Properties and impulse transmission of nerve fibers. Nerve injury – degeneration and regeneration.
3. Neuroglia: Types and functions.
4. Muscle: Classification. Skeletal muscle: Structure. Neuromuscular junction: Structure. Neuromuscular transmission, myasthenia gravis. Excitation- Contraction coupling. Rigor mortis.

## **Unit-2 Blood:**

1. Introduction: Composition and functions of blood.
2. Plasma: Composition, formation, functions. Plasma proteins.
3. Red Blood Corpuscle: count and its variations. Erythropoiesis- stages, factors regulating. Reticulo-endothelial system (in brief) Haemoglobin –structure, function and derivatives Anemia (in detail), types of Jaundice. Blood indices, Packed Cell Volume (PCV), Erythrocyte Sedimentation Rate (ESR).
4. White Blood Corpuscle: Classification. Morphology, functions, count, its variation of each.  
Immunity
5. Platelets: Morphology, functions, count, its variations
6. Hemostatic mechanisms: Blood coagulation–factors, mechanisms. Their disorders. Anticoagulants.
7. Blood Groups: Landsteiner's law. Types, significance, determination, Erythroblastosis foetalis.
8. Blood Transfusion: Cross matching. Indications and complications.
9. Lymph: Composition, formation, circulation and functions.

### **Unit-3 Respiratory System -**

1. Introduction: Physiological anatomy – Pleura, tracheo-bronchial tree, alveolus, respiratory membrane and their nerve supply. Functions of respiratory system. Respiratory muscles.
2. Mechanics of breathing: Intrapleural and Intrapulmonary pressure changes during respiration. Chest expansion. Lung compliance: Normal value, pressure-volume curve, factors affecting compliance and its variations. Surfactant – Composition, production, functions. RDS
3. Spirometry: Lung volumes and capacities. Timed vital capacity and its clinical significance. Maximum ventilation volume. Respiratory minute volume.
4. Dead Space: Types and their definition.
5. Pulmonary Circulation. Ventilation-perfusion ratio and its importance.
6. Transport of respiratory gases: Diffusion across the respiratory membrane. Oxygen transport – Different forms, oxygen-haemoglobin dissociation curve. Factors affecting it. P50, Haldane and Bohr Effect. Carbon dioxide transport: Different forms, chloride shift.
7. Regulation of Respiration: Neural Regulation. Hering-breuer's reflex. Voluntary control. Chemical Regulation.
8. Hypoxia: Effects of hypoxia. Types of hypoxia. Hyperbaric oxygen therapy.
9. Acclimatization Hypercapnoea. Asphyxia. Cyanosis – types and features. Dysbarism
10. Disorders of Respiration: Dyspnoea. Orthopnoea. Hyperpnoea, hyperventilation, apnoea, tachypnoea. periodic breathing – types Artificial respiration
11. Respiratory changes during exercise.

### **Unit-4 Cardiovascular System:**

1. Introduction: Physiological anatomy and nerve supply of the heart and blood vessels. Organization of CVS. Cardiac muscles: Structure. Ionic basis of action potential and pacemaker potential. Properties.
2. Conducting system: Components. Impulse conduction Cardiac Cycle: Definition. Phases of cardiac cycle. Pressure and volume curves. Heart sounds – causes, character. ECG: Definition. Different types of leads. Waves and their causes. P-R interval. Heart block.
3. Cardiac Output: Definition. Normal value. Determinants. Stroke volume and its regulation. Heart rate and its regulation. Their variations
4. Arterial Blood Pressure: Definition. Normal values and its variations. Determinants. Peripheral resistance. Regulation of BP.
5. Arterial pulse.
6. Shock – Definition. Classification–causes and features
7. Regional Circulation: Coronary, Cerebral and Cutaneous circulation.
8. Cardiovascular changes during exercise.

#### **Unit-5 Digestive System -**

1. Introduction: Physiological anatomy and nerve supply of alimentary canal. Enteric nervous system
2. Salivary Secretion: Saliva: Composition. Functions. Regulation. Mastication (in brief)
3. Swallowing: Definition. Different stages. Function.
4. Stomach: Functions. Gastric juice: Gland, composition, function, regulation. Gastrin: Production, function and regulation. Peptic ulcer. Gastric motility. Gastric emptying. Vomiting.
5. Pancreatic Secretion: Composition, production, function. Regulation.
6. Liver: Functions of liver. Bile secretion: Composition, functions and regulation. Gallbladder: Functions.
7. Intestine: Succus entericus: Composition, function and regulation of secretion. Intestinal motility and its function and regulation.
8. Mechanism of Defecation.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Human Physiology-I Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BPY004A</b>

**COURSE OBJECTIVES:** The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate procedures to determine hematology findings.
<b>CO 2</b>	Recognize the abnormalities in the hematology findings

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

**Unit-1 Hematology:**

1. Study of Microscope and its uses
2. Determination of Red Blood Corpuscle count
3. Determination of White Blood Corpuscle count
4. Differential leukocyte count
5. Estimation of hemoglobin
6. Estimation of platelets

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

7. Absolute eosinophil count
8. Reticulocyte count
9. Determination of blood groups and Rh typing
10. Determination of bleeding time
11. Determination of clotting time

**Unit-2 Demonstrations only**

1. Determination of Erythrocyte Sedimentation Rate
2. Determination of Packed Cell Volume

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Biochemistry-I Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY005A</b>

**COURSE OBJECTIVE-** This course provides the knowledge and skills in fundamental organic chemistry and introductory biochemistry that are essential for further studies. It covers basic biochemical, cellular, biological and microbiological processes, basic chemical reactions in the prokaryotic and eukaryotic cells, the structure of biological molecules, introduction to the nutrients i.e. carbohydrates, fats, enzymes, nucleic acids and amino acids.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Nutrition and its importance and requirement
<b>CO 2</b>	Functions and biochemistry of carbohydrate
<b>CO 3</b>	Functions and biochemistry of Lipid
<b>CO 4</b>	Functions and biochemistry of amino acid

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

<b>CO 5</b>	General characteristics of digestion and absorption carbohydrate, lipids and proteins
-------------	---

**Unit-1**

**Nutrition**

a) Introduction, Importance of nutrition Calorific values,  
Respiratory quotient – Definition, and its significance Energy

requirement of a person - Basal metabolic rate: Definition, Normal values, factor affecting BMR Special dynamic action of food.

b) Physical activities - Energy expenditure for various activities. Calculation of energy requirement of a person

c) Balanced diet

i. Recommended dietary allowances

ii. Role of carbohydrates in diet: Digestible carbohydrates and dietary fibers

iii. Role of lipids in diet

iv. Role of proteins in diet: Quality of proteins - Biological value, net protein utilization, Nutritional aspects of proteins- essential and non- essential amino acids. Nitrogen balance

v. Nutritional disorders.

## **Unit-2**

### **Carbohydrate Chemistry**

a) Definition, general classification with examples, Glycosidic bond

b) Structures, composition, sources, properties and functions of Monosaccharides, Disaccharides, Oligosaccharides and Polysaccharides.

c) Glycosaminoglycan (mucopolysaccharides)

### **Carbohydrate Metabolism**

a) Introduction, Glycolysis – Aerobic, Anaerobic Citric acid cycle, Substrate level phosphorylation.

b) Glycogen metabolism – Glycogenesis, Glycogenolysis, Metabolic disorders glycogen,

c) Gluconeogenesis, Cori cycle

d) Hormonal regulation of glucose, Glycosuria, Diabetes mellitus.

## **Unit-3**

### **Lipid Chemistry**

- a) Definition, general classification
- b) Definition, classification, properties and functions of Fatty acids, Triacylglycerol, Phospholipids, Cholesterol
- c) Essential fatty acids and their importance
- d) Lipoproteins: Definition, classification, properties, Sources and function Ketone bodies

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

## **Lipid Metabolism**

- a) Introduction to lipid metabolism, Lipolysis, Oxidation of fatty acids -oxidation of fatty acids,
- b) Lipogenesis - Denovo synthesis of fatty acids, chain elongation, desaturation, triacylglycerol synthesis, fat metabolism in adipose tissues
- c) Ketone body metabolism: Ketone body formation (ketogenesis), utilization (ketolysis), ketosis, Rothera's test.
- d) Cholesterol metabolism: synthesis, degradation, cholesterol transport
- e) Hypercholesterolemia and its effects (atherosclerosis and coronary heart diseases) Hypocholesterolemic agents, Common hyperlipoproteinemia, Fatty liver

## **Unit-4**

### **Amino-acid Chemistry**

- a) Amino acid chemistry: Definition, Classification, Peptide bonds
- b) Peptides: Definition, Biologically important peptides
- c) Protein chemistry: Definition, Classification, Functions of proteins

### **Amino acid and Protein Metabolism**

- a) Catabolism of amino acids - Introduction, transamination, deamination, Fate of ammonia, transport of ammonia, Urea cycle
- b) Specialized products formed from amino acids - from glycine, arginine, methionine, phenylalanine and tyrosine.

## **Unit-5**

**Digestion and Absorption** - General characteristics of di carbohydrates, proteins and lipids. Disorders of digestion and ab
