<b>Course Environmental Sciences- Theory</b>	<b>Course Description Foundation</b>	<b>Credit per Semester 3 credits</b>	<b>Hours per Semester 3 hours</b>	<b>Course Code DCH001</b>	

**COURSE OBJECTIVES** -To impart knowledge of fundamentals of Environmental sciences. To educate the students to make them confident and to develop the skills of Environmental protection and to increase awareness in society through education. (Problem-Solving Skills). To train the student's with appropriate combinations of old and new emerging concepts in new technologies, techniques and latest developments for their current and potential uses in their profession (Successful Career and Entrepreneurship)

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

<b>CO 1</b>	Recognize the history, structure, function, interactions and trends of key socio-environmental systems on personal, organizational and intellectual level regarding our surroundings through different media.
-------------	---

<b>CO 2</b>	Examine the generation of scientific knowledge and how that knowledge is presented, evaluated, framed and applied for environmental protection by conservation of Natural resources.
<b>CO 3</b>	Articulate a coherent philosophy of the environment and consider ethical bases for responding to environmental questions.
<b>CO 4</b>	Understand the role of conservation of resources and public awareness in prevention of pollution and ultimately for the sustainable development of society.
<b>CO 5</b>	Understand the social responsibility towards protection of environment and society

**Unit-1** The Multidisciplinary Nature of Environmental Studies Definition, scope and importance need for public awareness.

**Unit-2** **Natural Resources Renewable and Non-renewable Resources**

- Natural resources and associated problems.

(a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

(b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

(c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

(d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, Case studies. (e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.

(f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

### **Unit-3    Ecosystems**

- Concept of an ecosystem.
- Structure and function of an ecosystem.
- Producers, consumers and decomposers.
- Energy flow in the ecosystem. Ecological succession.
- Food chains, food webs and ecological pyramids.
- Introduction, types, characteristic features, structure and function of the following ecosystem: (a) Forest ecosystem (b) Grassland ecosystem (c) Desert ecosystem (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

#### **Biodiversity and Its Conservation**

- Introduction, definition: genetic, species and ecosystem diversity.
- Biogeographical classification of India.
- Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.

- Biodiversity at global, National and local levels.
- India as a mega-diversity nation. Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India.
- Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

#### **Unit-4 Environmental Pollution**

- Definition
- Causes, effects and control measures of
 

(a) Air pollution	(b) Water pollution	(c) Soil pollution	(d) Marine pollution
(e) Noise pollution	(f) Thermal pollution	(g) Nuclear hazards	
- Solid waste management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution. •Pollution case studies.
- Disaster management: Floods, earthquake, cyclone and landslides.

#### **Unit-5 Social Issues and the Environment**

- From unsustainable to sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, watershed management.
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.
- Air (Prevention and Control of Pollution) Act.      • Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act.                                      •Forest Conservation Act.
- Issues involved in enforcement of environmental legislation.
- Public awareness.

#### **Human Population and the Environment**

- Population growth, variation among nations.
- Population explosion—Family Welfare Programme.
- Environment and human health.
- Human rights.
- Value education.

#### **HIV/AIDS.**

- Women and Child Welfare. •Role of Information Technology in environment and human health.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Communication Skills-Theory</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN001A</b>

### **COURSE OBJECTIVES**

<b>1</b>	To enhance English language competence in reading, writing, listening and speaking.
<b>2</b>	Switch the approach from teacher-centred to student-centred one.
<b>3</b>	Minimize the Grammar Translation Method of ELT while trying to replace it with direct method.
<b>4</b>	Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centered learning rather than on the teacher-centered learning.
<b>5</b>	To link communication skills with the organizational behavior
<b>6</b>	To inculcate skills that are very much required for employability and adjust in the professional Environment

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

<b>CO 1</b>	Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
<b>CO 2</b>	Ability to analyze the usage of English words in different contexts.
<b>CO 3</b>	An understanding of technical and academic articles' comprehension.
<b>CO 4</b>	The ability to present oneself at multinational levels knowing the type of different

	standards of English
--	----------------------

- Unit-1 Basics of Organizational Communication:** Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
- Unit-2 Writing Skills:** Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
- Unit-3 Composition:** Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
- Unit-4 Vocabulary Building:** Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
- Unit-5 Professional and Technical Communication :** Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Communication Skills-Practical</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN001A</b>

- Unit-1 Basics of Organizational Communication:** Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time- management, Following Deadlines etc
- Unit-2 Write Dialogue from the different contexts of corporate culture:** Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
- Unit-3 Composition:** Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

- Unit-4 Vocabulary Building:** Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
- Unit-5 Professional and Technical Communication :** Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Fundamentals of Computer-Theory</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BPY006A</b>

### **COURSE OBJECTIVES**

The students will be able to appreciate the role of computer technology. The course has focus on computer organization, computer operating system and software, and MS windows, Word processing, Excel data worksheet and PowerPoint presentation

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Introduction to computer and Input output devices
<b>CO 2</b>	Processor and memory and Storage Devices
<b>CO 3</b>	Introduction of windows and Introduction to MS

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

<b>CO 4</b>	Introduction to Excel and Introduction to power-point
<b>CO-5</b>	Introduction of Operating System, Computer networks and Internet and its Applications

## **Unit-1**

- **Introduction to computer:** Introduction, characteristics of computer, block diagram of computer, generations of computer, computer languages.
- **Input output devices:** Input devices(keyboard, point and draw devices, data scanning devices, digitizer, electronic card reader, voice recognition devices, vision-input devices), output devices(monitors, pointers, plotters, screen image projector, voice response systems).

## Unit-2

- **Processor and memory:** The Central Processing Unit (CPU), main memory.
- **Storage Devices:** Sequential and direct access devices, magnetic tape, magnetic disk, optical disk, mass storage devices.

## Unit-3

- **Introduction of windows:** History, features, desktop, taskbar, icons on the desktop, operation with folder, creating shortcuts, operation with windows (opening, closing, moving, resizing, minimizing and maximizing, etc.).
- **Introduction to MS-Word:** introduction, components of a word window, creating, opening and inserting files, editing a document file, page setting and formatting the text, saving the document, spell checking, printing the document file, creating and editing of table, mail merge.

## Unit-4

- **Introduction to Excel:** introduction, about worksheet, entering information, saving workbooks and formatting, printing the worksheet, creating graphs.
- **Introduction to power-point:** introduction, creating and manipulating presentation, views, formatting and enhancing text, slide with graphs.

## Unit-5

- **Introduction of Operating System:** introduction, operating system concepts, types of operating system.
- **Computer networks:** introduction, types of network (LAN, MAN, WAN, Internet, Intranet), network topologies (star, ring, bus, mesh, tree, hybrid), components of network.
- **Internet and its Applications:** definition, brief history, basic services (E-Mail, File Transfer Protocol, telnet, the World Wide Web (WWW)), www browsers, use of the internet. Application of Computers in clinical settings.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Fundamentals of Computer-Practical</b>	<b>Course Description</b> <b>Core Practical</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BPY007A</b>

### **COURSE OBJECTIVES**

The students will be able to learn all practical aspects of fundamental of computer

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Practical learning to use MS office: MS word, MS PowerPoint, MS Excel
<b>CO 2</b>	Practically To install different software
<b>CO 3</b>	How to do Data entry efficiency

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

<b>CO 4</b>	Practical related to all theory units of Fundamentals of Computer syllabus
-------------	--

**Unit 1**-Learning to use MS office: MS word, MS PowerPoint, MS Excel.

**Unit 2**- To install different software

**Unit 3**- Data entry efficiency

**Unit 4-** Practical related to all theory units of Fundamentals of Computer syllabus

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 1</b>
<b>Course</b> <b>Cultural Education- I</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DIN001A</b>

**COURSE OBJECTIVES**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to acknowledge and appreciate the richness of Indian Culture
<b>CO 2</b>	Ability to represent the culture ethics in real life

**UNIT-I**

**Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction

  
**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

to different Dhram Granthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)

## 2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

## UNIT-II

### Society and Culture-I

3. Introduction to Indian Culture and Major Symbols of Indian Culture
4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, Vasudhev Kutumbkum

## UNIT-III

### India in Progress-I

5. Education, Science and Technology in Ancient India
6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

## UNIT-IV

### Great Indian Personalities-I

7. Life and works of the Great People of India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Budhha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

**\*oint Presentation on the learning and face Viva-voce by committee of teachers.**

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Human Anatomy-2 Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY008A</b>

## COURSE OBJECTIVE

Studies are concerned with the topographical and functional anatomy of the limbs. Particular attention is paid to the muscles, bones and joints of the regions. The head and neck and central nervous system (CNS) are studied with particular reference to topics of importance to Physiotherapists. The study of the CNS includes detailed consideration of the control of motor function.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

  
**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302003

<b>CO 1</b>	Anatomy of upper extremity including bones, joints, soft tissue parts and muscles related to shoulder elbow, wrist and hand joints. Surface land-marks, and radiological aspects of anatomy. Demonstrate movements of upper extremity joints. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various upper extremity skeletal muscles.
-------------	---

<b>CO 2</b>	Anatomy of lower extremity including bones, joints, soft tissue parts and muscles related to Hip, Knee, Ankle and foot joints. Surface land-marks, and radiological aspects of anatomy. Demonstrate movements of lower extremity joints. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various lower extremity skeletal muscles.
<b>CO 3</b>	Anatomy of head and neck bones, joints, soft tissue parts and muscles of head, face and neck. Surface land-marks, and radiological aspects of anatomy. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various head and neck muscles.
<b>CO 4</b>	Anatomy of trunk and pelvis bones, joints, soft tissue parts and muscles of Cervical, thoracic, lumbar, sacral and coccygeal vertebrae, ribs and pelvic girdle. Surface land-marks, and radiological aspects of anatomy. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various Trunk & Pelvis skeletal muscles.
<b>CO 5</b>	Anatomical basis of clinical conditions of nervous system. Outline various parts of nervous system: Source, course & components of various trans-sections of spinal tracts and C.N.S; Source, course & components of various trans-sections of brain, cranial nerves (Special emphasis to III, IV, V, VI and VII) and peripheral nerves. Describe blood circulation of C.N.S. & spinal cord. Describe the course of peripheral nerves.

## **THEORY**

### **Unit-1 Upper Extremity-**

- Osteology: Clavicles, Scapula, Humerus, Radius, Ulna, Carpals, Metacarpals, Phalanges.
- Soft parts: Breast, pectoral region, axilla, front of arm, back of arm, cubital fossa, front of fore arm, back of fore arm, palm, dorsum of hand, muscles, nerves, blood vessels and lymphatic drainage of upper extremity.
- Joints: Shoulder girdle, shoulder joint, elbow joints, radio ulnar joint, wrist joint and joints of the hand.
- Arches of hand, skin of the palm and dorsum of hand.

### **Unit-2 Lower Extremity-**

- Osteology: Hip bone, femur, tibia, fibula, patella, tarsals, metatarsals and phalanges.
- Soft parts: Gluteal region, front and back of the thigh (Femoral triangle, femoral canal and inguinal canal), medial side of the thigh (Adductor canal), lateral side of the thigh, popliteal fossa, anterior and posterior compartment of leg, sole of the foot, lymphatic drainage of lower limb, venous drainage of the lower limb, arterial supply of the lower limb, arches of foot, skin of foot.

c) Joints: Hip Joint, Knee joint, Ankle joint, joints of the foot.

**Unit-3 Head and Neck-**

a) Osteology: Mandible and bones of the skull.

b) Soft parts: Muscles of the face and neck and their nerve and blood supply-extra ocular muscles, triangles of the neck.

c) Gross anatomy of eyeball, nose, ears and tongue.

**Unit-4 Trunk & Pelvis:**

i. Osteology: Cervical, thoracic, lumbar, sacral and coccygeal vertebrae and ribs.

ii. Soft tissue: Pre and Para vertebral muscles, intercostals muscles, anterior abdominal wall muscles, Inter-vertebral disc.

iii. Pelvic girdle and muscles of the pelvic floor.

## Unit-5 Neuro Anatomy –

Organization of Central Nervous system - Spinal nerves and autonomic nervous system mainly pertaining to cardiovascular, respiratory and urogenital system

- a) Cranial nerves
- b) Peripheral nervous system
- c) Peripheral nerve
- d) Neuromuscular junction
- e) Sensory end organs
- f) Central Nervous System
- g) Spinal segments and areas
- h) Brain Stem
- i) Cerebellum
- j) Inferior colliculi
- k) Superior Colliculi
- l) Thalamus
- m) Hypothalamus
- n) Corpus striatum
- o) Cerebral hemisphere
- p) Lateral ventricles
- q) Blood supply to brain
- r) Basal Ganglia
- s) The pyramidal system
- t) Pons, medulla, extra pyramidal systems
- u) Anatomical integration

<b>JECRC University</b> <b>School of Allied Health Sciences</b>	<b>Bachelor of Physiotherapy (BPT)</b>			
<b>Course</b> <b>Human Anatomy-2 Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BPY009A</b>

**COURSE OBJECTIVES:** Studies are concerned with the topographical and functional anatomy of the limbs and Nervous system, to give practical exposure for better understanding of anatomy.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Identification of upper extremity including bones, joints, soft tissue parts and muscles related to shoulder elbow, wrist and hand joints. Surface land-marks, and radiological aspects of anatomy. Demonstrate movements of upper extremity joints. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various upper extremity skeletal muscles.
<b>CO 2</b>	Identification of lower extremity including bones, joints, soft tissue parts and muscles related to Hip, Knee, Ankle and foot joints. Surface land-marks, and radiological aspects of anatomy. Demonstrate movements of lower extremity joints. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various lower extremity skeletal muscles.
<b>CO 3</b>	Identification of head and neck bones, joints, soft tissue parts and muscles of head, face and neck. Surface land-marks, and radiological aspects of anatomy. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various head and neck muscles.
<b>CO 4</b>	Identification of trunk and pelvis bones, joints, soft tissue parts and muscles of Cervical, thoracic, lumbar, sacral and coccygeal vertebrae, ribs and pelvic girdle. Surface land-marks, and radiological aspects of anatomy. Identify & describe the origin/insertion, nerve /blood supply, root value & function of various Trunk & Pelvis skeletal muscles.
<b>CO 5</b>	Identification of clinical conditions of nervous system. Outline various parts of nervous system: Source, course & components of various trans-sections of spinal tracts and C.N.S; Source, course & components of various trans-sections of brain, cranial nerves (Special emphasis to III, IV, V, VI and VII) and peripheral nerves. Describe blood circulation of C.N.S. & spinal cord. Describe the course of peripheral nerves.

## PRACTICAL

## **Unit-1 Upper extremity – (Models and charts)**

### **a) Anatomy and Osteology:**

- i. Clavicles, Scapula, Humerus, Radius, Ulna, Carpals, Metacarpals, Phalanges.
- ii. Muscle of Upper Limb: Origin, Insertion, Nerve supply and Action of all the muscle of upper limb.
- iii. Joints: Shoulder girdle, shoulder joint, elbow joints, radio ulnar joint, wrist joint and joints of the hand.  
Arches of hand, skin of the palm and dorsum of hand.

### **b) Soft parts:**

i. Breast, pectoral region, axilla, front of arm, back of arm, cubital fossa, front of fore arm, back of fore arm, palm, dorsum of hand, muscles, nerves, blood vessels and lymphatic drainage of upper extremity.

## **Unit-2 Lower Extremity – (Models and charts)**

Anatomy and Osteology:

- i. Hip bone, femur, tibia, fibula, patella, tarsals, metatarsals and phalanges.
- ii. Muscle of Lower Limb: Origin, Insertion, Nerve supply and Action of all the muscle of lower limb.
- iii. Joints: Hip Joint, Knee joint, Ankle joint, joints of the foot

b) Soft parts:

Gluteal region, front and back of the thigh (Femoral triangle, femoral canal and inguinal canal), medial side of the thigh (Adductor canal), lateral side of the thigh, popliteal fossa, anterior and posterior compartment of leg, sole of the foot, lymphatic drainage of lower limb, venous drainage of the lower limb, arterial supply of the lower limb, arches of foot, skin of foot

**Unit-3 Head and Neck-** (Models and charts)

- a) Osteology: Mandible and bones of the skull.
- b) Soft parts: Muscles of the face and neck and their nerve and blood supply; extra ocular muscles, triangles of the neck.
- c) Gross anatomy of eyeball, nose, ears and tongue.

**Unit-4 Trunk & Pelvis:** (Models and charts)

- i. Osteology: Cervical, thoracic, lumbar, sacral and coccygeal vertebrae and ribs.
- ii. Soft tissue: Pre and Para vertebral muscles, intercostals muscles, anterior abdominal wall muscles, Inter-vertebral disc.
- iii. Pelvic girdle and muscles of the pelvic floor.

**Unit-5 Neuro Anatomy-** (Models and charts)

Spinal nerves and autonomic nervous system, Cranial nerves, Peripheral nerve, Central Nervous System, Spinal segments and areas, Brain Stem, Cerebellum, Inferior colliculi, Superior Colliculi, Thalamus, Hypothalamus, Corpus striatum, Cerebral hemisphere, Lateral ventricles, Blood supply to brain, Basal Ganglia, The pyramidal system, Pons, medulla, extra pyramidal systems

<b>JECRC University</b> <b>School of Allied Health Sciences</b>	<b>Bachelor of Physiotherapy (BPT)</b>			Semester 2
<b>Course</b> <b>Human Physiology-2 Theory</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY010A</b>

**COURSE OBJECTIVES:** The course in Physiology is designed to give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiology of special senses
<b>CO 2</b>	Physiological functions of Nervous system.
<b>CO 3</b>	Physiological functions of renal system.
<b>CO 4</b>	Physiological functions of Reproductive system.
<b>CO 5</b>	Exercise physiology and Functions of hormones with their effects in body

## THEORY

### Unit-1 Special Senses -

- Vision: Introduction: Functional anatomy of eye ball. Functions of cornea, iris, pupil, aqueous humor – glaucoma, lens – cataract, vitreous humor, rods and cones. Photopic vision. Scotopic vision.
- Visual Pathway and the effects of lesions.
- Refractive Errors: myopia, hypermetropia, presbyopia and astigmatism.
- Visual Reflexes: Accommodation, Pupillary and Light. Visual acuity and Visual field. Light adaptation. Dark adaptation. Color vision – color blindness. Nyctalopia.
- Audition: Physiological anatomy of the ear. Functions of external ear, middle ear and inner ear. Structure of Cochlea and organ of Corti. Auditory pathway. Types of Deafness. Tests for hearing. Audiometry.
- Taste: Taste buds. Primary tastes. Gustatory pathway.
- Smell: Olfactory membrane. Olfactory pathway.
- Vestibular Apparatus: Crista ampullaris and macula. Functions. Disorders

## Unit-2 Nervous System

- a) Introduction: Organisation of CNS – central and peripheral nervous system. Functions of nervous system. Synapse: Functional anatomy, classification, Synaptic transmission. Properties.
- b) Sensory Mechanism: Sensory receptors: function, classification and properties. Sensory pathway: The ascending tracts – Posterior column tracts, lateral spinothalamic tract and the anterior spinothalamic tract – their origin, course, termination and functions. The trigeminal pathway. Sensory cortex. Somatic sensations: crude touch, fine touch, tactile localization, tactile discrimination, stereognosis, vibration sense, kinesthetic sensations. Pain sensation: mechanism of pain. Cutaneous pain –slow and fast pain, hyperalgesia. Deep pain. Visceral pain – referred pain. Gate control theory of pain. tabes dorsalis, sensory ataxia.
- c) Motor Mechanism: Motor Cortex. Motor pathway: The descending tracts – pyramidal tracts, extrapyramidal tracts – origin, course, termination and functions. Upper motor neuron and lower motor neuron. Paralysis, monoplegia, paraplegia, hemiplegia and quadriplegia.
- d) Reflex Action: components, Bell-Magendie law, classification and Properties. Monosynaptic and polysynaptic reflexes, superficial reflexes, deep reflexes. Stretch reflex– structure of muscle spindle, pathway, higher control and functions. Inverse stretch reflex. Muscle tone – definition, and properties hypotonia, atonia and hypertonia. UMNL and LMNL
- e) Spinal cord Lesions: Complete transection and Hemisection of the spinal cord.

- f) Cerebellum: Functions. Cerebellar ataxia.
- g) Posture and Equilibrium: Postural reflexes – spinal, medullary, midbrain and cerebral reflexes.
- h) Thalamus and Hypothalamus: Nuclei. Functions. Thalamic syndrome
- i) Reticular Formation and Limbic System: Components and Functions.
- j) Basal Ganglia: Structures included and functions. Parkinson's disease.
- k) Cerebral Cortex: Lobes. Brodmann's areas and their functions. Higher functions of cerebral cortex – learning, memory and speech.
- l) EEG: Waves and features. Sleep: REM and NREM sleep.
- m) CSF: Formation, composition, circulation and functions. Lumbar puncture and its significance. Blood brain barrier. Hydrocephalus.
- n) ANS: Features and actions of parasympathetic and sympathetic nervous system.

### **Unit-3 Renal System -**

- a) Introduction: Physiological anatomy. Nephrons – cortical and juxtamedullary. Juxta- glomerular apparatus. Glomerular membrane. Renal blood flow and its regulation. Functions of kidneys.
- b) Mechanism of Urine Formation: Glomerular Filtration: Mechanism of glomerular filtration. GFR – normal value and factors affecting. Renal clearance. Inulin clearance. Creatinine clearance.
- c) Tubular Reabsorption: Reabsorption of Na<sup>+</sup>, glucose, HCO<sub>3</sub><sup>-</sup>, urea and water. Filtered load. Renal tubular transport maximum. Glucose clearance: TmG. Renal threshold for glucose.
- d) Tubular Secretion: Secretion of H<sup>+</sup> and K<sup>+</sup>. PAH clearance.
- e) Mechanism of concentrating and diluting the Urine: Counter-current mechanism. Regulation of water excretion. Diuresis. Diuretics.
- f) Micturition: Mechanism of micturition. Cystometrogram. Atonic bladder, automatic bladder.
- g) Acid-Base balance
- h) Artificial Kidney: Principle of haemodialysis.
- i) Skin and temperature regulation.

### **Unit-4 Reproductive System -**

- a) Introduction: Physiological anatomy reproductive organs. Sex determination. Sex differentiation. Disorder
- b) Male Reproductive System: Functions of testes. Pubertal changes in males. Spermatogenesis. Testosterone: action. Regulation of secretion. Semen.
- c) Female Reproductive System: Functions of ovaries and uterus. Pubertal changes in females. Oogenesis. Hormones: estrogen and progesterone-action. Regulation of secretion. Menstrual Cycle: Phases. Ovarian cycle. Uterine cycle. Hormonal basis. Menarche. Menopause. Pregnancy: Pregnancy tests. Physiological changes during pregnancy. Functions of placenta. Lactation. Contraception methods

## **Unit-5    Physiology of exercise –**

- a) Effects of acute and chronic exercise on
  - i. O<sub>2</sub> transport
  - ii. Muscle strength/power/endurance
  - iii. Basal Metabolic Rate /Respiratory Quotient.
  - iv. Hormonal and metabolic effect

- v. Cardiovascular system
- vi. Respiratory system
- vii. Body fluids and electrolyte
- b) Effect of gravity / altitude / acceleration / pressure on physical parameters
- c) Physiology of Age

### **Endocrine System -**

- a) Introduction: Major endocrine glands. Hormone: classification, mechanism of action.
- b) Functions of hormones
- c) Pituitary Gland: Anterior Pituitary and Posterior Pituitary hormones: Secretory cells, action on target cells, regulation of secretion of each hormone. Disorders: Gigantism, Acromegaly, Dwarfism, Diabetes insipidus. Physiology of growth and development: hormonal and other influences.
- d) Pituitary-Hypothalamic Relationship.
- e) Thyroid Gland: Thyroid hormone and calcitonin: secretory cells, synthesis, storage, action and regulation of secretion. Disorders: Myxedema, Cretinism, Grave's disease.
- f) Parathyroid hormones: secretory cell, action, regulation of secretion. Disorders: Hypoparathyroidism. Hyperthyroidism. Calcium metabolism and its regulation.
- g) Adrenal Gland: Adrenal Cortex: Secretory cells, synthesis, and action, regulation of secretion of Aldosterone, Cortisol, and Androgens. Disorders: Addison's disease, Cushing's syndrome, Conn's syndrome, Adrenogenital syndrome.
- h) Adrenal Medulla: Secretory cells, action, regulation of secretion of adrenaline and noradrenaline. Disorders: Pheochromocytoma.
- i) Endocrine Pancreas: Secretory cells, action, regulation of secretion of insulin and glucagon. Glucose metabolism and its regulation. Disorder: Diabetes mellitus.
- j) Calciferol, Thymus and Pineal gland (very brief).
- k) Local Hormones. (Briefly).

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Human Physiology-2 Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>BPY011A</b>

**COURSE OBJECTIVES:** The course in Physiology practical is designed such that the students should be able to determine the basic procedures to examine various physiological functions of human body.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate procedures to determine pulses and blood pressure. Demonstrate procedures to examine sensory system & motor system  Demonstrate procedures to examine respiratory system & cardio vascular system. Demonstrate examination of reflexes 4 hours  Demonstrate examination of cranial nerves
<b>CO 2</b>	Demonstrate procedures of Spirometry, Artificial Respiration and Electro Cardio Gram

## **PRACTICAL**

### **Unit-1 Clinical Examination**

- Examination of Radial pulse.
- Recording of blood pressure
- Examination of Cardio Vascular System
- Examination of Respiratory system
- Examination of Sensory system
- Examination of Motor System
- Examination of reflexes
- Examination of cranial nerves

### **Unit-2 Demonstrations**

- Spirometry
- Artificial Respiration
- Electro Cardio Gram

Course	Course Description	Credit per Semester	Hours per Semester	Course Code
Biochemistry-2 Theory	Core	3 credits	3 hours	BPY012A

**COURSE OBJECTIVES:** This course provides the knowledge and skills in fundamental organic chemistry and introductory biochemistry that are essential for further studies. It covers basic biochemical, cellular, biological and microbiological processes, basic chemical reactions in the prokaryotic and eukaryotic cells, the structure of biological molecules, introduction to the nutrients.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Functions and biochemistry of Enzymes, Nucleotide and Nucleic acid
<b>CO 2</b>	Functions and biochemistry of Vitamins and Mineral Metabolism
<b>CO 3</b>	Functions and biochemistry of Connective tissue
<b>CO 4</b>	Functions and biochemistry of Hormone, Acid-Base balance and water balance
<b>CO 5</b>	Functions and biochemistry of Electrolyte balance and clinical aspect of biochemistry

**Unit-1 Enzymes** – Definition, Active site, Cofactor (Coenzyme, Activator), Proenzyme. Classification with examples, Factors effecting enzyme activity, Enzyme inhibition and significance, Isoenzymes, Diagnostic enzymology (clinical significance of enzymes)

**Nucleotide and Nucleic acid Chemistry-** Nucleotide chemistry: Nucleotide composition, functions of free nucleotides in body. Nucleic acid (DNA and RNA) chemistry: Difference between DNA and RNA, Structure of DNA (Watson and Crick model), Functions of DNA. Structure and functions of tRNA, rRNA, mRNA.

**Unit-2 Vitamins** - Definition, classification according to solubility. Individual vitamins - Sources, Coenzyme forms, functions, RDA, digestion, absorption and transport, deficiency and toxicity.

**Mineral Metabolism-** Definition, Sources, RDA, Digestion, absorption, transport, excretion, functions, disorder of Individual minerals - Calcium, phosphate, iron, Magnesium, fluoride, selenium, molybdenum, copper. Phosphate, calcium and iron in detail.

**Unit-3 Biochemistry of Connective tissue** - Introduction, various connective tissue proteins: Collagen, elastin - Structure and associated disorders. Glycoproteins, Proteoglycans.

**Unit-4    Hormone Action** - Definition, classification, Mechanism of hormone action. Receptors, signal transduction, second messengers and cell function

**Acid-Base balance** - Acids, bases and buffers, pH. Buffer systems of the body, bicarbonate buffer system  
Role of lungs and kidneys in acid base balance, Acid base imbalance.

**Water balance** - Water distribution in the body, Body water, water turnover, Regulation of water balance:  
role of ADH and thirst centre.

**Unit-5 Electrolyte balance** - Osmolarity. Distribution of electrolytes. Electrolyte balance: Role of aldosterone, rennin angiotensin system and ANF.

**Clinical Biochemistry** - Normal levels of blood and urine constituents, Relevance of blood and urine levels of Glucose, Urea, Uric acid, Creatinine, Calcium, Phosphates, pH and Bicarbonate. Liver function tests, Renal function tests.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Basic Principles of Biomechanics</b>	<b>Course Description</b> <b>Core Theory</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY013A</b>

**COURSE OBJECTIVES:** Biomechanics involves the study of basic concepts of human movement, and application of various biomechanical principles in the evaluation and treatment of disorders of musculoskeletal system. Students are taught to understand the various quantitative and qualitative methods of movement. Mechanical principles of various treatment methods are studied. Study of posture and gait are also included.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basic concepts in Biomechanics- Kinetics and Kinematics
<b>CO 2</b>	Concept of joint structure and function. Biomechanics of movements at joints related to planes and axis.
<b>CO 3</b>	Basics of muscle structure and functions. Biomechanics of muscle related to force production
<b>CO 4</b>	Biomechanics of the Thorax and Chest wall.
<b>CO 5</b>	Biomechanics of The Temporo mandibular Joint. Describe Biomechanics of vertebral column.

## **THEORY**

### **Unit-1 Basic Concepts in Biomechanics: Kinematics and Kinetics**

**1**

- a) Types of Motion
- b) Location of Motion
- c) Direction of Motion
- d) Magnitude of Motion
- e) Definition of Forces
- f) Force of Gravity
- g) Reaction forces
- h) Equilibrium
- i) Objects in Motion
- j) Force of friction
- k) Concurrent force systems
- l) Parallel force system
- m) Work
- n) Moment arm of force
- o) Force components
- p) Equilibrium of levers

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

## **Unit-2 Joint structure and Function**

- a) Joint design
- b) Materials used in human joints
- c) General properties of connective tissues
- d) Complexity of human joint design
- e) Joint function
- f) General effects of disease, injury and immobilization.

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JSSO University, Jaipur-302003

**Unit-3 Muscle structure and function**

- a) Mobility and stability functions of muscles
- b) Elements of muscle structure
- c) Muscle function
- d) Effects of immobilization, injury and aging

**Unit-4 Biomechanics of the Thorax and Chest wall**

- a) General structure and function
- b) Rib cage and the muscles associated with the rib cage
- c) Ventilatory motions: its coordination and integration
- d) Developmental aspects of structure and function
- e) Changes in normal structure and function in relation to pregnancy, scoliosis and COPD

**Unit-5 The Temporomandibular Joint- General features, structure, function and dysfunction**

**Biomechanics of the Vertebral column**

- a) Describe the general structure and function of the vertebral column,.
- b) Describe factors affecting stability and mobility.
- c) Regional structure and function of cervical, dorsal, lumbar and sacral vertebrae.
- d) Motions of the vertebral column.
- e) Lumbar-pelvic rhythm.
- f) Rotation of the vertebrae in each region.
- g) Movements of the ribs during rotation.
- h) Describe the muscles of the vertebral column, flexors, extensor, rotators and lateral flexors.
- i) Describe the effects of injury, developmental deficits, defects in vertebrae
- j) Forces acting on the vertebral column during specific motions.
- k) General effects of injury and aging

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>General &amp; Clinical Psychology</b>	<b>Course Description</b> <b>Core Theory</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY014A</b>

**COURSE OBJECTIVES** -Human Psychology involves the study of various behavioral patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional and language development, communication and interaction skills appropriate to various age groups. The study of these subjects will help the student to understand their clients while assessment and while planning appropriate treatment methods.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basics and Introduction of Psychology and growth and development of humans on psychological aspects.
<b>CO 2</b>	Sensation, attention, perception motivational psychology
<b>CO 3</b>	Psychology of humans related to frustration, conflict, emotions and intelligence
<b>CO 4</b>	Thinking and learning on psychological basis and how to improve
<b>CO 5</b>	Improve personality by psychological aspect, social and clinical psychology for patient perspective

## **THEORY**

### **Unit-1 Introduction to Psychology**

- a) Schools: Structuralism, functionalism, behaviorism, Psychoanalysis.
- b) Methods: Introspection, observation, inventory and experimental method.
- c) Branches: psychology and applied psychology
- d) Psychology and physiotherapy

#### **Growth and Development**

- a) Life span: Different stages of development (Infancy, childhood, adolescence, adulthood, middle age, old age).
- b) Heredity and environment: role of heredity and environment in physical and psychological development, “Nature v/s Nurture controversy”.

## **Unit-2    Sensation, attention and perception**

- a) Sensation: Vision, Hearing, Olfactory, Gustatory and Cutaneous sensation, movement, equilibrium and visceral sense.
- b) Attention: Types of attention, Determinants of attention (subjective determinants and objective determinants).
- c) Perception: Gestalt principles of organization of perception (principle of figure ground and principles of grouping), factors influencing perception (past experience and context).
- d) Illusion and hallucination: different types.

### **Motivation**

- a) Motivation cycle (need, drive, incentive, reward).
- b) Classification of motives.
- c) Abraham Maslow's theory of need hierarchy

## **Unit-3    Frustration and conflict**

- a) Frustration: sources of frustration.
- b) Conflict: types of conflict.
- c) Management of frustration and conflict

## **Emotions**

- a) Three levels of analysis of emotion (physiological level, subjective state, and overt behavior).
- b) Theories of emotion
- c) Stress and management of stress.

## **Intelligence**

- a) Theories of intelligence.
- b) Distribution of intelligence.
- c) Assessment of intelligence

## **Unit-4 Thinking**

- a) Reasoning: deductive and inductive reasoning
- b) Problem solving: rules in problem solving (algorithm and heuristic)
- c) Creative thinking: steps in creative thinking, traits of creative people

## **Learning**

- a) Factors effecting learning.
- b) Theories of learning: trial and error learning, classical conditioning, Operant conditioning, insight learning, social learning theory.
- c) The effective ways to learn: Massed/Spaced, Whole/Part, Recitation/Reading, Serial/Free recall, Incidental/Intentional learning, Knowledge of results, association, organization, and mnemonic methods.

## **Unit-5 Personality**

- a) Approaches to personality: type & trait, behavioristic, psychoanalytic and humanistic approach.
- b) Personality assessment: observation, situational test, questionnaire, rating scale, interview, and projective techniques.
- c) Defense Mechanisms: denial of reality, rationalization, projection, reaction formation, identification, repression, regression, intellectualization, undoing, introjection, acting out.

## **Social psychology**

- a) Leadership: Different types of leaders. Different theoretical approaches to leadership.
- b) Attitude: development of attitude. Change of attitude.

## **Clinical psychology**

Models of training, abnormal behavior assessment, clinical judgement, psychotherapy, self-management methods, physiotherapist patient interaction, aggression, self- imaging, stress management, assertive training, Group therapy, Body awareness, Pediatric, child and geriatric clinical psychology.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Professional Skills-Theory</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN002A</b>

#### **COURSE OBJECTIVES**

<b>1.</b>	To enhance Professional competence in reading, writing, listening and speaking.
<b>2.</b>	Switch the approach from providing information about the language to use the language.
<b>3.</b>	Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
<b>4.</b>	Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
<b>5.</b>	Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
<b>6.</b>	Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

#### **COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
<b>CO 2</b>	Ability to analyze the usage of English words in professional scenario.
<b>CO 3</b>	An understanding of technical and academic articles' comprehension.
<b>CO 4</b>	The ability to present oneself at multinational levels as per the demand of the corporate culture

**Unit-1** Professional Grooming and Professional Culture: Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**Unit-2** Advanced Grammar: Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**Unit-3** Composition:, Memo, Notice, Circular, Book Review, Research Article, Reports

**Unit-4** Vocabulary Building: Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

**Unit-5** Reading Comprehension: Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JSSO University, Jaipur-302003

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Professional Skills-Practical</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN002A</b>

**Unit-1** Professional Grooming and Professional Culture: Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management

**Unit-2** Advanced Grammar: Exercise Sessions for Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents

**Unit-3** Composition:, Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics

**Unit-4** Vocabulary Building: Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words

**Unit-5** Reading Comprehension: Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc.

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 2</b>
<b>Course</b> <b>Culture Education - 2</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DIN002A</b>

## OBJECTIVES

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

**COURSE OUTCOMES (CO):** At the end of this course students will have:

<b>CO 1</b>	Ability to acknowledge and appreciate the richness of Indian Culture
<b>CO 2</b>	Ability to represent the culture ethics in real life

### Unit-1 Holy Scriptures-II

1. Bhagavad Gita and Life Management
2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Saheb, Bible, Quran, Jain Scriptures, Bodh Scriptures
3. Historicity of Ramayana and Mahabharata

### Unit-2 Society and Culture-II

4. Indian Society: Its Strengths and Weaknesses
5. Health and Lifestyle related issues
6. Conservation of cultural heritage

### Unit-3 India in Progress-II

7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights
8. Indian Models of Economy, Business and Management

### Unit-4 Great Indian Personalities-II

9. Life and works of the Great People of India- Raja Ram Mohan Roy, Swami Vivekanand, Madan Mohan Malviya, Ishwarchand VidyaSagar, JyotibaPhule, HomiBhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, VirHaqiqat Rai, Subhash Chandra Bose, Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada Saheb Phalke, Major Dhayan Chand, A P J Abdul Kalaam, Kailash Satyarthi, Aruna Roy, Mahasweta Devi, Udaya Kumar, Narayan Murthy, Azim Premji

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Biomechanics and kinesiology</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY015A</b>

**COURSE OBJECTIVES** - Biomechanics involves the study of basic concepts of human movement, and application of various biomechanical principles in the evaluation and treatment of disorders of musculoskeletal system. Students are taught to understand the various quantitative and qualitative methods of movement. Mechanical principles of various treatment methods are studied. Study of biomechanics of joints and spine

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Movement mechanics of shoulder complex and elbow complex
<b>CO 2</b>	Biomechanical science of Wrist and Hip complex
<b>CO 3</b>	Biomechanics of Knee and Ankle and Foot
<b>CO 4</b>	Learn about Posture
<b>CO 5</b>	Normal and pathological gait pattern

### **Unit-1**

Biomechanics of Shoulder complex  
Biomechanics of Elbow complex

### **Unit-2**

Biomechanics of Wrist complex  
Biomechanics of Hip complex

### **Unit-3**

Biomechanics of Knee complex  
Biomechanics of Ankle and Foot complex

### **Unit-4**

Posture

### **Unit-5**

Normal and Pathological Gait

  
**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302003

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Exercise Therapy-1</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY016A</b>

**COURSE OBJECTIVES** - In this course, the students will learn the principles and effects of exercise as a therapeutic modality and will learn the techniques in the restoration of physical functions.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Fundamentals and derived body position and different method of testing related to joints and muscles and special senses
<b>CO 2</b>	Learn active and passive movements
<b>CO 3</b>	Different types of exercises free, active, passive and resisted
<b>CO 4</b>	Learn scientific therapeutic massage
<b>CO 5</b>	Learn Specific exercise regimens, posture and walking aids

## Unit-1

1. Starting Positions – Fundamental positions & derived Positions

2. Methods of Testing

a. Functional tests

b. Measurement of Joint range: ROM-Definition, Normal ROM for all peripheral joints & spine, Goniometer- parts, types, principles, uses, Limitations of goniometry, Techniques for measurement of ROM for all peripheral joints

c. Tests for neuromuscular efficiency

i. Electrical tests

ii. Manual Muscle Testing: Introduction to MMT, Principles & Aims, Indications & Limitations, Techniques of MMT for group & individual: Techniques of MMT for upper limb / Techniques of MMT for lower limb / Techniques of MMT for spine.

iii. Anthropometric Measurements: Muscle girth – biceps, triceps, forearm, quadriceps, calf

iv. Static power Test

v. Dynamic power Test

vi. Endurance test

vii. Speed test

d. Tests for Co-ordination

e. Tests for sensation

f. Pulmonary Function tests

g. Measurement of Limb Length: true limb length, apparent limb length, segmental limb

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

length

h. Measurement of the angle of Pelvic Inclination

## **Unit-2**

### **Movements**

#### **1. Active Movements**

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JGUJKO University, Jaipur-302003

## **2. Passive Movements**

Causes of immobility, Classification of Passive movements, Specific definitions related to passive movements, Principles of giving passive movements, Indications, contraindications, effects of uses , Techniques of giving passive movements.

## **Unit-3**

### **Exercises**

1. Free exercise: Classification, principles, techniques, indications, contraindications, effects and uses
2. Active Assisted Exercise: principles, techniques, indications, contraindications, effects and uses Assisted-Resisted Exercise: principles, techniques, indications, contraindications, effects and uses Resisted Exercise: Definition, principles, indications, contraindications, precautions & techniques, effects and uses
3. Types of resisted exercises: Manual and Mechanical resistance exercise, Isometric exercise, Dynamic exercise: Concentric and Eccentric, Dynamic exercise: Constant versus variable resistance, Isokinetic exercise, Open-Chain and Closed-Chain exercise.

## **Unit-4**

### **1. THERAPEUTIC MASSAGE**

- History and Classification of Massage Technique
- Principles, Indications and Contraindications
- Technique of Massage Manipulations
- Physiological and Therapeutic Uses of Specific Manipulations

2. Relaxation -Definitions: Muscle Tone, Postural tone, Voluntary Movement, Degrees of relaxation, Pathological tension in muscle, Stress mechanics, types of stresses, Effects of stress on the body mechanism, Indications of relaxation, Methods & techniques of relaxation-Principles & uses: General, Local, Jacobson's, Mitchel's, additional methods

## **Unit-5**

1. Specific exercise regimens
  - a. Isotonic: de Lormes, Oxford, MacQueen, Circut weight training
  - b. Isometric: BRIME (Brief Resisted Isometric Exercise), Multiple Angle
  - c. Isometrics Isokinetic regimens
2. Posture -Definition, Active and Inactive Postures, Postural Mechanism, Patterns of Posture, Principles of re-education: corrective methods and techniques, Patient education.
3. Walking Aids -Types: Crutches, Canes, Frames; Principles and training with walking aids

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Exercise Therapy-1 Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>4 hours</b>	<b>Course Code</b> <b>BPY017A</b>

**COURSE OBJECTIVES** - The students of exercise therapy are to be trained in Practical Laboratory work for all the topics discussed in theory. The student must be able to evaluate and apply judiciously the different methods of exercise therapy techniques on the patients. They must be able to

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Students learn and practice fundamentals and derived body position and different method of testing related to joints and muscles and special senses
<b>CO 2</b>	Students learn and practice active and passive movements
<b>CO 3</b>	Students learn and practice different types of exercises free, active, passive and resisted
<b>CO 4</b>	Students learn and practice scientific therapeutic massage
<b>CO 5</b>	Students learn and practice specific exercise regimens, posture and walking aids

### **Unit-1 Demonstrate practical approach**

1. Starting Positions – Fundamental positions & derived Positions

2. Methods of Testing

a. Functional tests

b. Measurement of Joint range: ROM-Definition, Normal ROM for all peripheral joints & spine, Goniometer- parts, types, principles, uses, Limitations of goniometry, Techniques for measurement of ROM for all peripheral joints

c. Tests for neuromuscular efficiency

i. Electrical tests

ii. Manual Muscle Testing: Introduction to MMT, Principles & Aims, Indications & Limitations, Techniques of MMT for group & individual: Techniques of MMT for upper limb / Techniques of MMT for lower limb / Techniques of MMT for spine.

iii. Anthropometric Measurements: Muscle girth – biceps, triceps, forearm, quadriceps, calf

iv. Static power Test

v. Dynamic power Test

vi. Endurance test

vii. Speed test

d. Tests for Co-ordination

e. Tests for sensation

f. Pulmonary Function tests

g. Measurement of Limb Length: true limb length, apparent limb length, segmental limb

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

length

h. Measurement of the angle of Pelvic Inclination

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JSSO University, Jaipur-302003

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Electro Therapy-1</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY018A</b>

**COURSE OBJECTIVES** - In this course the student will learn the Principles, Techniques, and Effects, Indication, Contra-Indication and the dosage parameter for various indications of electro therapeutic modalities in the restoration of physical function. The objective of this course is that the student will be able to list the indications, contra indications, dosages of electro therapy modalities, demonstrates the different techniques, and describe their effects on various conditions.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	About dangers of electric current, shock prevention and TENS electrotherapeutic modality
<b>CO 2</b>	About IFT, Russian and Rebox Medium frequency therapeutic modalities
<b>CO 3</b>	Learn about ultrasound as physiotherapeutic modality
<b>CO 4</b>	Learn about LASER as physiotherapeutic modality
<b>CO 5</b>	Learn about superficial heating modalities as physiotherapeutic modality

### Unit-1

1. Dangers-short circuit, electric shocks: Micro/ Macro shocks, Precaution-safety devices, earthing, fuses etc., First aid and initial management of electric shock and Burns: electrical & chemical burns, prevention and management
2. TENS: Define TENS, Types of TENS, Conventional TENS, Acupuncture TENS, Burst TENS, Brief & Intense TENS, Modulated TENS. Types of Electrodes & Placement of Electrodes, Dosage parameters, Physiological & Therapeutic effects, Indications & Contraindications
3. Pain: Define Pain, Theories of Pain (Outline only), Pain Gate Control theory in detail.

### Unit-2- Medium Frequency

1. Interferential Therapy: Define IFT, Principle of Production of IFT, Static Interference System, Dynamic Interference system, Dosage Parameters for IFT, Electrode placement in IFT, Physiological & Therapeutic effects, Indications & Contraindications.
2. Russian Current
3. Rebox type Current

### Unit-3- Ultrasound

Define Ultrasound, Frequency, Piezo Electric effects: Direct, Reverse, Production of US, Treatment Dosage parameters: Continuous & Pulsed mode, Intensity, US Fields: Near field, Far field, Half value distance, Attenuation, Coupling Media, Thermal effects, Non-thermal effects,

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

Principles & Application of US: Direct contact, Water bag, Water bath, Solid sterile gel pack method for wound. Uses of US, Indications & Contraindications, Dangers of Ultrasound. Phonophoresis: Define Phonophoresis, Methods of application, commonly used drugs, Uses. Dosages of US

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JSSO University, Jaipur-302003

#### **Unit-4 - LASER**

Define LASER. Types of LASER. Principles of Production. Production of LASER by various methods. Methods of application of LASER. Dosage of LASER. Physiological & Therapeutic effects of LASER. Safety precautions of LASER. Classifications of LASER. Energy density & power density

#### **Unit-5- Superficial heating Modalities**

1. Wax Therapy: Principle of Wax Therapy application – latent Heat, Composition of Wax Bath Therapy unit, Methods of application of Wax, Physiological & Therapeutic effects, Indications & Contraindication, Dangers.
2. Contrast Bath: Methods of application, Therapeutic uses, Indications & Contraindications.
3. Moist Heat Therapy: Hydro collator packs – in brief, Methods of applications, Therapeutic uses, Indications & Contraindications.
4. Cyclotherm: Principles of production, Therapeutic uses, Indications & Contraindications.
5. Fluidotherapy: Construction, Method of application, Therapeutic uses, Indications & Contraindications.
6. Whirl Pool Bath: Construction, Method of Application, Therapeutic Uses, Indications & Contraindications.
7. Cryotherapy: Define- Cryotherapy, Principle- Latent heat of fusion, Physiological & Therapeutics effects, Techniques of Applications, Indications & Contraindications, Dangers, Methods of application with dosages.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Electro Therapy-1 Practical</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>2 credits</b>	<b>Hours per Semester</b> <b>4 hours</b>	<b>Course Code</b> <b>BPY019A</b>

**COURSE OBJECTIVES** - The student of Electrotherapy must be able to learn the practical use of electrotherapy modalities applying the principles of electrotherapy with proper techniques, choice of dosage parameters and safety precautions.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Students learn and practice about TENS
<b>CO 2</b>	Students learn and practice about IFT, Russian and Rebox current
<b>CO 3</b>	Students learn and practice about Ultrasound
<b>CO 4</b>	Students learn and practice about LASER
<b>CO 5</b>	Students learn and practice about superficial heating modalities

#### **Unit-1**

Demonstrate practical approach of TENS

#### **Unit-2**

Demonstrate practical approach of IFT, Russian and Rebox current

#### **Unit-3**

Demonstrate practical approach of Ultrasound

#### **Unit-4**

Demonstrate practical approach of LASER

#### **Unit-5**

Demonstrate practical approach of superficial heating modalities

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Law, Ethics &amp; Professional values</b>	<b>Course Description</b> <b>Core</b>	<b>Credit per Semester</b> <b>3 credits</b>	<b>Hours per Semester</b> <b>3 hours</b>	<b>Course Code</b> <b>BPY020A</b>

**COURSE OBJECTIVES** - Legal and ethical considerations are firmly believed to be an integral part of medical practice in planning patient care. Advances in medical sciences, growing sophistication of the modern society's legal framework, increasing awareness of human rights and changing moral principles of the community at large, now result in frequent occurrences of healthcare professionals being caught in dilemmas over aspects arising from daily practice.

Medical/ Physiotherapy ethics has developed into a well based discipline which acts as a "bridge" between theoretical bioethics and the bedside. The goal is "to improve the quality of patient care by identifying, analyzing, and attempting to resolve the ethical problems that arise in practice". Doctors are bound by, not just moral obligations, but also by laws and official regulations that form the legal framework to regulate medical practice. Hence, it is now a universal consensus that legal and ethical considerations are inherent and inseparable parts of good medical practice across the whole spectrum. Few of the important and relevant topics that need to focus on are as follows:

The module on professionalism will deliver the concept of what it means to be a professional and how physiotherapy profession is different from a usual vocation. It also explains how relevant is professionalism in terms of healthcare system and how it affects the overall patient environment.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Basics of medical ethics and Malpractice and negligence
<b>CO 2</b>	Right of patient, organ transplantation
<b>CO 3</b>	Medico legal aspects of medical records and informed consent
<b>CO 4</b>	Codes and laws of physiotherapy practice
<b>CO 5</b>	Professional values, professional behavior and professional accountability and responsibility

### Unit-1

1. Medical ethics versus medical law - Definition - Goal - Scope
2. Introduction to Code of conduct
3. Basic principles of medical ethics – Confidentiality
4. Malpractice and negligence - Rational and irrational drug therapy

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

## Unit-2

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JSSKO University, Jaipur-303003

1. Autonomy and informed consent - Right of patients
2. Care of the terminally ill- Euthanasia
3. Organ transplantation

### **Medical diagnosis versus physiotherapy diagnosis**

#### **Unit-3**

1. Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.
2. Professional Indemnity insurance policy
3. Development of standardized protocol to avoid near miss or sentinel events
4. Obtaining an informed consent.
5. Biomedical ethical principles

#### **Unit-4**

1. Code of ethics for physiotherapists
2. Ethics documents for physiotherapists
3. Laws affecting physiotherapy practice

#### **Unit-5**

1. Professional values- Integrity, Objectivity, Professional competence and due care, Confidentiality. Core values- Accountability, Altruism, Compassion/ caring, excellence, integrity, professional duties, social responsibility
2. Attitude and behavior- professional behavior, treating people equally
3. Code of conduct, professional accountability and responsibility, misconduct
4. Cultural issues in the healthcare environment
5. Entry level health care practitioner, direct access, autonomy in profession, practitioner of practice and evidence based practice.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Life Skills – 1 (Personality Development)</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>1 hours</b>	<b>Course Code</b> <b>DEN003A</b>

**COURSE OBJECTIVE-** To prepare the students as per the industry demands. Switching to Activity and Task based Teaching modules. To focus on the linguistic aspects in relation to life situations. Facilitating the aspects of behavioral skills in language. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields
<b>CO 2</b>	Ability to learn by doing it practically in the classroom
<b>CO 3</b>	Ability to learn by creating an environment and adapting to the environment.
<b>CO 4</b>	The ability to prepare the students as per the need of the Multi-cultural scenario around.

- |               |   |
|---------------|---|
| <b>UNIT 1</b> | <ul style="list-style-type: none"> <li>Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion</li> <li>Basics of Narrating and describing things</li> </ul>  |
| <b>UNIT 2</b> | <ul style="list-style-type: none"> <li>Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview</li> </ul>  |
| <b>UNIT 3</b> | <ul style="list-style-type: none"> <li>CV/Resume Drafting and HR Interview advance theory</li> <li>Basics of Video Interviews and Video Profiles for Job</li> <li>Types of listening, advantages and disadvantages</li> </ul> |
| <b>UNIT 4</b> | <ul style="list-style-type: none"> <li>Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report</li> </ul>   |

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

## **UNIT 5**

Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JSSO University, Jaipur-302003

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester: 3</b>
<b>Course</b> <b>Life Skills – 1 (Personality Development) Practical</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>2 hours</b>	<b>Course Code</b> <b>DEN003B</b>

- UNIT 1**
- Debates / Speeches / Addressing the public / Extempore/Group Discussion
  - Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids
- UNIT 2**
- Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview
  - CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand
  - Video Interviews and Video Profiles for Job-Practice session for Online Interviews
- UNIT 3**
- Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives
- UNIT 4**
- Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report
- UNIT 5**
- Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

<b>JECRC UNIVERSITY</b> <b>School of Allied Health Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Sem</b>
<b>Course</b> <b>Value Education and Ethics -1</b>	<b>Course Description</b> <b>Foundation</b>	<b>Credit per Semester</b> <b>1 credits</b>	<b>Hours per Semester</b> <b>1 hours</b>	<b>Cour</b> <b>DI</b>

## COURSE OBJECTIVES

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Ability to acknowledge and appreciate the ethical beauty of India
<b>CO 2</b>	Ability to incorporate the values of human lives in real life applications

## Lessons from the Ramayana

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

## Lessons from the Mahabharata

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

## Lessons from the Upanishads

Introduction to the Upanishads: Sruti versus Smriti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, Satyakama Jabala, Aruni, Shvetaketu.

## Message of the Bhagavad Gita

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War  
– The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita –

Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

### **Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

### **Life and Teachings of Spiritual Masters India**

Sri Rama, Sri Krishna, Sri Buddha, AdiShankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

### **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Clinical Orthopedics and</b> <b>Sports Injury-1</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY028A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about Orthopedic conditions the therapist would encounter in their practice. The objective of this course is that after completion of the lectures and discussion the student will be able to demonstrate an understanding of orthopedic conditions causing disability, list the etiology, clinical features and methods of investigations and management.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Introduction to Orthopedics and Traumatology of Musculoskeletal Disorders.
<b>CO 2</b>	Fractures and dislocations of upper extremity and hand injuries.
<b>CO 3</b>	Fractures of Spine.
<b>CO 4</b>	Regional conditions.
<b>CO 5</b>	Soft tissue injuries and Orthopedic surgeries

#### **Unit-1 Introduction**

- Introduction to musculoskeletal conditions.
- Clinical examination in musculoskeletal disorders.
- Common investigative procedures
- Radiological and Imaging techniques in musculoskeletal conditions.
- Inflammation and repair, soft tissue healing

#### **Traumatology**

- Fracture: definition, types, signs, and symptoms
- Fracture healing
- Complications of fractures
- Conservative and surgical approaches
- Principles of management – reduction (open/closed, immobilization etc)
- Subluxation/dislocations – definition, signs and symptoms, management (conservative and operative)

#### **Unit-2 Fractures and Dislocations of Upper Limb**

- Fractures of Upper Limb - causes, clinical features, mechanism of injury, complications, conservative and surgical management of the following fractures:**
  - Fractures of clavicle and scapula
  - Fractures of greater tuberosity and neck of humerus

- iii. Fracture shaft of humerus
- iv. Supracondylar fracture of humerus
- v. Fractures of capitulum, radial head, olecranon, coronoid, and epicondyles
- vi. Side swipe injury of elbow
- vii. Both bone fractures of ulna and radius
- viii. Fracture of forearm – Monteggia, Galeazzi fracture–dislocation
- ix. Chauffeur's fracture
- x. Colle's fracture
- xi. Smith's fracture
- xii. Scaphoid fracture
- xiii. Fracture of the metacarpals
- xiv. Bennett's fracture
- xv. Fracture of the phalanges. (Proximal and middle)

#### **b) Dislocations of Upper Limb-**

- i. Anterior dislocation of shoulder – mechanism of injury, clinical feature, complications, conservative management (Kocher's and Hippocrates manoeuvre), surgical management (putti plat, bankart's) etc
- ii. Recurrent dislocation of shoulder
- iii. Posterior dislocation of shoulder – mechanism of injury, clinical features, and management
- iv. Posterior dislocation of elbow – mechanism of injury, clinical feature, complications & management

**Hand Injuries** - mechanism of injury, clinical features, and management of the following–

- a) Crush injuries
- b) Flexor and extensor injuries
- c) Burn injuries of hand

#### **Unit-3 Fracture of Spine**

a) **Fracture of Cervical Spine** - Mechanism of injury, clinical feature, complications (quadriplegia); Management- immobilization (collar, cast, brace, traction); Management for stabilization, management of complication (bladder and bowel, quadriplegia)

- ☐ Clay shoveller's fracture
- ☐ Hangman's fracture
- ☐ Fracture odontoid
- ☐ Fracture of atlas

b) **Fracture of Thoracic and Lumbar Regions** - Mechanism of injury, clinical features, and management— conservative and surgical of common fractures around thoracic and lumbar regions

- ☐ Fracture of coccyx
- ☐ Fracture of Rib Cage - Mechanism of injury, clinical features, management for Fracture Ribs, Fracture of sternum

**Cervical and Lumbar Pathology:** Causes, clinical feature, patho-physiology, investigations, management-Medical and surgical for the following:

- a) Prolapsed Intervertebral Disc (PID)
- b) Spinal Canal Stenosis
- c) Spondylosis (cervical and lumbar)
- d) Spondylolysis
- e) Spondylolisthesis
- f) Lumbago/ Lumbosacral strain
- g) Sacralisation
- h) Lumbarisation
- i) Coccydynia
- j) Hemivertebra

#### **Unit-4 Regional Conditions**

Definition, Clinical features, and management of the following regional conditions

- a) Shoulder: Periarthritis shoulder (adhesive capsulitis), Rotator cuff tendinitis, Supraspinatus Tendinitis, Infraspinatus Tendinitis, Bicipital Tendinitis, Subacromial Bursitis
- b) Elbow: Tennis Elbow, Golfer's Elbow, Olecranon Bursitis (student's elbow) Triceps Tendinitis
- c) Wrist and Hand: De Quervain's Tenosynovitis, Ganglion, Trigger Finger/ Thumb, Mallet Finger, Carpal Tunnel Syndrome, Dupuytren's Contracture
- d) Pelvis and Hip: IT Band Syndrome, Piriformis Syndrome, Trochanteric Bursitis
- e) Knee: Osteochondritis Dissecans, Prepatellar and Suprapatellar Bursitis Popliteal Tendinitis, Patellar Tendinitis, Chondromalacia Patella, Plica Syndrome, Fat Pad Syndrome (Hoffa's syndrome)
- f) Ankle and Foot: Ankle Sprains, Plantar Fasciitis / Calcaneal Spur, Tarsal Tunnel Syndrome, Achilles Tendinitis, Metatarsalgia, Morton's Neuroma

#### **Unit-5 Soft Tissue Injuries**

- a) Define terms such as sprains, strains, contusion, tendinitis, rupture, Tenosynovitis, Tendinosis, bursitis
- b) Mechanism of injury of each, clinical features, managements- conservative and surgical of the following soft tissue injuries:
  - i. Meniscal injuries of knee
  - ii. Cruciate injuries of knee
  - iii. Medial and lateral collateral injuries of knee
  - iv. Lateral ligament of ankle
  - v. Wrist sprains
  - vi. Strains- quadriceps, hamstrings, calf, biceps, triceps etc
  - vii. Contusions- quadriceps, gluteal, calf, deltoid etc
  - viii. Tendon ruptures-Achilles, rotator cuff muscles, biceps, pectorals etc

**Orthopedic Surgeries:** Indications, Classification, Types, Principles of management of the following Surgeries: 3 Hours

- a) Arthrodesis
- b) Arthroplasty (partial and total replacement)
- c) Osteotomy
- d) External fixators
- e) Spinal stabilization surgeries (Harrington's, Luque's, Steffi plating) etc
- f) Limb reattachments

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Orthopedics and Sports</b> <b>Injury-1</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY029A</b>

**COURSE OBJECTIVES** - The subject serves to integrate the knowledge gained by the students in orthopedics and traumatology with skills to apply these in clinical situations of dysfunction and musculoskeletal pathology. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify disabilities due to musculoskeletal dysfunction, plan and set treatment goals and apply the skills gained in exercise therapy and electrotherapy in these clinical situations to restore musculoskeletal function.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiotherapy Assessment for Musculoskeletal Conditions
<b>CO 2</b>	Physiotherapy management for upper extremity fractures and dislocations
<b>CO 3</b>	Physiotherapy management of spinal conditions
<b>CO 4</b>	Regional conditions of upper extremity
<b>CO 5</b>	Sports injuries and orthopedics surgery

**Unit-1 PT assessment for Musculoskeletal conditions –**

- i. SOAP format
- ii. Subjective - history taking, informed consent, personal, past, medical and socioeconomic history, chief complaints, history of present illness. Pain assessment – its intensity, character, aggravating and relieving factors, site and location.
- iii. Objective- on observation - body built swelling, muscle atrophy, deformities, posture and gait.
- iv. On palpation, tenderness-grades, muscle spasm, swelling-methods of swelling assessment, bony prominences, soft tissue texture and integrity, warmth and vasomotor disturbances.
- v. On examination – ROM – active and passive, resisted isometric tests, limb length-apparent, true and segmental, girth measurement, muscle length testing-tightness, contracture

**Fractures –**

- i. Types, classification, signs and symptoms, complications.
- ii. Fracture healing - factors affecting fracture healing. Principles of fracture management - reduction - open and closed, immobilization - sling, cast, brace, slab, traction - manual, mechanical, skin, skeletal, lumbar and Cervical traction, external fixation, functional cast bracing.
- iii. PT management in complications - early and late - shock, compartment syndrome, Volkman's Ischemic Contracture (VIC), fat embolism, delayed and mal union, Reflex Sympathetic Dystrophy (RSD), myositis ossificans, Avascular Necrosis (AVN), pressure sores etc.

- iv. Physiotherapy assessment in fracture cases.
- v. Aims of PT management in fracture cases - short- and long-term goals.
- vi. Principles of PT management in fractures - Guidelines for fracture treatment during period of immobilization and guidelines for treatment after immobilization period

## **Unit-2 Physiotherapy management for upper extremity fractures and dislocations**

- 1. PT assessment and management of upper limb fractures and dislocations.
- 2. PT assessment and management of lower limb fractures and dislocations including pelvis.
- 3. PT assessment and management spinal fractures
- 4. Selection and application of physiotherapeutic techniques, maneuver's, modalities for preventive, curative and rehabilitative means in all conditions.
- 5. Principles of various schools of thought in manual therapy. (Briefly Maitland and Mc-kenzie)

## **Unit-3 Physiotherapy management of Spinal Conditions**

- 1. Review the causes, signs and symptoms, investigations, radiological features, neurological signs.
- 2. PT assessment, aims, and management and home program of the following conditions: Cervical Spondylosis, Lumbar Spondylosis, Spondylolisthesis, Spinal canal stenosis, Spondylolysis, Sacro-iliac joint dysfunction, Sacralisation, Lumbarisation, Intervertebral disc prolapse, Coccydynia, Spina bifida occulta
- 3. Effects of spinal traction, types of traction, modes of application, indications for spinal traction, contraindications, precautions, limitations of traction

## **Unit-4 Shoulder joint:**

Shoulder instabilities, TOS, RSD, Impingement syndrome - conservative and post-operative PT management. Total shoulder replacement and Hemi replacement. - Post operative PT management. AC joint injuries - rehabilitation. Rotator cuff tears-conservative and surgical repair. Sub acromial decompression- Post operative PT management

### **Elbow and forearm:**

Excision of radial head - Post operative PT management. Total elbow arthroplasty- Post operative PT management

### **Wrist and Hand:**

Total wrist arthroplasty. Repair of ruptured extensor tendons. Carpal tunnel syndrome. Flexor and extensor tendon lacerations - Post operative PT management

## **Unit-5 SPORTS CONDITIONS**

- 1. **Introduction to sports physiotherapy:** Scope of physiotherapy in sports 1 hour
- 2. **Assessment and evaluation of players:** Clinical examination, investigative procedures and documentation of sports injuries and pre- participation evaluation of sports players 1 hours
- 3. **Physical fitness:** assessment and evaluation of components of physical fitness including functional tests: muscle strength, flexibility, agility, balance, co-ordination, sensory deficits, cardio-pulmonary endurance. 1 hours

**4. Patho-mechanics and examination of sports injuries:** causes and mechanism of sports injuries. Examination of sports injuries in upper extremity, thorax and abdomen, head, neck and face, lower extremity, and spine

**5. Prevention and management of sports injuries:** prevention of sports injuries, management of acute sports injuries and advanced rehabilitation of sports players. Treatment guidelines for soft tissue injuries- Acute, Sub acute and chronic stages. Repair of soft tissues- rupture of muscle, tendon, and Ligamentous tears. Soft tissue injuries- prevention and rehabilitation of, Lateral ligament sprain of ankle. Rotator cuff injuries. Collateral and Cruciate injuries of knee. Meniscal injuries of knee. Supraspinatus and Bicipital tendonitis. Pre patellar and Sub-acromial bursitis. Tennis and Golfer's elbow. Hamstring strains, Quadriceps contusion, TA rupture. Dequervain's tenosynovitis. Trigger and Mallet finger. Plantar fasciitis. Wrist sprains

**6. Enhancing sports performance:** Sports psychology and nutrition

**Orthopaedic surgeries:**

Pre and post-operative PT assessment, goals, precautions and PT management of following surgeries such as: Arthrodesis, Osteotomy, Arthroplasty-partial and total - Excision arthroplasty, excision arthroplasty with implant, interposition arthroplasty and total replacement; Tendon transplant, Soft tissue release- tenotomy, myotomy, lengthening; Arthroscopy, Spinal stabilization, Re-attachment of limbs, External fixators, Synovectomy

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Orthopedics and Sports</b> <b>Injury-1 Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credit</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY030A</b>

**COURSE OBJECTIVES:** At the end of the course the students will be able to learn all the practical approaches of all the topics discussed in theory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate practical approaches of physiotherapy in Orthopedic Conditions and Sports Injury
-------------	--

**Unit-1** Practical shall be conducted for all the relevant topics discussed in theory in the following forms:

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Clinical Neurology and</b> <b>Neurosurgery-1</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY031A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about relevant aspects of neurology & neurosurgery. The student will have a general understanding of the diseases the therapist would encounter in their practice. The objective of this course is that after all lectures and discussion the student will be able to list the etiology, pathology, clinical features, and treatment methods for various neurological conditions

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Foundational concepts of Clinical Neurological Evaluation
<b>CO 2</b>	Neurodegenerative Disorders
<b>CO 3</b>	Disorders of Cranial nerves, peripheral nerves and behavior
<b>CO 4</b>	Traumatic Brain Injury
<b>CO 5</b>	Infections of Brain and Spinal Cord

- Unit-1**
1. Principles of clinical diagnosis, higher mental function, assessment of brain & spinal cord function, evaluation of cranial nerves and evaluation of autonomic nervous system.
  2. Neurological Investigations: principles, methods, views, normal/abnormal values/features, types of following investigative procedures- skull x-ray, CT, MRI, evoked potentials, lumbar puncture, CSF examination, EMG, NCV
  3. Classification of neurological involvement depending on level of lesion.
  4. Neuro Intensive Care Unit

## **Unit-2 Neurodegenerative Disorders**

Etiology, pathophysiology, classification, clinical signs & symptoms, investigations, differential diagnosis, medical management, and complications of following disorders –

a). Amyotrophic lateral sclerosis

b). Multiple sclerosis

c). Myasthenia Gravis

d). Pyramidal and Extra Pyramidal Disorders

### **Unit-3 1. Polyneuropathies:**

a). Classification and Features of Peripheral Nerve Injuries

b). Guillain-Barre syndrome – Causes, clinical features, management of GBS

### **2. Diseases of Cranial Nerves**

**3. Neuro-ophthalmology:** Assessment of visual function – acuity, field, color vision, Pupillary reflex, accommodation reflex, abnormalities of optic disc, disorders of optic nerve, tract, radiation, occipital pole, disorders of higher visual processing, disorders of pupil, disorders of eye movements, central disorders of eye movement

**4. Deafness, vertigo, and imbalance:** Physiology of hearing, disorders of hearing, examination & investigations of hearing, tests of vestibular function, vertigo, peripheral vestibular disorders, central vestibular vertigo.

### **Unit-4 Traumatic Brain Injury**

1. Head Injury: Etiology, classification, clinical signs & symptoms, investigations, differential diagnosis, medical management, surgical management and complications.

2. Neurogenic Bladder

3. Higher cortical, neuro psychological and neurobehavioral disorders:

Causes of blackouts, physiological nature of Epilepsy, classification, clinical features, investigations, medical & surgical management of following disorders –

Non-epileptic attacks of childhood, Epilepsy in childhood, Seizures, and Epilepsy syndromes in adult.

Classification and clinical features of Dyssomnias, Parasomnias, Dementia, Obsessive-compulsive disorders.

Neural basis of consciousness, causes & investigations of Coma, criteria for diagnosis of Brain death.

Etiology, pathophysiology, classification, clinical signs & symptoms, investigations, differential diagnosis, management of Perceptual disorders and Speech disorders.

### **Unit-5 Infections of brain and spinal cord:**

Etiology, pathophysiology, classification, clinical signs & symptoms, investigations, differential diagnosis, medical management, surgical management and complications of following disorders –

a) Meningitis

b) Encephalitis,

c) Poliomyelitis and

- d) Post polio syndrome.
- e) Complications of systemic infections on nervous system – Septic encephalopathy, AIDS, Rheumatic fever, Brucellosis, Tetanus, and Pertussis.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Physiotherapy in Clinical</b> <b>Neurology and</b> <b>Neurosurgery-1</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY032A</b>

### **COURSE OBJECTIVES:**

The subject serves to integrate the knowledge gained by the students in neurology and neurosurgery with skills to apply these in clinical situations of dysfunction and neurological pathology. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify disabilities due to neurological dysfunction, plan and set treatment goals and apply the skills gained in exercise therapy and electrotherapy in these clinical situations to restore neurological function.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Foundational Concepts of Physiotherapy Assessment of Neurological Conditions
<b>CO 2</b>	Neurorehabilitation Approaches
<b>CO 3</b>	Physiotherapy Management of Neurological Gait
<b>CO 4</b>	Physiotherapy Management of Nerve Disorders and Injuries
<b>CO 5</b>	Physiotherapy Management of Neurodegenerative Disorders and Traumatic Brain Injury

### **Unit-1 Neurological Physiotherapy Assessment:**

Required materials for examination, Chief complaints, History taking – Present, Past, medical, familial, personal histories, Observation, Palpation, Higher mental function – Consciousness, Orientation, Wakefulness, memory, Speech, Reading, Language, Writing, Calculations, Perception, Left right confusion, Reasoning, and Judgment, Motor Examination – Muscle power, Muscle tone, Spasticity, Flaccidity, Reflexes – Developmental reflexes, deep tendon reflexes, Superficial reflexes, Sensory examination – Superficial, Deep and Cortical sensations, Special tests – Romberg's, Kernig's sign, Brudzki sign, Tinels's sign, Slum test, Lehermitte's sign, Bells Phenomenon, Gower's sign, Sun set sign, Battle's sign,

 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

Glabellar tap sign, etc, Balance examination, coordination examination, Gait analysis – Kinetics & Kinematics (Quantitative & Qualitative analysis), Functional Analysis, Assessment tools & Scales – Modified Ashworth scale, Berg balance scale, FIM, Barthel index, Glasgow coma scale, Mini mental state examination, Rancho Los Amigos Scale for Head injury, APGAR score, ASIA scale, Reflex Grading. Differential diagnosis

#### **Unit-2 Neuro Rehabilitation Approaches:**

Neuro physiological Techniques – Concepts, Principles, Techniques, Effects of following Neurophysiological techniques: NDT, PNF, Rood's Sensory motor Approach, Sensory Integration Approach, Brunnstorm movement therapy, Motor relearning program, Contemporary task-oriented approach, Muscle re-education approach and Constraint induced movement therapy.

#### **Unit-3 Assessment and management of Neurological gaits:**

Quantitative and Qualitative (Kinetic & Kinematics) analysis, List of Problems, short- & Long-Term goals, Management of following Neurological Gaits – Hemiplegic gait, Parkinson gait, High step gait, Hyperkinetic gait, Hypokinetic gait, Waddling gait, Scissoring gait, Spastic gait, Choreaform Gait, Diplegic Gait, and Myopathic Gait.

#### **Unit-4 PT Management of Nerve Injuries and Disorders**

Assessment and PT Management of –

- a) Bell's palsy
- b) Facial palsy
- c) Trigeminal Neuralgia
- d) PNI
- e) GBS

#### **Unit-5 PT Management of Neuro-degenerative disorders and TBI:**

Assessment and PT Management of –

- a) Multiple Sclerosis
- b) Myasthenia Gravis
- c) MND
- d) ALS

- e) Parkinson's Disease
- f) Head Injury

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Physiotherapy in Clinical</b> <b>Neurology and</b> <b>Neurosurgery-1 Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credit</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY033A</b>

### **COURSE OBJECTIVES:**

At the end of the course the students will be able to learn all the practical approaches of all the topics discussed in theory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate practical approaches of physiotherapy in Neurological and Neuro-Surgical Conditions
-------------	---

**Unit-1** Practical shall be conducted for all the relevant topics discussed in theory in the following forms:

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Community Physiotherapy</b>	<b>Course</b> <b>Description</b> <b>Core Practical</b>	<b>Credit per</b> <b>Semester</b> <b>1 credits</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY034A</b>

## COURSE OBJECTIVES

The subject serves to integrate the knowledge gained by the students in community medicine and other areas with skills to apply these in clinical situations of health and disease and its prevention. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify rehabilitation methods to prevent disabilities and dysfunctions due to various disease conditions and plan and set treatment goals and apply the skills gained in rehabilitating and restoring functions.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Introduction, principles, planning and management of Community Based Rehabilitation
<b>CO 2</b>	Disability and disability evaluation
<b>CO 3</b>	Role of Government, Social Work and Voluntary Organizations in CBR and different Rehabilitation Programs
<b>CO 4</b>	Role of Physiotherapy in Community Based Rehabilitation
<b>CO 5</b>	Geriatrics, Industrial Health and Ergonomics including Occupational, Psychological and Biological Hazards.

## UNIT 1

- Rehabilitation: Definition, Types
- Community:** Definition of Community, Multiplicity of Communities, and Community based approach, Community Entry strategies, Community Based Rehabilitation (CBR) and Community development, Community initiated versus community-oriented programme, Community participation and mobilization
- Introduction to Community Based Rehabilitation:** Definition, Historical review, Concept of CBR, Need for CBR, Difference between Institution based and Community based Rehabilitation, Objectives of CBR, Scope of CBR, Members of CBR team, Modelsof CBR

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

- iv. **Principles of Community based Rehabilitation:** W.H.O.'s policies-about rural health care- concept of primary /tertiary health centers-district hospitals etc., Role of P.T.- Principles of a team work of Medical person/P.T./O.T. audiologist/speech therapist /P.&O./vocational guide in C.B.R. of physically handicapped person, Agencies involved in rehabilitation of physical handicapped - Legislation for physically handicapped. Concept of multipurpose health worker. Role of family members in the rehabilitation of a physically handicapped
- v. **Planning and management of CBR Programmes:** CBR Programmed planning and management, Ownership and Governance, Decentralization and CBR, Management of CBR, programmed sustainability, Communication and Coordination, Community participation, mobilization and awareness, CBR programme influence on promoting and developing public policies

## UNIT 2

- i. **Disability:** Definition of Impairment, Handicap and Disability, Difference between impairment, handicap and disability, causes of disability, Types of disability, Prevention of disability, Disability in developed countries, Disability in developing countries. Disability Surveys: Demography. Screening: Early detection of disabilities and developmental disorders, Prevention of disabilities- Types and levels
- ii. **Disability Evaluation:** Introduction, What, Why and How to evaluate, Quantitative versus Qualitative data, Uses of evaluation findings.
- iii. **Orthotics, Prosthetics, Splints and wheel chair**

## UNIT 3

- i. **Role of Government in CBR:** Laws, Policies, Programme, Human Rights Policy, Present rehabilitation services, Legal aspects of rehabilitation
- ii. **Role of Social work in CBR:** Definition of social work, Methods of social work, History of social work, Role of social worker in rehabilitation
- iii. **Role of voluntary Organizations in CBR:** Charitable Organizations, Voluntary health agencies, National level and International NGO's, Multilateral and Bilateral agencies. International Health Organizations: WHO, UNICEF, UNDP, UNFPA, FAO, ILO, World bank, USAID, SIDA, DANIDA, Rockefeller, Ford foundation, CARE, REDCROSS.
- iv. **National District Level Rehabilitation Programme:** Charitable Organizations, Voluntary health agencies, National level and International NGO's, Multilateral and Bilateral agencies. International Health Organizations: WHO, UNICEF, UNDP, UNFPA, FAO, ILO, World bank, USAID, SIDA, DANIDA, Rockefeller, Ford foundation, CARE, REDCROSS.

## UNIT 4

- i. **Role of Physiotherapy in CBR:** Screening for disabilities, Prescribing exercise programme, Prescribing and devising low cost locally available assistive aids, Modifications physical and architectural barriers for disabled, Disability prevention, Strategies to improve ADL, Rehabilitation programmes for various neuro-musculoskeletal and cardiothoracic disabilities
- ii. **Screening and rehabilitation of paediatric disorders in the community:** Early detection of high risk babies, Maternal nutrition and education, Rehabilitation of Cerebral Palsy, Polio, Downs Syndrome, Muscular Dystrophies etc., Prevention and rehabilitation of

- mental retardation and Behavioural disorders, Immunization programmes, Early intervention in high risk babies, Genetic counselling
- iii. **Extension services and mobile units:** Introduction, Need, Camp approach
- iv. **Vocational training in rehabilitation:** Introduction, Need, Vocational evaluation, Vocational rehabilitation services

## UNIT 5

- i. **Geriatrics:** Physiology of Aging /degenerative changes- Musculoskeletal/Neuromotor/cardio-respiratory-/Metabolic, Endocrine, Cognitive, Immune systems. Role of Physiotherapy in Hospital based care, Half-way homes, Residential homes, Meals on wheels etc. Home for the aged, Institution based Geriatric Rehabilitation. Few conditions: - Alzheimer's disease, Dementia, Parkinson's Disease, Incontinence, Iatrogenic drug reactions, etc. Ethics of Geriatric Rehabilitation
- ii. **Industrial Health & Ergonomics-** Occupational Hazards in the industrial area:
- I. Accidents due to
- a) Physical agents-e.g.-Heat/cold, light, noise, Vibration, U.V. radiation, Ionizing radiation
- b) Chemical Agents-Inhalation, local action, ingestion
- II. Accidents due to
- a) Mechanical hazards-overuse/fatigue injuries due to ergonomic alteration & ergonomic evaluation of workplace-mechanical stresses per hierarchy
- ☐ sedentary table work –executives, clerk
- ☐ inappropriate seating arrangement- vehicle drivers
- ☐ constant standing- watchman- Défense forces, surgeons
- ☐ Over-exertion in laborers, common accidents - Role of P.T.-Stress management
- b) Psychological hazards- e.g. executives, monotonicity & dissatisfaction in job, anxiety of work completion with quality, Role of P.T. in Industrial setup & Stress management-relaxation modes
- c) Biological Hazards

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>5</b>
<b>Course</b> <b>Community Physiotherapy</b> <b>- Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credit</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY035A</b>

### **COURSE OBJECTIVES:**

At the end of the course the students will be able to learn all the practical approaches of all the topics discussed in theory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate practical approaches of physiotherapy in Neurological and Neuro-Surgical Conditions
-------------	---

**Unit-1** Practical shall be conducted for all the relevant topics discussed in theory in the following forms:

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Clinical Orthopedics and</b> <b>Sports Injury-2</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY036A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about Orthopedic conditions the therapist would encounter in their practice. The objective of this course is that after completion of the lectures and discussion the student will be able to demonstrate an understanding of orthopedic conditions causing disability, list the etiology, clinical features and methods of investigations and management.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Fractures of Spine
<b>CO 2</b>	Fractures and Dislocations of Upper Limb
<b>CO 3</b>	Fractures and Dislocations of Lower Limb
<b>CO 4</b>	Deformities
<b>CO 5</b>	Diseases of Bones and Joints

#### **Unit-1 Introduction**

- Introduction to musculoskeletal conditions.
- Clinical examination in musculoskeletal disorders.
- Common investigative procedures
- Radiological and Imaging techniques in musculoskeletal conditions.
- Inflammation and repair, soft tissue healing

#### **Traumatology**

- Fracture: definition, types, signs, and symptoms
- Fracture healing
- Complications of fractures
- Conservative and surgical approaches
- Principles of management – reduction (open/closed, immobilization etc)
- Subluxation/dislocations – definition, signs and symptoms, management (conservative and operative)

#### **Unit-2 Fractures and Dislocations of Upper Limb**

- Fractures of Upper Limb - causes, clinical features, mechanism of injury, complications, conservative and surgical management of the following fractures:**

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

- i. Fractures of clavicle and scapula
- ii. Fractures of greater tuberosity and neck of humerus
- iii. Fracture shaft of humerus
- iv. Supracondylar fracture of humerus
- v. Fractures of capitulum, radial head, olecranon, coronoid, and epicondyles
- vi. Side swipe injury of elbow
- vii. Both bone fractures of ulna and radius
- viii. Fracture of forearm – Monteggia, Galeazzi fracture–dislocation
- ix. Chauffeur's fracture
- x. Colle's fracture
- xi. Smith's fracture
- xii. Scaphoid fracture
- xiii. Fracture of the metacarpals
- xiv. Bennett's fracture
- xv. Fracture of the phalanges. (Proximal and middle)

#### **b) Dislocations of Upper Limb-**

- i. Anterior dislocation of shoulder – mechanism of injury, clinical feature, complications, conservative management (Kocher's and Hippocrates manoeuvre), surgical management (putti plat, bankart's) etc
- ii. Recurrent dislocation of shoulder
- iii. Posterior dislocation of shoulder – mechanism of injury, clinical features, and management
- iv. Posterior dislocation of elbow – mechanism of injury, clinical feature, complications & management

**Hand Injuries** - mechanism of injury, clinical features, and management of the following–

- a) Crush injuries
- b) Flexor and extensor injuries
- c) Burn injuries of hand

#### **Unit-3 Fracture of Spine**

a) **Fracture of Cervical Spine** - Mechanism of injury, clinical feature, complications (quadriplegia); Management- immobilization (collar, cast, brace, traction); Management for stabilization, management of complication (bladder and bowel, quadriplegia)

- ☐ Clay shoveller's fracture
- ☐ Hangman's fracture
- ☐ Fracture odontoid
- ☐ Fracture of atlas

b) **Fracture of Thoracic and Lumbar Regions** - Mechanism of injury, clinical features, and management— conservative and surgical of common fractures around thoracic and lumbar regions

- ☐ Fracture of coccyx
- ☐ Fracture of Rib Cage - Mechanism of injury, clinical features, management for Fracture Ribs, Fracture of sternum

**Cervical and Lumbar Pathology:** Causes, clinical feature, patho-physiology, investigations, management-Medical and surgical for the following:

- a) Prolapsed Intervertebral Disc (PID)
- b) Spinal Canal Stenosis
- c) Spondylosis (cervical and lumbar)
- d) Spondylolysis
- e) Spondylolisthesis
- f) Lumbago/ Lumbosacral strain
- g) Sacralisation
- h) Lumbarisation
- i) Coccydynia
- j) Hemivertebra

#### **Unit-4 Regional Conditions**

Definition, Clinical features, and management of the following regional conditions

- a) Shoulder: Periarthritis shoulder (adhesive capsulitis), Rotator cuff tendinitis, Supraspinatus Tendinitis, Infraspinatus Tendinitis, Bicipital Tendinitis, Subacromial Bursitis
- b) Elbow: Tennis Elbow, Golfer's Elbow, Olecranon Bursitis (student's elbow) Triceps Tendinitis
- c) Wrist and Hand: De Quervain's Tenosynovitis, Ganglion, Trigger Finger/ Thumb, Mallet Finger, Carpal Tunnel Syndrome, Dupuytren's Contracture
- d) Pelvis and Hip: IT Band Syndrome, Piriformis Syndrome, Trochanteric Bursitis
- e) Knee: Osteochondritis Dissecans, Prepatellar and Suprapatellar Bursitis Popliteal Tendinitis, Patellar Tendinitis, Chondromalacia Patella, Plica Syndrome, Fat Pad Syndrome (Hoffa's syndrome)
- f) Ankle and Foot: Ankle Sprains, Plantar Fasciitis / Calcaneal Spur, Tarsal Tunnel Syndrome, Achilles Tendinitis, Metatarsalgia, Morton's Neuroma

#### **Unit-5 Soft Tissue Injuries**

- a) Define terms such as sprains, strains, contusion, tendinitis, rupture, Tenosynovitis, Tendinosis, bursitis
- b) Mechanism of injury of each, clinical features, managements- conservative and surgical of the following soft tissue injuries:
  - i. Meniscal injuries of knee
  - ii. Cruciate injuries of knee
  - iii. Medial and lateral collateral injuries of knee
  - iv. Lateral ligament of ankle
  - v. Wrist sprains
  - vi. Strains- quadriceps, hamstrings, calf, biceps, triceps etc
  - vii. Contusions- quadriceps, gluteal, calf, deltoid etc
  - viii. Tendon ruptures-Achilles, rotator cuff muscles, biceps, pectorals etc

**Orthopedic Surgeries:** Indications, Classification, Types, Principles of management of the following Surgeries: 3 Hours

- a) Arthrodesis
- b) Arthroplasty (partial and total replacement)
- c) Osteotomy
- d) External fixators
- e) Spinal stabilization surgeries (Harrington's, Luque's, Steffi plating) etc
- f) Limb reattachments

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Orthopedics and Sports</b> <b>Injury-2</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY037A</b>

**COURSE OBJECTIVES** - The subject serves to integrate the knowledge gained by the students in orthopedics and traumatology with skills to apply these in clinical situations of dysfunction and musculoskeletal pathology. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify disabilities due to musculoskeletal dysfunction, plan and set treatment goals and apply the skills gained in exercise therapy and electrotherapy in these clinical situations to restore musculoskeletal function.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiotherapy Management of Spinal Fractures
<b>CO 2</b>	Physiotherapy Management of Fractures and Dislocations of Upper Limb
<b>CO 3</b>	Physiotherapy Management of Fractures and Dislocations of Lower Limb
<b>CO 4</b>	Physiotherapy Management of Deformities
<b>CO 5</b>	Physiotherapy Management of Diseases of Bones and Joints

**Unit-1 PT assessment for Musculoskeletal conditions –**

- vi. SOAP format
- vii. Subjective - history taking, informed consent, personal, past, medical and socioeconomic history, chief complaints, history of present illness. Pain assessment – its intensity, character, aggravating and relieving factors, site and location.
- viii. Objective- on observation - body built swelling, muscle atrophy, deformities, posture and gait.
- ix. On palpation, tenderness-grades, muscle spasm, swelling-methods of swelling assessment, bony prominences, soft tissue texture and integrity, warmth and vasomotor disturbances.
- x. On examination – ROM – active and passive, resisted isometric tests, limb length-apparent, true and segmental, girth measurement, muscle length testing-tightness, contracture

**Fractures –**

- vii. Types, classification, signs and symptoms, complications.
- viii. Fracture healing - factors affecting fracture healing. Principles of fracture management - reduction - open and closed, immobilization - sling, cast, brace, slab, traction - manual, mechanical, skin, skeletal, lumbar and Cervical traction, external fixation, functional cast bracing.
- ix. PT management in complications - early and late - shock, compartment syndrome, Volkman's Ischemic Contracture (VIC), fat embolism, delayed and mal union, Reflex Sympathetic Dystrophy (RSD), myositis ossificans, Avascular Necrosis (AVN), pressure sores etc.

- x. Physiotherapy assessment in fracture cases.
- xi. Aims of PT management in fracture cases - short- and long-term goals.
- xii. Principles of PT management in fractures - Guidelines for fracture treatment during period of immobilization and guidelines for treatment after immobilization period

## **Unit-2 Physiotherapy management for upper extremity fractures and dislocations**

- 6. PT assessment and management of upper limb fractures and dislocations.
- 7. PT assessment and management of lower limb fractures and dislocations including pelvis.
- 8. PT assessment and management spinal fractures
- 9. Selection and application of physiotherapeutic techniques, maneuver's, modalities for preventive, curative and rehabilitative means in all conditions.
- 10. Principles of various schools of thought in manual therapy. (Briefly Maitland and Mc-kenzie)

## **Unit-3 Physiotherapy management of Spinal Conditions**

- 4. Review the causes, signs and symptoms, investigations, radiological features, neurological signs.
- 5. PT assessment, aims, and management and home program of the following conditions: Cervical Spondylosis, Lumbar Spondylosis, Spondylolisthesis, Spinal canal stenosis, Spondylolysis, Sacro-iliac joint dysfunction, Sacralisation, Lumbarisation, Intervertebral disc prolapse, Coccydynia, Spina bifida occulta
- 6. Effects of spinal traction, types of traction, modes of application, indications for spinal traction, contraindications, precautions, limitations of traction

## **Unit-4 Shoulder joint:**

Shoulder instabilities, TOS, RSD, Impingement syndrome - conservative and post-operative PT management. Total shoulder replacement and Hemi replacement. - Post operative PT management. AC joint injuries - rehabilitation. Rotator cuff tears-conservative and surgical repair. Sub acromial decompression- Post operative PT management

### **Elbow and forearm:**

Excision of radial head - Post operative PT management. Total elbow arthroplasty- Post operative PT management

### **Wrist and Hand:**

Total wrist arthroplasty. Repair of ruptured extensor tendons. Carpal tunnel syndrome. Flexor and extensor tendon lacerations - Post operative PT management

## **Unit-5 SPORTS CONDITIONS**

- 1. **Introduction to sports physiotherapy:** Scope of physiotherapy in sports 1 hour
- 2. **Assessment and evaluation of players:** Clinical examination, investigative procedures and documentation of sports injuries and pre- participation evaluation of sports players 1 hours
- 3. **Physical fitness:** assessment and evaluation of components of physical fitness including functional tests: muscle strength, flexibility, agility, balance, co-ordination, sensory deficits, cardio-pulmonary endurance. 1 hours

**4. Patho-mechanics and examination of sports injuries:** causes and mechanism of sports injuries. Examination of sports injuries in upper extremity, thorax and abdomen, head, neck and face, lower extremity, and spine

**5. Prevention and management of sports injuries:** prevention of sports injuries, management of acute sports injuries and advanced rehabilitation of sports players. Treatment guidelines for soft tissue injuries- Acute, Sub acute and chronic stages. Repair of soft tissues- rupture of muscle, tendon, and Ligamentous tears. Soft tissue injuries- prevention and rehabilitation of, Lateral ligament sprain of ankle. Rotator cuff injuries. Collateral and Cruciate injuries of knee. Meniscal injuries of knee. Supraspinatus and Bicipital tendonitis. Pre patellar and Sub-acromial bursitis. Tennis and Golfer's elbow. Hamstring strains, Quadriceps contusion, TA rupture. Dequervain's tenosynovitis. Trigger and Mallet finger. Plantar fasciitis. Wrist sprains

**6. Enhancing sports performance:** Sports psychology and nutrition

**Orthopaedic surgeries:**

Pre and post-operative PT assessment, goals, precautions and PT management of following surgeries such as: Arthrodesis, Osteotomy, Arthroplasty-partial and total - Excision arthroplasty, excision arthroplasty with implant, interposition arthroplasty and total replacement; Tendon transplant, Soft tissue release- tenotomy, myotomy, lengthening; Arthroscopy, Spinal stabilization, Re-attachment of limbs, External fixators, Synovectomy

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Orthopedics and Sports</b> <b>Injury-1I Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credit</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY038A</b>

**COURSE OBJECTIVES:** At the end of the course the students will be able to learn all the practical approaches of all the topics discussed in theory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate practical approaches of physiotherapy in Orthopedic Conditions and Sports Injury
-------------	--

**Unit-1** Practical shall be conducted for all the relevant topics discussed in theory in the following forms:

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Neurology and</b> <b>Neurosurgery-II</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY039A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about relevant aspects of neurology & neurosurgery. The student will have a general understanding of the diseases the therapist would encounter in their practice. The objective of this course is that after all lectures and discussion the student will be able to list the etiology, pathology, clinical features, and treatment methods for various neurological conditions

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Stroke and Cerebrovascular Diseases
<b>CO 2</b>	Spinal Cord Injuries and Disorders
<b>CO 3</b>	Pediatric Neurology
<b>CO 4</b>	Brain and Spinal Cord Tumors
<b>CO 5</b>	Cerebellar Coordination and Movement Disorders

## **Stroke**

### **Unit-1**

1. Cerebrovascular diseases: Define stroke, TIA, RIA, stroke in evolution, multi-infarct dementia and Lacunar infarct.
2. Classification of stroke – Ischemic, hemorrhagic, venous infarcts. Risk factors, cause of ischemic stroke, causes of hemorrhagic stroke.
3. Classification of hemorrhagic stroke, classification of stroke based on symptoms, stroke syndrome, investigations, differential diagnosis, medical and surgical management.

## **Spinal Cord Injuries and Disorders**

Functions of tracts, definition, etiology, risk factors, pathophysiology, classification, clinical signs & symptoms, investigations, differential diagnosis, medical management, surgical management and complications of following disorders –

### **Unit-2**

1. Spinal cord injury

2. Compression by IVD prolapse,
3. Spinal epidural abscess
4. Transverse myelitis, Viral myelitis
5. Syringomyelia
6. Spina bifida

### **Unit-3 Pediatric Neurology**

Classification, clinical features, investigations, medical and surgical management of :

1. Cerebral palsy
2. Hydrocephalus
3. Arnold-chiari malformation
4. Muscular Dystrophy
5. Down's syndrome

### **Unit-4 Brain and Spinal Cord Tumors**

Classification, clinical features, investigations, medical and surgical management of

1. Brain Tumours
2. Spinal Cord Tumours

### **Unit-5 Cerebellar Coordination and Movement Disorders:**

Etiology, pathophysiology, classification, clinical signs & symptoms, investigations, differential diagnosis, medical management, surgical management and complications of following disorders –

1. Movement disorders:
  - a) Parkinson's disease, Dystonia, Chorea, Ballism, Athedosis
  - b) Myoclonus and Wilson's disease
2. Cerebellar and coordination disorders:
  - a) Ataxia
  - b) Tabes dorsalis
  - c) Syphilis.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>6</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Neurology and</b> <b>Neurosurgery-II</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY040A</b>

### **COURSE OBJECTIVES:**

The subject serves to integrate the knowledge gained by the students in neurology and neurosurgery with skills to apply these in clinical situations of dysfunction and neurological pathology. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify disabilities due to neurological dysfunction, plan and set treatment goals and apply the skills gained in exercise therapy and electrotherapy in these clinical situations to restore neurological function.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Foundational Concepts of Physiotherapy Assessment of Neurological Conditions
<b>CO 2</b>	Neurorehabilitation Approaches
<b>CO 3</b>	Physiotherapy Management of Neurological Gait
<b>CO 4</b>	Physiotherapy Management of Nerve Disorders and Injuries
<b>CO 5</b>	Physiotherapy Management of Neurodegenerative Disorders and Traumatic Brain Injury

### **Unit-1 Neurological Physiotherapy Assessment:**

1. Assessment and PT Management of CVA and CVD
2. Pre and Post-Surgical Assessment and PT Management of Neuro Surgical Conditions

### **Unit-2 Neuro Rehabilitation Approaches:**

Neuro physiological Techniques – Concepts, Principles, Techniques, Effects of following Neurophysiological techniques: NDT, PNF, Rood's Sensory motor Approach, Sensory Integration Approach, Brunnstorm movement therapy, Motor relearning program, Contemporary task-oriented approach, Muscle re-education approach and Constraint induced movement therapy.

### **Unit-3 Assessment and management of Neurological gaits:**

Quantitative and Qualitative (Kinetic & Kinematics) analysis, List of Problems, short- & Long-Term goals, Management of following Neurological Gaits –

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

Hemiplegic gait, Parkinson gait, High step gait, Hyperkinetic gait, Hypokinetic gait, Waddling gait, Scissoring gait, Spastic gait, Choreaform Gait, Diplegic Gait, and Myopathic Gait.

#### **Unit-4 PT Management of Nerve Injuries and Disorders**

Assessment and PT Management of –

- f) Bell's palsy
- g) Facial palsy
- h) Trigeminal Neuralgia
- i) PNI
- j) GBS

#### **Unit-5 PT Management of Neuro-degenerative disorders and TBI:**

Assessment and PT Management of –

- g) Multiple Sclerosis
- h) Myasthenia Gravis
- i) MND
- j) ALS
- k) Parkinson's Disease
- l) Head Injury

## **COURSE OBJECTIVES**

The subject serves to integrate the knowledge gained by the students in

community medicine and other areas with skills to apply these in clinical situations of health and disease

and its prevention. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify rehabilitation methods to prevent disabilities and dysfunctions due to various disease conditions and plan and set treatment goals and apply the skills gained in rehabilitating and restoring functions.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Fundamentals of general surgical procedures and intensive care
<b>CO 2</b>	Post-Operative Complications and their specific management
<b>CO 3</b>	Plastic Surgery
<b>CO 4</b>	Cardio-thoracic Surgery
<b>CO 5</b>	Abdominal Surgery

### **Unit 1. General Surgery -**

- (1) Principles of pre and postoperative management of surgical patients.
- (2) Shock - definition, types, clinical features, pathology and management
- (3) Hemorrhage - common sites, complication, clinical features and management.
- (4) Surgical intensive care.
- (5) Description of events frequently accompanying in general anesthesia, blood transfusion and physiological response of the body to surgery.
- (6) Wounds and wound infections, Sinuses and ulcers.
- (7) Burns: Degrees of burns and, management and reconstructive surgery following burns and complications of Burns.

### **Unit 2. Post operative complications & management**

II. Accidents due to

- a) Mechanical hazards-overuse/fatigue injuries due to ergonomic alteration & ergonomic evaluation of workplace-mechanical stresses per hierarchy

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

- ☐ sedentary table work –executives, clerk
- ☐ inappropriate seating arrangement- vehicle drivers
- ☐ constant standing- watchman- Défense forces, surgeons
- ☐ Over-exertion in laborers, common accidents - Role of P.T.-Stress management

b) Psychological hazards- e.g. executives, monotonicity & dissatisfaction in job, anxiety of work completion with quality, Role of P.T. in Industrial setup & Stress management-relaxation modes

c) Biological Hazards

**Unit 3. Plastic Surgery** - Principles of sinuplasty, tendon transplant, cosmetic surgery, types of grafts, surgery of hand with emphasis on management of trauma and leprosy.

**Unit 4. Cardiothoracic Surgery** - Incisions for cardiothoracic surgery (Thoracotomy, Thoracoplasty, Lobectomy, Pneumonectomy, Decortication, CABG, Valvular Surgery, Congenital, Heart Disease Surgeries and Surgery for Peripheral Vascular Disease)

**Unit 5. Abdominal Surgery** - Incisions, complications and management of various abdominal surgeries.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>General Surgery 2</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY043A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about Surgical conditions the therapist would encounter in their practice. The objective of this course is that after completion of the lectures and discussion the student will be able to demonstrate an understanding of surgical conditions causing disability, list the etiology, clinical features and methods of investigations and management.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiology of menstrual cycle
<b>CO 2</b>	Pregnancy
<b>CO 3</b>	Prolapse of uterus and vagina
<b>CO 4</b>	Surgical procedures involving child birth
<b>CO 5</b>	Carcinoma of female reproductive organs

- Unit-1** Physiology of menstrual cycle –
- ovulation cycle,
  - uterine cycle,
  - Cx cycle,
  - duration,
  - amount
  - Hormonal regulation of menstruation,

- Unit-2** Pregnancy
- Diagnosis of pregnancy
  - Abortion
  - Physiological changes during pregnancy
  - High risk pregnancy, prenatal common complications – investigation and management
  - Normal puerperium, lactation
  - Family planning.

- Unit-3** Prolapse of uterus and vagina

- Unit-4** Surgical procedures involving child birth. a. Definition, Indications and Management of the following surgical procedures – pelvic repair, caesarian section, nephrectomy, Hysterosalphyngography, Dilatation and Curettage, Laproscopy, Colposcopy, Hysterectomy.
- Unit-5** Carcinoma of female reproductive organs – surgical management in brief Mastectomy – Simple, radical. Hysterectomy

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>Physiotherapy in</b> <b>General Surgery-2</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY044A</b>

**COURSE OBJECTIVES** - The subject serves to integrate the knowledge gained by the students in surgical and traumatology with skills to apply these in clinical situations of dysfunction and pathology. The objective of the course is that after the specified hours of lectures and demonstrations the student will be able to identify disabilities due to dysfunction, plan and set treatment goals and apply the skills gained in exercise therapy and electrotherapy in these clinical situations to restore musculoskeletal function.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiotherapy in Mother and Child care
<b>CO 2</b>	Physiotherapy in pre and post-operative conditions
<b>CO 3</b>	Physiotherapy Management of Burn and Wound
<b>CO 4</b>	Physiotherapy Management in dermatology
<b>CO 5</b>	Physiotherapy Management in Oncology

- Unit-1** 1. Physiotherapy in mother and child care – ante and post-natal management, early intervention and stimulation therapy in child care (movement therapy)  
2. Applied Yoga in Obstetric and Gynecological conditions
- Unit-2** Physiotherapy in pre and post-operative stages. Operations on upper G.I.T.- oesophagus, stomach, duodenum 8. Operations on large and small intestine – Appendisectomy, cholecystectomy, partial colectomy, ileostomy, hernia and herniotomy, hernioraphy, hernioplasty.
- Unit-3** Burns and its treatment – physiotherapy in burns, skin grafts, and reconstructive surgeries. . Management of wound ulcers- Care of ulcers and wounds - Care of surgical scars-U.V.R and other electro therapeutics for healing of wounds, prevention of Hyper-granulated Scars Keloids, Electrotherapeutics measures for relief of pain during mobilization of scars tissues.
- Unit-4** Physiotherapy in dermatology -Documentation of assessment, treatment and follow up skin conditions. U.V.R therapy in various skin conditions; Vitiligo; Hair loss; Pigmentation; Infected wounds ulcers. Faradic foot bath for Hyperhydrosis. Massage maneuvers for cosmetic purpose of

  
**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302003

skin; use of specific oil as medium; Care of anesthetic hand and foot; Evaluation, planning and management of leprosy-prescription, fitting and training with prosthetic and orthotic devices.

**Unit-5** Physiotherapy intervention in the management of Medical, Surgical and Radiation Oncology Cases.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>Physiotherapy in</b> <b>General Surgery</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credit</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY045A</b>

**COURSE OBJECTIVES:** At the end of the course the students will be able to learn all the practical approaches of all the topics discussed in theory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate practical approaches of physiotherapy in General Surgical Conditions
-------------	--

**Unit-1** Practical shall be conducted for all the relevant topics discussed in theory in the following forms:

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>General Medicine I</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY046A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about relevant aspects of medicine & pediatrics. The student will have a general understanding of the diseases the therapist would encounter in their practice. The objective of this course is that after all lectures and discussion the student will be able to list the etiology, pathology, clinical features, and treatment methods for various medical conditions

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Infections and Poisoning
<b>CO 2</b>	Endocrine Diseases
<b>CO 3</b>	Diseases of Blood
<b>CO 4</b>	Diseases of the digestive system
<b>CO 5</b>	Diseases of the Skin

#### **Unit-1**

Infection : Effects of Infection on the body – Pathology – source and spread of infection – vaccinations – generalized infections – rashes and infection – food poisoning and gastroenteritis – sexually transmitted diseases – HIV infections and Aids.

Poisoning: Clinical features – general management – common agents in poisoning – pharmaceutical agents – drugs of misuse – chemical pesticides – Envenomation.

#### **Unit-2**

Endocrine diseases: Common presenting symptoms of Endocrine disease – common classical disease presentations, clinical features and its management; Diabetes Mellitus: Etiology and pathogenesis of diabetes – clinical manifestations of the disease – management of the disease – Complications of diabetes

Diseases of the blood: Examinations of blood disorders – Clinical manifestations of blood disease; Anemia – signs and symptoms – types and management ; Hemophilia Cause – clinical

**Unit-3** features severity of disease – management – complications due to repeated hemorrhages – complications due to therapy

**Unit-4** Diseases of the digestive system : Clinical manifestations of gastrointestinal disease – Etiology, clinical features, diagnosis, complications and treatment of the following conditions : Reflux Oesophagitis, Achlasia Cardia, Carcinoma of Oesophagus, GI bleeding, Peptic Ulcer disease, Carcinoma of Stomach, Pancreatitis, Malabsorption Syndrome, Ulcerative Colitis, Peritonitis, Infections of Alimentary Tract ; Clinical manifestations of liver diseases - Aetiology, clinical features, diagnosis, complications and treatment of the following conditions : Viral Hepatitis, Wilson's Disease, Alpha1-antitrypsin deficiency, Tumors of the Liver, Gall stones, Cholecystitis.

**Unit-5** Diseases of the Skin: Examination and clinical manifestations of skin diseases; Causes, clinical features and management of the following skin conditions: Leprosy, Psoriasis, Pigmentary Anomalies, Vasomotor disorders, Dermatitis, Coccal and Fungal Parasitic and Viral infections.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>Community Medicine</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY047A</b>

### **COURSE OBJECTIVES:**

This subject follows the basic science subjects to provide the knowledge about conditions the therapist would encounter in their practice in the community. The objective of this course is that after 60 hrs of lectures and discussion the student will be able to demonstrate an understanding of various aspects of health and disease list the methods of health administration, health education and disease preventive measures

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Health and Disease
<b>CO 2</b>	Epidemiology
<b>CO 3</b>	Public Health Administration
<b>CO 4</b>	Health Programs in India
<b>CO 5</b>	Family Planning

**Unit-1** Health and Disease: Definitions, Concepts, Dimensions and Indicators of Health, Concept of well-being, Spectrum and Determinants of Health, Concept and natural history of Disease, Concepts of disease control and prevention, Modes of Intervention, Population Medicine, The role of socio-economic and cultural environment in health and disease.

**Unit-2** Epidemiology, definition and scope. Principles of Epidemiology and Epidemiological methods: Components and Aims, Basic measurements, Methods, Uses of Epidemiology, Infectious disease epidemiology, Dynamics and modes of disease transmission, Host defenses and Immunizing agents, Hazards of Immunization, Disease prevention and control, Disinfection. Screening for Disease: Concept of screening, Aims and Objectives, Uses and types of screening.

**Unit-3** Public health administration- an overview of the health administration set up at Central and state levels. The national health programme-highlighting the role of social, economic and cultural factors

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302003

in the implementation of the national programmes. Health problems of vulnerable groups- pregnant and lactating women, infants and pre-school children, occupational groups.

**Unit-4** Health programmes in India: Vector borne disease control programme, National leprosy eradication programme, National tuberculosis programme, National AIDS control programme, National programme for control of blindness, Iodine deficiency disorders (IDD) programme, Universal Immunisation programme, Reproductive and child health programme, National cancer control programme, National mental health programme. National diabetes control programme, National family welfare programme, National sanitation and water supply programme, Minimum needs programme.

**Unit-5** Demography and Family Planning: Demographic cycle, Fertility, Family planning-objectives of national family planning programme and family planning methods, A general idea of advantage and disadvantages of the methods.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>Research Methodology</b> <b>and Bio-statistics Theory</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY048A</b>

**COURSE OBJECTIVE-** This course provides the knowledge and skills in Application of basic concepts of statistics & principles of scientific enquiry in planning and evaluating the results. Participate in or conduct descriptive, exploration, survey studies in Physiotherapy practice. Present data in appropriate methods

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Research Methodology
<b>CO 2</b>	Study and its Designs
<b>CO 3</b>	Sampling Designs and Outcome Measures
<b>CO 4</b>	Evidence Based Research
<b>CO 5</b>	Applied Bio-statistics

#### **Unit-1**

1. Introduction to research
2. Types of research
3. Defining a research question
4. Research Methods: Designing methodology, Reporting results, Type I and Type II bias.
5. Communicating research.

#### **Unit-2**

4. Qualitative study designs
  - a. Grounded theory and Phenomenological methods.
5. Use of Delphi process
6. Quantitative study
7. Type I and type II bias
8. Study design: types
  - a. Case study, Case series, longitudinal cohort, Pre post design, Time series design, repeated measures design, Randomized control design.

### **Unit-3**

9. Sampling design, calculating minimum sample size based on design

**Dr. Vishal Jain**  
Dean & Professor  
School of Allied Health Sciences  
JECRC University, Jaipur-302005

10. Measurement: Properties of measurement: reliability, validity, responsiveness, MCID.

11. Outcome measures: Use of outcome measures in rehabilitation research

#### **Unit-4**

14. Evaluating published research: looking at the evidence

15. Introduction to evidence based practice, evaluating evidence,

16. Asking clinical questions

17. Translating of evidence into practice: strategies

18. Use of clinical practice guidelines, clinical pathways, prediction rules to inform practice.

#### **Unit-5**

1. Descriptive Statistics and measurement variability

2. Statistical inference

3. Comparison of group means: T-test

4. Analysis of variance

5. Multiple comparison tests

6. Non parametric tests

7. Correlations

8. Regression

9. Analysis of frequencies: Chi square

10. Statistical measure of reliability

11. Power analysis – Determining sample size

12. Epidemiological Measures – Rate, Ratio, Proportion, Incidence and prevalence, Relative risk,

Risk ratio, Odds ratio

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>7</b>
<b>Course</b> <b>Cardiovascular and</b> <b>Pulmonary Conditions</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY049A</b>

**COURSE OBJECTIVES** -Following the basic science and clinical science course, this course introduces the Student in cardio-thoracic conditions which commonly cause disability. The objective of this course is that after lectures and demonstration in addition to clinics the student will be able to demonstrate an understanding of Cardio-thoracic conditions causing disability and their management. Particular effort is made in this course to avoid burdening the student with any detail pertaining to diagnosis which will not contribute to their understanding of the limitations imposed by cardiovascular pathology on the functioning of the individual.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Cardiovascular Diseases
<b>CO 2</b>	Disorders of the Heart
<b>CO 3</b>	Respiratory Diseases
<b>CO 4</b>	Chest Wall Disorders
<b>CO5</b>	Respiratory Tract Infections

**Unit-1** Cardiovascular Diseases : Examination of the Cardiovascular System Investigations : ECG, Exercise Stress Testing, Radiology ; Clinical manifestations of Cardiovascular disease ; Definition, Etiology, Clinical features, signs and symptoms, complications, management and treatment of following diseases and disorders of the heart : Pericarditis, Myocarditis, Endocarditis, Rheumatic Fever – resulting in valve disorders, Ischemic Heart Disease, Coronary Valve Disease, Congenital disorders of the Heart, Cardiac Arrest ; Examination and Investigations of diseases of arteries and veins ; Hypertension : Definition, causes, classification, types, assessment, investigations and management.

**Unit-2** Disorders of the Heart – Definition, Clinical features, diagnosis and choice of management for the following disorders : Congenital Heart diseases – Acyanotic congenital heart disease & Cyanotic congenital heart disease : Patent Ductus Arteriosus, Coarctation of Aorta, Atrial Septal Defect, Ventricular Septal Defect, Tetralogy of Fallot, Transposition of Great Vessels ; Acquired Heart

Disease – Mitral Stenosis & Insufficiency, Aortic Stenosis and Insufficiency, Ischemic Heart Disease – Coronary Artery Disease, Cardiac tumors.

**Unit-3** Respiratory Disease : Examination of the Respiratory System – Investigations : Chest Radiographs, Pulmonary Function Testing, Arterial Blood Gas Analysis ; Clinical manifestations of Lung disease ; Patterns of lung disease – Chronic Obstructive Lung Disease and Restrictive Lung Disease ; Definition, Etiology, Clinical features, signs and symptoms, complications, management and treatment of following lung diseases : Chronic Bronchitis, Emphysema, Asthma, Bronchiectasis, Cystic Fibrosis, Upper Respiratory Tract Infections, Pneumonia, Tuberculosis, Fungal Diseases, Interstitial Lung Diseases, Diseases of the pleura, diaphragm and chest wall ; Respiratory failure – Definition, types, causes, clinical features, diagnosis and management.

**Unit-4** Chest wall disorders- Definition, Clinical features, diagnosis and choice of management for the following disorders – chest wall deformities, chest wall tumors, Spontaneous Pneumothorax, Pleural Effusion, Empyema Thoracis, Lung abscess, Bronchiectasis, Tuberculosis, Bronchogenic Carcinoma, Bronchial Adenomas, Metastatic tumors of the Lung, tracheal Stenosis, Congenital tracheomalacia, Neoplasms of the trachea, Lesions of the Mediastinum. Carcinoma of the female breast.

**Unit 5** Respiratory Tract Infections, Pneumonia, Tuberculosis, Fungal Diseases, Interstitial Lung Diseases, Diseases of the pleura, diaphragm and chest wall ; Respiratory failure – Definition, types, causes, clinical features, diagnosis and management.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>8</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Cardiovascular and</b> <b>Pulmonary Conditions</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY050A</b>

**COURSE OBJECTIVES** - The subject is designed to provide knowledge in assessing and planning physiotherapy interventions for various General, Medical and Surgical conditions. The student must be able to reassess the patient as necessary, to monitor the patient in regard to treatment, to monitor the patient's vital signs, student must know emergency drugs indication and contra-indication, care in intensive care unit (ICU) and to provide appropriate interventions to the patient.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Physiotherapy techniques to increase lung volume
<b>CO 2</b>	Physiotherapy to decrease work of breathing
<b>CO 3</b>	Physiotherapy techniques to clear secretions
<b>CO 4</b>	Physiotherapy in ICU
<b>CO 5</b>	Physiotherapy in Mechanical Ventilation

- Unit-1** Physiotherapy techniques to increase lung volume – controlled mobilization, positioning, breathing exercises, Neurophysiological Facilitation of Respiration, Mechanical aids - Incentive Spirometry, CPAP, IPPB.
- Unit-2** Physiotherapy techniques to decrease the work of breathing – Measures to optimize the balance between energy supply and demand, positioning, Breathing re-education – Breathing control techniques, mechanical aids – IPPB, CPAP, BiPAP.
- Unit-3** Physiotherapy techniques to clear secretions – Hydration, Humidification & Nebulisation, Mobilisation and Breathing exercises, Postural Drainage, Manual techniques – Percussion, Vibration and Shaking, Rib Springing, ACBT, Autogenic Drainage, Mechanical Aids – PEP, Flutter, IPPB, Facilitation of Cough and Huff, Nasopharyngeal Suctioning.

- Unit-4** Introduction to ICU : ICU monitoring –Apparatus, Airways and Tubes used in the ICU - Physiotherapy in the ICU – Common conditions in the ICU – Tetanus, Head Injury, Lung Disease, Pulmonary Oedema, Multiple Organ Failure, Neuromuscular Disease, Smoke Inhalation, Poisoning, Aspiration, Near Drowning, ARDS, Shock; Dealing with an Emergency Situation in the ICU.
- Unit-5** Respiratory failure – Oxygen Therapy and Mechanical Ventilation

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>8</b>
<b>Course</b> <b>Physiotherapy in</b> <b>Cardiovascular and</b> <b>Pulmonary Conditions</b> <b>Practical</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>1 credit</b>	<b>Hours per</b> <b>Semester</b> <b>2 hours</b>	<b>Course</b> <b>Code</b> <b>BPY051A</b>

**COURSE OBJECTIVES:** At the end of the course the students will be able to learn all the practical approaches of all the topics discussed in theory.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Demonstrate practical approaches of physiotherapy in Cardiopulmonary Conditions
-------------	---

**Unit-1** Practical shall be conducted for all the relevant topics discussed in theory in the following forms:

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>8</b>
<b>Course</b> <b>General Medicine 2</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>4 credits</b>	<b>Hours per</b> <b>Semester</b> <b>4 hours</b>	<b>Course</b> <b>Code</b> <b>BPY052A</b>

**COURSE OBJECTIVES** - This subject follows the basic science subjects to provide the knowledge about relevant aspects of medicine & pediatrics. The student will have a general understanding of the diseases the therapist would encounter in their practice. The objective of this course is that after all lectures and discussion the student will be able to list the etiology, pathology, clinical features, and treatment methods for various medical conditions

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	Low Birth Weight Babies
<b>CO 2</b>	Cerebral Palsy
<b>CO 3</b>	Sensory Disorders
<b>CO 4</b>	Psychiatric Disorders
<b>CO 5</b>	Spina Bifida and Muscular Dystrophy

**Unit-1**

Problems and management of LBW infants

Perinatal problems and management

Congenital abnormalities and management

Respiratory conditions of childhood

**Unit-2**

Cerebral Palsy – causes, complications, clinical manifestations, treatment ; Spina Bifida – management and treatment, Epilepsies – types, diagnosis and treatment; Recognizing developmental delay, common causes of delay ; Orthopedic and Neuromuscular disorders in childhood, clinical features and management

**Unit-3**

Sensory disorders – problems resulting from loss of vision and hearing ; Learning and behavioural problems – Hyperactivity, Autism, Challenging behaviours, Educational delay, Delayed Child.

**Unit-4** Psychiatric Disorders: Classifications, Causes, Clinical manifestations and treatment methods used in Psychiatry. Modalities of psychiatric treatment, Psychiatric illness and physiotherapy, Brief description of Etio-pathogenesis, manifestations, and management of psychiatric illnesses -. Anxiety neurosis, Depression, Obsessive compulsive neurosis, Psychosis, Maniac-depressive psychosis, Post-traumatic stress disorder, Psychosomatic reactions: Stress and Health, theories of Stress

**Unit-5** Spina Bifida  
Muscular Dystrophy

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>8</b>
<b>Course</b> <b>Physiotherapy in Medical</b> <b>Conditions</b>	<b>Course</b> <b>Description</b> <b>Core</b>	<b>Credit per</b> <b>Semester</b> <b>3 credits</b>	<b>Hours per</b> <b>Semester</b> <b>3 hours</b>	<b>Course</b> <b>Code</b> <b>BPY053A</b>

**COURSE OBJECTIVES:** At the end of the course the candidate will be able to: 1. Identify discuss and analyze medical dysfunctions based on pathophysiological principles and arrive at appropriate functional diagnosis. 2. Acquire knowledge of rationals of basic investigative approaches in the medical system 3. Execute effective physiotherapeutic measures (with appropriate clinical reasoning) and exercise, conditioning in general medical conditions. 4. Acquire knowledge of the overview of patient's care in the I.C.U. for bronchial hygiene and continuous monitoring of the patient in I.C.U. 5. Select strategies for cure, care and prevention, adopt restorative and rehabilitative measures for maximum possible functional independence of a patient at home, work and in community.

**COURSE OUTCOMES:** At the end of the course the student will be able to learn –

<b>CO 1</b>	PT Management of Cerebral Palsy
<b>CO 2</b>	PT Management of Spina Bifida
<b>CO 3</b>	PT Management of Muscular Dystrophy
<b>CO 4</b>	Diabetic Foot
<b>CO 5</b>	Mental Retardation

**Unit-1** PT assessment and rehab program for Cerebral Palsy

**Unit-2** PT assessment and rehab program for Spina Bifida

**Unit-3** PT assessment and rehab program for Muscular Dystrophy

**Unit-4** PT assessment and rehab program for Diabetic Foot

  
**Dr. Vishal Jain**  
 Dean & Professor  
 School of Allied Health Sciences  
 JECRC University, Jaipur-302005

**Unit-5** PT assessment and rehab program for Mental Retardation and Delayed Child

<b>JECRC UNIVERSITY</b> <b>School of Allied Health</b> <b>Sciences</b>	<b>Program</b> <b>Bachelor of Physiotherapy (BPT)</b>			<b>Semester:</b> <b>8</b>

1. Bedside case presentations and case discussions
2. Lab sessions consisting of evaluation and assessment methods on student models, treatment techniques and practice sessions.

## **School of Computer Applications**

### **Bachelor of Computer Applications**

#### **Syllabus of the Courses offering Employability (2022-23)**

#### **Course Name: Computer Organization and Architecture**

#### **Course Code: BCA115C**

#### **Course Objectives:-**

- To provide information about digital computer technology and how data is represented in computer system.
- To discuss in detail the operation of the arithmetic Unit including the algorithms & implementation of fixed-point and floating-point addition, subtraction, multiplication & division.
- To have a systematic understanding of the basic structure and operation of a digital computer.
- To clear concepts of central processing unit and describes the structure of arithmetic/logic units.
- To understand the pipelining and vector processing concepts.

#### **Unit1**

SOP and POS Expressions, Karnaugh Map Simplification - Universal gates, Sequential circuits and combinational circuits, Flip Flops, Registers, Counters, Decoder, Encoder, Multiplexer, De-multiplexer, Arithmetic circuits,

#### **Unit 2**

Computer Organization and Design - Instruction Codes- Computer Registers- Computer Instructions - Instruction Cycle - Memory Reference Instructions - Input Output configuration

#### **Unit 3**

Central Processing Unit: Introduction- General Register Organization - Stack Organization - Instruction Formats - Addressing Modes - Data Transfer and Manipulation - Conditional Branch Instructions - Program Interrupts

#### **Unit 4**

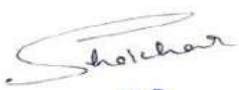

Pipeline and Vector Processing Parallel Processing - Pipelining - Arithmetic Pipeline - Instruction Pipeline - Vector Processing - Array Processors

#### **Unit 5**

Memory Organization Memory Hierarchy - Types of Memory - Main Memory - Auxiliary Memory - Associative Memory - Cache Memory Computer Arithmetic – Introduction – Multiplication

#### **Course Outcome: (COs):-**

**On successful completion of this course, the learner will be able to:**

  
HoD  
School of Computer Applications  
JECRC University Jaipur

CO1: Understand the concept of basic representation of data in computer.

CO2: Analyze the working of arithmetic unit including the algorithms & implementation of fixed-point and floating-point addition, subtraction, multiplication & division.

CO3: Develop an understanding of concepts of central processing unit and describes the structure of arithmetic/logic units.

CO4: Illustrate the basic structure and operation of a digital computer.

CO5: Demonstrate the pipelining and vector processing concepts.

**Text Books:**

1. Morris Mano, “Computer system architecture”, 5<sup>th</sup> edition, Pearson Education.

2. Carl Hamacher, Zvonko Vranesic and Safwat Zaky, Naraig Manjikian, “Computer Organization and Embedded Systems”, (6e), McGraw Hill Publication, 2012

**Reference Books :**

D. A. Patterson and J. L. Hennessy, “Computer Organization and Design - The Hardware/Software Interface”, (5e), Morgan Kaufmann, 2011

Mohammed Rafiquzzaman and Rajan Chandra, “Modern Computer Architecture”, Galgotia Publications Pvt. Ltd. 2008.

William Stallings, “Computer Organization and Architecture Designing for Performance”, (8e), PHI, 2009.

## **Course Name: Computational Thinking and Problem Solving**

**Course Code: BCA173A**

### **Course Objectives:**

1. To provide exposure to problem solving through programming.
2. To enhance the ability to solve the problem through various concepts searching and sorting
3. To demonstrate the concept of problem solving using various methods.
4. To evaluate the concept of Abstraction, greedy methods, divide and conquer method.

### **Unit 1**

Basics Introduction of Information and data, Number Systems-Binary, Hexadecimal, Octal, Conversion, BCD, Introduction to Computer System-I/O Devices, Memory , Computer Software, Operating System, Data Communications and Computer Network, Internet & WWW

### **.Unit 2**

Algorithm-Definition, Characteristics, Advantages and disadvantages, Flowchart –Definition, Define symbols of flowchart, Advantages and disadvantages, Problem Solving -Problem definition, Problem decomposition, Abstraction, Greedy Method, Divide and Conquer.

### **Unit-3**

Algorithmic Thinking Algorithm and Flowcharting, Name binding, Selection, Repetition.

### **Unit 4**

Data organization: List and Arrays, Modularization, Problem Solving: Factoring and Recursion Techniques,

### **Unit 5**

Searching and sorting techniques, Text processing and pattern matching.

### **Course Outcomes (COs):-**

**On successful completion of this course, the learner will be able to:**

CO1: Understand the concept of computer, data, information and number system.

CO2: Analyze the problem by defining and using concepts of greedy method and divide and conquer.

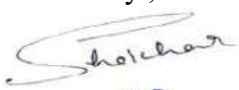

CO3: Illustrate the basic structure and operation of flowchart, selection and repetition.

CO4: Develop an understanding of concepts of Array, modularization, and concepts of recursion.

CO5: Examine the searching and sorting concepts.

## **Course Name: Object Oriented Programming Using C++**

**Course Code: BCA126B**

### **Course Objectives:**

1. To explain the difference between object oriented programming and procedural programming and features of object oriented programming.
2. To be able to create programs using more advanced C++ features such as composition of objects, operator overloads, dynamic memory allocation, inheritance and polymorphism, file I/O, exception handling, etc.
3. To be able to build C++ classes using appropriate encapsulation, objects and functions.
4. To be able to apply operator overloading in different form.
5. To be able to understand the working of files.

### **UNIT 1**

Introduction to C++, Object Oriented Concepts, Basics of C++ environment, Classes & Object, Data members, Access specifiers, Defining member functions, inline member functions, nesting of member functions, Array within a class, Static data members, Constant members , Arrays of objects, Objects as arguments, Returning objects, Constructors, Default Constructors, Parameterized constructors, Copy constructors, Destructors, friend functions, friend classes.

### **UNIT 2**

Compile time polymorphism, function overloading, Overloading operators, Overloading unary, Overloading binary, Overloading using friends, Overloading constructor Manipulation of strings using operators, overloading constructors, Inheritance, Base classes and derived classes, Protected members, Types, constructors in base derived classes,

### **UNIT 3**

Run time Polymorphism, function overriding, virtual base class, Virtual functions, pure virtual function, Abstract classes, class containership. Exception handling- basics of exception handling, exception handling mechanism, throw , catch, rethrow exceptions.

### **UNIT 4**

Fundamentals of pointers, New, Delete operators, pointer declarations, operations on pointers, passing pointers to function, passing an entire array to a function, pointers and two-dimensional arrays, array of pointers, passing functions to other functions, pointers to structures, this pointer.

### **UNIT 5**

class templates, class templates with multiple parameters, function templates, function templates with multiple parameters, Data files -C++ stream classes, unformatted and formatted I/O operations, Opening and closing

of files, File modes, File pointers and manipulation, Sequential input and output operations , Updating a file, Error handling during file operations.

### **Course Outcomes:**

**Upon successful completion of this subject students should be able to:**

CO1: Understand the features of C++ supporting object oriented programming

CO2: Be able to program using more advanced C++ features such as composition of objects, operator overloads, dynamic memory allocation, inheritance and polymorphism, file I/O, exception handling, etc.

CO3: Be able to apply operator overloading in different form.

CO4: Understand how to apply the major object-oriented concepts to implement object oriented programs in C++, encapsulation, inheritance and polymorphism

CO5: Able to understand the working with files like opening and closing of files.

### **Text Books**

1. ReemaThereja, "Object Oriented Programming with C++", First Edition, Oxford University Press ,2015
2. Let Us C: BalaGuruswamy, TATA McGraw Hill.

### **Reference Books**

1. Object Oriented Programming with C++, Souravsahay, Oxford University, Sept 2012.
2. Richard F. Gilberg, Behrouz A. Forouzan, "Data structures, A Pseudocode Approach with C", (2e), Cengage Learning India Pvt.Ltd, India, 2009.
3. Robert Kruc& Bruce Lening, "Data structures & Program Design in C", (2e), Pearson, 2007.

## **Course Name: Operating System**

**Course Code: BCA113B**

### **Course Objectives::**

1. To understand the OS role in the overall computer system
2. To study the operations performed by OS as a resource manager and the scheduling policies of OS
3. To understand the different memory management techniques
4. To understand process concurrency and synchronization
5. To understand the concepts of input/output, storage and file management and to study different OS and compare their features.

### **Syllabus**

#### **Unit – I**

**Introduction**-Operating system objectives, User view, System view, Operating system definition ,Types, Functions, Computer System Organization, Computer System Architecture, OS Structure, Operating System services, User and OS Interface, System Programs, Operating System Design and Implementation, OS Structure.

#### **Unit – II**

**Process and CPU Scheduling** – Process concepts, The Process, Process State, Process Control Block, Threads, Process Scheduling, Scheduling Criteria, Scheduling algorithms Scheduling Queues, Schedulers, Context Switch, Operations on Processes, System calls, Process Synchronization, The Critical Section Problem, Peterson's solution, Synchronization Hardware, Semaphores.

#### **Unit – III**

**Deadlocks**- Deadlock characterization, Methods of handling deadlock, Deadlock Prevention,Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.

#### **Unit- IV**

**Memory Management** – Memory Management Strategies- Overlays and Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of Page Table, Virtual Memory Management- Segmentation, Paging, Demand Paging, Page Replacement, Page Replacement Algorithms, Allocation of Frames, Thrashing.

## **Unit - V**

**File System and Security** - File-System Structure, File-System Implementation , Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance, Recovery, NFS, Organization of I/O Function, I/O Buffering, Disk Organization, Disk Scheduling, RAID, Operating Systems view of file system, Disk space management. System Security- The Security Problem, Program Threats, Policies, System and Network Threats, User Authentication, Security Models.

### **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: Differentiate between different types of Operating Systems and their working, functions and services

CO2: Define, restate, discuss, and explain the policies for scheduling and deadlocks

CO3: Apply techniques and algorithms for memory allocation, management, process, synchronization, system calls, and file systems

CO4: Design and construct the following OS components: System calls, Schedulers, Memory management systems, Virtual Memory and Paging systems

CO5: Measure, evaluate, and compare OS components through algorithms of disk Management and security and protection.

### **Text Books**

1. A Silberschatz, P.B. Galvin, G. Gagne, Operating Systems Concepts, 8<sup>th</sup> edition, John Wiley Publications ,2008.
2. A.S. Tanenbaum, Modern Operating Systems, 3<sup>rd</sup> edition, Pearson Education ,2007.

### **Reference Books**

1. G. Nutt, Operating Systems: A Modern Perspective, 2<sup>nd</sup> edition Pearson Education ,1997.
2. W. Stallings, Operating Systems, Internals & Design Principles, 5<sup>th</sup> edition, Prentice Hall of India, 2008.
3. “Operating Systems: Internals and Design Principles” by William Stallings

## **Course Name: Web Technologies**

**Course Code: BCA152B**

### **Course Objectives:**

1. To be able to develop a dynamic webpage by the use of java script and DHTML.
2. To be able to write a well formed / valid XML document.
3. To be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.
4. To be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.
5. To be able to write a server side java application called JSP to catch form data sent from client and store it on database.

### **Syllabus**

#### **Unit -1**

HTML5 and CSS3 HTML5- Basic Tags, Tables, Forms. HTML5 Tags, HTML Graphics, HTML media, HTML Graphics, HTML APIs. CSS - Background, Borders, margin, Box model. Styling text, fonts, list, links, tables. CSS overflow, float, inline blocks, pseudoclasses, pseudoelements. CSS border images, rounded corners

#### **Unit-2**

Java Script Client side scripting using java script, Introduction to java script, internal and external Java script files, variables, control statements, loops, Arrays , string handling , How to write functions in JavaScript, inputting and outputting from form elements to JavaScript. DOM concept, creating html elements using java script. Drawing 2D shapes, handling events. Introduction to AJAX

#### **Unit-3**

Building Single page applications with Angular JS Single page application – introduction , two way data binding, MVC in angular JS, controllers, getting user inputs , loops , Client side routing – accessing URL data , various ways to provide data in angular JS.

#### **Unit -4**

Server Side Programming Server side scripting, Difference between client side and server side scripting languages. Introduction to PHP, variables, control statements, loops, Arrays, string handling, PHP forms, Global variables in PHP, Regular expression and pattern matching, Database programming: inputting and

outputting data from MySQL using PHP, insertion , deletion and updating data. State management in web applications, cookies, Application and session state.

## **Unit-5**

Introduction to Xml, usage of XML, XML tags, elements and attributes, attribute type, XML validation: DTD and XSD, XML DOM Case study:-Application Development using Laravel framework

### **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: Students are able to understand basic terms and protocols related to WWW.

CO2: Students are able to develop a dynamic webpage by the use of HTML/DHTML

CO3: Students will be able to write a well formed / valid XML document.

CO4: Students will be able to use java script for event handling etc.

CO5: Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.

### **Text books and references**

The Complete Reference, HTML and CSS by Thomas A Powell latest edition

XML Bible by Horold, Ellotte Rusty

Web Reference:- W3Schools.com

## **Course Name: Database Management System**

**Course Code: BCA114B**

### **Course Objectives:**

1. To enhance the fundamentals knowledge of data models and to conceptualize and depict a database system using ER diagram.
2. To develop programs and queries based on SQL and relational database, and do fundamental Operations of Relational Algebra & their Implementation.
3. To be able to know the fundamental concepts of transaction processing management.
4. To justify the concept of concurrency control techniques and recovery procedure.
5. To have an introductory knowledge about the Storage and Query processing Techniques.

### **Syllabus**

#### **Unit I**

Basic Concepts: Purpose of database systems-Components of DBMS – DBMS Architecture and Data Independence- Data modeling, Entity Relationship Model, Relational, Network, Hierarchical and object oriented models, Data Modeling using the Entity Relationship Model.

#### **Unit II**

Structure of relational databases:Relational Constraints, Domain Constraints, Key Constraints Referential Integrity Constraints, Relational Algebra, Fundamental Operations of Relational Algebra & their Implementation, Data definition with SQL, insert, delete and update statements in SQL – views – data manipulation with SQL.

#### **Unit III**

Query Processing: Methods for Joining Tables –Nested Loop Join Merge Join, Hybrid Join, Multiple table Join, Transforming Nested Queries to Joins, Object Relational SQL, Procedural SQL, Introduction to Embedded SQL

#### **Unit IV**

Database Design: Integrity Constraints – Domain Constraints- Referential integrity – Functional Dependency- Normalization using Functional Dependencies, Normal forms based on primary keys- general definitions of Second and Third Normal Forms. Boyce Codd Normal Form– Multivalued Dependencies and Forth Normal Form – Join Dependencies and Fifth Normal Form.

Transaction Management: Transaction Concept, ACID Properties, Transaction State, Implementation of ACID properties, Schedules. Concurrency Control: Need of concurrency control, Concurrency control techniques, Lock based protocols, binary lock, share and exclusive lock, two phase locking protocol. Introduction to recovery.

## Unit V

AWS DBMS: Introduction about AWS DBMS, Uses and applications of AWS DBMS, Comparison of AWS DBMS with traditional DBMS system, Introduction of AWS database services : Amazon Aurora, Amazon RDS, Amazon DynamoDB, Amazon Redshift , Amazon Neptune, Amazon DocumentDB ( With MongoDB compatibility), Design, provision and configure an appropriate database for a given scenario.

## Course Outcomes:

**Upon successful completion of this subject students should be able to:**

CO1: Recall the basic concept of DBMS and models of DBMS.

CO2: To know the fundamental concepts of transaction processing management.

CO3: To develop programs and queries based on SQL and relational database, and do fundamental Operations of Relational Algebra & their Implementation.

CO4: Contrast the concept of functional dependency, Normal forms, constraints and integrity

CO5: Able to understand the concept of concurrency control techniques and recovery

## Text Books

1. Fundamentals of Database System Elmasri and Navathe (4rd Edition), Pearson Education Asia (2008)
2. An Introduction to Database Systems - C.J.Date (7th Edition) Pearson Education Asia (2006)

## Reference Books

1. A.Silberschatz, H. Korth and S. Sudarshan, *Database System Concepts*, 5th Edition, McGraw Hill, 2010.
2. R. Ramakrishnan, J. Gehrke, *Database Management Systems*, 3<sup>rd</sup> edition, McGraw Hill International Edition, 2007.
3. Database System Concepts - Henry F Korth, Abraham Silbershatz, McGraw Hill 2nd edition. (2005).

## Course Name: Programming in Python

Course Code: BCA300A

### Course Objectives:

- CO1. To lineup the basics of Programming with Python, Features, history, data types, operators and variables and be able to solve real-world problems through Programming with Python.
- CO2. To be able to understand problem solving approaches, programming languages.
- CO3. To construct of Python language such as , functions, strings, file Handling.
- CO4. To Construct and implement Data structures, Classes and Objects and Inheritance
- CO5. To Understand and Implement operator overloading by defining special methods in Python classes.

### Syllabus

#### Unit I

Basics of Programming with Python: Features of Python, History of Python, The Future of Python, Writing and Executing First Python Program, Literal Constants, Numbers, Strings, Variables and Identifiers, Data Types Assigning or Initializing Values to Variables, Multiple Assignment, Multiple Statements on a Single Line, Boolean, Input Operation, Comments, Reserved Words, Indentation, Operators and Expressions, Arithmetic Operators, Comparison Operators, Assignment and In-place or Shortcut Operators, Unary Operators, Bitwise Operators, Shift Operators, Logical Operators, Membership Operators, Identity Operators, Operators Precedence and Associativity, Expressions in Python, Operations on Strings, Concatenation, Multiplication (or String Repetition), Slice a String, Other Data Types, Tuples, Lists, Dictionary, Type Conversion

#### Unit II

**Decision Control Statements:** Introduction to Decision Control Statements, Selection/Conditional Branching Statements, if Statement, if-else Statement, Nested if Statements, if-elif-else Statement, Basic Loop Structures/ Iterative Statements, while loop, for Loop, Selecting an appropriate loop, Nested Loops, The break Statement, The continue Statement, The pass Statement, The else Statement used with Loops: *Case Study 1 - Simple Calculator*, *Case Study 2 - Generating a Calendar*.

#### Unit III

Functions and Modules: Need for Functions, Function Declaration and Definition, Function Definition, Function Call, Function Parameters, Variable Scope and Lifetime, Local and Global Variables, Using the Global Statement, Resolution of Names, The return statement, More on Defining Functions, Required Arguments, Keyword Arguments, Default Arguments, Variable-length Arguments, Lambda Functions or Anonymous Functions, Documentation Strings, Good Programming Practices, Recursive Functions, Greatest

Common Divisor, Finding Exponents, The Fibonacci Series, Recursion vs Iteration, Modules, The from import statement, Name of Module, Making your own Modules, The dir() function, The Python Module, Modules and Namespaces, Packages in Python, Standard Library modules, Globals(), Locals(), and Reload(), Function Redefinition: Case Study 3 - Tower of Hanoi, Case Study 4 - Shuffling a Deck of Cards

Python Strings Revisited: Concatenating, Appending, and Multiplying Strings, Strings are Immutable, String Formatting Operator, Built-in String Methods and Functions, Slice Operation, Specifying Stride While Slicing Strings, ord() and chr() Functions, in and not in operators, Comparing Strings, Iterating String, The String Module, Regular Expressions, The match() Function, The search() Function, The sub() Function, The findall() and finditer() Functions, Flag Options, Metacharacters in Regular Expression, Character Classes, Groups, Application of Regular Expression to Extract Email  
**File Handling:** File Path, Types of Files, ASCII Text Files, Binary Files, Opening and Closing Files, The open() Function, The File Object Attributes, The close() Method, Reading and Writing Files, write() and writelines() Methods, append() Method, The read() and readline() Methods, Opening Files using with Keyword, Splitting Words, Some Other Useful File Methods, File Positions, Renaming and Deleting Files, Directory Methods, Methods from the os Module: Case Study 5 - Creating a Hash File (or a message digest of a file), Case Study 6 - Mail Merge Program, Case Study 7 - Finding Resolution of an Image

#### Unit IV

Data Structures: Sequence, Lists, Access Values in Lists, Updating Values in Lists, Nested Lists, Cloning Lists, Basic List Operations, List Methods, Using Lists as Stack, Using Lists as Queues, List Comprehensions, Looping in Lists, Functional Programming, filter() Function, map() Function, reduce() Function, Tuple, Creating Tuple, Utility of Tuples, Accessing Values in a Tuple, Updating Tuple, Deleting Elements in Tuple, Basic Tuple Operations, Tuple Assignment, Tuples for Returning Multiple Values, Nested Tuples, Checking the Index: index() method, Counting the Elements: count() Method, List Comprehension and Tuples, Variable-length Argument Tuples, The zip() Function, Advantages of Tuple over List, Sets, Creating a Set, Dictionaries, Creating a Dictionary, Accessing Values, Adding and Modifying an Item in a Dictionary, Modifying an Entry, Deleting Items, Sorting Items in a Dictionary, Looping over a Dictionary, Nested Dictionaries, Built-in Dictionary Functions and Methods, Difference between a List and a Dictionary, String Formatting with Dictionaries, When to use which Data Structure, List vs Tuple vs Dictionary vs Set  
**Classes and Objects:** Classes and Objects, Defining Classes, Creating Objects, Data Abstraction and Hiding through Classes, Class Method and self-Argument, The \_\_init\_\_() Method (The Class Constructor), Class Variables and Object Variables, The \_\_del\_\_() Method, Other Special Methods, Public and Private Data

Members, Private Methods, Calling a Class Method from Another Class Method, Built-in Functions to Check, Get, Set, and Delete Class Attributes, Built-in Class Attributes, Garbage Collection (Destroying Objects), Class Methods, Static Methods  
Inheritance: Inheriting Classes in Python, Polymorphism and Method Overriding, Types of Inheritance, Multiple Inheritance, Multi-level Inheritance, Multi-path Inheritance, Composition or Containership or Complex Objects, Abstract Classes and Interfaces, Metaclass

## UNIT V

Operator Overloading: Concept Of Operator Overloading, Advantage of Operator Overloading, Implementing Operator Overloading, Reverse Adding, Overriding `__getitem__()` and `__setitem__()` Methods, Overriding the in Operator, Overloading Miscellaneous Functions, Overriding the `__call__()` Method  
Error and Exception Handling: Syntax Errors, Logic Error, Exceptions, Handling Exceptions, Multiple Except Blocks, Multiple Exceptions in a Single Block, Except Block Without Exception, The else Clause, Raising Exceptions, Instantiating Exceptions, Handling Exceptions in Invoked Functions, Built-in and User-defined Exceptions, The finally Block, Pre-defined Clean-up Action, Re-raising Exception, Assertions in Python: Case Study 8 - Compressing String and Files

### Course Outcomes (COs):

**Upon successful completion of this subject students should be able to:**

CO1: Outline the basics of Programming with Python, Features, history, data types, operators and variables.

CO2: Understanding of Python especially Decision control, function and modules.

CO3: Understanding of the file handling.

CO4: Be exposed to Data Structure, object oriented concepts in Programming with Python, decision controls and function.

CO5: Understand and Implement Operator Overloading.

### Text Books

1. Programming with Python, Oxford, ReemaThareja, June 2017
2. “Programming Python” by Mark Lutz and O’Reilly Media

### Reference Books

1. “Python Testing Cookbook” by Greg L Turnquist
2. “Head First Programming” by Paul Barry and David Griffiths
3. “Python Crash Course: A Hands-On, Project-Based Introduction to Programming” by Eric Matthes.

# **Course Name: Fundamental of Computer with C Programming**

**Course Code: BCA302A**

## **Course Objectives:**

1. The course is designed to provide complete knowledge of C language.
2. Students will be able to develop logics which will help them to create programs, applications in C.
3. By learning the basic programming constructs, they can easily switch over to any other language in future.
4. The course also provides hands-on training to help you write and test your coding skill, and prepare you for real-life application.
5. To be able to understand the working of files.

### **Unit I**

**Introductory concepts and C Fundamentals:** Introduction to Computers, Computer Characteristics, Modes of Operation, Types of Programming Languages, Introduction to C, Some Simple C Programs, Desirable Program Characteristics, The C Character Set, Identifiers and Keywords Data Types, Constants, Variables and Arrays, Declarations, Expressions, Statements, Symbolic Constants.

### **Unit II**

**Operators and Expressions and Data Input and Output:** Arithmetic Operators, Unary Operators, Relational and Logical Operators, Assignment Operators, The Conditional Operator, Library Functions, Single Character Input, the getchar Function, Single Character Output, the putchar Function, Entering Input Data, the scanf Function, Writing Output Data The printf Function, The gets and puts Functions, Interactive (Conversational) Programming.

### **Unit III**

**Complete C Program and Control Statements:** Planning a C Program, writing a C Program, Entering the Program into the Computer, Compiling and Executing the Program, Error Diagnostics, Debugging Techniques, Control Statements, Branching: The if-else Statement Looping: while Statement, do while Statement, for Statement, Nested Control Structures, switch Statement, break Statement, continue Statement, Comma Operator, goto Statement.

### **Unit IV**

**Functions, Program Structure and Arrays:** Defining a Function, accessing a Function, Function Prototypes, Passing Arguments to a Function, Recursion, Storage Classes, Automatic Variables, External (Global) Variables, Static Variables, Multifile Programs, Library Functions, Defining an Array, Processing an Array, Passing Arrays to Functions, Multidimensional Arrays, Arrays and Strings.

### **Unit V**

**Pointers, Structures, Union and Data Files:** Declarations Passing Pointers to Functions, Pointers and One-Dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers, Passing Functions to Other Functions, Pointer Declarations, Structures and Unions, defining a Structure, processing a Structure, User-Defined Data Types (typedef), Structures and Pointers, Passing Structures to Functions, Self-Referential Structures Unions. Opening and Closing a Data File, creating a Data File, processing a Data File

**Course Outcomes-**

After Successful completion of this subject student should be able to:

CO1. Develop a C program, Control the sequence of the program and give logical outputs.

CO2. Implement strings in your C program, Store different data types in the same memory and Manage I/O operations in your C program.

CO3. Repeat the sequence of instructions and points for a memory location.

CO4. Apply code reusability with functions and data accessing with array.

CO5. Memory allocation with Pointer, structure and union, Understand the basics of file handling mechanisms

**Text Books:**

1. Schaum's outline of theory and problems of programming with c.
2. C Programming Absolute Beginner's Guide, Greg Perry

**Reference Books:**

1. C: The Complete Reference, By Herbert Schildt
2. C Programming in easy steps, 5th Edition, By Mike McGrath
3. C Programming Language, By Brian W. Kernighan

## Course Name: Data Structures and Algorithms

Course Code: BCA010

### Course Objectives:

1. To impart the basic concepts of data structures and algorithms.
2. To understand concepts about searching and sorting techniques.
3. To understand basic concepts about stacks, queues, lists, trees and graphs.
4. To understanding about writing algorithms and step by step approach in solving problems with the help of fundamental data structures.
5. To impart the basic concepts of algorithms implementation in optimized time.

### Unit 1

**Introduction and overview:** Introduction, basic terminology, elementary data organization, data structures, data structures operations, Abstract data types(ADT), Algorithms: Complexity, Time-space tradeoff.

**Preliminaries:** Introduction, Mathematical notation and functions, Algorithmic notations, control structures, complexity of algorithms, other asymptotic notation for complexity of algorithm, Sub algorithms, variables, data types.

### Unit 2

**String processing:** Introduction, Basic terminology, storing strings, character data type, string as ADT, String operations, word/text processing, Pattern matching algorithms.

**Arrays, Records and Pointers:** Introduction, linear arrays, arrays as ADT, representation of linear arrays in memory, traversing linear arrays, inserting and deleting, sorting , bubble sort, Searching, linear search. Binary search, multidimensional arrays, representations of polynomials using arrays, Dynamic memory management, records structure, Representation of records in memory, parallel arrays, matrices and sparse matrices.

### Unit 3

**Linked Lists:** Introduction of linked list, representation of linked list in memory traversing a linked list, searching a linked list, memory allocation garbage collection, insertion into a linked list, deletion from a linked list ,header linked list, circular linked list, two way list( doubly linked lists) Buddy systems.

Stacks, queues, recursion: Introduction, stacks, array representation of stacks, linked representation of stacks, stack as ADT, Arithmetic expression , polish notation, application of stacks, recursion, tower of Hanoi, implementation of recursive procedures by stacks, queues, linked representation of queues, queues as ADT, circular queues , Dequeues, priority queues, application of queue.

### Unit 4

**Trees: Introduction , Binary trees, representing binary trees in memory, traversing binary trees,** Traversal algorithm using stacks, Binary search tree, searching ,inserting and deleting in binary tree, balanced binary tree, AVL search tree, B-Tree (searching , insertion, deletion), B+ Tree, Red Black tree, Heap, heapsort, path length and Huffman code.

Graphs and their applications: Introduction, graph theory, sequential representation of graphs, adjacency matrix, path matrix, warshall algorithm, shortest path, linked representation of graph, operation on graphs, traversing a graph, posets, topological sorting, spanning tree .

## **Unit 5**

**Sorting and searching:** Introduction, sorting, insertion sort, selection sort, merge sort, shell sort, radix sort, searching and data modification and hashing.

### **Course Outcomes (COs):**

**Upon successful completion of this subject students will able**

CO1: Ability to analyse algorithms and a algorithm correctness.

CO2: Ability to implement various techniques of link list.

CO3: Ability to describe stack, queue with linked list operation.

CO4: Ability to have knowledge of tree and graphs concepts.

CO5: Ability to summarize searching and sorting techniques

### **Text Books**

1. R. G. Dromey, "How to Solve it by Computer", Second Edition, Prentice-Hall of India, 2002.
2. ReemaThereja,, "Data Structure using C" , Second Edition , Oxford University Press, 2014

### **Reference Books**

1. M. A. Weiss, "Data Structures and Algorithm Analysis in C", Second Edition, Pearson Education Asia, 2002.
2. ISRD Group, "Data Structures using C", Fifth Edition Tata McGraw Hill, 2007
3. Richard F. Gilberg, Behrouz A. Forouzan, "Data Structures – A Pseudocode" Third Edition Prentice-Hall of India, 2004.

## **Course Name: Programming in PHP**

**Course Code: BCA123A**

### **Course Objectives:**

1. To demonstrate the basics of the PHP and MYSQL, PHP configuration in IIS & Apache Web Server and features of PHP.
2. To understand how PHP, HTML and MYSQL work together to produce dynamic pages.
3. To apply specific PHP variables, data types, syntax and conditional statements.
4. To be able to apply control statements and database connectivity.
5. To make use of string functions and array functions.

### **Syllabus**

#### **Unit I**

Introduction to PHP, Installation of PHP and MySQL, PHP configuration in IIS & Apache Web Server and features of PHP, Writing PHP, How PHP code is parsed, Embedding PHP and HTML Executing PHP and viewing in Browser.

#### **Unit II**

Data types, Operators, PHP variables: static and global variables, Comments in PHP, Control Structures, Condition statements, If...Else, Switch, ?operator, Loops, While, Break Statement Continue. Do...While, For, For each, Exit, Die, Return

#### **Unit III**

Arrays in PHP, Working With Data, FORM element, INPUT elements, Validating the user input, Passing variables between pages, Passing variables through GET, Passing variables through POST, Passing variables through REQUEST, Working With Data, Built-in functions.

#### **Unit IV**

String Functions: chr, ord, strtolower, strtoupper, strlen, ltrim, rtrim, substr, strcmp, strcasecmp, strpos, strrpos, strstr, stristr, str\_replace, strrev, echo, print, Math Functions: abs, ceil, floor, round, fmod, min, max, pow, sqrt, rand.

## Unit V

Array Functions: count, list, in\_array, current, next, previous, end, each, sort, rsort, assort, array\_merge, array\_reverse User Defined Functions. Sessions and cookies, Concept of Session Starting session, Modifying session variables, registering and deleting session variable Concept of Cookies.

### Course Outcomes:

**Upon successful completion of this subject students should be able to:**

CO1: Demonstrate the basics of the PHP and MYSQL, PHP configuration in IIS & Apache Web Server and features of PHP.

CO2: Examine how web pages are developed using PHP array, form and input elements.

CO3: Apply specific PHP variables, data types, syntax and conditional statements.

CO4: Understand the basics of array functions and user defined functions.

CO5: Understand the basics of string functions like chr, ord, strtolower, strtoupper, strlen.

### Text Books

1. PHP Cookbook by David Sklar and Adam Trachtenberg, O'Reilly Media, Inc., ISBN: 978-1-449-36375-8.
2. Core PHP Programming, Leon Atkinson Pearson publishers, 2nd Edition, ISBN-13: 978-0130893987.

### Reference Books

1. The Complete Reference PHP, Stever Holzner McGraw Hill, Edition: 1 ISBN: 9780070223622.
2. Web Technologies: HTML, JAVASCRIPT, PHP, JAVA, JSP, ASP.NET, XML and Ajax, Black Book: HTML, Javascript, PHP, Java, Jsp, XML and Ajax, Black Book” by Kogent Learning Solutions Inc.
3. “Web Enabled Commercial Application Development Using HTML, JavaScript, DHTML and PHP ( 4th Revised Edition ) CD-ROM Included” by Ivan Batross

## **Course Name: Programming in Java**

**Course Code: BCA 133A**

### **Course Objectives:**

1. To be able to understanding the concept of programming paradigms, basic concept of object oriented programming and features of java.
2. To demonstrate the concept of data types, literals and basic structure of java programming.
3. To enhance the practical knowledge of decision making statements and control statements.
4. To be able to use variety technologies of Java and work with different platforms.
5. To examine the life cycle of applets and packages.

### **Syllabus**

#### **Unit I**

**The history and evolution of java:** Java lineage, Introduction of modern programming C and C++, creation of Java, C# connection, java applets, security, portability, java's magic byte code, servlets, java buzzwords( simple, object oriented, robust, multithreaded, architecture neutral, interpreted and high performance distributed and dynamic) Evolution of java, java SE 6.

**An overview of Java:** object oriented programming, two paradigms, abstraction, oops principles, simple program of java( Entering the program, Compiling the program) Two control statements, The if statement, for loop, using block of code, lexical issues, java class libraries.

**Data types variables and arrays:** The primitive types, integers, floating points type, characters, Booleans, literals, variables, Type conversion and casting, automatic type promotion in expressions, Arrays and their types, introduction of strings.

#### **Unit II**

**Operators:** Arithmetic operator, bitwise operator, relational operators, Boolean logical operators, assignment operator, operator precedence.

**Control Statements:** Java's selection statements, iteration statements, jump statement( using break, continue and return)

**Introducing classes:** Class fundamentals , declaring objects, assigning object reference variables, introducing methods, returning a value, constructors, parameterized constructors, this keyword, garbage collection.

#### **Unit III**

**Methods and Classes:** Overloading methods, overloading constructors, using object as parameter, argument passing, returning objects, recursion, introducing access control, and understanding static, final, arrays revisited, introduction of nested and inner classes, exploring the string class, use of command line arguments.

**Inheritance:** Basics of inheritance, use of super class and sub class variable, creating multilevel hierarchy, method overriding, use of abstract class, the object class.

#### **Unit IV**

**Packages and Interfaces:** Introduction of packages, finding packages and class path, access protection, importing packages, interfaces and their types.

**Exception handling:** Exception handling fundamentals, Exception types, uncaught exceptions, use of try and catch, multiple catch clause, nested try statements, use of throw statement, java's built in exceptions, chained exceptions, use of exceptions.

**Multithreaded programming:** The java thread model, thread priorities, synchronization, messaging, thread class and the run able interface, main thread, creating a thread, thread priorities, synchronization methods, inter thread communication, deadlock, suspending, resuming, and stopping threads, modern way to suspend, resume and stopping the threads and use of multithread.

#### **Unit V**

**Enumeration, auto boxing and annotations (Metadata):** Enumeration, values () and values of () methods, type wrappers, auto boxing, annotations.

**I/O, Applets and other topics:** I/O basics, streams, byte streams, character streams, reading console input, writing console output, print writer class, reading and writing files, applets fundamentals, transient and volatile modifiers, naïve methods.

**Generics:** introduction of generics, generics types, generic class parameters, bounded types, wildcard arguments, generic constructor, generic interfaces, raw types and legacy code, generic class hierarchies.

**The Java Library:** string handling, string constructors, string length, special string operations, character extraction, string comparison, searching strings and modifying a string.

#### **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: Understanding the concept of programming paradigms, basic concept of object oriented programming and features of java.

CO2: Enhance the practical knowledge of decision making statements and control statements.

CO3: Examine the life cycle of applets and packages and use the exception handling mechanism for handle the errors.

CO4: Illustrate the concept of Inheritance, Constructor, operator overloading and graphics in java.

CO5: Evaluate the concept of array, string, function, class and object.

### **Text Books**

1. Programming in Java, SachinMalhotra, Oxford University, November 2013
2. Java One step ahead, Seth and Juneja, Oxford University, May 2017.

### **Reference Books**

1. Programming with Java A Primer, E. Balaguruswamy Tata McGraw Hill Companies
2. R. NageswaraRao, "Core Java: An Integrated Approach", First Edition, DT Editorial Services, 2016.
3. Herbert Schildt, "The Complete Reference", Ninth Edition, McGraw Hill, 2014.

Cay S. Horstmann," Core Java", Ninth Edition, Prentice Hall,2012.

**Course Name: Advance Java**

**Course Code: BCA410A**

### **Course Objectives**

1. To exhaustive coverage of advanced topics on Java from tools to enterprise Java
2. To provide ample application-based examples, with step-by-step explanations
3. To provide thorough understanding of each topic through extensive examples alongwith the program codes and screenshots
4. To provides relevant software installation and configuration information wherever necessary
5. To comprises keywords, objective-type questions (with answers) and subjective-type questions for students at the end of all the chapters

### **Syllabus**

#### **Unit I**

**Introduction** : Java Evolution and history, Data types, Control statements , conditional statements, Classes and Objects, Arrays and strings, Functions & Interfaces, Inheritance, keywords: Static, Final, Super, Packages,

#### **Unit II**

**Applet, Exception Handling, Multi-threading & Garbage Collection:** Applet, Applet life Cycle, Exception Handling: Introduction, types, catching exceptions, tracing stack, custom exception classes

Multi-threading : Introduction, Main Thread, Creating Thread, Interrupting Thread, Suspending and Resuming, Thread Priority, Garbage Collection.

#### **Unit III**

**Collection frame work and Generic Programming:** Collection frame work: Introduction, Benefits, Collection Interfaces, and Collection Implementation.

Generic Programming: Introduction, Collection Framework and Generics, Type Naming, Generic Methods and Constructors, Type Inference, Bounded Type Parameters, Wildcards, Type Erasure, Restrictions on Generics.

#### **Unit IV**

**AWT, Swings & Input/Output:** AWT: AWT Class Hierarchy, Creating Container, Adding Components, Layout, AWT components, Event Handling, Dialog Boxes, Scrollbar, Menu.

Swings: Containment Hierarchy, Swing Components, Methods of Important Event Listener Interfaces Streams, Formatting, Data Streams, Object Stream, Reading/writing Arrays via Streams, Pipes, File I/O, Path, File

#### **Unit V**

**JDBC, Servlet & JSP:** JDBC: JDBC Drivers, JDBC Architecture, JDBC Classes and Interfaces, Loading a Driver, Making a Connection, Execute SQL Statement, SQL Statements, Retrieving Result, Getting Database Information, Metadata.

Servlet: Server-side Java, Servlet Architecture, Servlet Life Cycle, Generic Servlet.

JSP: JSP and HTTP, JSP Engines, JSP and Servlet, JSP Syntax, JSP Components

#### **Course Outcomes (Cos):**

**Upon successful completion of this subject students should be able to:**

CO1: Revise object oriented features of java language and develop java applet programming using various techniques.

CO2: Handling exceptions and develop multi- threaded applications.

CO3: Develop applications using collection framework and concepts of generic programming.

CO4: Develop applications using Abstract Window Toolkit

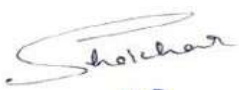

CO5: Develop server side programs using Servlets and develop Java Server Pages applications using JSP Tags.

#### **Text Books**

1. Advance java programming, Oxford, Uttam Kumar Roy, April 2015.
2. Sachin Malhotra, Saurabh Chaudhary, "Programming in Java", Second Edition, Oxford University Press , 2014.

#### **Reference Books**

1. Programming with Java A Primer, E.Balaguruswamy Tata McGraw Hill Companies
2. JAVA How to Program. Dietel & Dietel, Eleventh Edition, Pearson Group
3. The complete reference JAVA2, Herbert schildt. TMH

  
HoD  
School of Computer Applications  
JECRC University Jaipur

Servlet: Server-side Java, Servlet Architecture, Servlet Life Cycle, Generic Servlet.

JSP: JSP and HTTP, JSP Engines, JSP and Servlet, JSP Syntax, JSP Components

## **Course Name: Computer Network**

### **Course Code: BCA135B**

#### **Course Objectives**

1. To be familiar with the terminology and concepts of Layering, Distributed Systems and Networks, Peer-to-Peer and Client-Server Networks.
2. To enhance the practical knowledge of protocols used in different layers.
3. To be familiar with physical layer based on telephone lines.
4. To be able to understand Error Detection, Error Correction, Flow Control.
5. To be able to understand the concept of Connection Oriented, Connectionless and routing algorithms.

#### **Syllabus**

##### **Unit I**

**Introduction to Computer Networks:** Definition: Network , The Need of Resources Sharing, data communications components, data representation, and data flow, network topologies, categories of networks, organizations that set standards in data communications and networking, introduction to Open Systems Interconnection (OSI) and the Internet model (TCP/IP) layers and services.

##### **Unit II**

**The Physical Layer & Media:** Functions of physical layer, issues related to the physical layer and the transmission medium that is controlled by the physical layer, Bandwidth Utilization: Multiplexing and Spreading, Transmission Media, Switching.

##### **Unit III**

**The Data Link Layer:** Error Detection and Correction, Data Link Control, Multiple Access. Wired LANs: Ethernet, Wireless LANs.

##### **Unit IV**

**The Network Layer:** Logical addressing: IPv4 and IPv6, Internet Protocol: IPv4, Datagram, Fragmentation, Checksum, IPv6 Advantages and Packet Format, Address mapping: ARP, RARP and DHCP, Forwarding, and Unicast and Multicast Routing.

## Unit V

**Transport Layer and Application Layer:** Process-to-Process Delivery: UDP, TCP, and SCTP. Congestion Control. Application Layer: Domain Name System, Remote Logging, Electronic Mail, and File Transfer, WWW and HTTP.

### Course Outcomes (COs):

**Upon successful completion of this subject students should be able to:**

CO1: To be familiar with the terminology and concepts of Layering, Distributed Systems and Networks, Peer-to-Peer and Client-Server Networks.

CO2: Describe, analyze and compare Physical Layer based on telephone lines.

CO3: Describe, analyze and compare a number of data link, network, and transport layer protocols, Error Detection, Error Correction and Flow Control.

CO4: Able to understand the concept of Connection Oriented, Connectionless and routing algorithms.

CO5: Enhance the practical knowledge of protocols used in different layers

### Text Books

1. Behrouz A. Forouzan, Data Communication and Networking, Fifth Edition, Mcgraw Hill, 2017.
2. Andrew S. Tanenbaum, David J. Wetherall, Computer Networks, 5th Edition, Pearson, 2011.

### Reference Books

1. Larry L. Peterson and Bruce S. Davie, Computer Networks: A System Approach, Fifth Edition, The Morgan Kaufmann Series in Networking, 2011
2. James Kurose and Keith Ross, Computer networking: A Top Down Approach, Seventh Edition, Pearson, 2017.
3. William Stallings, Data and Computer Communications, 10th Edition, Pearson, 2014

# **Course Name: Advance Data Structures and Algorithms**

## **Course Code: BCA411A**

### **Course Objectives:**

1. To impart the basic concepts of data structures and algorithms.
2. To understand concepts about searching and sorting techniques.
3. To understand basic concepts about stacks, queues, lists, trees and graphs.
4. To understanding about writing algorithms and step by step approach in solving problems with the help of fundamental data structures.
5. To impart the basic concepts of algorithms implementation in optimized time .

### *Syllabus*

#### *Unit I*

**Introduction to Data Structures and Algorithms:** Elementary Data Structure Organization, Classification of Data Structures, Operation of Data Structures, Operations on Data Structures ,Abstract Data Type ,Algorithms, Different Approaches to, Designing an Algorithm, Control Structures Used in Algorithms, Time and Space Complexity, Omega Notation ( $\Omega$ ), Theta Notation ( $\Theta$ ) ,Other Useful Notations.

#### *UNIT II*

**Array and Linked List:** Declaration of Arrays, Accessing the Elements of an Array, Storing Values in Array, operations, Passing Array to functions, Pointers and Arrays, Arrays of Pointers, Two-dimensional Arrays, Operations on , Passing Two-dimensional Arrays to Functions, Pointers and Two-dimensional Arrays, Sparse Matrices .

Linked list Basic Terminologies, Memory Allocation and De-allocation for a Linked List, Singly Linked Lists, Circular Linked Lists, Doubly Linked Lists, Circular Doubly Linked Lists, Header Linked Lists, Multi-linked Lists, Applications of Linked Lists.

#### *UNIT III*

**Stack:** Array Representation of Stack, Operations on Stack, linked Representation of Stacks, Operations on a Linked Stack, Multiple Stacks, Applications of Stack,

**Queues:** Introduction to Queues, Array Representation of Queues ,Linked Representation of Queues, Types of Queues , Applications of Queues

#### UNIT IV

**Trees and BST** Trees: Types of trees , Creating a Binary Tree from a General Tree, Traversing a Binary Tree, Huffman's Tree

Binary Search Trees: BST Operations, Threaded Binary Trees, AVL Trees, Red-Black Trees, Splay Trees

#### UNIT V

**Graph, Searching & Sorting:** Basic Terminologies, Directed Graphs, Representations of Graphs, Graph Traversals Algorithms, Topological Sorting, Shortest-Path Algorithms.

**Searching & Sorting:** Introduction to searching, Linear and Binary Search, Interpolation Search, jump search, Sorting Types, Bubble, Insertion, Selection , Merge Sort, Radix Sort Shell Sort, Quick Sort, Heap Sort.

#### Course Outcomes (COs):

**Upon successful completion of this subject students will able**

CO1: Ability to analyse algorithms and a algorithm correctness.

CO2: Ability to implement various techniques of link list.

CO3: Ability to describe stack, queue with linked list operation.

CO4: Ability to have knowledge of tree and graphs concepts.

CO5: Ability to summarize searching and sorting techniques

#### Text Books

1. R. G. Dromey, "How to Solve it by Computer", Second Edition, Prentice-Hall of India, 2002.
2. Reema Thereja,, "Data Structure using C" , Second Edition , Oxford University Press, 2014

#### Reference Books

1. M. A. Weiss, "Data Structures and Algorithm Analysis in C", Second Edition, Pearson Education Asia, 2002.
2. ISRD Group, "Data Structures using C", Fifth Edition Tata McGraw Hill, 2007
3. Richard F. Gilberg, Behrouz A. Forouzan, "Data Structures – A Pseudocode" Third Edition Prentice-Hall of India, 2004.

**Course Name: Communication Skills**

**Course code: DEN001A**

**Course Objectives:**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centered to student-centered one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centered learning rather than on the teacher-centered learning.
5. To link communication skills with the organizational behavior.
6. To inculcate skills that is very much required for employability and adjusts in the professional Environment.

**Syllabus: Theory**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>UNIT 3</b>	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

**Syllabus: Lab**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive
---------------	---

	mindset during work pressure, Activities to teach Time-management, Following Deadlines etc
<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

### Suggested Reading:

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
4. On Writing Well. William Zinsser. Harper Resource Book. 2001
5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

### Course Outcomes (CO):

#### At the end of this course students will have:

- CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
- CO2: Ability to analyze the usage of English words in different contexts.
- CO3: An understanding of technical and academic articles' comprehension.
- CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

**Course Name: Environmental Studies**

**Course Code: DCH001A**

### **Course Objectives**

1. To define and use correctly the common terms of environmental science.
2. To explain what makes up the environment, how it functions, and how humans are part of it.
3. To apply the concepts and principles of environmental science to propose solutions to specific environmental problems.
4. To analysis environmental writings and predictions and their impact on subsequent developments in human relationship with the environment.
5. To evaluate the adequacy of conclusions about environmental phenomena.

### **Syllabus**

#### **Unit I**

**Introduction and Natural Resources:** Multidisciplinary nature and public awareness, Renewable and nonrenewal resources and associated problems, Forest resources, Water resources, Mineral resources, Food resources, Energy resources, Land resources, Conservation of natural resources and human role.

#### **Unit II**

**Ecosystems:** Concept, Structure and function, Producers composers and decomposers, Energy flow, Ecological succession, Food chains webs and ecological pyramids, Characteristics structures and functions of ecosystems such as Forest, Grassland, Desert, Aquatic ecosystems.

#### **Unit III**

**Biodiversity and Conservation:** Definition, Genetic, Species, and Ecosystem diversity, Bio-geographical classification of India, Value of biodiversity at global, national, local levels, India as a mega diversity nation, Hot sports of biodiversity, Threats to biodiversity, Endangered and endemic species of India, In-situ and ex-situ conservation of biodiversity.

## Unit IV

**Environmental Pollution:** Definition, Causes, effects and control of air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution, nuclear hazards, human role in prevention of pollution, Solid waste management, Disaster management, floods, earthquake, cyclone and landslides.

## Unit V

**Social issues and Environment:** Unsustainable to sustainable development, Urban problems related to energy, Water conservation and watershed management, Resettlement and re-habitation, Ethics, Climate change, Global warming, Acid rain, Ozone layer depletion, Nuclear accidents, holocaust, Waste land reclamation, Consumerism and waste products, Environment protection act, Wildlife protection act, Forest conservation act, Environmental issues in legislation, population explosion and family welfare program, Environment and human health, HIV, Women and child welfare, Role of information technology in environment and human health.

### Course Outcomes:

**Upon successful completion of this subject students should be able to:**

CO1: Understand fundamental physical and biological principles that govern natural processes.

CO2: Understand fundamental concepts from the social sciences and the humanities underlying environmental thought and governance.

CO3: Integrate and apply perspectives from across the natural sciences, social sciences, and the humanities in the context of complex environmental problems.

CO4: Apply the concepts and principles of environmental science to propose solutions to specific environmental problems.

CO5: Able to understand social and environmental issues.

### Text Books

1. Rajgopalan , “Environmental Studies From Crisis to Cure” , (3e), Oxford University Press.
2. Agarwal, K.C., Environmental Biology, Nidi Publication Ltd., Bikaner, 2001.

### Reference Books

1. BharuchaErach, Biodiversity of India, Mapin Publishing Pvt. Ltd., Ahmadabad, 2002.
2. Clark, R.S., Marine Pollution, Clanderson Press, Oxford, 2002.
3. Cunningham, W.P., et al., Environmental Encyclopedia, Jaico Publishing House, Mumbai, 2003.

## **Course Name: Certified Ethical Hacker**

**Course Code: BCAC13A**

### Background Network and Communication Technologies

- Networking technologies (e.g., hardware, infrastructure)
- Web technologies (e.g., web 2.0, skype)
- Systems technologies
- Communication protocols
- Telecommunication technologies
- Mobile technologies (e.g., smartphones)
- Wireless terminologies
- Cloud computing
- Cloud deployment models

### Information Security Threats and Attack Vectors

- Malware (e.g., Trojan, virus, backdoor, worms)
- Malware operations
- Information security threats and attack vectors
- Attacks on a system (e.g., DoS, DDoS, session hijacking, webserver and web application attacks, SQL injection, wireless threats)
- Botnet
- Cloud computing threats and attacks
- Mobile platform attack vectors
- Cryptography attacks

### Information Security Technologies

- Information security elements
- Information security management (e.g. IA, Defense-in-Depth, incident management)
- Security trends
- Hacking and ethical hacking
- Vulnerability assessment and penetration testing

- Cryptography
- Encryption algorithms
- Wireless encryption
- Bring Your Own Device (BYOD)
- Backups and archiving (e.g., local, network)
- IDS, firewalls, and honeypots

### *Unit – II*

#### Analysis / Assessment Information Security Assessment and Analysis

- Data analysis
- Systems analysis
- Risk assessments
- Vulnerability assessment and penetration testing
- Technical assessment methods
- Network sniffing
- Malware analysis

#### Information Security Assessment Process

- Footprinting
- Scanning (e.g., Port scanning, banner grabbing, vulnerability scanning, network discovery, proxy chaining, IP spoofing)
- Enumeration
- System hacking (e.g., password cracking, privilege escalation, executing applications, hiding files, covering tracks)

### *Unit – III*

#### Security Information Security Controls

- Systems security controls
- Application/file server
- IDS
- Firewalls
- Cryptography
- Disk Encryption
- Network security

- Physical security
- Threat modeling
- Biometrics
- Wireless access technology (e.g., networking, RFID, Bluetooth)
- Trusted networks
- Privacy/confidentiality (with regard to engagement)

#### Information Security Attack Detection

- Security policy implications
- Vulnerability detection
- IP Spoofing detection
- Verification procedures (e.g., false positive/negative validation)
- Social engineering (human factors manipulation)
- Vulnerability scanning
- Malware detection
- Sniffer detection
- DoS and DDoS detection
- Detect and block rogue AP
- Evading IDS (e.g., evasion, fragmentation)
- Evading Firewall (e.g., firewalking, tunneling)
- Honeypot detection
- Steganalysis

#### Information Security Attack Prevention

- Defend against web server attacks
- Patch management
- Encoding schemes for web application
- Defend against web application attacks
- Defend against SQL injection attacks
- Defend against wireless and Bluetooth attacks
- Mobile platforms security
- Mobile Device Management (MDM)
- BYOD Security

- Cloud computing security

#### *Unit – IV*

##### Tools / Systems / Programs Information Security Systems

- Network/host based intrusion
- Boundary protection appliances
- Access control mechanisms (e.g., smart cards)
- Cryptography techniques (e.g., IPSec, SSL, PGP)
- Domain name system (DNS)
- Network topologies
- Subnetting
- Routers / modems / switches
- Security models
- Database structures

##### Information Security Programs

- Operating environments (e.g., Linux, Windows, Mac)
- Anti-malware systems and programs (e.g., anti-keylogger, anti-spyware, anti-rootkit, anti-trojan, anti-virus)
- Wireless IPS deployment
- Programming languages (e.g. C++, Java, C#, C)
- Scripting languages (e.g., PHP, Javascript)

##### Information Security Tools

- Network/wireless sniffers (e.g., Wireshark, Aircrack-ng)
- Port scanning tools (e.g., Nmap, Hping)
- Vulnerability scanner (e.g., Nessus, Qualys, Retina)
- Vulnerability management and protection systems (e.g., Foundstone, Ecora)
- Log analysis tools
- Exploitation tools
- Footprinting tools (e.g., Maltego, FOCA, Recon-ng)
- Network discovery tools (e.g., Network Topology Mapper)
- Enumeration tools (e.g., SuperScan, Hyena, NetScanTools Pro)

- Steganography detection tools
- Malware detection tools
- DoS/DDoS protection tools
- Patch management tool (e.g., MBSA)
- Webserver security tools
- Web application security tools (e.g., Acunetix WVS)
- Web application firewall (e.g., dotDefender)
- SQL injection detection tools (e.g., IBM Security AppScan)
- Wireless and Bluetooth security tools
- Android, iOS, Windows Phone OS, and BlackBerry device security tools
- MDM Solutions
- Mobile Protection Tools
- Intrusion Detection Tools (e.g., Snort)
- Hardware and software firewalls (e.g., Comodo Firewall)
- Honeypot tools (e.g., KFSensor)
- IDS/Firewall evasion tools (e.g., Traffic IQ Professional)
- Packet fragment generators
- Honeypot Detection Tools
- Cloud security tools (e.g., Core CloudInspect)
- Cryptography tools (e.g., Advanced Encryption Package)
- Cryptography toolkit (e.g., OpenSSL)
- Disk encryption tools
- Cryptanalysis tool (e.g., CrypTool)

*Unit – V*

#### Procedures / Methodology Information Security Procedures

- Cryptography
- Public key infrastructure (PKI)
- Digital signature and Pretty Good Privacy (PGP)
- Security Architecture (SA)
- Service oriented architecture
- Information security incident
- N-tier application design
- TCP/IP networking (e.g., network routing)

- Security testing methodology

Information Security Assessment Methodologies

- Web server attack methodology
- Web application hacking methodology
- SQL injection methodology and evasion techniques
- SQL injection evasion techniques
- Wireless and Bluetooth hacking methodology
- Mobile platform (Android, iOS, Windows

Phone OS, and BlackBerry) hacking methodology

- Mobile Rooting and Jailbreaking

Regulation / Policy Information Security Policies/ Laws/Acts

- Security policies
- Compliance regulations (e.g., PCI-DSS,SOX)

Ethics of Information Security

- Professional code of conduct
- Appropriateness of hacking

# **Course Name: Dockers and Kubernetes Implementation**

**Course Code: BCA211A**

## **Course Objectives:**

CO1: Develop a thorough understanding of microservices architecture, its advantages over monolithic applications, and the importance of security and API management in microservices environments.

CO2: Master Node.js fundamentals, including installation, project setup, and utilization of development tools such as Nodeclipse.

CO3: Acquire practical skills in Docker, covering containerization concepts, image creation, Dockerfile usage, and container management.

CO4: Explore Kubernetes functionalities, including cluster setup, deployment configuration, scaling, and service management for container orchestration.

CO5: Apply Docker and Kubernetes knowledge to design, deploy, and manage microservices-based applications, ensuring scalability, reliability, and maintainability.

## **Syllabus**

### **Unit 1**

**Microservice Fundamentals:** Introduction to Microservices, Comparison with, Monolithic Applications, Microservice Security, API Management

### **Unit II**

**Node.js Introduction:** Introduction and Installation of Node.js, Sample Project Development, Introduction to Nodeclipse

### **Unit III**

**Docker Fundamentals:** Introduction to Docker, Containerization Concepts, Docker Image Creation and Management

### **Unit IV**

**Kubernetes Basics:** Introduction to Kubernetes, Cluster Setup, Deployment Configuration and Scaling

### **Unit V**

**Advanced Docker and Kubernetes Implementation:** Advanced Docker Concepts (e.g., Docker Compose), Kubernetes Service Management, Designing and Deploying Microservices Applications

## **Course Outcomes (COs):**

**Upon successful completion of this subject students will able**

CO1: Understand the fundamentals of microservices architecture, including its comparison with monolithic applications and key aspects of security and API management.

CO2: Gain proficiency in Node.js, including installation, project setup, and usage of tools like Nodeclipse.

CO3: Learn the concepts and practical implementation of Docker containers for packaging, distributing, and running applications.

CO4: Explore Kubernetes orchestration system for automating deployment, scaling, and management of containerized applications.

CO5: Apply Docker and Kubernetes knowledge to design and deploy scalable, resilient, and efficient microservices-based applications.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES  
AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		L							L			
CO2						H				M		
CO3				M				L				
CO4						L					L	
CO5	M				L							L

H = Highly Related; M = Medium; L = Low

**Reference Books**

1. IBM LMS Portal

## **Course Name: Deployment of Private Cloud**

### **Course Code: BCA212A**

#### **Course Objectives:**

CO1: Develop a comprehensive understanding of containers and Kubernetes, their advantages, and their significance in deploying private cloud infrastructure.

CO2: Master the features and functionalities of Red Hat OpenShift, including its installation process and the planning of development workflows on the platform.

CO3: Acquire practical skills in creating, building, and deploying Ruby-based applications on the OpenShift platform.

CO4: Learn the process of creating custom container images, managing builds, and image streams to streamline application deployment on OpenShift.

CO5: Explore the deployment, service, route, and storage management functionalities of OpenShift, and learn to efficiently manage application deployments in private cloud environments.

#### **Syllabus**

##### **Unit 1**

**Introduction to Containers and Kubernetes:** Overview of Containers, Introduction to Kubernetes

##### **Unit II**

**Red Hat OpenShift Overview:** Introduction to Red Hat OpenShift, Installation of OpenShift, Planning Development Process

##### **Unit III**

**Ruby Application Deployment on OpenShift:** Creating a Ruby-based Application, Building and Image Streams in OpenShift

##### **Unit IV**

**Custom Container Images and Deployments:** Creating Custom Container Images, Deployments in OpenShift

##### **Unit V**

**Application Management in OpenShift:** Service and Route Configuration, Allocating Persistent Storage, Managing Application Deployments

### Course Outcomes (COs):

**Upon successful completion of this subject students will able**

CO1: Understand the concepts of containers and Kubernetes and their role in deploying private cloud environments.

CO2: Gain proficiency in Red Hat OpenShift, including its features, installation process, and planning development workflows.

CO3: Learn to create and deploy Ruby-based applications on OpenShift platform.

CO4: Master the process of creating custom container images, managing builds, and image streams in OpenShift.

CO5: Acquire skills in deploying, managing, and scaling applications using OpenShift's deployment, service, route, and storage management functionalities.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		L							L			
CO2						H				M		
CO3				M				L				
CO4						L					L	
CO5	M				L							L

## **Course Name: REST API and IBM Watson Studio**

### **Course Code: BCA213A**

#### **Course Objectives:**

CO1: Develop a comprehensive understanding of JAXB and its usage in Java applications for XML data binding.

CO2: Explore the fundamentals of web services, including REST APIs, and their role in enabling communication between systems over the internet.

CO3: Acquire practical skills in designing and implementing RESTful APIs, including resource modeling, URI design, and HTTP methods usage.

CO4: Learn to develop Java clients to interact with REST APIs, including authentication, request handling, and response parsing.

#### **Syllabus**

##### **Unit 1**

**JAXB Introduction:** Overview of JAXB, JAXB Binding Process, Advantages of JAXB, JAXB Annotations, Practical Exercises

##### **Unit II**

**Web Services Overview:** Introduction to Web Services, Types of Web Services (SOAP, REST), Role of Web Services in Modern Applications, RESTful Architecture Principles, Web Service Standards (WSDL, SOAP, etc.)

##### **Unit III**

**REST APIs Fundamentals:** Introduction to REST APIs, REST vs. SOAP, RESTful Principles (Statelessness, Uniform Interface, etc.), Resource Modeling, URI Design and Best Practices

##### **Unit IV**

**Accessing REST API using Java client:** Introduction to Java REST Clients, REST Client Libraries (e.g., Apache HttpClient, Jersey Client), Authentication and Authorization, Handling HTTP Requests (GET, POST, PUT, DELETE), Parsing JSON/XML Responses

##### **Unit V**

**Practical Implementation and Case Studies:** Real-world REST API Examples, Building RESTful Services with Java EE (JAX-RS), Integration of REST APIs in Java Applications, Best Practices for REST API Development, Case Studies and Hands-on Projects

#### **Course Outcomes (COs):**

**Upon successful completion of this subject students will be able**

CO1: Understand the concepts of JAXB and its role in binding XML data to Java objects.

CO2: Gain an overview of web services, including REST APIs, and their significance in modern application development.

CO3: Master the principles and practices of RESTful API design and implementation.

CO4: Learn to access REST APIs using Java clients for building robust and scalable applications.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES  
AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

## **Course Name: Machine Learning with Python**

### **Course Code: BCA218A**

#### **Course Objectives:**

CO1: Understand the basic concepts of Python language.

CO2: Understand the basics of Machine Learning & their types.

CO3: Understand various learning models, methods and applications under supervised and unsupervised learning

CO4: Understand data preprocessing for Machine Learning.

CO5: Solve real world problems through machine learning implementation leading to predictions.

#### **Syllabus**

**Unit I: Supervised vs Unsupervised Learning:** Machine learning vs statistical modeling, supervised vs unsupervised learning, supervised learning classification, unsupervised learning.

**Unit II: Supervised Learning I:** K-Nearest Neighbors, Decision Trees, Random Forests, Reliability of Random Forests, Advantages & Disadvantages of Decision trees

**Unit III: Supervised Learning II:** Regression Algorithms, Model Evaluation, Model Evaluation: overfitting and underfitting.

**Unit IV: Data Analysis & visualization :** using numpy, panda ,matplotlib, scipy etc

**Unit V:** Mini Project/Prediction

#### **Course Outcomes(COs):**

**Upon successful completion of this subject students will able**

CO1: Understand different types of machine learning and map problems to different classes of machine learning algorithms.

CO2: Describe and apply machine-learning algorithms including decision trees, naïve Bayes, and logistic regression.

CO3: Understand subtleties and application scenarios for different supervised classification algorithms discussed above.

CO4: Explain and apply machine-learning concepts such as regularization, overfitting, and Laplace smoothing to design efficient machine learning models.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	M				M							
CO2						L			L			
CO3			L					L				
CO4						H				L		
CO5		H		L								L

H=Highly Related; M =Medium; L=Low

**Reference Books**

1. IBM LMS Portal

## **Course Name: Deep Learning and Machine Learning**

**Course Code: BCA219A**

### **Course Objectives:**

CO1: To introduce the idea of artificial neural networks and their architecture

CO2: To introduce techniques used for training artificial neural networks.

CO3: To enable design of an artificial neural network for classification

CO4: To enable design and deployment of deep learning models for machine learning problems

CO5: Solve real world problems through machine learning implementation leading to predictions.

### **Syllabus**

**Unit I: Deep Learning Concepts:** Neural network, Deep learning, The Vanishing Gradient, Restricted Boltzmann machines, deep belief network

**Unit II: Deep Learning Concepts Continued:** Convolutional networks, Recurrent nets, autoencoders, deep learning use cases

**Unit III: Platforms for Deep Learning:** Deep learning platform, H2O.ai, Dato GraphLab

**Unit IV: Deep Learning Software Libraries:** Deep Learning Library, Theano, deeplearning4j, caffe

**Unit V:** Mini Project/Prediction

### **Course Outcomes(COs):**

**Upon successful completion of this subject students will able**

CO1: Able to understand the mathematics behind functioning of artificial neural networks

CO2: Able to analyze the given dataset for designing a neural network based solution

CO3: Able to carry out design and implementation of deep learning models for signal/image processing applications

CO4: Able to design and deploy simple TensorFlow-based deep learning solutions to classification problems

CO5: Will understand the deep knowledge of Deep Learning and Machine Learning Algorithms

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	M				M							
CO2						L			L			
CO3			L					L				
CO4						H				L		
CO5		H		L								L

H=Highly Related; M =Medium; L=Low

**Reference Books**

1. IBM LMS Portal

**Course Name: Introduction to Cloud Architecture**  
**Course Code: BCA247A**

**Course Objectives:**

- CO 1.** Make architectural decisions based on AWS architectural principles and best practices
- CO 2.** Use AWS services to make infrastructure scalable, reliable, and highly available
- CO 3.** Use AWS managed services to enable greater flexibility and resiliency in an infrastructure
- CO 4.** Increase performance and reduce cost of a cloud infrastructure built on AWS
- CO 5.** Use the AWS Well-Architected Framework to improve architectures that use AWS solutions

**UNIT I : AWS Academy Cloud Architecting**

Roles in cloud computing, Introducing Cloud Architecting, What is cloud architecting?, The AWS Well-Architected Framework, Best practices for building solutions on AWS, AWS global infrastructure, **Adding a Storage Layer** The simplest architecture, Using Amazon S3, Demo Demonstration: Amazon S3 Versioning, Hosting a Static Website, Storing data in Amazon S3 Moving data to and from Amazon S3 Demo Demonstration: Amazon S3 Transfer Acceleration, Choosing Regions for your architecture, Challenge Lab Challenge Lab: Creating a Static Website for the Café

**UNIT II: Adding a Compute Layer**

Architectural need, Adding compute with Amazon EC2, Choosing an Amazon Machine Image (AMI) to launch an Amazon EC2 instance, Selecting an Amazon EC2 instance type, Using user data to configure an EC2 instance, Demo Demonstration: Configuring an EC2 Instance with User Data, Adding storage to an Amazon EC2 instance, Guided Lab Guided Lab: Introducing Amazon Elastic, File System (Amazon EFS), Amazon EC2 pricing options, Demo Demonstration: Reviewing the Spot, Instance History Page, **Adding a Database Layer** Architectural need, Database layer considerations, Amazon Relational Database Service, (Amazon RDS), Guided Lab Guided Lab: Creating an Amazon RDS, database, Database security controls, Migrating data into AWS databases, Migrating a Database to Amazon RDS, **Creating a Networking Environment**, Architectural need, Creating an AWS networking environment, Connecting your AWS networking, environment to the internet, Demo Demonstration: Creating a Virtual Private Cloud Using the AWS Console, Demo (Optional) Demonstration: Creating a Virtual Private Cloud Using the AWS CLI, Securing your AWS networking environment, Guided Lab: Creating a Virtual Private Cloud, Challenge Lab Challenge Lab: Creating a VPC,

**UNIT III: Connecting Networks**

Connecting your remote network with, AWS Site-to-Site VPN, Connecting your remote network with AWS Direct Connect, Connecting virtual private clouds (VPCs) in AWS with VPC peering Creating a VPC Peering Connection, Scaling your VPC network with AWS, Transit Gateway, Activity AWS Transit Gateway , Connecting your VPC to supported AWS services, Securing User and Application Access, Account users and AWS Identity and Access Management (IAM), Activity Examining IAM policies Organizing users, Federating users, Demo Demonstration: EC2 Instance Profile, Multiple accounts Challenge Lab Challenge Lab: Controlling Account Access by Using IAM, Implementing Elasticity, High Availability, and Monitoring Scaling your compute resources, Demo Demonstration: Creating Scaling Policies for Amazon EC2 Auto Scaling, Scaling your databases, Designing an environment that's highly available, Creating a Highly Available Web Application, Demo Demonstration: Amazon Route, Guided Lab Guided Lab: Creating a Highly Available, Environment, Monitoring Challenge Lab Challenge Lab: Creating a Scalable and Highly Available Environment for the Café

**UNIT IV Automating Your Architecture**

Reasons to automate, Automating your infrastructure, Analyzing AWS CloudFormation Template Structure and Creating a Stack, Guided Lab Guided Lab: Automating Infrastructure, Deployment with AWS CloudFormation, Automating deployments, AWS Elastic Beanstalk, Challenge Lab: Automating Infrastructure Deployment Caching

Content, Overview of caching, Edge caching, Streaming Dynamic, Content Using Amazon CloudFront, Caching web sessions, Caching databases, Building Decoupled Architectures Decoupling with Amazon Simple Queue Service (Amazon SQS). Decoupling with Amazon Simple Notification Service (Amazon SNS), Sending messages between cloud applications and on-premises with Amazon MQ.

### UNIT V Building Microservices and Serverless

Introducing microservices, Building microservice applications with AWS container services, Guided Lab Breaking a Monolithic, Node.js Application into Microservices, Introducing serverless architectures, Lecture or Video Building serverless architectures with, AWS Lambda, Demo Demonstration: Creating an AWS Lambda Function, Using AWS Lambda, with Amazon S3, Guided Lab Guided Lab: Implementing a Serverless Architecture on AWS Lecture or Video Extending serverless architectures with Amazon API Gateway, Orchestrating microservices with AWS Step Functions Challenge Lab Challenge Lab: Implementing a Serverless Architecture for the Café, Planning for Disaster Disaster planning strategies, Disaster recover patterns, Hybrid Storage and Data Migration with AWS Storage Gateway, File Gateway, Bridging to Certification, Certification exam resources, Additional resources Discussion, Course capstone project.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H							H				
CO2		H				H						
CO3		H							H			
CO4	H										H	
CO5	H											H

H = Highly Relevant ; M = Medium Relevant; L = Low Relevant

**Course Name Cloud Security**  
**Course Code BCA248A**

**Course Objective:**

- [CO1]Identify security benefits and responsibilities of using the Amazon Web Services (AWS) Cloud.
- [CO2]Use the identity and access management features of AWS.
- [CO3]Describe how to secure network access to AWS resources.
- [CO4]Explain the available methods for encrypting data at rest and data in transit.
- [CO5]Determine which AWS services can be used for monitoring and incident response.

**Syllabus**

**Unit 1: Introduction to Security on AWS**

Introduction, Security in the AWS Cloud, Security design principles, Shared responsibility model, Activity: Shared Responsibility Model

**UNIT II:Securing Access to Cloud Resources**

Introductionm, IAM fundamentals, Authenticating with IAM, Authorizing with IAM, Demo: Amazon S3 Cross-Account Resource-Based Policy, Additional authentication and access management services, AWS Organizations, Using Resource-Based Policies to Secure an S3 Bucket, **Securing Your Infrastructure**, Building a three-tier web application, Using VPCs to secure resources, Using security groups and network ACLs to control access, Using internet gateways and NAT gateways to manage communications, Balancing traffic, Pulling it all together, Protecting your compute resources, Securing VPC Resources by Using Security Groups

**UNIT III: Protecting Data in Your Application**

Introduction, Protect data at rest, Protect data in transit, Best practices for protecting data in Amazon S3, Additional data protection services, Introduction to AWS KMS, Protecting Data,

**UNIT IV: Logging and Monitoring,**

Importance of logging and monitoring, Capture and collect, Activity: Reading a Log File, AWS services with built-in logs, Monitor and report, Best practices for logging and monitoring, Additional AWS services for logging and monitoring Demo: Security Hub, Configure Monitoring and Logging in an AWS Environment

**UNIT V: Responding and Managing an Incident Response**

- Introduction, What is an incident?, Incident response on AWS, AWS Config, Additional incident response services, Best practices for incident response, Remediating an Incident by Using AWS Config

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H							H				

CO2		H				H						
CO3					H				H			
CO4			H								H	
CO5	H											H

H = Highly Relevant ; M = Medium Relevant; L = Low Relevant

# **Course Name: AWS Academy Cloud Foundation Course**

## **Course Code: BCA249A**

### **Course Objectives:**

- CO1: Create an AWS Virtual Private Cloud (Amazon VPC).
- CO2: Demonstrate when to use Amazon Elastic Compute Cloud (EC2), AWS Lambda and AWS Elastic Beanstalk.
- CO3: Differentiate between Amazon S3, Amazon EBS, Amazon EFS and Amazon S3 Glacier.
- CO4: Demonstrate when to use AWS Database services including Amazon Relational Database Service (RDS), Amazon DynamoDB, Amazon Redshift, and Amazon Aurora.
- CO5: Explore key concepts related to Elastic Load Balancing (ELB), Amazon CloudWatch, and Auto Scaling

### **Syllabus**

#### **UNIT I: Cloud Concepts Overview:**

Introduction to cloud computing, Advantages of the cloud, Introduction to AWS, Moving to the AWS Cloud. **Cloud Economic and Billing**, Introduction, Fundamentals of Pricing, Total cost of ownership, Delaware North Case study, AWS organization, AWS Billing and cost Management, Billing dashboard, Technical Support Model,

#### **UNIT II: AWS Global Infrastructure Overview:**

Introduction, AWS Global Infrastructure, AWS Services and Service category, AWS management console click through. AWS shared responsibility model, AWS IAM, Securing a New AWS Account, Securing account and data, working to ensure compliance

#### **UNIT III: Networking and Content Delivery:**

Introduction, Networking Basics, Amazon VPC, VPC Networking, VPC Security, Route 53, Cloud front, **Compute**: Introduction, compute services overview, amazon EC2 part 1, amazon EC2 part 2, amazon EC2 part 3, amazon EC2 cost optimization, container service, Introduction to AWS Lambda, Introduction to AWS Elastic Beanstalk,

#### **UNIT IV: Storage:**

Introduction, AWS EBS( Elastic Block Store Console), AWS S3, AWS EFS, AWS S3 Glacier. **Databases**:  
Introduction , Amazon RDS, Amazon DynamoDB, Amazon Redshift, Amazon Aurora.

#### **UNIT V: Cloud Architecture:**

Introduction, AWS Well Architected framework design principles, operational excellence, security, reliability, performance efficiency, cost optimization, reliability and high availability, AWS trusted advisor, **Automatic Scaling Monitoring**: Introduction, Elastic Load Balancing, Amazon Cloud watch, Amazon EC2 Auto Scaling,

### **Course Outcome: Upon completion of this course, students will be able to**

- CO1:** Define the AWS Cloud
- CO2:** Explain the AWS pricing philosophy
- CO3:** Identify the global infrastructure components of AWS
- CO4:** Describe the security and compliance measures of the AWS Cloud, including AWS Identity and Access Management (IAM)
- CO5:** Create a virtual private cloud (VPC) by using Amazon Virtual Private Cloud (Amazon VPC)

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H			H								
CO2		H								H		
CO3		H						H				
CO4	H										H	
CO5	H											H

H = Highly Relevant ; M = Medium Relevant; L = Low Relevant

## **Course Name: AWS Academy Cloud Developing**

**Course Code: BCA250A**

### **Course Objectives**

CO1 Recall cloud computing services and models.

CO2. Describe developing on AWS.

CO3. Configure AWS Identity and Access Management for programmatic access

CO4. Configure storage with Amazon S3 programmatically.

CO5. Develop with DynamoDB and explain caching

**UNIT I Welcome to Academy Cloud Developing (ACD):** Cloud prerequisites objectives and overview, AWS training portal, AWS free tier, AWS educate, AWS documentation scavenger hunt. Introduction to Developing on AWS System development lifecycle, steps to get started developing on AWS, working with AWS SDKs, errors and exceptions, introduction to AWS X-rays, introduction to amazon cloudwatch and AWS cloudtrail.

### **UNIT II – Introduction to AWS Identity and Access Management (IAM)**

Shared responsibility model , overview of IAM, authentication with IAM , authorization with IAM. Developing Storage Solutions with Amazon S3, Introduction to Amazon S3, Creating amazon S3 buckets, working with amazon S3 objects, protecting data and managing access to amazon S3 resources., Developing NoSQL Solutions with Amazon DynamoDB, Introduction to amazon dynamoDB, amazon dynamo DB Key concepts, partition and data distribution, secondary indexes, read/write throughput, streams and global tables, backup and restore, basic operations for amazon dynamoDB tables.

### **UNIT III Caching Information for Scalability**

Caching overview, caching with amazon cloudfront, caching with amazon elasticache, caching strategie, Introduction to Containers, Introduction to containers, Container VS Hardware virtualization, Microservices-use case for containers, Amazon container services. Developing Solutions with Amazon SQS and Amazon SNS Introduction to message queues, introduction to amazon SQS, amazon SQS developer concepts, introduction to amazon SNS, amazon SNS developer concepts, introduction to amazon MQ.

### **UNIT IV Developing Event-Driven Solutions with AWS Lambda**

Introduction to server less computing with AWS lambda, overview of AWS lambda, Execution model for invoking lambda functions, AWS lambda permissions, overview of authoring and configuring lambda functions, overview of deploying lambda functions. Developing Solutions with Amazon API Gateway, Application Programming Interfaces, Amazon API Gateway, Creating a RESTful API, Controlling Access to a RESTful API, Testing a RESTful API, Deploying a RESTful API, Invoking a RESTful API, Monitoring a RESTful API.

## UNIT V - Developing Solutions with AWS Step Functions

Workflow Coordination in Distributed Applications, Introduction to AWS Step Functions, StateTypes, AWS Step Functions Use Case, AWS Step Functions API. Developing Secure Applications on AWS, Secure Network Connections. Manage Application Secrets, Authenticate with AWS Security Token Service, Authenticate with Amazon Cognito. Deploying applications on AWS. Introducing DevOps, Using AWS Code Services for CI/CD, Introducing Deployment and Testing Strategies, Deploying Applications with AWS Elastic Beanstalk, Deploying Applications with AWS CloudFormation, Deploying Serverless Applications with AWS SAM

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H							H				
CO2					H					H		
CO3		H							H			
CO4	H										H	
CO5				H								H

H = Highly Relevant ; M = Medium Relevant; L = Low Relevant

# **Course Name: Introduction to Cryptography**

## **Course Code: BCA416A**

### **Course Objectives:**

1. Define crypto primitives, and assess their applications, emphasizing the importance of strong cryptographic algorithms and cryptanalysis.
2. Analyze various hash functions, including SHA256 and Keccak, with practical examples, focusing on properties, applications, and their effectiveness.
3. Understand symmetric cryptography, assess the effectiveness of symmetric key algorithms, and propose security enhancements, while also comparing strengths and weaknesses of encryption methods like DES and AES.
4. Define asymmetric cryptosystems, delve into RSA and elliptic curve cryptography (ECC), comparing their functionality, and apply ECC with open SSL for analysis, emphasizing digital signatures' role and security.
5. Explore zero-knowledge proofs (ZKP), evaluate interactive and non-interactive ZKP, and apply ZKP for privacy, culminating in the design and implementation of a secure user authentication system using appropriate cryptographic techniques.

### **Syllabus**

#### **Unit 1 : Cryptosystem Basics**

What is Cryptography?, Evolution of Cryptography, Cryptography Concepts and Terminology, Need for strong cryptographic algorithms, Role of Cryptoanalysis, Need for Cryptography in Blockchain. Cryptosystems and Crypto Primitives, Different Types of Crypto Primitives, Applications of Hashing, Applications of Symmetric Cryptography, Applications of Asymmetric Cryptography, Digital Signatures. What is Hashing?, Hash Functions, Hash Function Properties, Applications and Variants of Hashing, Salting and Peppering, SHA256, Implementing SHA256, Keccak, SHA256 vs Keccak

#### **Unit 2: Symmetric Cryptography**

Introduction to Symmetric Key Cryptography, Steps Involved In Symmetric Cryptography, Implementing a Symmetric Algorithm, Issues with a basic symmetric cryptography

"One-Time Pad, Implementing One-Time Pad, Stream Cipher

Implementing Stream Cipher, Confusion and Diffusion, Block Cipher"

Data Encryption Standard (DES), Implementing DES, DES shortcomings, Advanced Encryption Standard (AES), Pros and Cons and Applications of AES, Implementing AES

### **Unit 3: Asymmetric Cryptosystems**

What is asymmetric cryptosystems, Steps Involved In Asymmetric Cryptography, Trapdoor Function, What is the RSA algorithm?, How does RSA work?, Applications of RSA, RSA execution in Java, Asymmetric Cryptography Techniques

What is an elliptic curve?, What is ECC?, How does ECC work?, Demonstration of ECC on open SSL, ECC vs RSA

What are Finite Fields?, How are finite fields defined over ECC?

What are Digital Signatures, Digital Signatures over ECC, Digital Signature Verification Over ECC, What are public keys?, Public Key Recovery over ECC

### **Unit 4: PKI Deepdive & ZKP**

Digital Signatures, Why do we need Digital Signatures Algorithms?, Digital Certificates, Why do we have Digital Certificates?, What is Web Of Trust?, What is the need for Web of Trust?

"What is ZKP, What are some applications of ZKP?, Proof of Knowledge

What is zk-snarks?, How do zk-snarks work?"

Interactive vs Non-Interactive ZKP, Pedersen Commitments, Pedersen Commitments over ECC, What is Bulletproof?, How does Bulletproof work?, What is privacy?, How does ZKP ensure privacy?

### **Unit 5: Project**

Checkpoint 1: Encryption using cryptographic algorithm, Checkpoint 2: Decrypt an encrypted message, Checkpoint 3: Objective / Subjective test on Basics of cryptography

Case study - Solution

Course Outcomes (COs):

**Upon successful completion of this subject students will able:**

**CO1:** Develop a strong foundational understanding of cryptography, including cryptosystems and cryptographic primitives, to assess their applications and effectiveness in various contexts.

**CO2:** Master symmetric key cryptography techniques, including implementation and analysis of algorithms like one-time pad, stream cipher, block cipher, DES, and AES, to enhance security and propose solutions for improvement.

**CO3:** Gain expertise in asymmetric cryptosystems, RSA algorithm, and elliptic curve cryptography (ECC), along with digital signatures, to design and implement secure cryptographic systems meeting specific requirements.

**CO4:** Explore advanced cryptographic concepts such as digital signatures, digital certificates, Web of Trust, and zero-knowledge proofs (ZKPs), and evaluate their effectiveness in achieving security and privacy goals.

**CO5:** Design and implement secure user authentication systems using hashing and cryptographic techniques, including symmetric and asymmetric encryption, and leverage zero-knowledge proofs (ZKPs) for enhanced security and password recovery mechanisms.

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		H							M			
CO2						M				H		
CO3				H				M				
CO4						M					H	
CO5	H				M							L

H = Highly Related; M = Medium; L = Low

#### **Text Books**

1. "Cryptography and Network Security: Principles and Practice" by William Stallings. The latest edition of this book is the 8th edition, published in 2021.
2. "Understanding Cryptography: A Textbook for Students and Practitioners" by Christof Paar and Jan Pelzl. The latest edition of this book is the 3rd edition,

published in 2018

### **Reference Books**

1. "Cryptography and Network Security: Principles and Practice" by William Stallings. The latest edition of this book is the 8th edition, published in 2021.
2. "Introduction to Cryptography: Principles and Applications" by Hans Delfs and Helmut Knebl. The latest edition of this book is the 3rd edition, published in 2018

**Course Name: Life Skills-I**

**Course Code: DEN003A**

**Course Objectives:**

CO1.To prepare the students as per the industry demands.

CO 2.Switching to Activity and Task based Teaching modules.

CO 3.To focus on the linguistic aspects in relation to life situations.

CO 4.Facilitating the aspects of behavioral skills in language.

CO 5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.

**Syllabus: Theory**

<b>UNIT 1</b>	<ul style="list-style-type: none"><li>• Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion</li><li>• Basics of Narrating and describing things</li></ul>
<b>UNIT 2</b>	<ul style="list-style-type: none"><li>• Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview</li><li>• CV/Resume Drafting and HR Interview advance theory</li><li>• Basics of Video Interviews and Video Profiles for Job</li></ul>
<b>UNIT 3</b>	<ul style="list-style-type: none"><li>• Types of listening, advantages and disadvantages</li></ul>
<b>UNIT 4</b>	<ul style="list-style-type: none"><li>• Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report</li></ul>
<b>UNIT 5</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Buildingetc

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.

CO2: Ability to learn by doing it practically in the classroom.

CO3: Ability to learn by creating an environment and adapting to the environment.

CO4: The ability to prepare the students as per the need of the Multi-cultural scenario around.

CO5: Ability to improve personality, self esteem and body language.

**TEXTBOOKS:**

- A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.
- Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.
- Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa& Co.
- The Hard Truth about Soft Skills, by Amazon Publication.

- Verbal and Non-verbal Reasoning, R S Aggarwal, S Chand Publ.
- Data Interpretation, R S Aggarwal, S Chand Publ. 4. Nova GRE, KAPAL GRE, Barrons GRE books;
- Quantitative Aptitude, The Institute of Chartered Accountants of India.
- More Games Teams Play, by Leslie Bendaly, McGraw-Hill Ryerson.

## Course Name: Mathematical Foundation

Course Code: DMA051

### Course Objectives:

- CO 1. To introduce the concepts of mathematical logic.
- CO2. To introduce the concepts of sets, relations, and functions.
- CO3. To perform the operations associated with sets, functions, and relations.
- CO4 To introduce generating functions and use of matrix.
- CO 5 To relate practical examples to the appropriate set, function, or relation model, and interpret the associated operations and terminology in context.

### UNIT-I

**Permutations, Combinations and Logarithm:** Fundamental Principles of Counting, Multiplication Principle, Addition Principle, Different Rules on Permutation, Permutations of Different Things, Permutation of Things Not All Different, Repeated Permutations, Circular Permutations, Restricted Circular Permutations, Restricted Permutations, Different Rules on Combination, Combinations of Different Things, Restricted Combinations, Total Number of Combinations of Different Things, Total Number of Combinations of Things not all Different, Division of Groups. Introduction, Definition, Properties of Logarithms, Types of Logarithms, General Laws of Logarithm, Characteristic and Mantissa, Determination of Characteristic, Determination of Mantissa, Calculation of Logarithm of a Number, Determination of Mantissa of a Number Consisting of More than Four Digits.

### Unit II

**Sets :** Fundamental- Sets and Subsets, Operations on Sets, Sequences, Properties of Integers, Matrices. Logic- Proposition and Logical Operations, Conditional Statements, Methods of Proof, Mathematical Induction. Mathematical Logic-Statements and Notation, Connectives, Normal Forms, the Theory of Inference for the Statement Calculus, the Predicate Calculus, Inference Theory of the Predicate Calculus

### UNIT-III

**Determinants:** Definition, Minors, Cofactors, Properties of Determinants, MATRICES: Definition, Types of Matrices, Addition, Subtraction, Scalar Multiplication and Multiplication of Matrices, Adjoint, Inverse, Cramers Rule, Rank of Matrix Dependence of Vectors, Eigen Vectors of a Matrix, Caley-Hamilton Theorem

### UNIT-IV

**Limits & Continuity:** Limit at a Point, Properties of Limit, Computation of Limits of Various Types of Functions, Continuity at a Point, Continuity Over an Interval, Intermediate Value Theorem, Type of Discontinuities.

**Differential calculus** - Functions and limits - Simple Differentiation of Algebraic Functions — Evaluation of First and Second Order Derivatives – Maxima and Minima.

### UNIT-V

**Integration:** Integral as Limit of Sum, Fundamental Theorem of Calculus( without proof.), Indefinite Integrals, Methods of Integration: Substitution, By Parts, Partial Fractions, Reduction Formulae for Trigonometric Functions, Gamma and Beta Functions(definition).

**Vector Algebra:** Definition of a vector in 2 and 3 Dimensions; Double and Triple Scalar and Vector Product.

Reference Books :

1. B.S. Grewal, “Elementary Engineering Mathematics”, 34th Ed., 1998.
2. Shanti Narayan, “Integral Calculus”, S. Chand & Company, 1999
3. H.K. Dass, “Advanced Engineering Mathematics”, S. Chand & Company, 9th Revised Edition, 2001.
4. Shanti Narayan, “Differential Calculus ”, S.Chand& Company, 1998.
5. B.S.Vatsa-Discrete Mathematics –New Age International Limited Publishers,New Delhi

**Course Outcomes:**

**Upon successful completion of this subject students should be able to:**

CO1: Ability to apply mathematical logic to solve problems

CO2:Able to use logical notations to define and reason about fundamental mathematical concepts such as sets relations and functions.

CO3: Able to formulate problems and solve recurrence relations.

CO4: Able to use the concepts of Matrix and use of theorems.

CO5: Able to apply differential calculus on different algebraic functions

**Course Name: Life skill –II (Aptitude)**

**Course Code:- DMA003A**

**Course Objectives:**

- CO1.To acquire the basic professional skills used in business and to learn etiquettes and socially accepted behavior.
- CO2. Apply the concept of GD with a clear and open discussion on any relevant topics.
- CO3. To learn the basic concepts of reading comprehension and problem solving techniques.
- CO4. To acquire the Data Sufficiency: Concepts and Problem Solving.
- CO5. Learn the concepts of reasoning with special focus on Non-verbal techniques.

**Professional Grooming and Practices:** Basics of Corporate culture, Key pillars of Business Etiquette. Basics of Etiquette: Etiquette – Socially acceptable ways of behavior, Personal hygiene, Professional attire, Cultural Adaptability. Introductions and Greetings: Rules of the handshake, Earning respect, Business manners. Telephone Etiquette: activities during the conversation, Conclude the call, To take a message. Body Language: Components, Undesirable body language, Desirable body language. Adapting to Corporate life: Dealing with people.

**Group Discussions:** Advantages of Group Discussions, Structured GD – Roles, Negative roles to be avoided, Personality traits to do well in a GD, Initiation techniques, How to perform in a group discussion, Summarization techniques. Listening Comprehension advanced: Exercise on improving listening skills, Grammar basics: Topics like clauses, punctuation, capitalization, number agreement, pronouns, tenses etc.

**Reading Comprehension advanced:** A course on how to approach middle level reading comprehension passages.

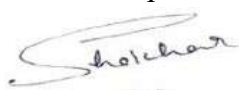

Problem solving – Money Related problems; Mixtures; Symbol Based problems; Clocks and Calendars; Simple, Linear, Quadratic and Polynomial Equations; Special Equations; Inequalities; Functions and Graphs; Sequence and Series; Set Theory; Permutations and Combinations; Probability; Statistics.

Data Sufficiency: Concepts and Problem Solving.

**Non-Verbal Reasoning and Simple Engineering Aptitude:** Mirror Image; Water Image; Paper Folding; Paper Cutting; Grouping Of Figures; Figure Formation and Analysis; Completion of Incomplete Pattern; Figure Matrix; Miscellaneous.  
Special Aptitude: Cloth, Leather, 2D and 3D Objects, Coin, Match Sticks, Stubs, Chalk, Chess Board, Land and geodesic problems etc., Related Problems

**Course Outcomes:**

After the completion of the course the student will be able to

  
HoD  
School of Computer Applications  
JECRC University Jaipur

CO 1 Define and Identify different life skills required in personal and professional life

CO 2 Develop an awareness of the self and apply well-defined techniques to cope with emotions and stress.

CO 3 Explain the basic mechanics of effective communication and demonstrate these through presentations.

CO 4 Take part in group discussions

CO 5 Use appropriate thinking and problem solving techniques to solve new problems.

**TEXTBOOKS:**

- A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.
- Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.
- Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa& Co.
- The Hard Truth about Soft Skills, by Amazone Publication.

## Course Name: Professional Skills

Course Code: DEN002A

### Course Objectives

1. To enhance Professional competence in reading, writing, listening and speaking.
2. Switch the approach from providing information about the language to use the language.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

### Course Outcomes (CO):

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario.

CO2: Ability to analyze the usage of English words in professional scenario.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

### Syllabus

- |               |   |
|---------------|---|
| <b>UNIT 1</b> | <b>Professional Grooming and Professional Culture:</b><br>Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management |
| <b>UNIT 2</b> | <b>Advanced Grammar:</b> Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents  |
| <b>UNIT 3</b> | <b>Composition:</b> Memo, Notice, Circular, Book Review, Research Article, Reports  |
| <b>UNIT 4</b> | <b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms  |
| <b>UNIT 5</b> | <b>Reading Comprehension:</b> Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction   |

## **Course Name: Cryptography and Cyber Security**

**Course Code: BCA178A**

### **Course Objectives**

CO1. To understand basics of Cryptography and Network Security.

CO2. To learn about how to maintain the Confidentiality, Integrity and Availability of a data.

CO3. To understand various protocols for network security to protect against the threats in the networks.

CO4. To know about various encryption techniques such as digital signatures use.

CO5. To study about message authentication and cyber crime security.

### **Unit 1**

Introduction to Cyber Security - Types of Attacks, Goals for Security, Security threat and vulnerability, Cyber security models (the CIA triad, the star model). Classical encryption techniques substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers - Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion. Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations.

### **Unit 2**

Principals of public key crypto systems, RSA algorithm, security of RSA. Key Management and distribution: Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, Introduction to SSL.

### **Unit 3**

Message Authentication Codes: Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions

### **Unit 4**

Digital Signatures: Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS), proof of digital signature algorithm.

### **Unit 5**

Introduction to Cyber Crime and security: Cyber Crimes, types of Cyber Crime, hacking, attack vectors, Cross Site Scripting (XSS), XSS Consequences. Cyber Space and criminal behaviour, traditional problems associated with Cyber Crime, Introduction to Incident Response, Digital Forensics - Phishing.

**Upon successful completion of this subject students should be able to:**

CO1: Classify the symmetric encryption techniques.

CO2: Illustrate various Public key cryptographic techniques.

CO3: Summarize the intrusion detection and its solutions to overcome the attacks.

CO4: Evaluate the authentication and hash algorithms.

CO5: Basic concepts of system level security.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2
CO1	M									M		
CO2		H	M									M
CO3					L						H	
CO4		H					M			L		
CO5	H			H					M			

H = Highly Related; M = Medium; L = Low

- William Stallings, "Cryptography and Network Security: Principals and Practice", Pearson Education, Sixth Edition.

**REFERENCE**

- Nina Godbole and SunitBelpure, Cyber Security: Understanding Cyber crimes, ComputerForensics and Legal Perspectives, Willey India Pvt.Ltd.
- Dr T R Padmanabhan N Harini,"Cryptography and Security Paperback", Wiley India

## **Course Name: Introduction to Cloud Computing**

**Course Code: BCA163A**

### **Course Objective:**

1. To provide students with the fundamentals, essentials of Cloud Computing and cloud models.
2. To be able to work with cloud services and to provide a sound foundation of the Cloud Computing so that they are able to start using and adopting Cloud Computing services and tools in their real life scenarios.
3. To learn about the cloud environment, building software systems and components that scale to millions of users in modern internet.
4. To understand basic and advance services provide by the cloud and basic architecture on which cloud is based upon.
5. To enable students exploring some important cloud computing driven commercial systems such as Google Apps, Microsoft Azure and Amazon Web Services and other businesses cloud applications.

### **Syllabus**

#### **Unit I**

**Introduction:** Business and IT perspective, Cloud and virtualization, Cloud services requirements, cloud and dynamic infrastructure, cloud computing characteristics, cloud adoption.

Cloud models: Cloud characteristics, Measured Service, Cloud models, security in a public cloud, public verses private clouds, cloud infrastructure self service.

#### **Unit II**

**Cloud at a service:** Gamut of cloud solutions, principal technologies, cloud strategy, cloud design and implementation using SOA, Conceptual cloud model, cloud service demand.

#### **Unit III**

**Cloud solutions:** Cloud ecosystem, cloud business process management, cloud service management, cloud stack, computing on demand, cloud sourcing.

#### **Unit IV**

**Cloud management:** Resiliency, Provisioning, Asset management, cloud governance, high availability and disaster recovery, charging models, usage reporting, billing and metering.

#### **Unit V**

**Cloud and SOA:** SOA journey to infrastructure, SOA and cloud, SOA defined, SOA defined, SOA and IAAS, SOA based cloud infrastructure steps, SOA business and IT services.

### Course Outcomes (COs):

**Upon successful completion of this subject students should be able to:**

CO1: To provide students with the fundamentals, essentials of Cloud Computing and cloud models.

CO2: Students are able to work with cloud services and to provide a sound foundation of the Cloud Computing so that they are able to start using and adopting Cloud Computing services and tools in their real life scenarios.

CO3: Understand about the cloud solutions, Cloud ecosystem, cloud business process management.

CO4: To learn about designing and implement cloud computing application and cloud management.

CO5: Demonstrate the SOA journey to infrastructure, SOA and cloud and IT services.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		H				L					H	
CO2				H						M		
CO3	H							M				M
CO4				H								
CO5		M			H				M			

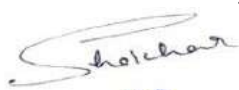

H = Highly Related; M = Medium; L = Low

### Text Books:

1. Rajkumar Buyya, James Broberg, Andrzej M. Goscinski,” Cloud Computing:Principles and Paradigms”, Edition1, Wiley,2011
2. Gautam Shroff, Enterprise Cloud Computing Technology Architecture Applications

### Reference Books

1. Toby Velte, Anthony Velte, Robert Elsenpeter, Cloud Computing, A Practical Approach
2. Barrie Sosinsky,”Cloud Computing Bible”,Edition1, Wiley-India, 2010

  
**HoD**  
 School of Computer Applications  
 JECRC University Jaipur

3. Ronald L. Krutz, Russell Dean Vines, "Cloud Security: A Comprehensive Guide to Secure Cloud Computing", Edition 1, Wiley- India, 2010

**School of Computer Applications**  
**Master of Computer Applications**  
**Syllabus of the Courses offering Employability (2022-23)**  
**Course Name: Advance Java**  
**Course Code: MCA130A**

**Course Objectives**

1. To exhaustive coverage of advanced topics on Java from tools to enterprise Java
2. To provide ample application-based examples, with step-by-step explanations
3. To provide thorough understanding of each topic through extensive examples along with the program codes and screenshots
4. To provides relevant software installation and configuration information wherever necessary
5. To comprises keywords, objective-type questions (with answers) and subjective-type questions for students at the end of all the chapters

**Syllabus**

**Unit I**

**Introduction** : Java Evolution and history, Data types, Control statements , conditional statements, Classes and Objects, Arrays and strings, Functions & Interfaces, Inheritance, keywords: Static, Final, Super, Packages,

**Unit II**

**Applet, Exception Handling, Multi-threading & Garbage Collection:** Applet, Applet life Cycle, Exception Handling: Introduction, types, catching exceptions, tracing stack, custom exception classes

Multi-threading : Introduction, Main Thread, Creating Thread, Interrupting Thread, Suspending and Resuming, Thread Priority, Garbage Collection.

**Unit III**

**Collection frame work and Generic Programming:** Collection frame work: Introduction, Benefits, Collection Interfaces, and Collection Implementation.

Generic Programming: Introduction, Collection Framework and Generics, Type Naming, Generic Methods and Constructors, Type Inference, Bounded Type Parameters, Wildcards, Type Erasure, Restrictions on Generics.

#### **Unit IV**

**AWT, Swings & Input/Output:** AWT: AWT Class Hierarchy, Creating Container, Adding Components, Layout, AWT components, Event Handling, Dialog Boxes, Scrollbar, Menu.

Swings: Containment Hierarchy, Swing Components, Methods of Important Event Listener Interfaces Streams, Formatting, Data Streams, Object Stream, Reading/writing Arrays via Streams, Pipes, File I/O, Path, File

#### **Unit V**

**JDBC, Servlet & JSP:** JDBC: JDBC Drivers, JDBC Architecture, JDBC Classes and Interfaces, Loading a Driver, Making a Connection, Execute SQL Statement, SQL Statements ,Retrieving Result, Getting Database Information, Metadata.

Servlet: Server-side Java, Servlet Architecture, Servlet Life Cycle, Generic Servlet.

JSP: JSP and HTTP, JSP Engines, JSP and Servlet, JSP Syntax, JSP Components

#### **Course Outcomes (Cos):**

**Upon successful completion of this subject students should be able to:**

CO1: Revise object oriented features of java language and develop java applet programming using various techniques.

CO2: Handling exceptions and develop multi- threaded applications.

CO3: Develop applications using collection framework and concepts of generic programming.

CO4: Develop applications using Abstract Window Toolkit

CO5: Develop server side programs using Servlets and develop Java Server Pages applications using JSP Tags.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		H	H						M			
CO2			M			L				M		
CO3				H								M
CO4	L							H				
CO5		M			H					L		

H = Highly Related; M = Medium; L = Low

**Text Books**

1. Advance java programming, Oxford, Uttam Kumar Roy, April 2015.
2. Sachin Malhotra, Saurabh Chaudhary, "Programming in Java", Second Edition, Oxford University Press , 2014.

**Reference Books**

1. Programming with Java A Primer, E.Balaguruswamy Tata McGraw Hill Companies
2. JAVA How to Program. Dietel & Dietel, Eleventh Edition, Pearson Group
3. The complete reference JAVA2, Herbert schildt. TMH

**Course Name: Professional Communication Skills**

**Course Code: DEN004A**

**Course Objectives**

- a) To provide an overview of Business Communication process.
- b) To put in use the basic mechanics of Grammar and building vocabulary.
- c) To provide an outline to effective Organizational Communication.
- d) To underline the nuances of Business communication.
- e) To impart the correct practices of the strategies of Effective Business writing and presentations.

**Course Outcomes (CO):**

**At the end of this course students will be able to:**

CO1 : Distinguish among various levels of organizational communication and communication barriers while developing an understanding of Communication as a process in an organization.

CO2 : Stimulate Critical thinking by designing and developing clean and lucid writing skills.

CO3: Demonstrate the ability to write error free while making an optimum use of correct Business Vocabulary & Grammar.

CO4 : Write effective business correspondence with brevity and clarity by correct usage of English language words in different contexts.

CO5 : Demonstrate verbal and non-verbal communication ability through presentations.

**Syllabus: Theory**

<b>UNIT 1</b>	<b>Effective Business Communication</b> <ul style="list-style-type: none"><li>• Communication – An overview</li><li>• Origin, Meaning and Process of Communication</li><li>• Goals of Communication</li><li>• Organizational Communication</li><li>• Directions/Flow of Communications</li><li>• Barriers to Communication</li><li>• Cross cultural/Intercultural communication.</li></ul>
---------------	--

<b>UNIT 2</b>	<b>Functional Grammar and Reading Comprehension:</b> <ul style="list-style-type: none"> <li>• Subject Verb Agreement/Concord</li> <li>• Tenses</li> <li>• Active Passive Voice</li> <li>• Narration</li> <li>• Common Errors</li> <li>• Reading and analysis of Business articles, success stories and case lets.</li> </ul>
<b>UNIT 3</b>	<b>Building Blocks of Vocabulary</b> <ul style="list-style-type: none"> <li>• Word Formation</li> <li>• Affixes, Homonyms</li> <li>• Synonyms and Antonyms</li> <li>• Business Idioms and Collections</li> </ul>
<b>UNIT 4</b>	<b>Writing Skills</b> <ul style="list-style-type: none"> <li>• Letter Writing</li> <li>• Email Writing</li> <li>• Précis Writing</li> <li>• Notice, Memo</li> <li>• Report Writing.</li> </ul>
<b>UNIT 5</b>	<b>Professional and Technical Communication</b> <ul style="list-style-type: none"> <li>• CV/Resume writing</li> <li>• Interview Skills :Telephonic Interview and Online Interview</li> <li>• Effective Presentation skills.</li> <li>• Business and Social Etiquette- Workplace hierarchy, proper way of making introductions, use of courteous language, appropriate business attire, cultural adaptability, Body language, Stress management</li> </ul>

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1									H	H		H
CO2									H	H		H
CO3									H	M		H
CO4									H	H		L
CO5									H	H		H

H = Highly Related; M = Medium; L = Low

### Syllabus: Lab

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> How to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time-management, Following Deadlines etc
<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

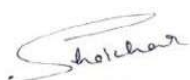

### Methodology for Evaluation

- a. Internal Assessment (Theory)
  - i. Home Assignments: One from each Unit : 15 Marks
  - ii. In Semester Tests (Minimum two) : 30 Marks
  - iii. Attendance : 05 Marks
- b. Term End (Theory) : 50 Marks

- c. Internal Assessment (Lab)  
(a) Daily Performance in the Lab : 50 Marks  
d. Term End (Lab) : 50 Marks

**Suggested Readings:**

1. Practical English Usage. Michael Swan. OUP. 1995
2. Remedial English Grammar. F.T. Wood. Macmillan. 2007
3. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
4. On Writing Well. William Zinsser. Harper Resource Book. 2001
5. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
6. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
7. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
8. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

HoD

School of Computer Applications  
JECRC University Jaipur

**Course Name: Advanced Computer Network**

**Course Code: MCA023A**

**Course Objectives**

1. To be familiar with the terminology and concepts of Layering, Distributed Systems and Networks, Peer-to-Peer and Client-Server Networks.
2. To enhance the practical knowledge of protocols used in different layers.
3. To be familiar with physical layer based on telephone lines.
4. To be able to understand Error Detection, Error Correction, Flow Control.
5. To be able to understand the concept of Connection Oriented, Connectionless and routing algorithms.

**Syllabus**

**Unit I**

**Introduction to Computer Networks:** Definition: Network , The Need of Resources Sharing , Concept of Layering, Distributed Systems and Networks, Peer-to-Peer and Client-Server Networks , Connection-Oriented Networks: X.25 and Frame Relay, Network Categories, Network Components & Connection, Layers and Services, The Protocols, Applications of Computer Networks, Security Issues

**Unit II**

**The Physical Layer:** The Duties Of Physical Layer, Infrared And Millimeter Waves, The ISM Bands, The Optical Light and Free Space Optics, Wired Physical Layer, Physical Layer Based on Telephone Line, 802.2, The LLC Layer, Wireless Physical Layer.

**Unit III**

**The Data Link Layer & The Medium Access Sub layer:** Introduction, Duties, The Error, Types of Errors, Redundancy, Error is Not Always Handled at the Data Link Layer, Error Detection, Error Correction, Flow Control, Protocols, The Sender and Receiver Concept, Timers and the Time Out Event, The Sending and Receiving Windows, The Sequence and Acknowledgment Numbers, Re-transmission, Duplicate Frames, Go Back N, Selective Repeat, Wired MAC Layer

## **Unit IV**

**The Network Layer:** Connection-Oriented Forwarding using Virtual Circuits, Connectionless Forwarding using Datagram, Connection-Oriented vs. Connectionless Forwarding, Forwarding Examples, Routing Algorithms, Hierarchical Routing , Broadcast Routing, Multicast Routing, Congestion, Network Layer Switching, Inter networking Issues, Security Issues at the Network Layer and IPSec

## **Unit V**

**Transport Layer and Application Layer:** Connection Management at the Transport Layer, Congestion Control, Comparison with Data Link Layer, Client-Server Communication, A Sample-Client Server Program, Efficient Management of Dynamic Connections, Domain Name System, The World Wide Web and HTTP, The Email System. File Transfer Protocol, Control and Data Connections

### **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: To be familiar with the terminology and concepts of Layering, Distributed Systems and Networks, Peer-to-Peer and Client-Server Networks.

CO2: Describe, analyze and compare Physical Layer based on telephone lines.

CO3: Describe, analyze and compare a number of data link, network, and transport layer protocols, Error Detection, Error Correction and Flow Control.

CO4: Able to understand the concept of Connection Oriented, Connectionless and routing algorithms.

CO5: Enhance the practical knowledge of protocols used in different layers.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H									M		
CO2		H	M									M
CO3					M						M	
CO4							M					
CO5	M			H					M			

H = Highly Related; M = Medium; L = Low

**Text Books**

1. William Stallings, Data and Computer Communications, 10th Edition, Pearson, 2014
2. Computer Network, Bhushan Trivedi, Oxford University, May 2011.

**Reference Books**

1. Data Communication and network, Bhushan Trivedi, Oxford University, Feb 2016.
2. Behrouz A. Forouzan, Data Communication and Networking, Fifth Edition, Mcgraw Hill, 2013
3. Andrew S. Tanenbaum, David J. Wetherall, Computer Networks, 5th Edition, Pearson, 2011

**Course Name: Certified Network Defender (CND)**

**Course code: MCA210A**

**Unit – I**

**1. Computer Network and Defense Fundamentals**

- Understanding computer network
- Describing OSI and TCP/IP network Models
- Comparing OSI and TCP/IP network Models
- Understanding different types of networks
- Describing various network topologies
- Understanding various network components
- Explaining various protocols in TCP/IP protocol stack
- Explaining IP addressing concept
- Understanding Computer Network Defense (CND)
- Describing fundamental CND attributes
- Describing CND elements
- Describing CND process and approaches

**Network Security Threats, Vulnerabilities, and Attacks**

- Understanding threat, attack, and vulnerability
- Discussing network security concerns
- Reasons behind network security concerns
- Effect of network security breach on business continuity
- Understanding different types of network threats
- Understanding different types of network security vulnerabilities
- Understanding different types of network attacks
- Describing various network attacks

## Network Security Controls, Protocols, and Devices

- Understanding fundamental elements of network security
- Explaining network access control mechanism
- Understanding different types of access controls
- Explaining network Authentication, Authorization and Auditing (AAA) mechanism
- Explaining network data encryption mechanism
- Describing Public Key Infrastructure (PKI)
- Describing various network security protocols
- Describing various network security devices

## Unit – II

### Network Security Policy Design and Implementation

- Understanding security policy
- Need of security policies
- Describing the hierarchy of security policy
- Describing the characteristics of a good security policy
- Describing typical content of security policy
- Understanding policy statement
- Describing steps for creating and implementing security policy
- Designing of security policy
- Implementation of security policy
- Describing various types of security policy
- Designing of various security policies
- Discussing various information security related standards, laws and acts

### Physical Security • Understanding physical security

- Importance of physical security
- Factors affecting physical security
- Describing various physical security controls

- Understanding the selection of Fire Fighting Systems
- Describing various access control authentication techniques
- Understanding workplace security
- Understanding personnel security
- Describing Environmental Controls
- Importance of physical security awareness and training

#### Host Security • Understanding host security

- Understanding the importance of securing individual hosts
- Understanding threats specific to hosts
- Identifying paths to host threats
- Purpose of host before assessment
- Describing host security baselining
- Describing OS security baselining
- Understanding and describing security requirements for different types of servers
- Understanding security requirements for hardening of routers
- Understanding security requirements for hardening of switches
- Understanding data security concerns when data is at rest, in use, and in motion
- Understanding virtualization security

### **Unit – III**

#### Secure Firewall Configuration and Management

- Understanding firewalls
- Understanding firewall security concerns
- Describing various firewall technologies
- Describing firewall topologies
- Appropriate selection of firewall topologies
- Designing and configuring firewall ruleset
- Implementation of firewall policies
- Explaining the deployment and implementation of firewall
- Factors to consider before purchasing any firewall solution
- Describing the configuring, testing and deploying of firewalls

- Describing the management, maintenance and administration of firewall implementation
- Understanding firewall logging
- Measures for avoiding firewall evasion
- Understanding firewall security best practices

#### Secure IDS Configuration and Management

- Understanding different types of intrusions and their indications
- Understanding IDPS
- Importance of implementing IDPS
- Describing role of IDPS in network defense
- Describing functions, components, and working of IDPS
- Explaining various types of IDS implementation
- Describing staged deployment of NIDS and HIDS
- Describing fine-tuning of IDS by minimizing false positive and false negative rate
- Discussing characteristics of good IDS implementation
- Discussing common IDS implementation mistakes and their remedies
- Explaining various types of IPS implementation
- Discussing requirements for selecting appropriate IDPS product
- Technologies complementing IDS functionality

#### Secure VPN Configuration and Management

- Understanding Virtual Private Network (VPN) and its working
- Importance of establishing VPN
- Describing various VPN components
- Describing implementation of VPN concentrators and its functions
- Explaining different types of VPN technologies
- Discussing components for selecting appropriate VPN technology
- Explaining core functions of VPN
- Explaining various topologies for implementation of VPN
- Discussing various VPN security concerns
- Discussing various security implications to ensure VPN security and performance

## Unit – IV

### Wireless Network Defense

- Understanding wireless network
- Discussing various wireless standards
- Describing various wireless network topologies
- Describing possible use of wireless networks
- Explaining various wireless network components
- Explaining wireless encryption (WEP, WPA, WPA2) technologies
- Describing various authentication methods for wireless networks
- Discussing various types of threats on wireless networks
- Creation of inventory for wireless network components
- Appropriate placement of wireless Access Point (AP)
- Appropriate placement of wireless antenna
- Monitoring of wireless network traffic
- Detection and locating of rogue access points
- Prevention of wireless network from RF interference
- Describing various security implications for wireless network

### Network Traffic Monitoring and Analysis

- Understanding network traffic monitoring
- Importance of network traffic monitoring
- Discussing techniques used for network monitoring and analysis
- Appropriate position for network monitoring
- Connection of network monitoring system with managed switch
- Understanding network traffic signatures
- Baselining for normal traffic
- Disusing the various categories of suspicious traffic signatures
- Various techniques for attack signature analysis
- Understanding Wireshark components, working and features
- Demonstrating the use of various Wireshark filters
- Demonstrating the monitoring LAN traffic against policy violation
- Demonstrating the security monitoring of network traffic

- Demonstrating the detection of various attacks using Wireshark
- Discussing network bandwidth monitoring and performance improvement

#### Network Risk and Vulnerability Management

- Understanding risk and risk management
- Key roles and responsibilities in risk management
- Understanding Key Risk Indicators (KRI) in risk management
- Explaining phase involves in risk management
- Understanding enterprise network risk management
- Describing various risk management frameworks
- Discussing best practices for effective implementation of risk management
- Understanding vulnerability management
- Explaining various phases involved in vulnerability management
- Understanding vulnerability assessment and its importance
- Discussing requirements for effective network vulnerability assessment
- Discussing internal and external vulnerability assessment
- Discussing steps for effective external vulnerability assessment
- Describing various phases involve in vulnerability assessment
- Selection of appropriate vulnerability assessment tool
- Discussing best practices and precautions for deploying vulnerability assessment tool
- Describing vulnerability reporting, mitigation, remediation and verification

### Unit – V

#### Data Backup and Recovery

- Understanding data backup
- Describing the data backup plan
- Describing the identification of data to backup
- Determining the appropriate backup medium for data backup
- Understanding RAID backup technology and its advantages
- Describing RAID architecture
- Describing various RAID levels and their use
- Selection of appropriate RAID level
- Understanding Storage Area Network (SAN) backup technology and its advantages

- Best practices of using SAN
- Understanding Network Attached Storage (NAS) backup technology and its advantages
- Describing various types of NAS implementation

#### Network Incident Response and Management

- Understanding Incident Handling and Response (IH&R)
- Roles and responsibilities of Incident Response Team (IRT)
- Describing role of first responder
- Describing first response activities for network administrators
- Describing Incident Handling and Response (IH&R) process
- Understanding forensic investigation
- People involved in forensics investigation

Describing forensics investigation methodology

**Course Name: Certified Ethical Hacker (CEH)**

**Course Code: MCA211A**

**Unit – I**

Background Network and Communication Technologies

- Networking technologies (e.g., hardware, infrastructure)
- Web technologies (e.g., web 2.0, skype)
- Systems technologies
- Communication protocols
- Telecommunication technologies
- Mobile technologies (e.g., smartphones)
- Wireless terminologies
- Cloud computing
- Cloud deployment models

Information Security Threats and Attack Vectors

- Malware (e.g., Trojan, virus, backdoor, worms)
- Malware operations
- Information security threats and attack vectors
- Attacks on a system (e.g., DoS, DDoS, session hijacking, webserver and web application attacks, SQL injection, wireless threats)
- Botnet
- Cloud computing threats and attacks
- Mobile platform attack vectors
- Cryptography attacks

Information Security Technologies

- Information security elements

- Information security management (e.g. IA, Defense-in-Depth, incident management)
- Security trends
- Hacking and ethical hacking
- Vulnerability assessment and penetration testing
- Cryptography
- Encryption algorithms
- Wireless encryption
- Bring Your Own Device (BYOD)
- Backups and archiving (e.g., local, network)
- IDS, firewalls, and honeypots

## **Unit – II**

### Analysis / Assessment Information Security Assessment and Analysis

- Data analysis
- Systems analysis
- Risk assessments
- Vulnerability assessment and penetration testing
- Technical assessment methods
- Network sniffing
- Malware analysis

### Information Security Assessment Process

- Footprinting
- Scanning (e.g., Port scanning, banner grabbing, vulnerability scanning, network discovery, proxy chaining, IP spoofing)
- Enumeration
- System hacking (e.g., password cracking, privilege escalation, executing applications, hiding files, covering tracks)

## **Unit – III**

### Security Information Security Controls

- Systems security controls

- Application/file server
- IDS
- Firewalls
- Cryptography
- Disk Encryption
- Network security
- Physical security
- Threat modeling
- Biometrics
- Wireless access technology (e.g., networking, RFID, Bluetooth)
- Trusted networks
- Privacy/confidentiality (with regard to engagement)

#### Information Security Attack Detection

- Security policy implications
- Vulnerability detection
- IP Spoofing detection
- Verification procedures (e.g., false positive/negative validation)
- Social engineering (human factors manipulation)
- Vulnerability scanning
- Malware detection
- Sniffer detection
- DoS and DDoS detection
- Detect and block rogue AP
- Evading IDS (e.g., evasion, fragmentation)
- Evading Firewall (e.g., firewalking, tunneling)
- Honeypot detection
- Steganalysis

#### Information Security Attack Prevention

- Defend against web server attacks
- Patch management

- Encoding schemes for web application
- Defend against web application attacks
- Defend against SQL injection attacks
- Defend against wireless and Bluetooth attacks
- Mobile platforms security
- Mobile Device Management (MDM)
- BYOD Security
- Cloud computing security

## Unit – IV

### Tools / Systems / Programs Information Security Systems

- Network/host based intrusion
- Boundary protection appliances
- Access control mechanisms (e.g., smart cards)
- Cryptography techniques (e.g., IPSec, SSL, PGP)
- Domain name system (DNS)
- Network topologies
- Subnetting
- Routers / modems / switches
- Security models
- Database structures

### Information Security Programs

- Operating environments (e.g., Linux, Windows, Mac)
- Anti-malware systems and programs (e.g., anti-keylogger, anti-spyware, anti-rootkit, anti-trojan, anti-virus)
- Wireless IPS deployment
- Programming languages (e.g. C++, Java, C#, C)
- Scripting languages (e.g., PHP, Javascript)

### Information Security Tools

- Network/wireless sniffers (e.g., Wireshark, Aircrack-ng)

- Port scanning tools (e.g., Nmap, Hping)
- Vulnerability scanner (e.g., Nessus, Qualys, Retina)
- Vulnerability management and protection systems (e.g., Foundstone, Ecora)
- Log analysis tools
- Exploitation tools
- Footprinting tools (e.g., Maltego, FOCA, Recon-ng)
- Network discovery tools (e.g., Network Topology Mapper)
- Enumeration tools (e.g., SuperScan, Hyena, NetScanTools Pro)
- Steganography detection tools
- Malware detection tools
- DoS/DDoS protection tools
- Patch management tool (e.g., MBSA)
- Webserver security tools
- Web application security tools (e.g., Acunetix WVS)
- Web application firewall (e.g., dotDefender)
- SQL injection detection tools (e.g., IBM Security AppScan)
- Wireless and Bluetooth security tools
- Android, iOS, Windows Phone OS, and BlackBerry device security tools
- MDM Solutions
- Mobile Protection Tools
- Intrusion Detection Tools (e.g., Snort)
- Hardware and software firewalls (e.g., Comodo Firewall)
- Honeypot tools (e.g., KFSensor)
- IDS/Firewall evasion tools (e.g., Traffic IQ Professional)
- Packet fragment generators
- Honeypot Detection Tools
- Cloud security tools (e.g., Core CloudInspect)
- Cryptography tools (e.g., Advanced Encryption Package)
- Cryptography toolkit (e.g., OpenSSL)
- Disk encryption tools
- Cryptanalysis tool (e.g., CrypTool)

## Unit – V

### Procedures / Methodology Information Security Procedures

- Cryptography
- Public key infrastructure (PKI)
- Digital signature and Pretty Good Privacy (PGP)
- Security Architecture (SA)
- Service oriented architecture
- Information security incident
- N-tier application design
- TCP/IP networking (e.g., network routing)
- Security testing methodology

### Information Security Assessment Methodologies

- Web server attack methodology
- Web application hacking methodology
- SQL injection methodology and evasion techniques
- SQL injection evasion techniques
- Wireless and Bluetooth hacking methodology
- Mobile platform (Android, iOS, Windows

### Phone OS, and BlackBerry) hacking methodology

- Mobile Rooting and Jailbreaking

### Regulation / Policy Information Security Policies/ Laws/Acts

- Security policies
- Compliance regulations (e.g., PCI-DSS,SOX)

### Ethics of Information Security

- Professional code of conduct
- Appropriateness of hacking

**Course Name: Certified Application Security Engineer**

**Course Code: MCA212A**

**Unit – I**

Understanding Application Security, Threats and Attacks, Security Requirements Gathering

**Unit – II**

Secure Application Design and Architecture, Secure Coding Practices for Input Validation,

**Unit – III**

Secure Coding Practices for Authentication and Authorization, Secure Coding Practices for Cryptography

**Unit – IV**

Secure Coding Practices for Session Management, Secure Coding Practices for Error Handling

**Unit – V**

Static and Dynamic Application Security Testing (SAST & DAST), Secure Deployment and Maintenance

**Course Name: Web Development using HTML, Java Script and Node JSCourse**

**Code: MCA213A**

**Course Objective:**

1. To understand the principles of creating an effective web page, including an in-depth consideration of information architecture.
2. To become familiar with graphic design principles that relates to web design and learn how to implement theories into practice.
3. To develop skills in analyzing the usability of a web site.
4. To understand how to plan and conduct user research related to web usability.
5. To learn CSS grid layout and flexbox.

**Syllabus:**

**Web Development using HTML (8 hours)**

Module 1: Basics of HTML & CSS- HTML Basics, CSS

Module 2: HTML 5 Features- New HTML5 Tags, HTML5 Structural Elements, HTML5 Input Element

Module 3: Introduction to Client Server Architecture- Architecture & HTTP

**Course Outcomes:**

1. To learn techniques of responsive web design, including media queries.
2. To develop skills in digital imaging (Adobe Photoshop.)
3. To develop basic programming skills using HTML.
4. To be able to embed social media content into web pages.
5. To understand the language of the web: HTML and CSS.

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	✓					✓						
CO2			✓			✓						
CO3					✓				✓			
CO4		✓			✓	✓						
CO5			✓						✓			

## Javascript (8 hours)

### Course Objectives:

1. To develop familiarity with the JavaScript language.
2. To learn to use best-practice idioms and patterns.
3. To understand concepts commonly used in dynamic language programming, such as introspection, higher-order functions, and closures.
4. To understand advanced language features such as prototypical inheritance

### Syllabus:

Module 1: Javascript Overview

Module 2: Loops and Functions

Module 3: Object Model- DOM

### Course Outcomes:

1. To become adept at implementing client-side interfaces through the use of the DOM, jQuery and AJAX.
2. To become familiar with common libraries and tools that are used in web application development.
3. To use JavaScript as an interactive tool for web development.
4. To hand code a number of interactive processes.
5. To implement interactive responses in the web pages.

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	✓					✓						
CO2			✓			✓						
CO3	✓				✓				✓			
CO4		✓			✓							
CO5			✓						✓			

## NodeJS (12 hours)

### Course Objectives:

1. To learn why server-side JavaScript is useful
2. To Install Node.js
3. To learn how Node.js is architected to allow high scalability with asynchronous code
4. To create basic web applications with Node.js
5. To automate tasks with Gulp

### Syllabus:

Module 1: Introduction- Introduction to NodeJS, Express Framework and features of MongoDB

Module 2: Installation and Configuration- Installation of NodesJS and MongoDB, Nodeclipse plugin

Module 3: Basic Routing and File System- Routing and Global Objects, Synchronous vs Asynchronous file read

Module 4: View Templates- Templates, Serving Static Content

Module 5: Connecting to Database- Handling HTTP and HTTPS, Connecting to Database

Labs: Develop Web Application Using NodeJS Express

**Course Outcomes:**

1. To build an HTTP server using the core modules in Node.js
2. To use stream I/O to efficiently serve the web pages
3. To create modules to organize the server
4. To test the reliability of the application with unit tests
5. To convert the application to an MVC framework using Express

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	✓					✓						
CO2			✓			✓						
CO3	✓				✓				✓			
CO4		✓			✓							
CO5			✓						✓			

# **Course Name: IBM Cloud Fundamental -Services**

## **Course Code: MCA214A**

### **Course Objectives:**

1. To understand the fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability;
2. To analyze the benefits, as well as current and future challenges;
3. To examine cloud management techniques and cloudsoftware deployment considerations.
4. To compare the variety of programming models and develop working experience in several of them.
5. To analyze various cloud programming models and apply them to solve problems on the cloud.

### **Syllabus:**

Module 1: Introduction to Cloud Computing- Traditional Way of Working in Traditional IT Challenges, Future Trend in IT, what is Cloud Computing, Cloud Characteristics, Service and Delivery Model, Cloud Computing Helps Overcome IT Challenges, Traditional On-Premises-Core IT, Cloud Service, IBM Cloud- IAAS, PAAS, SAAS, IBM Cloud Platform as a Service Offerings, Cloud Delivery Models.

Module 2: Deep Dive into IBM Cloud- What is IBM Cloud, Evolution of IBM Cloud, Why IBM Cloud, IBM Cloud UI tour, IBM Cloud Region, Organizations, Spaces, Users and Domains, User Management, Monitoring and Logs, IBM Cloud Catalog, Containers, IBM Cloud Pricing Options

Module 3: IBM Cloud Architecture- Is IBM Cloud a Cloud Foundry, What is Cloud Foundry, Cloud Foundry Languages, Frameworks, and Services, Cloud Foundry Provides Increase in Speed and Agility, Cloud Foundry Architecture – CF Kernel Internal, Description of Each of the Components, Cloud Controller and Diego Brain sync, BBS, and Cell Reps, App Storage and Execution, Messaging, Metrics and Logging, Cloud Foundry - Application Staging, Various IBM Cloud architecture, Cloud Foundry Command Line Interface, Cloud Foundry tools

Module 4: IBM Cloud Services, IBM Cloud Services, Analytics Services, Watson Services, Storage, DevOps, Auto-Scaling, Why Register a Service, Adding a Service to Application, Requesting a New Service Instance, Configuring your Application to Interact with a Service, VCAP\_SERVICES, Service Metadata, IBM Cloud User Provided Service Instance – Service Metadata, IBM Cloud User Provided Service Instance - User Interface service metadata

Module 5: IBM Cloud DevOps Services- What is IBM Cloud DevOps Services, Continuous Delivery, Toolchains Overview, Code, Code Repository, Delivery Pipeline, Get started with Toolchains in IBM Cloud

Module 6: Node Red - Getting Started- Getting Started with Overview of Node-Red, What is Node-Red, Node-Red Software Download, Install Node-Red  
Installing Node.js Windows Build Tools, Running Node-Red, Node-Red Architecture

Module 7: Node Red - Node Creation- Creating Nodes, Create a Node-Red Flow, Explain Types of Nodes and Functions, Inject Node, Debug Node, Function Node, Change Node, Raspberry Pi Node, Switch Node, Palette Nodes

### Course Outcomes:

1. To explain the core concepts of the cloud computing paradigm.
2. To apply fundamental concepts in cloud infrastructures to understand the trade-offs in power, efficiency and cost.
3. To state how to leverage and manage single and multiple datacentres to build and deploy cloud applications that are resilient, elastic and cost-efficient.
4. To discuss system, network and storage virtualization and outline their role in enabling the cloud computing system model.
5. To Illustrate the fundamental concepts of cloud storage and demonstrate their use in storage systems such as Amazon S3 and HDFS.

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	✓								✓			
CO2			✓									
CO3	✓			✓	✓							
CO4		✓		✓	✓							
CO5			✓						✓			

**Course Name: Angular JS and Spring Framework**

**Course Code: MCA216A**

**Angular JS (32 hours)**

**Course Objectives:**

1. To utilize AngularJS formats adequately.
2. To quickly create perplexing structures
3. To understanding two-way (proportional) information authoritative
4. To present route usefulness in web applications
5. To oversee conditions with Injection frameworks

**Syllabus:**

Module 1: Introduction to Javascript- Introduction to Javascript, Setting up a, Javascript Development Environment, Defining Variables, Understanding, Javascript Data Types, Using Operators, Implementing Looping, Creating, Functions, Understanding Variable Scope, Using Javascript Objects, Manipulating Strings, Working With Arrays, Adding Error Handling, Document Object Model in JS, Introduction to DOM, HTML and the DOM, Model View Controller, Angular Vs React., Where to Start?, Maturity, Features, Languages, Paradigms, and Patterns, Ecosystem, Adoption, Learning Curve and Development Experience, Putting it Into Context, One Framework to Rule Them All?

Module 2 – Introduction to Angular, Overview of Angular, Angular Architecture, Angular versions, Angular lifecycle, Angular core features, Why Angular, Setting up Angular, Introduction to TypeScript, Learning the Different Types, Understanding Interfaces, Implementing Classes, Implementing Modules, Understanding Functions, Hand-on Exercise

Module 3 - Angular Modules- Introduction to Components, Anatomy of a Component, Introduction to Data Binding, Data Binding and Customer Data Input, One-Way Data Binding

Module 4 – Testing Angular Apps- Overview of Karma and Jasmine, Planning test cases, Creating Unit Test Cases, Executing Unit Cases, The Debug Module  
DEBUGGING USING CHROME DEVTOOLS, Debugging Network Performance

Module 5 - Introduction to Boilerplate- Overview of Boilerplate, Boilerplate, Components, Hands on Exercise

**Course Outcomes:**

1. To securing web applications from dangers and pernicious clients
2. To understand the compiler for building better and more propelled orders
3. To utilize the testing system (Jasmine BDD) to test the web applications
4. To organizing the web application utilizing the vigorous index structure
5. To organizing, compose, and ultimately deploy the application.

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	✓			✓					✓			
CO2			✓									
CO3	✓			✓	✓							
CO4		✓		✓	✓							
CO5			✓						✓			

### Spring framework Course (32 hours)

#### Course Objectives:

1. To gain an understanding of Spring and its approach to Dependency Injection
2. To describe Spring Beans, Spring Configuration and the Spring Container
3. To explore Spring Web MVC and learn about Spring REST
4. To explore Aspect Oriented Programming using Spring AOP
5. To be introduced to Spring Boot

#### Syllabus:

Module 1: Loose Coupling and its Benefits- Interfaces and its uses, Loose coupling

Module 2: Spring Framework Overview- Introduction to Spring, Installation, First application

Module 3: Spring Container and Dependency Injection- Spring Container types, Working of Spring container, Dependency Injection by Constructor, Injecting string-based values

Module 4: Bean Implementation- Introduction and Scope, creating source file, Implement Collections, Implement Java Based Configuration

Module 5: Aspect Oriented Programming- Spring AOP, Implement Aspect Oriented Programming

Module 6: Spring Data Access and Transaction Management- Spring JDBC, JDBC Template,

## Spring Transaction

Module 7: Develop Web Application using Spring- Spring Web MVC Overview, Advanced MVC Features, Development of Spring Web Application

### Course Outcomes:

1. To become Familiar with Spring Data
2. To be able to Develop Spring JSM applications
3. To create a web application using Spring MVC
4. To interpret data access mechanisms provided by Spring
5. To write test cases with Junit

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1				✓	✓				✓			
CO2	✓		✓		✓							
CO3				✓								
CO4	✓	✓		✓								
CO5			✓						✓			

**Course Name: DevOps and Design Thinking**

**Course Code: MCA217A**

**Course Objectives:**

1. To understand the background and mind set of DevOps
2. To practice the version control and configuration management that support DevOps
3. To analyse how test automation supports DevOps
4. To study the essentials of continuous integration (CI)
5. To evaluate the changes to start making when first starting out with DevOps

**Syllabus:**

Module1: DevOps Fundamentals- Introduction ToDevOps, How is DevOps Different From Traditional IT, Recognizing the Business Value of DevOps, Introduction to Continuous Integration / Continuous Delivery / Continuous, Deployment, Introduction to DevOps Tools

Module 2: DevOpsUsecase- DevOps Use Case & Setup, DevOps in eCommerce, DevOps in Internet of Things, DevOps in Data Science & Data Engineering

Module 3: Advanced DevOps, Introduction to Advanced DevOps Concepts, Automatic Provisioning

Module 4: Introduction to DevOps on IBM Cloud- Introduction to Cloud, DevOps on IBM Cloud

---

**Course Outcomes:**

1. To comply the principles and practices of continuous delivery (CD)
2. To identify the challenges and support for managing infrastructure and databases
3. To understand the differences between conventional and agile approaches
4. To estimate in an incremental and iterative fashion using practical techniques
5. To learn DevOps for CI/CD using containers, container orchestration and pipelines

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1				✓	✓				✓			
CO2	✓		✓		✓							
CO3			✓									
CO4	✓	✓		✓								
CO5			✓						✓			

### Design thinking (8 hours)

#### Course Objectives:

1. To be familiar with design thinking concepts and principles
2. To practice the methods, processes and tools of design thinking.
3. To apply the design thinking approach and have ability to model real world situations.
4. To analyse primary and secondary research in the introduction to design Thinking
5. To understand the pitfalls and Cautions in Design Thinking Workgroups

#### Syllabus:

Module 1: About Design Thinking, Introduction to Design Thinking, Importance of Design Thinking, History of Design Thinking.

Module 2: IBM Design Thinking Framework, Introduction

Module 3: The Principles Guide Us- Introduction, Focus on User Outcomes, Restless Reinvention, Diverse Empowered Teams

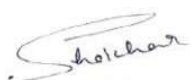

Module 5: The Keys Align Us- The Keys Align Us, Hills

#### Course Outcomes:

1. To examine Design Thinking concepts and principles
2. To practice the methods, processes, and tools of Design Thinking
3. To apply the Design Thinking approach and model to real world situations
4. To analyze the role of primary and secondary research in the discovery stage of design thinking.

5. To perform Role Playing of Scenarios for the Case Study.

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1				✓	✓				✓			
CO2	✓		✓		✓							
CO3			✓									
CO4	✓	✓		✓								
CO5			✓						✓			

HoD  
School of Computer Applications  
JECRC University Jaipur

**Course Name: Dockers and Kubernetes**

**Course Code: MCA218A**

**Course Objectives:**

**CO1:** Understand the fundamentals of Docker and Kubernetes, including installation and basic operations.

**CO2:** Learn advanced concepts such as Docker Swarm management and Kubernetes administration.

**CO3:** Master containerization techniques and best practices for deploying applications.

**CO4:** Learn to manage resources efficiently and scale applications dynamically using Kubernetes.

**CO5:** Gain practical experience in managing Docker containers and Kubernetes clusters, solving real-world challenges.

**Syllabus**

**Unit I**

**Introduction to Docker:** Overview of Docker technology, Installation and setup of Docker, Managing Docker images and containers

**UNIT II**

**Advanced Docker Concepts:** Docker registry, files, storage, and networking, Introduction to Docker Compose

**UNIT III**

**Docker Swarm Management:** Visualizing Docker Swarm, Managing Swarm services and stacks

**UNIT IV**

**Introduction to Kubernetes:** Installation of Kubernetes with Kubeadm, Understanding Kubernetes pods and node assignment

**UNIT V**

**Advanced Kubernetes Topics:** ConfigMaps, Secrets, and other Kubernetes objects, Deployment, DaemonSet, and ReplicaSet management

**Course Outcomes (COs):**

**Upon successful completion of this subject students will able**

**CO1:** Gain proficiency in using Docker and Kubernetes for containerization and orchestration.

**CO2:** Develop practical skills in managing Docker containers and Kubernetes clusters.

**CO3:** Understand the underlying concepts of containerization and their application in modern software development.

**CO4:** Learn to scale applications dynamically and efficiently manage resources using Kubernetes.

**CO5:** Enhance problem-solving and troubleshooting skills through hands-on experience with Docker and Kubernetes.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		M							M			
CO2						L				L		
CO3				M				L				
CO4						L					L	
CO5	M				L							L

H = Highly Related; M = Medium; L = Low

**Reference Books**

1. IBM LMS Portal

**Course Name: Advance Data Structures and Algorithms**

**Course Code: MCA 121B**

**Course Objectives:**

1. To impart the basic concepts of data structures and algorithms.
2. To understand concepts about searching and sorting techniques.
3. To understand basic concepts about stacks, queues, lists, trees and graphs.
4. To understanding about writing algorithms and step by step approach in solving problems with the help of fundamental data structures.
5. To impart the basic concepts of algorithms implementation in optimized time .

**Syllabus**

**Unit I**

**Introduction to Data Structures and Algorithms:** Elementary Data Structure Organization, Classification of Data Structures, Operation of Data Structures, Operations on DataStructures ,Abstract Data Type ,Algorithms, Different Approaches to, Designing an Algorithm, Control Structures Used in Algorithms, Time and Space Complexity, Omega Notation ( $\Omega$ ), Theta Notation ( $\Theta$ ) ,Other Useful Notations.

**UNIT II**

**Array and Linked List:** Declaration of Arrays, Accessing the Elements of an Array, Storing Values in Array, operations, Passing Array to functions, Pointers and Arrays, Arrays of Pointers, Two-dimensional Arrays, Operations on , Passing Two-dimensional Arrays to Functions, Pointers and Two-dimensional Arrays, Sparse Matrices .

Linked list Basic Terminologies, Memory Allocation and De-allocation for a Linked List, Singly Linked Lists, Circular Linked Lists, Doubly Linked Lists, Circular Doubly Linked Lists, Header Linked Lists, Multi-linked Lists, Applications of Linked Lists.

**UNIT III**

**Stack:** Array Representation of Stack, Operations on Stack, linked Representation of Stacks, Operations on a Linked Stack, Multiple Stacks, Applications of Stack,

**Queues:** Introduction to Queues, Array Representation of Queues ,Linked Representation of Queues, Types of Queues , Applications of Queues

#### **UNIT IV**

**Trees and BST**Trees: Types of trees , Creating a Binary Tree from a General Tree, Traversing a Binary Tree, Huffman's Tree

Binary Search Trees: BST Operations, Threaded Binary Trees, AVL Trees, Red-Black Trees, Splay Trees

#### **UNIT V**

**Graph, Searching & Sorting:** Basic Terminologies, Directed Graphs, Representations of Graphs, Graph Traversals Algorithms, Topological Sorting, Shortest-Path Algorithms.

**Searching & Sorting:** Introduction to searching, Linear and Binary Search, Interpolation Search, jump search, Sorting Types, Bubble, Insertion, Selection , Merge Sort, Radix Sort Shell Sort, Quick Sort, Heap Sort.

#### **Course Outcomes (COs):**

**Upon successful completion of this subject students will able**

CO1: Ability to analyse algorithms and a algorithm correctness.

CO2: Ability to implement various techniques of link list.

CO3: Ability to describe stack, queue with linked list operation.

CO4: Ability to have knowledge of tree and graphs concepts.

CO5: Ability to summarize searching and sorting techniques

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		H							M			
CO2						M				H		
CO3				H				M				
CO4						M					H	
CO5	H				M							L

H = Highly Related; M = Medium; L = Low

### Text Books

1. R. G. Dromey, “How to Solve it by Computer”, Second Edition, Prentice-Hall of India, 2002.
2. Reema Thereja,, "Data Structure using C" , Second Edition , Oxford University Press, 2014

### Reference Books

1. M. A. Weiss, “Data Structures and Algorithm Analysis in C”, Second Edition, Pearson Education Asia, 2002.
2. ISRD Group, “Data Structures using C”, Fifth Edition Tata McGraw Hill, 2007
3. Richard F. Gilberg, Behrouz A. Forouzan, “Data Structures – A Pseudocode” Third Edition Prentice-Hall of India, 2004.

**Course Name: Probabilistic modeling & reasoning**

**Course Code: MCA222A**

*Objectives: The objective of this course is to teach students the concepts of Statistics, probability, probability distribution, and other statistical methods to solve various engineering problems*

**UNIT – I**

**Introduction to Statistics:** Introduction to Statistics. Role of statistics in scientific methods, current applications of statistics.

**Scientific data gathering:** Sampling techniques, scientific studies, observational studies, data management.

**Data description:** Displaying data on a single variable (graphical methods, measure of central tendency, measure of spread), displaying relationship between two or more variables, measure of association between two or more variables.

**UNIT – II**

**Probability Theory:** Sample space and events, probability, axioms of probability, independent events, conditional probability, Bayes' theorem.

**Random Variables:** Discrete and continuous random variables. Probability distribution of discrete random variables, binomial distribution, poisson distribution. Probability distribution of continuous random variables, The uniform distribution, normal (gaussian) distribution, exponential distribution, gamma distribution, beta distribution, t-distribution,  $\chi^2$  distribution. Expectations, variance and covariance. Probability Inequalities. Bivariate distributions

**UNIT -III**

**Point Estimations:** Methods of finding estimators, method of moments, maximum likelihood estimators, bayes estimators. Methods of evaluating estimators, mean squared error, best unbiased estimator, sufficiency and unbiasedness

**Interval Estimations:** Confidence interval of means and proportions, Distribution free confidence interval of percentiles

## UNIT - IV

**Test of Statistical Hypothesis and p-values:** Tests about one mean, tests of equality of two means, test about proportions, p-values, likelihood ratio test, Bayesian tests

**Bayesian Statistics:** Bayesian inference of discrete random variable, Bayesian inference of binomial proportion, comparing Bayesian and frequentist inferences of proportion, comparing Bayesian and frequentist inferences of mean

**Univariate Statistics using Python:** Mean, Mode, Median, Variance, Standard Deviation, Normal Distribution, t-distribution, interval estimation, Hypothesis Testing, Pearson correlation test, ANOVA F-test

**Course Outcomes:**

On completion of this course, the students are expected to learn

CO1. Basics of Statistics and Probability distributions

CO2. Sampling theory and Theory of Estimation

CO3. Various tests of Hypothesis and Significance

CO4. Correlation and Regression and fitting of different types of curves

**Course Name: R Programming for Data Science and analysis**

**Course Code: MCA223A**

Objectives: The objective of this course is to teach students R Programming Language, basic functions in R programming language and critical techniques

**UNIT – I**

**Getting Started with R and R Workspace:** Introducing R, R as a programming Language, the need of R, Installing R, RStudio, RStudio's user interface, console, editor, environment pane, history pane, file pane, plots pane, package pane, help and viewer pane

R Workspace, R's working directory, R Project in R Studio, absolute and relative path, Inspecting an Environment, Inspect existing Symbols, View the structure of object, Removing symbols, Modifying Global Options, Modifying warning level, Library of Packages, Getting to know a package, Installing a Package from CRAN, Updating Package from CRAN, Installing package from online repository, Package Function, Masking and name conflicts

**UNIT – II**

**Basic Objects and Basic Expressions:** Vectors, Numeric Vectors, Logical Vectors, Character Vectors, subset vectors, Named Vectors, extracting element, converting vector, Arithmetic operators, create Matrix, Naming row and columns, subsetting matrix, matrix operators, creating and subsetting an Array, Creating a List, extracting element from list, subsetting a list, setting value, creating a value of data frame, subsetting a data frame, setting values, factors, useful functions of a data frame, loading and writing data on disk, creating a function, calling a function, dynamic typing, generalizing a function. Assignment Operators, Conditional Expression, using if as expression and statement, using if with vectors, vectorized if: ifelse, using switch, using for loop, nested for loop, while loop

## **Course Name: Machine Learning and Pattern Recognition**

### **Course Code: MCA224A**

**Objectives:** The objective of this course is to teach students the basic concepts of machine learning, supervised learning, unsupervised learning, and reinforcement learning

#### **UNIT – I**

**Introduction:** Learning systems, real world applications of machine learning, why machine learning, variable types and terminology, function approximation

**Types of machine learning:** Supervised learning, unsupervised learning, reinforcement learning

#### **UNIT – II**

**Important concepts of machine learning:** Parametric vs non-parametric models, the trade-off between prediction accuracy and model interpretability, the curse of dimensionality, measuring the quality of fit, bias-variance trade off, overfitting, model selection, no free lunch theorem

#### **UNIT – III**

**Linear Regression:** Linear regression, estimating the coefficients, assessing the accuracy of coefficient estimates, assessing the accuracy of the model, multiple linear regression, qualitative predictors.

#### **UNIT – IV**

**Classification:** Logistic regression, estimating regression coefficients, making predictions, multiple logistic regressions, linear discriminant analysis, bayes' theorem of classification, LDA for  $p=1$ , LDA for  $p>1$ , quadratic discriminant analysis.

#### **Reference Books:**

- Machine Learning by Tom M. Mitchell - McGraw Hill Education; First edition
- Pattern Recognition and Machine Learning (Information Science and Statistics) by Christopher M. Bishop - Springer; 1st ed. 2006. Corr. 2nd printing 2011 edition

#### **Course Outcomes:**

On completion of this course, the students are expected to learn

CO1. Basic Algorithms of Machine Learning

CO2. Supervised and Unsupervised Learning

CO3. Linear Regression, Classification, Tree, PCA, SVD, SVM CO4. Resampling Methods and

**Course Name: Neural Networks and deep learning**

**Course Code: MCA226A**

*Objectives: The objective of this course is to teach students the basic concepts of neural networks, neurons, and deep learning*

**UNIT – I**

**The neural network:** The neuron, linear perceptron, feed-forward neural network, limitations of linear neurons, sigmoid, tanh, relu neurons, softmax output layer, information theory, cross entropy, Kullback-Leibler divergence.

**UNIT – II**

**Training feed-forward neural network:** Gradient Descent, delta rules and learning rates, gradient descent with sigmoidal neurons, the backpropagation algorithms, stochastic and minibatch gradient descent, test sets, validation sets and overfitting, preventing overfitting

**UNIT – III**

**TensorFlow:** Computation graphs, graphs, sessions and fetches, constructing and managing graph, flowing tensors, sessions, data types, tensor arrays and shapes, names, variables, placeholders and simple optimization, linear regression and logistic regression using tensorflow

**UNIT – IV**

. **Implement Neural Network:** Introduction to Keras, Build neural network using Keras, Evaluating models, data preprocessing, feature engineering, feature learning, overfitting, underfitting, weight regularization, dropout, universal workflow of deep learning.

**Reference Books:**

Deep Learning with Python by Francois Chollet - Manning Publications; 1 edition

□ Deep Learning by Ian Goodfellow, Yoshua Bengio, Aaron Courville, Francis Bach - MIT Press (3 January 2017)

□ Tensor Flow for Deep Learning by Reza Zadeh, Bharath Ramsundar - Shroff/O'Reilly; First edition (2018)

**Course Outcomes:**

On completion of this course, the students are expected to learn

1. Neural Network, Feed Forward and Backpropagation
2. Tensorflow and Keras
3. RNN, CNN, Autoencoders .

HoD

School of Computer Applications  
JECRC University Jaipur

## **Course Name: Advanced Operating System**

**Course Code: MCA201A**

### **Course Objectives:**

1. To understand the OS role in the overall computer system
2. To study the operations performed by OS as a resource manager and the scheduling policies of OS
3. To understand the different memory management techniques
4. To understand process concurrency and synchronization
5. To understand the concepts of input/output, storage and file management and to study different OS and compare their features.

### **Syllabus**

#### **Unit – I**

**Introduction**-Operating system objectives, User view, System view, Operating system definition Types, Functions, Computer System Organization, Computer System Architecture, OS Structure, Operating System services, User and OS Interface, System Programs, Operating System Design and Implementation, OS Structure.

#### **Unit – II**

**Process and CPU Scheduling** – Process concepts, The Process, Process State, Process Control Block, Threads, Process Scheduling, Scheduling Criteria, Scheduling algorithms Scheduling Queues, Schedulers, Context Switch, Operations on Processes, System calls, Process Synchronization, The Critical Section Problem, Peterson's solution, Synchronization Hardware, Semaphores.

#### **Unit – III**

**Deadlocks**- Deadlock characterization, Methods of handling deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.

**Memory Management** – Memory Management Strategies- Overlays and Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of Page Table, Virtual Memory

Management- Segmentation, Paging, Demand Paging, Page Replacement, Page Replacement Algorithms, Allocation of Frames, Thrashing.

#### **Unit- IV**

**File System and Security** - File-System Structure, File-System Implementation , Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance, Recovery, NFS, Organization of I/O Function, I/O Buffering, Disk Organization, Disk Scheduling, RAID, Operating Systems view of file system, Disk space management. System Security- The Security Problem, Program Threats, Policies, System and Network Threats, User Authentication, Security Models.

#### **Unit - V**

**Distributed Systems** :Distributed System definition , Architectures for distributed systems, Distributed Computing Models , Software concepts , Network Operating System , Distributed Operating System , Multiprocessor Time-sharing System , Comparison of operating systems , Issues in designing Distributed Systems , Client–Server Model , Case Studies  
Network Communication: LAN and WAN Technologies , Introduction to LAN and WAN , Classification of networks , Protocols for Network Systems , The ISO/OSI Reference Model , Internet Protocols , Asynchronous Transfer Mode , Protocols for distributed systems

#### **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: Apply optimization techniques for the improvement of system performance.

CO2: Ability to design and solve synchronization problems.

CO3 Learn about minimization of turnaround time, waiting time and response time and also maximization of throughput by keeping CPU as busy as possible.

CO4: Ability to change access controls to protect files.

CO5: Ability to compare the different operating systems.

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF**

**PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		H							M

CO5		M			H					H		

H = Highly Related; M = Medium; L = Low

**Text Books**

1. A Silberschatz, P.B. Galvin, G. Gagne, Operating Systems Concepts, 8th edition, John Wiley Publications ,2008.
2. A.S. Tanenbaum, Modern Operating Systems, 3<sup>rd</sup> edition, Pearson Education ,2007.

**Reference Books**

1. G. Nutt, Operating Systems: A Modern Perspective, 2<sup>nd</sup> edition Pearson Education ,1997.
2. W. Stallings, Operating Systems, Internals & Design Principles, 5<sup>th</sup> edition, Prentice Hall of India, 2008.
3. Operating Systems: Internals and Design Principles, William Stallings, Pearson

**Course Name: Software Engineering**

**Course Code: MCA 131B**

### **Course Objectives**

1. To provide a comprehensive overview of Software Engineering
2. To understand the full software development life cycle, including a thorough coverage of methods, tools, principles, and guidelines.
3. To understand software metrics, real-time software design, quality assurance, reliability, risk management, cost and schedule estimation, sizing, planning, test and integration process, technical management and human
4. To be able to work with software metrics (attributes) to measure properties of the software product as a means to evaluate and control the development process.
5. To understand the concept of planning and managing the software development.

### **Syllabus**

#### **Unit I**

**The software problem:** Learning objectives, Cost, schedule and quality, scale and changes.

**Software Processes:** Learning objectives, process and project, component software processes, software development process models, water fall model, prototyping, iterative development, rational unified process, time boxing model, Extreme programming and agile processes, using process models in a project, project management process.

#### **Unit II**

**Software requirement analysis and specification:** Learning objectives, values of good SRS, requirement processes, requirement specifications, desirable characteristics of an SRS, components of SRS, structure of a requirement document, functional specification with use cases, developing use cases, other approaches for analysis( Data flow diagram, Entity relationship diagrams) and validation.

#### **Unit III**

**Software Architecture:** Learning objectives, role of software architecture, architecture views, components and connector views, Architecture styles for C&C view, pipe and filters, shared data style, client server style, documenting architecture design, evaluating architecture.

**Planning software project:** Learning objectives, effort estimation, top down estimation approach, bottom up estimation approach, project schedule and staffing, quality planning, risk management planning, risk assessment, risk control, risk management planning approach, project monitoring plan, measurement, project monitoring and tracking and detailed scheduling.

**Unit IV Design:** Learning objectives, design concepts, coupling, cohesion, open cloud principle, function oriented design, structure charts, structure design methodology, object oriented design, OO concepts, Unified modeling language(UML) Design methodology, verification, Metrics( Complexity metrics for function oriented design, complexity metrics for OO design.

**Coding and unit testing:** Learning objectives, Programming principles and guidelines, structured programming, information hiding, some programming practices, coding standards, incremental developing code and coding process, Test driven development, pair programming, managing evolving code, source code control and build, refactoring, unit testing, testing procedural units, unit testing of classes, code inspection, planning, self review, group review meeting, metrics, size measures, complexity metrics.

## **Unit V**

**Testing :** Learning objectives, testing concepts, error, fault and failure, test case, test suite and test harness, psychology of testing, levels of testing, testing process, test plan, test case design, test case execution, Black box testing, equivalence class partitioning, boundary value analysis, pairwise testing, special cases, state-based testing, white box testing, control flow-based criteria, test case generation and tool support, metrics, coverage analysis, reliability, defect removal efficiency.

## **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: Understanding of Basics of Software Engineering & Development.

CO2: Understanding of Different-2 models, Software Matrices and Estimation.

CO3: Understanding of Software Development across Workflows and Phases, languages & Architecture.

CO4: Understanding of different -3 testing strategies and tools.

CO5: Be exposed to World Wide Web and Enterprise Software Development.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course	Program Outcomes											
Outcomes												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H			M				M				
CO2		M				M					M	
CO3	H						M					
CO4			H						M			L
CO5	M											

H = Highly Related; M = Medium; L = Low

### Text Books

1. Software Engineering Fundamentals, Oxford, Ali Behforooz and Frederick Hudson, October 2012.
2. Pressman, R.S., "Software engineering" A Practitioner's Approach", Third Edition

**Course Name: Programming in Python**

**Course Code: MCA144B**

**Course Objectives:**

1. To outline the basics of python programming, Features, history, data types and variables.
2. To able to solve real-world problems through python programming.
3. To be able to exploit problem solving approaches, programming languages, object oriented programming.
4. To constructs of Python language such as control statements, functions, strings, files, data structures.
5. To apply the concept of Classes and objects, functions and array in python.

**Syllabus**

**Unit I**

**Introduction to Procedural Programming:** Data types in Python: Comments in Python, identifiers, keywords, Integral Types, Integers, and Booleans Floating-Point Types: Floating-Point Numbers, Complex Numbers, Decimal Numbers, Strings, Comparing Strings, Slicing and Striding Strings, String Operators and Methods, Operators in Python, Input and Output

**Unit II**

**Collection Data Types:** Sequence Types, Tuples Named Tuples, Lists Set Types: Sets. Frozen Sets, Mapping Types: Dictionaries, Default Dictionaries, Ordered Dictionaries, Iterating and Copying Collections, Arrays in Python

**Unit III**

**Control Structures and Functions :**Control Structures .Conditional Branching, Looping, Exception Handling, Catching and Raising Exceptions Custom Exceptions Custom Functions Names and Docstrings Argument and Parameter Unpacking, Accessing Variables in the Global Scope, Lambda Functions.

**Unit IV**

**File handling:** Writing and Reading Binary Data, Pickles with Optional Compression, Raw Binary Data with Optional Compression, Writing and Parsing Text Files, Writing Text, Parsing

Text, Parsing Text Using Regular Expressions, Writing and Parsing XML Files, Element Trees DOM (Document Object Model), Manually Writing XML Parsing XML with SAX (Simple API for XML), Random Access Binary Files ,A Generic BinaryRecordFile Class.

## **Unit V**

**Object Oriented Programming:** The Object-Oriented Approach, Object oriented approach Custom Classes, Attributes and Methods, Inheritance and Polymorphism, Using Properties to Control Attribute Access, Creating Complete Fully Integrated Data Types, Custom Collection Classes, Creating Classes That Aggregate Collections, Creating Collection Classes Using Aggregation, creating Collection Classes Using Inheritance, Python's Database Connectivity, Libraries in python for Machine Learning: Panda, Numpy, Matplotlib, Scikit-learn, Tensorflow.

### **Course Outcomes (COs):**

### **COURSE OUTCOMES:**

**On completion of the course, students will be able to:**

CO1: Develop algorithmic solutions to simple computational problems

CO2: Develop and execute simple Python programs.

CO3: Implement programs in Python using conditionals and loops for solving problems.

CO4: Deploy functions to decompose a Python program. And process compound data using Python data structures.

CO6: Utilize Python packages in developing software applications.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H								M			
CO2	H		M									M
CO3				M						M		
CO4							H					
CO5		M			M			H				

H = Highly Related; M = Medium; L = Low

**Text Books**

1. Core Python Programming, Black Book-Dreamtech, Dr. R. Nageswara Rao, 2017
2. Python Programming, Oxford, ReemaThareja, June 2017

**Reference Books**

1. “Python Testing Cookbook” by Greg L Turnquist
2. “Head First Programming” by Paul Barry and David Griffiths
3. “Python Crash Course: A Hands-On, Project-Based Introduction to Programming” by Eric Matthes.

**Course Name: Advance Database Management System**

**Course Code: MCA118A**

### **Course Objectives**

1. To enhance the fundamentals knowledge of data models and to conceptualize and depict a database system using ER diagram.
2. To know fundamentals of Operations of Relational Algebra and calculus.
3. To know the fundamental concepts of normalization.
4. To justify the concept of transaction processing management, concurrency control techniques and recovery procedure.
5. To have an introductory knowledge about the Storage and Query processing Techniques.

### **Syllabus**

#### **Unit I**

**Data modeling:** Entity Relationship Model, Relational, Network, Hierarchical and object oriented models, Data Modeling using the Entity Relationship Model. Relational Constraints, Domain Constraints, Key Constraints Referential Integrity Constraints, Relational Algebra and Relational Calculus.

#### **Unit II**

**Database Design:** Integrity Constraints – Domain Constraints- Referential integrity – Functional Dependency- Normalization using Functional Dependencies, Normal forms based on primary keys- general definitions of Second and Third Normal Forms. Boyce Codd Normal Form– Multivalued Dependencies and Forth Normal Form – Join Dependencies and Fifth Normal Form.

#### **Unit III**

**Object Relational Databases:** Complex Data Types and Object Orientation, Structured Data Types and Inheritance in SQL, Table Inheritance, Array and Multiset Types in SQL, Object Identity and Reference Types in SQL, Implementing O-R Features, Persistent Programming Languages, Comparison of Object-Oriented and Object-Relational Database

## **Unit IV**

**Physical Database Design:** Overview of Physical Storage Media, Magnetic Disks, RAID, Tertiary Storage , Storage Access, File Organization, Organization of Records in Files, Data-Dictionary Storage, Storage Structures for Object-Oriented Databases, Basic Concepts, Ordered Indices , B<sup>+</sup>-Tree Index Files, B-Tree Index Files, Static Hashing, Dynamic Hashing , Comparison of Ordered Indexing and Hashing , Index Definition in SQL.

## **Unit V**

**Transaction Management:** Transaction Concept, ACID Properties, Transaction State, Implementation of ACID properties, Schedules and Serializability: Conflict Serializability, View Serializability. Concurrency Control: Need of concurrency control, Concurrency control techniques, Lock based protocols, binary lock, share and exclusive lock, two phase locking protocol. Introduction to recovery.

## **Course Outcomes (Cos)**

**After successfully completing this subject, students will be able to:**

CO1: Understand practical implications of transaction properties and concurrency control techniques.

CO2: Understand the fundamentals of Object Relational database and complex data types.

CO3: Gain about the fundamentals of physical storage media and indexing.

CO4: Enhance the fundamentals knowledge of data models and to conceptualize and depict a database system using ER diagram.

CO5: Contrast the concept of functional dependency, Norm forms, constraints and integrity

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	H								M

### Text Books

1. RamezElmasri, Shamkant B. Navathe, “Fundamentals of Database Systems”, Fifth Edition, Pearson, 2008
2. A.Silberschatz, H. Korth and S. Sudarshan, Database System Concepts, 5th Edition, McGraw Hill.

### Reference Books

1. C.J.Date, A.Kannan, S.Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.
2. .
3. Raghu Ramakrishnan, “Database Management Systems”, Fourth Edition, Tata McGraw Hill, 2010.
4. G.K.Gupta,”Database Management Systems”, Tata McGraw Hill, 2011.

**Course Name: Competitive Programming (Using C++)**

**Course Code: MCA 125A**

### **Course Objectives**

1. To explain the difference between object oriented programming and procedural programming and features of object oriented programming.
2. To be able to understand the program using more advanced C++ features such as composition of objects, operator overloads, dynamic memory allocation, inheritance and polymorphism, file I/O, exception handling, etc.
3. To be able to build C++ classes using appropriate encapsulation, objects and functions.
4. To be able to apply operator overloading in different form.
5. To understand the working of files, templates and exception handling.

### **Syllabus**

#### **Unit I**

**Introduction to Object Oriented Programming:** Generation of Programming, Programming Paradigms, Features of Object Oriented Programming , Introduction to C++, History of C++, Structure, First Program, Compiling and Executing C++, Using Comments, Tokens, Character Set, Keywords, Identifiers, Data Types, Variables, Constants, Enumerators, Input and Output Statements, Operators in C++, Operator Precedence and Associability, Decision Control and Looping Statements.

#### **Unit II**

**Classes, Objects and Functions:** Introduction , Class, Creating Objects, Accessing Object Members, Nested Member Functions, Making a Member Function Inline, Memory Allocation for Class and Objects, Array of Objects, DMA, Objects as Function Arguments, Returning Objects, this pointer, Constant Parameters and Members, Pointers Within a Class , Empty Classes, Friend Classes, Constructor, Types of Constructors, Constructor with Arguments, Constructor Overloading, Destructors

#### **Unit III**

**Operator Overloading and Type Conversions:** Scope of Operator Overloading, Syntax, Not Overloading Operators, Implementing Operator, Overloading Unary Operators, Overloading Binary Operators, Overloading Special Operators, Type Conversions,

#### **Unit IV**

**Inheritance and Run-Time Polymorphism:** Defining Derived Classes, Access Specifiers, Inheritance, Types of Inheritance, Single Inheritance, Constructors and Destructors in Derived Class, Constructor in Multi-Level, Multi-Level Inheritance, Constructor in Multi-Level Inheritance, Multiple Inheritance, Hierarchical Inheritance, Multi-path Inheritance, Up- casting, Down- casting, and Cross-Casting, Run-time Polymorphism, Virtual Functions, Abstract Base Classes.

#### **Unit V**

**File Handling, Templates & Exception Handling:** Streams in C++, Classes for File Stream, Opening and Closing of Files, Detecting the End-of-File, Files Modes , File pointer, Use of Templates, Function Templates, Class Template, Class Templates and Friend Function, Templates and Static Variables in C++, Exception Handling, Multiple Catch Statements, Catch all Exceptions, Exceptions in Invoked Function

#### **Course Outcomes (COs):**

**Upon successful completion of this subject students should be able to:**

CO1: Understand the features of C++ supporting object oriented programming

CO2: Be able to program using more advanced C++ features such as composition of objects, operator overloads, dynamic memory allocation, inheritance and polymorphism, file I/O, exception handling, etc.

CO3: Be able to apply operator overloading in different form.

CO4: Understand how to apply the major object-oriented concepts to implement object oriented programs in C++, encapsulation, inheritance and polymorphism

CO5: Able to understand the working of files.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

2. Object Oriented Programming with C++, Reema Thareja, Oxford University, August 2015.

**Reference Books**

1. Object Oriented Programming with C++, Sourav sahay, Oxford University, Sept 2012.
2. Robert Lafore, "Object-Oriented Programming in C++", Sams, Fourth Edition 2007
3. BjarneStroustrup, "The C++ Programming Language: Special Edition", Addison-Wesley, Third Edition 2000

## **Course Name: Statistical Computing Using R**

**Course Code: MCA206A**

### **Course Objectives**

1. To explain the key differences between the tasks of classification, clustering, regression, and dimensionality reduction
2. To identify the key differences between supervised and unsupervised learning paradigms
3. To explain how noisy observations affect the result of data mining methods.
4. To deal with missing data and Manipulate strings in R
5. To understand basic regular expressions in R and base R graphics

### **Syllabus**

#### **Unit I**

**Introduction to R:** Basics of R, R-Environment Setup, Installation of R, Rstudio, Installing and Configuring, RStudio in Windows, Installing and Configuring, RStudio in Linux, Programming with R, Basic Data Types, Vectors, Matrices, Arrays.

Factors and data Frames: Factor Levels, Data Frame, Creating a Data Frame, Sub setting of Data Frames, Extending Data Frames, Sorting Data Frames

#### **Unit II**

**List:** Creating a List, Creating a Named List, Lists Operations , Conditionals and Control Flow, Relational Operators, Relational Operators and Vectors, Logical Operators, AND Operator, OR Operator, NOT Operator, Logical Operators and Vectors, Conditional Statements

#### **Unit III**

**Iterative Programming & Function in R:** Iterative Programming : While Loop, For Loop, Looping Over List, Loops for Vectors, Loops for Matrices, Loops for Data Frames, Loops for Lists, Functions in r

Functions: Writing a Function in R, Nested Functions, Function Scoping, Function Environment, Function Scope, Default Values for Arguments, Returning Complex, Recursion, Loading an R

Package, Methods of Loading, Mathematical Functions in R, Cumulative Sums and Products, Calculus in R, Input and Output Operations

#### Unit IV

**Apply Family in R , Charts & Graphs:** Apply Family : Using apply in R, Using lapply in R, Using sapply in R, Using tapply in R, Using mapply in R. Charts & Graphs: Pie Chart, Bar Chart, Box Plot, Histogram, Line Graph, Scatter

#### Unit V

**Data Interfaces:** Introduction to Data interfaces, CSV Files, Excel Files, Binary Files , XML files, JSON files, Web Data, , Databases

#### Course Outcomes (Cos):

CO1: Students will able to explain Basics of R programming, Installation of R, Rstudio, Installing and Configuring, RStudio in Windows.

CO2: Students will able to estimate the effects data interfaces, Conditionals and Control Flow, Relational Operators and condition flow.

CO3: Able to design data mining experiments using R and existing data mining tools.

CO4: Students will be able to learn about data interfaces, CSV files, Excel files and XML files.

CO5: Able explain the working of lists in R and will be able working with bar and charts.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course	Program Outcome											
Outcome												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

#### Text Books

1. Statistical Programming in R (Oxford) Srinivasa, Siddesh, Shetty and Sowmya, June 2017.
2. Lawrence Leemis. *Learning Base R*. Lightning Source, 2016

### Reference Books

1. VikramDayal. *An Introduction to R for Quantitative Economics: Graphing, Simulating and Computing*. Springer, 2015
2. Matthias Kohl. *Introduction to statistical data analysis with R*. bookboon.com, London, 2015.
3. Matthias Kohl. *Introduction to statistical data analysis with R*. bookboon.com, London, 2015

**Course Name: Internet security and Cryptography**

**Course Code: MCA207A**

### **Course Objectives**

1. To learn today's increasing network security threats and explain the need to implement a comprehensive security policy to mitigate the threats.
2. To provide extended security using authentication, Substitution Techniques, Transposition Techniques, Encryption and Decryption
3. To introduce security services for email and email protocols, Digital Certificates, Private Key Management, E-mail Security and Wireless Application Protocol (WAP) Security
4. To be aware about Prohibited actions on Cyber, Cyber Squatting Banking/Credit card related crime E-commerce.
5. To gain the knowledge about Cyber Crime and Prohibited actions on Cyber.

### **Syllabus**

#### **Unit I**

**Introduction to the Concepts of Security:** The need for security, Security Approaches, Principles of Security, Types of Attacks. Cryptographic Techniques: Plain Text and Cipher Text, Substitution Techniques, Transposition Techniques, Encryption and Decryption, Symmetric and Asymmetric Key Cryptography, Key Range and Key Size, Possible Types of Attacks.

#### **Unit II**

**Computer-based Symmetric Key Cryptographic Algorithms:** Algorithm Types and Modes, An overview of Symmetric Key Cryptography, DES, International Data Encryption, Algorithm (IDEA), RC5, Blowfish, AES, Differential and Linear Cryptanalysis.

#### **Unit III**

**Computer-based Asymmetric Key Cryptography:** Brief History of Asymmetric Key Cryptography, An overview of Asymmetric Key Cryptography, The RSA Algorithm,

Symmetric and Asymmetric Key Cryptography Together, Digital Signatures, Knapsack Algorithm, Some other Algorithms.

## **Unit IV**

**Public Key Infrastructure:** Digital Certificates, Private Key Management, The PKIX Model, Public Key Cryptography Standards, XML, PKI and Security. Internet Security Protocols: Basic Concepts, Secure Socket Layer, SHTTP, Time Stamping Protocol, Secure Electronic Transaction, SSL versus SET, 3-D Secure Protocol, Electronic Money, E-mail Security, Wireless Application Protocol (WAP) Security, Security in GSM.

## **Unit V**

**Prohibited Actions on Cyber:** Pornography, IPR violations: software piracy, copyright infringement, trademarks violations, theft of computer source code, patent violations, Cyber Squatting Banking/Credit card Related crime E-commerce/ Investment Frauds, Defamation (Cyber smearing), Cyber Stacking

### **Course Outcomes (Cos):**

**Upon successful completion of this subject students should be able to:**

CO1: Demonstrate the threats in networks and security concepts, Plain Text and Cipher Text, Substitution Techniques, Transposition Techniques, Encryption and Decryption.

CO2: Apply authentication applications in different networks.

CO3: Understand security services for email, the RSA Algorithm, Symmetric and Asymmetric Key Cryptography Together and Digital Signatures.

CO4: Know of Digital Certificates, Private Key Management, E-mail Security and Wireless Application Protocol (WAP) Security

CO5: Awareness of Prohibited actions on Cyber, Cyber Squatting Banking/Credit card related crime E-commerce.

<b>BDE083A</b>	<b>JEWELRY SKETCHING &amp; RENDERING</b>	<b>0-0-4 [32]</b>
----------------	--	-------------------

## AIM

This course will deal with sketching and rendering techniques. As a jewellery designer these skills will assist student a lot as you will be able to express your ideas in 2-dimensional and 3- dimensional forms. Student will able to represent ideas to clients with the help of rendered sketches of design helping the other person to visualize as how they will look like when crafted in any metal and as per specifications. The emphasis of this course is on learning basic practical skills and developing ideas. Students will learn to translate concepts into creative solutions. Principles and elements of applied design along with jewellery forming techniques, materials and forms will be introduced. This 3 credits theory course will carry equal weight age of both design and manufacturing components; students will be introduced to the conceptual and historical understanding of jewellery making, and thereby apply their own theoretical and creative understanding through theme based projects, as well as grasp the technical skills pertaining to basic jewellery manufacturing, as well as application of tools to particular techniques

## OBJECTIVE

- To acquire theoretical knowledge about the adornment of body through discussions, presentations and fieldwork.
- To develop skills with processes, techniques & materials through demonstrations and progressive exercises.
- To generate ideas particular to individual fields of study.
- To learn through review, appreciation and presentation of individual work.
- To practice and be aware of health and safety in the workplace.

## PREREQUISITE

<b>UNIT 1</b>	<b>PRACTICAL</b> – Gemstone –Drawing Of Gemstone Drawing And Faceting Method of A Round Brilliant Cut Stone. Oval, Pear, and Marquise Shaped Stone. Step Cut Stone Baguettes, Taper Baguettes, And A Single Cut, Kite Cut, Triangle Cut And Trilliant Step Cut Stone Drawing and of A Square, Cushion, And French Cut Stone. Gem Stone Shading And Rendering of Facetted, Cabochons Carved Stones, Pearl.
<b>UNIT 2</b>	<b>PRACTICAL</b> – Metal Forms – Representation Of Metal Colors For Yellow Gold, White Gold, Platinum, Silver. Types Of Textures- Like High Polish, Florentine, Matt Finish, Sandblasting, Tree Bark, Satin .Types Of Decoration –Like Granulation, Open And Close Filigree, Etching, Engraving, Repousse And Chasing, Embossing, Inlay, Enameling.
<b>UNIT 3</b>	<b>PRACTICAL</b> – Metal Forms – Representation Of Metal Colors For Yellow Gold, White Gold, Platinum, Silver. Types Of Textures- Like High Polish, Florentine, Matt Finish, Sandblasting, Tree Bark, Satin .Types Of Decoration –Like Granulation, Open And Close Filigree, Etching, Engraving, Repousse And Chasing, Embossing, Inlay, Enameling.
<b>UNIT 4</b>	<b>PRACTICAL</b> – Settings – Representation Of Different Types Of Setting Like Prong, Pave, Bezel, Channel, Fishtail, Invisible, Etc.

<b>UNIT 5</b>	<b>PRACTICAL – Chains, And Its Representation – Types Of Chain, Representation Of Chain, Clasps And Its Representation -Types Of Clasps, Representation Of Clasps</b>
---------------	---

### COURSE OUTCOME (CO)

**At the end of this course students will have:**

- CO1: This unit has introduced you with the basic information about the tools and materials and their use. After understanding their use their application will become very easy to design jewelry and master the skills.
- CO2: After going through this unit you have learnt about the different metal surfaces and their representation in addition you have learnt to observe various textures around you and their use in Jewelry.
- CO3: You learnt about the Gemstones their drawing, shading and rendering. This will be helpful for you to identify different cuts, shapes and varieties in the gemstones. This unit has given you the complete idea of representation of different settings in a Jewelry piece. This unit gives you an exposure to the types of chains and the different types of closing mechanisms used in Jewelry.
- CO4: You have learnt metal rendering techniques and identifying the different metal colors. Be able to develop designs and communicate ideas

BDE086A	METARIAL EXPLORATION AND TECHNIQUES-I	0-0-4 [2]
---------	---------------------------------------	-----------

### AIM

This unit aims to develop learners' skills and understanding the properties of materials - physical, visual and creative qualities - for better criteria in the selection of these, considering the technical, environmental and economic importance of the projects

### OBJECTIVE

Jewelry has long existed as a form of adornment and as a perceived enhancement of beauty and, as such, has roots in all cultures. Contemporary jewelry designers have reconsidered the role of ornament and its relationship to the human body to create a design aesthetic that results from innovative manipulation of shape and form and continuous exploration of the potential of materials. The ability to skillfully manipulate and explore these materials and techniques to exploit their full potential within both expected and unexpected contexts is the backbone of any designer's work. An important aspect of this exploration is the continuous analysis and evaluation of results and use of the knowledge and understanding gained to inform further work.

<b>UNIT 1</b>	<b>Exploring Copper &amp; Brass</b> Leather Paper
<b>UNIT 2</b>	<b>Nature of Materials and Processes</b> Properties and usage of various materials Process of selection and applications of various materials for consumer product Design limitations and specific advantages of particular product and their processes
<b>UNIT 3</b>	<b>Conceive and Create:</b> Significance of form in structural strength of products Influence of materials and processes on product aesthetics Costing of various product material and their structure
<b>UNIT 4</b>	<b>Metallic Material Technologies -I</b> Measuring, checking and tracing apparatus Working benches Soldering Equipment Protective equipment (gloves, masks, glasses, etc.)
<b>UNIT 5</b>	<b>Metallic Material Technologies- II</b> Miscellaneous tools Drilling machine Sawing machines

**COURSE OUTCOME (CO):****At the end of this course students will:**

CO1: Understand and apply the characteristics of copper and brass, leather and paper on the jewelry context.

CO2: To know the methods of work and manipulation of the materials.

CO3: To know the technical characteristics of the types of tools used to manipulate each material. CO4: To plan and develop projects and products that involves different types of materials.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES**

<b>BDE087A</b>	<b>2D &amp; 3D DRAWING</b>	<b>0-0-4 [2]</b>
----------------	----------------------------	------------------

### AIM

This unit will introduce the investigation of Isometric Drawing and Orthographic Drawing along with differentiates between them. Students will be able to create Drawings using the step-by-step process to create own Isometric & Orthographic Drawing of a given 2D and 3D object.

### OBJECTIVE

- Learn to provide people with a realistic view of what the object looks like.
- Learn to differentiate between an isometric drawing and an orthographic projection drawing.
- Learn to draw basic Orthographic & Isometric objects.
- Learn to convert drawings from isometric to orthographic projection.

<b>UNIT 1</b>	<b>Projections of Planes&amp; Solids:</b> Plane parallel, perpendicular and inclined to one reference plane. Plane inclined to both the reference planes. Projections of regular solids, cube, prisms, pyramids, tetrahedron, cylinder and cone, Axis inclined to both planes.
<b>UNIT 2</b>	<b>Sections and Sectional Views</b> Right Regular Solids – Prism, Cylinder, Pyramid, Cone – use of Auxiliary views.
<b>UNIT 3</b>	<b>Isometric Projections:</b> Principles of Isometric Projection – Isometric Scale, Isometric Views, Conventions – Band, Rings, Pendants and Earrings. Simple and Compound Solids – Isometric Projection of objects having non- isometric lines. Isometric Projection of parts with Spherical surface.
<b>UNIT 4</b>	<b>Transformation of Projections:</b> Conversion of Isometric Views to Orthographic Views and Conversion of orthographic views to isometric views – Design projects

### COURSE OUTCOME (CO):

**At the end of this course students will:**

CO1: Make accurate isometric and orthographic views of various types of jewelry.

CO2: Draw various views of rings, pendants, earrings etc. for an accurate understanding of its shape and other details

CO3: Translate the manual orthographic and isometric views into CAD.

<b>BDE088A</b>	<b>JEWELRY MANUFACTURING -I</b>	<b>0-0-4 [2]</b>
----------------	---------------------------------	------------------

### AIM

Understand the characteristics of light metals- their Visual, Tactile and Functional characteristics. Employ professional practice when working with light metals. Develop designs and communicate ideas. Use construction and finishing techniques to produce 3D outcomes.

### OBJECTIVE

- This unit has introduced you with the basic information about the tools and materials and their use. After understanding their use their application will become very easy to design jeweler and master the skills.
- After going through this unit you have learnt about the different metal surfaces and their representation in addition you have learnt to observe various textures around you and their used in Jewelry.

<b>UNIT 1</b>	Jewelry Making - A Brief History, Work Space & Tools, Materials Used In Jewelry Industry (Pre Civilization Era, Growth Of Civilization, Metals, Gem Stones, Natural Material, Man Made Material, Other Material Used In Jewellery Making)
<b>UNIT 2</b>	Basic Tool Kit For Jewelry, Essential Tools For Jewelry Manufacturing Recommended Tools For Jewelry Manufacturing
<b>UNIT 3</b>	Basic Techniques Of Jewelry Manufacturing ,Rolling Techniques Sawing, Piercing, Filling, Milling, Process On Sheet Metal – Repo usage, Chasing, Stamping, Stretching, Embossing, Blanking, Processes With Wire – Chains, Draw Plates, Cross Section, Wire Drawing, Bending, Cutting, Spirals, Forging, Jump-Rings, Chains, Twisting And Filigree. Shaping Doming Blocks , Dies Repousse And Chasing , Scoring And Bending
<b>UNIT 4</b>	Clips And Connections, Catches, Hinges, And Findings Different Types Closing Mechanisms Like Fold Over, Toggle, Lobster Claw, Springing, Box Tab Insert, Fish Hook, Hook And Eye, S-Hook, Barrel. Clips For Earring, Different Types Of Clasps And Locks – Box Clasps, Bead Lock, Tube Lock, Hinge Lock, Slide Lock, Connections With Half Ring For Settings, And With A Hinged Stud
<b>UNIT 5</b>	Surface Decoration & Ornamentation Techniques, Engraving, Scoring, Chip Carving, Metal Inlay, Etching, Granulation, Enameling), Texturing Metal, Texture And Surface Finishes

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand the characteristics of light metals.

CO2: Be able to develop designs and communicate ideas.

CO3: Be able to use construction and finishing techniques to produce 3D outcomes CO4: Be able to employ professional practice when working with light metals.

BDE089A	COMPUTER AIDED DESIGN I- (CORAL DRAW)	0-0-4 [2]
---------	---------------------------------------	-----------

### AIM

In this module you will learn how to convert Manual Design in Digital Form through Corel with Exact measurement. In this module you will learn creating variation and Orthography concept. And Also Learn applying 3d rendering Effect by Photoshop project.

### OBJECTIVE

- Students will learn the basics of Jewellery Design Software “Coral Draw”
- Each content will cover the meticulous research about the 2D design by using Coral Draw.
- Learning how to develop 2D drawings in multiple.
- Research and documentation of each project.
- Submissions: PowerPoint presentation with digital prints.

UNIT 1	Introduction To Corel Draw, Basic Tools In Coral Draw, Various Shapes.
UNIT 2	Drawing & Shaping Objects, Transforming Objects, Corel Draw Effects, Working With Layer, Design Development, Color Fills And Outlines Tools, Gold Color Creation.
UNIT 3	Motif Development To Make Jewelry, Interactive Blend Tool, Diamond With Measurement , Stone Setting, Creating Shapes & Painting
UNIT 4	Theme Based Designing-Earrings , Bracelets , Pendants , Rings, Brooch, Necklace
UNIT 5	Special Effects To Images-Backgrounds, Text Option, Detail Of Jewelry Piece

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: The student will be able to make more than one Appropriate Variation compared to original CO2: The student will be able to learn Exact Orthography

CO3: The student will be able to apply 2D Rendering object

CO4: The student will be able to learn how to save Sampling Cost.

<b>BDE090A</b>	<b>DESIGN PROJECT-I (GOLD JEWELRY)</b>	<b>0-0-6 [3]</b>
----------------	--	------------------

## **AIM**

After Understanding the About Gold, Different Jewelry Markets Of India and World, Characteristics of Light Metals Their Visual, Tactile and Functional Characteristics. Student Will Be Able To Develop Designs And Communicate Ideas Using Drawing, Rendering Finishing Techniques Application Of Inspiration Into A Jewelry Product. Make Product Range of All the Design like Pendant, Earring, Flexible Bracelet, Fixed Bracelet, Bangle, Ring and Necklace. Make Product Detail For All Designs. Choose Any 1 Design And Make Prototype Of Gold Jewelry In Your Jewelry Manufacturing Module. To Develop Learners' Skills Of Understanding Of Gold And Different Markets Of gold Jewelry, And Their Use So That Student Can Use His Knowledge For Industry Demand. Basic Knowledge Of Materials Used In Jewelry With Understanding Of How To Apply Them On Paper And Then Developing 3D Outcomes As Prototype Of The Design Project Gold Jewelry

## **OBJECTIVE**

- To look at designed objects, networks and environments more critically in our everyday life.
- To develop observational skills through which to investigate and understand Design.
- To develop drawing as a means of expression and communication of the creative process
- To develop creative problem solving through a variety of skills, techniques and processes
- To become familiar with researching, investigating and evaluating a wide range of materials and their properties.
- To have an informed opinion about Design and the design process and to be able to express those opinions.

## **PREREQUISITE**

- Visual Imagination.
- Eye on detail
- Intrapersonal Skills.
- Skills of Gemstone Rendering.
- Basic Knowledge of drawing and rendering.
- Basic knowledge of PowerPoint presentation.

<b>UNIT 1</b>	Inspiration Based Jewelry Design, What Is Inspiration, Why Do We Need Inspiration, Most Common Source Of Inspiration Like3 Natural Sources, Man- Made Sources, Historical Sources, Symbolic Sources, Other Sources Of Inspiration, Application Of Inspiration Into A Jewelry Product: Applying Design Elements And Principles To These Elements And Making As Many Variation And Options To Each Of The Chosen Elements. Line Placement /Repetition, Reduction And Enlargement, Grid Placement, Rotation, Skewing Or Twisting Or Folding.
<b>UNIT 2</b>	Selecting The Jewelry Forms / Styles Conceptualization: Concept Development, Generate Product Concepts; Select A Jewelry Concept, Rationale Behind Selecting A Form. Investigating The Inspiration To List The Motifs/ Elements Which Will Act As Forms For Developing Jewelry, Motifs And Its Types, Making Style Variations.
<b>UNIT 3</b>	Jewelry Design And Detailing: Design Detailing, Why Design Detailing Is Important, Steps Of Jewelry Design Detailing Process.
<b>UNIT 4</b>	Presentation Materials, Presentation Formats And Methods, Documentation And Compilation. Different Type Of Presentation Requirements And Allied Materials For It, Like Only For Designing, Manufacturing Specification, Marketing, / Branding / Promotion Why Documentation And Compilation Is Needed, Process Documentation , Documentation And Compilation For Marketing / Branding/ Promotion
<b>UNIT 5</b>	History Of Gold Jewelry In India, Analyzing Contemporary Gold Jewelry Trends In India, Traditional Indian Gold Smithing Techniques, Gold Appraisal, Market Identification, Culture Board, Jewelry Board, Client Board, Mood Board, Inspiration Board, Conceptualization And Form Generation, Final Design Development, Prototype Development, Portfolio. Inspiration Based Jewelry Design, Inspiration Board, Mood Board ,Client Board, Market Board, Brand Board Application Of Inspiration Into A Jewelry Product, Make Product Range Of All The Design Like Pendant, Earring , Flexible Bracelet , Fixed Bracelet, Bangle , Ring And Necklace, Make Product Detail For All Designs, Choose Any 1 Design And Make Prototype Of Gold Jewelry

\*On the completion of this task student will be able to prepare Jewelry Board, Client Board, Inspiration Board, Mood Board, and Inspiration board, Conceptualization and Form Generation, Final Design Development, Prototype Development & Portfolio.

## COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand the visual, tactile and decorative characteristics of gold materials.

CO2: Be able to create a jewelry collection and developing the portfolio in digital software. CO3: Be able to respond to design requirements.

CO4: Understand professional practice in gold jewelry making.

BDE092A	BUDGETING & COSTING	2-0-0 [2]
---------	---------------------	-----------

### AIM

The brief of the course is to prepare the students to the use of budgets and cost in Jewelry industry. It aims to help students to set up and operate a budgetary control system through understanding of costing methods.

### OBJECTIVE

- Be able to understand the process and documentation required for export
- Be able to enhance marketing skills
- Be able to train industry professionals to enhance export growth
- Be able to understand the trends and emergence of Jewelry brands and brand building
- Develop an understanding of budgetary and planning issues of a business
- Apply the acquired knowledge to problem-solving and practical and personal situations

<b>UNIT 1</b>	<b>Introduction to process and documentation in export market.</b> Principal Documents. Auxiliary Documents. Documents for claiming Export Assistance
<b>UNIT 2</b>	<b>Study quality issues:</b> Study Quality standard & compliances Study Quality certification & hallmarking
<b>UNIT 3</b>	<b>Costing:</b> Jewelry pricing formula Cost Allocations Profit analysis
<b>UNIT 4</b>	<b>Budgeting:</b> Developing the budget Creating an invoice Customs Duty
<b>UNIT 5</b>	<b>GST</b> Jewelers Details Customer Details Sales Details Exchange Details Taxation and Billing Summary

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Calculate the cost price, whole sale price and markup for jewelry CO2:

Understand hallmarking in jewelry.

CO3: Understand documentation for jewelry export.

BDE096A	DESIGN PROJECT- II (DIAMOND JEWELRY)	0-0-6 [3]
---------	--------------------------------------	-----------

### AIM

After understanding the about diamonds, different jewelry markets of India and world, characteristics of light metals their Visual, tactile and functional characteristics. Student will be able to develop designs and communicate ideas using drawing, rendering finishing techniques application of inspiration into a jewelry product. Make product range of all the design like pendant, earring, flexible bracelet, fixed bracelet, bangle, ring and necklace. Make product detail for all designs. Choose any 1 design and make prototype of gold jewelry in your jewelry manufacturing module.

### OBJECTIVE

- To develop learners' skills of independent enquiry by undertaking a sustained investigation of direct relevance to their vocational, academic and professional development.
- Understanding of diamond and different markets of diamond jewelry and their use so that student can use his knowledge for industry demand.
- Basic knowledge of materials used in Jewelry with understanding of how to apply them on paper.

UNIT 1	Diamond Introduction 5-C's Of The Diamond Sources Of Diamonds, Diamond Properties –Physical, Chemical, And Optical Optical Properties
UNIT 2	Analyzing Global Diamond Jewelry Brands, Analyzing Indian Diamond Jewelry Brands,
UNIT 3	Diamond Jewelry Manufacturing process, Diamond Jewelry Trend & Forecast,
UNIT 4	Market identification, Culture board, Jewelry board, Client board, Mood board, Inspiration board
UNIT 5	Conceptualization & Form Generation, Final Design Development,
UNIT 6	Cost assessment techniques, Prototype Development, Packaging, and Portfolio.

\*On the completion of this task student will be able to prepare Jewelry Board, Client Board, Inspiration Board, Mood Board, and Inspiration board, Conceptualization and Form Generation, Final Design Development, Prototype Development & Portfolio

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand the visual, tactile and decorative characteristics of Diamond.

CO2: Be able to create a diamond collection and developing the portfolio in digital software. CO3: Be able to respond to design requirements.

CO4: Understand professional practice in diamond jewelry making.

BDE097A	JEWELLERY DESIGN TRENDS AND FORECAST	2-0-0 [2]
---------	--------------------------------------	-----------

### AIM

In this course you will develop and apply your skills and knowledge of theoretical methods and practical applications of trend forecasting to research and analyze trends that influence jewelry products for the industry and end consumers. You will investigate the specialized study and knowledge based application of micro environments, global, social and cultural issues and their impact on consumer behavior. You will incorporate strategic decision making in recognizing the patterns, cycles and dissemination of information. Your investigation will determine a framework to specifically apply creative and analytical skills in the trend forecasting process.

### OBJECTIVE

- In this course you will develop the following program learning outcomes: Critically analyze, synthesize and reflect on complex theories and recent developments, both local and international, at a micro and macro level, to extend and challenge knowledge and practice in fashion entrepreneurship.
- Professionally communicate propositions, processes and outcomes to address specialist and non- specialist audiences while working with cultural differences in an appropriate manner.
- Implement research methodologies and methods to design and execute substantial applied and research projects, evaluate the outcomes and contribute to the fashion and textiles profession and the field of knowledge in fashion entrepreneurship.
- Investigate emergent global entrepreneurial issues and strategically respond to their impact in the fashion and textiles industry.

<b>UNIT 1</b>	<p>Trend Materials &amp; jewelry Development: materials for research; Color Practice Interactions between colors and materials Briefing and mood board creation Materials Art buying Product development Jewelry design management</p>
<b>UNIT 2</b>	<p><b>Trend Design research, Transmission and interpretation</b> Fashion and jewelry trend terminology Trends in luxury jewelry x fast fashion jewelry The trend industry Nature of trends Trends in urban environment. Information Management Visualization techniques Argumentation strategies</p>
<b>UNIT 3</b>	<p><b>Fashion Jewelry market and marketing environment research</b> market research Trend research techniques research design &amp; data sources Sampling methods evaluating the collections Forecasting Fashion Market Segmentation marketing mix Jewelry consumer</p>
<b>UNIT 4</b>	<p><b>Trend Analysis</b> Evolution of jewelry trend Jewelry trend implications for design / retail decisions Consumer influence on market</p>
<b>UNIT 5</b>	<p><b>Jewelry Forecasting</b> Jewelry Forecasting Process Diffusion of Innovation Fashion Cycles Cultural Indicators Color Forecasting Metal alloy and Gemstones Forecasting Styling Forecasting Sales Forecasting Competitive Analysis</p>

## COURSE OUTCOME (CO)

At the end of this course students will:

- CO1: Able to assess and review the requirements and operational methods of the role of a trendforecaster relevant to jewelry entrepreneurship.
- CO2: Substantiate and apply appropriate research methodologies to identify and analyze alternative research sources for identifying global trend directions.
- CO3: Research and critically analyze the challenges and opportunities of translating trend scenarios into the development of jewelry products.

<b>BDE101A</b>	<b>A. PHOTOGRAPHY (ELECTIVE)</b>	<b>0-0-4 [2]</b>
----------------	----------------------------------	------------------

### AIM

This unit aims to develop learners' skills and understanding in Product Photography. Students will get Knowledge of the history of the photographic medium and how it relates to the history of the other fine arts

### OBJECTIVE

Various aspects of photography including lighting for indoor & outdoor, handling of studio equipment and set planning & composition.

<b>UNIT 1</b>	Various aspects of photography including lighting for Indoor & Outdoor
<b>UNIT 2</b>	Handling of studio equipment
<b>UNIT 3</b>	Set planning
<b>UNIT 4</b>	Composition.
<b>UNIT 5</b>	Final Product Photography

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1 Be able to use space and equipment.

CO2 Be able to use sets, lights and backgrounds.

CO3: Apply the principles of lighting and color theory to a variety of photographic scenarios by measuring, evaluating, and adjusting light and color to create quality images.

<b>BDE102A</b>	<b>B. LIFESTYLE ACCESSORY DESIGN (ELECTIVE)</b>	<b>0-0-4 [2]</b>
----------------	---	------------------

### AIM

The Lifestyle Accessory Design (LAD) postgraduate program educates and trains professional designers to visualize and create lifestyle accessories and systems using different materials, processes and technologies.

### OBJECTIVE

- generate and evaluate design ideas for given briefs relevant to fashion accessories
- create a more integrated fashion look with an understanding of the role of accessories
- experiment with a variety of materials and techniques relevant to fashion accessories
- apply relevant millinery and costume jewelry skills
- present fashion accessories work in a professional manner

<b>UNIT 1</b>	Lacquer Craft Accessories
<b>UNIT 2</b>	Textile Craft Accessories
<b>UNIT 3</b>	Wood Craft Accessories
<b>UNIT 4</b>	Metal Craft Accessories
<b>UNIT 5</b>	Leather Craft &Packaging

### COURSE OUTCOME (CO)

At the end of this course students will:

CO1: Student will be able to understand about fashion accessories.

CO2: Student will be able to understand the techniques & process of fashion accessories.

CO3: Student will be able to understand the product development, quality & marketing aspects.

<b>BDE103A</b>	<b>DESIGN PROJECT III – KUNDAN MEENA</b>	<b>0-0-6 [3]</b>
----------------	--	------------------

### AIM

After Understanding the About Enamels and Enameling, Different Jewelry Markets of India and World, Characteristics of Light Metals Their Visual, Tactile and Functional Characteristics. Student Will Be Able To Develop Designs And Communicate Ideas Using Drawing, Rendering Finishing Techniques Application Of Inspiration Into A Jewelry Product. Make Product Range of All the Design like Pendant, Earring, Flexible Bracelet, Fixed Bracelet, Bangle, Ring and Necklace. Make Product Detail For All Designs. Choose any one Design and Make Prototype of kundan meena Jewelry In Jewelry Manufacturing Module.

### OBJECTIVE

- This unit will enable learners to understand the factors relevant to product design, and to develop skills in planning and producing prototypes.
- To make understand the contrasting difference between casted jewelry and traditional Kundan- Meena jewelry.
- Understanding of traditional and contemporary Kundan Meena. Understanding the technique through practical demonstration.
- Understanding the process of traditional jewelry class in India. A comparative analysis of the past Kundan Jadau work as compared to the present.
- Range development using Kundan Meena technique according to jewelry trends and forecast

<b>UNIT 1</b>	History Of Kundan Meena Jewelry In India, Analyzing Contemporary Kundan Meena Jewelry Trends In India, Traditional Kundan Meena Jewelry Manufacturing Process, Market Identification, Culture Board, Jewelry Board, Client Board, Mood Board, Inspiration Board, Conceptualization And Form Generation, Final Design Development, Cost Assessment Techniques
<b>UNIT 2</b>	Analyzing Global Jewelry Brands, Analyzing Indian Jewelry Brands,
<b>UNIT 3</b>	Kundan Meena Jewelry Manufacturing Process, Jewelry Trend & Forecast,
<b>UNIT 4</b>	Market Identification, Culture Board, Jewelry Board, Client Board, Mood Board, Inspiration Board
<b>UNIT 5</b>	Conceptualization & Form Generation.
<b>UNIT 6</b>	Final Design Development, Prototype Development, Packaging, Portfolio.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand the principles and characteristics of Kundan Meena.

CO2: Be able to create a Kundan Meena collection and developing the portfolio in digital software. CO3: Be able to respond to design requirements and get knowledge of History of Kundan Meena. CO4: Understand professional practice in Kundan Meena jewelry making.

<b>BDE104A</b>	<b>MARKETING &amp; MERCHANDISING</b>	<b>3-0-0 [3]</b>
----------------	--------------------------------------	------------------

### AIM

The brief of this unit to enable the student with an understanding of the essential elements of Jewelry merchandising and promotion & its role within the Jewellery industry.

### OBJECTIVE

- Learn the skills necessary to work as store buyers, market analysts or jewelry event planners.
- Learn about human relations
- Learn about product development and presentation
- Learn about local/global market

<b>UNIT 1</b>	<b>Significance of Jewelry industry</b> Overview of the Jewelry industry. Current scenario. Role of Jewelry industry in Indian economy.
<b>UNIT 2</b>	<b>Jewelry merchandising</b> Introduction to Jewelry merchandising. Role of merchandiser. Qualities of a merchandiser. Responsibility of the Jewelry merchandiser.
<b>UNIT 3</b>	<b>Visual merchandising and its elements</b> Visual merchandising and its advantages for the buyer and seller today. Jewelry calendar. The planning cycle. Merchandise planner.
<b>UNIT 4</b>	<b>Trend analysis and forecasting</b> Trend prediction. Sales forecasting. Product selection and mix, Distribution mix. Distribution channels, from producer to ultimate consumer. Jewelry supply chains. Buying calendar & Buying strategy.
<b>UNIT 5</b>	<b>Jewelry Retail</b> Role and responsibility of the retail Jewelry buyer. Customer identification, Supplier, Sourcing. Global sourcing, Range planning and range building.
<b>UNIT 6</b>	<b>E-Commerce</b> Market Research Variants on product pages (Which size, color, stone) Customization (Personal engraving, gift boxes) Recurring Billing

## COURSE OUTCOME (CO)

At the end of this course students will:

CO1: Be able to demonstrate the application of oral, written, and visual communication skills to present specifications/information and support decision making.

CO2: Understand the unique aspects of jewelry marketing and create strategic promotional plans in print, visual displays and online marketing.

CO3: Analyze the jewelry consumer and market trends.

CO4: Use research skills and analysis methods in order to produce a range of jewelry designs and product **MAPPING**

<b>BDE105A</b>	<b>PROFESSIONAL PRACTICE</b>	<b>3-0-0 [3]</b>
----------------	------------------------------	------------------

### AIM

The Objective Of This Course Is To Critically Look Into The Project And Office Management Practice Emphasizing On Professional Services And Professional Ethics As Well As Project Responsibilities. In This Module, Students Are Required To Demonstrate An Analytical And Methodical Approach To The Process Of Developing, Programming And Implementing Design Solutions. Students Must Reach And Comply With All Legal & Ethical Restrictions Relevant To Them, And Students Are Expected To Demonstrate A High Professional Standard Of Organizational And Time Management Skills, And The Ability To Price Their Services Competitively. It Includes Design Ethics, Principles, Practices, Typical Contract Document Formats, And Resumes Concepts Related To Professional Practice. Awareness of Current Legal Problems and Professional Ethics Relative To Handling Projects From Feasibility Studies Through Development Drawings, Contract Documents, Bidding, And Supervision. Investigation of Processes, Practices, And Ethics Involved In jewelry Design Profession. Course Emphasizes Integration Of Specifications, Cost Estimating, Office And Project Management, And Contract Writing Into The Design Process.

### OBJECTIVE

- Understand the scope of services and areas of responsibility that are encountered in theJewelry profession
- Learn about Pre-Design, Project and Office Administration
- Learn about Design methodology, cost analysis, budget formulation and pro forma procedures
- Learn about office management emphasizing professional service and ethics
- Learn about project management focusing on the Jewelry professional's responsibilities during a project

<b>UNIT 1</b>	<b>Quality and its Attributes</b> Quality standards and compliances Quality certification and hallmarking
<b>UNIT 2</b>	<b>IPR</b> Introduction to Intellectual property rights (IPR) issues. Overview & Importance; IPR in India and IPR abroad. Patents; their definition; granting; infringement; searching & filing. Copyrights; their definition; granting; infringement, searching & filing, distinction between related and copy rights.
<b>UNIT 3</b>	Goal setting, Career direction, Responsibilities. Family business approach / advantages and concerns.
<b>UNIT 4</b>	<b>Skills and development</b> Presentation skills, Personal development
<b>UNIT 5</b>	<b>Promotional opportunities.</b>

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: To be able to place themselves and their work in the context of their selected discipline.CO2: To understand their specialist area and the career opportunities available.

CO3: To understand how to promote themselves and their work professionally.

<b>BDE107A</b>	<b>COMPUTER AIDED DESIGN-IV (RHINO)</b>	<b>0-0-4 [2]</b>
----------------	---	------------------

### AIM

In this module you will learn how to Create Jewelry Design through Advanced 3Design software and how to use 3Design in making master model & Mass Production with Exact measurement, Fine finishing, Real 3d Rendering & Creating Video of design And Learn how can we control gold weight also.

### OBJECTIVE

- Each content will cover the meticulous research about the 3D design by using “RHINO”
- Students will learn the process of manufacturing through CAM by visiting PCSIR and PGJDC
- Investigating different perceptions about jewellery including traditional and contemporary
- Learning how to develop 2D drawings in multiple 3D perspectives and execution of CAD
- Research and documentation of each project with the final 3D processing
- The Final outcome in result of CAM
- Submissions: PowerPoint presentation with digital prints and CAM processed prototypes to make mass production out of one piece

<b>UNIT 1</b>	Concept Of 3D & 3Design, Concept Of Surfacing,
<b>UNIT 2</b>	Stone Setting, Texture Concept, Text Surfacing
<b>UNIT 3</b>	Stone Setting, Texture Concept, Text Surfacing, Concept Of Scooping, Concept Of Beezal Creating
<b>UNIT 4</b>	Concept Of Gold Weight Controlling, Concept Of Human Design Creating By Shaper
<b>UNIT 5</b>	Real 3D Rendering, Video Creating, Concept Of Converting In Dye Formatting, Concept Of Casting Through CAD-CAM Process.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Able to develop 3D Design with Rendering. CO2:

Able to develop exact setting in Design. CO3:

Able to Gold Controlling.

CO4: Able to Create Master Model & Rubber Dye to Create Different Joints for flexibility.

<b>BDE108A</b>	<b>A. VISUAL MERCHANDISING (ELECTIVE)</b>	<b>0-0-4 [2]</b>
----------------	---	------------------

### AIM

This course would require the students to develop merchandising plan for the Jewelry Retail Showrooms. The basics of visual merchandising, display windows, planning etc., would be covered in this course.

### OBJECTIVE

- Be able to promote jewelry merchandise.
- Be able to understand the attraction of the customers.
- Be able to understand the retail store promotion.
- Student will get knowledge of creativity, technical and operational aspects of the business and merchandise.

<b>UNIT 1</b>	Merchandising concepts and theories tools
<b>UNIT 2</b>	Techniques for merchandise
<b>UNIT 3</b>	Display, windows
<b>UNIT 4</b>	Creative thinking for merchandise display
<b>UNIT 5</b>	Store layout, display, Jewelry retailing

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Present and coordinate merchandise so that related goods are shown in a unique, desirable, and salable manner.

CO2: Apply basic design principles and color theories to the construction of promotional displays and advertising.

CO3: Understand the basic functions of retail store operations including store location and layout, shopping center analysis, retail market segmentation and strategies, and the merchandising mix.

CO4: Prepare and execute displays for exhibitions and promotional events using the visual dynamics of light as a design element.

### AIM

The aim of this unit is to develop understanding of the dynamics of online business and online buying behavior to create a consumer-oriented online business strategy along with holistic knowledge on product development for E-Commerce platform.

### OBJECTIVE

- Acquaint students with a fundamental understanding of the environment and strategies in the New Economy.
- Provide analytical tools to understand opportunities in unserved or underserved New Economy markets. Provide a fundamental understanding of the different types and key components on business models in the New Economy.
- Provide guiding principles behind the design and strategy of the customer web interface.
- Understand the traditional and new communication/marketing approaches that create competitive advantage in the New Economy.
- Provide insights on how to implement strategy in the New Economy.
- Understand the metrics that New Economy firms use to measure progress, customer satisfaction, and financial performance.
- Understand the fundamentals of financially valuing New Economy companies.
- Provide an overview of the hardware, software, servers, and the parts that make up the enabling "railroad" for the New Economy.

<b>UNIT 1</b>	Online Industry Appreciation and Business World, Fundamentals of Management, Creative Managerial Leadership,
<b>UNIT 2</b>	Market Dynamic, Jewelry Lifestyle accessories Products, and Fundamentals of E-commerce.
<b>UNIT 3</b>	Digital Marketing, Merchandising, Sourcing and Vendor management,
<b>UNIT 4</b>	Project Management, Long Industry Attachment, Specialisations, Customer Relations Management
<b>UNIT 5</b>	Advanced Data Analytics, Specialisation 2a Visual Communication, Specialisation 2b User Experience Design & Business Plan.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Student will be able to understand global online business sensibilities. CO2: The student will be able to understand Global Online Business Industry.

CO3: The student will be able to understand with the knowledge and skills required to manage the online venture for a long period of sustainable profits, but will also challenge them to achieve career goals by fueling their passion. Student will be able to understand global online business sensibilities. ### AIM

In economics, a luxury good is a good for which demand increases more than proportionally as income rises, and is a contrast to a "necessity good", for which demand increases proportionally less than income. Luxury goods are said to have high income elasticity of demand: as people become wealthier, they will buy more and more of the luxury good. This also means, however, that should there be a decline in income its demand will drop. Income elasticity of demand is not constant with respect to income, and may change sign at different levels of income. That is to say, a luxury good may become a normal good or even an inferior good at different income levels, e.g. a wealthy person stops buying increasing numbers of luxury cars for his automobile collection to start collecting airplanes (at such an income level, the luxury car would become an inferior good

### OBJECTIVE

- A brand is a philosophy of a designer transformed in to value added products. Generally, consumers recognize brands by names which could be logos or unique colors.
- A brand successfully makes recognition through coming up with distinct design features such as style, color or use of certain features unique to the brand.
- Here a student thinks about a very important variable of design called design philosophy which is unique and is thinking how to transform ones design philosophy into fashion and lifestyle products.
- Therefore this part of the project holds maximum importance in this assignment

<b>UNIT 1</b>	What Is Luxury Brand Global Luxury Brands Of Craft Product Influence Of Fashion In Luxury Craft Product Brands Trends And Influences Forecasting Analyzing Global Jewelry Brands, Analyzing Indian Jewelry Brands.
<b>UNIT 2</b>	Supply Chain Management Branding Packaging Visual Merchandising Case Study: Any One Luxury Craft Product Brand
<b>UNIT 3</b>	Collection Analysis Market Segmentation Client & Mood Board Inspiration Board Design Development
<b>UNIT 4</b>	Product Detailing Prototyping Product Photography & Portfolio

## COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Towards the completion of this unit a student would think about the luxury brand philosophy and development with above parameters

CO2: The student will be able to develop own luxury brand

CO3: Be Able To Use Technology to Produce Models, Prototypes and Presentation Materials. CO4:

Understand the Connections between Design Management and Manufacturing.

## TEXT BOOKS

- The Cult of the Luxury Brand – Radha Chadha & Paul Husband.
- Luxury Brand Management – A World Of Privilege – Michel Chevalier & Gerald Mazzalovo.

**OBJECTIVE:**

- To expose students to Historical, Vernacular and Contemporary architecture.

**OUTLINE:**

- ② Vacation Assignment/ Study tour is to be undertaken after the end of V semester exam and before the commencement of VI semester classes. This assignment could be a measured drawing and documentation of a noted building or a study tour for visiting places of architectural interest. The choice of the building to be documented and the places to be visited is left to the concerned department. The assignment may be given as group work (4 to 6 students per group). The students have to submit a report on the measured drawing or the study tour within 15 days from the beginning of the VI Semester. The reports are to be

<b>BDE112A</b>	<b>BRAND MANAGEMENT</b>	<b>2-0-0 [2]</b>
----------------	-------------------------	------------------

### AIM

A brand is a philosophy of a designer transformed in to value added products. Generally, consumers recognize brands by names which could be logos or unique colors. A brand successfully makes recognition through coming up with distinct design features such as style, color or use of certain features unique to the brand. Here a student thinks about a very important variable of design called design philosophy which is unique and is thinking how to transform ones design philosophy into fashion and lifestyle products. Therefore this part of the project holds maximum importance in this assignment.

### OBJECTIVE

- The objective of this course is to learn fundamentals of Brand Management.
- The aim of brand Management Part is to make participants understand competition at product level as well as brand level. Two broadly important aspects namely brand Management from competition point of view and Product Management from New brand Development and Innovation point of view are to be covered.
- The objective of Brand Management is to make students understand principles of Branding, role of brands, elements and components of brands, brand equity etc.
- The main aim for Brand Management is to make sure that students understand implications of planning, implementing and evaluating Branding Strategies.

<b>UNIT 1</b>	<b>UNDERSTANDING BRAND</b> This module gives a basic overview of branding. It covers what a brand is, why brands matter, characteristics of strong brands, and other fundamental concepts of branding. This module aims to familiarize the students with the key conceptual foundations of developing and managing a strong brand.
<b>UNIT 2</b>	<b>DEVELOPING BRAND</b> This module introduces the process of crafting a brand. It covers ways of developing brand elements, creating brand associations, and introducing a new brand, and designing marketing/marketing communications programs that effectively communicate the desirable brand identity to target markets.

<b>UNIT 3</b>	<b>EVALUATING BRAND</b> This module reviews the methods of measuring and interpreting brand performance. It covers typical approaches of assessing brand equity, especially from a consumer perspective. It also offers both qualitative and quantitative tools for measuring brand image and strength.
<b>UNIT 4</b>	<b>MANAGING BRAND</b> The final module focuses on the stewardship and management of brands over time, geographic areas, and market segments. It covers the strategies for more established brands as they attempt to grow and stay relevant over time by examining the concepts/tools in brand extensions, consumer-brand relationships, strategic alliances, brand portfolios, global branding, and brand repositioning/revitalization.
<b>UNIT 5</b>	<b>CRAFTING BRAND</b> This module provides a view into what is involved in the formulation of the brand asset. The most important task in designing the brand is specifying the unique and relevant meaning the brand is to capture. This meaning must then be translated to reflect in the range of brand elements: brand name, logo, slogan, jingle, package design, retail space online space and overarching experience.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Towards the completion of this unit a student would think about the brand philosophy and development with above parameters

CO2: The student will be able to develop own brand.

### AIM

The course will offer a broad perspective of Design thinking, LMC, idealization, data analytic, creating MVP, various digital tools for marketing, financial and pitch deck for the business.

### OBJECTIVE

- To enable the student to incorporate in the structuring and development of the project the concepts of project management, planning tools and controls.
- Economic feasibility of projects.
- Develop the project as a broad business process, covering the entire project life cycle.
- Conceptual phases, planning and organization, implementation and closure.

<b>UNIT 1</b>	<b>Introduction to Project management</b> Conceptualization and characteristics of projects: Project Life Cycle Phases of the project: conceptual, planning and organization, implementation, closure Project administration
<b>UNIT 2</b>	<b>Conceptual phases, planning and organization</b> Scope planning. Analytical structure of activities Structuring people in projects Costs and budget
<b>UNIT 3</b>	<b>Implementation</b> Project execution, monitoring and control Reviews and ratings
<b>UNIT 4</b>	<b>Introduction to Project management</b> Conceptualization and characteristics of projects: Project Life Cycle Phases of the project: conceptual, planning and organization, implementation, closure Project administration
<b>UNIT 5</b>	<b>Product packaging</b> Introduction Packaging Media Quality Assessment & Performance Evaluation: Package Printing: Package Graphics: Package Storage and Handling: Packaging & Environment:

<b>UNIT 6</b>	<b>Introduction to Entrepreneurship and Business Essentials</b> Who is an Entrepreneurs and Types of Businesses The Lean Approach Designing Thinking Lean Model Canvas / Business Model Canvas
<b>UNIT 7</b>	<b>Forecasting Demands and Acquiring Customers</b> Identifying the Target Audience / Customer Conducting Surveys Building an MVP based on the Survey Analyzing Competition
<b>UNIT 8</b>	<b>Brand Building and Establishing Brand Presence</b> Digital Marketing and Social Media Marketing Basics of PR and Importance of Digital Presence Building a Website – Tools and Techniques
<b>UNIT 9</b>	<b>Understanding Finance and Planning for Investment</b> Creating a Revenue Model Developing Sales Projects, Unit Economics, Investment Deck

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Approach the ideas through design thinking. CO2:

Identify the demand and its customers.

CO3: Analyze the data and obtain info like target market, market size, competition. CO4:

Management of the product development process.

CO5: Strategic product planning and Project planning and Detailed project.

CO6: Preparation of the production of the product and Product distribution and Evaluation of the product and process.

<b>BDE114A</b>	<b>PRODUCTION METHOD AND QUALITY CONTROL</b>	<b>2-0-0 [2]</b>
----------------	--	------------------

### AIM

To develop knowledge of various production methods and evaluate various Jewelry manufacturing systems and equipment in the industry.

### OBJECTIVE

- To gain an understanding and appreciation of the principles and applications relevant to the planning, design, and operations of manufacturing.
- To develop skills necessary to effectively analyze and synthesize the many inter-relationships inherent in complex socio-economic productive systems.
- To reinforce analytical skills already learned, and build on these skills to further increase your "portfolio" of useful analytical tools for operations tasks.
- To gain some ability to recognize situations in a production system environment that suggests the use of certain quantitative methods to assist in decision making on operations management and strategy.
- To understand the managerial responsibility for Operations, even when production is outsourced, or performed in regions far from corporate headquarters.

<b>UNIT 1</b>	Introduction to Jewelry manufacturing industry.
<b>UNIT 2</b>	Study of Production Process and Planning in cutting, sewing & finishing.
<b>UNIT 3</b>	Management information systems & documentation procedures.
<b>UNIT 4</b>	Time & Motion study and its relevance: - an overview.
<b>UNIT 5</b>	Quality Department functions of a jewelry industry. Inspection systems from raw material to dispatch.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Evaluate the principles of quality management and production method to explain how these principles can be applied within quality management systems.

CO2: Identify the key aspects of the quality and production improvement cycle and to select and use appropriate tools and techniques for controlling, improving and measuring quality.

CO3: Critically appraise the organizational, communication and teamwork requirements for effective quality and production management.

CO4: Critically analyze the strategic issues in quality and production management, including current issues and developments, and to devise and evaluate quality implementation plans.

<b>BDE115A</b>	<b>JEWELLERY RETAIL AND EXPORT</b>	<b>2-0-0 [2]</b>
----------------	------------------------------------	------------------

### AIM

After studying this subject the students will understand marketing in domestic and international markets and their quota systems. It focuses attention on Gem and jewelry industry giving thorough knowledge of merchandising.

### OBJECTIVE

- To enhance the marketing and selling skills.
- To provide in-depth working knowledge of retail and export in Gem & jewelry industry.
- Techniques to maintain better customer relations.
- New development areas of retail stores and exports companies.
- Be able to respond to professional design requirements and to develop skills in planning and producing prototypes.
- To train professionally with a view to enhance retail and export growth.

<b>UNIT 1</b>	Basic Concept of retailing – definition need and functions
<b>UNIT 2</b>	Introduction to various terms Cost price, selling price, mark-ups, markdowns, distribution channel, wholesale, agent, broker, vendor, distributor
<b>UNIT 3</b>	Introduction to retail organizations Departmental store Discount stores Specialty stores Direct Retailing E- Retailing
<b>UNIT 4</b>	Concept of buying houses – definition, importance and types Retail Mix Concept of visual merchandising – definition, types of window display with examples
<b>UNIT 5</b>	Jewelry merchandising and export– definition, role of merchandiser, buyer – merchandiser interface, time and action sheet Consumer Buying Behavior – definition, consumer black box, decision making process.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand the role of merchandiser in export environment.

CO2: Understand the factors & principles relevant to Jewelry product e.g. concept, ergonomics, form, function, aesthetics, trends, end user, lifespan, materials, manufacturing methods, costing, level of finish, testing, sustainability.

CO3: Be able to respond to professional design requirements and to develop skills in planning and producing prototypes.

CO4: Understand the connections between Export and Retail market.

<b>BDE116A</b>	<b>FINAL PROJECT-I</b>	<b>0-0-12 [6]</b>
----------------	------------------------	-------------------

### AIM

This subject purely concentrates on developing a collection based on all the previous areas covered in jewelry. This subject also aims at a thorough research on selected theme supported by a Design process to develop the whole range of jewelry collection. Students are required to research on the selected topic for the required aspects like demographics, psycho graphics etc. Students will develop the whole design process including mood board, story board, fabric development, design development, range development etc.

### OBJECTIVE

The objective of this unit is to further extend learner's knowledge creating the final collection putting all the knowledge and efforts students have gained so far and launch themselves as designers creating their own brand identity, and brand image.

<b>UNIT 1</b>	<b>Contextual research to identify potential areas of design research &amp; development</b> During this subject student are expected to gather information and visual materials in a field which has sufficient scope for design research and development.
<b>UNIT 2</b>	<b>Formulation of design brief, design concept, research methods and project schedule</b> The student will have to develop and negotiate a design brief by developing a concept based on a particular theme. At this stage student are expected to present their design concept based on a colloquium paper in front of a jury of faculty mentors. After the approval of their concept, student will be expected to meet their design mentor at scheduled times. Formative Feedback will be provided at each meeting and student will have to maintain a log book which shows their progress and gives evidence of following the design process. When student are in the process of design exploration.
<b>UNIT 3</b>	<b>Pricing &amp; Costing of Final products</b> The student will achieve optimum costs of production through an understanding of metal, design, concept development and finishing processes. They are also expected to do the pricing and costing of their final product.
<b>UNIT 4</b>	<b>Final submission and presentation</b> The Final Submission which will be supported by an oral presentation and submission of a design portfolio in front of a Jury, where the student will be expected to justify the validity/originality of their design process and findings. The student will be encouraged to do a self-evaluation, assessing their effectiveness of achieving set aims.
<b>UNIT 5</b>	<b>Reflective Journal &amp; Prototype and portfolio development</b> <ul style="list-style-type: none"> <li>• Additionally the student will be required to submit a Reflective Journal which represents their involvement and overall journey of learning and what specifically they reflected on. This will give evidence of whether they have fulfilled the initial aims that they had set.</li> <li>• To develop prototypes, student has to explore new and appropriate methods of jewelry making, jewelry product in relation to the relevant metal, stones.</li> </ul>

## COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: To understand strengths and weakness and create your brand, brand identity, image and logo. CO2: To identify the major types of idea sources in clothing design and provide information about each source. Recognize that these sources of inspiration help designers to create design elements and principles of individual designs. In order to foster originality, sources of inspiration play a powerful role throughout the creative stage of design process, and also in the early stages of jewelry research and strategic collection planning

CO3: To present research analysis to client groups.

CO4: To extend and apply skills in developing creative visual language.

CO5: To synthesize and critically evaluate experimentation in personal creative practice.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

BDE117A	RESEARCH PROJECT & DISSERTATION	0-0-4 [2]
---------	---------------------------------	-----------

### AIM

Sustainability is regarded as the future of Jewelry design sector. A student should have practice to implement sustainable strategies to their designing a collection for Jewelry Design. Now sustainability is a very complex concept when it comes to input it into jewelry industries on the whole. When it comes to Jewelry, the student shall concentrate on designing the PRODUCT.

### OBJECTIVE

- To enable the student to incorporate in the structuring and development of the project the concepts of project management, planning tools and controls.
- Economic feasibility of projects.
- Develop the project as a broad business process, covering the entire project life cycle.
- Conceptual phases, planning and organization, implementation and closure.

<b>UNIT 1</b>	This unit describes the extent of the project. It contains product development to the final process of marketing it to the consumer.
<b>UNIT 2</b>	Product Development
<b>UNIT 3</b>	Marketing the product
<b>UNIT 4</b>	Where to retail
<b>UNIT 5</b>	<b>Reflection on the Dissertation Writing Experience:</b> Dissertation Topic Dissertation Process Resources will be used in Dissertation with Discussion and Evaluation

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: The student will explore the fields of Research design, Research proposal development and the conduct of Research projects as applied to their dissertation topic.

CO2: Being able to critically evaluate the Jewelry Design work of others and provide constructive criticism for ongoing work.

CO3: Being able to deconstruct and reconstruct alternative collection developments from existing work.

<b>BDE119A</b>	<b>PORTFOLIO</b>	<b>0-0-6 [3]</b>
----------------	------------------	------------------

### **AIM**

Design portfolio is the expression of student to translate themes into design. Here one gets inspired by different themes which could be art movements, sport, historic eras, music, dance culture, nature, traditions etc. And picks out tangible and intangible elements which are to be used as design elements in the collection. The ability of a designer to exhibit and use design elements is highlighted which is further on translated into projects. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of three years. The purpose lies in promoting the skills of students in a single format this course will help students enter the “real world”. It's structured around equipping students on skills of “self selling and presenting their portfolios”. The course is aimed at equipping them select “perfect fit” careers, find better jobs and become professional and street smart. It will give students a realistic picture of their future professional lives and provides tools on coping with it.

### **OBJECTIVE**

- Have the necessary professional communication skills. These include a wide array of tools like making CV's and presentations, preparing for job tests and interviews and the necessary computer skills to produce these.
- Knowledge about the local and international markets and their operations.
- Career planning, channels for job search, basics of entrepreneurship.
- The course will also assist students to be able to present their portfolios in various modern formats like USB's, digital photography, websites, CD's etc.
- Work ethics will also be touched upon to enable them to have long term and fruitful relations with employers.

### **COURSE OUTCOME (CO)**

**At the end of this course students will:**

CO1: Be able to place themselves and their work in the context of their selected discipline. CO2:

Understand their specialist area and the career opportunities available

CO3: Be able to develop and present a professional portfolio in an appropriate format Understand how to promote themselves and their work professionally.

CO4: A copy of portfolio has to be submitted with the department at the time of final Assessment.

<b>BDE120A</b>	<b>OFFICE TRAINING (INTERNSHIP)</b>	<b>0-0-26 [13]</b>
----------------	-------------------------------------	--------------------

### AIM

The Aim Of This Unit Is To Extend Learners' Knowledge Of Professional Practices Within Their Specialist Area And To Relate These To Personal Goals And Career Opportunities.

### OBJECTIVE

- To encourage students to work in with relevant industries.
- An avenue to enhance academics learning through hands on work experience.
- Get advice on career from knowledgeable and experienced professionals.
- Gain exposure to a professional work atmosphere.
- Be able to place themselves and their work in the context of their selected discipline
- Understand their specialist area and the career opportunities available
- Understand how to promote themselves and their work professionally.

### INTERNSHIP TRAINING

- In the VI semester , student will undergo a 12 weeks training in a jewelry designing industry /manufacturing unit/ jewelry export unit so that they can understand the existing working practices , conditions and acquire an in depth technical knowhow.
- The student shall prepare a report on the training given by the organization he/she will submit the report. The student has to submit the certificate regarding successful training with the organization.
- A copy of report has to be submitted with the department along with the performance certificate issued by the firm manager/ owner and one with the firm (where internship is pursued).
- After the internship, student has to appear in front of jury members for a presentation seminar, who will judge the performance based on their presentation, report & viva- voce and award marks to student

<b>UNIT 1</b>	<b>Weekly Teaching Plan</b> Week 1-2 How to assess your internship Week 3 writing an introduction Week 4 doing your research Week 5-6 locating the required area of research and analyzing it Week 7-8 writing down about the context of your report Week 9 linking the research to the context of your report Week 10 writing up the conclusion of the report and editing it Week 11 making a short, 'to the point' presentation Week 12-
---------------	---

	14 working on the presentation Teaching & Learning Methods: Assessment and Evaluation: A Proposal
<b>UNIT 2</b>	<b>A Paper (minimum 2000 words)</b> Reason for particular Placement. Brief description of the context. Description of your duties. Findings. Diary of activities. Professional's report
<b>UNIT 3</b>	<b>A Presentation</b> (approx. 30 minutes) Over view of your paper. Visual support materials.
<b>UNIT 4</b>	<b>PROJECT REPORT</b> To Be Submitted ,Background of Industry, Number Of Employees Project Detail On Which Assisted, Manufacturing Process, Hand & Computer, Sketches, Experience ,Any Other Details

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: To identify business strategies for buying and selecting product of the company. CO2: To identify process and procedures for company purchases.

CO3: To explore the buying process, Increase skills in buying and merchandising. CO4: To identify business strategies for buying and selecting products.

CO5: To understand that how they write a report of their industry experience & develop written communication skills

<b>BDE004A</b>	<b>Material Exploration &amp; Sourcing</b>	<b>0-0-2 [1]</b>
----------------	--	------------------

**PREREQUISITE OF THE COURSE** ---Basic knowledge of different material, Basic Textile (Fabric), Knowledge Market Survey

**LEARNING OBJECTIVE:**

The main objective is to develop understanding of skills in the application of materials for different end uses. Student will develop a visual and tactile understanding of textile raw materials and fabrics enabling to evaluate performance characteristics in fibers and fabrics in relation to commodity and processing costs. Student will be required to do data collection & sourcing of samples like knitwear, performance sportswear, natural fibers or technologically led fabrics from a variety of fiber manufacturers, wholesalers and retailers in and around Jaipur.

<b>UNIT 1</b>	<b>Introduction to Material Sourcing &amp; Data Collection</b> Introduction to basic material required for fashion and textile design. Identifying customers' requirements. Pricing, lead time and trade rules. Risk assessment of raw materials.
<b>UNIT 2</b>	<b>Understanding Markets for basic fabrics &amp; weaves</b> Market survey to find out basic fabric shops in and around Jaipur. Market survey to find out weaving centers in & around Jaipur. Create a swatch book of above mention fabrics with their market price.
<b>UNIT 3</b>	<b>Understanding Markets for Decorative, Complex fabrics, &amp; weaves</b> Market survey to find out complex and decorative fabric Shops in and around Jaipur. Market survey to find out weaving artisans and handicraft stores in and around Jaipur. List out all the fabric shops and handicraft centers in detail. Create a swatch book of above mention fabrics with their market price.
<b>UNIT 4</b>	<b>Understanding markets for Laces, Buttons, and others Fasteners</b> Market visit to find out various shops of laces, buttons and others detailing in and around Jaipur. List out all the names of the shops along with their address and complete details. Small collection book of above mention detailing items with price.
<b>UNIT 5</b>	<b>Understanding markets for Fashion and textile Accessories</b> Market survey to find out small to large fashion accessory shops in and around Jaipur. Prepare the list with name of the shop along with address. Small swatch book of accessories along with their price.

**COURSE OUTCOME (CO):**

At the end of this course students will have:

CO1: To understand the raw materials for various textile uses CO2:

To differentiate various materials

CO3: To surf the market according to the material and apply various materials according to the product CO4: To know famous markets and shops for material sourcing & data collection in and around Jaipur.

<b>BDE005A</b>	<b>Fashion Illustration-I</b>	<b>0-0-4 [2]</b>
----------------	-------------------------------	------------------

**PREREQUISITE OF THE COURSE** ---Drawing skills, Use of different mediums

**LEARNING OBJECTIVE:**

A thorough foundation in fashion illustration is established in this course which covers the fashion figure and garment interpretation. Student's study and develop the basic structure unique to the fashion figure. Students will learn to interpret draping and surface texture of the fabric together with technical drawings.

<b>UNIT 1</b>	<b>Basic Human Anatomy</b> Basics of human anatomy, drawing of legs, feet, hands, arm etc. Practice of hands and feet, hair style and face analysis
<b>UNIT 2</b>	<b>Eight Head Theory and Stick Figure</b> Eight-head human figure, elongated eight-head human figures – 8 ½, 10 ½, and 11 ½ head. Stick figure and fleshing of the stick figure. Stylization of stick figure.
<b>UNIT 3</b>	<b>Medium Exploration and Fabric Rendering</b> Medium explorations –Color pencil shading, Charcoal, Watercolour, India Ink, Pastels, Marker. Fabric rendering – Cotton, Leather, Silk, Satin, Denim, Corduroy, wool, net, chiffon, organza and velvet. Embellishment and Prints.
<b>UNIT 4</b>	<b>Fashion Poses and Flat Drawing</b> Fashion poses, fashion figure in relation to fashion pose, drawing profile and ¾ figures. Background for the figures.
<b>UNIT 5</b>	Drawing flat sketches Developing range of women's wear for a concept

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: Understand human figures proportion, movements and postures. CO2: To understand about the eight Head Theory and Stick Figure.
- CO3: To understand how to illustrate the idea of design with the skill of fashion illustration technique with different materials: charcoal, colour pencil, water colour, ink and pastels.
- CO4: Present a fashion Illustration Portfolio, identifying areas for further development and best practice.

<b>BDE006A</b>	<b>Pattern Making &amp; Garment Construction-I</b>	<b>0-0-4 [2]</b>
----------------	--	------------------

#### LEARNING OBJECTIVE:

The main objective of this module is to develop: (I) understanding of pattern making, based on body measurements, using industry standard signs and symbols. (II) To develop the understanding in the skills of garment construction techniques, creating toiles, demonstrating the safe use of equipment and relevant health and safety regulations.

<b>UNIT 1</b>	<b>Pattern Drafting</b> Introduction of Pattern Making Method of measuring body and dress form Tools of pattern making Common terms used in pattern development Method for drafting the basic pattern set (women/Kids) Torso Pattern Test fitting of patterns Dart manipulation - elementary and advanced dart manipulation. Variations of Sleeve, collar and skirt
<b>UNIT 2</b>	<b>Draping</b> Introduction to Basics of draping Grain line, preparation of muslin for draping Dress form, Key to abbreviations used in draping
<b>UNIT 3</b>	Basic Bodice Block – Front & Back Basic Skirt Block – Front & Back Skirt Variation Collar variation Yokes
<b>UNIT 4</b>	<b>Garments Construction Techniques</b> Sewing machine and parts Stitch practice. Types of stitches. Types of seams & seam finishes.
<b>UNIT 5</b>	<b>Garments Construction Techniques</b> Plackets, Pocket, Collar. Fitting a sleeve, Bodice Blocks. Darts & neckline finishes.

#### COURSE OUTCOME (CO):

At the end of this course students will have:

- CO1: To create and use a set of basic blocks and apply skills in dart and seam manipulation.
- CO2: To produce a full-scale pattern from creative designs and working drawings through Pattern making and draping technique.
- CO3: To make them familiar with sewing machine and to work proficiently on the sewing machine with the rectify simple problems of the machine.
- CO4: To understand the special skills and techniques used in the garment making with the understanding of various parts of the garment and construction of complete garment.

<b>BDE008A</b>	<b>Design Project –I</b>	<b>0-0-6 [3]</b>
----------------	--------------------------	------------------

**Prerequisite of the Course** ---Elements of Design, Elements of Fashion, Process of Design, Fashion Illustration, Drawing Skills

**LEARNING OBJECTIVE:**

The main objective of this module is to develop a design intellect and basic design system. Hands-on experiences in the interpretation of image of fashion product/customer specifications, apparel design concept development, illustrations and technical drawings, design for prototyping, and manufacturing will be utilized in the instruction of the design process. Students will accurately document their fashion product design experience through design process in a notebook.

The course would require the students to carry out research on the major women wear designers and their brands along with the recognition of different women wear segments and their growth rate.

<b>UNIT 1</b>	<b>Design Development Process</b> Research Inspiration board Creating Mood boards- its application in designing apparels. Theme boards- its direct relation to creating designs of apparels. Client boards - the study of peculiar characteristics of a client to design special apparels for him/her.
<b>UNIT 2</b>	<b>Design Development Process</b> Illustration board - Fashion Illustrations according to themes. Accessory board
<b>UNIT 3</b>	<b>Design Development Process</b> Trim &Swatch (Fabric) boards- Use of Trims and swatches in surface texture of the designed apparels. Technical drawing - Flat sketch board / tech pack
<b>UNIT 4</b>	<b>Process of Fittings</b> Muslin fits (toile) Actualizing the garment
<b>UNIT 5</b>	<b>Process of Fittings</b> Costing Presentation

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: To develop the design process through experimental ideas and applications CO2:  
To Present research analysis to client groups.  
CO3: To extend and apply skills in developing creative visual language.  
CO4: To synthesize and critically evaluate experimentation in personal creative practice.

<b>BDE012A</b>	<b>Fashion Illustration-II</b>	<b>0-0-4 [2]</b>
----------------	--------------------------------	------------------

**PREREQUISITE OF THE COURSE** ---Drawing Skills, Fashion Illustration of Women's

**LEARNING OBJECTIVE:**

Introducing students to illustrate figures with reference to eight-head figure and elongated eight-head figures. This subject is an extension of fashion illustration-I, where the students would be encouraged to sketch fashion figures, render the fabrics and work on fashion figures with reference to design aesthetics.

The course is a study of illustration of different garments for Women, Kids and Men.

<b>UNIT 1</b>	Illustration of men's/kids garments, different poses, importance of the background. Men's features- Face, hair, hands and feet. Illustrating men's figures in different mediums.
<b>UNIT 2</b>	Individual style in illustration for different looks.
<b>UNIT 3</b>	<b>Accessory designing and illustration</b> Illustration of Jewellery using various mediums like pearls, beads, gold and silver, diamonds, wood, wires, velvet, net, etc, Designing and illustration of head gears
<b>UNIT 4</b>	Designing and illustration of bags and belts using various mediums like leather, cane, pearls, beads, wires, velvet, net, etc. Designing and illustrating footwear of all types
<b>UNIT 5</b>	Designing and illustrating bows and ties on varied dresses. Illustrating hairstyles

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: To understand how to illustrate the idea of design with the skill of fashion illustration technique. CO2: Understand human figures proportion, movements and postures.  
CO3: To understand the garment interpretation  
CO4: To understand about the accessory from a sketch.

<b>BDE013A</b>	<b>Pattern Making &amp; Garment Construction-II</b>	<b>0-0-4 [2]</b>
----------------	---	------------------

**PREREQUISITE OF THE COURSE** ---Basic Pattern Making of western garment and Knowledge of construction Techniques.

**LEARNING OBJECTIVE:**

The purpose of this module is to provide learners with the opportunity to develop skills in the principles of Indian wear pattern drafting and construction.

<b>UNIT 1</b>	<b>Pattern Drafting</b> Standardize concept of pattern making Direct Method Things to keep in mind while taking measurement Paper pattern of Salwar, Churidar, Plain kurta, Kalidar kurta Paper pattern of SareeBlouse, Choli blouse Marka-Making & Layouts Spec-Sheets of one designed garment <b>Documentation and Presentation of Work</b> In portfolio - All full-size patterns & 1/4 file document
<b>UNIT 2</b>	<b>Garments Construction</b> Construction of Salwar /Churidar Construction of plain kurta Construction of kalidar kurta Construction of plain blouse Construction of choli blouse <b>Documentation and Presentation of Work</b> In portfolio -- All women's wear garment construction with proper finish
<b>UNIT 3</b>	<b>Advance Draping</b> <u><b>Hands on:</b></u> Handling of new fabrics – georgette, chiffon, satin, knits, etc Asymmetric drapes Cowls – underarm, hip, etc. Draping of accents & emphasis – peplum, frills, flounces, etc. Conversion of Drapes in to flat patterns (developing of patterns from drapes) Conversion of drapes in to actual fabrics.
<b>UNIT 4</b>	<b>Garment Construction</b> Construction of mock-up garment from a chosen design. Construction of final garment from a chosen design
<b>UNIT 5</b>	<b>Documentation and Presentation of Work</b> In portfolio - Draping techniques, Pattern Making and Garment Construction

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: In this module student will learn to take bodice measurement related to the Indian wear garment with different variation and produce them on drafting paper and create a full-scale pattern from creative designs and working drawings.
- CO2: To understand and appreciate the concept of fit and balance of garments
- CO3: Understanding of identify and differentiate between fabric varieties with understanding of different materials.
- CO4: To develop understanding on how to concealment of fabric joins within garment with advanced knowledge in draping, pattern cutting and construction for women's clothing.

BDE018A	Surface Design	0-0-4 [2]
---------	----------------	-----------

**PREREQUISITE OF THE COURSE** ---Knowledge of different fabric

**LEARNING OBJECTIVE:**

- This module is all about of dyes and Print style. In this module students will be able to understand about classes of dyes, dyestuffs, techniques, dye auxiliaries, printing and printing techniques, effects and defects of dyeing and printing.
- The module is to teach the basic and complicated techniques of surface embellishment to the students. A surface design technique makes the fabric beautiful by various methods. Surface design refers to the process of adding color, pattern, texture or design to fabric through the use of outside mediums such as dyeing, printing, batik, embroidery and many more.

<b>UNIT 1</b>	<b>Dyeing Theory</b> Theory of Dyeing – Application of various dyes dye-fiber interaction Classification of Dyes- Natural dyes and synthetic dyes. Direct dyes Reactive, vat, insoluble azoic, indigo sol, acid dyes, basic dyes, Sulphur dyes, disperse dyes, pigments. <b>Methods and Machinery</b> Methods and machinery for dyeing, Pre and after treatments of dyeing Defects of dyeing, Care of fabrics.
<b>UNIT 2</b>	<b>Application of Dyes</b> Practical application and swatch dyeing with direct, basic, reactive, sulfur, vat, mordant, pigment and acid dye. <b>Tie &amp; Dye</b> Introduction to tie and dye. Making samples of dye and dye with different dyes on different fabrics and product making. Creative exploration of dyeing techniques.
<b>UNIT 3</b>	<b>Different styles of Printing</b> Styles of printing: Direct, Discharge and Resist styles on cellulosic, Protein, manmade textiles and their blends, Solvent dyeing, foam dyeing, spray dyeing. After treatments: Steaming, curing, and ageing of Prints. <b>Printing methods</b> Hand block, machine, block, roller and Screen-printing methods, Advantages and drawbacks of all these printing methods, Printing paste: Constituents of print paste, Thickener and its types. Function of thickener, selection of thickener.
<b>UNIT 4</b>	<b>Resist style of Printing</b> <ul style="list-style-type: none"> <li>• Introduction to Batik.</li> <li>• Application of technique on various fabrics and product making.</li> </ul> <b>Printing Styles</b> <ul style="list-style-type: none"> <li>• Practical introduction to printing methods and application of block, stencil and screen printing</li> </ul>

<b>UNIT 5</b>	<b>Natural Prints</b> <ul style="list-style-type: none"> <li>● Application of Dabu print with product.</li> <li>● Application of Natural print (echo print) with product.</li> </ul>
	<ul style="list-style-type: none"> <li>● Application of Pigment print with product.</li> <li>● Practical application of Ice Dyeing with product</li> </ul>

#### **COURSE OUTCOME (CO):**

At the end of the course, students will be able to

- CO1: To Apply and select various dyes according to fabric, find Defects in dyeing and printing with. the process of tie and dye.
- CO2: To learn the various classes of dyes and auxiliaries used in dyeing through practical application and demonstrate Hand block, machine, block, roller and Screen-printing methods. Advantages and drawbacks of all these printing methods.
- CO3: To understand Direct, Discharge and Resist styles on cellulosic, Protein, manmade textiles and their blends and analyse Pre and after treatments: Steaming, curing, and ageing of Prints, printing process, history of printing, different style of printing preparation of printing paste practically.
- CO4: To learn basic and complex hand embroideries through needle and anchor threads and various surface design techniques according to the design requirement.

<b>BDE021A</b>	<b>Pattern Making &amp; Garment Construction-III</b>	<b>0-0-4 [2]</b>
----------------	--	------------------

**PREREQUISITE OF THE COURSE** ---Pattern Making and garment construction

**LEARNING OBJECTIVE:**

- The course is designed to inculcate the skills of making patterns for the men's/Kids wear with focus on fit and details which is expected to grow in Indian market in terms of exports and domestic market.
- Students would be encouraged to make their unique sketches and make the patterns for the same.
- To familiarize the students with the concept of grading for fashion

<b>UNIT 1</b>	<b>Size chart of menswear shirt &amp; Shirt terminology</b> Paper pattern of Shirt Paper pattern of Waist coat Collars- (shirt collar, stand collar, roll collar), cuffs, plackets. Standardization of measurements: fundamentals of grading and grading terminology.
<b>UNIT 2</b>	Size chart of menswear trouser & Trouser terminology Paper pattern of Trouser with zip fly.
<b>UNIT 3</b>	<b>Garment Construction</b> Men's Shirt with attachment of Collars, cuffs and plackets Men's Trouser with attachment of zip fly. Men's waist coat with lining attachment. Specification Sheet and Costing. Fabric selection and stitching.
<b>UNIT 4</b>	<b>Pattern making of Kids Wear</b> Basic Bodice Block Basic Skirt Block Basic Sleeve Block
<b>UNIT 5</b>	<b>Garment Construction</b> Construction of Basic patterns of Kids wear

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: To understand the specialist skills and techniques used in the men's wear pattern making and understanding of size chart with making of basic shirt pattern with collar, placket, pocket & cuff.
- CO2: To understand how to make a basic trouser pattern with pocket, waist band & zipper fly and produce men's wear garment of pattern making to given specification.
- CO3: To understand the special skills and techniques used in the garment making and construction of Men's wear shirt, trouser & waist coat.
- CO4: To understand the specialist skills and techniques used in the kid's wear pattern and garment making.

**PREREQUISITE OF THE COURSE** ---Coral draw and Photo Shop and Manual Illustration.

**LEARNING OBJECTIVE:**

To enhance Professional competence in Fashion & Textile. Providing a deep insight into the techniques for delivering effective presentations. Understanding of core aspects of Fashion Design Digitally. Presentation of Product display and views to market in Industry

<b>UNIT 1</b>	<b>Introduction to Illustrator</b> Introduction to Illustrator Interface Navigation and Viewing Introduction to Shape
<b>UNIT 2</b>	<b>Introduction to Illustrator</b> Line Segment, Selection, Scale, Rotate, Pen, Pencil, Eraser and Type Magic Wand & symbols. Brief about Swatch, Gradient & Align Panel
<b>UNIT 3</b>	<b>Digitizing the sketching</b> Understanding of Design process from Paper to Pixels, Understanding of Color Dock panel for mixing up the swatches, <u>Fill apparel sketches with colors and patterns</u> . Easier, manageable, preservable and shareable of output, Detail bubbles and callouts on illustration.
<b>UNIT 4</b>	<b>Pattern Making</b> Customised patterns, textures and Designs, Making combination for Different Patterns, Creating technical illustrations for Pattern making, Neat stitch lines and cut specifications. Create and modify textile designs, repeats and colorways, Models of garments can be presented in different fabric types with each fabric's typical material pattern.
<b>UNIT 5</b>	<b>Design &amp; Product Development</b> Improvisation of Design & Patterns, Digital presentations of Product Display

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: Overview of Illustrator terminology  
CO2: Familiarization with the Digitally Product making and Coloring CO3:  
Develop skills in visual and textual analysis  
CO4: Overview of design and product development processes used in industry and how Illustrator fits into the design workflow

<b>BDE023A</b>	<b>Design Project –III</b>	<b>0-0-4 [2]</b>
----------------	----------------------------	------------------

**Prerequisite of the Course** ---Knowledge of Design Process, Material understanding

**LEARNING OBJECTIVE:**

The course would require the students to carry out research on the major women's (Indian) wear designers and their brands along with the recognition of different women's (Indian) wear segments and their growth rate.

<b>UNIT 1</b>	<b>Design Development Process</b> Research Inspiration board Creating Mood boards- its application in designing apparels. Theme boards- its direct relation to creating designs of apparels. Client boards - the study of peculiar characteristics of a client to design special apparels for him/her.
<b>UNIT 2</b>	<b>Design Development Process</b> Illustration board - Fashion Illustrations according to themes. Accessory board Trim & Swatch (Fabric) boards- Use of Trims and swatches in surface texture of the designed apparels. Technical drawing - Flat sketch board / tech pack
<b>UNIT 3</b>	<b>Process of Fitting</b> Muslin fits (toile) Actualizing the garment
<b>UNIT 4</b>	<b>Process of Fitting</b> Costing Presentation

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: To develop the design process through experimental ideas.  
CO2: To understand the applications and present research analysis to client groups. CO3: To extend and apply skills in developing creative visual language.  
CO4: To synthesize and critically evaluate experimentation in personal creative practice.

BDE027A	Computer Application IV	0-0-6 [3]
---------	-------------------------	-----------

**PREREQUISITE OF THE COURSE:** Coral Draw and Photo Shop

**LEARNING OBJECTIVE:**

The objective of this module is to learn advanced computer graphic competency and learn, how to Create Portfolio with help of Computer software.

<b>UNIT 1</b>	<b>Concept of Page margin</b> <ul style="list-style-type: none"> <li>● Concept of Page Margin.</li> <li>● Concept of Page Layout.</li> <li>● Setting of Document.</li> </ul>
<b>UNIT 2</b>	<b>Editing &amp; Formatting</b> <ul style="list-style-type: none"> <li>● Formatting of Document.</li> <li>● Digital Portfolio Development</li> <li>● Format of Portfolio.</li> </ul>
<b>UNIT 3</b>	<b>Projection of different board</b> Complete project with story board and Inspiration. Mood Board
<b>UNIT 4</b>	<b>Projection of different board</b> Color Board Client Profile.
<b>UNIT 5</b>	<b>Projection of different board</b> Concept of Choosing Paper. Concept of Resolution.

**COURSE OUTCOME (CO):**

At the end of this course students will have:

CO1: To develop Pages with exact margin and Formatting.

CO2: To understand setting of document, choosing paper and concept of resolution. CO3: To complete projects with story board, Inspiration.

CO4: To Complete project with Mood Board, Color Board, Client Board and Client profile

<b>BDE034A</b>	<b>Fashion Styling</b>	<b>0-0-8 [4]</b>
----------------	------------------------	------------------

**LEARNING OBJECTIVE:**

The course will teach students to become fashion stylist who selects each item appropriately so that they complement and harmonize with all the other components successfully. It is for this reason that fashion stylists have been called “Designers of Style”, setting the trends that everyone else follows.

<b>UNIT 1</b>	<p><b>Styling Elements</b></p> <p>understand the different roles of today's stylist working in various fields including styling designer collections, styling for magazines, styling for the individual</p> <p>use fashion forecasting to ensure the relevance of the styled product</p> <p>competently brief relevant people including the photographer, hair stylist and make-up artist on the required look both verbally and visually</p>
<b>UNIT 2</b>	<p><b>Styling Elements</b></p> <p>communicate effectively using a professional styling, hairstyling and make-up vocabulary</p> <p>compile relevant research on a range of period styles in history with an emphasis on the decades of the 20th and 21st centuries looking at clothing, hair and make-up</p> <p>understand the influence of trends and subcultures</p> <p>select all required items to put a look together including garments and accessories.</p>
<b>UNIT 3</b>	<p><b>Styling Elements</b></p> <p>compile relevant information on the items photographed/shown so that correct details and credits can be supplied</p> <p>explain the products and equipment used by professionals to style hair and apply make-up</p> <p>describe a selection of hair styling techniques and make-up techniques commonly used by hair stylists and make-up artists.</p> <p>Analyze the current trends in hair styling and make-up for advertising, publicity, show and session work</p> <p>understand the different requirements of make-up for photo shoots, catwalk shows.</p> <p>Select make-up including highlighting, shading and contouring techniques Describe preparation of the model including selection of bases and corrective make-up</p> <p>Demonstrate ideas for a range of catwalk hair and make-up looks and promotional photo shoot hair and make-up looks</p>
<b>UNIT 4</b>	<p><b>Photography and the Photo Shoot</b></p> <p>Outline the history of fashion photography and its role in promoting fashion in the 20th and 21st centuries.</p> <p>Understand the different types of lighting, both natural and artificial plan the photo shoot to fit the client's budget and deadline</p> <p>Direct the professional team producing the photo shoot</p> <p>Work on set/on location as part of a professional team</p>

<b>UNIT 5</b>	<b>Fashion PR and Fashion Journalism</b> Report fashion shows. Study and analyse the writing of contemporary fashion journalist Develop a fashion vocabulary suited to fashion journalism
	Write a fashion article for the print media Conduct an interview and write a profile

#### **COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: Be able to understand about the Styling Elements.  
 CO2: Be able to understand how to handle Photography and the Photo Shoot  
 CO3: Be able to understand about the Fashion PR.  
 CO4: To understand about the Fashion Journalism

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

BDE035A	Project Management& Entrepreneurship	2-0-0 [2]
---------	--------------------------------------	-----------

#### AIM

The course will offer a broad perspective of Design thinking, LMC, idealization, data analytic, creating MVP, various digital tools for marketing, financial and pitch deck for the business.

#### OBJECTIVE

- To enable the student to incorporate in the structuring and development of the project the concepts of project management, planning tools and controls.
- Economic feasibility of projects.
- Develop the project as a broad business process, covering the entire project life cycle.
- Conceptual phases, planning and organization, implementation and closure.

<b>UNIT 1</b>	<b>Introduction to Project management</b> Conceptualization and characteristics of projects: Project Life Cycle Phases of the project: conceptual, planning and organization, implementation, closure Project administration
<b>UNIT 2</b>	<b>Conceptual phases, planning and organization</b> Scope planning. Analytical structure of activities Structuring people in projects Costs and budget <b>Implementation</b> Project execution, monitoring and control Reviews and ratings
<b>UNIT 3</b>	<b>Product packaging</b> Introduction Packaging Media Quality Assessment & Performance Evaluation: Package Printing: Package Graphics: Package Storage and Handling: Packaging & Environment <b>Introduction to Entrepreneurship and Business Essentials</b> Who is an Entrepreneurs and Types of Businesses. The Lean Approach Designing Thinking Lean Model Canvas / Business Model Canvas
<b>UNIT 4</b>	<b>Forecasting Demands and Acquiring Customers</b> Identifying the Target Audience / Customer Conducting Surveys Building an MVP based on the Survey Analysing Competition

<b>UNIT 5</b>	<b>Brand Building and Establishing Brand Presence</b> Digital Marketing and Social Media Marketing Basics of PR and Importance of Digital Presence Building a Website – Tools and Techniques <b>Understanding Finance and Planning for Investment</b>
	Creating a Revenue Model Developing Sales Projects, Unit Economics, Investment Deck

#### **COURSE OUTCOME (CO)**

**At the end of this course students will:**

- CO1: Approach the ideas through design thinking and create its LMC
- CO2: Identify the demand and its customers and analyze the data and obtain info like target market, market size, competition
- CO3: Management of the product development process and strategic product planning and Project planning and Detailed project
- CO4: Preparation of the production of the product and Product distribution and Evaluation of the product and process and the brand Building and Establishing Brand Presence and the Finance and Planning for Investment.

<b>BDE036A</b>	<b>Portfolio</b>	<b>0-0-8 [4]</b>
----------------	------------------	------------------

**PREREQUISITE OF THE COURSE**---Knowledge of Computer Software (Coral Draw, Photo Shop, Illustrator.

**LEARNING OBJECTIVE:**

The ability of a designer to exhibit and use design elements is highlighted which is further on translated into garments. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of three years. The purpose lies in promoting the skills of students in a single format.

This course is devoted at developing a design portfolio for men's wear/women's wear/ Kids's wear. The design portfolio is an expression of a fashion designer involving his creativity, design ability, illustration and presentation skills.

**COURSE CONTENT:**

Research and theme based contextual project, design development, tech pack, flat sketch etc. compiled into a professional portfolio.

<b>UNIT 1</b>	<b>Outline of portfolio</b> Describe and speak articulately and critically about their work and the field of visual communications. Inspiration board Mood board Color board & trims Client board Style direction Illustration 6 croqui Specifications Cost sheet
<b>UNIT 2</b>	<b>Presentation</b> Produce work that demonstrates creative thinking in order to express a personal vision/point of view that communicates a personal voice. A-3 format. Landscape. Digital power point.
<b>UNIT 3</b>	<b>Analysis and realization of concept</b> Create art that incorporates the fundamental elements and principles of design and select materials that express issues such as content and subject matter. Apply and use analog and digital processes in the creation of their work. Decision making in choosing the concept.
<b>UNIT 4</b>	<b>Style direction Specification</b> Technical specification of garment construction and pattern. making has to be exhibited by the student in order to prove the viability of design. <b>Cost specification sheet</b> A basic costing of the garment of the collection has to be done in order to know the factory price of the garment
<b>UNIT 5</b>	<b>Design development</b> Development of the design through the elements which the student has visualized through the concept. The student will be evaluated on the precision of the format completion.

**COURSE OUTCOME (CO):**

At the end of this course students will have:

- CO1: To focus on personal development through the use of self-evaluation and reflection and reflect on artifacts as well as how they match goals and standards.
- CO2: To communicate with stakeholders (students, faculty, administrators, and employers) and increase learning effectiveness and identify students' strengths and weaknesses.
- CO3: To review, assess, and improve the effectiveness of curricular programs and provide useful administrative data that will expedite decision making.
- CO4: To model professionalism, and enhances information technology skills to allow for academic credits for learning beyond the classroom

<b>BDE037A</b>	<b>Research Project &amp; Dissertation</b>	<b>0-0-6 [3]</b>
----------------	--	------------------

#### LEARNING OBJECTIVE:

The main objective of this module is to compose a fashion research around a craft cluster or industry, including fashion collection designs, analysis & interpretation, materials & techniques consideration and presentation. This module will cover visual studies, trends, culture, aesthetic, intellectual property rights, technical translation and transformation, sample developments and technological support and reference.

In addition to dissertation the student will be creating a fashion portfolio composing of visual presentation and written materials in professional standard, design strategies, brand image and personal styles and understands the overall research process. The purpose of research is information generation. The study should seek to contextualize its findings within the larger body of research. The results of the study should have implications for policy and project implementation.

<b>UNIT 1</b>	Harvard referencing and Literature review. How to Research? Different approaches to research: Survey, Action Research, Experiments etc.
<b>UNIT 2</b>	Introduction to Research methodology. Collection of Data: Primary and Secondary.
<b>UNIT 3</b>	Analyzing and synthesizing the collected information. Visual referencing and documenting. Documentation and presentation skills in soft and hard cop
<b>UNIT 4</b>	Development of Project brief. Development of PDP. Experience and contribution as a design professional in an apparel organization / craft industry / research areas.
<b>UNIT 5</b>	Project development in chosen area of specialism will include: research and surveys, design development, client, material, trend research and exploration, fashion presentation, design sampling, and commercial applications. Further development of generic / cognitive skills

#### COURSE OUTCOME (CO):

At the end of this course students will have:

- CO1: To explore the fields of research design, research proposal development.
- CO2: To conduct of research projects as applied to their dissertation topic and critically evaluate the fashion design work of others and provide constructive criticism for ongoing work.
- CO3: To deconstruct and reconstruct alternative collection developments from existing work.
- CO4: To consider the target audience (instructor, peers, and employers). Sensitize with the craft cluster communities and provide solutions to the issues in the current fashion industry.

<b>BDE038A</b>	<b>Brand Design Management</b>	<b>2-0-0 [2]</b>
----------------	--------------------------------	------------------

#### LEARNING OBJECTIVE:

Towards the completion of this unit a student would think about the brand philosophy and development with above parameters. The student will be able to develop own brand.

Student thinks about a very important variable of design called design philosophy which is unique and is thinking how to transform one's design philosophy into fashion and lifestyle products. Therefore this part of the project holds maximum importance in this assignment.

<b>UNIT 1</b>	Description of brand philosophy Development of logo using colors and shapes.
<b>UNIT 2</b>	Brand competitor studies and market research. Consumer profiling and market segmentation.
<b>UNIT 3</b>	Research about the various brands globally for your inspiration.
<b>UNIT 4</b>	Study of different brands and your own strengths and weakness and assessment of various Apparel Brand having similar Categories.
<b>UNIT 5</b>	Costs for Men or Women .create your brand name, brand story, image, identity, logo and give the Promotional Policies for the same.

#### COURSE OUTCOME (CO):

At the end of this course students will have:

- CO1: To make students understand of brand philosophy.  
CO2: Students will be understanding about the market segmentation. CO2:  
TO Understanding strengths and weakness.  
CO4: To create brand, brand identity, image and logo.

<b>BDE039A</b>	<b>Final Project- I</b>	<b>0-0-22 [11]</b>
----------------	-------------------------	--------------------

#### LEARNING OBJECTIVE:

The objective of this module is to further extend learner's knowledge creating the final collection putting all the knowledge and efforts students have gained so far and launch themselves as designers creating their own brand identity, and brand image.

<b>UNIT 1</b>	Research about the various brands globally for your inspiration. Do a complete study of different brands and their collection Concepts inspired with a complete understanding of design process and finally Select one concept. Only extensive research enables designers to stay fresh and keep up to date with developments.
<b>UNIT 2</b>	Judgments and develop your own style with experimentation in personal creative practice through explorations in design and surfaces.
<b>UNIT 3</b>	The design process along with difference between different categories like avant- garde and prêt wear.
<b>UNIT 4</b>	Sketches, fabrics, trims and other detailing. Technical part of the sketches and final test fits
<b>UNIT 5</b>	Produce the final collection completely accessorized. Publicize work in the best visual way through styling and photo shoot.

#### COURSE OUTCOME (CO):

At the end of this course students will have:

- CO1: Be able to present research analysis to client groups and extend and apply skills in developing creative visual language.
- CO2: Identify the major types of idea sources in clothing design and provide information about each source. Recognize that these sources of inspiration help designers to create design elements and principles of individual designs. In order to foster originality, sources of inspiration play a powerful role throughout the creative stage of design process, and also in the early stages of fashion research and strategic collection planning.
- CO3: To synthesize and critically evaluate experimentation in personal creative practice. CO4: To present a complete collection with photo shoots.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

<b>BDE040A</b>	<b>Office Training (Internship)</b>	<b>0-0-26 [13]</b>
----------------	-------------------------------------	--------------------

#### LEARNING OBJECTIVE:

This course will prepare students to enter into full-time employment in their area of specialization upon graduation. It will provide students with the opportunity to test their career aptitude and aid them adjusting from college to full-time employment. It will present students with the opportunity to develop attitudes conducive to effective interpersonal relationships, increase their sense of responsibility, and help them acquire good work habits. It will offer the opportunity for students to understand informal organizational interrelationships and provide in-depth knowledge of the formal functional activities of a participating organization.

<b>UNIT 1</b>	First hand exposure to an apparel organization, designer or Export House and their working structures and systems.
<b>UNIT 2</b>	Specific project on the job to sharpen skills required for chosen area of specialism. Further development of generic/cognitive skills.
<b>UNIT 3</b>	Identification of industry for internship with student's career path in mind.
<b>UNIT 4</b>	Internship log book: is a tool to help you record your daily activities along with a reflection on the same. Reflective writing enables the documentation experiences, thoughts questions, ideas and conclusions that signpost the learning journey.
<b>UNIT 5</b>	Internship report: will focus on study of the organizational structure & development objective of the internship. Personal design philosophy & career path linked to learning in the internship. Learning process and its analysis as internship progresses through detailed processes and projects undertaken. Report should be a reflection of the internship experience of the personal & professional development.

#### COURSE OUTCOME (CO):

At the end of this course students will have:

- CO1: To identify business strategies for buying and selecting product. CO2:  
To identify process and procedures for company purchases.
- CO3: To explore the buying process, Increase skills in buying and merchandising.
- CO4: To understand that how they write a report of their industry experience and develop written communication skills

**AIM:**

Design portfolio is the expression of student to translate themes into design collections. Here one gets inspired by different themes which could be art movements, sport, historic eras, music, dance, culture, nature, traditions etc. and picks out tangible and intangible elements which are to be used as design elements in the collection. The ability of a designer to exhibit and use design elements is highlighted which is further on translated into garments. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of four years. The purpose lies in promoting the skills of students in a single format.

**OBJECTIVE**

Students will present a portfolio of all the files/ folders/ projects created during the course of study in I to III year. The portfolio should include projects, industrial visit reports, any other projects made during the academic session. The external examiner will evaluate the portfolio and take a viva of the student.

  
**DEAN**  
 Jaipur School of Design  
 JECRC University JAIPUR

<b>BDE047A</b>	<b>Architectural Planning Studio</b>	<b>0-8-0 [4]</b>
----------------	--------------------------------------	------------------

### **Objective**

- To Familiarize Students With Theoretical Basis and Design Process Through Observation Comparison, Analysis With The Help of Prototypes, Model And Drawings.
- To understand the Anthropometric & Ergonomics data and its importance & relation in interior design.
- To introduce the elements; principles and objective in orientation to Architectural Design.
- To introduce the basics of designing for retail interiors and to develop skills required for the same.
- Introduce to the basics of designing for Residential interiors and to develop skills required for the same.

<b>UNIT 1</b>	Anthropometric & Ergonomics Structural Dimensions, Functional Dimensions, Human Dimensions, and Generalized Heights. Accessibility and Barrier free codes: Manoeuvring Clearances, Seating, Living Space, Dining Space, and Sleeping Space.
<b>UNIT 2</b>	Introduction to the Basic Design features
<b>UNIT 3</b>	Introduction & formulation of concept & Zoning
<b>UNIT 4</b>	Design Project-I Residential Planning- Introduction, Designing of a Model Residence Case Study, Design Project
<b>UNIT 5</b>	Design Project-II Case Study, Design Project for a Retail Store or Office building

### **Course Outcome (CO):**

At the end of this course students will have:

CO1: Understand the project studies, case studies of various related topics for interiors will be used.

Presentation of data collected will be done by means of seminars / visits / books / visuals.

CO2: Understand about the Anthropometric & Ergonomics

CO3: Understand the specific requirements of exhibition and retail design CO4:

Understand how to work in a professional context.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

<b>BDE048A</b>	<b>Photography Workshop</b>	<b>0-2-0 [1]</b>
----------------	-----------------------------	------------------

### **Objective**

- To Develop Photographic Skills, to understand Simple Architectural Forms, Joinery and Construction Details Through Field Exercises and Model Making.
- To develop observations through the different material workshops.
- To develop skills and understanding of learners who intend to follow careers as model makers in the architectural, interior design, industrial design, media or entertainment industries.

<b>UNIT 1</b>	Introduction to Photography
<b>UNIT 2</b>	Components & working of Compact & SLR Camera, Peripheral equipment like cables, lights, flashguns, lenses, filters, tripods etc. Assignments oriented towards using camera, Indoor & outdoor photography.
<b>UNIT 3</b>	Techniques of using camera, basics in optics, light, exposure, focus, depth of field, aperture. Dark room techniques, digital printing. Assignments oriented towards using camera, Indoor & outdoor photography.
<b>UNIT 4</b>	Reading a photograph, Understanding subject in a photograph, composition basics, light, exposure to various types of photography like nature, portraits, wildlife, sports, documentation, journalism etc. Assignments oriented towards using photography for presentations.
<b>UNIT 5</b>	Photographic investigation of a location and situation. Assignments culminating into a small presentation investigating a case.

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: Student should be able to Using Photography as a means of communication and Documentation; a tool to demonstrate concepts and ideas, document situations, & objects in general; get familiar with camera, film, digital technology & techniques and understand aesthetics of photography, composition and light.
- CO2: Be able to use space and equipment
- CO3: Be able to use sets, lights and backgrounds.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE052A</b>	<b>Product Design</b>	<b>0-4-0 [2]</b>
----------------	-----------------------	------------------

### **Objective**

- To create awareness about the design process and various ways of designing products for user needs and requirements. To learn about the integration of design, manufacturing process, marketing etc. in the design of products.

<b>UNIT 1</b>	Concepts like design research, human factors, form, ergonomics, design processes, sustainable design.
<b>UNIT 2</b>	Understanding of compatibility with diverse cultures, technologies, user needs and cognitive and physical conditions.
<b>UNIT 3</b>	Application of materials and uses, sustainable approach towards product designing.
<b>UNIT 4</b>	Exploration of the design language, form and values from traditional and contemporary design platform.
<b>UNIT 5</b>	Design Exercise: To develop an innovative design solution for a given problem by synthesizing the trends, socio-cultural factors and design language.

### **Course Outcome (CO):**

At the end of this course students will have:

CO1: To be able to analyze current user behavior and trends for product development and understand the user and spatial relationship.

CO2: Be able to becoming familiar with basic traditional and modern joinery. CO3:

Be able to Understand Different material Specifications and their uses. CO4: Apply design thinking and process to solve problem creatively.

CO5: Perceive the design language, form and values while designing a product.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE055A</b>	<b>Model Making Workshop</b>	<b>0-2-0 [1]</b>
----------------	------------------------------	------------------

**PURPOSE**

To introduce the students to basics of Model making with various materials.

**INSTRUCTIONAL OBJECTIVES**

Acquisition of hands on experience in model - building.

<b>UNIT 1</b>	<b>INTRODUCTION TO MODEL MAKING</b> Introduction to concepts of model making and various materials used for model making Drawing settings - Limits, D settings, Units
<b>UNIT 2</b>	<b>BLOCK MODELLING</b> Preparation of base for models using wood or boards Introduction to block models of buildings (or 3D Compositions) involving the usage of various materials like Thermocol, Soap/Wax, Boards, Clay etc.
<b>UNIT 3</b>	<b>DETAILED MODELLING 20</b> Making detailed models which includes the representation of various building elements like Walls, Columns, Steps, Windows/glazing, Sunshades, Handrails using materials like Mountboard, Snow- white board, acrylic sheets. Representing various surface finishes like brick/stone representation, stucco finish etc. Various site elements – Contour representation, Roads/Pavements, Trees/Shrubs, Lawn, Water bodies, Street furniture, Fencing etc.
<b>UNIT 4</b>	<b>INTERIOR MODELS OF INTERIOR SPACES</b> Making models of the various interior spaces such as <ul style="list-style-type: none"> <li>• Residences</li> <li>• Offices</li> <li>• Retail Spaces</li> <li>• Recreational Spaces Scaled models of furniture.</li> </ul>
<b>UNIT 5</b>	<b>CARPENTRY</b> Introducing the techniques of planning, chiselling & jointing in timber to learn the use of hand tools. Exercise involving the design of simple furniture and making a model of the same.

  
 DEAN  
 Jaipur School of Design  
 JECRC University JAIPUR

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: Understand the technological principles of model making in a commercial context CO2: Be able to Relate the geometrical volumes into building models.  
 CO3: Be able to Understand the volumes in relation to space and experience 3D quality of volumes.  
 CO4: Analyze the various possibilities for representing the models and use the various methods of model building.  
 CO5: Design and create models conceptually with functional and aesthetic values.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE058A</b>	<b>INTERIOR DESIGN STUDIO – II (Office Spaces)</b>	<b>0-6-0 [3]</b>
----------------	--	------------------

### **Objective**

- Explore to a preliminary level basic spatial and material design concepts.
- This unit intends to equip the students with concept and principles of Basic Design pertaining to office design.
- To develop the skills in elements of design, color, texture, anthropometrics, planning of a office.
- To understand the basic function of the office, which are required in planning of the interior of office.

<b>UNIT 1</b>	<b>Office design</b> Introduction to work space design; Requirement of a work space; Types of Office system-Open Office, Closed cabin system; Planning of an Office; Ambience of an office; Office layout Patterns- Grid & random. Office Spaces - General Offices & Workstation and Planning Data; Different types of Workstations; Different types of Conferences Layouts; general offices & Multiple Workstation Planning Data.
<b>UNIT 2</b>	<b>Office Design Procedure:</b> Design on Paper and Practical Approach- Visiting the site, Preparing Personal Data Card, Making out Requirements, Designing, and Evaluating.
<b>UNIT 3</b>	<b>Interiors of Office:</b> Colour Schemes; Use of Colour Scheme; Factors Influencing the colour Scheme- Individual choice, Utility, Direction Wise, Region Wise. Light- Open Light & Concealed Light; Factors influencing Lighting- Position, Movability, Adaptability, Adjustability, State, Purpose, Direction, Architectural, Application; Layout of Lighting- Chessboard, Perimeter, Diagonal, Neutral, Square; Principles of Lighting. Material Selection- Selection Criteria in an Workspace.
<b>UNIT 4</b>	<b>Design project-I</b> Architect's/ Designer's Office- Planning, Interior Designing- Inspiration, Theme, Concept, Functional Requirements, Working Drawings & Presentation Drawing and Material Specification.
<b>UNIT 5</b>	<b>Design Project-II:</b> Parlour Design- Planning, Interior Designing- Inspiration, Theme, Concept, Functional Requirements, Working Drawings & Presentation Drawing and Material Specification.

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: An ability to understand the Design Process Through Observation Comparison, Analysis With the Help of Prototypes, Model and Drawings.
- CO2: An ability to understand the different areas and their anthropometrics in office design.
- CO3: An ability to understand the project studies, case studies of various related topics for interiors will be used. Presentation of data collected will be done by means of seminars / visits / books / visuals. Motivation of inspiration through the works of renowned designers and architects. Critical observation of interior projects for their merits and demerits by means of reading, study of drawings, interpretation and discussion.

<b>BDE061A</b>	<b>W.d. &amp; Estimation</b>	<b>0-4-0 [2]</b>
----------------	------------------------------	------------------

### **Objective**

- This unit intends to equip the students with all the procedures of estimation & costing principles of estimating all works of interior design project.

<b>UNIT 1</b>	<b>Estimating &amp; Costing</b> Introduction to Estimating & Costing; Importance; Units of Measurements; Types of estimates- Preliminary or Approximate Estimate or Abstract Estimate, Plinth area estimate for building, Cube Rate Estimate for Building Renovation, Approximate Quantity Method Estimate, Detailed Estimate or Item Rate Estimate, Revised Estimate, Supplementary Estimate, Annual Repair or Maintenance Estimate; General principle of approximate method of costing; Approximate Methods of Costing for Various Interior Works
<b>UNIT 2</b>	<b>Specifications</b> Introduction; Objects of Specifications; Importance of Specifications; Types of Specifications; Brief specifications; Detailed specifications; Principles of Specifications; Typical Specifications.
<b>UNIT 3</b>	<b>Taking Out Quantities</b> Introduction; Essentials of an Estimation; Requirements of an Estimation; Methods of Taking out Quantities; English method of taking out quantities; Units of Measurements; Modes and Unit of Measurement For Different Types Of Trades; General rules for measurements.
<b>UNIT 4</b>	<b>Tenders</b> Introduction; Invitation to Tender; Tender Notice- Essentials of Tender Notice; Opening of Tender; Acceptance of Tender; Tender Document; Types of Tender- Item Rate, Lump Sum, Lump Sum Plus Percentage, Cost Plus Percentage, Cost Plus Fixed Fee, Cost Plus Fixed Fee with Bonus/Penalty, Labor Tender, Demolition Tender.
<b>UNIT 5</b>	Detailed working drawing of a project

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: Student will be able to know the procedure of estimation & costing CO2: Student will be able to plan a project using the estimation & costing CO3: Student will be able to prepare bills, contracts, agreements etc.  
 CO4: Understand the different grammar of the drawings. CO5: Develop drawings that are used for execution

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE066A</b>	<b>Elective-I (A. Marketing Techniques)</b>	<b>3-0-3 [3]</b>
----------------	---	------------------

## **A. MARKETING TECHNIQUES**

### ***Objective***

- To understand the need of market supply and Marketing Position with exposure to various fixtures and fittings, water supply and sanitary installations at work sites.
- To expose the students to the basic principles of Organizational capabilities..

<b>UNIT 1</b>	<b>WHAT IS MARKETING?</b> Introduction, definition, Organizational conditions and USP, Environmental factors, marketing concept – marketing strategy – marketing tactics, Planning, operation and Implementation.
<b>UNIT 2</b>	<b>FORMULATING A MARKETING STRATEGY</b> Competitive settings, marketing decisions in a competitive setting, formulating overall marketing strategy, factors in selecting marketing inputs, the three C's of a marketing strategy, Components of a product/market strategy, hierarchy of strategies, how to develop a product/market strategy, finding a suitable market strategy.
<b>UNIT 3</b>	<b>UNDERSTANDING CUSTOMERS</b> How marketing influences society – economic aspects, buyers behavior, the environment, how society influences marketing – public opinion and political pressure, legislative action, pitfalls of neglecting customers, management mistakes, benefits of understanding customers, types of benefits, feature Vs benefits.
<b>UNIT 4</b>	<b>MANAGING VALUE</b> Components of perceived value, perceived value analysis, measuring perceived value, customer management, role of perceived value in competition, strategic themes, increasing perceived value.
<b>UNIT 5</b>	<b>ORGANISATIONAL CAPABILITIES AND MARKETING POSITIONING</b> Analysing competitors, capabilities and market strategies, types of capabilities, evaluating capabilities, competitive advantage and benefit advantage, macro trends, market segmentation, characteristics of market segment, determining a target market, role of segments and target market in marketing strategy, segment identification analysis, segments and decision making, market selection criteria, types of market segments, what is positioning, competitive advantage analysis, determining positioning, positioning and perceived value.

### **Course Outcome (CO):**

At the end of this course students will have:

CO1: An ability to understand the Marketing strategies and its components. CO2:

An ability to understand the different Marketing challenges.

CO3: An ability to understand the ORGANISATIONAL CAPABILITIES AND MARKETING POSITIONING

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

BDE067A	Elective (B. Entrepreneurial Development)	3-0-3 [3]
---------	---	-----------

### **B. Entrepreneurial Development**

#### **Objective**

- To enable the students to Develop entrepreneurial skills.
- To enable the students to Analyze the environment related to small scale industry and business.
- Understand the process and procedures of setting up small enterprises.
- To Develop Management skills for entrepreneurship development.

<b>UNIT 1</b>	Entrepreneurship - Entrepreneur, Enterprise and Entrepreneurship - meaning, need, transition from income generation to self employment and Entrepreneurship, qualities of a good entrepreneur, problems of entrepreneurs.
<b>UNIT 2</b>	Factors influencing entrepreneurial development - Economic, Legal, Socioeconomic, Psychological and Environmental factors.
<b>UNIT 3</b>	Agencies supporting entrepreneurial Development Programme - SIDCO, DIC, TILC, EDII, SIPCOT, KVIC. Institutional Finance to Entrepreneurs – IDBI, ICICI, RBI, LIC,
<b>UNIT 4</b>	Project identification and classification - Meaning of Projects, Project identification, Project Classification, internal and external constraints, Project objectives.
<b>UNIT 5</b>	Project formulation – Concept, need, elements. Project selection, appraisal format, check list for feasibility report, planning commission guidelines.

#### **Course Outcome (CO):**

At the end of this course students will have:

CO1: Student will be able to understand about entrepreneurship and evolution of entrepreneurship. CO2: Student will be able to understand creating and starting the venture.  
CO3: Student will be able to understand managing, growing and ending the new venture. CO4: Student will be able to understand entrepreneurship Development and Government.

<b>BDE074A</b>	<b>Research Project &amp; Dissertation</b>	<b>0-6-0 [3]</b>
----------------	--	------------------

In this semester the learner is introduced to basic research principles and research methods, report writing skills and dissertation writing. Students are expected to choose their own topic of research on a specific area/field after consultation with the dissertation guide/subject coordinator.

He / She are also required to do the following before the end of the semester:-

- finalize the topic and guide,
- set the aim-objectives and scope of study,
- conduct research and review related literature,
- identify and conduct related case studies and project reviews,
- collect data and critically analyze the data,
- finalize the Interior Design brief/programme and
- Identify and finalize the site for design.

**Note:** Continuous assessment of sessional work may consist of the above in the given time frame as set by the guide/subject coordinator.

At the end of the Semester each Student is required to submit the final printed two copies of the dissertation volume supplemented with finished, rendered drawings to suitable scale with related detailing, all certified by the guide/subject coordinator and Principal which may be presented for final Viva-voce examination.

#### **Course Outcome (CO):**

At the end of this course students will have:

CO1: Be able to formulate a project.

CO2: Be able to implement the project within agreed procedures and to specification. CO3: Be able to evaluate the project outcomes.

CO4: Be able to present the project outcomes.

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE065A</b>	<b>INTERIOR DESIGN STUDIO – III (Public &amp; Commercial Spaces)</b>	<b>0-8-0 [4]</b>
----------------	--	------------------

### **Objective**

- The course concentrates on larger scale spaces with an emphasis on planning commercial spaces.
- The main aim is to develop visually literate students who are proficient at analytical thinking, conceptualization and the problem-inquiry, solution cycle. The course also examines the connection between abstract design principles and the physical and visual environments.

<b>UNIT 1</b>	<b>OPS</b> Planning for retail activity – anthropometrics – types of Shop layouts Modular units. Materials used in counters, shelves, worktops, their comparative study. Lighting & colour scheme – natural & artificial light.
<b>UNIT 2</b>	<b>COMMERCIAL SPACES</b> The art of selling-displays/products/marketing, design of display units, design of boutiques, showrooms. Concepts in modern day Retail interiors – materials & finishes – colour, texture & pattern.
<b>UNIT 3</b>	<b>SHOPPING MALLS</b> Product display – windows/ internal displays/ hierarchy of product display/ power of visual communication/ graphics Exhibition spaces – display for exhibition Lighting design for commercial spaces – task/ display/ atmospheric/ focal lighting Colouring commercial spaces – coding/ decoding/ visual communication Design of commercial Environments such as Malls, Shopping Arcades Etc.

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: An ability to understand the Design Process Through Observation Comparison, Analysis With the Help of Prototypes, Model and Drawings.
- CO2: An ability to understand the Demonstrate knowledge of commercial interior design fundamentals.
- CO3: An ability to understand the project studies, case studies of various related topics for interiors will be used. Presentation of data collected will be done by means of seminars / visits / books/ visuals.
- CO4: Motivation of inspiration through the works of renowned designers and architects. Critical observation of interior projects for their merits and demerits by means of reading, study of drawings, interpretation and discussion.
- CO5: Apply design thinking and process to develop creative designs and demonstrate through relevant communication skills.

2. Hotels: Architecture & Design by Carles Broto
3. The Best of Hospitality Architecture and Design by Cindy Allen (Editor)

<b>BDE068A</b>	<b>Exhibition &amp; Retail Design</b>	<b>0-4-0 [2]</b>
----------------	---------------------------------------	------------------

### **Objective**

- Understanding theory of exhibition design and their principles..
- To understand the construction details of Retail design.
- To study about the various lighting and graphics.

<b>UNIT 1</b>	<b>Exhibition Design</b> Introduction, History of Exhibition Design, Principles of Exhibition Design.
<b>UNIT 2</b>	<b>Retail Design</b> Importance of Retail Design; Types of Retail Stores- Department Stores, Boutiques, Outlet Store, Specialty Shops, Jewellery, Hyper Markets & Super Markets, Shopping Centre/ Malls; Elements of Retail Store- Space, Spatial Organization, Store Layout, Presentation of Merchandise, Design of Store, Lighting, In-Store Graphics.
<b>UNIT 3</b>	<b>Construction &amp; Material Selection</b> Selection of material for Exhibition, Designing & Construction of Exhibitions Stands/Kiosks.
<b>UNIT 4</b>	<b>Lighting &amp; Graphics</b> Lighting for Exhibition- Lighting Plan of an Exhibition, Environment Light, Exhibit Focused Lighting, Feature Lighting, Color Lighting, Lighting for comfort; Lighting Specifications; Do's & Don'ts for Exhibition Lighting. Graphics for Exhibition- Importance of Graphics in Exhibition; Stand Alone Installation; Approaches to exhibition Graphics- Legibility, Readability; Printing of Graphics- Vinyl text, Rubdown/Dry Transfer, Cut-Outs, Inkjet Printing, Digital Printing, Mounting Techniques; Outdoor Application; Dos & Don'ts of Graphic for exhibitions.
<b>UNIT 5</b>	<b>Design Project</b> Designing of Exhibition stands one of each category - Commercial & Non- Commercial Category- Planning, Designing- Concept & Functional Needs, Working Drawings, Wall Finishes with Material Specification. Services detail. Designing of Retail Stores any two categories – Planning, Designing- Concept & Functional Needs, Working Drawings, Presentation Drawing, Wall Finishes with Material Specification. Services detail.

### **Course Outcome (CO):**

At the end of this course students will have:

CO1: Demonstrate knowledge of design fundamentals of exhibition and retail design. CO2: Be able to Identify issues and concerns contextually through comparative study.

CO3: An ability to Elaborate conceptual development through relevant communication skills. CO4: An ability to understand a design program through an analysis of data & case study.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

**Suggested Readings:**

1. Creating Exhibitions: Collaboration in the Planning, Development, and Design by Janet Kamien and Polly
2. McKenna-Cress
3. Exhibition Design by Philip Hughes.

<b>BDE075A</b>	<b>TEXTILE DESIGN</b>	<b>0-4-0 [2]</b>
----------------	-----------------------	------------------

### **OBJECTIVE**

- To gain knowledge and understanding of the functional and aesthetic requirements of textiles for a range of applications
- To familiarize the students of Interior Design on textile materials used in interior.

<b>UNIT 1</b>	<b>INTRODUCTION TO FABRICS</b> Fabric, yarn and fibre structure, Fabric structure- woven- warp, weft, selvedge ,knitted- course, non- woven, Fabric types and classification- woven, including plain, twill, satin, Jacquard, crepe and pile weaves, knitted- including single knit, double knit, tricot knit, pile knit, lace and net ,non-woven-including felts webs and films, identification and properties of fabrics, yarns and fibers.
<b>UNIT 2</b>	<b>APPLICATION OF ELEMENTS AND PRINCIPLES</b> Application of elements and principles of design across a range of textiles. Describe and analyze elements and principles of design -furnishings, textile arts, non-apparel. Functional and aesthetic requirements and features of textile range
<b>UNIT 3</b>	<b>COLOUR ON FABRICS</b> Fabric coloration and decoration- Principles of applying color to fabrics. Textile arts and crafts in interiors, traditional and modern materials and methods. Preparing samples on tie and die printing, batik printing, appliqué, macramé and braiding.
<b>UNIT 4</b>	<b>FURNISHINGS</b> Furnishings-classification, types of curtain, curtain construction, selection criteria relation to backgrounds in walls , floors and ceilings. Slip covers , cushion covers , bed linen and table linen Floor coverings -rugs and carpets, types selection , care and maintenance, installation of floor coverings
<b>UNIT 5</b>	<b>OTHER NATURAL MATERIALS</b> Jute or hessian – dyed jute fabric and its applications – various kinds of processed leather, its application in interior design.

### **Course Outcome (CO):**

At the end of this course students will have:

CO1: An ability to understand the different fabrics and their application. CO2: An ability to understand the different colours on fabrics and furnishing. CO3: An ability to understand the elements and principle of fabrics.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

 DEAN  
 Jaipur School of Design  
 JECRC University JAIPUR

<b>BDE078A</b>	<b>Thesis Project</b>	<b>0-22-0 [11]</b>
----------------	-----------------------	--------------------

### **OBJECTIVE**

- To demonstrate an ability to comprehend the nature of Interior problem and create a brief which sets the frame work for design.
- To demonstrate an advanced level design ability to convert the brief set forth earlier into a speculative proposition of design.
- To articulate and delineate the propositions of design into an architectural & Interior solution addressing all the dimensions

### **Outline:**

Interior Design projects can be of any scale and size (in terms of built areas) as long as the required rigor and depth is demonstrated by the student to merit consideration as a final project. Very large campus projects can be avoided as the work tends to be repetitive and more often ends with a large number of Structures but with minimal variations and content. It is expected that all genre of projects (study or design) would end with a design solution; in fact all projects should be grounded in some kind of critical enquiry. The maximum weight age for study will be 25% in the case of a Study + Design Project. The depth of enquiry can be extended and the time spent on design can be reduced in a specific case, but such a project should demonstrate clarity in terms of research design. The following stages have been identified as a generic model of the studio. The stages can be fine tuned depending on the resources. It is expected that this project will be run as a studio with individual guidance under a project coordinator.

**1. Pre-Project** – This stage should ideally be accomplished in the previous semester. The work involves students to discuss with the faculty to identify an area of interest or specific types of buildings. The pre project stage should end with a project proposal giving routine information on site, location, need, broad requirements and scale. In addition, the proposal should clearly indicate the “project question” or an area (or areas) of interest.

**2. Project seminar** – Student shall present a seminar on the project topic which would include the following; 1. Precedents of similar projects, either actual visit to such projects or through literature reviews. 2. Cultural, contextual, historical, technological, programmatic concerns of the project. 3. Prevalent or historical models of architectural approach to such projects and a critique of such models and 4. A rhetorical or a speculative statement that would be the basis of further investigation. (For example: Interiors in the information age: Design of libraries in the new virtual reality regime). Documentation which is a part of this presentation shall be taken as completion of “case study” part of the final requirement.

**3. Mid Review** – There shall be a review to clarify the conceptual statements and assumptions of the students. Students shall present a clearly articulated response to context, programme and users. Conceptual framework and preliminary architectural scheme shall be the end products of this stage.

  
 DEAN  
 Jaipur School of Design  
 JECRC University JAIPUR

**4. Final Review** – Final review should consist of all the works which would be presented at the viva. Mode of presentation shall be tentative. Number of sheets shall be limited to maximum of 15 plus two case study sheets. Study Models are expected to be presented. The final output shall include a report, all drawings, study models and a presentation model.

The report in typed or computer printed form shall discuss the programme, site- analysis, literature review, case studies, design criteria, concept and detailed design. Three copies of the reports shall be submitted along with drawing and models.

Note –

1) The requirements pertaining to the handicapped and elderly people and children are to be addressed in design and detailing.

2) At the time of Viva examination, the student shall show to the jurors the portfolio containing the evolution of his/her design from the beginning to the final output. All the drawings and reports shall be certified by the Head of the Department as bonafid work carried out by the student during the semester

#### **Course Outcome (CO):**

At the end of this course students will have:

CO1: An ability to understand that how to handle a live project design. CO2:

An ability to Outline the thesis topic in domains of their interests.

CO3: An ability to Examine and research with the help of case examples and best practices in the identified domain.

CO4: Design of the project with conceptualization and demonstration of research as an application. CO5:

Develop the study into practical details of the project.

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE079A</b>	<b>Project Management &amp; Entrepreneurship</b>	<b>4-0-4 [4]</b>
----------------	--	------------------

**OBJECTIVE**

- To expose the students to the currently prevalent techniques in the planning, programming and management of a project.
- Knowledge about the methodology of executing a Project greatly enhances the professional ability of an Interior Designer.

<b>UNIT 1</b>	<b>INTRODUCTION</b> Project planning and project scheduling and project controlling, Role of Decision in project management, Method of planning and programming, Human aspects of project management, work breakdown structure, Life cycle of a project, disadvantages of traditional management system
<b>UNIT 2</b>	<b>ELEMENTS OF NETWORK</b> Event, activity, dummy, network rules, graphical guidelines for network, numbering of events
<b>UNIT 3</b>	<b>CRITICAL PATH METHOD AND PERT ANALYSIS</b> CPM network analysis & PERT time estimates, time computation & network analysis
<b>UNIT 4</b>	<b>PROJECT TIME REDUCTION AND OPTIMIZATION</b> Project cost, Indirect project cost, direct project cost, slope of the direct cost curve, total project cost and optimum duration, contracting the network for cost optimization, steps in cost-time optimization
<b>UNIT 5</b>	<b>PROJECT UPDATING AND ALLOCATION</b> When to update? Data required for updating, steps in the process of updating Resource usage profile: Histogram, Resource smoothing and Resource levelling, Computer applications in project management.

**Course Outcome (CO):**

At the end of this course students will have:

CO1: An ability to understand the project planning and project scheduling

CO2: An ability to understand the different method for calculate the project time. CO3: An ability to understand the cost optimization of the project.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BDE080A</b>	<b>Professional Practice &amp; Management</b>	<b>4-0-4 [4]</b>
----------------	---	------------------

**OBJECTIVE**

- To enable the students to plan residential interiors and commercial interiors Gain knowledge in estimating and costing understand the preparation of quotation and tenders.

<b>UNIT 1</b>	<b>Residential Interiors</b> – Space planning for residential interiors – living room, dining room, kitchen, bedroom.
<b>UNIT 2</b>	<b>Commercial interiors</b> – Space planning for office interiors – cabinets, conference rooms open office systems.
<b>UNIT 3</b>	<b>Estimating</b> – Definition of estimates, types, unit and mode of measurement, quantity surveying –systems adopted, analysis of rates, schedule of items, schedule of rates, schedule of quantities.
<b>UNIT 4</b>	<b>Specifications</b> – definition, uses, importance, types, requirements, points to be included in the specifications.
<b>UNIT 5</b>	<b>Tenders and quotations</b> – Tenders – meaning types, preparation of tenders, quotations, contracts.

**Course Outcome (CO):**

At the end of this course students will have:

CO1: An ability to understand the calculation of a project cost. CO2: An ability to understand the process of tendering.

CO3: An ability to understand the project scheduling and estimating.

<b>BDE081A</b>	<b>INTERNSHIP</b>	<b>0-24-0 [12]</b>
----------------	-------------------	--------------------

### **Aim**

In this semester the learner will be equipped with knowledge and skills needed such as management of office along with current practices, codes of conduct required to enhance skills and techniques of managing small and large scale residential and commercial interior projects.

### **OBJECTIVE**

- To encourage students to work in with relevant industries.
- An avenue to enhance academics learning through hands on work experience.
- Get advice on career from knowledgeable and experienced professionals.
- Gain exposure to a professional work atmosphere.

Be able to place themselves and their work in the context of their selected discipline

Understand their specialist area and the career opportunities available Understand how to promote themselves and their work professionally.

The aim of this unit is to extend learners' knowledge of professional practices within their specialist area and to relate these to personal goals and career opportunities.

### **INTERNSHIP TRAINING**

- In the VI semester, student will undergo a internship of 20 Weeks Duration in an Interior designing or Architectural firm and form a project report about his/her practical experience gained by working on various projects worked under the supervision of a professional designer, so that they can understand the existing working practices, conditions and acquire an in depth technical knowhow.
- The student has to submit a certificate regarding their successful training with the firm.
- A Copy of Report needs to be submitted with the department along with the performance certificate issued by the firm Manager/ Owner and one with the Firm (where internship is pursued).
- After the Internship, student needs to appear in front of jury members for a presentation seminar, who will judge the performance based on their presentation, report, and Viva-voce and award marks to student.
- PROJECT REPORT to be submitted
  - Background of industry
  - Number of employees
  - Project detail on which assisted
  - Manufacturing process
  - Hand & Computer sketches
  - Experience
  - Any other details

### **Course Outcome (CO):**

CO1: Student will be able to understand about entrepreneurship and evolution of entrepreneurship. CO2:

Student will be able to understand creating and starting the venture.

CO3: Student will be able to understand managing, growing and ending the new venture. CO4:

Student will be able to understand entrepreneurship Development and Government.

<b>BVI001A</b>	<b>Dimensional Practice</b>	<b>0-0-6[3]</b>
----------------	-----------------------------	-----------------

### AIM

In this unit student would learn introduction of Graphic Design industry through understanding of Graphic and Career Opportunities and working process in Graphic Industry with the role of Graphic Designer. Students will also get the exposure of different Graphic Categories with their Components of a craft.

### OBJECTIVE

- Students demonstrate their knowledge of key sculptural techniques and formal ideas through hands-on workshops and experimentation using a variety of materials and three-dimensional assignments.
- Strong communicative verbal and written skills accompany these explorations as students learn how to conceptualize, evaluate and defend their creative work.
- Students develop collaborative skills and come to understand how the visual and plastic arts inform broader social realities involving economic, political, and technological change.
- Adoption of a basic vocabulary of terms related to the field is gained through research, writing assignments and audio-visual classroom presentations.
- A sketchbook of written ideas and drawings is also mandatory and is used as the basis for class presentations, group evaluations, and final critiques of all student work.

<b>UNIT 1</b>	Explain to students to the fundamental context of sculpture and three-dimensional design. Basic techniques, concepts, and materials found in the sculptural arts through assignments that investigate particular spatial problems requiring both creative expressivities as well as focused research into the history and social context of this important art form.
<b>UNIT 2</b>	Traditional art-based skills as molding, carving and three-dimensional fabrication.
<b>UNIT 3</b>	Appreciation of creative work while learning to resolve technical, cognitive and expressive problems at both the individual and collaborative level.
<b>UNIT 4</b>	German Bauhaus School and pivotal art movement of the 1920s. Carving .Plaster /cement block.
<b>UNIT 5</b>	Demonstration of 3D Printing technology and discuss ways to incorporate this technology into projects. complete the Project (during one half of class depending on when the 3D printer demo is scheduled.).

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to Introduce to the world of making and thinking in three dimensions. Study of this unit will involve undertaking basic skills and techniques,
- CO2: An ability to Identify and discuss the functional units of sculptures, identify the various mediums and methods.
- CO3: An ability to develop an understanding of conceptual and formal trends in contemporary sculpture through lectures, images and other means
- CO4: An ability to Learn the sculptural basics of carving, casting and fabrication in relation to original art work.

<b>BVI004A</b>	<b>Rendering Techniques</b>	<b>0-6-0[3]</b>
----------------	-----------------------------	-----------------

### Objective

- Student will be able to understand the perceptual and cognitive processes associated with the evolution of the human mind and its essential relationship to Rendering as an art form.
- Ability to Compare and contrast different uses of Rendering in art.
- Show a fundamental proficiency in the current technology and understanding of the materials, methods and techniques.
- To develop a portfolio that enables the graduate to showcase his/her abilities while reflecting the individual personality of the designer.

<b>Unit 1</b>	Introduce drawing Shading Techniques - geometric figures Accent Lines. Power lines and adding elements i.e. dramatic sky, flowers, landscaping.
<b>Unit 2</b>	Rendering in pen and ink, or colored pencil, in marker & stipple.
<b>Unit 3</b>	The art of Ink Line Drawings, Sepia Washes using ink, graphite, chalk, charcoal, or crayon.
<b>Unit 4</b>	Patch Pattern Rendering Technique, Blending Rendering Technique and Monochrome Rendering Technique.
<b>Unit 5</b>	Isometric Drawings, Multiple Orthographic Views, Perspective Projections, Depth Cueing, Depth Clipping, Illumination and Transparency and Reflection.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to Gain a broad-based knowledge and understanding of art and its histories.
- CO2: An ability to develop your understanding of the production, circulation, and interpretation of visual culture in specific historical contexts.
- CO3: An ability to Gain awareness of the role of the visual arts within different cultures and societies, both Western and non-Western.
- CO4: An ability to Gain awareness of the role of museums and galleries in the production and reproduction of cultural values.

<b>BVI005A</b>	<b>GRAPHIC PRINT</b>	<b>0-4-0[2]</b>
----------------	----------------------	-----------------

### Objective

- Student will be able to Exercise and demonstrate use and mastery of the elements of design
- Use materials, tools and processes from a variety of media (printmaking)
- Handle materials effectively.

<b>Unit 1</b>	Introduction: Relief printmaking is a form of printmaking in which the image to be printed is raised from the surface. This creates a surface similar to a stamp and is sometimes referred to as "block printing".
<b>Unit 2</b>	Linoleum cut and wood cut. Beginning printmakers -.Calligraphy, Linoleum allows the printmaker (student) to easily carve curved lines and is able to accept impressions from sharp objects. Lay outting & drawing.
<b>Unit 3</b>	A pointed tool, such as pen or pencil, is used to trace the lines of the drawing, forcing the soft graphite on the back of the drawing on to the linoleum surface. Material (Calligraphy / linoleum, wood, or rubber).
<b>Unit 4</b>	Creating a relief print. Handling tools a variety of blades called gouges. Each gouge is designed to remove linoleum at different widths. Smaller gouges remove less material, but are more precise. Larger gouges remove more of the material, but are far less precise.
<b>Unit 5</b>	Inking process is demonstrated. Tray, ink, and brayer aroused. Over-inked or under-inked, or uneven inking solutions during the burnishing process.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to create professional Graphics and illustrations, and graphic prints.
- CO2: Ability to Transforming objects, Drawing, Working with Tools and Materials i.e. Lino and Wood.
- CO3: An ability to Recognize and evaluate basic elements of design (color, line, form, texture, rhythm, etc.)
- CO4: An ability to acquire a working vocabulary associated with the analysis and interpretation of works and architecture.

BVI006A	Computer Graphic I	0-6-0[3]
---------	--------------------	----------

### Objective

- Corel draw is a graphic design software coral draw enables users to create professional Illustrations for newsletters, brochures logos and web graphics.
- Provides training about illustration program that can be used for print, multimedia, and online graphics. Whether you plan to design or illustrate multimedia artwork illustrator offers all the tools needed to produce professional and quality results for even a beginner.
- Photoshop provides hands-on with creative image designing techniques. Photoshop is the leading digital image editing application for the internet, print, and other new media disciplines.
- Important tool for graphic artists, print designers, visual communicators, and other regular peoples.

<b>Unit 1</b>	Introduction of Raster and vector Software' show they used in different scenario of digital platform. Introduction of software's and user interface.
<b>Unit 2</b>	Making sketches in Photoshop, customize the workspace, create projects, Basic tools settings and brush options, Color theory and light painting, Selection tools and cropping images, Image manipulation process pipeline. Raster vs. Vector.
<b>Unit 3</b>	Introduction of layer, Use the Layers Panel, Layer Dexterity, Fast Alignments Layer Types Explained, Manipulate Layers in Photoshop, Use Blending Modes, Find out how art boards can help you, Creating and resizing art boards, Introduction Photoshop vs. Illustrator, Tools explained and making digital paintings.
<b>Unit 4</b>	Introduction Of art boards, Difference Raster and vector, Resolutions formats, Creating vector illustrations, Turning photographs into vector artwork, Vector zing and coloring traced hand drawings, Learn useful keyboard shortcuts and best practices.
<b>Unit 5</b>	Colour correction images, Image Manipulation, Digital painting concepts, Matte painting process, Different Ways to Paint, Background and Final Effects.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to create professional Graphics and illustrations for newsletters, brochures logos and web graphics. CO2: An ability to Transforming objects, Drawing, Coloring and Painting, Working with Type, Layers, Brushes, Using Effects, Appearance Attributes and Graphic Styles
- CO3: An ability to Working with Symbols Expected Outcome This being a job-oriented course.
- CO4: An ability to creative image designing techniques. Photoshop is the leading digital image editing application for the internet, print, and other new media disciplines, color manipulations, levels, curves dust and scratches, seeing color accurately

BVI007A	TYPOGRAPHY	0-4-0[2]
---------	------------	----------

### Objective

- Student will be able to Create and evaluate typographical designs for audience, meaning, and effectiveness.
- Explain the importance of appearance in effective layout design. Demonstrate the ability to control the reader's eye in layout design.
- Use typography in layout design. Basic design principles in layout creation.
- Create and modify typefaces. Use color in an effective manner in layout design

Unit 1	Introduce Typography (letterform, layout, grouping and hierarchy).
Unit 2	Conceptual development, verbal articulation of visual solutions, research, production, and visual, verbal and written presentation skills.
Unit 3	Structure of Design: Visual Elements: Line, Shape, Light and dark, Color, Texture, Perspective and depth and Organization of the Elements. Techniques: Contrast, Tone, Shape, Juxtaposition, Harmony, Balance, Opacity, Singularity, Flatness, Repetition and regularity.
Unit 4	Principles of Typography: Origins of the alphabet Pictograms, Ideographs, Phoenician, Greek and Roman alphabets, Sans Serif, Serif, Script, Families of type, Color of type, Personalities of type. Visual change between type over time Garamond, Baskerville and Bodoni, Century Expanded and Helvetica, Display type, Roman and Egyptian, Sans Serif and Script Widows and orphans Designing with type, Function of type: Ornate type Creating moods with type Altering of characteristics of existing fonts. Anatomy of a Page – Terminology, Feelings duotones-quad tones, without black, White space, Bleeds, Drop shadows Methods: Repetition, Grids/Headlines.
Unit 5	Kern Type: The Kerning Game Better Web Typography In a Few Simple Steps. Helvetica - A Documentary About the Most Ubiquitous Typeface in The World Game Bonus.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to explain the fundamental role that typography plays in developing legibility for the reading audience. CO2: An ability to explain Analyze the cultural significance of typography as a means to convey messages.
- CO3: An ability to explain Compare and contrast different typographic approaches and how they influence and change meaning.
- CO4: An ability to explain Apply a range of typographic approaches in response to specific design problems. Different typographical approaches for a range of media and audiences.

BVI009A	PHOTOGRAPHY I	0-4-0[2]
---------	---------------	----------

### Objective

- Develop knowledge of principles of aesthetics and visual communication and integrate these principles creatively in still and motion based images and in new media storytelling.
- Demonstrate thorough knowledge and application of DSLR camera techniques for capture of both still, time and video based imagery.
- Develop a thorough and adaptable knowledge of software used in digital imaging and new media storytelling.
- Develop complete digital imaging workflow that includes capture, post processing, ethical considerations of digital techniques based on genre and asset management techniques from image capture to image archive.

<b>Unit 1</b>	Introduction to Photography. History of Photography - the evolution, journey and advancement of photographic techniques and usage in context to development.
<b>Unit 2</b>	The Camera prototype. Introduction and handling of camera. Basics of DSLR Camera. Understanding of Optics & Lenses, and their usage.
<b>Unit 3</b>	Principles of Photography - Understanding of rhythm, balance, pattern, emphasis, contrast, unity and movement. The knowledge about balance and colour patterns.
<b>Unit 4</b>	Study of lights– Taking control over lights, capturing Dramatics from day to night. Natural & Studio light study. Shoot in One light source, Multi-light sources, understanding of Shadow, Silhouette and Exposure.
<b>Unit 5</b>	Composition basics – elements and ideations. Framing, crop factor and introduction to editing.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to understanding of professional practices, communications, organizations and career opportunities in the field of professional photography.
- CO2: An ability to identify the primary working methods (conceptual and illustrative vs. journalistic and found moment) within different genres of photography in order to understand ethically acceptable images.
- CO3: An ability to apply effective lighting techniques in natural, artificial and mixed lighting in a variety of photographic areas including product, still life and portraiture.
- CO4: An ability to Develop a professional body of work and appropriate support material such as website and marketing materials, to showcase personal vision and technical skills.

<b>BVI010A</b>	<b>PRODUCTION DESIGN</b>	<b>0-4-0[2]</b>
----------------	--------------------------	-----------------

### Objectives

1. Student will be able to understand basics of production design, and film language.
2. Develop a skill for visualization and conceptualization.
3. To make miniature with diagram, and basic mold making.
4. Pre production skill development.
5. Understand design principals of moving images.

<b>Unit 1</b>	Introduction to Production Design, basic understanding of Film Language.
<b>Unit 2</b>	Visualization & Foundation. Developing empathetic approach for working. Set Illustration, Narrative and Décor in context to it.
<b>Unit 3</b>	Set completion – complete visualization, miniature set design, (diagram based model) Basic molding workshop.
<b>Unit 4</b>	Light design in context to Production. Location Scouting trip. Design principles of moving images.
<b>Unit 5</b>	Submission on basis of Virtual Set Design. The informative interaction for the same.

### Course Outcome

At the end of this course students will have

CO1 An ability to understand basics of production design, and film language. CO2

An ability to develop skill for visualization and conceptualization.

CO3 An ability to develop skill to make miniature sets with diagram, and basic mould making. CO4 An ability to develop plan and execution pre-production.

CO5 An ability to develop understand design principals of moving images.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

DEAN  
Jaipur School of Design  
JECRC University JAIPUR

<b>BVI011A</b>	<b>WORKSHOP I – MATERIAL EXPLORATION</b>	<b>0-4-0[2]</b>
----------------	--	-----------------

### Objective

- 1 Basic study of forms, shapes,
- 2 Deformation, and model making
- 3 To enhance the brief knowledge of design methodology and steps of the design process.
- 4 Learn and apply the basic knowledge of tools and techniques according to the material to be used.
- 5 Interpreting the natural environment and creating a design with realistic approach.

<b>Unit 1</b>	Basic study of design & shapes in Model making & understanding of new dimensions.
<b>Unit 2</b>	Brief on Design Methodology – the process of development. Design conceptualization in perspective of executional details.
<b>Unit 3</b>	Creating the Miniature forms. The study of objects and subject shaping. Understanding of tools and usage in different variants accordingly.
<b>Unit 4</b>	Creating Natural Environmental Scenario. Application, molding & execution of different segments for creating it on realistic manner.
<b>Unit 5</b>	The finalized submission with proper models and usage of different techniques. Play with variety of materials like Textile, Leather, Clay, Thermacol, Fiber, Paper and Hardboard.

### Course Outcome

At the end of this course students will have:

- CO1 An ability to understand Basic knowledge about forms, shapes,  
CO2 An ability to develop skill for deformation, and model making with concepts.  
CO3 An ability to apply Knowledge of design methodology and steps of the design process. CO4 An ability to apply Basic knowledge of tools and techniques according to the material.  
CO5 An ability to apply advance knowledge of creating design and concepts to more approachable to the real time.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

1. Materials & Design, Editor-in-Chief: Alexander M. Korsunsky,

<b>BVI012A</b>	<b>COMPUTER GRAPHIC –II</b>	<b>0-6-0[3]</b>
----------------	-----------------------------	-----------------

### Objective

- Student will be able to Navigate premiere pro, create and open projects, work with files
- Import media into premiere pro, organize your media once it's imported, use the timeline for video and audio tracks
- Create and work with key frames, add animation and other effects, add transitions, use the colour-correction tools, sync clips from multiple cameras, add text, shapes, and logos to your project, work with audio in the audio workspace, export media from premiere pro, create and edit closed captions
- Produce professional quality print material, Manage documents effectively Indesign is Pro Software in Industry.

<b>Unit 1</b>	Getting Started with lightroom, Lightroom classic library module, Image Manipulation, Organization, Develop Module.
<b>Unit 2</b>	Colorize images manipulation with advanced technique in Photoshop tools, color grading, Advanced tricks for Healing Brush for retouching in Photoshop, clone Tool Stamp in Photoshop, vanishing point to mocking up designs, How to edit video in Adobe Photoshop, Parallax effect.
<b>Unit 3</b>	How to setup a file ready for web UI designing, How to export your web design UI project for Dreamweaver.
<b>Unit 4</b>	Make 3D text & 3D logos, Adding lights & casting shadows using Photoshop 3D, How make a reusable mock-up in Photoshop using smart objects, How to make a simple UI app web design mock-up using Photoshop.
<b>Unit 5</b>	An Overview of Adobe Premiere Pro, An Overview Of The Entire Workflow. Optimizing Your Hardware, Navigating Within The Workspace Customizing Your Workspace, Trimming Clips In Advance - Project Panel And Source Monitor, Animate Workflow.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to describe what adobe premiere pro is and how it can help you with your video making needs. CO2: An ability to Demonstrate installing, setting up, and working with media in adobe premiere.
- CO3: An ability to apply this In-Design training will make familiar with easily manipulating text by setting different font styles, weights and other properties and then saving the style you created to apply to other desired text within the document.
- CO4: An ability to acquire Better job opportunities, quick career growth.

<b>BVI013A</b>	<b>Design Project I - Storyboard Design</b>	<b>0-6-0[3]</b>
----------------	---	-----------------

### Objective

- Student will be able to serves as an outline of the design approach.
- It defines the elements that need to go on each page or movie frame.
- Students will be able to critical study of cinema inform their filmmaking and that the study and practice of film production enhance their work as film scholars and analysts.
- Students will be able to understand the pre-production, production, and postproduction filmmaking process.

<b>Unit 1</b>	Introduction to Story board design, brief on manual process of development. Difference of the Basic Templates and understanding the utility in animation video.
<b>Unit 2</b>	Manual Designing and composition. Importance of Color/BW. The usage of Light & Shadow. Illustrating the actions in accordance to storyboard design.
<b>Unit 3</b>	Conventions of the Camera movements. Shot Selections and understanding. Methods of Montage, Edit and Dynamic Design.
<b>Unit 4</b>	The Sequencing of frame wise design & time management. Introduction and merger of Special Effects. Dialogue based content development.
<b>Unit 5</b>	UX based design thinking & execution. Story Board for interaction design.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to present a clear picture of what will be happening throughout the entire site, what each page will look like, and what each team member/developer will do.
- CO2: An ability to draw detailed information on graphics, text, video, sound, audience interaction, colour, type fonts, type size, etc.
- CO3: An ability to conduct film research and compose cogent, persuasive, and valid essays about film.
- CO4: An ability to demonstrate the relationship between film form and aesthetic effect through both film analysis and the creation of motion pictures.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BVI014A</b>	<b>Strategic Communication &amp; Consumer Behavior</b>	<b>2-0-0[2]</b>
----------------	--	-----------------

### Objective

- 1- Student will develop Market understanding and understand consumer behavior.
- 2- Understanding the deference between needs, wants and demands.
- 3- How to plan strategically according to the consumer behavior.
- 4- Learn how to create a design in way it triggers impulsive buying.
- 5- Study top business models and their insides which triggers the consumer behavior.

<b>Unit 1</b>	Introduction to the types of market, knowing the Consumer & Target Audience. Understanding the demand and supply chain for expected buyers.
<b>Unit 2</b>	The Strategic planning, Variations according to the business module. The mode of communication for influencing consumer decisions. Research and Development for expected buyers knowing the inflow and limitations. Key factors of Consumer Behavior impacted by communication strategy; Awareness, Choice, Preference, Accountability and Personalization.
<b>Unit 3</b>	Approaches of Consumer Behavior .Models of Consumer Behavior. Study of the Buying Behavior of consumer– Routine response, Limited Decision Making, Extreme Decision Making and Impulsive Buying.
<b>Unit 4</b>	Relationship between customers and business by communication skills. Defining communication as a core driving force for emerging business modules. Persuasive Communication and its types – Ethos, Logos & Pathos.
<b>Unit 5</b>	The channels of communication in an organization, Personal, Broadcast Media, Mobile, Electronic and written. Building strategic communication for “Business to Business” model & “Business to Customer” model.

### Course Outcome

At the end of this course students will have:

- 1- An ability to understand markets and consumers.
- 2- An ability to develop an understanding between needs, wants and demands.
- 3- An ability to plan strategically according to the consumer behavior.
- 4- An ability to create a design in a way it triggers impulsive buying.
- 5- An ability to understand top business models and their insides which triggers the consumer behavior.

BVI015A	Photography II	0-4-0[2]
---------	----------------	----------

#### Objective

- Student will be able to Develop knowledge of principles of aesthetics and visual communication and integrate these principles creatively in still and motion based images and in new media storytelling.
- Demonstrate thorough knowledge and application of DSLR camera techniques for capture of both still, time and video based imagery.
- Develop a thorough and adaptable knowledge of software used in digital imaging and new media storytelling.
- Develop complete digital imaging workflow that includes capture, post processing, ethical considerations of digital techniques based on genre and asset management techniques from image capture to image archive.

Unit 1	Advance features of camera operating. Module based photo-shoot. Portrait photography: manipulation in techniques & skills.
Unit 2	Learning Subjective photography – Macro, Figure, Nature, Fashion, Sports & action, Still & Moving, Architectural Product etc. with technical advancements in camera techniques.
Unit 3	Lenses variation in photography – procedure of Multiple Lense and fix Lense photography. Flash light study in day & night shoot, its limitations & benefits. Understanding Image Sensors.
Unit 4	Panoramic Photography technique. Nightscapes and light trails- long exposure photography. Panning and motion capture style. Controlling the Tonal Balance according to color temperature, Light source & its angels and the exposure value.
Unit 5	Understanding the grading according to the production. The Generation loss adjustments and reproduction techniques. Advance Gadgets and their understanding according to the utility.

#### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to understand professional practices, communications, organizations and career opportunities in the field of professional photography.
- CO2: An ability to identify the primary working methods (conceptual and illustrative vs. journalistic and found moment) within different genres of photography in order to understand ethically acceptable images.
- CO3: An able to apply effective lighting techniques in natural, artificial and mixed lighting in a variety of photographic areas including product, still life and portraiture.
- CO4: Develop a professional body of work and appropriate support material such as website and marketing materials, to showcase personal vision and technical skills.

BVI016A	Motion Graphics- I	0-4-0[2]
---------	--------------------	----------

### Objectives

- Student will be able to learn and use adobe illustrator tools and techniques.
- Student will be able to Learn to create charts, icons and 3D typography.
- To learn to create animated stories with a basic knowledge of after effects, Layers, exporting, animation techniques.
- Understand how to create graphics for Information of the Brands
- Deliver process of Product with minimalist information
- Create and work with key frames, add animation and other effects

<b>Unit 1</b>	Advanced Pen Tool Tricks, create icons and typography with Advanced Pen Tool Tricks and Live Shape Effects, multiple strokes to a path, 3D in Adobe Illustrator CC, Semi flat 3D icons & UI design using Adobe Illustrator.
<b>Unit 2</b>	How to make a pie chart line graph & bar graph, Linocut effect, 3D gradient lettering, 3D Ribbon, Puppet Warp Tool settings.
<b>Unit 3</b>	Animated GIF using Adobe Illustrator, Character designing, Mascots, Scenes developing export techniques.
<b>Unit 4</b>	Introduction to after effects, Layer management, exporting, Basic animation techniques.
<b>Unit 5</b>	Create animated story, animation with puppet tool, exporting animation and editing with adobe premiere, sound recording and cleaning process with adobe audition.

### Course Outcome (CO)

At the end of this course students will have:

- CO1: An ability to communicate with the viewer, and add depth to the story by linking text with graphics for better visualization  
CO2: An ability to demonstrate installing, setting up, and working with media in adobe after effects  
CO3: An ability to bring brand to life by using your colors, visuals, & Brand Policies.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BVI017A</b>	<b>Advertising Film Making</b>	<b>0-4-0[2]</b>
----------------	--------------------------------	-----------------

### Objectives

- 1-Student will be able to learn the tools and techniques of adobe Premier.
- 2- Student will be able to learn importing and after effects.
- 3- Student will be able to learn editing
- 4- Student will be able to learn sound compilation
- 5- Student will be able Basic understanding of color grading and lumetric color and LUT's

<b>Unit 1</b>	Introduction to Adobe Premier
<b>Unit 2</b>	Importing footage to Premier, understanding the use of after effects with Premier for Video Compositing
<b>Unit 3</b>	Video Editing for Documentary
<b>Unit 4</b>	Taking footage to the sequence for Ad making with sound compilation
<b>Unit 5</b>	Giving final touch by Color Grading and understanding of Lumetric Color and LUT's

### Course Outcome (CO)

At the end of this course students will have:

- CO 1 An ability to, understand the use of after effects with Premier for Video Compositing. CO 2 An ability to demonstrate their knowledge on video editing in their projects.
- CO 3 An ability to develop taking footage to the sequence for Ad making. CO 4 An ability to develop final touch by Color Grading.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BVI018A</b>	<b>3D (Modeling &amp; illustration)</b>	<b>0-6-0[3]</b>
----------------	---	-----------------

**Objective –**

- Student will be able to develop the skill & knowledge in 3D Modeling & illustration.
- Students will understand the knowhow and can function either as an entrepreneur or can take up jobs in the multimedia and animation industry, video studios, edit set-up and other special effects sectors.

<b>Unit 1</b>	3DS MAX UI, Viewport navigation, Create versus modify objects, Selections, Transformations, Pivot Point, Transformation settings, Object duplication, Basic scene management.
<b>Unit 2</b>	Modifiers for modify objects, Layer management, Snapping, Align objects, Arrays,
<b>Unit 3</b>	Introduction to splines, Spline vertex types, Spline modification, Spline Boolean operation, Cross-insert and weld, product modeling with spline
<b>Unit 4</b>	Primitive versus editable objects, Introduction to editable poly, Sub-object selection, Edge modeling techniques, Cut and slice techniques, Polygon modeling techniques.
<b>Unit 5</b>	Modeling product, packaging, branding and Basics of Character design with poly modeling.

**Course Outcome (CO)**

Student will be able to

CO 1 -

CO 2-

CO 3-

CO 4-

H = Highly Related; M = Medium L = Low

**Textbooks:**

1. 3D Animation Essentials by Andy Beane
2. 3D Art Essentials by Ami Chopine

**Reference Books:**

2. Basics Animation: Digital Animation by Andrew Chong

<b>BVI019A</b>	<b>Design Project- II Branding &amp; Corporate Identity</b>	<b>0-6-0[3]</b>
----------------	---	-----------------

### Objective

- The course will help the students to explore how communication strategies and branding programs are developed and executed in contemporary design practice, which include their extension across a range of applications.
- In this subject, students learn to assess the goals, initiatives, missions and values of a client and communicate the essence of their business visually through signs, symbols, typography, colour and design.
- In addition to creating a corporate identity, they learn to create a brand identity system
- Students learn about the functions of branding through the study of companies' visual identity system that communicates the characteristics of the organisation.

<b>Unit 1</b>	Indicative content. Foundations of branding and evolution of branding concept.
<b>Unit 2</b>	Brand development process; role of insight; understanding values, positioning and essence; brand equity communicating the brand; emotional approaches; communication tools.
<b>Unit 3</b>	Managing the brand portfolio; brand architecture and hierarchy. Brand identity design process; corporate brand identity; role of design; communicating differences. Developing brand touch points; names; packaging; logos.
<b>Unit 4</b>	Brand identity analysis; interpreting the visual manifestation of brand identity. Brand extension; rationale, benefits and risks; distancing techniques; co-branding.
<b>Unit 5</b>	Luxury branding; Veblen effects; communicating values. Services and retail branding; managing the environment. Why branding is important in marketing.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to identify the value of brand strategies.
- CO2: An ability to differentiate branding projects with different forms of identity applications.
- CO3: An ability to generate a branding strategy for a branding program, apply creativity and critical thinking ability on input of new ideas to create a corporate identity system.
- CO4: An ability to demonstrate the ability to handle a range of extended branding applications.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BVI021A</b>	<b>Packaging Design</b>	<b>4-0-0[2]</b>
----------------	-------------------------	-----------------

### Objectives

- 1- The student will be able to get detailed knowledge of packaging design, and skills like patterns, prints and styles of packaging, and basic understanding of value & position of tags & labels.
- 2- To be able to create story and information of the product on packaging.

<b>Unit 1</b>	Introduction to Packaging Design. Logical thinking about the patterns & style of packaging. Creative process Expressions. Introduction to Tags & Labels design, and their utility.
<b>Unit 2</b>	Understanding of Mass versus Prestige packaging. Tangible Visual Marketing – mode & types. Pattern Design.
<b>Unit 3</b>	Typography choice in Packaging .Testing the selected Design. Choosing a form for communicating the Brand. Utility and viability of using Eco-friendly material in packaging. Branding and packaging –Types of packaging .Stock versus Custom Packaging.
<b>Unit 4</b>	Material, Textures & finishes, Shelf appeal & consumer response. Illustration and Photography.
<b>Unit 5</b>	Branding Product line. Ultimate Project submission, Presentation & final layout with Labels and Tags for it.

### Course Outcome (CO)

At the end of this course students will have:

CO1: An ability to develop an understanding of packaging design. CO2: An

ability to Learn skills like patterns, prints, lay outing.

CO3: An ability to learn value & position of tags & labels.

CO4: An ability to take decision upon typography & material of the packaging according to the product and develop a sense for sustainable model of packaging.

<b>BVI022A</b>	<b>Motion Graphics II</b>	<b>0-6-0[3]</b>
----------------	---------------------------	-----------------

### Objectives

- 1- To learn and use Animation tools and techniques.
- 2- Learn to create charts, icons and 3D subject & object.
- 3- To learn to create animated stories with a basic knowledge of after effects, Layers, exporting, animation techniques.

<b>Unit 1</b>	How to work with Text on Path, How to Animate Text on Path, How to Create Per Character Animation, Multi-line pre-sets, Presets Practice Activity ,The Concept and Properties of Masks, Using the Mask Properties, Animating Masked Layers.
<b>Unit 2</b>	Intro and Setting up the workspace for 3D work, Using the 3D Rotation Property, Using the Null Object in 3D, Beyond the Camera, Random with Orientation.
<b>Unit 3</b>	How to create a Camera Layer - Properties and Presets, Understanding the Lights Properties.
<b>Unit 4</b>	How to Create and Save Your Animation Presets, Basics of camera tracking technique, Motion Graphics Template editing workflow.
<b>Unit 5</b>	Plugins character animation and advanced animation with expressions, exporting your Composition as GIF and movie sequences. E-learning videos flow chart.

### Course Outcome (CO)

At the end of this course students will have:

- CO 1 - An ability to use Animation tools and techniques for creating charts, icons and 3D Object. CO 2- An ability to Make GIF, with the basic motion & movie sequences.
- CO 3- An ability to learn camera tracking & create animated stories.

<b>BVI024A</b>	<b>3D (Texturing &amp; Rendering)</b>	<b>0-6-0[3]</b>
----------------	---------------------------------------	-----------------

### Objectives

- Provides an introduction to creating, editing, and analyzing 3D models.
- Develops foundational skills to work with, and navigate the digital 3D modeling workspace to create 3D objects. Examines basic elements of the 3D development of modeling, texturing, lighting, animating, and rendering.

<b>Unit 1</b>	Introduction of material editor, UVW mapping, Unwrapping technique and texture painting with Photoshop.
<b>Unit 2</b>	Materials types, advanced ray tracing techniques,
<b>Unit 3</b>	Introduction of light types, 3 point lighting theory, Render engines, types of light in 3d max, Parameters and 3d environment visualization
<b>Unit 4</b>	Image based Lighting, Rendering techniques, Daylight system, Global illumination and Final gathering pixel in mental ray.
<b>Unit 5</b>	Render Passes, Compositing workflow, Format exporting frame types.

### Course Outcome (CO)

At the end of this course students will have:

- CO1: An ability to Work with and navigate the unique features of the digital 3D modeling workspace to create 3D objects.  
CO2: An ability to Identify characteristics of rendering 3D objects for optimal system processing and analysis. CO3: An ability to Create a 3D environment featuring lighting and textures.  
CO4: An ability to Create basic 3D models and animations.  
CO5: An ability to Evaluate digital 3D projects, identify items for improvement, and implement changes.

BVI027A	Web Designing	0-4-0[2]
---------	---------------	----------

### Objective

- Student will gain the skills and project-based experience needed for entry into web design and development careers.
- Student will be able to use a variety of strategies and tools to create websites.
- Student will develop awareness and appreciation of the many ways that people access the web, and will be able to create standards-based websites that can be accessed by the full spectrum of web access technologies.

Unit 1	Introduction to HTML Language, Web applications, Web Structure, About the software, Workflow in Dreamweaver, User interface, About views, Browser, references, Text, Formatting's HTML Styles, About tags, Tag inspector, Code view, About paths, Absolute path, Images, Image Mapping.
Unit 2	Tables, Table properties – table size, Headers, Insert ,delete rows/columns, Split & Merge cells, Cascading style sheets ( CSS Styles), Types of styles, Rule Definition – category wise, CSS Styles, Text, Paragraph, Image, Frameset- Page from sample, Frameset, Frameset Properties, Saving Frames, Linking Framesets, Forms, Text field, Checkbox, Radio Button, Labels, List/Menu, Submit, Other applications, Insert Media, Flash files, fly files, Sound files, Snippets - snippets panel, Adding new snippets, Making a web page with snippets, Spry Assets, Types of spry assets, Making web pages using spry assets, Behaviours, Actions and events, adding behaviours and testing, Layout pages - Div tag, Define CSS rules for div tag, Use Templates , About AP elements, Working with AP Elements, Links, Text, email Links, Anchor link, Image, Image maps.
Unit 3	Testing web site, Defining local server, Creating local web address using IIS, Installing IIS, Creating virtual folder, setting the local path and home page. Defining FTP Server, Uploading websites, Updating websites , Assets Panel , site panel, Project work- Make websites, Mobiles, Educational organizations, Restaurants& for Companies, Project
Unit 4	<b>Web fundamentals</b> - Platform issues (Windows, Mac), Web standards and the end user (size, colour, etc), HTML fundamentals. <b>Features of the product</b> - The Interface (workspace), Previewing in browsers, Validate HTML Code and Check browser compatibility, The Toolbars, The Panels, The Property Inspector, The document window. <b>Site creation and management</b> - Defining the Local site, The Files panel and the Site Window, Remote and Local site view and management, Put and Get files (uploading and downloading), Check in and Check out as part of management strategies.

<b>Unit 5</b>	<p><b>Web pages creation and basic definition</b> - Creating a new page, Page Properties, Colour in Dreamweaver (the colour palette), Document type (DTD), The Head content.</p> <p><b>Page composition</b> - Working with text in Dreamweaver, Basic formatting with the Property inspector, HTML and CSS mode for text formatting, Text with CSS and the CSS panel, Creating, editing and managing CSS styles, Ordered and unordered Lists, Text indent and outdent, Special characters.</p> <p><b>Navigation</b> - Links and URL (absolute versus relative links), Local, External and Email links, Vertical navigation with name anchors in Dreamweaver, Targeting links.</p> <p><b>Working with graphics</b> - Image formats, Inserting images in Dreamweaver, Image properties, Images and text blocks, Titling with the Alt text box (accessibility attributes).</p> <p><b>Navigating with Graphic elements</b> - Images as buttons, Rollover effects, and Image maps. <b>Working with tables</b> - Inserting tables, Table properties, and Cell, column and row properties, Tables as layout strategy, Inserting and managing content inside tables.</p> <p><b>AP Elements / Layers</b> - AP Elements panel, Drawing/inserting AP Elements on page, AP Elements properties inspector, Layouts with AP Elements.</p> <p><b>Working with Assets</b> - The Assets panel, Categories in the Assets panel, Favourites in the Assets panel, placing content from the Assets panel into pages, Reusable items (The</p>
	<p>Library, Creating, and managing and editing library items.</p> <p><b>Templates</b> - About Templates, The Templates panel, creating basic templates, Assigning editable regions, Inserting content into templates, creating documents based on existing templates, Using and editing templates.</p>

### Course Outcome (CO)

At the end of the course students will have:

- CO1 AN Ability to develop an understanding of the formalistic (aesthetic) aspects of design and visual communication. CO2 AN Ability to demonstrate cross-platform (web, mobile, broadcast, print) storytelling skills.
- CO3 AN Ability to become familiar with graphic design and/or game theory and be able to apply this theory to real world projects.
- CO4 AN Ability to develop and understanding of information design and usability as it applies to interactive media projects.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

BVI035A	Entrepreneurship	2-0-0[2]
---------	------------------	----------

#### Objective

- Be able to apply problem solving approaches to work challenges and make decisions using sound Design methodologies
- Be able to apply a systematic design approach to commercial projects and have strong design and research skills in the chosen discipline specialization
- Communicate effectively across all modes: listen, speak, write and draw
- Balance the technical, economic, social and ethical demands of a problem in sustainable and culturally sensitive ways.

<b>Unit 1</b>	Introduction to Entrepreneurship -Entrepreneur- meaning, importance, Qualities, nature, types, traits, culture, similarities and economic differences between Entrepreneur and entrepreneur. Entrepreneurship development, its importance, Role of Entrepreneurship, entrepreneurial environment.
<b>Unit 2</b>	Evolution of Entrepreneurs - Entrepreneurial promotion, Training and developing motivation factors, mobility of Entrepreneurs, Entrepreneurial change, occupational mobility factors in mobility, Role of consultancy organizations in promoting Entrepreneurs, Forms of business for entrepreneurs.
<b>Unit 3</b>	Creating and starting the venture - Steps for starting a small industry- selection of types of organizations. Managing, growing and ending the new venture - Preparing for the new venture launch-early management decisions Managing early growth of the new venture-new, venture expansion strategies and issues, going public ending the venture.
<b>Unit 4</b>	Entrepreneurship Development and Government - Role of Central Government and State Government in promoting Entrepreneurship, Introduction to various incentives, subsidies and grants, Export Oriented Units. Fiscal and Tax concessions available. Women Entrepreneurs Reasons for Low/no women Entrepreneurs, their Role, Problems and Prospects
<b>Unit 5</b>	Project Management – Introduction to project management, principles of management, establishment and financial implications, project resourcing, time management

#### Course Outcome (CO):

At the end of this course students will have:

CO1: An ability to describe product/project development and the associated business processes. CO2: An ability to describe team operation and its dynamics.

CO3: An ability to communicate effectively in writing (both textually and graphically). CO4: An ability to undertake self-directed study.

BVI037A	Portfolio Development	0-6-0[3]
---------	-----------------------	----------

#### Objective

- Design portfolio is the expression of student to translate themes into design. Here one gets inspired by different themes which could be art movements, sport, historic eras, music, dance, culture, nature, traditions etc. and picks out tangible and intangible elements which are to be used as design elements in the collection. The ability of a designer to exhibit and use design elements is highlighted which is further translated into projects. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of four years. The purpose lies in promoting the skills of students in a single format.

<b>UNIT 1</b>	Students will present a portfolio of all the files/ folders/ projects created during study in I to III year. The portfolio should include projects, industrial visit reports, any other projects made during the academic session. The external examiner will evaluate the portfolio and take a viva of the student. A Copy of Portfolio must be submitted with the department at the time of final assessment.
---------------	--

#### Course Outcome (CO):

At the end of this course students will have:

- CO1 Students will present a portfolio of all the files/ folders/ projects created during the course of study in I to III year. The portfolio should include projects, industrial visit reports, any other projects made during the academic session. The external examiner will evaluate the portfolio and take a viva of the student.

<b>BVI040A</b>	<b>OFFICE TRAINING (INTERNSHIP)</b>	<b>0-26-0[13]</b>
----------------	-------------------------------------	-------------------

#### **OBJECTIVE**

- To encourage students to work in with relevant industries.
- An avenue to enhance academics learning through hands on work experience.
- Get advice on career from knowledgeable and experienced professionals.
- Gain exposure to a professional work atmosphere.

<b>UNIT 1</b>	<p>In the VI semester, student will undergo a 12 weeks training in a Graphics designing industry /manufacturing unit/ Graphics export unit so that they can understand the existing working practices, conditions and acquire an in depth technical knowhow.</p> <p>The student shall prepare a report on the training given by the organization He/she will submit the report. The student has to submit the certificate regarding successful training with the organization.</p> <p>A Copy of Report has to be submitted with the department along with the performance certificate issued by the firm Manager/ Owner and one with the Firm (where internship is pursued).</p> <p>After the Internship, student has to appear in front of jury members for a presentation seminar, who will judge the performance based on their presentation, report &amp; Viva-voce and award marks to student.</p> <p>Project Report to be submitted</p> <p>Background of industry Number of employees</p> <p>Project detail on which assisted Task and deadlines Manufacturing process</p> <p>Hand &amp; Computer sketches</p> <p>Experience</p> <p>Any other details</p>
---------------	---

#### **Course Outcome (CO):**

At the end of this course students will have:

CO1: An able to place themselves and their work in the context of their selected discipline CO2: An understand their specialist area and the career opportunities available

CO3: An understand how to promote themselves and their work professionally.

CO4: The aim of this unit is to extend learners' knowledge of professional practices within their specialist area and to relate these to personal goals and career opportunities.

<b>BVI034A</b>	<b>Intellectual Property and Protection</b>	<b>3-0-0 [3]</b>
----------------	---	------------------

#### OBJECTIVE

- This paper is designed to introduce students to the Intellectual Property and its protection along with the registration process.
- The aim is to provide comprehensive knowledge of different types of Intellectual Property and its management.
- To aware about current trends in IPR and Govt. steps in fostering IPR

UNIT 1	Unit 1 – Introduction to IP - Historical and philosophical background of Intellectual Property – Industrial Property, Artistic and Literary Property, Need for IPR. Rationales for protection of IPR, IPR in India – Genesis and Development, International IPR - Organisations, Agencies and Treaties.
UNIT 2	Unit 2 – Patents - Trips Definition, Kind of inventions protected by Patent – Patentable and Non Patentable inventions, Process and product patent, double patent- patent addition, Legal requirements for patents, Granting of patents – Rights of a Patent Exclusive Right. Patent Application Process: Searching a patent, Drafting, Filing a patent. Types of Patent Applications – Patent Document: Specification and Claims. Commercial Exploitation of IP – Assignment, licensing, infringement.
UNIT 3	Unit 3 – Trademarks – Trademarks and Industrial Designs for increasing the power of marketing - The value of a brand, create brands through trademark. Strengthening brands through industrial design, How to protect trademark and industrial design - The value of registration, Basic steps for registration, Multi-protection. Trademark management – Trade Mark Audit.
UNIT 4	Unit 4 – Copyrights – Rights and Protections covered by copyright. Law of Copyright : Fundamental of copyright law, originality of material, rights of reproduction, rights to perform the work publically, copyright ownership issues, obtaining copyright registration. Infringement of copyright under copyright act.
UNIT 5	Unit 5 – Industrial Designs- Design Patents - Protection, kinds of Protection is provided by industrial designs, integrated circuits, Patentable and Non Patentable Industrial Designs, Design patents vs. Utility Patents Advantages & Disadvantages of Design patent, The Industrial Design Patent Application Process.
UNIT 6	Trade Secrets – Trade Secret Law, Determination of a trade secrete status, liability for misappropriations of trade secrets, protection of submission. Trade Secret Litigations.
UNIT 7	Institutional Capacity – IP Policy Making and Legislation, IPR Administration and Institutions, Examination versus Registration systems, Regional and International Co-operation, The Cost of IP System, Meeting the Costs, Technical Assistance & Capacity Building, International Standard Setting: WIPO and WTO

### COURSE OUTCOME (CO)

At the end of this course students will be able to :

- CO1 Apply intellectual property law principles (including copyright, patents, designs and trademarks) to real problems and analyse the social impact of intellectual property law and policy.
- CO2 Analyse ethical and professional issues which arise in the intellectual property law context CO3 To catch up Intellectual Property (IP) as a career option
- R&D IP Counsel
  - Government Jobs – Patent Examiner
  - Private Jobs
  - Patent agent and Trademark agent
  - Entrepreneur
- CO4 Will be able to differentiate between the original and duplicate work on the basis of ownership of the IP. CO5 Protect the originality of the assignments and will be able to generate better revenues with IP ownership.

GDD001A	DESIGN FOUNDATION	0-0-8[4]
---------	-------------------	----------

#### PREREQUISITE OF THE COURSE ---Drawing skills

#### AIM

To make students see, make and appreciate the basic design concepts. The first level includes the vocabulary of design and principles of composition. This level includes 3D composition and study of Volumes. The aim of this course is to understand the method of visualizing and drawing from nature, cast and product drawing. Learners will be introduced to a brief history and introduction to 3D materials, tools and processes and made aware of the range of possibilities of different materials in their 2D and 3D application to design. This may be done through lectures / ppt presentations / swatches/ samples. The aim of this unit is to enable learners to develop knowledge and understanding of the issues that have informed debate on the purposes and processes of design. This unit aims to give learners opportunities to develop skills and knowledge in the development of new products or services in design pathways.

#### OBJECTIVE

- Know the phases of the design development cycle
- Skill in color mixing and fine color-discernment.
- Know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).
- Practice and develop rendering and presentation techniques in design presentations.
- Recognize the relationship between lighting, surface and perception.
- Student will be able to understand design & principles of composition & 3D compositions
- Student will be able to understand the methods & techniques of visualization & drawing.
- The student would be exposed to appreciation of drawing different products.
- Student will be able to understand basics of design concepts

**UNIT 1**      **THEORY-** Elements of Design- Point, Line, Characteristic of Line, Types of Line, Shapes, Categories of Shape, Space, Categories .  
**PRACTICAL-** Elements of design- Types of Lines, Line Compositions, Different types of Shapes- Geometric, Organic, Free-form, Natural, and Shape, composition, Positive & Negative. Textures- Physical & Visual, Texture Composition, Form Space-Positive & Negative.

**UNIT 2**      **THEORY-** Principle of Design- Balance, Types of Balance, Emphasis, Unity, Repetition, Rhythm, Pattern, Harmony, Proportion, Contrast, Functionality. Gestalt and his Concepts- Closures, Continuance, Similarity, Proximity, Alignment.  
**PRACTICAL-** Principle of design- Balance, types of balance emphasis, unity, repetition (rhythm, pattern), harmony, proportion (scale), variety (alteration), contrast, functionality.

- UNIT 3** **THEORY-** Color- Introduction to Color, Color Theory, Color Harmonies, Color Schemes, Color Wheel, Tint, Tone, Shades. Different Mediums in Art.  
**PRACTICAL-** Color- Color Wheel and color chart, Color Exploration, Color Interaction. Primary colors- Color Wheel, Color Composition, Secondary colors- Color Wheel, Color Composition, Tertiary colors- Color Wheel, Color Composition Color schemes- Monochromatic, Achromatic, Complimentary, Split Complimentary, Double-Split Complimentary Polychromatic. Tint, tone & shades- Application of Gray Scale and Black & White. Mediums in art- Pencil, Charcoal, Pastels, Water & Poster.
- UNIT 4** **THEORY/PRACTICAL-** What is Design, Philosophies and Studies of Design, Approaches to Design, Philosophies for Methods of Designing, Philosophies for the Purpose of Design, Design as a Process, Defining a Design Process, Typical Steps or Stages of the Design Process, Design and Art, Design and Engineering, Design and Production, Process Design?
- UNIT 5** **THEORY/PRACTICAL** - Drawing, Nature-drawing Composition, Free-Hand Sketching. Object drawing-2D & 3D, Human drawing- Outline Sketches, Shades & Shadow Composition, Light- Dark Tone Composition, positive and negative spaces, Product drawings; method of representing
- UNIT 6** **THEORY-** Composition, Principle of Organization, View Point Compositional Techniques, Rules of Thirds, Odds, Space, Simplification, Limiting Focus, Geometry and Symmetry  
**PRACTICAL** –View- Perspective, Isometric, Geometry- Lines & Angle bisecting, Constructing Regular & Semi Regular Tessellation, Constructing 3D Tessellation

#### COURSE OUTCOME (CO)

**At the end of this course students will have:**

- CO1: An ability to color mixing and fine color-discernment.
- CO2: An ability to know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).
- CO3: An ability to rendering and presentation techniques in design presentations. CO4: An ability to recognize the relationship between lighting, surface and perception.

<b>GDD002A</b>	<b>BASIC ART &amp; DESIGN</b>	<b>0-0-8(4)</b>
----------------	-------------------------------	-----------------

**Prerequisite of the Course** ---Drawing skills

#### **AIM**

Art and design stimulates creativity and imagination. It provides visual, tactile and sensory experiences and a special way of understanding and responding to the world. It enables students to communicate what they see, feel and think through the use of color, texture, form, pattern and different materials and processes. Students become involved in shaping their environments through art and design activities. They learn to make informed judgments and aesthetic and practical decisions. They explore ideas and meanings through the work of artists and designers. Through learning about the roles and functions of art, they can explore the impact it has had on contemporary life and that of different times and cultures. The appreciation and enjoyment of the visual arts enriches all our lives

#### **OBJECTIVE**

- To understand of the social, psychological, cultural, historical and commercial factors.
- Development of Graphic Skills, Ability and Comprehension. Establishing Significance of Art.
- To understand the influences on art and design activities.

<b>UNIT 1</b>	Introduction to History of Art, Design and Architecture – Pre History To Ancient Civilization, Mesopotamia, Egypt, Indus Valley, China.
<b>UNIT 2</b>	Introduction to Indian folk Art- Worli, Fadd, Madhubani, Modern Art, Blue Pottery, Fresco, Meenakari , glass mosaic, Miniature Art, Kalamkari, Inlay-Work.
<b>UNIT 3</b>	<b>Techniques &amp; Process</b> Material exposure ranging from POP, Fly-ash, Terracotta & Ceramics Clay, Wood, metal, etc.,) Techniques, Processes terminology and tools.
<b>UNIT 4</b>	<b>Techniques &amp; Process</b> Material exposure ranging from Leather, Resin, Paper, Fabric, Tissues, foil etc.) Techniques, Processes terminology and tools.
<b>UNIT 5</b>	Introduction to Photography for documentation

#### **COURSE OUTCOME (CO)**

**At the end of this course students will have:**

CO1: An ability to understand influences on art and design activities.

CO2: To understand outcomes through the interpretation and analysis of information. CO3: An ability to be able to assess, interpret and evaluate information.

CO4: An ability to be able to evaluate and present conclusions.

DEN001A	Communication Skills	Credits 2-0-2(3)
---------	----------------------	------------------

### Course Objectives

- To enhance English language competence in reading, writing, listening and speaking.
- Switch the approach from teacher-centred to student-centred one.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
- To link communication skills with the organizational behaviour.
- To inculcate skills that are very much required for employability and adjust in the professional Environment.

### Course Outcomes (CO):

**At the end of this course students will have:**

- CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
- CO2: Ability to analyze the usage of English words in different contexts. CO3: An understanding of technical and academic articles' comprehension.
- CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

### Syllabus: Theory

- UNIT 1 Basics of Organizational Communication:**  
Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
- UNIT 2 Basic Writing Skills:** Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
- UNIT 3 Composition:**, Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
- UNIT 4 Vocabulary Building:** Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
- UNIT 5 Professional and Technical Communication :** Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

### Syllabus: Lab

- UNIT 1 Basics of Organizational Communication:** Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time- management, Following Deadlines etc

  
DEAN  
Jaipur School of Design  
JECRC University JAIPUR

- UNIT 2**      **Write Dialogue from the different contexts of corporate culture:**  
Employee and Employer, Customer and Service Provider, Customer and Product Review,  
How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
- UNIT 3**      **Composition:**, Letter Writing, Email Writing, Précis Writing, Essay Writing,  
Practice sessions by using Ms Word- Following the process of Drafting-Redrafting, Proof  
Reading, Editing etc
- UNIT 4**      **Vocabulary Building:** Word Formation from one word form to another, Origin of  
Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find  
out the difference between words, similarity between words, origin of words, neologism  
concepts etc
- UNIT 5**      **Professional and Technical Communication :** Drafting                  a CV/Resume,      Practice  
Sessions on Telephonic      Interview and      Online Interview, Presenting      projects,  
proposals etc through PPT Making,

#### **Methodology for Evaluation**

- |   |   |          |
|---|---|----------|
| 1. Internal Assessment (Theory)         |   |          |
| a) Home Assignments: One from each Unit | : | 15 Marks |
| b) In Semester Tests (Minimum two)      | : | 30 Marks |
| c) Attendance                           | : | 05 Marks |
| 2. Term End (Theory)                    | : | 50 Marks |
| 3. Internal Assessment (Lab)            |   |          |
| (a) Daily Performance in the Lab        | : | 50 Marks |
| 4. Term End (Lab)                       | : | 50 Marks |

<b>GDD071A</b>	<b>Material Exploration &amp; Sourcing</b>	<b>0-0-4 [2]</b>
----------------	--	------------------

**Prerequisite of the Course** ---Basic knowledge of different material, Basic Textile (Fabric), Knowledge Market Survey

**Learning Objective:**

The main objective is to develop understanding of skills in the application of materials for different end uses. Student will develop a visual and tactile understanding of textile raw materials and fabrics enabling to evaluate performance characteristics in fibers and fabrics in relation to commodity and processing costs. Student will be required to do data collection & sourcing of samples like knitwear, performance sportswear, natural fibers or technologically led fabrics from a variety of fiber manufacturers, wholesalers and retailers in and around Jaipur.

<b>UNIT 1</b>	<b>Introduction to Material Sourcing &amp; Data Collection</b> Introduction to basic material required for fashion and textile design. Identifying customers' requirements. Pricing, lead time and trade rules. Risk assessment of raw materials.
<b>UNIT 2</b>	<b>Understanding Markets for basic fabrics &amp; weaves</b> Market survey to find out basic fabric shops in and around Jaipur. Market survey to find out weaving centers in & around Jaipur. Create a swatch book of above mention fabrics with their market price.
<b>UNIT 3</b>	<b>Understanding Markets for Decorative, Complex fabrics, &amp; weaves</b> Market survey to find out complex and decorative fabric Shops in and around Jaipur. Market survey to find out weaving artisans and handicraft stores in and around Jaipur. List out all the fabric shops and handicraft centers in detail. Create a swatch book of above mention fabrics with their market price.
<b>UNIT 4</b>	<b>Understanding markets for Laces, Buttons, and others Fasteners</b> Market visit to find out various shops of laces, buttons and others detailing in and around Jaipur. List out all the names of the shops along with their address and complete details. Small collection book of above mention detailing items with price.
<b>UNIT 5</b>	<b>Understanding markets for Fashion and textile Accessories</b> Market survey to find out small to large fashion accessory shops in and around Jaipur. Prepare the list with name of the shop along with address. Small swatch book of accessories along with their price.

**Course Outcome (CO):**

At the end of this course students will have:

CO1: To understand the raw materials for various textile uses CO2:  
To differentiate various materials

CO3: To surf the market according to the material and apply various materials according to the product CO4:  
To know famous markets and shops for material sourcing & data collection in and around Jaipur.

<b>GDD072A</b>	<b>Fashion Illustration-I</b>	<b>0-0-4 [2]</b>
----------------	-------------------------------	------------------

**Prerequisite of the Course** ---Drawing skills, Use of different mediums

**Learning Objective:**

A thorough foundation in fashion illustration is established in this course which covers the fashion figure and garment interpretation. Student's study and develop the basic structure unique to the fashion figure. Students will learn to interpret draping and surface texture of the fabric together with technical drawings.

<b>UNIT 1</b>	<b>Basic Human Anatomy</b> Basics of human anatomy, drawing of legs, feet, hands, arm etc. Practice of hands and feet, hair style and face analysis
<b>UNIT 2</b>	<b>Eight Head Theory and Stick Figure</b> Eight-head human figure, elongated eight-head human figures – 8 ½, 10 ½, and 11 ½ head. Stick figure and fleshing of the stick figure. Stylization of stick figure.
<b>UNIT 3</b>	<b>Medium Exploration and Fabric Rendering</b> Medium explorations –Color pencil shading, Charcoal, Watercolour, India Ink, Pastels, Marker. Fabric rendering – Cotton, Leather, Silk, Satin, Denim, Corduroy, wool, net, chiffon, organza and velvet. Embellishment and Prints.
<b>UNIT 4</b>	<b>Fashion Poses and Flat Drawing</b> Fashion poses, fashion figure in relation to fashion pose, drawing profile and ¾ figures. Background for the figures.
<b>UNIT 5</b>	Drawing flat sketches Developing range of women's wear for a concept

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: Understand human figures proportion, movements and postures. CO2: To understand about the eight Head Theory and Stick Figure.
- CO3: To understand how to illustrate the idea of design with the skill of fashion illustration technique with different materials: charcoal, colour pencil, water colour, ink and pastels.
- CO4: Present a fashion Illustration Portfolio, identifying areas for further development and best practice.

<b>GDD073A</b>	<b>Pattern Making &amp; Garment Construction-I</b>	<b>0-0-4 [2]</b>
----------------	--	------------------

**Learning Objective:**

The main objective of this module is to develop: (I) understanding of pattern making, based on body measurements, using industry standard signs and symbols. (II) To develop the understanding in the skills of garment construction techniques, creating toiles, demonstrating the safe use of equipment and relevant health and safety regulations.

<b>UNIT 1</b>	<b>Pattern Drafting</b> Introduction of Pattern Making Method of measuring body and dress form Tools of pattern making Common terms used in pattern development Method for drafting the basic pattern set (women/Kids) Torso Pattern Test fitting of patterns Dart manipulation - elementary and advanced dart manipulation. Variations of Sleeve, collar and skirt
<b>UNIT 2</b>	<b>Draping</b> Introduction to Basics of draping Grain line, preparation of muslin for draping Dress form, Key to abbreviations used in draping
<b>UNIT 3</b>	Basic Bodice Block – Front & Back Basic Skirt Block – Front & Back Skirt Variation Collar variation Yokes
<b>UNIT 4</b>	<b>Garments Construction Techniques</b> Sewing machine and parts Stitch practice. Types of stitches. Types of seams & seam finishes.
<b>UNIT 5</b>	<b>Garments Construction Techniques</b> Plackets, Pocket, Collar. Fitting a sleeve, Bodice Blocks. Darts & neckline finishes.

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: To create and use a set of basic blocks and apply skills in dart and seam manipulation.
- CO2: To produce a full-scale pattern from creative designs and working drawings through Pattern making and draping technique.
- CO3: To make them familiar with sewing machine and to work proficiently on the sewing machine with the rectify simple problems of the machine.
- CO4: To understand the special skills and techniques used in the garment making with the understanding of various parts of the garment and construction of complete garment.

<b>GDD074A</b>	<b>Computer Application – I</b>	<b>0-0-4 [2]</b>
----------------	---------------------------------	------------------

**Prerequisite of the Course** ---Basic Computer skills

**Learning Objective:**

The main objective of this unit is to learn how to Use Computer with User friendly. Student will learn documentation, spreadsheet, presentation and web surfing with security.

They will learn the technique of Creating Mood Board, Color Board, Picture placement and Picture blending by Photoshop and Corel Draw.

They will also understand how to create Flat drawing and specification sheet.

<b>UNIT 1</b>	<b>Basic Computer</b> Features of windows. Word processing. Spreadsheet. Presentation Graphics. Securing Computer Data.
<b>UNIT 2</b>	<b>Basic Corel</b> <ul style="list-style-type: none"> <li>• Introduction to Corel Draw</li> <li>• Concept vecto based drawing.</li> <li>• Used corel Draw in garments.</li> </ul>
<b>UNIT 3</b>	<ul style="list-style-type: none"> <li>• Flat Drawing through Corel.</li> <li>• Specification Sheet Formation.</li> <li>• Measurement of garments &amp; stitch line.</li> <li>• Draw single stitch / Overlock stitch / Flat lock stitch.</li> </ul>
<b>UNIT 4</b>	<b>Basic Photoshop</b> <ul style="list-style-type: none"> <li>• Introduction to photoshop/ pixed based vs vector.</li> <li>• Tool Box</li> </ul>
<b>UNIT 5</b>	<b>Basic Photoshop</b> <ul style="list-style-type: none"> <li>• Drop downs functions.</li> <li>• Image sizing/ Resolution/ Page Size</li> </ul>

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: Student will be able to work with windows utility, documentation.
- CO2:To create spreadsheet and make presentation and web surfing.
- CO3:Students will be able to convert Manual Design in Digital Form through Corel with Exact measurement with creating design variations.
- CO4: Students will be able to understand photoshop/ pixed based vs vector and functions.

<b>GDD075A</b>	<b>Design Project –I</b>	<b>0-0-6 [3]</b>
----------------	--------------------------	------------------

**Prerequisite of the Course** ---Elements of Design, Elements of Fashion, Process of Design, Fashion Illustration, Drawing Skills

**Learning Objective:**

The main objective of this module is to develop a design intellect and basic design system. Hands-on experiences in the interpretation of image of fashion product/customer specifications, apparel design concept development, illustrations and technical drawings, design for prototyping, and manufacturing will be utilized in the instruction of the design process. Students will accurately document their fashion product design experience through design process in a notebook.

The course would require the students to carry out research on the major women wear designers and their brands along with the recognition of different women wear segments and their growth rate.

<b>UNIT 1</b>	<b>Design Development Process</b> Research Inspiration board Creating Mood boards- its application in designing apparels. Theme boards- its direct relation to creating designs of apparels. Client boards - the study of peculiar characteristics of a client to design special apparels for him/ her.
<b>UNIT 2</b>	<b>Design Development Process</b> Illustration board - Fashion Illustrations according to themes. Accessory board
<b>UNIT 3</b>	<b>Design Development Process</b> Trim & Swatch (Fabric) boards- Use of Trims and swatches in surface texture of the designed apparels. Technical drawing - Flat sketch board / tech pack
<b>UNIT 4</b>	<b>Process of Fittings</b> Muslin fits (toile) Actualizing the garment
<b>UNIT 5</b>	<b>Process of Fittings</b> Costing Presentation

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: To develop the design process through experimental ideas and applications
- CO2: To Present research analysis to client groups.
- CO3: To extend and apply skills in developing creative visual language.
- CO4: To synthesize and critically evaluate experimentation in personal creative practice.

DEN002A	Professional Skills	Credits 2-0-2(3)
---------	---------------------	------------------

### Course Objectives

- To enhance Professional competence in reading, writing, listening and speaking.
- Switch the approach from providing information about the language to use the language.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
- Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
- Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

### Course Outcomes (CO):

**At the end of this course students will have:**

- CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
- CO2: Ability to analyze the usage of English words in professional scenario. CO3: An understanding of technical and academic articles' comprehension.
- CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

### Syllabus: Theory

- UNIT 1 Professional Grooming and Professional Culture:**  
Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
- UNIT 2 Advanced Grammar:** Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
- UNIT 3 Composition:**, Memo, Notice, Circular, Book Review, Research Article, Reports
- UNIT 4 Vocabulary Building:** Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms
- UNIT 5 Reading Comprehension:** Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction,

<b>GDD079A</b>	<b>Fashion Illustration-II</b>	<b>0-0-6 [3]</b>
----------------	--------------------------------	------------------

**Prerequisite of the Course** ---Drawing Skills, Fashion Illustration of Women's

**Learning Objective:**

Introducing students to illustrate figures with reference to eight-head figure and elongated eight-head figures. This subject is an extension of fashion illustration-I, where the students would be encouraged to sketch fashion figures, render the fabrics and work on fashion figures with reference to design aesthetics.

The course is a study of illustration of different garments for Women, Kids and Men.

<b>UNIT 1</b>	Illustration of men's/kids garments, different poses, importance of the background. Men's features- Face, hair, hands and feet. Illustrating men's figures in different mediums.
<b>UNIT 2</b>	Individual style in illustration for different looks.
<b>UNIT 3</b>	<b>Accessory designing and illustration</b> Illustration of Jewellery using various mediums like pearls, beads, gold and silver, diamonds, wood, wires, velvet, net, etc, Designing and illustration of head gears
<b>UNIT 4</b>	Designing and illustration of bags and belts using various mediums like leather, cane, pearls, beads, wires, velvet, net, etc. Designing and illustrating footwear of all types
<b>UNIT 5</b>	Designing and illustrating bows and ties on varied dresses. Illustrating hairstyles

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: To understand how to illustrate the idea of design with the skill of fashion illustration technique. CO2: Understand human figures proportion, movements and postures.
- CO3: To understand the garment interpretation
- CO4: To understand about the accessory from a sketch.

<b>GDD080A</b>	<b>Pattern Making &amp; Garment Construction-II</b>	<b>0-0-6 [3]</b>
----------------	---	------------------

**Prerequisite of the Course** ---Basic Pattern Making of western garment and construction Techniques.

**Learning Objective:**

The purpose of this module is to provide learners with the opportunity to develop skills in the principles of Indian wear pattern drafting and construction.

<b>UNIT 1</b>	<b>Pattern Drafting</b> Standardize concept of pattern making Direct Method Things to keep in mind while taking measurement Paper pattern of Salwar, Churidar, Plain kurta, Kalidar kurta Paper pattern of Saree Blouse, Choli blouse Marka-Making & Layouts Spec-Sheets of one designed garment <b>Documentation and Presentation of Work</b> In portfolio - All full-size patterns & 1/4 file document
<b>UNIT 2</b>	<b>Garments Construction</b> Construction of Salwar /Churidar Construction of plain kurta Construction of kalidar kurta Construction of plain blouse Construction of choli blouse <b>Documentation and Presentation of Work</b> In portfolio -- All women's wear garment construction with proper finish
<b>UNIT 3</b>	<b>Advance Draping</b> <u>Hands on:</u> Handling of new fabrics – georgette, chiffon, satin, knits, etc Asymmetric drapes Cowls – underarm, hip, etc. Draping of accents & emphasis – peplum, frills, flounces, etc. Conversion of Drapes in to flat patterns (developing of patterns from drapes) Conversion of drapes in to actual fabrics.
<b>UNIT 4</b>	<b>Garment Construction</b> Construction of mock-up garment from a chosen design. Construction of final garment from a chosen design
<b>UNIT 5</b>	<b>Documentation and Presentation of Work</b> In portfolio - Draping techniques, Pattern Making and Garment Construction

<b>UNIT 6</b>	<b>Size chart of menswear shirt &amp; Shirt terminology</b> Paper pattern of Shirt Paper pattern of Waist coat Collars- (shirt collar, stand collar, roll collar), cuffs, plackets. Standardization of measurements: fundamentals of grading and grading terminology.
<b>UNIT 7</b>	<b>Size chart of menswear trouser &amp; Trouser terminology</b> Paper pattern of Trouser with zip fly.
<b>UNIT 8</b>	<b>Garment Construction</b>
	Men's Shirt with attachment of Collars, cuffs and plackets Men's Trouser with attachment of zip fly. Men's waist coat with lining attachment. Specification Sheet and Costing. Fabric selection and stitching.
<b>UNIT 9</b>	<b>Pattern making of Kids Wear</b> Basic Bodice Block Basic Skirt Block Basic Sleeve Block
<b>UNIT 10</b>	<b>Garment Construction</b> Construction of Basic patterns of Kids wear

#### Course Outcome (CO):

At the end of this course students will have:

- CO1: In this module student will learn to take bodice measurement related to the Indian and men's wear garment with different variation and produce them on drafting paper and create a full-scale pattern from creative designs and working drawings.
- CO2: To understand and appreciate the concept of fit and balance of garments
- CO3: Understanding of identify and differentiate between fabric varieties with understanding of different materials.
- CO4: To develop understanding on how to concealment of fabric joins within garment with advanced knowledge in draping, pattern cutting and construction for women's clothing.

<b>GDD081A</b>	<b>Computer Application – II</b>	<b>0-0-4 [2]</b>
----------------	----------------------------------	------------------

**Prerequisite of the Course** ---Basic coral draw and Photo Shop skills and Manual Illustration.

**Learning Objective:**

The purpose of this module is to provide learners with the opportunity to develop skills in Draping and Rendering technique through coral & Photoshop with Exact measurement & Fine finishing with Real Looking & 3D Rendering and Draping

<b>UNIT 1</b>	<b>Croqui and 3D Rendering</b> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Drawing the Croqui through Curve tool.</li> <li>• Import croqui (JPG) in Photoshop and apply 3D Rendering.</li> <li>• Import 3D Render Croqui in Corel.</li> </ul>
<b>UNIT 2</b>	<b>Draping</b> <ul style="list-style-type: none"> <li>• Draping Fabrics.</li> <li>• Concept of Design variation &amp; Color Variation.</li> <li>• Apply 3D Effect on Draped Design</li> <li>• Croqui Development with fabrics/ Texture/ Fleshing etc.</li> </ul>
<b>UNIT 3</b>	<b>Formatting</b> <ul style="list-style-type: none"> <li>• Concept of Page Setup.</li> <li>• Light Effect.</li> <li>• Concept of Page Margin.</li> </ul>
<b>UNIT 4</b>	<b>Formatting</b> <ul style="list-style-type: none"> <li>• Concept of Page Layout.</li> <li>• Setting of Document.</li> <li>• Formatting of Document.</li> </ul>
<b>UNIT 5</b>	<b>Formatting</b> <ul style="list-style-type: none"> <li>• Specification sheet.</li> <li>• Costing</li> </ul>

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: Students learn to optimize and streamline their workflow and increase productivity, improve the quality and level of detail in the design.
- CO2: To be able to improve documentation communication and save time and be ready for the competition.
- CO3: To be able to improve accuracy, quality and decrease errors by practicing the software and achieve proficiency in professional presentations.
- CO4: To understand demonstrate ability to work with creative skills & presentation technology.

GDD082A	Surface Design	0-0-6 [3]
---------	----------------	-----------

**Prerequisite of the Course** ---Knowledge of different fabric.

**Learning Objective:**

- This module is all about of dyes and Print style. In this module students will be able to understand about classes of dyes, dyestuffs, techniques, dye auxiliaries, printing and printing techniques, effects and defects of dyeing and printing.
- The module is to teach the basic and complicated techniques of surface embellishment to the students. A surface design technique makes the fabric beautiful by various methods. Surface design refers to the process of adding color, pattern, texture or design to fabric through the use of outside mediums such as dyeing, printing, batik, embroidery and many more.

<b>UNIT 1</b>	<p><b>Dyeing Theory</b> Theory of Dyeing – Application of various dyes dye-fiber interaction Classification of Dyes- Natural dyes and synthetic dyes. Direct dyes Reactive, vat, insoluble azoic, indigo sol, acid dyes, basic dyes, Sulphur dyes, disperse dyes, pigments.</p> <p><b>Methods and Machinery</b> Methods and machinery for dyeing, Pre and after treatments of dyeing Defects of dyeing, Care of fabrics.</p>
<b>UNIT 2</b>	<p><b>Application of Dyes</b> Practical application and swatch dyeing with direct, basic, reactive, sulfur, vat, mordant, pigment and acid dye.</p> <p><b>Tie &amp; Dye</b> Introduction to tie and dye. Making samples of dye and dye with different dyes on different fabrics and product making. Creative exploration of dyeing techniques.</p>
<b>UNIT 3</b>	<p><b>Different styles of Printing</b> Styles of printing: Direct, Discharge and Resist styles on cellulosic, Protein, manmade textiles and their blends, Solvent dyeing, foam dyeing, spray dyeing. After treatments: Steaming, curing, and ageing of Prints.</p> <p><b>Printing methods</b> Hand block, machine, block, roller and Screen-printing methods, Advantages and drawbacks of all these printing methods, Printing paste: Constituents of print paste, Thickener and its types. Function of thickener, selection of thickener.</p>

<b>UNIT 4</b>	<b>Resist style of Printing</b> <ul style="list-style-type: none"> <li>● Introduction to Batik.</li> <li>● Application of technique on various fabrics and product making.</li> </ul> <b>Printing Styles</b>
	<ul style="list-style-type: none"> <li>● Practical introduction to printing methods and application of block, stencil and screen printing</li> </ul>
<b>UNIT 5</b>	<b>Natural Prints</b> <ul style="list-style-type: none"> <li>● Application of Dabu print with product.</li> <li>● Application of Natural print (echo print) with product.</li> <li>● Application of Pigment print with product.</li> <li>● Practical application of Ice Dyeing with product</li> </ul>

**Course Outcome (CO):**

At the end of the course, students will be able to

- CO1: To Apply and select various dyes according to fabric, find Defects in dyeing and printing with. the process of tie and dye.
- CO2: To learn the various classes of dyes and auxiliaries used in dyeing through practical application and demonstrate Hand block, machine, block, roller and Screen-printing methods. Advantages and drawbacks of all these printing methods.
- CO3: To understand Direct, Discharge and Resist styles on cellulosic, Protein, manmade textiles and their blends and analyse Pre and after treatments: Steaming, curing, and ageing of Prints, printing process, history of printing, different style of printing preparation of printing paste practically.
- CO4: To learn basic and complex hand embroideries through needle and anchor threads and various surface design techniques according to the design requirement.

<b>GDD083A</b>	<b>Photography</b>	<b>0-0-2 [1]</b>
----------------	--------------------	------------------

#### AIM

This unit aims to develop learners' skills and understanding in Product Photography Students will get Knowledge of the history of the photographic medium and how it relates to the history of the other fine arts

#### OBJECTIVE

Various aspects of photography including lighting for indoor & outdoor, handling of studio equipment and set planning & composition.

<b>UNIT 1</b>	Various aspects of photography including lighting for Indoor & Outdoor
<b>UNIT 2</b>	Handling of studio equipment
<b>UNIT 3</b>	Set planning
<b>UNIT 4</b>	Composition.
<b>UNIT 5</b>	Final Product Photography

#### COURSE OUTCOME (CO)

**At the end of this course students will:**

- CO1: Be able to use space and equipment.  
CO2: Be able to use sets, lights and backgrounds.  
CO3: Apply the principles of lighting and color theory to a variety of photographic scenarios by measuring, evaluating. CO4: To adjusting light and color to create quality images.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

<b>GDD085A</b>	<b>Trend Forecast and Analysis</b>	<b>2-0-0 [2]</b>
----------------	------------------------------------	------------------

**Learning Objective:**

- Critically analyze, synthesize and reflect on complex theories and recent developments, both local and international, at a micro and macro level, to extend and challenge knowledge and practice in fashion entrepreneurship.
- Investigate emergent global entrepreneurial issues and strategically respond to their impact in the fashion and textiles industry.
- Identify, evaluate and communicate the potential impact of cultural, social, economic and technological components in the trend forecasting process.

<b>UNIT 1</b>	<b>Trend Materials &amp; Fashion Development</b> Materials for research Color practice Interactions between colors and materials Briefing and mood board creation Materials are buying Product development
<b>UNIT 2</b>	<b>Trend Design research, Transmission and interpretation</b> Fashion trend terminology The trend industry Nature of trends Trends in urban environment Information Management Visualization techniques Argumentation strategies
<b>UNIT 3</b>	<b>Fashion market and marketing environment research</b> Market research Trend research techniques Research design & data sources Sampling methods Evaluating the collections Forecasting Fashion Market Segmentation marketing mix Fashion consumer
<b>UNIT 4</b>	<b>Trend Analysis</b> Evolution of fashion trend Fashion trend implications for design/retail decisions Consumer influence on market

<b>UNIT 5</b>	<b>Fashion Forecasting</b> Fashion Forecasting Process Diffusion of Innovation Fashion Cycles Cultural Indicators Color Forecasting
	Textile Forecasting Styling Forecasting Sales Forecasting Competitive Analysis

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: To assess and review the requirements and operational methods of the role of a trend forecaster relevant to fashion and textiles entrepreneurship.
- CO2: To understand the Trend Design research, Transmission and interpretation of fashion and understand the Fashion market and marketing environment research.
- CO3: To substantiate and apply appropriate research methodologies to identify and analyze alternative research sources for identifying global trend directions.
- CO4: To research and critically analyze the challenges and opportunities of translating trend scenarios into the development of textile and fashion products.

<b>BGDD086A</b>	<b>Final Project-</b>	<b>0-0-6 [3]</b>
-----------------	-----------------------	------------------

**Prerequisite of the Course** ---They have to apply all the knowledge of all previous semester in the final project

**Learning Objective:**

The objective of this module is to further extend learner's knowledge creating the final collection putting all the knowledge and efforts students have gained so far and launch themselves as designers creating their own brand identity, and brand image.

<b>UNIT 1</b>	Research about the various brands globally for your inspiration. Do a complete study of different brands and their collection Concepts inspired with a complete understanding of design process and finally Select one concept. Only extensive research enables designers to stay fresh and keep up to date with developments.
<b>UNIT 2</b>	Judgments and develop your own style with experimentation in personal creative practice through explorations in design and surfaces.
<b>UNIT 3</b>	The design process along with difference between different categories like avant- garde and prêt wear.
<b>UNIT 4</b>	Sketches, fabrics, trims and other detailing. Technical part of the sketches and final test fits
<b>UNIT 5</b>	Produce the final collection completely accessorized. Publicize work in the best visual way through styling and photo shoot.

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: Be able to present research analysis to client groups and extend and apply skills in developing creative visual language.
- CO2: Identify the major types of idea sources in clothing design and provide information about each source. Recognize that these sources of inspiration help designers to create design elements and principles of individual designs. In order to foster originality, sources of inspiration play a powerful role throughout the creative stage of design process, and also in the early stages of fashion research and strategic collection planning.
- CO3: To synthesize and critically evaluate experimentation in personal creative practice. CO4: To present a complete collection with photo shoots.

<b>GDD087A</b>	<b>Portfolio</b>	<b>0-0-4 [2]</b>
----------------	------------------	------------------

**Prerequisite of the Course** ---Coral Draw, Photo Shop

**AIM:**

Design portfolio is the expression of student to translate themes into design collections. Here one gets inspired by different themes which could be art movements, sport, historic eras, music, dance, culture, nature, traditions etc. and picks out tangible and intangible elements which are to be used as design elements in the collection. The ability of a designer to exhibit and use design elements is highlighted which is further on translated into garments. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of four years. The purpose lies in promoting the skills of students in a single format.

**OBJECTIVE**

Students will present a portfolio of all the files/ folders/ projects created during the course of study in I to III year. The portfolio should include projects, industrial visit reports, any other projects made during the academic session. The external examiner will evaluate the portfolio and take a viva of the student.

  
**DEAN**  
 Jaipur School of Design  
 JECRC University JAIPUR

<b>GDD088A</b>	<b>Office Training (Internship)</b>	<b>0-0-16 [8]</b>
----------------	-------------------------------------	-------------------

### **Learning Objective:**

This course will prepare students to enter into full-time employment in their area of specialization upon graduation. It will provide students with the opportunity to test their career aptitude and aid them adjusting from college to full-time employment. It will present students with the opportunity to develop attitudes conducive to effective interpersonal relationships, increase their sense of responsibility, and help them acquire good work habits. It will offer the opportunity for students to understand informal organizational interrelationships and provide in-depth knowledge of the formal functional activities of a participating organization.

<b>UNIT 1</b>	First hand exposure to an apparel organization, designer or Export House and their working structures and systems.
<b>UNIT 2</b>	Specific project on the job to sharpen skills required for chosen area of specialism. Further development of generic/cognitive skills.
<b>UNIT 3</b>	Identification of industry for internship with student's career path in mind.
<b>UNIT 4</b>	Internship log book: is a tool to help you record your daily activities along with a reflection on the same. Reflective writing enables the documentation experiences, thoughts questions, ideas and conclusions that signpost the learning journey.
<b>UNIT 5</b>	Internship report: will focus on study of the organizational structure & development objective of the internship. Personal design philosophy & career path linked to learning in the internship. Learning process and its analysis as internship progresses through detailed processes and projects undertaken. Report should be a reflection of the internship experience of the personal & professional development.

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: To identify business strategies for buying and selecting product. CO2:  
To identify process and procedures for company purchases.
- CO3: To explore the buying process, Increase skills in buying and merchandising.
- CO4: To understand that how they write a report of their industry experience and develop written communication skills

----------------	--------------------------	-----------------

### AIM

To make students see, make and appreciate the basic design concepts. The first level includes the vocabulary of design and principles of composition. This level includes 3D composition and study of Volumes. The aim of this course is to understand the method of visualizing and drawing from nature, cast and product drawing. Learners will be introduced to a brief history and introduction to 3D materials, tools and processes and made aware of the range of possibilities of different materials in their 2D and 3D application to design. This may be done through lectures / ppt presentations / swatches/ samples. The aim of this unit is to enable learners to develop knowledge and understanding of the issues that have informed debate on the purposes and processes of design. This unit aims to give learners opportunities to develop skills and knowledge in the development of new products or services in design pathways.

### OBJECTIVE

- Know the phases of the design development cycle
- Skill in color mixing and fine color-discernment.
- Know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).
- Practice and develop rendering and presentation techniques in design presentations.
- Recognize the relationship between lighting, surface and perception.
- Student will be able to understand design & principles of composition & 3D compositions
- Student will be able to understand the methods & techniques of visualization & drawing.
- The student would be exposed to appreciation of drawing different products.
- Student will be able to understand basics of design concepts

<b>UNIT 1</b>	<b>THEORY-</b> Elements of Design- Point, Line, Characteristic of Line, Types of Line, Shapes, Categories of Shape, Space, Categories . <b>PRACTICAL-</b> Elements of design- Types of Lines, Line Compositions, Different types of Shapes- Geometric, Organic, Free-form, Natural, and Shape, composition, Positive & Negative. Textures- Physical & Visual, Texture Composition, Form Space-Positive & Negative.
<b>UNIT 2</b>	<b>THEORY-</b> Principle of Design- Balance, Types of Balance, Emphasis, Unity, Repetition, Rhythm, Pattern, Harmony, Proportion, Contrast, Functionality. Gestalt and his Concepts- Closures, Continuance, Similarity, Proximity, Alignment. <b>PRACTICAL-</b> Principle of design- Balance, types of balance emphasis, unity, repetition (rhythm, pattern), harmony, proportion (scale), variety (alteration), contrast, functionality.
<b>UNIT 3</b>	<b>THEORY-</b> Color- Introduction to Color, Color Theory, Color Harmonies, Color Schemes, Color Wheel, Tint, Tone, Shades. Different Mediums in Art. <b>PRACTICAL-</b> Color- Color Wheel and color chart, Color Exploration, Color Interaction. Primary colors- Color Wheel, Color Composition, Secondary colors- Color Wheel, Color Composition, Tertiary colors- Color Wheel, Color Composition Color schemes- Monochromatic, Achromatic, Complimentary, Split Complimentary, Double-Split Complimentary Polychromatic. Tint, tone & shades- Application of Gray Scale and Black & White. Mediums in art- Pencil, Charcoal, Pastels, Water & Poster.

<b>UNIT 4</b>	<b>THEORY/PRACTICAL</b> - What is Design, Philosophies and Studies of Design, Approaches to Design, Philosophies for Methods of Designing, Philosophies for the Purpose of Design, Design as a Process, Defining a Design Process, Typical Steps or Stages of the Design Process, Design and Art, Design and Engineering, Design and Production, Process Design?
<b>UNIT 5</b>	<b>THEORY/PRACTICAL</b> - Drawing, Nature-drawing Composition, Free-Hand Sketching. Object drawing- 2D & 3D, Human drawing- Outline Sketches, Shades & Shadow Composition, Light- Dark Tone Composition, positive and negative spaces, Product drawings; method of representing
<b>UNIT 6</b>	<b>THEORY-</b> Composition, Principle of Organization, View Point Compositional Techniques, Rules of Thirds, Odds, Space, Simplification, Limiting Focus, Geometry and Symmetry <b>PRACTICAL</b> –View- Perspective, Isometric, Geometry- Lines & Angle bisecting, Constructing Regular & Semi Regular Tessellation, Constructing 3D Tessellation

### COURSE OUTCOME (CO)

**At the end of this course students will have:**

- CO1: An ability to color mixing and fine color-discernment.  
CO2: An ability to know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).  
CO3: An ability to rendering and presentation techniques in design presentations. CO4: An ability to recognize the relationship between lighting, surface and perception.

- Bruce D. Kurty, (1987), Visual imagination- An introduction of Art, Prentice Hall, New Jers.

<b>GDD002A</b>	<b>BASIC ART &amp; DESIGN</b>	<b>0-0-8(4)</b>
----------------	-------------------------------	-----------------

#### AIM

Art and design stimulates creativity and imagination. It provides visual, tactile and sensory experiences and a special way of understanding and responding to the world. It enables students to communicate what they see, feel and think through the use of color, texture, form, pattern and different materials and processes. Students become involved in shaping their environments through art and design activities. They learn to make informed judgments and aesthetic and practical decisions. They explore ideas and meanings through the work of artists and designers. Through learning about the roles and functions of art, they can explore the impact it has had on contemporary life and that of different times and cultures. The appreciation and enjoyment of the visual arts enriches all our lives

#### OBJECTIVE

- To understand of the social, psychological, cultural, historical and commercial factors.
- Development of Graphic Skills, Ability and Comprehension. Establishing Significance of Art.
- To understand the influences on art and design activities.

<b>UNIT 1</b>	Introduction to History of Art, Design and Architecture – Pre History To Ancient Civilization, Mesopotamia, Egypt, Indus Valley, China.
<b>UNIT 2</b>	Introduction to Indian folk Art- Worli, Fadd, Madhubani, Modern Art, Blue Pottery, Fresco, Meenakari , glass mosaic, Miniature Art, Kalamkari, Inlay-Work.
<b>UNIT 3</b>	Techniques & Process Material exposure ranging from POP, Fly-ash, Terracotta & Ceramics Clay, Wood, metal, etc.,) Techniques, Processes terminology and tools.
<b>UNIT 4</b>	Techniques & Process Material exposure ranging from Leather, Resin, Paper, Fabric, Tissues, foil etc.) Techniques, Processes terminology and tools.
<b>UNIT 5</b>	Introduction to Photography for documentation

#### COURSE OUTCOME (CO)

**At the end of this course students will have:**

CO1: An ability to understand influences on art and design activities.

CO2: To understand outcomes through the interpretation and analysis of information. CO3: An ability to be able to assess, interpret and evaluate information.

CO4: An ability to be able to evaluate and present conclusions.

DEN001A	Communication Skills	Credits 2-0-1 [3]
---------	----------------------	-------------------

#### Course Objectives

- To enhance English language competence in reading, writing, listening and speaking.
- Switch the approach from teacher-centred to student-centred one.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
- To link communication skills with the organizational behaviour.
- To inculcate skills that are very much required for employability and adjust in the professional Environment.

#### Course Outcomes (CO):

At the end of this course students will have:

- CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
- CO2: Ability to analyze the usage of English words in different contexts. CO3: An understanding of technical and academic articles' comprehension.
- CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

#### Syllabus: Theory

UNIT 1	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
UNIT 2	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
UNIT 3	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
UNIT 4	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
UNIT 5	<b>Professional and Technical Communication :</b> Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

## Syllabus: Lab

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time-management, Following Deadlines etc
<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting-Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

### Methodology for Evaluation

- |   |   |          |
|---|---|----------|
| 5. Internal Assessment (Theory)         |   |          |
| d) Home Assignments: One from each Unit | : | 15 Marks |
| e) In Semester Tests (Minimum two)      | : | 30 Marks |
| f) Attendance                           | : | 05 Marks |
| 6. Term End (Theory)                    | : | 50 Marks |
| 7. Internal Assessment (Lab)            |   |          |
| (b) Daily Performance in the Lab        | : | 50 Marks |
| 8. Term End (Lab)                       | : | 50 Marks |

### Suggested Reading:

11. Practical English Usage. Michael Swan. OUP. 1995
12. Remedial English Grammar. F.T. Wood. Macmillan. 2007
13. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
14. On Writing Well. William Zinsser. Harper Resource Book. 2001
15. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
16. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
17. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
18. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006
19. More Games Teams Play, by Leslie Bendaly, McGraw-Hill Ryerson.
20. The BBC and British Council online resources

<b>GDD047A</b>	<b>MATERIALS &amp; CONSTRUCTION-I</b>	<b>0-4-0 [2]</b>
----------------	---------------------------------------	------------------

### **Objective**

Understanding the basic components of the buildings envelope for small buildings

- Foundations
- Walls
- Openings
- Roofs
- Understanding simple roof & floor finishes

<b>UNIT 1</b>	<b>INTRODUCTION TO MATERIALS</b> Wood - Soft and hardwood, plywood, laminated wood and particle boards – properties, manufacture & uses. Synthetic Materials – Different types of Glass, their properties, manufacturing processes and uses. Plastics – injection molding& other manufacturing methods, etc. Fabrics – textile, Jute, leather etc. different types and their uses
<b>UNIT 2</b>	<b>BUILDING COMPONENTS</b> Drawings of the components of a building indicating Foundation – brick footing, stone footing &rcc column footing concrete flooring, plinth beam & floor finish superstructure- brickwork with sill, lintel, windows & sunshade Flat rcc roof with weathering course, parapet & coping.
<b>UNIT 3</b>	<b>Doors &amp; Windows-</b> Introduction; Location of Door & Windows; Technical Terms; Standard Sizes; Types of doors- Battened Ledged & Braced Door, Battened Ledged & Framed Door, Paneled Door, Framed & Paneled Door, Glazed & Sash Door, Flush Door, Louvered Door, Sliding Door, Swing Door, Revolving Door; Types of Windows- Fixed Window, Pivoted Window, Sliding Window, Sash Window, Louvered Window, Bay Window, Corner Window, Metal Window, Dormer Window, Gable Window, Lantern Window; Skylight, Ventilators; Joinery & Fixing of Doors & Windows
<b>UNIT 4</b>	<b>STRUCTURAL SYSTEMS</b> Structures – Components of a load bearing wall &rcc slab roof system - rcc beams, columns and framed structure
<b>UNIT 5</b>	<b>Staircase</b> Introduction; Technical Terms; Requirement of Good Staircase; Dimensions; Classification based on design- Half Turn, Quarter Turn, Three Quarter Turn, Bifurcated, Continuous; Staircase design

**Course Outcome (CO):**

The Implementation Strategy will consist of various methods like problem identification and alternative solution, self-study, demonstration and actual site visits with discussion.

- CO1: After successful completion of this course, student should be able to Explore and Work with different Materials & carpentry joinery through models.
- CO2: Understanding the limitations and properties of different materials to be able to prepare working models of the designs and also to visualize the final product.
- CO3: Study of subject and of materials museum and use of the same in the practice, preferably during actual site visits.
- CO4: Collecting and studying for deeper understanding of the details of interior construction related various hardware and their proper applications with uses.
- CO5: Market survey, study and understanding of construction techniques and practice in interior design.

 Jaipur School of Design  
 JECRC University JAIPUR

<b>GDD048A</b>	<b>Art &amp; Design</b>	<b>0-6-0 [3]</b>
----------------	-------------------------	------------------

### **Objective**

- This course offers knowledge and experience about the classic drawing and sketching techniques and develops the appropriate skills for visualization and representation to facilitate effective visual communication.

<b>UNIT 1</b>	INTRODUCTION TO FREE HAND DRAWING Basic exercises, Still life, Basic forms, effect of lines to represent textures - Understanding of different types of perspective views using vanishing points, Shading exercises etc.
<b>UNIT 2</b>	Introduction to drawing equipment, familiarization, use and handling; Expression and exploration of point, lines, planes and volumes.
<b>UNIT 3</b>	Proportions of the human body, the expressions of colour, the importance of light and shadow through various exercises.
<b>UNIT 4</b>	Typography Fundamentals; Principle of composition; Concept of forms and form development; Colour Theory.
<b>UNIT 5</b>	Rendering Technique: Pencil rendering, colour rendering –pencils, pastels, watercolours etc.
<b>UNIT 6</b>	Representation of Architectural symbols; Measuring and drawing to scale; Orthographic projections, Isometric & Perspective drawing of Simple objects

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: An ability to understand the basics concept of Hand drafting .
- CO2: An ability to Develop Drawing Skills As a Thinking Tool, Visualization, And Representation of Design.
- CO3: An ability to use graphic systems, including the plan, section, axonometric, and perspective, and drawing techniques to represent outline, tone, texture, shade, and shadow.
- CO4: An ability to develop sketching concepts.
- CO5: Comprehension of Freehand drawing of simple objects and the fundamental techniques of concept and presentation sketches

<b>GDD049A</b>	<b>Architectural Planning Studio</b>	<b>0-8-0 [4]</b>
----------------	--------------------------------------	------------------

### **Objective**

- To Familiarize Students With Theoretical Basis and Design Process Through Observation Comparison, Analysis With The Help of Prototypes, Model And Drawings.
- To understand the Anthropometric & Ergonomics data and its importance & relation in interior design.
- To introduce the elements; principles and objective in orientation to Architectural Design.
- To introduce the basics of designing for retail interiors and to develop skills required for the same.
- Introduce to the basics of designing for Residential interiors and to develop skills required for the same.

<b>UNIT 1</b>	<b>Anthropometric &amp; Ergonomics</b> Structural Dimensions, Functional Dimensions, Human Dimensions, and Generalized Heights. Accessibility and Barrier free codes: Manoeuvring Clearances, Seating, Living Space, Dining Space, and Sleeping Space.
<b>UNIT 2</b>	Introduction to the Basic Design features
<b>UNIT 3</b>	Introduction & formulation of concept & Zoning
<b>UNIT 4</b>	<b>Design Project-I</b> Residential Planning- Introduction, Designing of a Model Residence Case Study, Design Project
<b>UNIT 5</b>	<b>Design Project-II</b> Case Study, Design Project for a Retail Store or Office building

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: Understand the project studies, case studies of various related topics for interiors will be used. Presentation of data collected will be done by means of seminars / visits / books / visuals.
- CO2: Understand about the Anthropometric & Ergonomics
- CO3: Understand the specific requirements of exhibition and retail design CO4:  
Understand how to work in a professional context.

<b>GDD050A</b>	<b>Photography Workshop</b>	<b>0-2-0 [1]</b>
----------------	-----------------------------	------------------

**Objective**

- To Develop Photographic Skills, to understand Simple Architectural Forms, Joinery and Construction Details Through Field Exercises and Model Making.
- To develop observations through the different material workshops.
- To develop skills and understanding of learners who intend to follow careers as model makers in the architectural, interior design, industrial design, media or entertainment industries.

<b>UNIT 1</b>	Introduction to Photography
<b>UNIT 2</b>	Components & working of Compact & SLR Camera, Peripheral equipment like cables, lights, flashguns, lenses, filters, tripods etc. Assignments oriented towards using camera, Indoor & outdoor photography.
<b>UNIT 3</b>	Techniques of using camera, basics in optics, light, exposure, focus, depth of field, aperture. Dark room techniques, digital printing. Assignments oriented towards using camera, Indoor & outdoor photography.
<b>UNIT 4</b>	Reading a photograph, Understanding subject in a photograph, composition basics, light, exposure to various types of photography like nature, portraits, wildlife, sports, documentation, journalism etc. Assignments oriented towards using photography for presentations.
<b>UNIT 5</b>	Photographic investigation of a location and situation. Assignments culminating into a small presentation investigating a case.

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: student should be able to Using Photography as a means of communication and Documentation; a tool to demonstrate concepts and ideas, document situations, & objects in general; get familiar with camera, film, digital technology & techniques and understand aesthetics of photography, composition and light.
- CO2: Be able to use space and equipment
- CO3: Be able to use sets, lights and backgrounds.

**Contact Hours (L-T-P): 2-0-2**

<b>DEN002A</b>	<b>Professional Skills</b>	<b>Credits 2-0-1 [3]</b>
----------------	----------------------------	--------------------------

**Course  
Object**

**ives**

- To enhance Professional competence in reading, writing, listening and speaking.
- Switch the approach from providing information about the language to use the language.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
- Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
- Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**Course Outcomes (CO):**

**At the end of this course students will have:**

- CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
- CO2: Ability to analyze the usage of English words in professional scenario. CO3: An understanding of technical and academic articles' comprehension.
- CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

**Syllabus: Theory**

<b>UNIT 1</b>	<b>Grooming and Professional Culture:</b> Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
<b>UNIT 2</b>	<b>Advanced Grammar:</b> Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
<b>UNIT 3</b>	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms
<b>UNIT 5</b>	<b>Reading Comprehension:</b> Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction,

GDD053A	INTERIOR DESIGN STUDIO – I (Residential Design)	0-6-0 [3]
---------	---	-----------

### Objective

- To develop understanding of the scale, function and options existing when designing small-scale spaces in residences such as toilets, kitchens, living, bedrooms etc.
- Development of ideas with regard to false ceiling, wall paneling, flooring, floor coverings, curtains, windows, doors and other elements of residential interiors.

<b>UNIT 1</b>	<b>KITCHENS</b> Work triangle, planning for activity – anthropometrics – types of kitchen- Modular kitchens. Materials used in counters, shelves, worktops, washing areas & their comparative study. Lighting & colour scheme – natural & artificial light.
<b>UNIT 2</b>	<b>TOILETS</b> Anthropometry – various types of sanitary ware and their use – types of layouts – concepts in modern day toilet interiors – materials & finishes – colour, texture & pattern.
<b>UNIT 3</b>	<b>BEDROOMS &amp; LIVING ROOMS</b> Concepts in bedroom & living room interiors – various layout of these spaces – the use of furniture and accessories to create a certain type of ambience – materials & finishes – lighting, colour & texture.
<b>UNIT 4</b>	<b>RESIDENCE</b> Holistic concepts in residential interiors – ability to integrate various individual spaces into one theme – treatment of patios, courtyards, verandahs & other semi sheltered spaces – integration of built form and open spaces.

### Course Outcome (CO):

At the end of this course students will have:

CO1: Be able to manipulate interior environments to meet design requirements

CO2: Be able to respond to the aesthetic and functional requirements of an interior design brief CO3: Be able to employ technical processes to respond to an interior design brief.

CO4: Demonstrate knowledge of residential interior design fundamentals.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

<b>GDD054A</b>	<b>Product Design</b>	<b>0-4-0 [2]</b>
----------------	-----------------------	------------------

### **Objective**

- To create awareness about the design process and various ways of designing products for user needs and requirements. To learn about the integration of design, manufacturing process, marketing etc. in the design of products.

<b>UNIT 1</b>	Concepts like design research, human factors, form, ergonomics, design processes, sustainable design.
<b>UNIT 2</b>	Understanding of compatibility with diverse cultures, technologies, user needs and cognitive and physical conditions.
<b>UNIT 3</b>	Application of materials and uses, sustainable approach towards product designing.
<b>UNIT 4</b>	Exploration of the design language, form and values from traditional and contemporary design platform.
<b>UNIT 5</b>	Design Exercise: To develop an innovative design solution for a given problem by synthesizing the trends, socio-cultural factors and design language.

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: To be able to analyze current user behavior and trends for product development and understand the user and spatial relationship.
- CO2: Be able to becoming familiar with basic traditional and modern joinery. CO3: Be able to Understand Different material Specifications and their uses. CO4: Apply design thinking and process to solve problem creatively.
- CO5: Perceive the design language, form and values while designing a product .

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

GDD055A	MATERIALS & CONSTRUCTION II	0-4-0 [2]
---------	-----------------------------	-----------

### Objective

- To understand the construction of basic elements of an interior space such as walls & partitions, floors & roofs.

<b>UNIT 1</b>	<b>WALLS- TYPES OF MASONRY</b> Different types - Stone walls – random rubble, coursed rubble, square rubble, polygonal rubble & Ashlar etc Brick masonry -Types of bonds - single & double Flemish bond, header bond, stretcher bond, rat trap bond, ornamental bonding.
<b>UNIT 2</b>	<b>FLOORS</b> Floor coverings- - softwood, hardwood- resilient flooring - linoleum, asphalt tile, vinyl, rubber, cork tiles - terrazzo , marble & granite – properties, uses & laying. Floor tiles- ceramic glazed, mosaic and cement tiles- properties, uses and laying, details for physically handicapped.
<b>UNIT 3</b>	<b>FALSE CEILING</b> Construction of various kinds of false ceiling such as thermacol, plaster of paris, gypboard, metal sheets, glass and wood Construction of domes, vaults, & other special ceilings
<b>UNIT 4</b>	<b>WALL PANELING</b> Paneling – Using wooden planks, laminated plywood, cork sheets, fibre glass wool & fabric for sound insulation and wall paneling for thermal insulation.
<b>UNIT 5</b>	<b>FINISHES</b> Paints- enamels, distempers, plastic emulsions, cement based paints- properties, uses and applications- painting on different surfaces – defects in painting , clear coatings & strains- varnishes, lacquer, shellac, wax polish & strains- properties, uses and applications. Special purpose paints- bituminous, luminous, fire retardant and resisting paints- properties, uses and applications

### Course Outcome (CO):

At the end of this course students will have:

CO1: Ability to understand and draft the construction details.

CO2: An ability to understand the different Building Materials and Elements and their Details. CO3: An ability to understand the properties and use of protective finishes, floors and its products.

<b>GDD056A</b>	<b>Digital Modelling</b>	<b>0-4-0 [2]</b>
----------------	--------------------------	------------------

**Objective**

- The course shares fundamental knowledge on digital software to enable the student to make effective audio visual presentations, create two dimensional drawings and three dimensional visualization of interiors.
- This unit intends to equip the students with concepts and principle of CAD pertaining to Interior Design using software like AUTOCAD and similar ones.

<b>UNIT 1</b>	Fundamentals of Photo editing and presentation skills with Adobe Photoshop /CorelDraw .
<b>UNIT 2</b>	2D drawings with AutoCAD
<b>UNIT 3</b>	3D modelling through Sketch up
<b>UNIT 4</b>	Rendering with V-ray
<b>UNIT 5</b>	3D drawings- Introduction to 3D 3D forms Material application Rendering Tools &Techniques Project Setting up plotters and print

**Course Outcome (CO):**

the end of this course students will have:

CO1: Knowledge on basic software required for Design presentations.

CO2: An ability to understand the total use of all commands relate to windows and AutoCAD for making designs,

CO3: An ability to understand the 2D drawings Line compositions to be taken Color compositions, painting in windows,

CO4: An ability to understand the Drawing simple geometry objects and drafting of room give building / apartment / flat and Bungalows.

----------------	------------------------------	------------------

**PURPOSE**

To introduce the students to basics of Model making with various materials.

**INSTRUCTIONAL OBJECTIVES**

Acquisition of hands on experience in model - building.

<b>UNIT 1</b>	<b>INTRODUCTION TO MODEL MAKING</b> Introduction to concepts of model making and various materials used for model making Drawing settings - Limits, D settings, Units
<b>UNIT 2</b>	<b>BLOCK MODELLING</b> Preparation of base for models using wood or boards Introduction to block models of buildings (or 3D Compositions) involving the usage of various materials like Thermocol, Soap/Wax, Boards, Clay etc.
<b>UNIT 3</b>	<b>DETAILED MODELLING 20</b> Making detailed models which includes the representation of various building elements like Walls, Columns, Steps, Windows/glazing, Sunshades, Handrails using materials like Mountboard, Snow- white board, acrylic sheets. Representing various surface finishes like brick/stone representation, stucco finish etc. Various site elements – Contour representation, Roads/Pavements, Trees/Shrubs, Lawn, Water bodies, Street furniture, Fencing etc.
<b>UNIT 4</b>	<b>INTERIOR MODELS OF INTERIOR SPACES</b> Making models of the various interior spaces such as Residences Offices Retail Spaces Recreational Spaces Scaled models of furniture.
<b>UNIT 5</b>	<b>CARPENTRY</b> Introducing the techniques of planning, chiselling & jointing in timber to learn the use of hand tools. Exercise involving the design of simple furniture and making a model of the same.

**Course Outcome (CO):**

At the end of this course students will have:

CO1: Understand the technological principles of model making in a commercial context CO2: Be able to Relate the geometrical volumes into building models.

CO3: Be able to Understand the volumes in relation to space and experience 3D quality of volumes.

CO4: Analyze the various possibilities for representing the models and use the various methods of model building. CO5: Design and create models conceptually with functional and aesthetic values.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

2. Jannsen, Constructional Drawings & Architectural models, Karl Kramer Verlag Stuttgart, 1973.
3. Harry W.Smith, The art of making furniture in miniature, E.P.Dutton Inc., New York, 1982.

**Contact Hours (L-T-P): 1-0-2**

<b>DEN003A</b>	<b>Life Skill-1(personality Development)</b>	<b>Credits 1-0-1 [2]</b>
----------------	--	--------------------------

**Object ives**

1. To prepare the students as per the industry demands.
2. Switching to Activity and Task based Teaching modules.
3. To focus on the linguistic aspects in relation to life situations.
4. Facilitating the aspects of behavioural skills in language.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

**Course Outcomes (CO):**

**At the end of this course students will have:**

- CO1: Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.
- CO2: Ability to learn by doing it practically in the classroom.
- CO3: Ability to learn by creating an environment and adapting to the environment.
- CO4: The ability to prepare the students as per the need of the Multi-cultural scenario around.

**Syllabus: Theory**

<b>UNIT 1</b>	Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion Basics of Narrating and describing things
<b>UNIT 2</b>	Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview CV/Resume Drafting and HR Interview advance theory Basics of Video Interviews and Video Profiles for Job
<b>UNIT 3</b>	Types of listening, advantages and disadvantages
<b>UNIT 4</b>	Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report
<b>UNIT 5</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self- esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc.

<b>GDD060A</b>	<b>INTERIOR DESIGN STUDIO – II (Office Spaces)</b>	<b>0-6-0 [3]</b>
----------------	--	------------------

### **Objective**

- Explore to a preliminary level basic spatial and material design concepts.
- This unit intends to equip the students with concept and principles of Basic Design pertaining to office design.
- To develop the skills in elements of design, color, texture, anthropometrics, planning of an office.
- To understand the basic function of the office, which are required in planning of the interior of office.

<b>UNIT 1</b>	<b>Office design</b> Introduction to work space design; Requirement of a work space; Types of Office system-Open Office, Closed cabin system; Planning of an Office; Ambience of an office; Office layout Patterns- Grid & random. Office Spaces - General Offices & Workstation and Planning Data; Different types of Workstations; Different types of Conferences Layouts; general offices & Multiple Workstation Planning Data.
<b>UNIT 2</b>	<b>Office Design Procedure:</b> Design on Paper and Practical Approach- Visiting the site, Preparing Personal Data Card, Making out Requirements, Designing, and Evaluating.
<b>UNIT 3</b>	<b>Interiors of Office:</b> Colour Schemes; Use of Colour Scheme; Factors Influencing the colour Scheme- Individual choice, Utility, Direction Wise, Region Wise. Light- Open Light & Concealed Light; Factors influencing Lighting- Position, Movability, Adaptability, Adjustability, State, Purpose, Direction, Architectural, Application; Layout of Lighting- Chessboard, Perimeter, Diagonal, Neutral, Square; Principles of Lighting. Material Selection- Selection Criteria in an Workspace.
<b>UNIT 4</b>	<b>Design project-I</b> Architect's/ Designer's Office- Planning, Interior Designing- Inspiration, Theme, Concept, Functional Requirements, Working Drawings & Presentation Drawing and Material Specification.
<b>UNIT 5</b>	<b>Design Project-II:</b> Parlour Design- Planning, Interior Designing- Inspiration, Theme, Concept, Functional Requirements, Working Drawings & Presentation Drawing and Material Specification.

### **Course Outcome (CO):**

At the end of this course students will have:

- CO1: An ability to understand the Design Process Through Observation Comparison, Analysis Withthe Help of Prototypes, Model and Drawings.
- CO2: An ability to understand the different areas and their anthropometrics in office design.
- CO3: An ability to understand the project studies, case studies of various related topics for interiors will be used. Presentation of data collected will be done by means of seminars / visits / books / visuals. Motivation of inspiration through the works of renowned designers and architects. Critical observation of interior projects for their merits and demerits by means of reading, study of drawings, interpretation and discussion.

GDD061A	W.d. & Estimation	0-4-0 [2]
---------	-------------------	-----------

### Objective

- This unit intends to equip the students with all the procedures of estimation & costing principles of estimating all works of interior design project.

<b>UNIT 1</b>	<b>Estimating &amp; Costing</b> Introduction to Estimating & Costing; Importance; Units of Measurements; Types of estimates- Preliminary or Approximate Estimate or Abstract Estimate, Plinth area estimate for building, Cube Rate Estimate for Building Renovation, Approximate Quantity Method Estimate, Detailed Estimate or Item Rate Estimate, Revised Estimate, Supplementary Estimate, Annual Repair or Maintenance Estimate; General principle of approximate method of costing; Approximate Methods of Costing for Various Interior Works
<b>UNIT 2</b>	<b>Specifications</b> Introduction; Objects of Specifications; Importance of Specifications; Types of Specifications; Brief specifications; Detailed specifications; Principles of Specifications; Typical Specifications.
<b>UNIT 3</b>	<b>Taking Out Quantities</b> Introduction; Essentials of an Estimation; Requirements of an Estimation; Methods of Taking out Quantities; English method of taking out quantities; Units of Measurements; Modes and Unit of Measurement For Different Types Of Trades; General rules for measurements.
<b>UNIT 4</b>	<b>Tenders</b> Introduction; Invitation to Tender; Tender Notice- Essentials of Tender Notice; Opening of Tender; Acceptance of Tender; Tender Document; Types of Tender- Item Rate, Lump Sum, Lump Sum Plus Percentage, Cost Plus Percentage, Cost Plus Fixed Fee, Cost Plus Fixed Fee with Bonus/Penalty, Labor Tender, Demolition Tender.
<b>UNIT 5</b>	Detailed working drawing of a project

### Course Outcome (CO):

At the end of this course students will have:

- CO1: Student will be able to know the procedure of estimation & costing CO2:  
Student will be able to plan a project using the estimation & costing CO3:  
Student will be able to prepare bills, contracts, agreements etc.  
CO4: Understand the different grammar of the drawings. CO5:  
Develop drawings that are used for execution

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>GDD064A</b>	<b>Furniture Design</b>	<b>0-4-0 [2]</b>
----------------	-------------------------	------------------

### **Objective**

- To acquire practices of craftsmanship and sensitize the student's visual perception of furniture as a single form through the study and presentation of precedent works - both historical and contemporary & to cultivate the ability necessary to design by understanding the user-activity, structural concepts of furniture, materials and their essential attributes.
- To Provide the students knowledge on furniture design and its various aspects.
- To understand about the various anthropometric aspects, human factors and other design criteria involved in the design of furniture's.
- To make the students understand about the various materials & Technology involved in the making of the furniture's.

<b>UNIT 1</b>	Sitting Furniture: Executive Chair, Sofa Chair, Lounge, Deck/ Outdoor Chair, Bar Chair/Stool - Designing, Working Drawings with Material & hardware. Tables: Reception desk, Manager's table, Drafting Table, Trolley Table - Designing, Working Drawings with Material & hardware
<b>UNIT 2</b>	Sleeping Furniture: Day Bed, Canopy Bed, Poster Beds, Infant Bed- Designing, Working Drawings with Material & hardware. Storage Furniture : Display Islands, Book Case/ Racks, Chester drawers- - Designing, Working Drawings with Material & hardware.
<b>UNIT 3</b>	Multipurpose Furniture: Sofa Cum Bed, Office Work Stations with storage, Bar Counters cum storage- Designing, Working Drawings with Material & hardware.
<b>UNIT 4</b>	Furniture Detailing and Construction- Introduction to different materials, joinery details and manufacturing methods most frequently adopted in furniture design such as Injection Molding, investment casting, sheet metal work, die casting, blow-molding, vacuum - forming etc.
<b>UNIT 5</b>	Design Problem - Exercise oriented by innovative explorations, observation and constrains, to design a furniture, by providing measured drawing – plan, elevation and detailing on full scale, supported by prototype.

**Course Outcome (CO):**

At the end of this course students will have:

- CO1: To Impart the knowledge of various styles, systems and products available in the market. Enhances the knowledge of ergonomics, materials, design and working parameters in designing furniture.
- CO2: Be able to Relate various design fundamentals and ergonomics with existing day to day furniture. CO3: Be able to becoming familiar with basic traditional and modern joinery of furniture.
- CO4: Be able to Analyze the user and space relationship in terms of Furniture Design by studying different built spaces. CO5: Apply design thinking and process to create a new Furniture Design.

<b>UNIT 3</b>	<b>Module 3:</b> Applying basic 3D Modifiers – Bend, Taper, Twist, Noise ,Relax, Skew. Applying basic 3D Modifiers-Affect Region, Displace, Lattice, Mirror, Push, Ripple, Stretch, Squeeze, and Spherify, Shell, Slice and Wave. 2D-Shapes, About Start New Shape. Editing Line Object 2D Modifiers - Edit Spline Modifier, Lathe, Extrude, Bevel, Bevel Profile,Sweep, Fillet/Chamfer Compound Objects – Boolean AEC Extended Objects – Foliage, Railing, and Wall, Stair, Doors, Windows.
<b>UNIT 4</b>	<b>Module 4:</b> Introduction to lights - Standard Lights – Omni Target Spot, and Free Spot Target Direct, Free Direct, Sky Light, , Photometric Lights –Target Point, Free Point, Target Linear, Free Linear, Target Area, Free Area. Copying Objects – Clone, Instance, Reference, Array, Spacing Tool, Normal Align, and Align view, Align Camera. Working with Shape Boolean Edit-Spline Compound object- Loft Deforming Loft Objects – Scale, Twist, Teeter, Bevel, Fit - Modifying Objects
<b>UNIT 5</b>	<b>Module 5:</b> Introduction to Material Editor, Tools in M.E, ign Material to selection, assigning 2D maps, t Material, Save Material Library, Maps Rollout, terial / Map Navigation, Rendering Map ended Parameters meras – Target, Free Rendering basics - Output image sizes, ort as JPEG, File handling – Save, Save as, Save Copy as, Save selected, Archive, Summary Info, View Image File, Hold, Fetch, Undo/Redo ject.

#### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to understand the total use of all commands relate to windows and AutoCAD formaking designs.
- CO2: An ability to understand the 3D drawings Line compositions to be taken Color compositions, painting in windows. CO3: An ability to understand the Implementation Strategies will include use and regular practice of all related commands of AUTOCAD 3D, 3D studio, Photoshop, Walk through Animations. The generation of drawings and animation should satisfy theclient’s requirements and it should ease the planning, design and execution of the interior work.

GDD066A	Portfolio	0-6-0 [3]
---------	-----------	-----------

**Objective:**

- To assess the performance of student in the practical training, a final jury will be conducted in the month of January, after commencement of the new session.
- The student have to be present in the jury along with their training reports (properly binded), on the basis of which marks for VI sem. will be awarded.
- The jury will be taken on the Training Report & not on the sheets.

**Course Outcome (CO):**

CO1: Understand the different attributes of portfolio design.

CO2: Illustrate reflecting their accomplishments, skills, designs, values, and attributes. CO3:

Develop a portfolio showcasing various aspects of Projects.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>GDD067A</b>	<b>Summer Office Training (Internship)</b>	<b>0-8-0 [4]</b>
----------------	--	------------------

### **Aim**

In this semester the learner will be equipped with knowledge and skills needed such as management of office along with current practices, codes of conduct required to enhance skills and techniques of managing small and large scale residential and commercial interior projects.

### **OBJECTIVE**

- To encourage students to work in with relevant industries.
- An avenue to enhance academics learning through hands on work experience.
- Get advice on career from knowledgeable and experienced professionals.
- Gain exposure to a professional work atmosphere.

Be able to place themselves and their work in the context of their selected discipline

Understand their specialist area and the career opportunities available Understand how to promote themselves and their work professionally.

The aim of this unit is to extend learners' knowledge of professional practices within their specialist area and to relate these to personal goals and career opportunities.

### **INTERNSHIP TRAINING**

- In the Summer break after IV semester, student will undergo an internship of 4 Weeks Duration in an Interior designing or Architectural firm and form a project report about his/her practical experience gained by working on various projects worked under the supervision of a professional designer, so that they can understand the existing working practices, conditions and acquire an in depth technical knowhow.
- The student has to submit a certificate regarding their successful training with the firm.
- A Copy of Report needs to be submitted with the department along with the performance certificate issued by the firm Manager/ Owner and one with the Firm (where internship is pursued).
- After the Internship, student needs to appear in front of jury members for a presentation seminar, who will judge the performance based on their presentation, report, and Viva-voce and award marks to student.
- PROJECT REPORT to be submitted
  - Background of industry
  - Number of employees
  - Project detail on which assisted
  - Manufacturing process
  - Hand & Computer sketches
  - Experience
  - Any other details

### **Course Outcome (CO):**

CO1: Student will be able to understand about entrepreneurship and evolution of entrepreneurship. CO2:

Student will be able to understand creating and starting the venture.

CO3: Student will be able to understand managing, growing and ending the new venture. CO4:

Student will be able to understand entrepreneurship Development and Government.

GDD001A	DESIGN FOUNDATION	0-0-8[4]
---------	-------------------	----------

### AIM

To make students see, make and appreciate the basic design concepts. The first level includes the vocabulary of design and principles of composition. This level includes 3D composition and study of Volumes. The aim of this course is to understand the method of visualizing and drawing from nature, cast and product drawing. Learners will be introduced to a brief history and introduction to 3D materials, tools and processes and made aware of the range of possibilities of different materials in their 2D and 3D application to design. This may be done through lectures / PPT presentations / swatches/ samples. The aim of this unit is to enable learners to develop knowledge and understanding of the issues that have informed debate on the purposes and processes of design. This unit aims to give learners opportunities to develop skills and knowledge in the development of new products or services in design pathways.

### OBJECTIVE

- Know the phases of the design development cycle
- Skill in color mixing and fine color-discernment.
- Know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).
- Practice and develop rendering and presentation techniques in design presentations.
- Recognize the relationship between lighting, surface and perception.
- Student will be able to understand design & principles of composition & 3D compositions
- Student will be able to understand the methods & techniques of visualization & drawing.
- The student would be exposed to appreciation of drawing different products.
- Student will be able to understand basics of design concepts

<b>UNIT 1</b>	<p><b>THEORY-</b> Elements of Design- Point, Line, Characteristic of Line, Types of Line, Shapes, Categories of Shape, Space, Categories .</p> <p><b>PRACTICAL-</b> Elements of design- Types of Lines, Line Compositions, Different types of Shapes- Geometric, Organic, Free-form, Natural, and Shape, composition, Positive &amp; Negative. Textures- Physical &amp; Visual, Texture Composition, Form Space-Positive &amp; Negative.</p>
---------------	--

<b>UNIT 2</b>	<p><b>THEORY-</b> Principle of Design- Balance, Types of Balance, Emphasis, Unity, Repetition, Rhythm, Pattern, Harmony, Proportion, Contrast, Functionality. Gestalt and his Concepts- Closures, Continuance, Similarity, Proximity, Alignment.</p> <p><b>PRACTICAL-</b> Principle of design- Balance, types of balance emphasis, unity, repetition (rhythm, pattern), harmony, proportion (scale), variety (alteration), contrast, functionality.</p>
<b>UNIT 3</b>	<p><b>THEORY-</b> Color- Introduction to Color, Color Theory, Color Harmonies, Color Schemes, Color Wheel, Tint, Tone, Shades. Different Mediums in Art.</p> <p><b>PRACTICAL-</b> Color- Color Wheel and color chart, Color Exploration, Color Interaction. Primary colors- Color Wheel, Color Composition, Secondary colors- Color Wheel, Color Composition, Tertiary colors- Color Wheel, Color Composition Color schemes- Monochromatic, Achromatic, Complimentary, Split Complimentary, Double-Split Complimentary Polychromatic. Tint, tone &amp; shades- Application of Gray Scale and Black &amp; White. Mediums in art- Pencil, Charcoal, Pastels, Water &amp; Poster.</p>
<b>UNIT 4</b>	<p><b>THEORY-</b> What is Design, Philosophies and Studies of Design, Approaches to Design, Philosophies for Methods of Designing, Philosophies for the Purpose of Design, Design as a Process, Defining a Design Process, Typical Steps or Stages of the Design Process, Design and Art, Design and Engineering, Design and Production, Process Design?</p> <p><b>PRACTICAL</b> –Drawing, Nature-drawing Composition, Free-Hand Sketching. Object drawing-2D &amp; 3D, Human drawing- Outline Sketches, Shades &amp; Shadow Composition, Light- Dark Tone Composition, positive and negative spaces, Product drawings; method of representing</p>
<b>UNIT 5</b>	<p><b>THEORY-</b> Composition, Principle of Organization, View Point Compositional Techniques, Rules of Thirds, Odds, Space, Simplification, Limiting Focus, Geometry and Symmetry</p> <p><b>PRACTICAL</b> –View- Perspective, Isometric, Geometry- Lines &amp; Angle bisecting, Constructing Regular &amp; Semi Regular Tessellation, Constructing 3D Tessellation</p>

## COURSE OUTCOME (CO)

**At the end of this course students will have:**

CO1: An ability to color mixing and fine color-discernment.

CO2: An ability to know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).

CO3: An ability to rendering and presentation techniques in design presentations. CO4: An ability to recognize the relationship between lighting, surface and perception.

<b>GDD002A</b>	<b>BASIC ART &amp; DESIGN</b>	<b>0-0-8(3)</b>
----------------	-------------------------------	-----------------

### **Prerequisite of the Course ---Drawing skills AIM**

Art and design stimulate creativity and imagination. It provides visual, tactile and sensory experiences and a special way of understanding and responding to the world. It enables students to communicate what they see, feel and think through the use of color, texture, form, pattern and different materials and processes. Students become involved in shaping their environments through art and design activities. They learn to make informed judgments and aesthetic and practical decisions. They explore ideas and meanings through the work of artists and designers. Through learning about the roles and functions of art, they can explore the impact it has had on contemporary life and that of different times and cultures. The appreciation and enjoyment of the visual arts enriches all our lives

### **OBJECTIVE**

- To understand of the social, psychological, cultural, historical and commercial factors.
- Development of Graphic Skills, Ability and Comprehension. Establishing Significance of Art.
- To understand the influences on art and design activities.

<b>UNIT 1</b>	Introduction to History of Art, Design and Architecture – Pre History To Ancient Civilization, Mesopotamia, Egypt, Indus Valley, China.
<b>UNIT 2</b>	Introduction to Indian folkArt- Worli, Fadd, Madhubani, Modern Art, Blue Pottery, Fresco, Meenakari , glass mosaic, Miniature Art, Kalamkari, Inlay-Work.
<b>UNIT 3</b>	<b>Techniques &amp; Process</b> Material exposure ranging from POP, Fly-ash, Terracotta & Ceramics Clay, Wood, metal, etc.,) Techniques, Processes terminology and tools.
<b>UNIT 4</b>	<b>Techniques &amp; Process</b> Material exposure ranging from Leather, Resin, Paper, Fabric, Tissues, foiletc.) Techniques, Processes terminology and tools.
<b>UNIT 5</b>	Introduction to Photography for documentation

### **COURSE OUTCOME (CO)**

**At the end of this course students will have:**

CO1: An ability to understand influences on art and design activities.

CO2: To understand outcomes through the interpretation and analysis of information. CO3: An ability to be able to assess, interpret and evaluate information.

CO4: An ability to be able to evaluate and present conclusions.

GDD025A	JEWELRY SKETCHING & RENDERING	0-0-6 [3]
---------	-------------------------------	-----------

## AIM

This course will deal with sketching and rendering techniques. As a jewellery designer these skills will assist student a lot as you will be able to express your ideas in 2-dimensional and 3- dimensional forms. Student will be able to represent ideas to clients with the help of rendered sketches of design helping the other person to visualize as how they will look like when crafted in any metal and as per specifications. The emphasis of this course is on learning basic practical skills and developing ideas. Students will learn to translate concepts into creative solutions. Principles and elements of applied design along with jewellery forming techniques, materials and forms will be introduced. This 3 credits theory course will carry equal weightage of both design and manufacturing components; students will be introduced to the conceptual and historical understanding of jewellery making, and thereby apply their own theoretical and creative understanding through theme based projects, as well as grasp the technical skills pertaining to basic jewellery manufacturing, as well as application of tools to particular techniques.

## OBJECTIVE

- To acquire theoretical knowledge about the adornment of body through discussions, presentations and fieldwork.
- To develop skills with processes, techniques & materials through demonstrations and progressive exercises.
- To generate ideas particular to individual fields of study.
- To learn through review, appreciation and presentation of individual work.
- To practice and be aware of health and safety in the workplace.

<b>UNIT 1</b>	<b>PRACTICAL</b> – Gemstone –Drawing Of Gemstone Drawing And Faceting Method of A Round Brilliant Cut Stone. Oval, Pear, and Marquise Shaped Stone. Step Cut Stone Baguettes, Taper Baguettes, And A Single Cut, Kite Cut, Triangle Cut And Trilliant Step Cut Stone Drawing and of A Square, Cushion, And French Cut Stone. Gem Stone Shading And Rendering of Facetted, Cabochons Carved Stones, Pearl.
<b>UNIT 2</b>	<b>PRACTICAL</b> – Metal Forms – Representation Of Metal Colors For Yellow Gold, White Gold, Platinum, Silver. Types Of Textures- Like High Polish, Florentine, Matt Finish, Sandblasting, Tree Bark, Satin .Types Of Decoration –Like Granulation, Open And Close Filigree, Etching, Engraving, Repousse And Chasing, Embossing, Inlay, Enameling.
<b>UNIT 3</b>	<b>PRACTICAL</b> – Metal Forms – Representation Of Metal Colors For Yellow Gold, White Gold, Platinum, Silver. Types Of Textures- Like High Polish, Florentine, Matt Finish, Sandblasting, Tree Bark, Satin .Types Of Decoration –Like Granulation, Open And Close Filigree, Etching, Engraving, Repousse And Chasing, Embossing, Inlay, Enameling.
<b>UNIT 4</b>	<b>PRACTICAL</b> – Settings – Representation Of Different Types Of Setting Like Prong, Pave, Bezel, Channel, Fishtail, Invisible, Etc.
<b>UNIT 5</b>	<b>PRACTICAL</b> – Chains, And Its Representation – Types Of Chain, Representation Of Chain, Clasps And Its Representation -Types Of Clasps, Representation Of Clasps

## COURSE OUTCOME (CO)

### At the end of this course students will have:

- CO1: This unit has introduced you with the basic information about the tools and materials and their use. After understanding their use their application will become very easy to design jeweler and master the skills.
- CO2: After going through this unit you have learnt about the different metal surfaces and their representation in addition you have learnt to observe various textures around you and their used in Jewelry.
- CO3: You learnt about the Gems stones their drawing, shading and rendering. This will be helpful for you to identify different cuts, shapes and varieties in the gem stones. This unit has given you the complete idea of representation of different settings in a Jewelry piece. This unit gives you an exposure to the types of chains and the different types of closing mechanisms used in Jewelry.
- CO4: You have learnt metal rendering techniques and identifying the different metal colors. Be able to develop designs and communicate ideas

DEN001A	COMMUNICATION SKILLS	2-0-1	[ 3]
---------	----------------------	-------	------

### OBJECTIVE

- To enhance English language competence in reading, writing, listening and speaking.
- Switch the approach from teacher-centered to student-centered one.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student- centered learning rather than on the teacher-centered learning.
- To link communication skills with the organizational behavior.
- To inculcate skills that is very much required for employability and adjusts in the professional Environment.

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>UNIT 3</b>	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
<b>UNIT 5</b>	<b>Professional and Technical Communication</b> :Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

### COURSE OUTCOME (CO)

#### At the end of this course students will have:

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts. CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English.

  
DEAN  
Jaipur School of Design  
JECRC University JAIPUR

## TEXT BOOKS

- Practical English Usage. Michael Swan. OUP. 1995
- Remedial English Grammar. F.T. Wood. Macmillan. 2007
- Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw HillPub. Co. New Delhi. 2005. Tenth Edition.
- On Writing Well. William Zinsser. Harper Resource Book. 2001
- Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
- Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
- Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
- Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006

GDD026A	METALLURGY	2-0-0 [2]
---------	------------	-----------

### AIM

This unit aims to develop learners' skills and understanding common to the broad area of 3D design and the potential design implications of selected materials. In this unit learner will know about Characteristics and properties of metals Classification of Metal group -Ferrous, Non-Ferrous, Alloys, Ores, origin, mining and methods, introduction to physical properties. In this unit learner will know about the techniques practiced in getting a final 3d product. Cutting and shaping of different types of metals with maintaining the quality and standards.

### OBJECTIVE

- To impart the knowledge of metals & the use of various laboratory equipment and other instruments used in Jewelry manufacturing lab.
- To acquire a thorough knowledge of all precious and semi precious metals and the ways in which they are used in Jewelry.
- To understand the different metals and their implementation.
- To learn various Standard Weights and Measures.

<b>UNIT 1</b>	Characteristics and properties of metals applicable in jewelry industry –ductility, malleability surface tension and absorption.
<b>UNIT 2</b>	Classification of Metal group -Ferrous, Non-Ferrous, Alloys, Ores. Mining and Techniques-Surface Mining, Subsurface Mining and types
<b>UNIT 3</b>	Basic Techniques of Jewelry Making- Measurement, Layout, Sawing, Drilling, Filing etc. Solders And Soldering – Meaning, Solders, Flux Basic Soldering Techniques Methods, Electronic Component, Pipe/Mechanical Soldering, Stained Glass Soldering.
<b>UNIT 4</b>	Precious Metals and their Mining, Methods of Refinement & Recovery, Application in Jewellery, Quality Control –Lowering or Raising Metal Quality, Hallmarking, Standard Weights and Measures.
<b>UNIT 5</b>	Manufacturing Process- Different Types Of Manufacturing Process, Handmade Jewelry, Advantages And Disadvantages. Stamping - Advantages And Disadvantages Modeling- Advantages And Disadvantages Casting Electroforming Process, Electroplating.

## COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Be able to understand how to cut and shape metals

CO2: Understand and apply the characteristics of metal used in jewellery design.

CO3: Be able to demonstrate the use of metal in specific contexts. Be able to understand about quality certification of metal

CO4: Understand how to use metal to meet intentions.

GDD027A	GEMOLOGY	2-0-0 [2]
---------	----------	-----------

### AIM

This unit aims to develop learners' skills and understanding common to the broad area of 3D design and the potential design implications of selected materials. In this unit learner will know about definition, value of gemstone, classification and types, Geological occurrences, formation, origin, mining and methods, history and folklore, introduction to physical properties. Cutting and shaping of different types of gemstones, with maintaining the quality and standards.

### OBJECTIVE

- To impart the knowledge of gemology & the use of various laboratory equipment such as the gemological microscope, dichroscope, polar scope and other instruments used in Gem identification.
- To acquire a thorough knowledge of all precious and semi precious stones and the ways in which they are used in jewelry.

<b>UNIT 1</b>	Definition , Value Of Gemstone , Introduction To Gemology, Instruments Used In Gemology , Moh's Scale Of Hardness, Geological Occurrences, Formation Of Gemstone, Origin Of Gemstone, And Mining Of Gemstone.
<b>UNIT 2</b>	Classification Of Gemstones, Visual Observation, Crystallography, Physical Properties, Optical Properties, Refractive Index , Sources , Hardness ,Chemical Composition Of Gemstone, Crystals Structures And Crystallography Determining RI Magnification , Use Of Characteristics Inclusions As A Means Of Gem Identification.
<b>UNIT 3</b>	Organic Gemstones, Synthesis, Synthetics, Imitation & Composite, Enhancement. Manufacture Of Synthetics Gemstone, Types Of Stimulants. Identification Of Stimulants With Help Of Instruments
<b>UNIT 4</b>	Gem Species 1.4 To 1.6, Gem Species 1.6 To 1.8, Gem Species Over 1.80,
<b>UNIT 5</b>	Gem Stone Processing Cabs: (Shapes) (Sawing, Shaping, Doping, Polishing), Gem Stone Processing Cut Stones (Shapes) (Sawing, Shaping, Doping, Cutting & Polishing),.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Be able to understand how to cut and shape cabochon and cut gemstones.CO2:

Understand and apply the characteristics of 3D used in jewelry materials.

CO3: Be able to demonstrate the use of 3D materials in specific contexts. Be able to understand about quality certification.

CO4: Understand how to use 3D materials to meet intentions.

GDD028A	METARIAL EXPLORATION AND TECHNIQUES-I	0-0-2 [1]
---------	---------------------------------------	-----------

## AIM

This unit aims to develop learners' skills and understanding the properties of materials - physical, visual and creative qualities - for better criteria in the selection of these, considering the technical, environmental and economic importance of the projects

## OBJECTIVE

Jewelry has long existed as a form of adornment and as a perceived enhancement of beauty and, as such, has roots in all cultures. Contemporary jewelry designers have reconsidered the role of ornament and its relationship to the human body to create a design aesthetic that results from innovative manipulation of shape and form and continuous exploration of the potential of materials. The ability to skillfully manipulate and explore these materials and techniques to exploit their full potential within both expected and unexpected contexts is the backbone of any designer's work. An important aspect of this exploration is the continuous analysis and evaluation of results and use of the knowledge and understanding gained to inform further work.

<b>UNIT 1</b>	<b>Exploring Copper &amp; Brass Leather Paper</b>
<b>UNIT 2</b>	<b>Nature of Materials and Processes</b> Properties and usage of various materials Process of selection and applications of various materials for consumer product Design limitations and specific advantages of particular product and their processes
<b>UNIT 3</b>	<b>Conceive and Create:</b> Significance of form in structural strength of products Influence of materials and processes on product aesthetics Costing of various product material and their structure
<b>UNIT 4</b>	<b>Metallic Material Technologies -I</b> Measuring, checking and tracing apparatus Working benches Soldering Equipment Protective equipment (gloves, masks, glasses, etc.)
<b>UNIT 5</b>	<b>Metallic Material Technologies- II</b> Miscellaneous tools Drilling machine Sawing machines

**COURSE OUTCOME (CO):****At the end of this course students will:**

CO1: Understand and apply the characteristics of copper and brass, leather and paper on the jewelry context.

CO2: To know the methods of work and manipulation of the materials.

CO3: To know the technical characteristics of the types of tools used to manipulate each material. CO4: To plan and develop projects and products that involves different types of materials.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES**

GDD029A	2D & 3D DRAWING	0-0-4 [2]
---------	-----------------	-----------

### AIM

This unit will introduce the investigation of Isometric Drawing and Orthographic Drawing along with differentiates between them. Students will be able to create Drawings using the step-by-step process to create own Isometric & Orthographic Drawing of a given 2D and 3D object.

### OBJECTIVE

- Learn to provide people with a realistic view of what the object looks like.
- Learn to differentiate between an isometric drawing and an orthographic projection drawing.
- Learn to draw basic Orthographic & Isometric objects.
- Learn to convert drawings from isometric to orthographic projection.

<b>UNIT 1</b>	<b>Projections of Planes&amp; Solids:</b> Plane parallel, perpendicular and inclined to one reference plane. Plane inclined to both the reference planes. Projections of regular solids, cube, prisms, pyramids, tetrahedron, cylinder and cone, Axis inclined to both planes.
<b>UNIT 2</b>	<b>Sections and Sectional Views</b> Right Regular Solids – Prism, Cylinder, Pyramid, Cone – use of Auxiliary views.
<b>UNIT 3</b>	<b>Isometric Projections:</b> Principles of Isometric Projection – Isometric Scale, Isometric Views, Conventions – Band, Rings, Pendants and Earrings. Simple and Compound Solids – Isometric Projection of objects having non- isometric lines. Isometric Projection of parts with Spherical surface.
<b>UNIT 4</b>	<b>Transformation of Projections:</b> Conversion of Isometric Views to Orthographic Views and Conversion of orthographic views to isometric views – Design projects

### COURSE OUTCOME (CO):

**At the end of this course students will:**

CO1: Make accurate isometric and orthographic views of various types of jewelry.

CO2: Draw various views of rings, pendants, earrings etc. for an accurate understanding of its shape and other details

CO3: Translate the manual orthographic and isometric views into CAD.

GDD030A	JEWELRY MANUFACTURING -I	0-0-4 [2]
---------	--------------------------	-----------

### AIM

Understand the characteristics of light metals- their Visual, Tactile and Functional characteristics. Employ professional practice when working with light metals. Develop designs and communicate ideas. Use construction and finishing techniques to produce 3D outcomes.

### OBJECTIVE

- This unit has introduced you with the basic information about the tools and materials and their use. After understanding their use their application will become very easy to design jeweler and master the skills.
- After going through this unit you have learnt about the different metal surfaces and their representation in addition you have learnt to observe various textures around you and their used in Jewelry.

<b>UNIT 1</b>	Jewelry Making - A Brief History, Work Space & Tools, Materials Used InJewelry Industry (Pre Civilization Era, Growth Of Civilization, Metals, Gem Stones, Natural Material, Man Made Material, Other Material Used InJewellery Making)
<b>UNIT 2</b>	Basic Tool Kit For Jewelry, Essential Tools For Jewelry ManufacturingRecommended Tools For Jewelry Manufacturing
<b>UNIT 3</b>	Basic Techniques Of Jewelry Manufacturing ,Rolling Techniques Sawing, Piercing, Filling, Milling, Process On Sheet Metal – Repo usage, Chasing, Stamping, Stretching, Embossing, Blanking, Processes With Wire – Chains, Draw Plates, Cross Section, Wire Drawing, Bending, Cutting, Spirals, Forging, Jump-Rings, Chains, Twisting And Filigree. Shaping Doming Blocks , Dies Repousse And Chasing , Scoring And Bending
<b>UNIT 4</b>	Clips And Connections, Catches, Hinges, And Findings Different Types Closing Mechanisms Like Fold Over, Toggle, Lobster Claw, Springing, Box Tab Insert, Fish Hook, Hook And Eye, S-Hook, Barrel. Clips For Earring, Different Types Of Clasps And Locks – Box Clasps, Bead Lock, Tube Lock, Hinge Lock, Slide Lock, Connections With Half Ring For Settings, And With A Hinged Stud
<b>UNIT 5</b>	Surface Decoration & Ornamentation Techniques, Engraving, Scoring, Chip Carving, Metal Inlay, Etching, Granulation, Enameling), Texturing Metal,Texture And Surface Finishes

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand the characteristics of light metals.

CO2: Be able to develop designs and communicate ideas.

CO3: Be able to use construction and finishing techniques to produce 3D outcomesCO4: Be able to employ professional practice when working with light metals.

GDD031A	COMPUTER AIDED DESIGN I- (CORAL DRAW)	0-0-6 [3]
---------	---------------------------------------	-----------

### AIM

In this module you will learn how to convert Manual Design in Digital Form through Corel with Exact measurement. In this module you will learn creating variation and Orthography concept. And Also Learn applying 3d rendering Effect by Photoshop project.

### OBJECTIVE

- Students will learn the basics of Jewellery Design Software “Coral Draw”
- Each content will cover the meticulous research about the 2D design by using Coral Draw.
- Learning how to develop 2D drawings in multiple.
- Research and documentation of each project.
- Submissions: PowerPoint presentation with digital prints.

<b>UNIT 1</b>	Introduction To Corel Draw, Basic Tools In Coral Draw, Various Shapes.
<b>UNIT 2</b>	Drawing & Shaping Objects, Transforming Objects, Corel Draw Effects, Working With Layer, Design Development, Color Fills And Outlines Tools, Gold Color Creation.
<b>UNIT 3</b>	Motif Development To Make Jewelry, Interactive Blend Tool, Diamond With Measurement , Stone Setting, Creating Shapes & Painting
<b>UNIT 4</b>	Theme Based Designing-Earrings , Bracelets , Pendants , Rings, Brooch, Necklace
<b>UNIT 5</b>	Special Effects To Images-Backgrounds, Text Option, Detail Of Jewelry Piece

### COURSE OUTCOME (CO)

**At the end of this course students will:**

- CO1: The student will be able to make more than one Appropriate Variation compared to original  
CO2: The student will be able to learn Exact Orthography  
CO3: The student will be able to apply 2D Rendering object  
CO4: The student will be able to learn how to save Sampling Cost.

GDD032A	DESIGN PROJECT-I (GOLD JEWELRY)	0-0-8 [4]
---------	---------------------------------	-----------

## AIM

After Understanding the About Gold, Different Jewelry Markets Of India and World, Characteristics of Light Metals Their Visual, Tactile and Functional Characteristics. Student Will Be Able To Develop Designs And Communicate Ideas Using Drawing, Rendering Finishing Techniques Application Of Inspiration Into A Jewelry Product. Make Product Range of All the Design like Pendant, Earring, Flexible Bracelet, Fixed Bracelet, Bangle, Ring and Necklace. Make Product Detail For All Designs. Choose Any 1 Design And Make Prototype Of Gold Jewelry In Your Jewelry Manufacturing Module. To Develop Learners' Skills Of Understanding Of Gold And Different Markets Of gold Jewelry, And Their Use So That Student Can Use His Knowledge For Industry Demand. Basic Knowledge Of Materials Used In Jewelry With Understanding Of How To Apply Them On Paper And Then Developing 3D Outcomes As Prototype Of The Design Project Gold Jewelry

## OBJECTIVE

- To look at designed objects, networks and environments more critically in our everyday life.
- To develop observational skills through which to investigate and understand Design.
- To develop drawing as a means of expression and communication of the creative process
- To develop creative problem solving through a variety of skills, techniques and processes
- To become familiar with researching, investigating and evaluating a wide range of materials and their properties.
- To have an informed opinion about Design and the design process and to be able to express those opinions.

## PREREQUISITE

- Visual Imagination.
- Eye on detail
- Intrapersonal Skills.
- Skills of Gemstone Rendering.
- Basic Knowledge of drawing and rendering.
- Basic knowledge of PowerPoint presentation.

<b>UNIT 1</b>	Inspiration Based Jewelry Design, What Is Inspiration, Why Do We Need Inspiration, Most Common Source Of Inspiration Like 3 Natural Sources, Man- Made Sources, Historical Sources, Symbolic Sources, Other Sources Of Inspiration, Application Of Inspiration Into A Jewelry Product: Applying Design Elements And Principles To These Elements And Making As Many Variation And Options To Each Of The Chosen Elements. Line Placement /Repetition, Reduction And Enlargement, Grid Placement, Rotation, Skewing Or Twisting Or Folding.
---------------	--

<b>UNIT 2</b>	Selecting The Jewelry Forms / Styles Conceptualization: Concept Development, Generate Product Concepts; Select A Jewelry Concept, Rationale Behind Selecting A Form. Investigating The Inspiration To List The Motifs/ Elements Which Will Act As Forms For Developing Jewelry, Motifs And Its Types, Making Style Variations.
---------------	--

<b>UNIT 3</b>	Jewelry Design And Detailing: Design Detailing, Why Design Detailing Is Important, Steps Of Jewelry Design Detailing Process.
<b>UNIT 4</b>	Presentation Materials, Presentation Formats And Methods, Documentation And Compilation. Different Type Of Presentation Requirements And Allied Materials For It, Like Only For Designing, Manufacturing Specification, Marketing, / Branding / Promotion Why Documentation And Compilation Is Needed, Process Documentation , Documentation And Compilation For Marketing / Branding/ Promotion
<b>UNIT 5</b>	History Of Gold Jewelry In India, Analyzing Contemporary Gold Jewelry Trends In India, Traditional Indian Gold Smithing Techniques, Gold Appraisal, Market Identification, Culture Board, Jewelry Board, Client Board, Mood Board, Inspiration Board, Conceptualization And Form Generation, Final Design Development, Prototype Development, Portfolio. Inspiration Based Jewelry Design, Inspiration Board, Mood Board ,Client Board, Market Board, Brand Board Application Of Inspiration Into A Jewelry Product, Make Product Range Of All The Design Like Pendant, Earring , Flexible Bracelet , Fixed Bracelet, Bangle , Ring And Necklace, Make Product Detail For All Designs, Choose Any 1 Design And Make Prototype Of Gold Jewelry

\*On the completion of this task student will be able to prepare Jewelry Board, Client Board, Inspiration Board, Mood Board, and Inspiration board, Conceptualization and Form Generation, Final Design Development, Prototype Development & Portfolio.

### **COURSE OUTCOME (CO)**

**At the end of this course students will:**

CO1: Understand the visual, tactile and decorative characteristics of gold materials.

CO2: Be able to create a jewelry collection and developing the portfolio in digital software.CO3: Be able to respond to design requirements.

CO4: Understand professional practice in gold jewelry making.

DEN002A	PROFESSIONAL SKILLS	2-0-1 [3]
---------	---------------------	-----------

### OBJECTIVE

- To enhance Professional competence in reading, writing, listening and speaking.
- Switch the approach from providing information about the language to use the language.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student- centered learning rather than on the teacher-centered learning.
- Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
- Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

<b>UNIT 1</b>	<b>Professional Grooming and Professional Culture:</b> Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
<b>UNIT 2</b>	<b>Advanced Grammar:</b> Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
<b>UNIT 3</b>	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms
<b>UNIT 5</b>	<b>Reading Comprehension:</b> Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc- Skimming and Scanning-Inference and Deduction

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in professional scenario. CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture.

  
DEAN

GDD035A	METARIAL EXPLORATION AND TECHNIQUES-II	0-0-2 [1]
---------	--	-----------

### AIM

This unit aims to develop learners' skills and understanding the properties of materials - physical, visual and creative qualities - for better criteria in the selection of these, considering the technical, environmental and economic importance of the projects

### OBJECTIVE

Jewelry has long existed as a form of adornment and as a perceived enhancement of beauty and, as such, has roots in all cultures. Contemporary jewelry designers have reconsidered the role of ornament and its relationship to the human body to create a design aesthetic that results from innovative manipulation of shape and form and continuous exploration of the potential of materials. The ability to skillfully manipulate and explore these materials and techniques to exploit their full potential within both expected and unexpected contexts is the backbone of any designer's work. An important aspect of this exploration is the continuous analysis and evaluation of results and use of the knowledge and understanding gained to inform further work.

### PREREQUISITE

- Visual Imagination.
- Eye on detail
- Understanding the tools with safety.
- Basic Knowledge of drawing and rendering.

<b>UNIT 1</b>	<b>Exploring:</b> Silver Fabric Lacquer Enamel
<b>UNIT 2</b>	<b>Nature of Materials and Processes:</b> Properties and usage of various materials Process of selection and applications of various materials for consumer product Design limitations and specific advantages of particular product and its processes
<b>UNIT 3</b>	<b>Conceive and Create:</b> Significance of form in structural strength of products Influence of materials and processes on product aesthetics Costing of various product material and their structure
<b>UNIT 4</b>	<b>Material Technologies I</b> Measuring, checking and tracing apparatus Working benches Soldering Equipment Filling Machines

<b>UNIT 5</b>	<b>Material Technologies II</b> Protective equipment (gloves, masks, glasses, etc.) Miscellaneous tools Drilling machine Sawing machines
---------------	---

### COURSE OUTCOME (CO):

**At the end of this course students will:**

CO1: Understand and apply the characteristics of Silver, Fabric, Lacquer, and Enamel on the jewelry context;

CO2: To know the methods of work and manipulation of the materials;

CO3: To know the technical characteristics of the types of tools used to manipulate each material; CO4: To plan and develop projects and products that involves different types of materials

GDD036A	JEWELLERY MANUFACTURING -II	0-0-6 [3]
---------	-----------------------------	-----------

### AIM

Learn to choose when to use a specific tool or manufacturing process. Convert and represent different types of surfaces and finishes, shading three dimensional surfaces and translate a two- dimensional surface into three dimensional forms. This unit aims to develop learners' practical skills and understanding when working with light metals and in translating designs into 3D outcomes.

### OBJECTIVE

- This unit has introduced you with the basic information about the tools and materials and their use. After understanding their use their application will become very easy to design jeweler and master the skills.
- After going through this unit you have learnt about the different metal surfaces and their representation in addition you have learnt to observe various textures around you and their used in Jewelry.
- Understand the characteristics of light metals.

### PREREQUISITE

- Visual Imagination.
- Eye on detail.
- Basic Knowledge of metals.
- Understanding the tools with safety.
- Basic Knowledge of drawing and rendering.

UNIT 1	Develop a Personal Design from a Gold design project
UNIT 2	Use Previously Learned Techniques to Showcase Personal Style and Artistic Discovery
UNIT 3	Application of Advanced Techniques in Soldering, Cold-Connections, Piercing, and Use of Alternative Media
UNIT 4	Conceptualization & Form Generation, Final Design Development,
UNIT 5	Creating Visual Harmony in Design Elements

### COURSE OUTCOME (CO):

**At the end of this course students will:**

CO1: Be able to develop designs and communicate ideas

CO2: Be able to use construction and finishing techniques to produce 3D outcomes  
CO3: Be able to employ professional practice when working with light metals.

CO4: Understand how to use metal to meet intention

GDD037A	COMPUTER AIDED DESIGN-II (RHINO)	0-0-8 [4]
---------	----------------------------------	-----------

### AIM

RHINO module III leads to the practice of advance tools and terminologies of Rhino software. It includes processing of the design for the wax modelling, export and import in different file formats, estimation of the design, product making and cost reduction. Learning of how to advertise the product through catalogues and branding.

Power point presentations /handouts about design development and basic terminologies use in CAD/CAM course will be presented as per required

### OBJECTIVE

- Students will learn the advance level of tools by learning Jewellery Design Software “RHINO”
- Each content will cover the meticulous research about the 3D design by using Rhino
- Students will learn the process of manufacturing through CAM by visiting PCSIR and PGJDC
- Investigating different perceptions about jewellery including traditional and contemporary
- Learning how to develop 3D perspectives and execution of CAD.
- Research and documentation of each project with the final 3D processing
- The Final outcome in result of CAM.
- Submissions: PowerPoint presentation with digital prints and CAM processed prototypes to make mass production out of one piece.

### PREREQUISITE

- Visual Imagination.
- Basics of colour balance, rhythm, contrast etc.
- Eye on detail.
- Skill of 2D Software
- Basic knowledge of orthographic & Isometrics.
- Basic knowledge of PowerPoint presentation.

UNIT 1	Introduction To Rhino, Surfacing ,Stone Setting ,Texture
UNIT 2	Text Surfacing , Scooping , Creating Gallery & J-Bag,
UNIT 3	Gold Weight Controlling,
UNIT 4	Creating Human Figure In Rhino
UNIT 5	Converting In To Dye Format, Casting Through CAD-CAM Process.

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: Understand use of specialist 3D technology and processes in chosen pathway CO2: Be able to apply understanding of specialist processes to produce design work CO3: Be able to produce outcomes using specialist 3D technology and processes CO4: Be able to evaluate own work

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES**

GDD038A	PHOTOGRAPHY	0-0-4 [2]
---------	-------------	-----------

### AIM

This unit aims to develop learners' skills and understanding in Product Photography. Students will get Knowledge of the history of the photographic medium and how it relates to the history of the other fine arts

### OBJECTIVE

Various aspects of photography including lighting for indoor & outdoor, handling of studio equipment and set planning & composition.

<b>UNIT 1</b>	Various aspects of photography including lighting for Indoor & Outdoor
<b>UNIT 2</b>	Handling of studio equipment
<b>UNIT 3</b>	Set planning
<b>UNIT 4</b>	Composition.
<b>UNIT 5</b>	Final Product Photography

### COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1 Be able to use space and equipment.

CO2 Be able to use sets, lights and backgrounds.

CO3: Apply the principles of lighting and color theory to a variety of photographic scenarios by measuring, evaluating, and adjusting light and color to create quality images.

GDD041A	DESIGN PROJECT II – DIAMOND JEWELLERY	0-0-4 [2]
---------	---------------------------------------	-----------

### AIM

After Understanding the About Enamels and Enameling, Different Jewelry Markets of India and World, Characteristics of Light Metals Their Visual, Tactile and Functional Characteristics. Student Will Be Able To Develop Designs And Communicate Ideas Using Drawing, Rendering Finishing Techniques Application Of Inspiration Into A Jewelry Product. Make Product Range of All the Design like Pendant, Earring, Flexible Bracelet, Fixed Bracelet, Bangle, Ring and Necklace. Make Product Detail For All Designs. Choose any one Design and Make Prototype of kundan meena Jewelry In Jewelry Manufacturing Module.

### OBJECTIVE

- This unit will enable learners to understand the factors relevant to product design, and to develop skills in planning and producing prototypes.
- To make understand the contrasting difference between casted jewelry and traditional Kundan- Meena jewelry.
- Understanding of traditional and contemporary Kundan Meena. Understanding the technique through practical demonstration.
- Understanding the process of traditional jewelry class in India. A comparative analysis of the past Kundan Jadau work as compared to the present.
- Range development using Kundan Meena technique according to jewelry trends and forecast

### PREREQUISITE

- Visual Imagination.
- Eye on detail
- Intrapersonal Skills.
- Skills of different type of stone setting.
- Basic Knowledge of drawing and rendering.
- Basic knowledge of PowerPoint presentation.

<b>UNIT 1</b>	History Of Kundan Meena Jewelry In India, Analyzing Contemporary Kundan Meena Jewelry Trends In India, Traditional Kundan Meena Jewelry Manufacturing Process, Market Identification, Culture Board, Jewelry Board, Client Board, Mood Board, Inspiration Board, Conceptualization And Form Generation, Final Design Development, Cost Assessment Techniques
<b>UNIT 2</b>	Analyzing Global Jewelry Brands, Analyzing Indian Jewelry Brands,
<b>UNIT 3</b>	Kundan Meena Jewelry Manufacturing Process, Jewelry Trend & Forecast,
<b>UNIT 4</b>	Market Identification, Culture Board, Jewelry Board, Client Board, Mood Board, Inspiration Board
<b>UNIT 5</b>	Conceptualization & Form Generation.
<b>UNIT 6</b>	Final Design Development, Prototype Development, Packaging, Portfolio.

## COURSE OUTCOME (CO)

At the end of this course students will:

CO1: Understand the principles and characteristics of Kundan Meena.

CO2: Be able to create a Kundan Meena collection and developing the portfolio in digital software. CO3: Be able to respond to design requirements and get knowledge of History of Kundan Meena. CO4: Understand professional practice in Kundan Meena jewelry making.

GDD042A	PORTFOLIO	0-0-4 [2]
---------	-----------	-----------

### AIM

Design portfolio is the expression of student to translate themes into design. Here one gets inspired by different themes which could be art movements, sport, historic eras, music, dance culture, nature, traditions etc. And picks out tangible and intangible elements which are to be used as design elements in the collection. The ability of a designer to exhibit and use design elements is highlighted which is further on translated into projects. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of three years. The purpose lies in promoting the skills of students in a single format this course will help students enter the “real world”. It’s structured around equipping students on skills of “self selling and presenting their portfolios”. The course is aimed at equipping them select “perfect fit” careers, find better jobs and become professional and street smart. It will give students a realistic picture of their future professional lives and provides tools on coping with it.

### OBJECTIVE

- Have the necessary professional communication skills. These include a wide array of tools like making CV’s and presentations, preparing for job tests and interviews and the necessary computer skills to produce these.
- Knowledge about the local and international markets and their operations.
- Career planning, channels for job search, basics of entrepreneurship.
- The course will also assist students to be able to present their portfolios in various modern formats like USB’s, digital photography, websites, CD’s etc.
- Work ethics will also be touched upon to enable them to have long term and fruitful relations with employers.

### PREREQUISITE

- Visual Imagination.
- Basics of colour balance, rhythm, contrast etc.
- Eye on detail.
- Skill of 2D Software.
- Basic knowledge of PowerPoint presentation.

## **COURSE OUTCOME (CO)**

**At the end of this course students will:**

CO1: Be able to place themselves and their work in the context of their selected discipline. CO2:  
Understand their specialist area and the career opportunities available

CO3: Be able to develop and present a professional portfolio in an appropriate format  
Understand how to promote themselves and their work professionally.

CO4: A copy of portfolio has to be submitted with the department at the time of final Assessment.

  
DEAN  
Jaipur School of Design  
JECRC University JAIPUR

GDD043A	OFFICE TRAINING (INTERNSHIP)	0-0-16 [8]
---------	------------------------------	------------

## AIM

The Aim Of This Unit Is To Extend Learners' Knowledge Of Professional Practices Within Their Specialist Area And To Relate These To Personal Goals And Career Opportunities.

## OBJECTIVE

- To encourage students to work in with relevant industries.
- An avenue to enhance academics learning through hands on work experience.
- Get advice on career from knowledgeable and experienced professionals.
- Gain exposure to a professional work atmosphere.
- Be able to place themselves and their work in the context of their selected discipline
- Understand their specialist area and the career opportunities available
- Understand how to promote themselves and their work professionally.

## INTERNSHIP TRAINING

- In the IV semester , student will undergo a 12 weeks training in a jewelry designing industry /manufacturing unit/ jewelry export unit so that they can understand the existing working practices , conditions and acquire an in depth technical knowhow.
- The student shall prepare a report on the training given by the organization he/she will submit the report. The student has to submit the certificate regarding successful training with the organization.
- A copy of report has to be submitted with the department along with the performance certificate issued by the firm manager/ owner and one with the firm (where internship is pursued).
- After the internship, student has to appear in front of jury members for a presentation seminar, who will judge the performance based on their presentation, report & viva- voce and award marks to student

<b>UNIT 1</b>	<b>Weekly Teaching Plan</b> Week 1-2 How to assess your internship Week 3 writing an introduction Week 4 doing your research Week 5-6 locating the required area of research and analyzing it Week 7-8 writing down about the context of your report Week 9 linking the research to the context of your report Week 10 writing up the conclusion of the report and editing it Week 11 making a short, 'to the point' presentation Week 12- 14 working on the presentation Teaching & Learning Methods: Assessment and Evaluation: A Proposal
---------------	--

<b>UNIT 2</b>	<b>A Paper (minimum 2000 words)</b> Reason for particular Placement. Brief description of the context. Description of your duties. Findings. Diary of activities. Professional's report
<b>UNIT 3</b>	<b>A Presentation</b> (approx. 30 minutes) Over view of your paper. Visual support materials.
<b>UNIT 4</b>	<b>PROJECT REPORT</b> To Be Submitted ,Background of Industry, Number Of Employees Project Detail On Which Assisted, Manufacturing Process, Hand & Computer, Sketches, Experience ,Any Other Details

## COURSE OUTCOME (CO)

**At the end of this course students will:**

CO1: To identify business strategies for buying and selecting product of the company. CO2: To identify process and procedures for company purchases.

CO3: To explore the buying process, Increase skills in buying and merchandising. CO4: To identify business strategies for buying and selecting products.

CO5: To understand that how they write a report of their industry experience & develop written communication skills

<b>GDD001A</b>	<b>DESIGN FOUNDATION</b>	<b>0-0-8[4]</b>
----------------	--------------------------	-----------------

### AIM

To make students see, make and appreciate the basic design concepts. The first level includes the vocabulary of design and principles of composition. This level includes 3D composition and study of Volumes. The aim of this course is to understand the method of visualizing and drawing from nature, cast and product drawing. Learners will be introduced to a brief history and introduction to 3D materials, tools and processes and made aware of the range of possibilities of different materials in their 2D and 3D application to design. This may be done through lectures / ppt presentations / swatches/ samples. The aim of this unit is to enable learners to develop knowledge and understanding of the issues that have informed debate on the purposes and processes of design. This unit aims to give learners opportunities to develop skills and knowledge in the development of new products or services in design pathways.

### OBJECTIVE

- Know the phases of the design development cycle
- Skill in color mixing and fine color-discernment.
- Know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).
- Practice and develop rendering and presentation techniques in design presentations.
- Recognize the relationship between lighting, surface and perception.
- Student will be able to understand design & principles of composition & 3D compositions
- Student will be able to understand the methods & techniques of visualization & drawing.
- The student would be exposed to appreciation of drawing different products.
- Student will be able to understand basics of design concepts

<b>UNIT 1</b>	<b>THEORY-</b> Elements of Design- Point, Line, Characteristic of Line, Types of Line, Shapes, Categories of Shape, Space, Categories . <b>PRACTICAL-</b> Elements of design- Types of Lines, Line Compositions, Different types of Shapes- Geometric, Organic, Free-form, Natural, and Shape, composition, Positive & Negative. Textures- Physical & Visual, Texture Composition, Form Space-Positive & Negative.
<b>UNIT 2</b>	<b>THEORY-</b> Principle of Design- Balance, Types of Balance, Emphasis, Unity, Repetition, Rhythm, Pattern, Harmony, Proportion, Contrast, Functionality. Gestalt and his Concepts- Closures, Continuance, Similarity, Proximity, Alignment. <b>PRACTICAL-</b> Principle of design- Balance, types of balance emphasis, unity, repetition (rhythm, pattern), harmony, proportion (scale), variety (alteration), contrast, functionality.
<b>UNIT 3</b>	<b>THEORY-</b> Color- Introduction to Color, Color Theory, Color Harmonies, Color Schemes, Color Wheel, Tint, Tone, Shades. Different Mediums in Art. <b>PRACTICAL-</b> Color- Color Wheel and color chart, Color Exploration, Color Interaction. Primary colors- Color Wheel, Color Composition, Secondary colors- Color Wheel, Color Composition, Tertiary colors- Color Wheel, Color Composition Color schemes- Monochromatic, Achromatic, Complimentary, Split Complimentary, Double-Split Complimentary Polychromatic. Tint, tone & shades- Application of Gray Scale and Black & White. Mediums in art- Pencil, Charcoal, Pastels, Water & Poster.

<b>UNIT 4</b>	<b>THEORY/PRACTICAL-</b> What is Design, Philosophies and Studies of Design, Approaches to Design, Philosophies for Methods of Designing, Philosophies for the Purpose of Design, Design as a Process, Defining a Design Process, Typical Steps or Stages of the Design Process, Design and Art, Design and Engineering, Design and Production, Process Design?
<b>UNIT 5</b>	<b>THEORY/PRACTICAL</b> - Drawing, Nature-drawing Composition, Free-Hand Sketching. Object drawing-2D & 3D, Human drawing- Outline Sketches, Shades & Shadow Composition, Light- Dark Tone Composition, positive and negative spaces, Product drawings; method of representing
<b>UNIT 6</b>	<b>THEORY-</b> Composition, Principle of Organization, View Point Compositional Techniques, Rules of Thirds, Odds, Space, Simplification, Limiting Focus, Geometry and Symmetry <b>PRACTICAL</b> –View- Perspective, Isometric, Geometry- Lines & Angle bisecting, Constructing Regular & Semi Regular Tessellation, Constructing 3D Tessellation

### COURSE OUTCOME (CO)

**At the end of this course students will have:**

CO1: An ability to color mixing and fine color-discernment.

CO2: An ability to know in principle the physics of color (light), the chemistry of color (pigment), and the impact of color (psychology).

CO3: An ability to rendering and presentation techniques in design presentations. CO4: An ability to recognize the relationship between lighting, surface and perception.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1			H		M											M	M
CO2			H		M											M	M
CO3			M		M				L							M	M

### TEXT BOOKS

5. Broome, Gerald F., (1974), Elements of Design: Space, Davis Publications Inc. Worcester, Massachusetts.
6. Bruce D. Kurty, (1987), Visual imagination- An introduction of Art, Prentice Hall, New Jers.

  
 DEAN  
 Jaipur School of Design  
 JECRC University JAIPUR

<b>GDD002A</b>	<b>BASIC ART &amp; DESIGN</b>	<b>0-0-6(3)</b>
----------------	-------------------------------	-----------------

### AIM

Art and design stimulates creativity and imagination. It provides visual, tactile and sensory experiences and a special way of understanding and responding to the world. It enables students to communicate what they see, feel and think through the use of color, texture, form, pattern and different materials and processes. Students become involved in shaping their environments through art and design activities. They learn to make informed judgments and aesthetic and practical decisions. They explore ideas and meanings through the work of artists and designers. Through learning about the roles and functions of art, they can explore the impact it has had on contemporary life and that of different times and cultures. The appreciation and enjoyment of the visual arts enriches all our lives

### OBJECTIVE

- To understand of the social, psychological, cultural, historical and commercial factors.
- Development of Graphic Skills, Ability and Comprehension. Establishing Significance of Art.
- To understand the influences on art and design activities.

<b>UNIT 1</b>	Introduction to History of Art, Design and Architecture – Pre History To Ancient Civilization, Mesopotamia, Egypt, Indus Valley, China.
<b>UNIT 2</b>	Introduction to Indian folk Art- Worli, Fadd, Madhubani, Modern Art, Blue Pottery, Fresco, Meenakari , glass mosaic, Miniature Art, Kalamkari, Inlay- Work.
<b>UNIT 3</b>	<b>Techniques &amp; Process</b> Material exposure ranging from POP, Fly-ash, Terracotta & Ceramics Clay, Wood, metal, etc.,) Techniques, Processes terminology and tools.
<b>UNIT 4</b>	<b>Techniques &amp; Process</b> Material exposure ranging from Leather, Resin, Paper, Fabric, Tissues, foil etc.) Techniques, Processes terminology and tools.
<b>UNIT 5</b>	Introduction to Photography for documentation

### COURSE OUTCOME (CO)

**At the end of this course students will have:**

CO1: An ability to understand influences on art and design activities.

CO2: To understand outcomes through the interpretation and analysis of information. CO3:

An ability to be able to assess, interpret and evaluate information.

CO4: An ability to be able to evaluate and present conclusions.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

**TEXT BOOKS**

9. Broomer F. Gerald, (1974), Elements of Design, Space, Davis Publications Inc., Worcester, Masschusetts.
  10. Dodson B., (1990), Keys to Drawing, North Light Publications, Cincinnati.
  11. Mark W., Mary W. (1999), Drawing for Absolute Beginner, F&W Publications, Cincinnati.
  12. Davis M.L. (1996), Visual Design in Dress, Prentice Hall, Canada.
- Graves M., (1951). The Art of Colour and Design, McGraw-Hill Book Company

DEN001A	Communication Skills	Credits 2-0-2 3
---------	----------------------	-----------------

### Course Objectives

- To enhance English language competence in reading, writing, listening and speaking.
- Switch the approach from teacher-centred to student-centred one.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
- To link communication skills with the organizational behaviour.
- To inculcate skills that are very much required for employability and adjust in the professional Environment.

### Course Outcomes (CO):

**At the end of this course students will have:**

- CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario
- CO2: Ability to analyze the usage of English words in different contexts. CO3: An understanding of technical and academic articles' comprehension.
- CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

### Syllabus: Theory

UNIT 1	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
UNIT 2	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
UNIT 3	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
UNIT 4	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms
UNIT 5	<b>Professional and Technical Communication :</b> Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation

### Syllabus: Lab

UNIT 1	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time-management, Following Deadlines etc
UNIT 2	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc

<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

### Methodology for Evaluation

- |   |   |          |
|---|---|----------|
| 9. Internal Assessment (Theory)         |   |          |
| g) Home Assignments: One from each Unit | : | 15 Marks |
| h) In Semester Tests (Minimum two)      | : | 30 Marks |
| i) Attendance                           | : | 05 Marks |
| 10. Term End (Theory)                   | : | 50 Marks |
| 11. Internal Assessment (Lab)           |   |          |
| (c) Daily Performance in the Lab        | : | 50 Marks |
| 12. Term End (Lab)                      | : | 50 Marks |

### Suggested Reading:

22. Remedial English Grammar. F.T. Wood. Macmillan. 2007
23. Raymond V. Lesikar and Marie E. Flatley. Basic Business Communication, Tata McGraw Hill Pub. Co. New Delhi. 2005. Tenth Edition.
24. On Writing Well. William Zinsser. Harper Resource Book. 2001
25. Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
26. Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.
27. Exercises in Spoken English. Parts. I-III, Hyderabad. Oxford University Press.
28. Syamala, V. Speak English in Four Easy Steps, Improve English Foundation Trivandrum: 2006
29. More Games Teams Play, by Leslie Bendaly, McGraw-Hill Ryerson.
30. The BBC and British Council online resources

<b>GDD071A</b>	<b>Rendering Techniques</b>	<b>0-0-6[3]</b>
----------------	-----------------------------	-----------------

### Objective

- Student will be able to understand the perceptual and cognitive processes associated with the evolution of the human mind and its essential relationship to Rendering as an art form.
- Ability to Compare and contrast different uses of Rendering in art.
- Show a fundamental proficiency in the current technology and understanding of the materials, methods and techniques.
- To develop a portfolio that enables the graduate to showcase his/her abilities while reflecting the individual personality of the designer.

<b>Unit 1</b>	Introduce drawing Shading Techniques - geometric figures Accent Lines. Power lines and adding elements i.e. dramatic sky, flowers, landscaping.
<b>Unit 2</b>	Rendering in pen and ink, or colored pencil, in marker & stipple.
<b>Unit 3</b>	The art of Ink Line Drawings, Sepia Washes using ink, graphite, chalk, charcoal, or crayon.
<b>Unit 4</b>	Patch Pattern Rendering Technique, Blending Rendering Technique and Monochrome Rendering Technique.
<b>Unit 5</b>	Isometric Drawings, Multiple Orthographic Views, Perspective Projections, Depth Cueing, Depth Clipping, Illumination and Transparency and Reflection.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to Gain a broad-based knowledge and understanding of art and its histories.
- CO2: An ability to Develop your understanding of the production, circulation, and interpretation of visual culture in specific historical contexts.
- CO3: An ability to Gain awareness of the role of the visual arts within different cultures and societies, both Western and non-Western.
- CO4: An ability to Gain awareness of the role of museums and galleries in the production and reproduction of cultural values.

 DEAN  
 Jaipur School of Design  
 JECRC University JAIPUR

<b>GDD072A</b>	<b>Graphic Print</b>	<b>0-0-4[2]</b>
----------------	----------------------	-----------------

### Objective

- Student will be able to Exercise and demonstrate use and mastery of the elements of design
- Use materials, tools and processes from a variety of media (printmaking)
- Handle materials effectively.

<b>Unit 1</b>	Introduction: Relief printmaking is a form of printmaking in which the image to be printed is raised from the surface. This creates a surface similar to a stamp and is sometimes referred to as "block printing".
<b>Unit 2</b>	Linoleum cut and wood cut. Beginning printmakers -.Calligraphy, Linoleum allows the printmaker (student) to easily carve curved lines and is able to accept impressions from sharp objects. Lay outing & drawing.
<b>Unit 3</b>	A pointed tool, such as pen or pencil, is used to trace the lines of the drawing, forcing the soft graphite on the back of the drawing on to the linoleum surface. Material (Calligraphy / linoleum, wood, or rubber).
<b>Unit 4</b>	Creating a relief print. Handling tools a variety of blades called gouges. Each gouge is designed to remove linoleum at different widths. Smaller gouges remove less material, but are more precise. Larger gouges remove more of the material, but are far less precise.
<b>Unit 5</b>	Inking process is demonstrated. Tray, ink, and brayer aroused. Over-inked or under- inked, or uneven inking solutions during the burnishing process.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to create professional Graphics and illustrations, and graphic prints.
- CO2: Ability to Transforming objects, Drawing, Working with Tools and Materials i.e. Lino and Wood.
- CO3: An ability to Recognize and evaluate basic elements of design (color, line, form, texture, rhythm, etc.)
- CO4: An ability to acquire a working vocabulary associated with the analysis and interpretation of works and architecture.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>GDD073A</b>	<b>Computer Graphic I</b>	<b>0-0-6[3]</b>
----------------	---------------------------	-----------------

### Objective

- Corel draw is a graphic design software coral draw enables users to create professional Illustrations for newsletters, brochures logos and web graphics.
- Provides training about illustration program that can be used for print, multimedia, and online graphics. Whether you plan to design or illustrate multimedia artwork illustrator offers all the tools needed to produce professional and quality results for even a beginner.
- Photoshop provides hands-on with creative image designing techniques. Photoshop is the leading digital image editing application for the internet, print, and other new media disciplines.
- Important tool for graphic artists, print designers, visual communicators, and other regular peoples.

<b>Unit 1</b>	Introduction of Raster and vector Software' show they used in different scenario of digital platform. Introduction of software's and user interface.
<b>Unit 2</b>	Making sketches in Photoshop, customize the workspace, create projects, Basic tools settings and brush options, Color theory and light painting, Selection tools and cropping images, Image manipulation process pipeline. Raster vs. Vector.
<b>Unit 3</b>	Introduction of layer, Use the Layers Panel, Layer Dexterity, Fast Alignments Layer Types Explained, Manipulate Layers in Photoshop, Use Blending Modes, Find out how art boards can help you, Creating and resizing art boards, Introduction Photoshop vs. Illustrator, Tools explained and making digital paintings.
<b>Unit 4</b>	Introduction Of art boards, Difference Raster and vector, Resolutions formats, Creating vector illustrations, Turning photographs into vector artwork, Vector zing and colorizing traced hand drawings, Learn useful keyboard shortcuts and best practices.
<b>Unit 5</b>	Colour correction images, Image Manipulation, Digital painting concepts, Matte painting process, Different Ways to Paint, Background and Final Effects.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to create professional Graphics and illustrations for newsletters, brochures logos and web graphics.
- CO2: An ability to Transforming objects, Drawing, Coloring and Painting, Working with Type, Layers, Brushes, Using Effects, Appearance Attributes and Graphic Styles
- CO3: An ability to Working with Symbols Expected Outcome This being a job-oriented course.
- CO4: An ability to creative image designing techniques. Photoshop is the leading digital image editing application for the internet, print, and other new media disciplines, color manipulations, levels, curves dust and scratches, seeing color accurately

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

3. Design, Animate & Create with Computer Graphics –by Max Wainewright

<b>GDD073A</b>	<b>Typography</b>	<b>0-0-4[2]</b>
----------------	-------------------	-----------------

### Objective

- Student will be able to Create and evaluate typographical designs for audience, meaning, and effectiveness.
- Explain the importance of appearance in effective layout design. Demonstrate the ability to control the reader's eye in layout design.
- Use typography in layout design. Basic design principles in layout creation.
- Create and modify typefaces. Use color in an effective manner in layout design

<b>Unit 1</b>	Introduce Typography (letterform, layout, grouping and hierarchy).
<b>Unit 2</b>	Conceptual development, verbal articulation of visual solutions, research, production, and visual, verbal and written presentation skills.
<b>Unit 3</b>	Structure of Design: Visual Elements: Line, Shape, Light and dark, Color, Texture, Perspective and depth and Organization of the Elements. Techniques: Contrast, Tone, Shape, Juxtaposition, Harmony, Balance, Opacity, Singularity, Flatness, Repetition and regularity.
<b>Unit 4</b>	Principles of Typography: Origins of the alphabet Pictograms, Ideographs, Phoenician, Greek and Roman alphabets, Sans Serif, Serif, Script, Families of type, Color of type, Personalities of type. Visual change between type over time Garamond, Baskerville and Bodoni, Century Expanded and Helvetica, Display type, Roman and Egyptian, Sans Serif and Script Widows and orphans Designing with type, Function of type: Ornate type Creating moods with type Altering of characteristics of existing fonts. Anatomy of a Page – Terminology, Feelings duotones-quad tones, without black, White space, Bleeds, Drop shadows Methods: Repetition, Grids/Headlines.
<b>Unit 5</b>	Kern Type: The Kerning Game Better Web Typography In a Few Simple Steps. Helvetica - A Documentary About the Most Ubiquitous Typeface in The WorldGame Bonus.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to explain the fundamental role that typography plays in developing legibility for the reading audience.
- CO2: An ability to explain Analyze the cultural significance of typography as a means to convey messages.
- CO3: An ability to explain Compare and contrast different typographic approaches and how they influence and change meaning.
- CO4: An ability to explain Apply a range of typographic approaches in response to specific design problems. Different typographical approaches for a range of media and audiences.

<b>GDD076A</b>	<b>Photography I</b>	<b>0-0-4[2]</b>
----------------	----------------------	-----------------

### Objective

- Develop knowledge of principles of aesthetics and visual communication and integrate these principles creatively in still and motion based images and in new media storytelling.
- Demonstrate thorough knowledge and application of DSLR camera techniques for capture of both still, time and video based imagery.
- Develop a thorough and adaptable knowledge of software used in digital imaging and new media storytelling.
- Develop complete digital imaging workflow that includes capture, post processing, ethical considerations of digital techniques based on genre and asset management techniques from image capture to image archive.

<b>Unit 1</b>	Introduction to Photography. History of Photography - the evolution, journey and advancement of photographic techniques and usage in context to development.
<b>Unit 2</b>	The Camera prototype. Introduction and handling of camera. Basics of DSLR Camera. Understanding of Optics & Lenses, and their usage.
<b>Unit 3</b>	Principles of Photography - Understanding of rhythm, balance, pattern, emphasis, contrast, unity and movement. The knowledge about balance and colour patterns.
<b>Unit 4</b>	Study of lights– Taking control over lights, capturing Dramatics from day to night. Natural & Studio light study. Shoot in One light source, Multi-light sources, understanding of Shadow, Silhouette and Exposure.
<b>Unit 5</b>	Composition basics – elements and ideations. Framing, crop factor and introduction to editing.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to understanding of professional practices, communications, organizations and career opportunities in the field of professional photography.
- CO2: An ability to identify the primary working methods (conceptual and illustrative vs. journalistic and found moment) within different genres of photography in order to understand ethically acceptable images.
- CO3: An ability to apply effective lighting techniques in natural, artificial and mixed lighting in a variety of photographic areas including product, still life and portraiture.
- CO4: An ability to Develop a professional body of work and appropriate support material such as website and marketing materials, to showcase personal vision and technical skills.

<b>GDD077A</b>	<b>Production Design</b>	<b>0-0-4[2]</b>
----------------	--------------------------	-----------------

### Objectives

- 1- Student will be able to understand basics of production design, and film language.
- 2- Develop a skill for visualization and conceptualization.
- 3- To make miniature with diagram, and basic mold making.
- 4- Pre production skill development.
- 5- Understand design principals of moving images.

<b>Unit 1</b>	Introduction to Production Design, basic understanding of Film Language.
<b>Unit 2</b>	Visualization & Foundation. Developing empathetic approach for working. Set Illustration, Narrative and Décor in context to it.
<b>Unit 3</b>	Set completion – complete visualization, miniature set design, (diagram based model) Basic molding workshop.
<b>Unit 4</b>	Light design in context to Production. Location Scouting trip. Design principles of moving images.
<b>Unit 5</b>	Submission on basis of Virtual Set Design. The informative interaction for the same.

### Course Outcome

At the end of this course students will have

CO1- An ability to understand basics of production design, and film language. CO2-

An ability to develop skill for visualization and conceptualization.

CO3- An ability to develop skill to make miniature sets with diagram, and basic mould making. CO4- An ability to develop plan and execution pre-production.

CO5- An ability to develop understand design principals of moving images.

 JECRC University JAIPUR

<b>GDD078A</b>	<b>Workshop I – Material Exploration</b>	<b>0-0-4[2]</b>
----------------	--	-----------------

### Objective

- 1 Basic study of forms, shapes,
- 2 Deformation, and model making
- 3 To enhance the brief knowledge of design methodology and steps of the design process.
- 4 Learn and apply the basic knowledge of tools and techniques according to the material to be used.
- 5 Interpreting the natural environment and creating a design with realistic approach.

<b>Unit 1</b>	Basic study of design & shapes in Model making & understanding of new dimensions.
<b>Unit 2</b>	Brief on Design Methodology – the process of development. Design conceptualization in perspective of executional details.
<b>Unit 3</b>	Creating the Miniature forms. The study of objects and subject shaping. Understanding of tools and usage in different variants accordingly.
<b>Unit 4</b>	Creating Natural Environmental Scenario. Application, molding & execution of different segments for creating it on realistic manner.
<b>Unit 5</b>	The finalized submission with proper models and usage of different techniques. Play with variety of materials like Textile, Leather, Clay, Thermacol, Fiber, Paper and Hardboard.

### Course Outcome

At the end of this course students will have:

- CO1 An ability to understand Basic knowledge about forms, shapes,  
CO2 An ability to develop skill for deformation, and model making with concepts.  
CO3 An ability to apply Knowledge of design methodology and steps of the design process. CO4 An ability to apply Basic knowledge of tools and techniques according to the material.  
CO5 An ability to apply advance knowledge of creating design and concepts to more approachable to the real time.

### Objective

- Student will be able to Navigate premiere pro, create and open projects, work with files
- Import media into premiere pro, organize your media once it's imported, use the timeline for video and audio tracks
- Create and work with key frames, add animation and other effects, add transitions, use the colour- correction tools, sync clips from multiple cameras, add text, shapes, and logos to your project, work with audio in the audio workspace, export media from premiere pro, create and edit closed captions
- Produce professional quality print material, Manage documents effectively Indesign is Pro Software in Industry.

<b>Unit 1</b>	Getting Started with lightroom, Lightroom classic library module, Image Manipulation, Organization, Develop Module.
<b>Unit 2</b>	Colorize images manipulation with advanced technique in Photoshop tools, color grading, Advanced tricks for Healing Brush for retouching in Photoshop, clone Tool Stamp in Photoshop, vanishing point to mocking up designs, How to edit video in Adobe Photoshop, Parallax effect.
<b>Unit 3</b>	How to setup a file ready for web UI designing, How to export your web design UI project for Dreamweaver.
<b>Unit 4</b>	Make 3D text & 3D logos, Adding lights & casting shadows using Photoshop 3D, How make a reusable mock-up in Photoshop using smart objects, How to make a simple UI app web design mock-up using Photoshop.
<b>Unit 5</b>	<u>An Overview of Adobe Premiere Pro</u> , An Overview Of The Entire Workflow. Optimizing Your Hardware, Navigating Within The Workspace Customizing Your Workspace, Trimming Clips In Advance - Project Panel And Source Monitor, Animatic Workflow.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to describe what adobe premiere pro is and how it can help you with your video making needs.
- CO2: An ability to Demonstrate installing, setting up, and working with media in adobe premiere.
- CO3: An ability to apply this In-Design training will make familiar with easily manipulating text by setting different font styles, weights and other properties and then saving the style you created to apply to other desired text within the document.
- CO4: An ability to acquire Better job opportunities, quick career growth.

<b>GDD080A</b>	<b>Design Project I - Storyboard Design</b>	<b>0-0-4[2]</b>
----------------	---	-----------------

### Objective

- Student will be able to serves as an outline of the design approach.
- It defines the elements that need to go on each page or movie frame.
- Students will be able to critical study of cinema inform their filmmaking and that the study and practice of film production enhance their work as film scholars and analysts.
- Students will be able to understand the pre-production, production, and postproduction filmmaking process.

<b>Unit 1</b>	Introduction to Story board design, brief on manual process of development. Difference of the Basic Templates and understanding the utility in animation video.
<b>Unit 2</b>	Manual Designing and composition. Importance of Color/BW. The usage of Light & Shadow. Illustrating the actions in accordance to storyboard design.
<b>Unit 3</b>	Conventions of the Camera movements. Shot Selections and understanding. Methods of Montage, Edit and Dynamic Design.
<b>Unit 4</b>	The Sequencing of frame wise design & time management.Introduction and merger of Special Effects. Dialogue based content development.
<b>Unit 5</b>	UX based design thinking & execution. Story Board for interaction design.

### Course Outcome (CO):

At the end of this course students will have:

CO1: An ability to present a clear picture of what will be happening throughout the entire site, what each page will look like, and what each team member/developer will do.

CO2: An ability to draw detailed information on graphics, text, video, sound, audience interaction, colour, type fonts, type size, etc.

CO3: An ability to conduct film research and compose cogent, persuasive, and valid essays about film. CO4: An ability to demonstrate the relationship between film form and aesthetic effect through both film analysis and the creation of motion pictures.

<b>GDD081A</b>	<b>Strategic Communication &amp; Consumer Behavior</b>	<b>2-0-2[2]</b>
----------------	--	-----------------

### Objective

- 1- Student will develop Market understanding and understand consumer behavior.
- 2- Understanding the deference between needs, wants and demands.
- 3- How to plan strategically according to the consumer behavior.
- 4- Learn how to create a design in way it triggers impulsive buying.
- 5- Study top business models and their insides which triggers the consumer behavior.

<b>Unit 1</b>	Introduction to the types of market, knowing the Consumer & Target Audience. Understanding the demand and supply chain for expected buyers.
<b>Unit 2</b>	The Strategic planning, Variations according to the business module. The mode of communication for influencing consumer decisions. Research and Development for expected buyers knowing the inflow and limitations. Key factors of Consumer Behavior impacted by communication strategy; Awareness, Choice, Preference, Accountability and Personalization.
<b>Unit 3</b>	Approaches of Consumer Behavior .Models of Consumer Behavior. Study of the Buying Behavior of consumer– Routine response, Limited Decision Making, Extreme Decision Making and Impulsive Buying.
<b>Unit 4</b>	Relationship between customers and business by communication skills. Defining communication as a core driving force for emerging business modules. Persuasive Communication and its types – Ethos, Logos & Pathos.
<b>Unit 5</b>	The channels of communication in an organization, Personal, Broadcast Media, Mobile, Electronic and written. Building strategic communication for “Business to Business” model & “Business to Customer” model.

### Course Outcome

At the end of this course students will have:

- 1 An ability to understand markets and consumers.
- 2 An ability to develop an understanding between needs, wants and demands.
- 3 An ability to plan strategically according to the consumer behavior.
- 4 An ability to create a design in a way it triggers impulsive buying.
- 5 An ability to understand top business models and their insides which triggers the consumer behavior.

GDD082A	Motion Graphics- I	0-0-6[3]
---------	--------------------	----------

### Objectives

- Student will be able to learn and use adobe illustrator tools and techniques.
- Student will be able to Learn to create charts, icons and 3D typography.
- To learn to create animated stories with a basic knowledge of after effects, Layers, exporting, animation techniques.
- Understand how to create graphics for Information of the Brands
- Deliver process of Product with minimalist information
- Create and work with key frames, add animation and other effects

<b>Unit 1</b>	Advanced Pen Tool Tricks, create icons and typography with Advanced Pen Tool Tricks and Live Shape Effects, multiple strokes to a path, 3D in Adobe Illustrator CC, Semi flat 3D icons & UI design using Adobe Illustrator.
<b>Unit 2</b>	How to make a pie chart line graph & bar graph, Linocut effect, 3D gradient lettering, 3D Ribbon, Puppet Warp Tool settings.
<b>Unit 3</b>	Animated GIF using Adobe Illustrator, Character designing, Mascots, Scenes developing export techniques.
<b>Unit 4</b>	Introduction to after effects, Layer management, exporting, Basic animation techniques.
<b>Unit 5</b>	Create animated story, animation with puppet tool, exporting animation and editing with adobe premiere, sound recording and cleaning process with adobe audition.

### Course Outcome (CO)

At the end of this course students will have:

- CO1:** An ability to communicate with the viewer, and add depth to the story by linking text with graphics for better visualization
- CO2:** An ability to demonstrate installing, setting up, and working with media in adobe after effects
- CO3:** An ability to bring brand to life by using your colors, visuals, & Brand Policies.

### Objectives

- 1 Student will be able to learn the tools and techniques of adobe Premier.
- 2 Student will be able to learn importing and after effects.
- 3 Student will be able to learn editing
- 4 Student will be able to learn sound compilation
- 5 Student will be able Basic understanding of color grading and lumetric color and LUT's

<b>Unit 1</b>	Introduction to Adobe Premier
<b>Unit 2</b>	Importing footage to Premier, understanding the use of after effects with Premier for Video Compositing
<b>Unit 3</b>	Video Editing for Documentary
<b>Unit 4</b>	Taking footage to the sequence for Ad making with sound compilation
<b>Unit 5</b>	Giving final touch by Color Grading and understanding of Lumetric Color and LUT's

### Course Outcome (CO)

At the end of this course students will have:

- CO 1 An ability to, understand the use of after effects with Premier for Video Compositing. CO 2 An ability to demonstrate their knowledge on video editing in their projects.  
CO 3 An ability to develop taking footage to the sequence for Ad making. CO 4 An ability to develop final touch by Color Grading.

GDD085A	Design Project- II Branding & Corporate Identity	0-0-6 [3]
---------	--	-----------

### Objective

- The course will help the students to explore how communication strategies and branding programs are developed and executed in contemporary design practice, which include their extension across a range of applications.
- In this subject, students learn to assess the goals, initiatives, missions and values of a client and communicate the essence of their business visually through signs, symbols, typography, colour and design.
- In addition to creating a corporate identity, they learn to create a brand identity system
- Students learn about the functions of branding through the study of companies' visual identity system that communicates the characteristics of the organisation.

<b>Unit 1</b>	Indicative content. Foundations of branding and evolution of branding concept.
<b>Unit 2</b>	Brand development process; role of insight; understanding values, positioning and essence; brand equity communicating the brand; emotional approaches; communication tools.
<b>Unit 3</b>	Managing the brand portfolio; brand architecture and hierarchy. Brand identity design process; corporate brand identity; role of design; communicating differences. Developing brand touch points; names; packaging; logos.
<b>Unit 4</b>	Brand identity analysis; interpreting the visual manifestation of brand identity. Brand extension; rationale, benefits and risks; distancing techniques; co-branding.
<b>Unit 5</b>	Luxury branding; Veblen effects; communicating values. Services and retail branding; managing the environment. Why branding is important in marketing.

### Course Outcome (CO):

At the end of this course students will have:

- CO1: An ability to identify the value of brand strategies.
- CO2: An ability to differentiate branding projects with different forms of identity applications.
- CO3: An ability to generate a branding strategy for a branding program, apply creativity and critical thinking ability on input of new ideas to create a corporate identity system.
- CO4: An ability to demonstrate the ability to handle a range of extended branding applications.

GDD086A	Portfolio Submission	0-0-4[2]
---------	----------------------	----------

**Objective:**

- To assess the performance of student in the practical training, a final jury will be conducted in the month of January, after commencement of the new session.
- The student have to be present in the jury along with their training reports (properly binded), on the basis of which marks for VI sem. will be awarded.
- The jury will be taken on the Training Report & not on the sheets.

**Note:** Students has to follow the instructions as guided in the training manual.

GDD087A	OFFICE TRAINING (INTERNSHIP)	0-0-16[8]
---------	------------------------------	-----------

#### OBJECTIVE

- To encourage students to work in with relevant industries.
- An avenue to enhance academics learning through hands on work experience.
- Get advice on career from knowledgeable and experienced professionals.
- Gain exposure to a professional work atmosphere.

<b>UNIT 1</b>	<p>In the VI semester, student will undergo a 12 weeks training in a Graphics designing industry /manufacturing unit/ Graphics export unit so that they can understand the existing working practices, conditions and acquire an in depth technical knowhow.</p> <p>The student shall prepare a report on the training given by the organization He/she will submit the report. The student has to submit the certificate regarding successful training with the organization.</p> <p>A Copy of Report has to be submitted with the department along with the performance certificate issued by the firm Manager/ Owner and one with the Firm (where internship is pursued).</p> <p>After the Internship, student has to appear in front of jury members for a presentation seminar, who will judge the performance based on their presentation, report &amp; Viva-voce and award marks to student.</p> <p>Project Report to be submitted</p> <p>Background of industry Number of employees</p> <p>Project detail on which assisted Task and deadlines Manufacturing process</p> <p>Hand &amp; Computer sketches</p> <p>Experience</p> <p>Any other details</p>
---------------	---

#### Course Outcome (CO):

At the end of this course students will have:

An able to place themselves and their work in the context of their selected discipline

An understand their specialist area and the career opportunities available An

understand how to promote themselves and their work professionally.

The aim of this unit is to extend learners' knowledge of professional practices within their specialist area and to relate these to personal goals and career opportunities.

MDE001A	Professional Communication Skills	2-0-0[2]
---------	-----------------------------------	----------

**PREREQUISITE OF THE COURSE**---Communication skills, Knowledge of different department in the industry

#### AIM

The aim of this module is to enhance Professional competence in reading, writing, listening and speaking and Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication

#### OBJECTIVE

- Introduce the importance of communication skills through listening, writing and presenting in the professional context.
- Provide an in depth understanding of effective communication techniques and tools.
- Emphasize on the knowledge of communication strategies to apply appropriately in different situations in the professional context.

<b>UNIT 1</b>	<b>Elements of Communication:</b> Process of Communication; What makes a competent communicator? Characteristics of effective communicator types of communication- intrapersonal, interpersonal, small group communication, public communication, mass communication; Barriers of communication and overcoming the barriers.
<b>UNIT 2</b>	<b>Listening:</b> Types of Listening – Content listening, Empathetic listening, Critical/Evaluative listening; Barriers of Listening; Active Listening to overcome the barriers of listening
<b>UNIT 3</b>	<b>Non-verbal Communication:</b> Characteristics of non-verbal communication; Classification of non-verbal communication – posture & gesture, face and eyes, voice, touch, clothing, distance, time, territoriality; Effective use of non-verbal communication
<b>UNIT 4</b>	<b>Oral Communication:</b> Principles of Oral communication – accuracy, preciseness clarity, courtesy; Identifying behavioral patterns such as dominant, passive, pessimists, optimists, advisors, diplomats and managing these effectively; Etiquette for phone calls and voicemails
<b>UNIT 5</b>	<b>Team Communication:</b> Definition of team and importance of culture of team; Individual's role in the team; Managing – peer to peer, peer to superior relationship, managing peer-subordinate relationship; Managing interactions such as extempore speech, debate, negotiations
<b>UNIT 6</b>	<b>Public Communication: Theme/ Situation based Communication:</b> Choosing theme; defining purpose – general, specific, thesis statement; Analyzing the situation – audience analysis, occasion; Gathering information – internet, library, interviews, personal observation, survey; <b>Organization &amp; Support:</b> Structuring the speech; Principles of Outlining; Logical structuring – using transitions; Beginning & ending speech; Supporting material; Visual aids; <b>Presenting the Message:</b> Dealing with stage fright; Practicing the Speech
<b>UNIT 7</b>	<b>Written Communication:</b> Planning & Execution of Written Content – Planning, Drafting, Completing, Proofreading, distributing; Electronic Messages – Managing the semantics of Emails, Text messaging, Blogs, Podcasts and Vodcasts; Writing Reports, Proposals & Business Plans: Characteristics of Reports, Types of Reports, writing good report; Characteristics of Proposals, Types of Proposals, Making a Proposal and a Business Plan
<b>UNIT 8</b>	<b>Event Management and Media Communication</b> Types of events; Organizing an event; Writing press releases

**COURSE OUTCOME (CO)****At the end of this course students will have:**

CO1: To know the importance of communication. Skill.

CO2: To understand about effective communication techniques and tools. CO3: To understand about the different situations in the professional context. CO4: To know about the communication strategies.

<b>MDE003A</b>	<b>Entrepreneurship</b>	<b>2-0-0[2]</b>
----------------	-------------------------	-----------------

### AIM

This course aims to impart basic skills and understandings to run a business efficiently and effectively. The course also provides insights to students on entrepreneurship opportunities

### OBJECTIVE

- Types of businesses, design thinking and LMC.
- Analysis of the data and know the target customers, market size, competition and create MVP.
- Various branding and marketing tools such as SEO, digital marketing, PR and websites.
- Understanding costing, revenue, investments and unit economics.
- Components of pitch deck, how to pitch to investors.

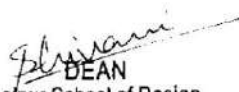

<b>UNIT 1</b>	<b>Introduction to Entrepreneurship and Business Essentials</b> Who is an Entrepreneurs and Types of Businesses? The Lean Approach. Designing Thinking. Lean Model Canvas / Business Model Canvas
<b>UNIT 2</b>	<b>Forecasting Demands and Acquiring Customers</b> Identifying the Target Audience / Customer. Analyzing the Target Market (TAM, SAM, SOM). Conducting Surveys. Building an MVP based on the Survey. Analyzing Competition.
<b>UNIT 3</b>	<b>Brand Building and Establishing Brand Presence</b> Digital Marketing and Social Media Marketing. SEO. Basics of PR and Importance of Digital Presence. Building a Website – Tools and Techniques.
<b>UNIT 4</b>	<b>Understanding Finance and Planning for Investment</b> Creating a Revenue Model. Developing Sales Projects, Unit Economics, Investment Deck.
<b>UNIT 5</b>	<b>Building a Pitch Deck</b> Analyzing Essential Components of Pitch Deck. Data Collection and Content Generation for Pitch Deck. Designing a Pitch Deck. Art of Pitching to an Investor

### COURSE OUTCOME (CO):

**At the end of this course students will have:**

- CO1: To approach the ideas through design thinking and create its LMC. and identify the demand and its customers. CO2: To analyze the data and obtain info like target market, market size, competition.
- CO3: To create the MVP for the business, and do branding and marketing through SEO, social media, website and various other digital marketing tools.
- CO4: To understand financials of a business such as various costs, unit cost, revenue, unit economics and various investment deck and to collect and put the data in various components of pitch deck and able to pitch in front of the investors.

----------------	--	-----------------

**PREREQUISITE OF THE COURSE** – Basic Pattern making of women’s, men’s and kids.

#### **OBJECTIVE**

- To learn industrial pattern making & Grading
- To understand design, measurement and sizes as per the industry requirements

<b>UNIT 1</b>	Interpret Technical Package and Garment Specification.
<b>UNIT 2</b>	Take Body and Garment Measurements
<b>UNIT 3</b>	Create Basic Bodice Block and Pattern for Garments
<b>UNIT 4</b>	Perform Pattern Grading for Garment Production
<b>UNIT 5</b>	Develop Professionalism

#### **COURSE OUTCOME (CO)**

**At the end of this course students will have:**

- Know job requirements of technical package ,Communicate with others and work in a team
- Apply health and safety requirement.
- Use and maintain drafting and grading tools and create basic block and other patterns
- Take body and garment measurements and perform grading and production
- Demonstrate professionalism and manage time

<b>MDE006A</b>	<b>Design Project &amp; Documentation – 1 (Women Wear)</b>	<b>0-0-8 [4]</b>
----------------	--	------------------

**PREREQUISITE OF THE COURSE** – Design process, fashion illustration, Pattern making and garment construction.

#### **OBJECTIVE**

This module represents culmination of your learning experience and skills development acquired in the previous programme modules. It enables you to realize and confirm your individual practice from your negotiated project proposal.

You will consolidate your knowledge and skills to evidence a sustained, critically informed body of work that is original and creative in its scope and ambition, demonstrating a professional approach, using your technical skills and in-depth knowledge of your subject specialism.

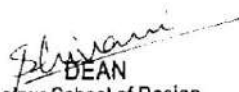

The realization of your project will be supported through a combination of teaching and learning activities that include tutor feedback and peer learning before a final presentation and exhibition.

<b>UNIT 1</b>	<b>Research &amp; Analysis</b> Planning. Forecasting. Research process. Fashion market and marketing environment research
<b>UNIT 2</b>	<b>Concept</b> Illustrate the idea of design through various mediums. Selection and implementation of proper colors and medium in fashion product. Brainstorming and ideation on papers.
<b>UNIT 3</b>	<b>Form Generation</b> Design Illustration and Silhouette. Patterns and Grading. Prototypes.
<b>UNIT 4</b>	<b>Computer Aided Design</b> Fashion Illustration. Documentation Manual & digital Technical Design and Tech Packs. .
<b>UNIT 5</b>	<b>Checks &amp; Tests</b> The quality checks examine the design from various angles like aesthetics, performance, durability, strength, functionality etc. <b>Presentation &amp; Documentation</b> Oral, written, documentation, digital. Sketchbooks; maquettes; plans; photographs; performance; 2D; 3D; time-based

#### **COURSE OUTCOME (CO)**

**At the end of this course students will have:**

- CO1: To investigate trends, through contextual research, to inform the strategy for a fashion collection. CO2: To communicate a fashion collection strategy, based on research and experimentation.
- CO3: To develop a cohesive fashion collection, in response to a brief.
- CO4: To present a fashion collection, identifying areas for further development and best practice, evaluate the project outcomes. And present the project outcomes.

MDE007A	Trends Research, Analysis & Forecasting	1-0-0 [1]
---------	---	-----------

#### OBJECTIVE

- Critically analyze, synthesize and reflect on complex theories and recent developments, both local and international, at a micro and macro level, to extend and challenge knowledge and practice in fashion entrepreneurship.
- Investigate emergent global entrepreneurial issues and strategically respond to their impact in the fashion and textiles industry.
- Identify, evaluate and communicate the potential impact of cultural, social, economic and technological components in the trend forecasting process.

<b>UNIT 1</b>	Trend Materials & Fashion Development <ul style="list-style-type: none"> <li>• Materials for research</li> <li>• Color practice</li> <li>• Interactions between colors and materials</li> <li>• Briefing and mood board creation</li> <li>• Materials art buying</li> <li>• Product development</li> </ul>
<b>UNIT 2</b>	Trend Design research, Transmission and interpretation <ul style="list-style-type: none"> <li>• Fashion trend terminology</li> <li>• The trend industry</li> <li>• Nature of trends</li> <li>• Trends in urban environment</li> <li>• Information Management</li> <li>• Visualization techniques</li> </ul> Argumentation Strategies
<b>UNIT 3</b>	Fashion market and marketing environment research <ul style="list-style-type: none"> <li>• Market research</li> <li>• Trend research techniques</li> <li>• Research design &amp; data sources</li> <li>• Sampling methods</li> <li>• Evaluating the collections</li> <li>• Forecasting Fashion</li> <li>• Market Segmentation marketing mix</li> <li>• Fashion consumer</li> </ul>
<b>UNIT 4</b>	<b>Trend Analysis</b> <ul style="list-style-type: none"> <li>• Evolution of fashion trend</li> <li>• Fashion trend implications for design/retail decisions</li> <li>• Consumer influence on market</li> </ul>
<b>UNIT 5</b>	<b>Fashion Forecasting</b> <ul style="list-style-type: none"> <li>• Fashion Forecasting Process</li> <li>• Diffusion of Innovation</li> <li>• Fashion Cycles</li> <li>• Cultural Indicators</li> <li>• Color Forecasting</li> <li>• Textile Forecasting</li> <li>• Styling Forecasting</li> <li>• Sales Forecasting Competitive Analysis</li> </ul>

**COURSE OUTCOME (CO)**

**At the end of this course students will have:**

- CO1: To assess and review the requirements and operational methods of the role of a trend forecaster relevant to fashion and textiles entrepreneurship.
- CO2: To substantiate and apply appropriate research methodologies to identify and analyze alternative research sources for identifying global trend directions.
- CO3: To research and critically analyze the challenges and opportunities of translating trend scenarios into the development of textile and fashion products

MDE008A	Operations and Supply Chain Management	2-0-0 [2]
---------	--	-----------

**PREREQUISITE OF THE COURSE** – Knowledge of apparel manufacturing technology and garment construction

**OBJECTIVE**

- It enables students to understand the need to implement an appropriate operation's strategy for a supply chain and logistics company.
- It offer the students a vast avenue of understanding on the major strategic issues and trade-offs in supply chain management which acquires analytical capability to uncover problems and suggest improvement.

<b>UNIT 1</b>	<b>Introduction to Production/Operations Management:</b> Meaning & Introduction to Production & Operations Management - Scope of Operations Management w.r.t. Design & Selection of Product, Selection & Planning for Process as well Layout, Selection of Location, Aggregate and Capacity Planning, Types of Production systems and Operational/Short Term Decisions - Criteria of Performance
<b>UNIT 2</b>	<b>Services:</b> Meaning of Service & Intangibility of Service - Customer's view w.r.t. Service - Comparison between Services & Goods - Non-inventor ability of services & Customer Involvement - Service Matrix & Implications for Operations Policy - Determinants of Service Quality
<b>UNIT 3</b>	<b>Outsourcing:</b> Business Process Outsourcing (BPO) - Make or Buy - Quality considerations - Quantity considerations - Cost considerations - Service considerations - Other considerations - Sub-contracting
<b>UNIT 4</b>	<b>Introduction to supply chains:</b> Importance of supply chains, decision phases, process view, drivers of supply chain – facilities, inventory, transportation, information, sourcing, pricing. Demand forecasting: characteristics of forecasts, bull whip effect, forecasting methods – basic approaches, role of IT in forecasting. Aggregate Sales & Operations planning: Role of aggregate planning in supply chain, aggregate planning strategies, role of IT in aggregate planning
<b>UNIT 5</b>	<b>Supply Chain:</b> Role of sourcing in a supply chain, in house or outsource, third party and fourth party logistics providers, supplier scoring and assessment, supplier selection – auctions and negotiations, contracts and supply chain performance, design collaboration, procurement process, sourcing planning and analysis.
<b>UNIT 6</b>	<b>Coordination in a supply chain:</b> Bullwhip effect impact on performance, obstacles to coordination in a supply chain, managerial levers to achieve coordination, vertical integration, partnerships, continuous replenishment and vendor managed inventories, collaborative planning, forecasting and replenishment.

**COURSE OUTCOME (CO)****At the end of this course students will have:**

CO1: To understand about the appropriate operation's strategy for a supply chain and logistics company. CO2: To understand the major strategic issues in supply chain management.

CO3: Students will be able to recommend improvement along the dimensions of efficiency, quality and speed, and improved team-work capability to cooperate with others to solve business operations problems in supply chain management.

MDE014A	Elective 2-Fashion Styling and Photography	0-2 [1]
---------	--	---------

**PREREQUISITE OF THE COURSE** – Knowledge of Fashion Collection, Fashion drawing, Sewing techniques, Fashion draping.

#### OBJECTIVE

The course aims at various areas of Fashion, Beauty and Clothing where students would be exposed to Movie styling, Character styling, Lifestyle styling and Prop Styling. This course would include concepts of equipment used and the lightning concepts that need to be taken into consideration for fashion photographs. This course would enable the students to take photographs for their portfolios and fashion shows.

<b>UNIT 1</b>	Introduction to Fashion Styling and Photography: Meaning, Types- editorial styling, Fashion styling, Wardrobe styling, catalogue styling, prop styling, set styling, personal styling, celebrity styling. Introduction to fashion photography: magazine photography, advertising photography icons and trendsetter, taking inspiration, choosing a style, tools and equipment required – camera, lens, tripods and monopods, camera controls and operations.
<b>UNIT 2</b>	Make-Up, Hairstyle and Basic Studio Photography: Introduction to make up artistry, history of makeup, special effect makeup, fantasy makeup, character make up, different hairstyles. Select any two artists and their styles and techniques. Photography in studio: Basic studio requirements, basic lighting, studio flash, setting the backdrop
<b>UNIT 3</b>	Final Project and Portfolio: Thematic fashion styling, Portfolio, Fashion make up Team building: Fashion protocols, assistants, styling, sourcing models, testing for models. Creating pictures: Composition, content, attitude, movement versus static, the frame, sourcing clothes, props and set design, managing a shoot. The Portfolio: Editing process, putting stories together, printing photos, styles of presentation. Portfolio should include – Developmental sketches and stage wise photographs of the forms develop under the above modules.

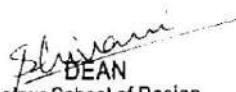

#### COURSE OUTCOME (CO)

**At the end of this course students will have:**

- CO1: Students would be able to understand about the Movie styling, Character styling, Lifestyle styling and Prop Styling.  
CO2: Students would be able to understand about the concepts of equipment used and the lightning concepts that need to be taken into consideration for fashion photographs.  
CO3: Students will be able to understand how students to take photographs for their portfolios and fashion shows.

MDE020A	Portfolio	0-0-4 [2]
---------	-----------	-----------

**PREREQUISITE OF THE COURSE** – Knowledge of all the software that we used in the fashion industry.

**AIM:**

Design portfolio is the expression of student to translate themes into design collections. Here one gets inspired by different themes which could be art movements, sport, historic eras, music, dance, culture, nature, traditions etc. and picks out tangible and intangible elements which are to be used as design elements in the collection. The ability of a designer to exhibit and use design elements is highlighted which is further translated into garments. A portfolio is an exhibit of the overall knowledge of the student work which he/she has gained through the course of four years. The purpose lies in promoting the skills of students in a single format.

**OBJECTIVE**

Students will present a portfolio of all the files/ folders/ projects created during the course of study in I to III year. The portfolio should include projects, industrial visit reports, any other projects made during the academic session. The external examiner will evaluate the portfolio and take a viva of the student.

 Jaipur School of Design  
 JECRC University JAIPUR

<b>MDE025A</b>	<b>Office Training (Internship)</b>	<b>0-0-48 [24]</b>
----------------	-------------------------------------	--------------------

**Learning Objective:**

This course will prepare students to enter into full-time employment in their area of specialization upon Post graduation. It will provide students with the opportunity to test their career aptitude and aid them adjusting from college to full-time employment. It will present students with the opportunity to develop attitudes conducive to effective interpersonal relationships, increase their sense of responsibility, and help them acquire good work habits. It will offer the opportunity for students to understand informal organizational interrelationships and provide in-depth knowledge of the formal functional activities of a participating organization.

<b>UNIT 1</b>	First hand exposure to an apparel organization, designer or Export House and their working structures and systems.
<b>UNIT 2</b>	Specific project on the job to sharpen skills required for chosen area of specialism. Further development of generic/cognitive skills.
<b>UNIT 3</b>	Identification of industry for internship with student's career path in mind.
<b>UNIT 4</b>	Internship log book: is a tool to help you record your daily activities along with a reflection on the same. Reflective writing enables the documentation experiences, thoughts questions, ideas and conclusions that signpost the learning journey.
<b>UNIT 5</b>	Internship report: will focus on study of the organizational structure & development objective of the internship. Personal design philosophy & career path linked to learning in the internship. Learning process and its analysis as internship progresses through detailed processes and projects undertaken. Report should be a reflection of the internship experience of the personal & professional development.

**COURSE OUTCOME (CO):**

At the end of this course students will have:

CO1: To identify business strategies for buying and selecting product. CO2:

To identify process and procedures for company purchases.

CO3: To explore the buying process, increase skills in buying and merchandising.

CO4: To understand that how they write a report of their industry experience and develop written communication skills

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

CO2		M			M	M						M					
CO3		M			M	M						M					
CO4		M			M	M						M					

<b>MDE026A</b>	<b>DESIGN &amp; DRAFTING</b>	<b>0-4-0[2]</b>
----------------	------------------------------	-----------------

## OBJECTIVE

- Design Learners Need To Learn To Visualize And Communicate Their Concepts/Ideas Through Various Representation Techniques Like Freehand Drawing And Sketches Through Manual And Digital Methods.

<b>UNIT 1</b>	Introduction To Drafting, Drafting Tools, Surface And Fundamentals Pencils, Parallel Bar, Set-Square, Variety In Sheets(Sizes), Scales Etc.
<b>UNIT 2</b>	Fundamentals Of Drafting Vocabulary Of Architecture, Scaling, Lines, Symbols, Lettering, Etc.
<b>UNIT 3</b>	Orthographic Drawings, Section Drawings.
<b>UNIT 4</b>	Isometric Drawings-Grid, Projection Of 3D Geometry, Analytical Drawings.
<b>UNIT 5</b>	Digital Drafting -Autocad

## COURSE OUTCOME (CO)

### At The End Of This Course Students Will Have:

CO1: Develop An Understanding Of Various Marking Devices And Surfaces And Learn To Draw Through Observation And Using Motor Skills.

CO2: Develop Skills To Understand The Size, Scale, And Proportion, Surface Textures Through Drawing Techniques Of Line, Shapes And Volume.

CO3: Develop Techniques Of Various Methods Of Visual Representation Such As Longhand Drawing, Isometric Drawings, Perspective Drawing.

CO4: Illustrate The Ability Of Design Idea Through 2d And 3d Visuals.

CO5: To Observe The Environment And Draw Exterior And Interior Spaces.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Outcome Specific				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5

CO5							H										

**TEXT BOOKS:**

- I.H. Morris, Orient Longman, Chennai -Geometrical Drawing For Art Students.
- M.S. Kumar, D.D. Publications, Chennai Engineering Drawing.
- Architectural Drafting And Design By Alan Jefferis, David. A. Madsen.
- Hand Drafting For Interior Design By Diana Bennett Writz.

**Reference Books:**

- Allen Tate- Harper & Row Publishers, New York, 1987. The Making Of Interiors- An Introduction.
- Sherrill Whiton- Prentice Hall, Fourth Edition- 1974-Interior Design & Decoration.

<b>MDE030A</b>	<b>DESIGN PROJECT - I</b>	<b>0-10-0[5]</b>
----------------	---------------------------	------------------

### OBJECTIVE

The Emphasis Of The Project Is On Individually Planned Design Projects That Involve Considerations Of Interactions With Product / Communication System, Wide Range Of Requirements Of Different Users And Scope For Visual, Formal, And Structural Innovations.

Pre-Requisite: Design Project

Selection of Project. Literature Review, Investigation and Exploratory Studies of Problem Area Including User Studies to Define the Design Brief. Ideation and Visualization Applying Concept Generation Techniques. Evaluation Techniques for Concept Selection. Documentation Of The Design Process And Conclusion Of Phase I With A Submission Of A Report And Presentation Of Design Concepts.

The Project Is Supported By Theoretical Information And Assignments In The Complementary Nature Of Systematic And Creative Thinking In The Various Stages Of The Design Process And Visual, Structural, And Functional Analysis Of Design System.

These Will Be Developed And Presented In The Form Of Appropriate And Tangible Design Solutions Including Models, Graphic Solutions Etc.

### COURSE OUTCOME (CO):

At The End Of This Course Student Will Have:

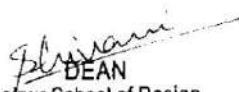

CO1: Understand the Project Studies, Case Studies of Various Related Topics For Interiors Will Be Used. Presentation Of Data Collected Will Be Done By Means Of Seminars / Visits / Books /Visuals.

CO2: Understand About The Anthropometric & Ergonomics.CO3: Understand How To Work In A Professional Context.

CO4: The Outcome Of The Project Will Be In The Form Of Innovative And Conceptual DesignProposal That Reflect The Students Understanding Of The Design Process.

MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

<b>MDE031A</b>	<b>MODEL MAKING WORKSHOP</b>	<b>0-4-0[2]</b>
----------------	------------------------------	-----------------

### Course Objectives

To Introduce The Students To Basics Of Model Making With Various Materials.

<b>UNIT 1</b>	<b>INTRODUCTION TO MODEL MAKING</b> Introduction To Concepts Of Model Making And Various Materials Used For ModelMaking.
<b>UNIT 2</b>	<b>BLOCK MODELLING</b> Preparation Of Base For Models Using Wood Or Boards • Introduction To Block Models Of Buildings (Or 3D Compositions) Involving The Usage Of Various Materials Like Thermocol, Soap/Wax, Boards, Clay Etc.
<b>UNIT 3</b>	<b>DETAILED MODELLING</b> Making Detailed Models Which Include The Representation Of Various Building Elements Like Walls, Columns, Steps, Windows/Glazing, Sunshades, Handrails Using Materials Like Mount Board, Snow-White Board, Acrylic Sheets. • Representing Various Surface Finishes Like Brick/Stone Representation, Stucco Finish Etc. Various Site Elements – Contour Representation, Roads/Pavements, Trees/Shrubs, Lawn, Water Bodies, Street Furniture, Fencing Etc.
<b>UNIT 4</b>	<b>INTERIOR MODELS OF INTERIOR SPACES</b> Making Models Of The Various Interior Spaces Such As • Residences • Offices • Retail Spaces • Recreational Spaces Scaled Models Of Furniture.
<b>UNIT 5</b>	Introducing The Techniques Of Planning, Chiselling & Jointing In Timber To Learn The Use Of Hand Tools. Exercise Involving The Design Of Simple Furniture And Making A Model Of The Same.

### Course Outcomes (CO):

At The End Of This Course Student Will Have:

CO1: Develop An Understanding Of Various Marking Devices And Surfaces And Learn To DrawThrough Observation And Using Motor Skills.

CO2: Develop Skills To Understand The Size, Scale, And Proportion, Surface Textures ThroughDrawing Techniques Of Line, Shapes And Volume.

CO3: Develop Techniques of Various Methods of Visual Representation Such As Longhand Drawing, Isometric Drawings, and Perspective Drawing.

CO4: Illustrate The Ability Of Design Idea Through 2d And 3d Visuals.

CO5: To Observe The Environment And Draw Exterior And Interior Spaces.

<b>MDE032A</b>	<b>ESTIMATING &amp; COSTING</b>	<b>0-4-0[2]</b>
----------------	---------------------------------	-----------------

### Objective

- Implement An Interior Design Project & Also To Monitor / Control Project Cost.

<b>UNIT 1</b>	<b>INTRODUCTION TO ESTIMATION:</b> Estimation – Definition, Purpose, Types Of Estimate, And Procedure For Estimating The Cost Of Work In Order To Implement An Interior Design Project Or To Make Products Related To Interior Design Like Furniture, Artifacts Etc.
<b>UNIT 2</b>	<b>RATE ANALYSIS &amp; ESTIMATION FORMAT :</b> Rate Analysis – Definition, Method Of Preparation, Quantity & Labour Estimate For Woodwork, Steelwork, Aluminium Work, Glass & Its Rate For Different, Thickness & Sections, Finishing (Enamel Paint, Duco Paints, Melamine, DU Coats, Hand Polishing, Veneering And Laminating) For Walls & Ceilings. Electrical & Plumbing Products, Wiring, Ducting Etc., And Laying Of Tiles & Wall Panelling In The Estimate Format Of The Project.
<b>UNIT 3</b>	<b>DETAILED ESTIMATE:</b> Detailed Estimate – Data Required, Factors To Be Considered, Methodology Of Preparation, Abstract Of Estimate, Contingencies, Labor Charges, Bill Of Quantities, Different Methods Of Estimate For Interior Design Works, Methods Of Measurement Of Works.
<b>UNIT 4</b>	<b>COSTING OF FIXTURES &amp; FITTINGS:</b> Cost Of The Following Items: Electrical Fitting Like, Luminaries, Fan, Cables, Switches Etc., Tiles In Skirting & Dado, Cement Plaster, Joinery In Wood, Steel & Aluminium, Painting To Walls – Cement Paint, Oil Paints , Distemper Acrylic Emulsion, Enamel Paint Painting To Joinery, Varnishing, French Polishing Plumbing Equipment Like Piping, Shower Panels ,Cubicles, Tubs, Jacuzzis , Taps, Motors, Fountains, False Ceiling Of Aluminium Panels, Steel & Wooden Frame Work, Thermocol Etc. Wall Panelling Of Ceramic Tiles & Other Tiles Of Materials Suitable For The Same, Partitions Made Of Materials Like Aluminium Wood, Steel Etc.
<b>UNIT 5</b>	<b>INTRODUCTION TO SPECIFICATION :</b> Specification – Definition, Purpose, Procedure For Writing Specification For The Purpose Of Calling Tenders, Types Of Specification. Specification For Different Item Related To Interior Design Project – Woodwork For Furniture Window Frames & Pelmet, Partitions Etc. Also Of Materials Like Steel Aluminium Glass Of Various Kind. Wall Panelling & False Ceiling Of Materials Like Aluminium, Steel, Wood, Electrical, Plumbing, Air-Conditioning & Fire Fighting Equipment.

### **Course Outcome (CO):**

At The End Of This Course Student Will Have:

CO1: Develop An Understanding Of Various Marking Devices And Surfaces And Learn To Draw Through Observation And Using Motor Skills.

CO2: Develop Skills To Understand The Size, Scale, And Proportion, Surface Textures Through Drawing Techniques Of Line, Shapes And Volume.

CO3: Develop Techniques Of Various Methods Of Visual Representation Such As Longhand Drawing, Isometric Drawings, And Perspective Drawing.

CO4: Illustrate The Ability Of Design Idea Through 2d And 3d Visuals.

CO5: To Observe The Environment And Draw Exterior And Interior Spaces.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>MDE033A</b>	<b>INTERIOR MATERIALS &amp; SPECIFICATION</b>	<b>3-0-0[3]</b>
----------------	---	-----------------

### Objective

- Design Learners Need To Learn To Visualize And Communicate Their Concepts/Ideas Through Various Representation Techniques Like Freehand Drawing And Sketches Through Manual And Digital Methods.

<b>UNIT 1</b>	Floor Coverings & Wall Coverings Rugs, Carpets, PVC Coverings, Vinyl Floors, Linoleum Floors, Wallpapers, Paints & Finishes, Cladding; Market Survey.
<b>UNIT 2</b>	Interior Furnishings Curtains, Blinds, Upholstery, Tapestry, Covers, Cushions, Bathroom & Table Linen-Styles, Material Classification, Functions, Fittings; Market Survey.
<b>UNIT 3</b>	Kitchen & Toilets Fixtures & Fittings; Finishing Material; Market Survey
<b>UNIT 4</b>	Door & Window Hardware Hinges, Handles, Locks, Door Stoppers, Etc.- Types, Material Classification, Function; Market Survey.
<b>UNIT 5</b>	Lighting Natural & Artificial- Fixtures, Fittings, Light Controls- Switches, Dimmers, Contractors, Photocells, Timers, Occupancy Sensors, Light Sensitive Controls, Decorative Lighting Style, Special Effect Lighting, Selection Of Amount Of Lighting For An Area, Market Survey.

Course Outcome (CO):

At The End Of These Course Students Will Have:

CO1: An Ability To Understand The Construction Detail That Use A Variety Of Techniques, Including Manual Drafting, To Convey The Design Solution Clearly.

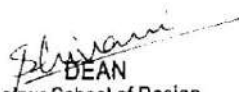

CO2: An Ability to Understand the Interior Design on Material and Construction Methodology. CO3: An Ability to Understand the Hardware Detail of Elements Such As Doors & Windows.

MDE035A	DESIGN PROJECT - 2	0-10-0[5]
---------	--------------------	-----------

## OBJECTIVE

Identify And Conserve The Untapped Values And Principles Of Vernacular Design Theories For Architectural Creations, Highlight Needs And Various Ways Of Vernacular Building Research, Analysis, Presentation Of, Finding And Its Application To Contemporary Buildings.

<b>UNIT 1</b>	<b>Case Studies Of Works Of Designers And Architects In Contemporary World Architecture</b> Case Studies Of Works Of Designers And Architects In Contemporary World Architecture (Outside Indian Subcontinent) whose Works Are Influenced By The Vernacular Design Of The Region.
<b>UNIT 2</b>	<b>Case Studies Of Works Of Designers And Architects In Contemporary Indian Styles</b> Case Studies Of Works Of Designers In Contemporary Indian Style; whose Works Are Influenced By The Vernacular Architecture Of The Region.
<b>UNIT 3</b>	<b>Design Project</b>

## COURSE OUTCOME (CO):

At The End Of This Course Students Will Have:

CO1: Be Able To Manipulate Interior Environments to Meet Design Requirements.

CO2: Be Able To Respond To the Aesthetic and Functional Requirements of an Interior Design Brief.

CO3: Be Able To Employ Technical Processes to Respond To an Interior Design Brief. CO4: Be Able To Understand the Role of Vernacular in Design.

<b>MDE036A</b>	<b>Digital Software-I (Furniture Design And Detailing)</b>	<b>0-4-0[2]</b>
----------------	--	-----------------

### Objective

- The Course Shares Fundamental Knowledge On Digital Software To Enable The Student To Make Effective Audio Visual Presentations, Create Two Dimensional Drawings And Three Dimensional Visualization Of Interiors.
- This Unit Intends To Equip The Students With Concepts And Principle Of CAD Pertaining To Interior Design Using Software Like AUTOCAD And Similar Ones.

<b>UNIT 1</b>	Fundamentals Of Photo Editing And Presentation Skills With Adobe Photoshop /Coreldraw.
<b>UNIT 2</b>	2D Drawings With Autocad
<b>UNIT 3</b>	3D Modelling Through Sketch Up
<b>UNIT 4</b>	Rendering With V-Ray
<b>UNIT 5</b>	3D Drawings- Introduction To 3D3D Forms Material Application Rendering Tools & Techniques Project Setting Up Plotters And Print

Course Outcome (CO):

At The End Of This Course Student Will Have:

CO1: Knowledge On Basic Software Required For Design Presentations.

CO2: An Ability to Understand The Total Use Of All Commands Relate To Windows And AutoCAD For Making Designs.

CO3: An Ability to Understand the 2D Drawings Line Compositions to Be Taken Color Compositions, Painting In Windows,

CO4: An Ability To Understand The Drawing Simple Geometry Objects And Drafting Of Room Give Building /Apartment / Flat And Bungalows.

<b>MDE037A</b>	<b>Design Project-II (FURNITURE DESIGN AND DETAILING)</b>	<b>0-0-4[2]</b>
----------------	---	-----------------

### Objective

- To Familiarize Students With Understanding Furniture Categories: Exploration Of The Idea Of Furniture, Role Of Furniture In Interior Design, Design Approaches In Furniture Design.

<b>UNIT 1</b>	Styles Of Furniture: Traditional, Contemporary, And Modern Design. Furniture For Different Purpose.
<b>UNIT 2</b>	Seating Design: Different Types Of Seating With A Focus On The Following – Functionality, Aesthetics, Style, Human Factors, And Ergonomics.
<b>UNIT 3</b>	Modular Approach To Furniture Design: Soft Furnishings. Meaning, Importance – Relationship Of Furnishings With Space, Selection And Use Of Furnishings. Visiting To Different Manufacturers To Understand Material And Its Processes.
<b>UNIT 4</b>	Batch Production And Mass Production Of Furniture. Technical Considerations Of Internal Subsystems Of Furniture And Their Influence On Detailing. Selection Of Natural, Synthetic, And Manmade Materials And Their Processes For Detailing Furniture For Manufacture. Detailing Mechanisms For Foldable, Stackable, And Collapsible Considerations Of The Furniture. Design Detailing Of Components Vis-À-Vis Considerations Of Manufacture, Maintenance, And Assembly.
<b>UNIT 5</b>	Design Problem: Exercise Oriented For Designing Some Furniture By Creative Explorations, Observation, And Constraints Along With Measured Drawing – Plan, Elevation And Drawings On Full Scale Supported By Prototype Making.

### Course Outcome (CO):

At The End Of This Course Student Will Have:

CO1: Be Able To Research and Studying Furniture Pieces.

CO2: Be Able to Becoming Familiar with Basic Traditional and Modern Joinery of Furniture's. CO3:

Be Able To Sketching Basic Joints Used In Furniture and Cabinet Making. CO4: Be Able To Develop

Knowledge and Critical Comprehension of Key Concepts,

Methodologies, Current Trends, and Theoretical Approaches in All Studio Concentrations In Order To Understand the Relationship among Them.

MDE039A	Interior Landscape	0-4-0[2]
---------	--------------------	----------

### Objective

- To Develop An Understanding About The Design Of Interior Landscape With Special Emphasis On The Choice And Care Of Plant Materials Used In The Interior Spaces.
- To Study about the Various Landscaping Elements and Their Application in Interior Spaces.
- To Study The Concepts Of Interior Landscaping And Their Application In The Design Of Interior Spaces.

UNIT 1	<b>INTERIOR LANDSCAPING</b> Definition, Classification Of Plants, Indoor Plants And Their Functions, Layout & Components, Floriculture – Commercial, Ornamental, Selection Of Plants & Pest Control.
UNIT 2	<b>PHYSICAL REQUIREMENTS OF PLANTS</b> Physical Requirements Of Plants – Light, Temperature, Water, Planting Medium, Soil Separator, Weight Of Plants, Acclimatization & Maintenance. Techniques To Meet Physical Requirements.
UNIT 3	<b>INTERIOR LANDSCAPING ELEMENTS &amp; PRINCIPLES</b> Various Interior Landscaping Elements – Water Bodies - Pools, Fountains, Cascades Plants, Rocks, Artifacts, Paving & Lighting, Design Guidelines- Plant Texture & Colour, Plant Height, Plant Spacing.
UNIT 4	<b>ROOF AND DECK LANDSCAPE</b> Protection Of The Integrity Of The Roof And Structure, Provisions For Drainage, Light Weight Planting Medium, Irrigation, Selection Of Materials, Water Proofing, Provision For Utilities And Maintenance.
UNIT 5	<b>EXERCISE ON INTERIOR LANDSCAPE</b> Courtyard Design An Outdoor Room Design Terrace Garden

### Course Outcome (CO):

At The End Of This Course Student Will Have:

CO1: An Ability to Understand the Theory and Design of Landscape and Site Plan.

CO2: An Ability to Develop the Design of Interior Landscape with Special Emphasis on the Choice And Care Of Plant Materials Used In the Interior Spaces.

CO3: An Ability To Develop And Understanding About The Design Of Interior Landscape With Special Emphasis On The Choice And Care Of Plant Materials Used In The Interior Spaces.

**Suggested Readings:**

1. Residential Landscape Design by Dean Herald.
2. Residential Landscape Architects by Norman K Booth & James E. Hiss.

MDE040A	Digital Software-II	0-4-0[2]
---------	---------------------	----------

### Objective

- This Unit Intends To Equip The Students With Concepts And Principle Of CAD PertainingTo Interior Design Using Software Like AUTOCAD And Similar Ones.
- This Unit Intends To Equip The Students With Throughout Knowledge Of Application Of Computer In Interiors And Efficient Working In 3D & 3D Animation And Walk Through.

<b>UNIT 1</b>	<b>Module 1:</b> Introduction - About Max System Configuration Max Interface Customize Viewports Standard Primitives Creating Objects Using Keyboard Entry Setting Projec Creating Extended Primitives Defining Object Name & ColorUsing Manipulator Using Navigation Tools Transforms [Move, Rotate, And Scale With Short-Cut Keys]Using Absolute / Relative Transform Type-In Dialog Box Restrict To X, Y, Z, XY, YZ, ZX With Short-Cut Keys Using Clone (Copy Option Only)
<b>UNIT 2</b>	<b>Module 2:</b> PHOTOSHOP
<b>UNIT 3</b>	<b>Module 3:</b> Applying Basic 3D Modifiers – Bend, Taper, Twist, Noise ,Relax, Skew. Applying Basic 3D Modifiers-Affect Region, Displace, Lattice, Mirror, Push,Ripple, Stretch, Squeeze, And Spherify, Shell, Slice And Wave. 2D-Shapes, About Start New Shape. Editing Line Object 2D Modifiers - Edit Spline Modifier, Lathe, Extrude, Bevel, BevelProfile,Sweep, Fillet/Chamfer Compound Objects – Boolean AEC Extended Objects – Foliage, Railing, And Wall, Stair, Doors, Windows.

<b>UNIT 4</b>	<p><b>Module 4:</b></p> <p>Introduction To Lights - Standard Lights – Omni Target Spot, And Free Spot</p> <p>Target Direct, Free Direct, Sky Light, ,</p> <p>Photometric Lights –Target Point, Free Point, Target Linear, Free Linear,Target Area, Free Area.</p> <p>Copying Objects – Clone, Instance, Reference, Array, Spacing Tool, NormalAlign, And Align View, Align Camera.</p> <p>Working With Shape BooleanEdit-Spline</p> <p>Compound Object- Loft</p> <p>Deforming Loft Objects – Scale, Twist, Teeter, Bevel, Fit – Modifying Objects</p>
---------------	---

<b>UNIT 5</b>	<b>Module 5:</b> Fill, Stroke. Changing The Background Color, Foreground Color. Pen Tool, Free Form, Add Anchor, Delete Anchor, Convert Point Tool.Path And Direct Selection Tool. Applying Brush Tool On The Stroke. Working With Text, Applying Layer Style. Creating Reflections. Working With Vector Shapes. Creating Layers, Arranging Layers, Merging Layers, Flattening Layers. Changing The Background. Applying Blending Modes. Group Layers, Ungroup Layers Using Modes – RGB, CMYK. Applying Adjustments - Color Balance, Brightness & Contrast.  How To Create Own Designs. Page Setup, Print, Printer Settings How To Create Own Designs. Page Setup, Print, Printer Settings. Project Poster Making
---------------	---

### **Course Outcome (CO):**

At The End Of This Course Student Will Have:

CO1: An Ability To Understand The Total Use Of All Commands Relate To Windows And AutoCAD For Making Designs.

CO2: An Ability to Understand the 3D Drawings Line Compositions to Be Taken Color Compositions, Painting In Windows.

CO3: An Ability To Understand The Implementation Strategies Will Include Use And Regular Practice Of All Related Commands Of AUTOCAD 3D, 3D Studio, Photoshop, Walk Through Animations. The Generation of Drawings and Animation Should Satisfy the Client's Requirements and It Should Ease the Planning, Design and Execution of the Interior Work.

MDE042A	DESIGN PROJECT – III	0-10-0[5]
---------	----------------------	-----------

### Objective

- Explore To A Preliminary Level Basic Spatial And Material Design Concepts.
- This Unit Intends To Equip The Students With Concept And Principles Of Design.
- Pre-Requisite: Design Project  
Selection of Project. Literature Review, Investigation and Exploratory Studies of Problem Area Including User Studies to Define the Design Brief. Ideation and Visualization Applying Concept Generation Techniques. Evaluation Techniques for Concept Selection. Documentation Of The Design Process And Conclusion Of Phase I With A Submission Of A Report And Presentation Of Design Concepts.

Course Outcome (CO):

At The End Of This Course Student Will Have:

CO1: Understand The Project Studies, Case Studies Of Various Related Topics For Interiors Will Be Used. Presentation Of Data Collected Will Be Done By Means Of Seminars / Visits / Books / Visuals.

CO2: Understand About the Anthropometric & Ergonomics

CO3: Understand The Specific Requirements Of The Project Given. CO4:

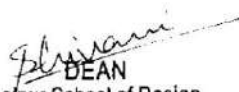

Understand How To Work In A Professional Context.

---------	---------------------	-----------

### **Aim**

In This Semester The Learner Will Be Equipped With Knowledge And Skills Needed Such As Management Of Office Along With Current Practices, Codes Of Conduct Required To Enhance Skills And Techniques Of Managing Small And Large Scale Residential And Commercial Interior Projects.

### **OBJECTIVE**

- To Encourage Students To Work In With Relevant Industries.
  - An Avenue to Enhance Academics Learning Through Hands on Work Experience.
  - Get Advice On Career From Knowledgeable And Experienced Professionals.
  - Gain Exposure to a Professional Work Atmosphere.
- Be Able To Place Themselves And Their Work In The Context Of Their Selected Discipline  
Understand Their Specialist Area And The Career Opportunities Available  
Understand How To Promote Themselves And Their Work Professionally.

The Aim Of This Unit Is To Extend Learners' Knowledge Of Professional Practices Within Their Specialist Area And To Relate These To Personal Goals And Career Opportunities.

### **INTERNSHIP TRAINING**

- In The IV Semester, Student Will Undergo An Internship Of 10 Weeks Duration In An Interior Designing Or Architectural Firm And Form A Project Report About His/Her Practical Experience Gained By Working On Various Projects Worked Under The Supervision Of A Professional Designer, So That They Can Understand The Existing Working Practices, Conditions And Acquire An In Depth Technical Knowhow.
- The Student Has To Submit A Certificate Regarding Their Successful Training With The Firm.
- A Copy Of Report Needs To Be Submitted With The Department Along With The Performance Certificate Issued By The Firm Manager/ Owner And One With The Firm (Where Internship Is Pursued).
- After The Internship, Student Needs To Appear In Front Of Jury Members For A Presentation Seminar, Who Will Judge The Performance Based On Their Presentation, Report, And Viva-Voce And Award Marks To Student.
- PROJECT REPORT To Be Submitted
  - Background Of Industry
  - Number Of Employees
  - Project Detail On Which Assisted
  - Manufacturing Process
  - Hand & Computer Sketches
  - Experience
  - Any Other Details

**Course Outcome (CO):**

CO1: Student Will Be Able To Understand About Entrepreneurship And Evolution Of Entrepreneurship.

CO2: Student Will Be Able To Understand Creating And Starting The Venture.

CO3: Student Will Be Able To Understand Managing, Growing And Ending The New Venture. CO4: Student Will Be Able To Understand Entrepreneurship Development And Government.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO 1	PSO 2	PSO 3
CO1	H				L		M		M			H	M		H
CO2	H		M	L					M			H			H
CO3		M				M				M	L		M		
CO4	M							L							

MDE047A	Office Portfolio Submission	0-10-0[5]
---------	-----------------------------	-----------

**Objective:**

- To Assess The Performance Of Student In The Practical Training, A Final Jury Will Be Conducted In The Month Of June, After Commencement Of The Session.
- The Student Have To Be Present In The Jury Along With Their Training Reports (Properly Binded), On The Basis Of Which Marks For IV Sem. Will Be Awarded.
- The Jury Will Be Taken On The Training Report & Not On The Sheets.

Course Outcome (CO):

CO1: Understand The Different Attributes Of Portfolio Design.

CO2: Illustrate Reflecting Their Accomplishments, Skills, Designs, Values, And Attributes. CO3: Develop A Portfolio Showcasing Various Aspects Of Projects.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO 1	PSO 2	PSO 3
CO1	H				L		M		M			H	M		H
CO2	M		M	L							M	H			H
CO3		M				M				M			M		

**Note:** Students Has To Follow The Instructions As Guided In The Training Manual.

  
 DEAN  
 Jalpur School of Design  
 JECRC University JAIPUR

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

**SCHOOL OF ENGINEERING**

**SYLLABUS AND COURSE STRUCTURE**

**B. TECH (CIVIL ENGINEERING)**  
**ACADEMIC YEAR 2022-23**

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

**B. Tech. (CE) Program Educational Objective (PEO's):**

A graduate of the Civil Engineering Program should:

**PEO-I**

Graduates of the Programme will contribute to the development of infrastructure that is sustainable.

**PEO-II**

Graduates of the Programme, as part of an organization or as Entrepreneurs, will continue to learn to harness evolving technologies.

**PEO-III**

Graduates of the Programme will be professional Civil Engineers with ethical and societal responsibility.

**Program Outcome (PO's)**

A graduate of the Civil Engineering Program will demonstrate:

**PO1: Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and Civil Engineering principles to the solution of complex problems in Civil Engineering.

**PO2: Problem Analysis:** Identify, formulate, research literature, and analyse complex Civil Engineering problems reaching substantiated conclusions using first principles of mathematics and engineering sciences.

**PO3: Design/development of solutions:** Design solutions for complex Civil Engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO4: Conduct investigation of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions related to Civil Engineering problems.

**PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex Civil Engineering activities with an understanding of the limitations.

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

**PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal, and cultural issues and the consequent responsibilities relevant to the professional Civil Engineering practice.

**PO7: Environment and sustainability:** Understand the impact of the professional Civil Engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO8: Culture, Values and Ethics:** Understand the importance of culture and values along with the implication it has on learning, teaching, engineering practice, identify and enculturation as an engineer. Apply ethical principles and commit to professional ethics and responsibilities and norms of the Civil Engineering practice.

**PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO10: Communication:** Communicate effectively on complex Civil Engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage Civil Engineering projects and in multidisciplinary environments.

**PO12: Life-long learning:** Recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### **Program Specific Outcome:**

The B. Tech. Degree Programme in Civil Engineering is offered in the department with the following programme specific objectives:

**PSO1:** Able to apply the knowledge gained during the course of the program from one or more streams of civil engineering such as construction management, structural engineering, environmental engineering, transportation engineering, water resource engineering, Geotech engineering, software development etc particularly to identify, formulate and solve real life problems faced by industries.

**PSO2:** Able to provide economically viable and socially acceptable technical solutions to complex civil engineering problems with the application of modern and appropriate techniques for sustainable development.

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

**PSO3:** Able to grasp emerging and futuristic technologies as and when introduced in the specified streams of civil engineering and even beyond through self-learning and make them to face competitive exams like GATE, IES etc ready.

## CODE AND SUBJECT SCHEME FOR B.TECH. CIVIL

### Semester I

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
DME011A	Engineering Graphics and Design	3	0	0	3	F

### Semester II

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
DLW005A	A Professional's Approach to Law and Ethics	3	0	0	3	F

### Semester III

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
DEN003A	Life Skills - 1 (Personality Development)	1	0	0	1	F
DEN003B	Life Skills - 1 (Personality Development)	0	0	2	1	F
DIN003A	Value Education & Ethics -1	1	0	0	1	F
DMA010A	Engineering Mathematics - III	3	1	0	4	F
BCI081A	Strength of Material	3	1	0	4	C
BCI082A	Building Materials and Construction Technology	3	0	0	3	C
BCI083A	Engineering Surveying	3	0	0	3	C
BCI002B	Fluid Mechanics	3	0	0	3	C
BCI084A	Engineering Surveying Lab	0	0	2	1	C
BCI063C	Fluid Mechanics and Hydraulics Lab	0	0	2	1	C
BCI006C	Building Materials & Concrete Technology Lab	0	0	2	1	C

  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

### Semester IV

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P

### Semester I

<b>DME011A</b>	<b>Engineering Graphics and Design</b>	<b>3: 0: 0</b>	<b>3</b>
----------------	--	----------------	----------

#### ❖ Course Overview:

The course provides the fundamental knowledge on engineering graphics and design, which is used for technical communication in the industry. The practical expertise of L&T has been leveraged for the course development to help the learners understand and apply the knowledge as it is being done in the field. This course covers the fundamentals of engineering graphics involving geometrical 1D, 2D, and 3D objects. The knowledge of engineering graphics gained through this course can be applied to design and draw simple machine parts, small office and residential buildings. Computer Aided Design is introduced and discussed in a practical way with an exposure to Building Information Modelling. This course facilitates the learners to have a clear understanding on how to apply the knowledge of graphics in their respective disciplines for engineering design.

#### ❖ Course Objective:

To help learners draw engineering drawings of objects in manual and computer aided drafting methods, read and interpret the drawing of simple machine components, buildings, etc., and apply the knowledge for creative engineering design

#### ❖ Key Topics:

Drawing Codes | Manual Drafting | Traditional Engineering Graphics | Computer Graphics and Computer Aided Design | Solid Modelling | Building Information Modelling | Design Project

#### ❖ Syllabus:

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

### **Basics of Engineering Graphics, Projection of Points**

Introduction to Engineering Drawing, Manual & Computer Aided Design and Drafting, Lettering, Dimensioning, Geometrical Constructions, Plane Curves, Conic Sections, Cycloidal Curves, Involute – Projection of point placed in a quadrant – Projection of a line using first angle projection method, rotating line method, trapezoidal plane method – Solve & draw projections of a line kept inclined to two planes – Determination of true length, true inclinations & traces of a straight line

### **Projection of Planes & Solids**

Description of plane shapes & solids - Drawing plane projections & solids using change of position and auxiliary plane method – Projection of solids with inclined axis – Drawing projection of solids using change of position and auxiliary plane method.

### **Orthographic Projections & Sections of Solids**

Visualization & drawing orthographic projections – Description & drawing of Plan, elevation, side elevation of objects, simple machine parts using first angle projection method – Description of section plane & portion of solid – Drawing sectional top view, front view, true shape of section on an auxiliary plane

### **Isometric & Perspective Projection, Development of Surfaces**

Drawing isometric view of solids (Box method) – Drawing isometric scale & construction of isometric projection from orthographic projection – Drawing perspective projection of small, large objects and building components using suitable methods – Drawing section plane & determining lateral surface – Determination of shortest distance between points – Drawing & determining shape of metal sheet to cut objects.

### **Building Drawing, Solid Modeling, Building Information Modeling**

Drawing plan, elevation and sectional elevation of a small residential & office building – Description & creation of Solid models in general and with respect to engineering – Designing and creating a new product & generating various views – Basics of Building Information Modeling (BIM)

#### **❖ Case Studies**

1. Building drawing of a small office building
2. Building drawing of a small office building

#### **❖ Software used: AUTOCAD**

## Semester II

<b>L-T-P</b>	<b>DLW005A – A Professional's Approach to Law and Ethics</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### ❖ Course overview:

This course is structured keeping in mind the need to familiarize the learners with various laws they would be required to apply in their professional life on a day-to-day basis. The contents of the course are divided into lessons that deal with various areas of law, such as:

- Study of professional ethics
- Insights into law of contract
- Study on dispute resolution
- Study on labour laws
- Study on Intellectual Property Rights and Taxation.
- Insights into basic laws governing companies.

### ❖ Course Objectives:

The Course aims addressing the following aspects:

- to enable learners to make informed ethical and legal choices in their professional capacity.
- to sensitize the learners to the legal and ethical issues that may arise during the course of their employment.

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

- To provide adequate exposure to the various laws that are relevant in their day-to-day professional life.

#### ❖ Syllabus:

##### **General Principles of Contracts Management:**

Performance, Joint Liabilities, Impossibility, Excusable Non-performance and Doctrine of Frustration. Breach of Contract, Consequences, Remedies and different forums for Enforcement of Contract. Performance, Joint Liabilities, Impossibility, Excusable Non-performance and Doctrine of Frustration.

##### **Professional Ethics, Arbitration and Mediation:**

Evolution and Salient Provisions of the Arbitration Act. Salient Features of Arbitration: Notice invoking arbitration, Eligibility of an arbitrator, Seat vs Venue, Challenging the Arbitral Award. Alternate Dispute Resolution methods and Confidentiality. Resource Allocation and Resource Levelling, Case Study on Schedule Compression, PERT to Predict the Probability of Project Completion.

##### **Corporate and Commercial Laws:**

Definitions and Terms under Company Law, and authentication of contracts. Company Act and the Landmarks under this act. Basic Definitions and Terms under Insolvency Code and Corporate Insolvency Resolution Process (CIRP). Competition Law, Anti-Competitive agreements and abuse of dominant position

##### **Taxation, Labour Laws:**

Basic terms under Income Tax Act and Sources of Income. Overview of (Foreign Exchange Management Act) FEMA, Foreign Trade Policy and other Special Scenarios. Industrial Disputes Act, Building and Other Construction Workers Act. Social Security Laws and Health and Safety Laws.

##### **Environmental Protection laws, IPR:**

Overview of Environmental Laws in India, Environment Impact Assessment and understanding Sustainable Development, Overview of International Conventions on Environment Protection.

An Introduction to Intellectual Property Law, Copyrights and Trademarks, General legal recourse for Copyright infringement, Trademark infringement, Design infringement and IP Issues, Software and Business Method Patenting in India & in other Jurisdictions.

### Semester III

<b>L-T-P</b>	<b>DEN003A(L)/3B(P) – Life Skills - 1 (Personality Development)</b>	<b>Credits:2</b>
<b>1-0-2</b>		

#### Objectives

1. To prepare the students as per the industry demands.
2. Switching to Activity and Task based Teaching modules.
3. To focus on the linguistic aspects in relation to life situations.
4. Facilitating the aspects of behavioral skills in language.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

### Course Outcomes (CO):

**At the end of this course students will have:**

CO1: Ability to use appropriate language while communicating with the people ranging from personal to professional settings in order to meet the desired needs of economic, environmental, social, political, ethical fields.

CO2: Ability to learn by doing it practically in the classroom.

CO3: Ability to learn by creating an environment and adapting to the environment.

CO4: The ability to prepare the students as per the need of the Multi-cultural scenario around.

### Syllabus: Theory

<b>UNIT 1</b>	<ul style="list-style-type: none"><li>Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion</li><li>Basics of Narrating and describing things</li></ul>
<b>UNIT 2</b>	<ul style="list-style-type: none"><li>Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview</li><li>CV/Resume Drafting and HR Interview advance theory</li><li>Basics of Video Interviews and Video Profiles for Job</li></ul>
<b>UNIT 3</b>	<ul style="list-style-type: none"><li>Types of listening, advantages and disadvantages</li></ul>
<b>UNIT 4</b>	<ul style="list-style-type: none"><li>Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report</li></ul>
<b>UNIT 5</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

### Syllabus: Lab

<b>UNIT 1</b>	<ul style="list-style-type: none"><li>Debates / Speeches / Addressing the public / Extempore/Group Discussion</li><li>Describing a hypothetical situation / theme / surroundings / appearance/personality traits/company/ a professional Concept/New Idea, / New Project through PPT and video aids</li></ul>
<b>UNIT 2</b>	<ul style="list-style-type: none"><li>Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview</li></ul>

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

	<ul style="list-style-type: none"> <li>CV/Resume Drafting and HR Interview practice sessions elaborating the points as per the CV and industry demand</li> <li>Video Interviews and Video Profiles for Job-Practice session for Online Interviews</li> </ul>
<b>UNIT 3</b>	<ul style="list-style-type: none"> <li>Listening to variety of audio/video conversations including interviews, news, reports, reports, GDs, dialogues from body language, logic, wit and vocabulary perspectives</li> </ul>
<b>UNIT 4</b>	<ul style="list-style-type: none"> <li>Group Discussion-Practice sessions, Presenting New Idea/Concept/Proposal/ Project/ Report</li> </ul>
<b>UNIT 5</b>	Activities on how to be a strong Personality, Motivation, Case studies for Resourcefulness and out of the box thinking, Role plays and Case studies on Risk taking, Self confidence and Self-esteem, Decision Making, Emotion Management, Cultural Adaptability, Multicultural Perspective towards things, ideas, views, codes etc

### Methodology for Evaluation

1. Internal Assessment (Theory)
  - a) Home Assignments: One from each Unit : 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
2. Term End (Theory) : 50 Marks
3. Internal Assessment (Lab)
  - (a) Daily Performance in the Lab : 50 Marks
4. Term End (Lab) : 50 Marks

### Suggested Readings:

1. A Communicative Grammar of English: Geoffrey Leech and Jan Svartvik. Longman, London.
2. Adair J (1986) - "Effective Team Building: How to make a winning team", London, U.K: Pan Books.
3. Gulati S (2006) - "Corporate Soft Skills", New Delhi, India: Rupa& Co.
4. The Hard Truth about Soft Skills, by Amazone Publication.
5. 101 Great Answers to the Toughest Interview Questions. Ron Fry. High Bridge Company. 1996.
6. Michael Swan. Practical English Usage, Oxford University Press.

<b>L-T-P</b>	<b>BCI081A – Strength of Material</b>	<b>Credits: 4</b>
<b>3-1-0</b>		

### Objective:

  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

- To provide basic knowledge in mechanics of materials so that the students can solve real engineering problems and design engineering systems.
- Ability to analyze the various types of structures.
- To understand the deformations of structures under loading.
- To understand about the theory of vibration and torsion effects on the structures.

### Unit 1

**Simple Stresses and Strains:** Concept of stress and strain in three dimensions and generalized Hooke's law; Young's modulus; Tension test of mild steel and other materials: true and apparent stress, ultimate strength, Yield stress and permissible stress; Stresses in prismatic & non-prismatic members and in composite members; Thermal stresses; Shear stress, Shear strain, Modulus of rigidity, Complementary shear stress; Poisson's ratio, Volumetric strain, Bulk modulus, relation between elastic constants; Stresses in composite members, Compatibility condition

**Compound Stress:** Two dimensional stress system: stress resultant, principal planes and principal stresses, state of pure shear maximum shear stress, Mohr's circle & its application.

### Unit 2

**Columns:** Short and long columns, slenderness ratio, crushing and buckling of column, short column subjected to axial and eccentric loads; Euler's theory and its limitation, concept of effective length of columns; Rankine & Secant formula.

**Membrane Analysis:** Stress and strain in thin cylindrical & spherical shells under internal pressures.

**Moment of Inertia:** Polar and product moment of inertia, Principal axes and principal moment of inertia

### Unit 3

**Bending of Beams:** Types of supports, support reactions, determinate and indeterminate structures, static stability of plane structures.

Bending moment, Shear force and Axial thrust diagrams for statically determinate beams subjected to various types of loads and moments, Point of Contra- flexure, relation between load, SF and BM

**Theory of simple bending:** Distribution of bending and shear stresses for simple and composite sections.

### Unit 4

**Deflection of Beams:** Differential relation between load, shear force, bending moment, slope deflection. Slope & deflection in determinate beams using double integration method, Macaulay's method, area moment method and conjugate beam method.

**Analysis of prop cantilever structures:** Analysis of Indeterminate Structure using Area moment method, Conjugate beam method Combined direct and bending stress, middle third rule, core of a section, gravity retaining wall

**Fixed Beams and Continuous Beams:** Analysis of fixed beams & continuous beams by three moments Theorem and Area moment method.

### Unit 5

**Torsion:** Elementary concepts of torsion, shear stress in solid and hollow circular shafts, angle of twist, power transmitted by a shaft, combined bending and torsion;

**Springs:** Stiffness of springs, springs in series and parallel, laminated plate springs, leaf spring, close coiled helical springs, open coiled springs.

**Vibrations:** Elementary concepts of structural vibration, Mathematical models, basic elements of vibratory system. Degree of freedom. Equivalent Spring stiffness of springs in parallel and in series. Basics of simple harmonic motion and undamped free vibration of SDOF system.

**Course Outcome:**

*At the end of this course, students will be able to:*

CO1: Understand the fundamental concepts of stress and strain and the relationship between both through the strain-stress equations in order to solve problems for simple tri dimensional elastic solids. Determine the principal stresses and strains in structural members.

CO2: To obtain solutions to column buckling and plate problems

CO3: Describe the concepts and principles, and perform calculations, relative to the strength and stability of structures and mechanical components and to solve problems relating to pure and non-uniform bending of beams and other simple structures

CO4: Evaluate the slope and deflection of cantilever, simply supported, overhanging, propped cantilever, fixed and continuous beams subjected to loads.

CO5: Solve problems relating to torsional deformation of bars; Analyze and design springs and understand the fundamental concept of vibration.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

JECRC University, Jaipur 303145

<b>L-T-P</b>	<b>BCI082A - Building Materials &amp; Construction Technology</b>	<b>Credits:3</b>
<b>3-0-0</b>		

#### Objectives:

- Building materials are to be studied from a different view point, that is, Right from manufacture.
- The objective of the course is to provide basic knowledge of Construction Technology and its application.
- To understand the safety aspects during construction of various structures.
- Properties of building materials which are used for construction behavior

#### Unit 1

**Stones & Bricks :** Source and types of stones, various standard test on building stones, Selection criteria and uses of common building stones. Manufacturing of Bricks. Types and properties of bricks and their determination as per IS code such as water absorption, compressive strength, effloresces, dimension and tolerance test. Types of Tiles, Standard tests for tiles as per IS code such as water absorption, tolerance, impact value, glazing.

Fly Ash: Properties, classification, use of fly-ash in manufacturing of bricks & cement.

#### Unit 2

**Cement & Lime:** Raw materials, chemical composition and manufacturing process of cement. Basic compounds (Bouge's compounds) of cement and their role, types of cement. Setting and hardening of cement, physical properties of cement, various standard tests on Portland cements, as per IS code including consistency, setting time, fineness, soundness and strength. **Mortar and Plaster:** types of sand, bulking of sand, tests for sand, classification, mortar preparation methods: Functions and tests & their uses in various types pointing & plastering.

**Lime:** Classification as per IS, Manufacturing process, properties, standard tests of lime. Use of lime in construction. Gypsum, properties and use, Plaster of Paris.

#### Unit 3

**Brick and Stone Masonry:** Basic principle of sound masonry work, different types of bonds, relative merits and demerits of English, single Flemish and double Flemish bond. Comparison between stone and brick masonry. General principles, classification of stone masonry.

**Timber & Steel:** Definitions of related terms, classifications and properties, defects in wood, conversion of wood, seasoning, preservation, fire proofing, Plywood, fiber boards, Steel: properties, type's mild steel and HYSD steel and their use, common tests on steel

Various types of paints and Varnishes; white wash and distempers and their application.

#### Unit 4

**Ground & Upper floors:** Floor components and their junctions, selection of flooring and floor types, construction details of ground and upper floors, merits and demerits.

Roof and Roof Covering: Purposes, classification of roofs, terms used, types of pitched roofs, method of construction, roof covering materials for pitched roofs. **Stairs:** Terms used requirements of good staircase, classification, construction details and suitability of different types of stairs.

#### UNIT 5

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

**Building Requirements & Construction System:** Building components, their functions and requirements, types of construction, load bearing construction and framed structure construction. Temporary structures: Types & methods of shoring, underpinning and scaffolding. Foundation & Site Preparation: Purpose, types of foundation, depth of foundation.

**Damp Proofing:** Causes of dampness, effects of dampness methods and material for damp proofing DPC treatment in buildings, methods and materials for anti-termite treatment.

#### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: understand the properties of stones and bricks suitable for construction and testing procedure

CO2: understand the manufacturing, properties and the type of cement and Lime

CO3: understand about the techniques of brick and stone masonry.

CO4: Identify effective measures for floor and roof components.

CO5: Classification of different structural components and their applications

<b>L-T-P</b>	<b>BCI083A – Engineering Surveying</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:**

- At the end of the course the student will possess knowledge about Chain surveying, Compass surveying, Contouring, Plane table surveying, Levelling, trigonometric levelling, Theodolite surveying modern field survey systems and Engineering surveys.

**Unit 1**

Definition - Principles - Classification - Field and office work - Scales - Conventional signs - Survey instruments, their care and adjustment - Ranging and chaining - Reciprocal ranging - Setting perpendiculars - well - conditioned triangles.

**Unit 2**

Prismatic compass - Surveyor's compass - Bearing - Systems and conversions – Local attraction - Magnetic declination - Dip - Traversing - Plotting - Adjustment of errors. Level line - Horizontal line - Levels- Spirit level- Bench marks - Temporary and permanent adjustments - Fly and check leveling- Reduction -Curvature and refraction - Reciprocal leveling - Longitudinal and cross sections.

**Unit 3**

Theodolite - Vernier and microptic - Description and uses - Temporary and permanent adjustments of Vernier transit - Horizontal angles - Vertical angles - Heights and distances - Traversing - Closing error. Methods of trigonometric leveling.

**Unit 4**

Curve Surveying: Elements of circular (Simple, compound and reverse) curves, transition curves, degrees of curves, Methods of setting out circular and transition curves.

**Unit 5**

Contouring - Methods - Characteristics and uses of contours. Plane table instruments and accessories - Merits and demerits - Methods - Radiation - Intersection - Resection – Traversing. Principle of E.D.M. (Electronic Distance Measurements), Modulation, Types of E.D.M., Distomat, Total station, parts of total station, advantages and application.

**Course outcomes:**

*At the end of this course, students will be able to:*

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

- CO1: Understand the working principles of survey instruments  
 CO2: Calculate angles and distances  
 CO3: Able to measure and layout elevations and relative heights between points  
 CO4: Able to measure horizontal and vertical angles.  
 CO5: Able to carry out profiling and grid leveling, for generation of profiles, contour maps.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>L-T-P</b>	<b>BCI002B – Fluid Mechanics</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objectives:**

- To understand behavior of fluids under different conditions of flow and static properties.
- Several engineering operations and designs of equipment are based on fluid mechanics.

**Unit 1**

Introduction of fluid, Properties of fluids: Density, Specific volume, Specific gravity Viscosity, Compressibility, Surface Tension, Capillarity, Vapour Pressure; Cavitation, Classification of fluids: Newtonian and non-Newtonian fluids.

**Unit 2**

Principles of fluid statics: Pascal's law, Hydrostatic law, Measurement of pressure by Manometers and mechanical gauges; Pressure on plane and curved surfaces.

Buoyancy: Total Pressure and Centre of pressure, Stability of immersed and floating bodies, Meta-centre, Meta-centric height.

**Unit 3**

Kinematics of flow and Equations of motion Continuity equation and Continuity equation in 3-D, Lagrangian and Euler equation of motion, Types of fluid Flows: Steady and Un-steady, Uniform and non-uniform, Laminar and turbulent flows, 1, 2 and 3-D flows; Stream lines, Path lines and Streak lines, Elementary explanation of Stream function and Velocity potential.

**Unit 4**

Bernoulli's equation and its applications in flow measurement in pipes and open channels: Concept of control volume and control surface, Introduction to Navier-Stokes Equations, Pitot tube, Flow through orifices, Mouthpieces, Nozzles, Notches, Weirs, Free and Forced vortex motion. Introduction of boundary layer theory and Hydro-dynamically smooth and rough boundaries.

**Unit 5**

*[Signature]*  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

Introduction of Laminar and turbulent flow through pipes: Nature of turbulent flow in pipes, Equation for velocity distribution over smooth and rough surfaces, Major and Minor energy losses, Resistance coefficient and its variation, Hydraulic gradient and total energy lines, Flow in sudden expansion, contraction, bends, valves and siphons, Concept of equivalent length Branched pipes, Pipes in series and parallel.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Categorize solutions to fluids problems by their fundamental assumptions

CO2: Compute hydrostatic and hydrodynamic forces

CO3: List and explain the assumptions behind the classical equations of fluid dynamics

CO4: Identify and formulate the physical interpretation of the mathematical terms used in Solutions to fluid dynamics problems

CO5: Analyze and design simple pipe systems

#### Experiments

1. Ranging and fixing of survey station by chain and tap.
2. Determination of area of polygon by chain and cross staff.
3. To determine the magnetic bearing of a line by using surveyor's compass.
4. To determine the magnetic bearing of a line by using prismatic compass.
5. Determination of elevation of various points with tilting/dumpy level by collimation plane method.
6. Determination of elevation of various points with tilting/dumpy level by rise and fall method.
7. To measure the horizontal angles by theodolite.
8. To measure the vertical angles by theodolite.
9. Determination of elevation of point by trigonometric levelling (Same and different vertical plane).
10. To prepare a contour map by indirect contouring.
11. Locating given building by plane table surveying.
12. Demonstration of Total Station.

#### Course Outcomes:

*At the end of this course, students will be able to:*

- CO1: use conventional surveying tools such as chain/tape, compass, plane table, level in the field of civil engineering applications such as structural plotting and highway profiling
- CO2: apply the procedures involved in field work and to work as a surveying team
- CO3: plan a survey appropriately with the skill to understand the surroundings
- CO4: take accurate measurements, field booking, plotting and adjustment of errors can be understood

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

CO5: plot traverses / sides of building and determine the location of points present on field on a piece of paper

<b>L-T-P</b>	<b>BCI063C – Fluid Mechanics and Hydraulics Lab</b>	<b>Credits: 1</b>
<b>0-0-2</b>		

**Experiments**

1. Determination of friction
2. Hydraulic coefficient of an orifice/mouthpiece.
3. Impact of jet on vanes.
4. Performance test on centrifugal and reciprocating pump.
5. Performance test on Pelton wheel turbine, Francis turbine and Kaplan turbine.
6. To verify Bernoulli's theorem.
7. To calibrate a Venturimeter and Orificemeter.
8. To determine Metacentric Height.
9. To determine velocity by Pitot tube.
10. To determine  $C_d$  of a V-notch.
11. Determination of losses in pipe fitting.
12. Determination of Reynolds no. for flowing water.

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: understand Hydraulic coefficient

CO2: understand turbines.

CO3: understand Venturimeter and Orificemeter.

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

CO4: understand Pitot tube.

CO5: understand losses in pipe fitting.

**Experiments**

**Cement**

1. Normal Consistency of cement.
2. Initial & final setting time of cement
3. Compressive strength of cement
4. Fineness of cement.
5. Soundness & specific gravity of cement by Le-Chatelier's apparatus.

**Aggregate**

6. Sieve analysis of sand
7. To determine the specific gravity of fine aggregate.
8. Bulking of sand

**Bricks:**

9. Water absorption & Compressive strength

**Concrete**

10. Slump test & Compaction factor test
11. Flow table test

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303145

## 12. Compressive strength test

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: understand the basic test for materials and cement.

CO2: determination of various test of sand and concrete.

CO3: understand the basic test workability of the concrete.

CO4: understand of the basic test for fine and coarse aggregates.

CO5: understand of the basic test of compressive strength test of concrete.

## Semester IV

L-T-P	DMA003A – Life Skills -2 (Aptitude)	Credits:2
1-0-2		

### Course Objectives

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

## Course Outcomes (CO):

At the end of this course students will have:

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

## Syllabus: Theory

<b>UNIT 1</b>	<b>Number System:</b> a. Number system b. Power cycle c. Remainder cycle d. Factors, Multiples e. HCF and LCM
<b>UNIT 2</b>	<b>Data Arrangements and Blood Relations:</b> a. Linear Arrangement b. Circular Arrangement c. Multi-dimensional Arrangement d. Blood Relations
<b>UNIT 3</b>	<b>Time and Work:</b> a. Work with different efficiencies b. Pipes and cisterns c. Work equivalence d. Division of wages
<b>UNIT 4</b>	<b>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</b> a. Coding and Decoding b. Series c. Analogy d. Odd Man Out e. Visual Reasoning
<b>UNIT 5</b>	<b>Percentages, Simple Interest and Compound Interest:</b> a. Percentages as Fractions and Decimals b. Percentage Increase / Decrease c. Simple Interest d. Compound Interest e. Relation Between Simple and Compound Interest

<b>UNIT 6</b>	<b>Permutation, Combination and Probability:</b> a. Fundamental Counting Principle b. Permutation and Combination c. Computation of Permutation d. Circular Permutations e. Computation of Combination f. Probability
<b>UNIT 7</b>	<b>Data Interpretation and Data Sufficiency:</b> a. Data Interpretation – Tables b. Data Interpretation - Pie Chart c. Data Interpretation - Bar Graph d. Data Sufficiency
<b>UNIT 8</b>	<b>Profit and Loss, Partnerships and Averages:</b> a. Basic terminologies in profit and loss b. Partnership c. Averages d. Weighted average e. Mixtures and allegations

## Methodology for Evaluation

1. Internal Assessment
    - a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks
    - b) In Semester Tests (Minimum two) : 30 Marks
  2. Term End : 40 Marks
- \*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

JECRC University, Jaipur-303005

<b>L-T-P</b>	<b>BCI085A - Geotechnical Engineering</b>	<b>Credits: 4</b>
<b>3-1-0</b>		

**Objective:**

- To get the knowledge about different types of soil and their origin.
- Study of different soil improvement techniques.
- Study of natural occurring phenomena in soil and variation of the properties of soil.
- To provide the knowledge of different soil structures and their properties.

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

- To get the experimental knowledge of soil parameters.

### Unit 1

**Introduction:** Soil and soil-mass constituents, water content, specific gravity, void ratio, porosity, degree of saturation, air void and air content, unit weights, density index etc. Inter relationships of the above.

Index properties of soil and tests: Determination of index properties of soil: water content, specific gravity, particle size distribution, sieve and sedimentation analysis, consistency limits, void ratio and density index.

### Unit 2

**Plasticity Characteristics of Soil-Introduction to definitions of:** plasticity of soil, consistency limits-liquid limit, plastic limit, shrinkage limit, plasticity, liquidity and consistency indices, flow & toughness indices, definitions of activity and sensitivity. Determination of: liquid limit, plastic limit and shrinkage limit. Use of consistency limits.

**Soil Classification:** Classification of soil for general engineering purposes: particle size, textural, H.R.B. Unified and I.S. Classification systems

### Unit 3

**Clay mineralogy:** Soil structure; single grained, honeycombed, flocculent, and dispersed, structure of composite soils, clay structure; basic structure, mineral structures, structures of Illite, Montmorillonite and kaolinite and their characteristics.

**Permeability of soil:** Soil water absorbed, capillary and free water, Darcy's law of permeability of soil and its determination in laboratory. Field pumping out tests, factors affecting permeability, permeability of stratified soil masses.

### Unit 4

**Stresses in soil mass:** Total, effective and neutral pressure, calculation of stresses, influence of water table on effective stress, quicksand phenomenon.

**Seepage Analysis:** Seepage and Seepage Pressure, Laplace's equation for seepage. Flow net and its construction. Uplift pressure, piping, phreatic line, Flow net through earth dam.

### Unit 5

Compaction of Soil-Introduction, theory of compaction, laboratory determination of optimum moisture content and maximum dry density. Compaction in field, compaction specifications and field control. Consolidation of Soil-Introduction, comparison between compaction and consolidation, initial, primary & secondary consolidation, spring analogy for primary consolidation, consolidation test results, basic definitions, Terzaghi's theory of consolidation, final settlement of soil deposits, consolidation settlement: one-dimensional method, secondary consolidation.

### Course Outcomes:

*At the end of this course, students will be able to:*

- CO1: Develop a basic understanding of the engineering properties of soil, and the use of such properties in the analysis of selected geotechnical engineering problems.
- CO2: Understanding of the fundamental behavior of soil and its relevance to civil engineering operations and applications. Develop a understanding the behavior of soil in field conditions
- CO3: Understanding of mineralogy of soil mass and its impacts on soil behavior. Ability to determine and understand of permeability of soil in context of stability.
- CO4: Estimation and analysis of developed stress in soil mass. Analysis of impacts and determination of seepage pressure.
- CO5: Develop a concept to adopt the best suitable technique for soil strength improvement techniques (Compaction Techniques).

<b>L-T-P</b>	<b>BCI086A – Structure Analysis</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### Objectives:

- Ability to analyze the various types of structures.
- To study the different methods to analyze the structures.
- To introduce portal method, cantilever method & factor method for analysis of Analysis of multistory frames.
- To understand the deformations of structures under loading.
- To determine forces and deflections in arches and cable.

### Unit 1

**Introduction to indeterminate structures:** Degrees of freedom per node, Static and Kinematic Indeterminacy Releases in structures, Maxwell's reciprocal theorem and Betti's theorem.

**Analysis of indeterminate structures:** Methods of analysis, analysis of indeterminate structures by displacement method (Slope Deflection Method, Moment Distribution Method, Kani's Method and Stiffness Matrix Method).

### Unit 2

**Analysis of indeterminate structures by force methods:** Method of Consistent Deformation, Column Analogy Method, Strain Energy Method, Unit Load Method and Flexibility Matrix Method.

### Unit 3

**Approximate methods for lateral loads:** Analysis of multi-storey frames by portal method, cantilever method & factor method. Analysis of determinate space trusses by tension coefficient method.

### Unit 4

**Influence line diagram and rolling load:** ILD for beams & frames, Muller-Breslau principle and its application for drawing ILD, Rolling load, maximum stress resultants in a member/section, absolute maximum stress resultant in a structure.

### Unit 5

**Arches:** analysis of three hinged two hinged and fixed type parabolic arches with supports at the same level and at different levels.

**Cable and Suspension bridges:** Analysis of cables with concentrated and continuous loading, analysis of two and three hinged stiffening girder.

**Unsymmetrical bending:** Definition, location of NA, computation of stresses and deflection, shear center and its location, Theories of Failures.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Ability to identify determinate, indeterminate, stable and unstable structures.

CO2: Able to understand the concept of different exact methods to analyze the structures.

CO3: Able to understand the concept of approximate methods to analyze the structures.

CO4: Ability to understand the concept of ILD for various loading and structures.

CO5: Ability to determine forces and deflections in determinate arches and cable.

## Experiments

1. To determine the particle size distribution of a soil by sieve analysis/ hydrometer analysis.
2. To determine the water content of a soil sample by Oven drying/pycnometer method.
3. To determine the specific gravity of a soil sample by pycnometer method.
4. To determine the liquid limit, plastic limit and shrinkage limit of a soil specimen.
5. To determine the field/dry density of the soil by core-cutter/Sand replacement method.
6. To determine the compaction characteristics of a soil specimen by Standard proctor's test/Modified Proctor's test.
7. To determine the shear parameters of a sandy soil specimen by direct shear test.
8. To determine the CBR of soil.
9. To determine the compressibility parameters of soil by consolidation test.
10. To determine the permeability of a soil sample using Constant/ Variable Head permeability test method.
11. To determine the shear strength of soil sample by tri-axial test apparatus.
12. To determine the Unconfined Compression Strength of a soil sample.

## Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Develop a basic understanding of the engineering properties of soil, and the use of such properties in the analysis of selected geotechnical engineering problems.

CO2: Experimentally determination of fundamental properties of soil to suit industrial need.

CO3: Experimentally able to understand and estimate plastic properties of soil using Casagrande's apparatus.

CO4: Estimation and analysis of various limits defined under plastic characteristics of soil.

CO5: Determine the compaction characteristics of a soil specimen by Standard proctor's test/Modified Proctor's test.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

**Experiments**

1. Tensile strength of material with the help of Universal Testing Machine.
2. Compressive strength of material with the help of Universal Testing Machine.
3. Flexural strength of material with the help of Universal Testing Machine.
4. Shear strength of material with the help of Universal Testing Machine.
5. Bending tests on simply supported beam and Cantilever beam.
6. Torsion test
7. Hardness tests with Rockwell's method
8. Hardness tests with Brinell's method
9. Tests on closely coiled and open coiled springs
10. Compression test on wood or concrete
11. Charpy and Izod Impact test
12. Fatigue Test

**Course Outcome:***At the end of this course, students will be able to:*

CO1: Conduct tension test on steel, aluminum, copper and brass

CO2: Conduct compression tests on spring, wood and concrete

CO3: Conduct flexural and torsion test to determine elastic constants

CO4: Determine hardness of metals

CO5: Use of Universal Testing Machine

### Experiments

1. To study the stress-strain diagram for various materials.
2. To study the strain measurement using Rosette strain gauge
3. To study behavior of different types of columns and find Euler's buckling load for each case.
4. To study the slope & deflection of cantilever beam subjected to various loads.
5. To study the slope & deflection of simply supported beam subjected to various loads.
6. To study the slope & deflection of simply supported beam with overhangs subjected to various loads.
7. To study the slope & deflection of propped cantilever beam subjected to various loads.
8. To study the slope & deflection of fixed beam subjected to various loads.
9. To study the slope & deflection of continuous beam subjected to various loads.
10. To study the stiffness of springs in series and parallel arrangement.

### Course Outcome:

*At the end of this course, students will be able to:*

CO1: Understand the stress-strain property for various materials.

CO2: Understand the use of Rosette strain gauge for strain measurement.

CO3: Understand the behavior of different types of columns subjected to buckling load.

CO4: Analyse the slope & deflection of different beams subjected to various loads.

CO5: Understand the spring behaviour in different arrangements.

<b>L-T-P</b>	<b>BCI014A – Hydraulics and Hydraulic Machine</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

#### Objectives:

- The knowledge of this subject is necessary to study further hydraulics and hydraulic machinery.
- To understand the behavior for designing different hydraulic structures.

#### Unit 1

Introduction: Dimensional analysis, Rayleigh method, Buckingham theorem, applications of dimensional analysis to pipe Friction problems, Dynamical Similarity and Dimensional Homogeneity Model experiment, geometric, Kinematic and Dynamic similarity. Dimensionless numbers: Reynolds's, Froude's, Weber's, Euler and Mach numbers. Distorted and undistorted river models, proper choice of scale ratios. Scale effect.

#### Unit 2

Laminar Flow: Relation between shear & pressure gradient, Flow between plates & pipes, Equation of velocity distribution and Pressure difference.

Turbulent Flow in pipes: Theories of Turbulence, Nikuradse's Experiments, and Hydro-dynamically smooth and rough boundaries, Laminar, Sub-layer, Equations of velocity distribution and friction coefficient, Stanton Diagram, Moody's diagram.

#### Unit 3

Flow through channels: Uniform, Non-Uniform and variable flow. Resistance equations of Chezy, Manning and Bazin, Section factor for uniform flow, Most Efficient rectangular, triangular and trapezoidal sections, Equations of gradually varied flow in Prismatic channels, Limitation of its applicability and assumption made in its derivation, Specific energy of flow, Critical depth in prismatic channels, Alternate depths. Rapid, critical and sub critical Flow Mild, steep and Critical Slopes.

#### Unit 4

Rapidly varied flow: Hydraulic jump or standing wave in rectangular channels, Conjugate or sequent depths Losses in jump, location of jump, Broad crested weirs for channel flow: Measurement, velocity distribution in open channels, parshall flume. Impact of free Jets: Impact of a jet on a flat or a curved vane, moving and stationary vane, flow over radial vanes.

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

## Unit 5

Pumps and turbines: Volute and whirlpool chambers, Losses of head due to variation of discharge, Monomeric and Hydraulic efficiencies, Description of single and multistage pumps. Specific speed, characteristic curves. Model Test. Reaction and Impulse turbines, specific speed, mixed flow turbines, Pelton wheel turbine, Francis turbine, propeller turbine and Kaplan turbine Efficiency, Characteristics of turbines. Basic principles of governing of turbines, Draft-tube, Selection of turbines, model tests.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Able to use of dimensions & model numbers

CO2: To understand the functioning of different types of laminar & turbulent flow.

CO3: Able to understand Flow through channels

CO4: Able to understand the impact of jet on vanes.

CO5: To understand the functioning of different types of pumps and turbines.

## Semester V

<b>L-T-P</b>	<b>BCI020A – Reinforced Cement Concrete I</b>	<b>Credits: 4</b>
<b>3-1-0</b>		

### Objectives:

- Study of design Philosophies.
- Analysis and design of structural members such as beam, slab, column, footing etc.

### Unit 1

Objective and fundamental concepts of design of RC members, Types and function of reinforcement. Introduction to various related IS codes. Design Philosophies: Working stress, ultimate strength and limit states of design. Analysis and Design of singly reinforced rectangular beam section for flexure using Working Stress Method and Limit State Method

### Unit 2

Analysis and design of singly reinforced, flanged beams and doubly reinforced rectangular beams for flexure using Limit State Method. Limit state of serviceability for deflection, control of deflection as per codal provisions of empirical coefficients

### Unit 3

Limit state of collapse in shear: analysis and design of prismatic sections for shear using LSM. Limit state of collapse in bond: concept of bond stress, anchorage length and development length, curtailment of reinforcement as per codal provisions.

### Unit 4

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

Analysis and design of one way and two way slabs using LSM and Flat slab using direct design method as per code, Detailing of reinforcement.

### Unit 5

Columns: Short and long columns, their structural behavior. Analysis and design of axially loaded short columns, using LSM. Analysis of uniaxial eccentrically loaded short columns. Introduction to Pu-Mu interaction curves and their use for eccentrically loaded columns.

Design of Column Footings: Analysis and design of isolated column footing and combined footing for two columns (without central beam) for axial loads using LSM

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Understand the concept of shear and shear reinforcement

CO2: Ability to analyze and design of beams.

CO3: Ability to analyze and design of columns.

CO4: Ability to analyze and design of slab.

CO5: Ability to analyze and design of footings.

<b>L-T-P</b>	<b>BCI030B – Environmental Engineering I</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objectives:**

- Demonstrate the importance of interdisciplinary nature of environmental and health risk assessment.
- To study the Aesthetics of metropolitans.
- Facilitates to plan urban area's removing the environmental issues.

**Unit 1**

Water supply and quantity: Introduction, Water demands and domestic use, variation in demands; population forecasting by various methods using logistic curve method; per capita supply, basic needs and factors affecting consumption; design period. Sources of water: Kinds of water sources and their characteristics, collection of surface and ground water; quality of surface and ground waters; factors governing the selection of a source of water supply.

Quality of water: Introduction, Common impurities in water and their effect, quality of source, water analysis, physical examination, chemical examination, micro-organism in water, microbiological examination of water, bacterial effect on quality of water, common water borne diseases, standards of purified water

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

## Unit 2

Transmission of water: Various types of conduits, capacity and sizes including economical sizes of rising main, structural requirements; laying and testing of water supply pipelines; pipe materials, joints, appurtenances and valves; leakages and control; water hammer and its control measures.

## Unit 3

Storage and distribution of water: Methods of distribution, pressure and gravity distribution systems, concept of service and balancing reservoirs, capacity of distribution reservoirs; general design guidelines for distribution system, Hardy - Cross method, Newton - Raphson method and equivalent pipe method of pipe network analysis; rural water supply distribution system.

## Unit 4

Purification of water supplies: Introduction, coarse and fine screens, theory of sedimentation, sedimentation tanks, tube settlers, analysis of flocculent settling, coagulation, constituents of coagulation plant, determination of optimum coagulant quantity, coagulation sediment process, theory of filtration, filter materials, types of filters and their classification, slow sand filters, rapid gravity filters, design of filtering media, hydraulics of sand gravity filters, pressure filters, other filters

## Unit 5

Disinfection, softening and miscellaneous treatments: Minor methods of disinfection, chlorination, methods of removing temporary hardness and permanent hardness, removal of colors, odors and tastes from water, Desalination, arsenic contamination and its removal, removal of iron and manganese, packaged natural mineral water, BIS standards for packaged drinking water.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Able to design a water supply scheme for a particular section of community.

CO2: To know the different water treatment technologies.

CO3: Basic knowledge of storage and transmission.

CO4: Basic knowledge of distribution system.

CO5: Able to understand Purification of water supplies

**Experiments**

1. To determine the pH of the given sample of water & sewage.
2. To determine the turbidity of the given sample of water & wastewater.
3. To determine the Total Solids of the given sample of water & sewage.
4. To determine the Total Dissolved Solids of the given sample of water & sewage.
5. To find out conductivity of the given water sample.

*[Signature]*  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

6. Determination of the iron and fluoride content in drinking water.
7. Determination of BOD & COD of waste water.
8. To find out chloride of the given water sample.
9. To determine alkalinity of the given water sample.
10. To determine hardness of the given water sample.
11. To determine the optimum dose of alum by Jar test.
12. Determine the dissolved oxygen in water by winkler method.
13. Determine the color and odor of a given sample of water
14. To find out Total Settle able Solids of the given sewage sample.
15. To determine Total Suspended Solids of the given sewage sample.

#### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Understanding different theory of filtration.

CO2: Understanding anaerobic digestion of sludge of wastewater

CO3: Understanding anaerobic digestion of disposal of waste water.

CO4: Would be able to explain the different aspects of quality of water.

CO5: Able to understand Wastewater Treatment

#### Experiments

1. To verify strain in an externally loaded beam with the help of a strain gauge indicator and to verify theoretically.

*[Signature]*  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

2. To study behavior of different types of columns and find Euler's buckling load for each case.
3. To study two hinged arch for the horizontal displacement of the roller end for a given system of loading and to compare the same with those obtained analytically.
4. To determine the deflection of a pin connected truss analytically & graphically and verify the same experimentally.
5. To verify the Maxwell's reciprocal theorem and Muller Breslau theorem.
6. To verify the moment area theorem regarding the slopes and deflections of the beam.
7. To study ILD for various types of structure.
8. To study the unsymmetrical bending, computation of stresses and deflection, shear center and its location.
9. To study the flexibility matrix and stiffness matrix method.

**Course Outcome:**

*At the end of this course, students will be able to:*

CO1: Measurement of strain using strain gauge indicator.

CO2: Understand the behavior of different types of columns subjected to buckling load.

CO3: Analyse the various types of arches and ILD for various structures.

CO4: Analyse the slope & deflection of different beams subjected to various loads.

CO5: Understand the spring behaviour in different arrangements.

<b>L-T-P</b>	<b>BCI037C – Foundation Engineering</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

*[Signature]*  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

**Objective:**

- To understand the suitability of different type of foundation on the basis of soil type.
- Methods to determine the load carrying capacity of soil.
- To understand the design of shallow, pile and well foundations.
- Study of different types loading on soil and calculation of stresses due to such loadings.

**Unit 1**

Bearing Capacity of Shallow Foundation: Definitions of ultimate bearing capacity, gross, net and safe pressures, allowable bearing pressure, types of shallow foundations modes of failures. Bearing capacity theories: Rankine's approach, Prandtl's approach and Terzaghi's approach, concept behind derivation of equation, general bearing capacity equation, bearing capacity equations for square and circular footings, factors influencing bearing capacity, performance of footings in different soils, Vesic's chart, ultimate bearing capacity in case of local shear failure. Plate load test and its applications and estimation of settlements, bearing capacity based on Standard Penetration Test

**Unit 2**

Design of Shallow foundation: Types of shallow foundation, Footing size and loading parameters, principle of design of footing, different types of method of design of strip, spread, combined footing and raft footing.

**Unit 3**

Lateral Earth Pressures Theories- Introduction: applications of earth pressure theories, different types of earth pressure at rest, active and passive pressure. Rankine's Earth Pressure Theory, active earth pressure and passive earth pressure for horizontal and inclined backfill including the direction of failure Planes for cohesion-less and cohesive soils. Coulomb's Wedge Theory: Coulomb's active pressure in cohesion-less soils, expression for active pressure, Coulomb's passive earth pressure. Rebhann's Construction for Active Pressure, Culmann's graphical solutions for active soils, Wedge Method, passive pressure by friction circle method for cohesion-less and cohesive soils.

**Unit 4**

Soil Stabilization: Introduction, Mechanical Stabilization, Cement Stabilization, Lime Stabilization, Bituminous Stabilization, Chemical Stabilization, Chemical Stabilization, Thermal Stabilization, Electrical Stabilization, Stabilization by Grouting, Stabilization by Geotextile and fabric, Reinforced earth.

**Unit 5**

Foundation on Difficult Soils: Collapsible soil; identification, Collapse settlement: foundation design. Sanitary land fills settlement of sanitary land fill.

Expansive soils: Behaviour of expansive soil, foundation practices, underreamed piles. Methods of finding out load carrying capacity of under reamed piles in clayey and sandy soil. Provision of IS 2911 Part III-1980 for design of under-reamed pile foundations.

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Develop a basic understanding of bearing capacity of soil foundation, and the use of such properties in the analysis of selected geotechnical engineering problems.

CO2: Understanding of the fundamental Shallow foundations.

CO3: Understanding of Lateral earth pressure theories of soil for cohesion less or cohesive soil.

CO4 analysis of techniques for improvement of soil quality by using the different types of stabilization methods.

CO5: Understanding the behavior of foundation design and expansive soil.

<b>L-T-P</b>	<b>BCI011C – Design of Steel Structures</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objectives:**

- To know how to design and use the different types of steel structural elements.
- To know about different design concepts for different types of steel structures.

**Unit 1**

**Connections:** Types of bolts, load transfer mechanism, prying action. Design of bolted and welded connections under axial and eccentric loadings.

**Unit 2**

**Tension Members:** Design strength in gross section yielding, net section rupture and block shear. Design of axially loaded tension members.

**Unit 3**

Design of laterally supported and unsupported beam.

**Unit 4**

Columns and Bases- Design of columns under axial loads using single or multiple rolled steel sections, design of lacing and battens, columns subjected to axial load and bending, design of slab and Gusseted base.

**Unit 5**

Plastic analysis of steel structures, fundamentals, and static and mechanism method of analysis, bending of beams of rectangular and I sections beams, shape factor. Classification of Cross Sections: As per IS 800-2007 Plastic, compact, semi compact, slender sections, their characteristics including moment rotation.

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: An understanding of the basic principles and design of bolt and weld connections

CO2: Able to design of tension members

CO3: Able to design of beams and beam columns

CO4: Able to design of column bases and compression members

CO5: To understand plastic design method in steel structures and classification of section.

## Semester VI

<b>L-T-P</b>	<b>BCI029C – Transportation Engineering I</b>	<b>Credits: 4</b>
<b>3-1-0</b>		

### Objectives:

- Ability to mathematically develop and interpret design standards for horizontal and vertical geometry and super elevation.
- Ability to apply standards to design of alignments when considering topography and environmental concerns.
- Providing faster system of transport to avoid traffic jams in urban areas.

### Unit 1

Introduction: Importance and Role of Transportation Systems, Technological and Operating Characteristics of Transportation Systems, Components of transportation Systems, Transportation Coordination, Transportation Modes and their comparison. Highway Planning: Highway Planning Process, specifically in India, Transport or Highway related Agencies in India. Classification of Roads and Road Development Plans, Road Patterns, Controlling Factors and Surveys for Highway Alignment.

### Unit 2

Highway Materials: Desirable Properties, Testing Procedures, Standards and standard values relating to Soil, Stone Aggregates, Bitumen and Tar, fly-ash/pond-ash.

### Unit 3

Highway Geometric Design: Cross Sectional Elements, camber, Sight Distances - definition and analysis of SSD and OSD, Design of Horizontal Alignment – Super elevation, extra widening, transition curves. Design of Vertical Alignment – Gradients, Vertical curves.

### Unit 4

Highway Construction: Methods of constructing different types of roads viz. Earth roads, Stabilized roads, WBM roads, fly ash embankments, bituminous roads and Concrete roads.

### Unit 5

Structural design of Highway Pavements: Design of Flexible Pavements by G. I. and CBR methods. Design of Rigid Pavements by Westergaard and modified methods.

  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

**Course Outcomes:***At the end of this course, students will be able to:*

CO1: Plan highway networks

CO2: Understand the principles of construction and maintenance of highways

CO3: Design highway geometrics.

CO4: Design Intersections and prepare traffic management plans

CO5: Design flexible and rigid pavements.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
CO1	H	M								L		L	M	M	
CO2	H	L					H			L			L	M	L
CO3	L	M	H		L		M				M		H	H	
CO4		H				H	M			L	M	L	H	H	M
CO5	L		H				L			L		L	H	M	

H = Highly Related

<b>L-T-P</b>	<b>BCI043C – Transportation Engineering Lab</b>	<b>Credits: 1</b>
<b>0-0-2</b>		

### Experiments

1. Aggregate impact test
2. To determine fineness modulus of a given sample of coarse aggregate.
3. Los angles abrasion test
4. Aggregate crushing value test
5. Standard tar viscometer test
6. Specific gravity and water absorption test
7. To determine the elongation index for given sample of aggregate.
8. To determine the flakiness index & angularity number of given sample of aggregate.
9. Ductility test
10. To determine the softening point for give sample of bitumen.
11. To determine penetration value of bitumen.
12. Marshal stability test
13. Float test

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Characterize the pavement materials

CO2: Perform quality control tests on pavements and pavement materials

CO3: Develop Job mix for various types of bituminous constructions such as WMM, SDBC, BC, DBM and BM etc.

CO4: Prepare the testing reports related to highway engineering works.

CO5: Monitor and maintain road pavements.

<b>L-T-P</b>	<b>BCI065B - CAD Building Drawing Lab</b>	<b>Credits: 1</b>
<b>0-0-2</b>		

#### **Auto CAD 2D –**

1. Introduction to AutoCAD
2. Draw Commands
3. Drawing Aids
4. Edit Drawings
5. Text
6. Layers, Line Types, Colors
7. Polylines and Polygon
8. Crosshatching
9. Dimensioning
10. Draw Building Plan
11. Draw Building Section and Elevation
12. Plot and Print

#### **AutoCAD 3D –**

1. 3D Modeling Concepts in AutoCAD
2. 3D Co-ordinates Systems Viewpoint & UCS
3. Wireframe Modeling & Editing Solid, Mesh, Surface (Modeling& Editing ) Materials, Lights and Rendering Working with Images Import & Export

#### **Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Introduction to AutoCAD

CO2: Draw Commands, Drawing Aids, Edit Drawings.

CO3: Draw the plan, section and elevation of a building

CO4: Create, analyze and produce 2-D drawings of buildings in AUTO CAD environment.

CO5: Detailing building plans in CAD environment.

<b>L-T-P</b>	<b>BCI036B – Advanced Reinforced Cement Concrete</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:**

- Design of various structural members.

**Unit 1**

**Elements of Prestressed Concrete:** Principles and systems, material properties, losses of prestress, I.S. specifications, analysis and design of rectangular and T sections for flexure and shear.

**Unit 2**

Torsion: Analysis and Design of beams for torsion as per code method.

Continuous and Curved Beams: Analysis and Design of continuous beams using coefficients (IS Code), concept of moment redistribution. Analysis and design of beams curved in plan.

**Unit 3**

Circular Domes: Analysis and design of Circular domes with u.d.l. and concentrated load at crown.

Water Tanks and Towers: Water Tanks and Water Towers-design of rectangular, circular and Intze type tanks, column brace type staging

**Unit 4**

Yield Line Theory: Introduction to Yield line concept, Application of Y.L.T. to slabs with simple support conditions.

Retaining walls: Analysis and design of Cantilever Retaining Walls: Introduction to counterfort and buttress type retaining walls, their structural behavior and stability analysis.

**Unit 5**

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

Culverts and Bridges: Analysis and Design of superstructure of slab culverts and T-bridge for I.R.C. loading.

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Understand the concept of Prestressed concrete

CO2: Ability to analyze and design of torsion reinforcement.

CO3: Ability to analyze and design of Circular domes & Water Tank.

CO4: Ability to analyze and design of Retaining wall.

CO5: Ability to analyze and design of Culverts & Bridges.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>L-T-P</b>	<b>BCI077A – Quantity Surveying and Valuation</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objectives:**

- To produce civil engineering students who have strong foundation in estimation of quantities required for roads and buildings
- To familiarize with the knowledge of preparing bar bending schedules and valuation of buildings.

**Unit 1**

**Introduction:** Purpose and importance of estimates, principles of estimating. Methods of taking out quantities of items of work. Mode of measurement, measurement sheet and abstract sheet; bill of quantities. Types of estimate, plinth area rate, cubical content rate, preliminary, original, revised and supplementary estimates for different projects.

**Unit 2**

**Rate Analysis:** Task for average artisan, various factors involved in the rate of an item, material and labor requirement for various trades; preparation for rates of important items of work. Current schedule of rates. (C.S.R.)

**Unit 3**

*[Signature]*  
 Head  
 Department of Civil Engineering  
 JECRC University, Jaipur-303005

**Estimates:** Preparing detailed estimates of various types of buildings, R.C.C. works, earth work calculations for roads and estimating of culverts, Services for building such as water supply, drainage and electrification.

#### Unit 4

**Cost of Works:** Factors affecting cost of work, overhead charges, Contingencies and work charge establishment, various percentages for different services in building.

#### Unit 5

**Valuation:** Purposes, depreciation, sinking fund, scrap value, year's purchase, gross and net income, dual rate interest, methods of valuation, rent fixation of buildings.

#### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: To identify and differentiate the types of estimates

CO2: To prepare rate analysis and identify the main sources of current and forecast labour rates and

CO3: To prepare detailed estimates of roads and buildings

CO4: To quantify the various items of constructions and estimation of overhead costs

CO5: Ability to prepare valuation of the buildings

<b>L-T-P</b>	<b>BCI073A – Project Work</b>	<b>Credits: 4</b>
<b>0-0-4</b>		

### **Semester VII**

<b>L-T-P</b>	<b>BCI039A – Water Resource Engineering</b>	<b>Credits: 4</b>
<b>3-1-0</b>		

#### **Objectives:**

- To understand the design of different types of regulatory works and diversion headwork.
- To incorporate analytical abilities into the planning and design of water resource systems.
- To understand the design of different types of dams.

#### **Unit 1**

Regulation of works: Falls, Classification of falls, Design of falls, Distributary head regulator and cross-head regulator, Escape, bed bars.

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

Cross-Drainage Structure: Necessity of Cross-drainage structures, their types and selection, comparative merits and demerits, design of various types of cross-drainage structure-aqueducts, siphon aqueduct, super passage siphon, level crossing and other types.

## Unit 2

Diversion Head works: Design for surface and subsurface flows, Bligh's and Khosla's methods. Selection of site and layout, different parts of diversion head works, types of weirs and barrages, design of weirs on permeable foundation, silt excluders and different types of silt ejectors. Energy dissipation.

## Unit 3

Embankment Dams: Suitable sites, causes of failures, stability and seepage analysis, flownet, slope stability analysis, precautions of piping, principles of design of earth dams.

Gravity Dams: Force acting on a gravity dam, stability requirements, Instrumentation.

## Unit 4

Spillways: Spillway capacity, flood routing through spillways, different types of spillways and gates, energy dissipation below spillways.

Hydro Power Plant: General features of hydroelectric schemes, elements of power house structure, selection of turbines, draft tube and setting of turbine, cavitation.

## Unit 5

Reservoirs: Evaluation of impact of water projects on river regimes and environment. Reservoir sedimentation and watershed management.

Optimization: Introduction to optimization techniques and system approach. Introduction to G.I.S. and Computer aided irrigation design.

## Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Design and analysis of flow regulation work, and cross drainage work and classification.

CO2: Design and analysis of diversion head work and its classification.

CO3: Design and analysis of embankment and gravity dam in context of site selection, stability and instrumentation.

CO4: Design and assessment of water power projects, various structural components.

CO5: Analysis and understanding of reservoirs impacts, relevance in context of environment using optimization techniques.

<b>L-T-P</b>	<b>BCI040B– Transportation Engineering II</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objectives:**

- Students should be able to relate their understanding of the railroad industry, history, and principal components.
- Finding out the traffic load analyzing them and designing transportation systems.

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

- To overcome the traffic problems in peak hours.

### **Unit 1**

Introduction and Permanent Way Components: Types and Selection of Gauges, Selection of Alignment, Ideal Permanent Ways and Cross-sections in different conditions, Drainage, Salient Features and types of Components viz. Rails, Sleepers, Ballast, Rail Fastenings. Study of Specific Aspects: Coning of Wheels, Creep, Wear, failures in Rails, Rail Joints, Length of Rail, Sleeper Density and Spacing, Stations, Yards and Sidings, Turntable, Signalling.

### **Unit 2**

Points and Crossings: Types of Turnouts, Points or Switches, layout Plans of different types of Crossings, Design calculations of turnouts. Railway Systems Specific to Urban Movements: Surface railways (suburban railway system of Mumbai, Chennai and Delhi), Underground system (Metro of Kolkata/ Delhi), Elevated Systems (as Proposed for Jaipur, Delhi, Mumbai), Light Rail System (MRTS, Thane). Recent developments in Railway Networking.

### **Unit 3**

Geometric Design: Gradient and Grade Compensation, Superelevation and cant, cant deficiency, Types of Curves, Transition curves, their designs, Widening of Gauges.

### **Unit 4**

Airport Engineering: Introduction: Requirements to Airport Planning, Airport Classifications, Factors in Airport Site Selection, Airport Size, Obstructions, Zoning. Planning and Design of Airport: Requirements of Airport, Planning of Terminal Area, and different Layouts, Location of Gates, Types of Runway patterns, Runway Layout, Runway Length, Geometric Design of Runways, Layout of Taxiways, Geometric Standards, Exit or Turnaround Taxiways, Apron and Hangers.

### **Unit 5**

Airport Pavement Design: Factors Affecting Pavement Design, Design methods of Flexible Pavements, Design methods of Rigid Pavements.

### **Course Outcomes:**

*At the end of this course, students will be able to:*

- CO1: Understand the importance of railway infrastructure planning and Design fundamental.
- CO2: Identify the factors governing design of railway infrastructures
- CO3: Design and analyze the railway track system
- CO4: Describe the different components of airport and aircrafts
- CO5: Design flexible and rigid pavements

<b>L-T-P</b>	<b>BCI055A – Solid Waste Management</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### Objectives:

- To provide the student with a working knowledge of all unit operations involved in solid waste management.
- To identify the hazardous wastes, their transportation and disposal.
- To predict the sources and types of solid wastes.

### Unit 1

Solid Wastes: sources, types, composition, physical, chemical, and biological properties of solid wastes/ sources and types of hazardous and infectious wastes in municipal solid wastes.

### Unit 2

Solid waste generation and collection, Handling, Storage, Processing, Transportation.

### Unit 3

Disposal of Solid waste, materials separation and processing, thermal conversion, biological and chemical conversion, recycling of material in municipal solid wastes, Land-filling, Composting, gas generation, closure of land-fills.

### Unit 4

Hazardous Wastes–Fundamentals, fate, and Transport of contaminants, Toxicology origin, quantity and quality parameters. Biomedical / infectious Waste: Composition, Collection, Handling and Disposal. Legal aspects of Hazardous Waste Management: Collection, Conveyance, Treatment and Disposal

### Unit 5

Hazardous Waste Management Practices: Environmental Audits, Pollution Prevention Treatment and Disposal Methods; Physicochemical processes, Biological Methods, Stabilization & Solidification, Thermal Methods, Land Disposal. Site Remediation- Site and Subsurface Characterization, Remedial Technologies.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Study of physical, chemical, and biological properties of solid wastes

CO2: Analysis of solid waste generation and collection

CO3: Disposal of Solid waste, materials

CO4: Study of hazardous Wastes

CO5: Ability to explain the various aspects of solid waste management

<b>L-T-P</b>	<b>BCI080A – Earthquake Resistant Design</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objectives:**

- *Understand phenomenon, causes and effects of earthquake.*
- *Apply concepts of dynamics to earthquake problems.*
- *Design earthquake resistant RCC structures using Codal provisions.*
- *Design earthquake resistant masonry structures.*

**Unit 1**

**Seismology:** Causes of earthquakes and seismic waves, magnitude, intensity and energy release, plate tectonics, types of earthquakes, related IS codes.

**Unit 2**

**Characterization of Ground Motion:** Measurement of earthquake ground motion, seismic instruments, strong ground motion parameters.

**Unit 3**

**Effect of Damping:** Types of damping and their form, Logarithmic Decrement.

**Unit 4**

**Forced vibration of Single Degree of Freedom System:** Equation of motion, harmonic force excitation, Dynamic Magnification Factor, Resonance, system excited at base, Transmissibility of force/motion. Free vibration of Multi-Degree of Freedom System.

**Unit 5**

**Earthquake resistant design of buildings, Ductile Detailing.**

**Earthquake resistant design for masonry structures.**

**Course Outcomes:**

***At the end of this course, students will be able to:***

CO1: Able to understand the basic of seismology.

CO2: To know the measurements, equipment and parameters related to seismology.

CO3: Able to understand the effect of damping.

*[Signature]*  
Head  
Department of Civil Engineering  
JECRC University, Jaipur-303005

CO4: Basic knowledge of dynamics of seismic.  
CO5: Able to design earthquake resistant buildings.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

**SCHOOL OF ENGINEERING**  
**SYLLABUS AND COURSE STRUCTURE**  
**M. TECH (CIVIL ENGINEERING)**  
**ACADEMIC YEAR 2022-23**

**M. Tech. (CE) Program Educational Objective (PEO's):**

A postgraduate of the Civil Engineering with specialization Program should:

**PEO-I**

Postgraduates of the Programme will adopt to the technological advancements for professional development to cater for the changing needs of the society through critical thinking

**PEO-II**

Postgraduates of the Programme, will become as Professional Engineers, teaching experts and engage in Research and Development works both with ethically and societal responsibility

**PEO-III**

Postgraduates of the Programme will impart practical perspectives of civil engineering in order to propose techno-economically and practical solutions to complex problems for collaborative and multidisciplinary projects.

**Program Outcomes (PO)**

A postgraduate of the Civil Engineering with specialization Program will demonstrate:

**PO1:** To acquire in-depth knowledge of civil engineering, with an ability to understand, evaluate and analyse existing techniques and establish new techniques and integrate them for the betterment of the field.

**PO2:** To analyse complex civil engineering problems critically, apply independent judgment for synthesizing information to make intellectual and/or creative advances for conducting research in a wider theoretical, practical and policy context.

**PO3:** To think laterally and originally, conceptualize and solve engineering problems, evaluate a wide range of potential solutions for those problems and arrive at technically feasible and economically viable solutions after considering health and safety, cultural, societal and environmental factors in the core areas of expertise.

**PO4:** To extract information pertinent to engineering problems through literature survey and experiments, apply appropriate research methodologies, techniques and tools, design, conduct experiments, analyze and interpret data, demonstrate higher order skill and view things in a broader perspective, contribute individually / in group(s) to the development of scientific / technological knowledge in one or more domains of civil engineering.

**PO5:** To create, select, learn and apply appropriate techniques, resources, and modern engineering modelling tools, including modelling and prediction, to complex civil engineering activities with an understanding of the limitations.

**PO6:** To possess knowledge and understanding of group dynamics, recognize opportunities and contribute positively to collaborative-multidisciplinary scientific research, demonstrate a capacity for self-management and teamwork, decision making based on open-mindedness, objectivity and rational analysis in order to achieve common goals and further the learning of themselves as well as others.

**PO7:** To demonstrate knowledge and understanding of engineering and management principles and apply the same to one's own work, as a member and leader in a team, manage projects efficiently after consideration of economic and financial factors.

**PO8:** To communicate with the engineering community, and with society at large, regarding complex civil engineering activities confidently and effectively, such as, being able to comprehend and write effective reports and design documentation by adhering to appropriate standards, make effective presentations, and give and receive clear instructions.

**PO9:** To recognize the need for, and have the preparation and ability to engage in lifelong learning, with a high level of enthusiasm and commitment to improve knowledge and competence continuously.

**PO10:** To acquire professional and intellectual integrity, professional ethics and code of conduct, consideration of the impact of research outcomes on professional practices and an understanding of responsibility to contribute to the society for sustainable development.

**PO11:** To observe and examine critically the outcomes of one's actions in addressing Civil Engineering problems and make corrective measures subsequently, and learn from mistakes without depending on external feedback.

### **Program Specific Outcomes:**

The M. Tech. Degree Programme in Civil Engineering with specialization is offered in the department with the following programme specific objectives:

**PSO1:** Graduates of the programme will possess the ability to provide solutions to Engineering problems with the highest standards economically, socially and ethically.

**PSO2:** Graduates of the Programme, as part of an organization or as Entrepreneurs, will continue to learn to harness evolving technologies and work for the betterment of the global community.

**PSO3:** Graduates of the programme will continue their lifelong learning to remain effective professionals to maintain and enhance technical and professional growth.

## M. Tech. (Civil Engineering) Code & Subject Scheme

### Semester-I

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
MCI116A	Urban Project Management	3	0	0	3	C
MCI117B	Technologies for Sustainability and Sustainable Development	3	0	0	3	C
MCI118B	Advance Concrete and Concrete Mechanics	3	0	0	3	C
MCI148A	MicroStation Lab	0	0	4	2	C
MCI121A	Advance Excel Lab	0	0	2	1	C
DMA017A	Research Methodology	2	0	0	2	C
DMA018A	Research Methodology Lab	0	0	2	1	C

### Semester-II

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
	Program Elective – I	3	0	0	3	S
	Program Elective – II	3	0	0	3	S
	Program Elective – III	3	0	0	3	S
	Core Lab – I	0	0	4	2	C
MCI124A	Project	0	0	8	4	C

### Semester-III

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
	Program Elective – IV	3	0	0	3	S
	Program Elective – V	3	0	0	3	S
	Program Elective – VI	3	0	0	3	S
MCI125A	Seminar on Proposed Dissertation	0	0	2	1	C

### Semester-IV

Code	Subject	Contact Hours/week			Total Credits	Type
		L	T	P		
MCI023B	Dissertation Part – II	0	0	40	20	C

### Specialization in Structural Engineering

Core Lab – I			
MCI122B	Advanced Concrete Technology Lab		

Program Elective – I, II, III, IV, V & VI			
Elective Subjects (Choose any six)			
MCI024B	Structural Dynamics	MCI030B	Advanced Design of Steel Structures
MCI027B	Bridge Engineering	MCI129A	Design of Advanced Concrete Structures
MCI031B	Prestressed Concrete Design	MCI032B	Theory of Elasticity and Plasticity

### Specialization in Transportation Engineering

Core Lab – I			
MCI132B	Transportation Planning Lab		

Program Elective – I, II, III, IV, V & VI			
Elective Subjects (Choose any six)			
MCI133A	Pavement Materials	MCI136A	Pavement Design and Analysis
MCI134A	Traffic Engineering and Management	MCI138A	Pavement Construction and Maintenance
MCI135A	Transportation Systems Planning	MCI142A	Geo-informatics in Transportation Engineering

### Specialization in Environment Engineering

Program Elective – I, II, III, IV, V & VI			
Elective Subjects (Choose any six)			
MCI068B	Ecology and Environmental Impact Assessment	MCI069B	Wastewater Treatment Engineering
		MCI078B	Global Warming and Climate Change

### Specialization in Construction Engineering and Management

Core Lab – I			
MCI100C	Construction Management Lab		

Program Elective – I, II, III, IV, V & VI			
Elective Subjects (Choose any six)			
MCI096B	Construction Project Management	MCI099B	Construction Quality and Safety Management
MCI103B	Construction Contracts and Specifications	MCI104B	Durability and Repair of Concrete Structures
MCI102B	Construction Practices and Equipment	MCI145A	Composite Materials

## Semester-I

<b>L-T-P</b>	<b>MCI116A – Urban Project Management</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### Objective:

- Learn how to Understand the concepts, principles, theories, tools and techniques of project management
- Apply the methods learned to a prepare project implementation plan

### UNIT 1

**Overview of Project Management** - Concepts of a Project and Project Management, Public Sector Vs Private Sector Projects, The Challenges of Public-Sector Project Management, Why Do Public-Sector Projects Fail? The Link between Plans, Programs and Projects, Classification of Projects, Overview of Project Life Cycle

### UNIT 2

**Project Identification:** Sources of project ideas, Participatory analysis, Problem analysis, Objective analysis, Alternative Tree Analysis or Project Selection, Logical Framework Approach

**Project preparation:** Pre-feasibility study, Support study, Feasibility study, Proposal writing

### UNIT 3:

**Financial analysis of a project-** The Costs of a Project, Means of finance, Accounting Income Vs Cash Flows, Project Appraisal - Accounting Rate of Return (ARR), Payback Period, Net Present Value (NPV) method, Benefit Cost Ratio (BCR), Internal Rate of Return (IRR), Discounted payback period

**Economic Analysis of a project** -The Rational for Economic Analysis, How to do Economic Analysis, Economic Prices, Economic transfer, Tradable and non-tradable Goods, Factors of production, Application of financial appraisal methods

### Risk and uncertainty in project Appraisal

### UNIT 4:

**Project Team Building and Conflict Management** - Team building and conflict management, Establishing a Team Identity, Traits of effective project manager,

**Project Monitoring, Evaluation and closing** - Introduction, What is project monitoring, What is project evaluation?, Process and impact evaluation, Usefulness of project Evaluation, Problems with project Evaluation, Project Closing

### UNIT 5

**Project implementation** - Project Organization, Project Contract Administration, Project Implementation tools, Work breakdown structure, Gantt Chart, Network Techniques, The Critical path method (CPM), Program Evaluation and Review Technique (PERT), Project cost analysis, Project Resource Scheduling, Earning Value Methods, Successful Project Implementation

**Outcome:**

CO1:Identify potential development projects

CO2: Prepare project proposals for appropriate development projects

CO3:Appraise public projects using financial and economic cost benefit analysis techniques.

CO4:Create project risk management tools and techniques and evaluate the effectiveness of public projects

CO5:Design tools and methods for successful implementation of public projects

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3

<b>L-T-P</b>	<b>MCI117B – Technologies for Sustainability and Sustainable Development</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:**

- Learn about sustainability and technical performance of sustainable technologies.
- Apply the methods learned to a realistic engineering problem by using sustainable energy technologies.

**Unit 1**

Introduction to Sustainability and Sustainable development; Need, role and significance of sustainability

**Unit 2**

Sustainable Development dimensions and intersections; Measurement of Sustainability; Sustainable Impact Assessment

**Unit 3**

Economic Development and sustainability; Social dimensions of Sustainability; Environment Modeling for Sustainable Development

**Unit 4**

Sustainable Infrastructure; Industrial Practices in Sustainability; Climate Change Adaptation for Sustainable Management of Water in India

**Unit 5**

Sustainability of Carbon Storage and Sequestration; Energy Needs for Sustainable Buildings and Transportation; Remote Sensing and GIS Applications in Sustainability

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Understand the base concepts and terminologies of Sustainability and Sustainable development

CO2: Analyse and measure sustainability

CO3: Prepare and understand economic, social and environmental models of sustainable development.

CO4: Apply sustainability to infrastructure, industries, water management

CO5: Apply sustainability and RS to energy needs of buildings and transportation

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome

<b>L-T-P</b>	<b>MCI118B – Advance Concrete and Concrete Mechanics</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### Objectives

- To familiarize with the fundamentals of advance concrete
- To study the different cementitious materials
- To understand the basic concepts of deterioration of concrete
- To study the application of different mineral admixtures

### Unit -1

Introduction to cement and concrete, composition of cement and hydration of cement phases, mechanics of hydrating concrete, flowing concrete.

### Unit -2

Supplementary cementitious materials and chemical admixtures, Rheology of concrete, Rheological modelling of fresh concrete, Creep, Drying shrinkage, relaxation and volume stability of concrete.

### Unit-3

Deterioration processes, Special concretes, Microstructural development and internal microstresses, Micromechanics.

### Unit -4

**Durability of concrete:** Carbonation, chloride ingress, corrosion, sulphate attack, freezing and thawing: Factors affecting, effects, mechanisms, Corrosion mapping, prevention and control.

### Unit-5

**Concrete containing supplementary cementitious materials:** Specifications of fly ash, silica fume and GGBFS for use in concrete, reaction mechanism, properties of fresh and hardened concrete.

### Course Outcomes:

*At the end of this course, students will be able to:*

- CO1: Ability to understand about advance concrete practices.  
CO2: Knowledge about properties of concrete chemical admixtures.  
CO3: Knowledge about various concrete attacks.  
CO4: Knowledge about durability of concrete.  
CO5: Knowledge about supplementary cementitious materials

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome

<b>L-T-P</b>	<b>MCI148A – MicroStation Lab</b>	<b>Credits: 2</b>
<b>0-0-4</b>		

### Experiments

MicroStation is used by engineers, architects, GIS professionals, constructors, and owner-operators to design, model, visualize, document, map, and sustain infrastructure projects because it delivers an integrated and proven suite of intuitive, interactive, and highly interoperable design capabilities.

### **Course Outcomes:**

**At the end of this course, students will be able to:**

CO1: Use MicroStation for designing

CO2: Prepare Maps and model

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome

<b>L-T-P</b>	<b>MCI121A – Advanced Excel Lab</b>	<b>Credits: 1</b>
<b>0-0-2</b>		

**Various Methods and Uses of Advance Excel Formulas:** Vlookup, Hlookup, Sumif, Sumifs, Sumproduct, Dsum, Countif, Countifs, If, Iferror, Iserror, Isna, Isnumber, Isnontext, Isblank, Istext, Getpivotdata, Dcount, Dcounta, Or, And, Search, Index, Match Etc

**Various Methods and Uses of IF Conditions:** When should use the "IF" Conditions?, Creation of Multiple IF Conditions in One Cell, Use the IF Conditions with the Other Advance Functions, How to use nested IF statements in Excel with AND, OR Functions

**ADVANCED EXCEL OPTIONS :** Various Methods of Filter and Advance Filter options, Creating and Updating Subtotals, Various Methods of Text to Column options, Uses of Data Grouping and Consolidation options, Uses of Goal Seek and Scenarios Manager, Various Method of Sorting Data, Creating, Formatting and Modifying Chart, Data Validation, Creating drop down lists using different data sources, Linking Workbooks and Uses of Edit Link options, Excel Options, Customizing the Quick Access Tool Bar, Formula Auditing features and Trace formula error

**Pivot Tables & Charts :** Various Methods and Options of Pivot Table, Using the Pivot Table Wizard, Changing the Pivot Table Layout, Subtotal and Grand total Options, Formatting, Grouping Items, Inserting Calculated Fields, Pivot Table Options, Calculation in Pivot Table, Display and Hide Data in Field, Select, Move & Clear Pivot Data, Creating and Modifying Pivot Chart

**Advance Use of Function:** Mixing Function to get Various MIS Outputs, Creating Data Table, Advance Data Validation, Using conditional formatting with Formulas and Function, Using Name Manager, Array Formulas

**Importing Data from External Sources: Macros,** What is a Macro?, Creating Excel Macro, Running Macros and Editing, Automating Tasks with Macro

<b>L-T-P</b>	<b>DMA017A – Research Methodology</b>	<b>Credits: 2</b>
<b>2-0-0</b>		

### Objectives:

- To understand basic concepts of research and its methodologies
- To Identify appropriate research topics
- To Select and define appropriate research problem and parameters
- To understand hypothesis formulation and testing
- To learn fundamentals of thesis writing

### Unit 1

**Research Fundamentals and Terminology:** Importance of Research in Management Decisions. Defining Research Problems and Formulation of Hypothesis

### Unit 2

**Research Design:** Type of Research Design, Natural Experiments, Formal Type of Experiments, Evaluation of Experiments, Selecting Relevant Variables, Validity of Experiments. Sample design, Steps in sample design, Criteria for selection of sample, Different types of sample design, The Sampling Process

### Unit 3

**Data Analysis:** Methods and Techniques of Data Collection, Type of Data, Distinction between primary Data and Secondary, Data Collection Procedure for primary Data, Data preparation and Preliminary Analysis, Presentation of Data, Oral Presentation Statistical Analysis and Interpretation of Data.

### Unit 4

**Hypothesis Testing:** Null and alternative hypothesis, Level of significance, Type I and type II error, Two-tailed and one-tailed tests, Procedure of hypothesis testing, Power of hypothesis test, difference Hypothesis Testing, Multivariate Analysis of Data, Multiple Linear Regression.

### Unit 5

**Report writing and Presentation:** Fundamental of Report Writing and Formatting of Reports, Additional Statistics in Research

### Course Outcomes:

At the end of this course, students will be able to

1. Understand basic concepts of various research areas
2. identify appropriate research topics concerned to Engineering field
3. select and define appropriate research problem and its related parameters
4. prepare the hypothesis and testing of hypothesis.
5. develop skill of thesis /Dissertation writing.

### **SPSS Package -**

**An Overview of SPSS :** Mouse and keyboard processing, frequently –used dialog boxes, Editing output, Printing results, Creating and editing a data file

**Managing Data:** Listing cases, replacing missing values, computing new variables, recording variables, exploring data ,selecting cases, sorting cases, merging files

**Graphs:** Creating and editing graphs and charts

**Frequencies:** Frequencies, bar charts, histograms, percentiles

**Descriptive Statistics:** measures of central tendency, variability, deviation from normality, size and stability, Cross Tabulation and chi-square analyses, The means Procedure

**Bivariate Correlation:** Bivariate Correlation, Partial, Correlations and the correlation matrix

**The T-test procedure:** Independent –samples, paired samples, and one sample tests

**The one way ANOVA procedure:** One way analysis of variance

**General Linear model:** Two –way analysis of variance and the influence of covariates, Simple Linear Regression, Multiple regression analysis, Multidimensional scaling, Factor analysis, Cluster analysis.

## Semester-II

### Specialization in Structural Engineering

<b>L-T-P</b>	<b>MCI122B – Advanced Concrete Technology Lab</b>	<b>Credits: 2</b>
<b>0-0-4</b>		

#### List of Experiments:

1. Determination of bond strength of specimens with M25 Grade and M50 Grade concrete.
2. Preparation of M40 Grade pumpable concrete with superplasticizer and supplementary cementitious materials
3. Preparation of M60 Grade self- compacting concrete and testing it for properties in fresh and hardened states.
4. Determine stress-strain curve of high strength concrete specimens (M60 or higher grade).
5. Determine correlation between cube strength, cylinder strength, split tensile strength and modulus of rupture with normal strength concrete and high strength concrete mixes
6. Non-Destructive testing of existing concrete members through rebound hammer, Ultrasonic pulse velocity meter, resistivity meter, carbonation test and core test.
7. Behavior of Reinforced Concrete Beam specimen- measurement of strains at various levels through LVDTs, strain Gages- determination of moment curvature relationship

#### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Determination of bond strength of Different specimens grade of concrete

CO2: apply the procedures involved Preparation of M40 Grade pumpable concrete with superplasticize and different cementitious material

CO3: apply the procedures Preparation of M60 Grade self- compacting concrete.

CO4: take measurements of stress-strain curve of high strength concrete specimens, Non-Destructive testing

CO5: Behavior of Reinforced Concrete Beam specimen- measurement of strains at various levels.

## Specialization in Transportation Engineering

<b>L-T-P</b>	<b>MCI132B-Transportation Planning Lab</b>	<b>Credits: 2</b>
<b>0-0-4</b>		

### List of Experiments:

1. Traffic volume data collection at midblock section in urban area and its analysis
2. Traffic volume data collection at rural highway section and its analysis
3. Categorized vehicle speed data collection at urban and rural sections and its analysis
4. Deriving flow relationships between flow characteristics based on volume and speed data collected
5. Speed and delay study using Moving observed method
6. Volume study at a roundabout to examine its capacity
7. Volume and speed study at a four legged intersection
8. Parking study in a market or commercial area (accumulation and duration analysis)
9. Analysis of accident data procured from police stations
10. Demonstration and hands-on training with transportation software for design of flexible as well as rigid pavements.
11. Road Safety Audit of a rural section of a highway

### Course Outcomes:

*At the end of this course, students will be able to:*

- CO1: Understand the base concepts and terminologies of Transportation Planning  
CO2: Conduct surveys to collect traffic data  
CO3: Interpret different traffic studies and data sampling processes.  
CO4: Analyse all survey data.  
CO5: Design and analyse pavements

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Specialization in Environment Engineering

### Specialization in Construction Engineering and Management

<b>L-T-P</b>	<b>MCI100C-Construction Management Lab</b>	<b>Credits: 2</b>
<b>0-0-4</b>		

#### List of Experiments:

1. Analytical solution of construction project models.
2. Numerical solution of construction project models.
3. Application software for project planning, scheduling & control.
4. Programming exercises for estimation, network planning and control, LP in construction.
5. MATLAB Programming in linear and non-linear programming.

#### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Understand the basic concept of analytical solution of construction project models.

CO2: Conduct Numerical solution of construction project models.

CO3: Application and uses of software for project planning & scheduling

CO4: Understand the basic concept of estimation & network planning

CO5: Understand the basic concept of MATLAB Programming

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome											Program Specific Outcome

## Specialization in Structural Engineering

L-T-P	MCI024B - Structural Dynamics	Credits: 3
3-0-0		

**Objective:** To understand the response of structures to earthquakes requires study of structural dynamics. Therefore, Single Dynamic Degree of Freedom Systems are first introduced, then two and three DOF systems are covered. Finally the earthquake effects on structures are covered.

### UNIT-1

**Dynamics of Structures:** Objectives and importance. Types of dynamic loads, Dynamic degree of freedom, Mathematical modelling, Damping and stiffness, Torsional stiffness, Equivalent stiffness, Free and forced vibrations

### UNIT-2

**Single Degree of Freedom (SDOF) Systems:** Undamped free vibrations, formulation of differential equation of motion: Newton's law of motion, D'Alembert's principle and energy approach. Natural frequency. Vibration response.

### UNIT-3

**Single Degree of Freedom (SDOF) Systems:** damped free vibrations, critically damped, under damped & over damped systems, formulation of differential equation of motion: Natural frequency. Vibration response.

### UNIT-4

**Forced vibration (under Harmonic Excitation):** Undamped and Underdamped SDOF System: Formulation and Solution of Differential Equation of Motion; Dynamic Magnification Factor, Frequency Ratios and Damping Factors, and Phase angles.

### UNIT-5

**Two Degree of Freedom Systems:** Formulation of equations of motion. Undamped free vibrations and Principle Mode of Vibration and mode shapes: Analysis of Dynamic response, Normal co-ordinates, Uncoupled equations of motion, Orthogonal, properties of normal modes; Coordinate Coupling: Static and Dynamic Coupling.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: understand the properties of objectives and importance Types of dynamic loads.

CO2: Able to solve the Sdof system Undamped free vibrations

CO3: Able to solve the Sdof system damped free vibrations.

CO4: Identify effective measures for Forced vibration (under Harmonic Excitation).

CO5: Classification of different structural Two Degree of Freedom Systems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>L-T-P</b>	<b>MCI027B - Bridge Engineering</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### **Objective:**

- To study the loads, forces on bridges and design of several types of bridges .
- Analysis and design of RC and PSC box girder bridge deck

### **UNIT-1**

**Introduction** - Classification and components of bridges, historical perspective, layout and planning, investigations for Bridges, choice of type of the bridges, conceptual bridge design, bridge aesthetics. Bridge appurtenances

### **UNIT-2**

**Loads on bridges** - loading standards for highway and railway bridges (IRC, IRS) Analysis and design of RC and PSC bridge decks: slab culvert bridges, slab and beam bridges, load distribution in slabs and beams, bowstring girder bridges, behaviour of skew bridge decks

### **UNIT-3**

Behaviour, analysis and design of RC and PSC box girder bridge decks. Behaviour, analysis and design of steel bridge decks: girder bridges, truss bridges, arch bridges, composite construction.

### **UNIT-4**

Modern methods of construction of concrete, steel and composite bridges, their impact on analysis and design. Introduction to analysis and design of long span bridges: suspension.

### **UNIT-5**

Design of bearings, substructure and foundations - piers and abutments of different types, shallow and deep foundations-design and constructional aspects.

### **Course Outcomes:**

*At the end of this course, students will be able to:*

- CO1: Able to understand types and Classification and components of bridges.
- CO2: Able to Analysis and design of RC and PSC bridge decks: slab culvert bridges
- CO3:Able to understand Behaviour, analysis and design of steel bridge decks.
- CO4: Classification of different Modern methods of construction of concrete.
- CO5: Classification of different Design of bearings, substructure and foundations .

<b>L-T-P</b>	<b>MCI031B - Prestressed Concrete Design</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### Objective

- This subject is thought to give the concepts of pre stress
- To impart the knowledge about analysis and design of pre stressed concrete members

### UNIT-1

**Introduction to prestressed concrete:** types of prestressing, systems and devices, materials, losses in prestress.

### UNIT-2

Analysis of PSC flexural members: basic concepts, stresses at transfer and service loads, ultimate strength in flexure, code provisions in IS 1343. Statically determinate PSC beams: design for ultimate and serviceability limit states for flexure, and flexure combined with axial compression or tension

### UNIT-3

Analysis and design for shear and torsion, code provisions. Transmission of prestress in pretensioned concepts, crack-width members. Anchorage zone stresses for posttensioned members.

### UNIT-4

Statically indeterminate structures Analysis and design continuous beams and frames, choice of cable profile, linear transformation and concordancy. Composite construction with precast PSC beams and cast insitu RC slab Analysis and design, creep and shrinkage effects. Partial prestressing principles, analysis and design calculations

### UNIT-5

Analysis and design of prestressed concrete pipes, tanks and spatial structures slabs.

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Able to understand types of prestressing, systems and devices.

CO2: Able to Analysis of PSC flexural members.

CO3: Able to understand Analysis and design for shear and torsion.

CO4: Classification of different Statically indeterminate structures Analysis and design continuous beams and frames.

CO5: Analysis and design of prestressed concrete pipes.

<b>L-T-P</b>	<b>MCI030B - Advanced Design of Steel Structures</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### Objective-

- To introduce basic concepts of stability of structures and illustrate it's application.
- Perform Limit state design of trusses and frames.
- Perform Minimum weight design of steel structures.

### UNIT-1

Limit States Load and Resistance Factor Design methods. Behaviour and design of members under tension, compression, bending, and combined forces (shear bending, axial force bending).

### UNIT-2

Fasteners: Methods of installation and behaviour of rivets, bolts and welds. Screws and rivets in cold formed steel construction Connections, Types of fasteners, Behaviour of local elements, Analysis, Design and Detailing of Connections. Design for Earthquake Forces.

### UNIT-3

Cold formed Steel Sections - Types of cross sections - Local buckling and post buckling - Design of compression and Tension members - Beams - Deflection of beams - Combined stresses and connections

### UNIT-4

Design for ductility, R factor, concentrically and eccentrically braced frames, non-buckling bracings.

### UNIT-5

Estimation of wind load - Design of industrial stacks - Self-supporting and guyed stacks lined and unlined – along wind and across wind vibration.

### Course Outcomes:

*At the end of this course, students will be able to:*

- CO1: Able to understand Limit States Load and Resistance Factor Design methods.  
CO2: Able to Analysis Methods of installation and behaviour of rivets, bolts and welds.  
CO3: Able to understand Types of cross sections.  
CO4: Able to understand non-buckling bracings.  
CO5: Analysis and design of Estimation of wind load.

<b>L-T-P</b>	<b>MCI129A - Design of Advanced Concrete Structures</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective-**

- Perform Limit state design of trusses and frames.
- Perform Minimum weight design of steel structures.

**Course details:**

<b>S. No.</b>	<b>Contents</b>	<b>Contact hours</b>
1	<b>Limit State Design:</b> Objective, scope and outcome of the course Revision of Basic Concepts of Limit State Design of Prismatic Members in Flexure, Shear & Bond. Limit State Analysis and Design of Continuous Beams using Coefficient, Reinforcement Detailing & Curtailment provisions as per Code.	7
2	<b>Serviceability Requirements:</b> Limit State of Serviceability of Beams and Slabs in Deflection. Calculation of Deflection due to Loads, Shrinkage & Creep; Calculation of Crack Width as per IS Code.	8
3	<b>Flat Slabs:</b> Direct design method: Distribution of moments in column strips and middle strip-moment and shear transfer from slabs to columns. Shear in Flat Slabs-Check for one way and two-way shears. Introduction to Equivalent frame method. Limitations of Direct design method, Distribution of moments in column strips and middle strip sketch showing reinforcement details.	10
4	<b>Columns and Footing:</b> Design of Slender Columns. Analysis and Design of (i) Isolated Footing subjected to Axial Load and Moment (ii) Combined Rectangular Footing for Two Columns subjected to Axial Loads and moments. Reinforcement Detailing	8
5	<b>Ribbed Floor and Shell Roofs:</b> Introduction to Structural Behavior and Construction & Design Features of Ribbed floor, Shell Roofs and Stresses in Simple Semicircular Shell. <b>Stair Case:</b> Types and Planning of Staircases, Analysis and Design of Staircase spanning longitudinally on Waist slab. Reinforcement detailing.	10
	<b>Total</b>	<b>45</b>

**Course Outcomes:**

***At the end of this course, students will be able to:***

CO1: Understand the concept of shear and shear reinforcement

CO2: Ability to understand the Limit State of Serviceability of Beams and Slabs.

CO3: Ability to analyze and design of columns & footings.

CO4: Ability to analyze and design of slab.

CO5: Ability to analyze and design of Ribbed Floor and Shell Roofs

<b>L-T-P</b>	<b>MCI032B - Theory of Elasticity and Plasticity</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### **Objective-**

This subject is taught to impart knowledge on theory of elasticity and plasticity .

### **UNIT-1**

Introduction: Elasticity - notation for forces and stresses - components of stresses - components of strain - Hooks law. Plane stress and plane strain analysis - plane stress - plane strain – differential equations of equilibrium - boundary conditions - compatibility equations - stress function – boundary condition..

### **UNIT-2**

Two dimensional problems in rectangular coordinates - solution by polynomials - Saint- Venant's principle - determination of displacements - bending of simple beams. Two dimensional problems in polar coordinates – strain components in polar coordinates - displacements for symmetrical stress distributions - simple symmetric and asymmetric problems - general solution of two- dimensional problem in polar coordinates - application of general solution in polar coordinates.

### **UNIT-3**

Analysis of stress and strain in three dimensions - principal stresses - stress ellipsoid - director surface - determination of principal stresses - max shear stresses – homogeneous deformation - principal axes of strain rotation. General Theorems: Differential equations of equilibrium – conditions of compatibility - determination of displacement - equations of equilibrium in terms of displacements - principle of super position - uniqueness of solution - the reciprocal theorem.

### **UNIT-4**

Torsion method - use of soap films in solving torsion problems - hydro dynamical analogies - torsion of shafts, tubes, bars etc. Bending of Prismatic Bars: Stress function - bending of cantilever – circular cross section - elliptical cross section - rectangular cross section - bending problems by soap film method – displacements of Prismatic Bars - torsion of prismatic bars - bars with elliptical cross sections – other elementary solution - membrane analogy - torsion of rectangular bars - solution of torsion problems by energy

### **UNIT-5**

Theory of Plasticity: Introduction - concepts and assumptions - yield criterions

### **Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Able to understand components of stresses - components of strain.

CO2: Able to Analysis of Two dimensional problems in rectangular coordinates.

CO3:Able to understand stress and strain in three dimensions.

CO4: Able to understand Torsion method by using different bars..

CO5: Analysis a concept of Theory of Plasticity.

3	Karlaftis, F. Mannering. Statistical and econometric methods for transportation data analysis (2nd edition), CRC Press	2010

**Course Outcomes:***At the end of this course, students will be able to:*

CO1: Understand the base concepts and terminologies of Travel Demand Modelling

CO2: Analyse Trip Generation and distribution data.

CO3: Evaluate Mode choice models

CO4: Evaluate Traffic assignment problems

CO5: Interpret and understand activity based models

<b>L-T-P</b>	<b>MCI138A-Pavement Construction and Maintenance</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To introduce the construction methods of highways and maintenance systems.

**Pre-requisite:** Pavement Design and Analysis

**Course details:**

<b>S. No.</b>	<b>Contents</b>	<b>Contact hours</b>
1	<b>Flexible Pavement Construction:</b> Construction methods, Quality control requirements, Tools required, IRC & MORT&H recommendations for construction	9
2	<b>Rigid Pavement Construction:</b> Construction methods, Quality control requirements, Joints in cement concrete pavements, Reinforced cement concrete road construction, IRC & MORT&H recommendations for construction	8
3	<b>Pavement Evaluation and Performance:</b> General concept of pavement evaluation, evaluation of pavement performance, evaluation of pavement structural capacity, evaluation of pavement distress, evaluation of pavement safety.	10
4	<b>Types of Distress:</b> Structural and functional, serviceability, fatigue cracking, pavement deformation and low temperature shrinkage cracking, Factors affecting performance, relation between performance and distress.	9
5	<b>Pavement Management System:</b> Introduction to Pavement Management System (PMS) & Maintenance Management System (MMS), construction, maintenance and rehabilitation. Feedback data system.	9
	<b>Total</b>	<b>45</b>

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Introduction of flexible pavements Construction methods.

CO2: Introduction of rigid pavements Construction methods.

CO3: Analysis of Pavement Evaluation and Performance.

CO4: Analysis of types of distress.

CO5: Introduction of pavement management system.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Specialization in Environment Engineering

L-T-P	MCI068B-Ecology and Environmental Impact Assessment	Credits: 3
3-0-0		

**Objective:** The course introduces the process of environmental impact assessment and policy decision making as required under the National Environmental Policy Act (NEPA) and the regulations of the Council of Environmental Quality (CEQ).

### Unit 1

**Ecology:** Classification of Ecosystems, Structure and Function of Ecosystems, Energy flow in Ecosystems, Ecological Niche and succession, Bio-geo-chemical cycles, Ecological Pyramids.

### Unit 2

**Aquatic and Terrestrial Ecosystems:** Diversity and dominance Indices, Ecosystem Models. Climate change and biodiversity

**Lake Ecosystem:** Trophic levels, nutrient loading, nutrient enrichment, Leibig's Law, control of eutrophication.

### Unit 3

**Environmental Impact Assessment:** Definition, Objectives, Types – Rapid and Comprehensive EIA, EIS, FONSI. Step by-step procedure for conducting EIA and Limitations of EIA, Prevention of Significant Deterioration (PSD) Programme. Carrying capacity concept.

### Unit 4

**Framework of Impact assessment:** Scope and contents of EIA, methodologies and techniques of EIA. Attributes, Standards and Value functions: Public participation in EIA. Environmental Management Plan (EMP) and Disaster Management Plan (DMP).

### Unit 5

EIA Case Studies –**Thermal Power Plant, Mining, Fertilizer, Construction Projects, Airport, Water and Wastewater Treatment Plants.**

### Course Outcomes:

*At the end of this course, students will be able to:*

**CO1:** Understand basic ecology and its classification..

**CO2:** Gain knowledge about aquatic and terrestrial ecosystems.

**CO3:** Gain knowledge about basics of EIA Process..

**CO4:** Gain knowledge about the Environmental Impact Assessment framework..

**CO5:** Understand detailed EIA Reports of various projects

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PSO 1	PSO 2	PSO 3
CO1	H		H			M	L	H		L	M	H	L	M
CO2	M	L	L			H	M	M		M	M	H		L
CO3	M		L			L	H				M	H	M	H
CO4		M	M			L	H	L		H	M	H		
CO5	L	H	M			L	L	H			M	H	L

M = Medium

L=Low

**Suggested Books:**

- 1) Krebs J. *Ecology - The Experimental Analysis of Distribution and Abundance*. Harper International
- 2) Hall C.A.S., Day J.W. *Ecosystem Modeling in Theory and Practice: An Introduction with Case Histories*. John Willey
- 3) EIA manual by MOEF.

<b>L-T-P</b>	<b>MCI069B-Wastewater Treatment Engineering</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To provide a basic description and understanding of the principal unit processes used in the treatment of wastewater. This will include coverage of the scientific basis of each unit process, as well as the conventional approach to their engineering design.

### Unit 1

**Introduction:** Biological Wastewater Treatment, Biological Sludge Treatment. Biological Systems: Fundamentals of Microbiology and Biochemistry, Bioenergetics and Metabolism, Kinetics of Biological Growth. Process Analysis: Reaction Rates, Effect of Temperature on Reaction Rate, Enzyme Reaction and Kinetics, Reactor Analysis, Residence Time Distribution.

### Unit 2

**Sewerage System:** Domestic wastewater characteristics, Flow equalization, population equivalent, Treatment flow chart. Primary, secondary and tertiary treatment of domestic wastewater. Downstream Wastewater Treatment for Reuse and Recycle – Need for downstream processing, Guidelines for wastewater recycling, Small and package plants for wastewater treatment.

### Unit 3

Activated sludge process design for nutrient removal, Process operation: (F/M), mean cell residence time, oxygen requirement. Biological and Chemical phosphorus removal, Sedimentation of Activated Sludge. Advanced Activated Sludge Process- Sequencing Batch Reactor, Oxidation Ditch and membrane bioreactors.

### Unit 4

Biofilm Process: Trickling Filter, Bio tower, Rotating Biological Contactor, Integrated Activated Sludge and Biofilm processes. Stabilization Ponds & Aerated Lagoons: Types and their description, Design, Operation and Maintenance.

### Unit 5

Anaerobic Processes: Process Description; Process Design, Operation and Maintenance; Sludge Digestion. Sludge Treatment- Thickening, Dewatering- Mechanical and Sludge drying Beds. Rural wastewater systems: Septic tanks, two-pit latrines, eco-toilet, soak pits

### Course Outcomes:

*At the end of this course, students will be able to:*

**CO1:** Ability to understand industrial waste water effects.

**CO2:** Knowledge about industrial wastewater standards and their monitoring.

**CO3:** Knowledge about various treatment techniques in specific industries.

**CO4:** Knowledge about complete industrial wastewater treatment systems.

**CO5:** Ability to understand anaerobic treatment processes.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PSO 1	PSO 2	PSO 3

<b>L-T-P</b>	<b>MCI078B-Global Warming and Climate Change</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To provide an understanding of the factors responsible for climate change, the biological and sociological consequences of such changes; and the possible engineering, economic, and legal solutions to avoid more extreme perturbations

**Prerequisite:** Nil

**Course details:**

### **Unit 1**

Energy Issues and Climate Change, Alternate Energy Sources

### **Unit 2**

Green-House Effect as a Natural Phenomenon, GreenHouse Gases GHGs) and their Emission Sources  
Quantification of CO<sub>2</sub> Emission, Global Warming Potential (GWP) of GHGs.

### **Unit 3**

Modelling Climate change, Ozone layer depletion and its control, Impacts of climate change: Global and India, Temperature Rise, Sea Level rise, Coastal Erosion and landslides, Coastal Flooding, Wetlands, Estuaries Loss Impact of ocean current on global climate, EL-NINO & LA-NINA effects.

### **Unit 4**

Kyoto Protocol: Importance, Significance and its role in Climate Change. Carbon Trading - Mechanisms, Various Models (European, Indian) Global and Indian Scenario.

### **Unit 5**

Cleaner Development Mechanisms: Various Projects related to CO<sub>2</sub> Emission Reduction.  
Alternatives of Carbon Sequestration: Conventional and non-conventional techniques, Role of Countries and Citizens in Containing Global Warming.

### **Course Outcomes:**

*At the end of this course, students will be able to:*

**CO1:** Understand about climate change.

**CO2:** Gain knowledge about greenhouse effect, causes and prevention.

**CO3:** Gain knowledge about various effects of greenhouse.

**CO4:** Gain knowledge about carbon trading.

**CO5:** Understand projects related to carbon dioxide reduction

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome											Program Specific Outcome

## Specialization in Construction Engineering and Management

<b>L-T-P</b>	<b>MCI096B-Construction Project Management</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To understand the concepts of CPM & Measuring project progress & performance and Identification of risks and impact.

### Course details:

S. No.	Contents	Contact hours
1	Introduction to construction project management - CPM, PERT, PDM, LOB. Scope management, WBS, PDRI.	9
2	Time and cost management, material related management - purchase & inventory control, time-cost-resource optimization, quality, safety - planning & control.	9
3	Labor productivity variations, productivity improvement - work study.	9
4	Measuring project progress & performance - EVA & ES	9
5	Identification of risks and impact. Management Information systems	9
	<b>Total</b>	<b>45</b>

### Course Outcomes:

*At the end of this course, students will be able to:*

CO1: Ability to ensure that construction projects are completed on-time and within budget.

CO2: Able to apply different techniques for planning.

CO3: Able to apply PERT for predicting probability and time of completion of project.

CO4: Able to understand about CPM & PERT method.

Co5: Able to understand about MIS.

Course Outcome	Program Outcome											Program Specific Outcome		
	PO1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PS O1	PS O2	PS O3

<b>L-T-P</b>	<b>MCI103B- Construction Contracts and Specifications</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To understand procedures of tendering, contracts & its administration and various acts along with case studies.

#### **UNIT-1**

Professional Ethics, Duties and Responsibilities of Parties. Owner's and contractor's estimate, Bidding Models and Bidding Strategies, Qualification of Bidders.

#### **UNIT-2**

Tendering and Contractual procedures and Indian Contract Act 1872

#### **UNIT-3**

Definition of Contract and its Applicability, Types of Contracts, Clauses in Domestic and International Contracts - CPWD, MES, FIDIC, AIA, NEC, JCT, etc

#### **UNIT-4**

Contract Administration, Delay Protocol, Change Orders Analysis, Claim Management and Compensation, Disputes and Resolution Techniques.

#### **UNIT-5**

Arbitration and Conciliation Act 1996 and Arbitration Case Studies.

#### **Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Ability to understand Professional Ethics .

CO2: Able to understand tendering Indian Contract Act 1872.

CO3: understand Definition of Contract and its Applicability.

CO4: Able to understand Contract Administration.

Co5: Able to understand Arbitration and Conciliation Act 1996.

<b>L-T-P</b>	<b>MCI102B-Construction Practices and Equipment</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To understand the characteristics and performances of equipment for major civil engineering activities.

**Pre-requisite:** Nil

**Course details:**

<b>S. No.</b>	<b>Contents</b>	<b>Contact hours</b>
1	Form work design and scaffolding, slip form and other moving forms, Shoring, Reshoring, and Back shoring in multistoried Building construction.	8
2	Prestressing, Steel and composites construction methods: Fabrication and erection of structures including heavy structures, Prefab construction, Industrialized construction, Modular coordination.	10
3	Special construction methods: High rise construction, Bridge construction including segmental construction, incremental construction and push launching techniques.	9
4	Factors affecting selection of equipment - technical and economic, Analysis of production outputs and costs	9
5	Characteristics and performances of equipment for major civil engineering activities such as Earth moving, erection, material transport, pile driving, Dewatering, and Concreting.	9
	<b>Total</b>	<b>45</b>

**Course Outcome:**

1. Able to design the formwork for multistory buildings
2. Learn about the composite construction method like prefabricated buildings and steel industry buildings
3. Learn about the more complex techniques for construction of high rise buildings and bridges.
4. Able to identify the proper equipment and its performance for various constructions.

<b>L-T-P</b>	<b>MCI099B- Construction Quality and Safety management</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To introduce and to relate the understanding regarding safety, injuries, assessment of quality in construction.

#### **UNIT-1**

Introduction to safety. Types of injuries, Factors affecting safety, Strategic Planning for safety provisions

#### **UNIT-2**

Personal & Structural safety - Safety consideration during construction, demolition and during use of equipment. Recording injuries and accident indices. Method statement, SOPs, PPE, Inspections, Investigations.

#### **UNIT-3**

Site safety programmes - JSA, JHA, Root cause analysis, meetings, safety policy, manuals, training & orientation. Safety legislation regard to violation.

#### **UNIT-4**

Introduction to quality, assurance, control and audit. Regulatory agent - owner, designer, contractor. Strategic Planning and control of quality during design and construction, Quality tools in construction projects, Customer satisfaction and QFD, Quantitative techniques in quality control, Quality assurance during construction, Inspection of materials and machinery

#### **UNIT-5**

Assessing quality. Teachings/findings of Gurus - Concept and philosophy of TQM, 6Sigma, ISO Certification.

IS codes and standards regard to quality & safety

#### **Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Ability to understand Introduction to safety .

CO2: Able to understand Personal & Structural safety.

CO3: understand Definition Site safety programmes.

CO4: Able to understand Introduction to quality, assurance, control and audit. Regulatory agent.

Co5: Able to understand Assessing quality.

<b>L-T-P</b>	<b>MCI104B-Durability and Repair of Concrete Structures</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:** To understand properties of concrete and non-destructive testing, repairs, protection and retrofitting, durability based design of structures.

#### **UNIT-1**

Chemical composition of concrete, permeability and transport processes.

#### **UNIT-2**

Corrosion of reinforcement and pre-stressing steel in concrete.

#### **UNIT-3**

Carbonation, chloride attack, alkali-silica reaction, freeze-thaw attack, sulphate attack, acid attack.

#### **UNIT-4**

Effect of fire and high temperatures and seawater attack, cracking, weathering, biological processes.

#### **UNIT-5**

Non-destructive testing, repairs, protection and retrofitting, durability based design of structures.

#### **Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: Ability to understand Chemical composition of concrete.

CO2: Able to understand Corrosion of reinforcement and pre-stressing steel in concrete.

CO3: understand Definition of Carbonation, chloride attack.

CO4: Able to understand Effect of fire and high temperatures and seawater attack.

Co5: Able to understand Non-destructive testing, repairs.

<b>L-T-P</b>	<b>MCI145A- Composite Materials</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

**Objective:**

- To familiarize students with the application of composite materials in civil engineering.
- Familiarization with the basic expressions and methods used in the mechanics of composite structures. A complete theoretical and practical knowledge of composite materials.

**Prerequisite:** Nil

**Course details:**

<b>S. No.</b>	<b>Contents</b>	<b>Contact hours</b>
1	Introduction: Historical development, concept of composites, properties, classification, Constituent materials in composites	10
2	Laminae: Behavior of laminae, Stress strain concept, hooke's law, plane stress concept and assumptions, Mechanics of Composites, load transfer, Laminates, composite laminates, properties.	8
3	Laminated composites: Introduction, Introduction to Mechanics of Plates, Mechanical Behavior of Laminates, Laminate Plate Theory, Kirchhoff's Plate Theory, Classical Laminated Plate Theory, Structural Mechanics of Laminates, Special Classification of Laminates	10
4	Strength and Failure Theories, Strength of unidirectional composites and laminates, Failure Mechanics of Composites, Macromechanical Failure Theories/Failure Theories for Fiber Reinforced Materials.	8
5	Design Concepts, Manufacturing Composite laminates, Engineering Applications, Civil Engineering applications.	9
	<b>Total</b>	<b>45</b>

**Course Outcomes:**

*At the end of this course, students will be able to:*

CO1: understand the properties, classification of Constituent materials in composites

CO2: understand the Behavior of laminae

CO3: understand about the Mechanical Behavior of Laminates

CO4: Identify effective measures of Strength and Failure Theories

CO5: Design Concepts, Manufacturing Composite laminates

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

# **SCHOOL OF ENGINEERING**

## **Syllabi and Course Structure**

### **B. Tech. - Computer Science & Engineering with Various Specialization (Session: 2022-2023)**

Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

The curriculum and syllabus for B.Tech. Program conforms to outcome based teaching learning process. In general, several outcomes have been identified and the curriculum and syllabus have been planned in such a way that each of the courses meets one or more of these outcomes. Student outcomes illustrate the students are expected to know and be able to do by the time of graduation. These relate to the skills, understanding, and behaviours that students acquire as they progress through the program. Further each course in the program brings out clear instructional objectives which are mapped to the student outcomes.

**B.Tech. (CSE) Program Educational Objective (PEO's):**

A graduate of the Computer Science and Engineering Program should:

**PEO- I**

Students will develop themselves as effective professionals by solving real problems through the use of computer science knowledge and with attention to team work, effective communication, critical thinking and problem solving skills.

**PEO- II**

Students will develop professional skills that prepare them for immediate employment and for life-long learning in advanced areas of computer science and related fields.

**PEO- III**

Students will demonstrate their ability to adapt to a rapidly changing environment by having learned and applied new skills and new technologies.

**PEO- IV**

Students will be provided with an educational foundation that prepares them for excellence, leadership roles along diverse career paths with encouragement to professional ethics and active participation needed for a successful career.

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

## **Program Outcome (PO's)**

**A graduate of the Computer Science and Engineering Program will demonstrate:**

PO1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2. Problem analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

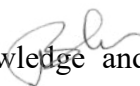

PO7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

  
Head,  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**Program Specific Outcome:**

PSO1: The ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, multimedia, web design, big data analytics, and networking for efficient design of computer-based systems of varying complexity.( Professional Skills)

PSO2: The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success. (Problem-Solving Skills)

PSO3: The ability to employ modern computer languages, environments, and platforms in creating innovative career paths to be an entrepreneur, and a zest for higher studies.( Successful Career and Entrepreneurship)

<b>L-T-P</b>	<b>Communication Skills (DEN001C)</b>	<b>Credits 2-0-1 3</b>
--------------	---------------------------------------	------------------------

### **Course Objectives**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.
6. To inculcate skills which are very much required for employability and adjust in the professional environment.

### **Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

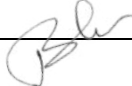

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

CO5: Ability to showcase employability skills and professional writing skills

### **Syllabus: Theory**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> <i>Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture</i>
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> <i>Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration</i>
<b>UNIT 3</b>	<b>Composition:</b> <i>Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,</i>
<b>UNIT 4</b>	<b>Vocabulary Building:</b> <i>Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms</i>
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> <i>Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation</i>

<b>DCO001A</b>	<b>Computer Programming in C++</b>	<b>3: 0: 0</b>	<b>3</b>
----------------	------------------------------------	----------------	----------

### OBJECTIVE:

- To perform object oriented programming solution and develop solutions to problems demonstrating usage of control structure, modularity, classes, I/O and the scope of the class members
- To demonstrate adeptness of object oriented programming in developing solution to problems demonstrating usage of data abstraction, encapsulation and inheritance
- To demonstrate ability to implement one or more patterns involving dynamic binding and utilization of polymorphism in the solution of problems
- To learn syntax and features of exception handling
- To demonstrate the ability to implement solution to various I/O manipulation operations and the ability to create two-dimensional graphic components using applets

<b>UNIT 1</b>	C++ Overview, C++ Characteristics, Object-Oriented Terminology, Polymorphism, encapsulation ,inheritance, Object-Oriented Paradigm, Abstract Data Types, I/O Services, Standard Template Library, Standards Compliance, Functions and Variables. Declaration and Definition
<b>UNIT 2</b>	Variables: Dynamic Creation and Derived Data, Arrays and Strings in C++,Classes in C++, Defining Classes in C++, Classes and Encapsulation, Member Functions, Friend function ,Inline function
<b>UNIT 3</b>	Using Constructors, Multiple Constructors and Initialization Lists, Using Destructors to Destroy Instances, Using Destructors to Destroy Instances, Operator Overloading: operator overloading of unary and binary operator, Function Overloading, Working with Overloaded Operator Methods
<b>UNIT 4</b>	Constant and Static Class Members, Inheritance, Overview of Inheritance, Defining Base and Derived Classes, Single, Multiple, multilevel, hybrid hierarchical inheritance. Constructor and Destructor Calls in inheritance, virtual function, virtual base class,
<b>UNIT 5</b>	Input and Output in C++ Programs, Standard Streams, Manipulators, Unformatted Input and Output. Working with files.

### Course Outcome (CO):

At the end of this course, students will demonstrate ability to:

CO1: Understand object-oriented programming features in C++,

CO2: Apply these features to program design and implementation,

CO3: Develop applications using Object Oriented Programming Concepts

CO4: Implement features of object oriented programming to solve real world problems.

CO5: CO5: Develop the ability to implement software in high-level programming language like C++

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

JECRC University Jaipur-303905

<b>DCO002A</b>	<b>Computer Programming in C++Lab</b>	<b>0:0:2</b>
----------------	---------------------------------------	--------------

1. Write a program for understanding of C++ program structure without any CLASS declaration. Program may be based on simple input output, understanding of keyword using.
2. Write a Program to Understand Structure & Unions.
3. Write a C++ program to demonstrate concept of declaration of class with public & private member, constructors, object creation using constructors, access restrictions, defining member functions within and outside a class. Scope resolution operators, accessing an object's data members and functions through different type of object handle name of object, reference to object, pointer to object, assigning class objects to each other.
4. Write a Program, involving multiple classes (without inheritance) to accomplish a task & demonstrate composition of class.
5. Write a Program to Demonstrate Friend function, classes and this pointer.
6. Write a Program to Demonstrate Inline functions.
7. Write a Program to Demonstrate pointers to derived classes.
8. Write a Program to demonstrate dynamic memory management using new & delete & static class members.
9. Write a Program to demonstrate an operator overloading, operator functions as member function and/ or friend function, overloading stream insertion and stream extraction, operators, overloading operators etc.
10. Write a Program to demonstrate use of protected members, public & private protected classes, multilevel inheritance etc.
11. Write a Program for multiple inheritance, virtual functions, virtual base classes, abstract classes
12. Write a Program to Demonstrate use of Constructors and Destructors.
13. Write a Program to Develop with suitable hierarchy, classes for Point, Shape, Rectangle, Square, Circle, Ellipse, Triangle, Polygon, etc. Design a simple test application to demonstrate dynamic polymorphism.

<b>DEN002C</b>	<b>Professional Skills</b>	<b>2-0-1</b>
----------------	----------------------------	--------------

### **Course Objectives**

1. To enhance Professional competence in reading, writing, listening and speaking.
2. Switch the approach from providing information about the language to use the language.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

### **Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in professional scenario.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

CO5: Ability to enhance professional writing skills in tune with professional scenario.

### **Syllabus: Theory**

<b>UNIT 1</b>	<b>Professional Grooming and Professional Culture:</b> <i>Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management</i>
<b>UNIT 2</b>	<b>Advanced Grammar:</b> <i>Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents</i>
<b>UNIT 3</b>	<b>Composition:</b> <i>Memo, Notice, Circular, Book Review, Research Article, Reports</i>
<b>UNIT 4</b>	<b>Vocabulary Building:</b> <i>Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms</i>
<b>UNIT 5</b>	<b>Reading Comprehension:</b> <i>Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction,</i>

BCO 035B	<b>Programming in Java</b>	<b>3:0:0 [3]</b>
----------	----------------------------	------------------

#### Objective

- Cover issues related to the definition, creation and usage of classes, objects and methods.
- Discuss the principles of inheritance and polymorphism and demonstrate through problem analysis assignments how they relate to the design of methods, abstract classes and interfaces.
- Provide the foundation of good programming skills by discussing key issues to the design of object-oriented software, including programming design patterns, automatic documentation techniques and programming testing.
- Cover the basics of creating APIs as well as allow students to explore the Java Abstract Programming Interface (API) and Java Collection Framework through programming assignments.
- Discuss basic principles and tools of collaborating programming (versioning systems, code review) and study their usage through group programming projects.

<b>UNIT 1</b>	<b>Java Fundamentals:</b> Features of Java ,OOPs concepts , Java virtual machine , Reflection byte codes ,Byte code interpretation , Data types, variable, arrays, expressions, operators, and control structures , Objects and classes
<b>UNIT 2</b>	<b>Java Classes:</b> Abstract classes ,Static classes ,Inner classes ,Packages,Wrapper classes Interfaces ,This ,Super ,Access control
<b>UNIT 3</b>	<b>Exception handling:</b> Exception as objects ,Exception hierarchy ,Try catch finally ,Throw, throws
<b>UNIT 4</b>	<b>IO package:</b> Input streams ,Output streams ,Object serialization ,De serialization ,Sample programs on IO files ,Filter and pipe streams
<b>UNIT 5</b>	<b>Multi threading:</b> Thread Life cycle ,Multi threading advantages and issues ,Simple thread program ,Thread synchronization .GUI: Introduction to AWT programming, Layout and component managers ,Event handling ,Applet class ,Applet life-cycle ,Passing parameters embedding in HTML ,Swing components – JApplet, JButton, JFrame, etc. Sample swing programs

#### Course Outcome:

At the end of this course student will:

CO1:Understand how object-oriented concepts are incorporated into the Java programming language

CO2: Develop problem-solving and programming skills using OOP concept

CO3:Understand the benefits of a well structured program

CO4:Develop the ability to solve real-world problems through software development in high-level programming language like Java

CO5:Develop efficient Java applets,threading and applications using OOP concept

DCO004A	Programming in Java Lab	0-0-2
---------	-------------------------	-------

### 1. Operators and Expressions

- a. To write a java program to find the area of rectangle
- b. To write a java program to find the result of the following expressions
  - i)  $(a \ll 2) + (b \gg 2)$
  - ii)  $(b > 0)$
  - iii)  $(a + b * 100) / 10$
  - iv)  $a \& b$
 Assume  $a=10$  and  $b=5$
- c. To write a java program to print the individual digits of a 3 digit number.

### 2. Decision Making Statements

- a. write a java program to read two integers and print the larger number followed by the words "is larger" "If the numbers are equal print the message "These numbers are equal".
- b. To write a java program to read an integer and find whether the number is odd or eve
- c. To write a java program find the biggest of three integers.

### 3. Looping Statements

- a. To write a java program to find the sum of digits of a given number
- b. To write a java program to find the first 15 terms of Fibonacci sequence.
- c. To write a java program to print the Armstrong numbers.

### 4. Array

- a. To write a java program to find the largest and smallest number in an array.

### 5. Strings

- a. To write a java program that creates a string object and initializes it with your name and performs the following operations
  - i) To find the length of the string object using appropriate String method.
  - ii) To find whether the character 'a' is present in the string. If yes find the number of times 'a' appear in the name and the location where it appears

### 6. String Buffer

- a. To write a java program to create a StringBuffer object and illustrate how to append characters and to display the capacity and length of the string buffer
- b. To write a java program to create a StringBuffer object and illustrate how to insert characters at the beginning
- c. To write a java program to Create a StringBuffer object and illustrate the operations of the append () and reverse () methods.

<b>BCO321B</b>	<b>Introduction to AI, Data Science, Ethics and Foundation of Data Analysis</b>	<b>3: 0: 0</b>
----------------	---	----------------

Software Req: MS Office 2013/2016 Version Hours: 4 per Week

*Objectives: The objective of this course is to teach students the concepts of current main conceptual frameworks at use in AI*

## **UNIT – I**

**Introduction to AI:** What is AI, Turing test, cognitive modelling approach, law of thoughts, the relational agent approach, the underlying assumptions about intelligence, techniques required to solve AI problems, level of details required to model human intelligence, successfully building an intelligent problem, history of AI

## **UNIT – II**

**Introduction to Machine Learning:** What is Machine Learning, Learning from Data, History of Machine Learning, Big Data for Machine Learning, Leveraging Machine Learning, Descriptive vs Predictive Analytics, Machine Learning and Statistics, Artificial Intelligence and Machine Learning, Types of Machine Learning – Supervised, Unsupervised, Semi-supervised, Reinforcement Learning, Types of Machine Learning Algorithms, Classification vs Regression Problem, Bayesian, Clustering, Decision Tree, Dimensionality Reduction, Neural Network and Deep Learning, Training machine learning systems

## **UNIT – III**

**AI Research Trends:** Research trends in machine learning, deep learning, reinforcement learning, robotics, computer vision, natural language processing, collaborative systems, algorithmic game theory, internet of things (IoT), neuromorphic computing

**Applications of AI by domain:** Transportation, home/service robots, healthcare, education, low resource communities, public safety and security, employment and workplace, entertainment, finance, banking and insurance

## **UNIT – IV**

**Role of Artificial Intelligence in Society:** Societal challenges AI presents, Ethical and Societal implications, policy and law for AI, fostering dialogue, sharing of best practices

**Malicious Use of AI: Prevention and Mitigation:** Security relevant properties of AI, Security domains and scenarios: digital security, physical security, political security, factors affecting the equilibrium of AI and security

**Explainable AI:** Introduction to explainable AI, why explainable AI, interpretability and explainability, methods of interpretability and explainability

**Introduction to Data Analytics:** Working with Formula and Functions, Introduction to Charts, Logical functions using Excel, Analyzing Data with Excel.

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

<b>BCO169B</b>	<b>Data Analysis using Python</b>	<b>3:0:0</b>
----------------	-----------------------------------	--------------

**Software:** Python, NumPy, Pandas, Matplotlib, Seaborn, SciPy

*Objectives: The objective of this course is to teach students the concepts of Python Programming Language with Libraries*

#### **UNIT – I**

**Python programming Basic:** Python interpreter, IPython Basics, Tab completion, Introspection, %run command, magic commands, matplotlib integration, python programming, language semantics, scalar types. Control flow

**Data Structure, functions, files:** tuple, list, built-in sequence function, dict, set, functions, namespace, scope, local function, returning multiple values, functions are objects, lambda functions, error and exception handling, file and operation systems

#### **UNIT – II**

**NumPy: Array and vectorized computation:** Multidimensional array object. Creating ndarrays, arithmetic with numpy array, basic indexing and slicing, Boolean indexing, transposing array and swapping axes, universal functions, array-oriented programming with arrays, conditional logic as arrays operations, file input and output with array

**Pandas:** Pandas data structure, series, DataFrame, Index Object, Reindexing, dropping entities from an axis, indexing, selection and filtering, integer indexes, arithmetic and data alignment, function application and mapping, sorting and ranking, correlation and covariance, unique values, values controls and membership, reading and writing data in text format

#### **UNIT -III**

**Visualization with Matplotlib:** Figures and subplots, colors, markers, line style, ticks, labels, legends, annotation and drawing on subplots, matplotlib configuration

**Plotting with pandas and seaborn:** line plots, bar plots, histogram, density plots, scatter and point plots, facet grids and categorical data

<b>BCO370A</b>	<b>Digital Transformation and Agile Development</b>	<b>3-0-0</b>
----------------	---	--------------

### Unit 1: Introduction to Digital Transformation

Introduction, Challenges of Traditional Business Model, Why Digital Transformation, Design Thinking, Different Phases of Design Thinking, Divergence, Emergence and Convergence of Design Thinking, Design Thinking vs. Agile vs. Lean, Agile Practices, Design Sprint and its Phases, Design Thinking Vs Design Spirit

### UNIT 2 Product Management

Introduction to Product Management & Service Mindset, Product Manager, Building Products and services, Product lifecycle and phases, product development & Methodology; systems thinking, value chain, Introduction of Capability Optimization and Capability Maturity Model, Business Integration methods, Agile methodology, Product Marketing; User Experience Design

### Unit 3: Agile Practices

Agile Methodology, Software, History of Software Engineering and Software, Development Methodologies, Traditional Software Development Models, Waterfall Model, Classical Waterfall Model, Traditional IT Organizations, Developers vs IT Operations Conflict, Birth of Agile, Four Values of the Agile Manifesto, Agile and Lean

### Unit 4: Agile & Scrum Methodology

Scrum, Scrum Theory, Scrum Values, Scrum Roles, Scrum Master Scrum Sprints, Benefits of Scrum, Planning and Estimation, Agile Planning, Levels of Agile Planning, Conditions of Satisfaction, Velocity, Estimating Techniques, Soft Skills in Agile, Kanban Model.

### Unit 5: Kanban Principles

Kanban Principle, Kanban Board, Kanban Core Practices, Make work visible, Limit work in progress (WiP), Manage flow, Make progress policies explicit, Implement feedback mechanisms, Improve collaboratively (using methods and models).

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

<b>BCA371A</b>	<b>Software Craftsmanship</b>	<b>3-0-0</b>
----------------	-------------------------------	--------------

### Unit 1: Introduction to Software Craftsmanship

Definition, History of the emergence of software craftsmanship, Software craftsmanship, Process versus paradigm, Software development processes, Software development models, Software design paradigms, Software development paradigms, Major programming paradigms Procedural programming paradigm, Object-oriented programming paradigm, Functional programming paradigm, Dimensions of craftsmanship, Craftsmanship - Mastery of the paradigm Describing and defining well-crafted code, Becoming a craftsman, The programming process

### Unit 2: Code Design

Clean code and its fundamental concepts, Code Design, Software design considerations, Kent Beck's principle of simple design, Fundamental characteristics of good design, Design Patterns: Reusing best practices, SOLID design principles, Programming Principles

### Unit 3: Code Structure

Classes, packages and methods: building blocks of code, organizing code: the size of methods and classes, What makes methods and classes "good", Software metaphors, Objects and data structures, data transfer objects, Using libraries, Overview of the best practices in structure: Law of demeter and open close principle,

### Unit 4 Code Formatting & Documentation

Introduction, Variants, Vertical Openness, Vertical Density, Distance and Ordering, Naming Best Practices, Intention-Revealing Names, Avoid Mental Mappings, Naming Classes, Methods and Functions, Comments, Writing Code Documentation

### Unit 5: Testing Debugging & Refactoring

Testing and Debugging, Basic Test-driven Development (TDD), Categories of TDD and Unit tests, Unit Testing Techniques, Automating Testing Using Junit, Refactoring: Improving Structure, Refactoring: Changing Code Structure without Changing Functionality, The need for Refactoring, The Refactoring Process and the Different Levels of Refactoring, Refactoring Strategies, Code Smells: Symptoms of Poorly Designed Code, Categories of Code Smells, Code Base, Using Frameworks & Tools

### Course OUTCOME (CO):

- CO1: Explain the essentials of software craftsmanship.
- CO2: Understand the clean code concepts and code design.
- CO3: Understand the concept of classes and packages.
- CO4: Understand the working with functions.
- CO5: Explore Testing and refactoring concepts.

<b>BCA373A</b>	<b>DevOps Engineering</b>	<b>3-0-0</b>
----------------	---------------------------	--------------

## UNIT 1: Introduction to DevOps

Definition of DevOps: Challenges of traditional IT systems & processes, History and emergence of DevOps, DevOps definition and principles governing DevOps, DevOps and Agile, The need for building a business use case for DevOps, Purpose of DevOps, Application Deployment, Automated Application Deployment, Application Release Automation (ARA), Components of Application Release Automation (ARA), Continuous Integration, Best Practices of CI, Benefits of CI, Continuous Delivery, Process

## Unit 2: Typical Toolkit for DevOps

DevOps: An Overview, Achieving DevOps, Continuous Practices, Continuous Integration (CI), How does CI Work?, Continuous Integration Practices, Benefits of Continuous Integration A Quick Recap of Continuous Delivery, Continuous Delivery Process, Benefits of Continuous Delivery, Continuous Deployment, Continuous

## UNIT 3: Source Code Management

History of Version Control Systems (VCS), Basic operations in a VCS, Examples of version control systems, Subversion (SVN), Features and Limitations, Mercurial, Git, Overview, History - Linux and Git by Linus Torvalds, Advantages of Git, Explain how local version control works, Centralized Version Control Systems (CVCS), Distributed Version Control Systems (DVCS), advantages of DVCS, Private Workspace

## Unit 4: Application Containerization

Understanding Containers: Transporting Goods Analogy, Problems in Shipping Industry before Containers, Shipping Industry Challenges, Container: Virtualization Introduction, Hypervisor, Scope of Virtualisation, Containers vs Virtual Machines, Understanding Containers, Containerisation Platform, Runtime and Images, Container Platform, Container Runtime, The Chroot System, FreeBSD Jails, Linux Containers (LXC), Docker

## UNIT 5: Introduction to Containerization

Docker architecture, Docker Daemon (Container Platform), Docker Rest API, CLIDifferent environments: (Dev, QA and Prod), Overcoming issues with different environments, Development Environment Docker Swarm and Kubernetes, Architecture, AWS (ECS,EKS), AWS Elastic Container Services Architecture, Azure Kubernetes Services, Openshift, KUBERNETES ON CLOUD, Monitoring of container

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

**COURSE OUTCOME (CO):**

CO1: Explore the advent of software engineering.

CO2: Analyse the challenges in traditional IT System

CO3: Learn the purpose and benefits of DevOps.

CO4: Understand the CAMS methods.

CO5: Learn the concepts of Test-Driven Development

 JECRC University Jaipur-303905

<b>BCO353A</b>	<b>Foundation of Artificial Intelligence &amp; Machine Learning</b>	<b>3-0-0</b>
----------------	---	--------------

#### UNIT I Foundations of AIML

Introduction and history of AI, Sources of Data, Introduction to AI, A Brief History of Data Science, Introduction to Machine Learning, History of AI, categories of ML systems, An Introduction to AI, ML and AI Overlap with Each Other? Applications of ML, Types of Data, Organization of Structured Data, Examples of Structured Data, Expansion of Structured Data, What is Semi-structured Data?

#### UNIT II Basic Statistical Concepts

Introduction to Statistics, Classification of Statistical Methods, Descriptive Statistics, Inferential Statistics, Scale of Measurements (Nominal, Ordinal, Ratio and Interval), Nominal Scales, Nominal Scales, Ratio Scales, Mean, Median, Mode, Measures of Variability/Spread, range, Quartiles and Interquartile Range, Standard Deviation (SD), Measures of Shape, Skewness, Kurtosis

#### UNIT III Probability Theory

Principles of Counting, Introduction and Definitions of Probability Theory, Conditional Probability, Bayes Theorem, Discrete Probability Distribution, Covariance and Correlation, Continuous Probability Distribution, Central Limit Theorem, Hypothesis Testing

#### UNIT IV Matrices

Introduction to Matrices, Matrix Notations and Types, Matrix Equality, Operations on Matrices, Determinants, Singularity of a Matrix, Orthogonal Matrix, Elementary Transformations and elementary matrices, Echelon forms and echelon transformations, Matrix Rank and Normal Form of a matrix, Vector Spaces and the axioms, Linear Dependence and Independence of vectors, Consistency of linear system of equations, Eigenvalues and eigenvectors, Cayley Hamilton Theorem, Linear Transformation and Orthogonal transformation, Matrix Factorization and Types

#### UNIT V Linear Algebra

Introduction to Linear Algebra, Notations in Linear Algebra, Important Concepts of Linear Algebra, Definitions of Linear Algebra, Introduction to mathematical modeling, Applications of mathematical modeling, Principles and stages involved in developing a mathematical model, Classification of mathematical modeling, Conceptualizing a mathematical model, Concept of boundary conditions

<b>BCO354A</b>	<b>Python Programming</b>	<b>3-0-0</b>
----------------	---------------------------	--------------

## UNIT I Setting up the Python Environment

Compiler vs. Interpreter, Statically vs. Dynamically Typed Languages, Introduction to Python, Installing Python, Anaconda, Jupyter Notebook, Spyder, Components and Versions of Python, Difference between Python 2 and Python 3, Python Distributions

## UNIT II Programming with Python

Python REPL, Variables, control structures, functions and objects, First-class functions, immutable data, strict and non-strict evaluation, Recursion instead of an explicit loop state, Functions, iterators, and generators, Writing pure functions, functions as first-class objects, Using strings, tuples and named tuples, Using lists, dicts, and sets, The itertools module, Best practices and clean coding, Reading data files into Python, writing files, Introduction to Python libraries

## UNIT III Data Preprocessing

Introduction, Introduction to Pandas and Basic Concepts of Pandas, Data Cleaning and Preparation, Handling Missing Data, Filtering out Missing Data, Filling in Missing Data, Data Transformation, Removing Duplicates, Transforming Data Using a Function or Mapping, Replacing Values, Renaming Axis Indexes, Discretization and Binning, Detecting and Filtering Outliers, Permutation and Random Sampling, String Manipulation, Feature Engineering

## Unit IV Statistical Modeling

Derived Variables, Basic Exploratory Data Analysis, Methods for EDA and Examples, Statistical Modeling, Curve Fitting: Linear Regression, Nonlinear Regression

<b>BCO 173A</b>	<b>Certified Secure Computer User</b>	<b>4-0-0 [4]</b>
-----------------	---------------------------------------	------------------

### Course Outcomes:

CO1: Understand the need and importance of data security.

CO2: Ability to implement Operating System security measures.

CO3: Understand the threats associated with email communications and safeguarding against them.

CO4: Ability to make informed decisions for securing cloud, mobile devices and network connections.

CO5: Knowledge of Data Backup and Disaster Recovery.

### Syllabus:

<b>Module</b>	<b>Topics</b>
Module 1. Introduction To Data Security	<ul style="list-style-type: none"> <li>● Data–Digital Building Blocks</li> <li>● Importance of Data in the Information Age</li> <li>● Threats to Data</li> <li>● Data Security</li> <li>● Potential Losses Due to Security Attacks</li> <li>● Implementing Security</li> </ul>
Module 2. Securing Operating Systems	<ul style="list-style-type: none"> <li>● Guidelines to Secure Windows</li> <li>● Guidelines to Secure Mac OS X</li> </ul>
Module 3. Malware and Antiviruses	<ul style="list-style-type: none"> <li>● What is Malware</li> <li>● Types of Malware</li> <li>● Symptoms of Malware Infection</li> <li>● Antivirus</li> <li>● Configuring and Using Antivirus Software</li> <li>● How to Test If an Antivirus is Working</li> </ul>
Module 4. Internet Security	<ul style="list-style-type: none"> <li>● Understanding Web Browser Concepts</li> <li>● Understanding IM Security</li> <li>● Understanding Child Online Safety</li> </ul>
Module 5. Security On Social Networking Sites	<ul style="list-style-type: none"> <li>● Understanding Social Networking Concepts</li> <li>● Understanding Various Social Networking Security Threats</li> <li>● Understanding Facebook Security Settings</li> <li>● Understanding Twitter Security Settings</li> </ul>
Module 6. Securing Email Communications	<ul style="list-style-type: none"> <li>● Understanding Email Security Concepts</li> <li>● Understanding Various Email Security Threats</li> <li>● Understanding Various Email Security Procedures</li> </ul>
Module 7. Securing Mobile Devices	<ul style="list-style-type: none"> <li>● Understanding Mobile Device Security Concepts</li> <li>● Understanding Threats to a Mobile Device</li> <li>● Understanding Various Mobile Security Procedures</li> <li>● Understanding How to Secure iPhone and iPad Devices</li> <li>● Understanding How to Secure Android Devices</li> <li>● Understanding How to Secure Windows Devices</li> </ul>

	<ul style="list-style-type: none"> <li>● Mobile Security Tools</li> </ul>
Module 8. Securing The Cloud	<ul style="list-style-type: none"> <li>● The Concept of Cloud</li> <li>● How Cloud Works</li> <li>● Threats to Cloud Security</li> <li>● Safeguarding Against Cloud Security Threats</li> <li>● Cloud Privacy Issues</li> <li>● Addressing Cloud Privacy Issues</li> <li>● Choosing a Cloud Service Provider</li> </ul>
Module 9. Securing Network Connections	<ul style="list-style-type: none"> <li>● Understanding Various Networking Concepts</li> <li>● Understanding Setting Up a Wireless Network in Windows</li> <li>● Understanding Setting Up a Wireless Network in Mac</li> <li>● Understanding Threats to Wireless Network Security and Countermeasures</li> <li>● Measures to Secure Network Connections</li> </ul>
Module 10. Data Backup and Disaster Recovery	<ul style="list-style-type: none"> <li>● Data Backup Concepts</li> <li>● Types of Data Backups</li> <li>● Windows Backup and Restore Procedures</li> <li>● MAC OS X Backup and Restore Procedures</li> <li>● Understanding Secure Data Destruction</li> </ul>

### Data Science Methodology

- **Module 1: From Problem to Approach:** Business Understanding, Analytic Approach
- **Module 2: From Requirements to Collection:** Data Requirements, Data Collection
- **Module 3: From Understanding to Preparation :**Data Understanding,Data Preparation
- **Module 4: From Modeling to Evaluation:** Modeling,Evaluation
- **Module 5: From Deployment to Feedback:** Deployment,Feedback

### Data Science

- **Module 1 - Defining Data Science :**What is data science?, There are many paths to data science, Any advice for a new data scientist?, What is the cloud?, Data Science: The Sexiest Job in the 21st Century"
- **Module 2 - What do data science people do?:**A day in the life of a data science person,R versus Python?,Data science tools and technology, "Regression"
- **Module 3 - Data Science in Business:** How should companies get started in data science?,Tips for recruiting data science people,"The Final Deliverable"
- **Module 4 - Use Cases for Data Science:**Applications for data science,"The Report Structure"
- **Module 5 -Data Science People:**Things data science people say., "What Makes Someone a Data Scientist?"

<b>BCO 117A</b>	<b>Data Visualisation</b>	<b>2: 0:0</b>	<b>2</b>
-----------------	---------------------------	---------------	----------

## Chapter 1: Introduction to Statistics

Introduction to Statistics, Descriptive vs Inferential Statistics,

## Chapter 2 : Inferential Statistics

Drawing Inferences from Data, Random Variables, Normal Distribution, Sampling, Sample Statistics and Sampling Distribution

## Chapter 3 - R overview and Installation

Overview and About R, Installing RStudio

## Chapter 4 - Descriptive Data Analysis using R

Description of Basic Functions used to Describe Data in R

## Chapter 5: Data Manipulation with R

Introduction to dplyr (filter, select, arrange, mutate, summarize), Introduction to data.table

Introduction to reshape2 package, Introduction to tidyr package, Introduction to Lubridate package

## Chapter 6: Data Visualisation with R

Data Visualisation with R, Working with ggplot2,

## Chapter 7: Data Visualisation in Watson Studio

Data Visualisation in Watson Studio, Adding Data to Data Refinery, Visualization of Data on Watson Studio

## Chapter 8: Introduction to Python

Python and Anaconda Installation, Introduction to Jupyter Notebook, Python Scripting Basics

## Chapter 9: Numpy and Pandas

Numpy overview - Creating and Accessing Numpy Arrays, Introduction to Pandas, Pandas read and write csv, Descriptive Statistics using Pandas, Pandas Working with Text Data and DateTime Columns, Pandas Indexing and Selecting Data, Pandas- groupby, Merge/Join Datasets

## Chapter 10: Introduction to Data Visualization Tools in Python

Introduction to Matplotlib, Read a CSV and Generate a Line Plot with Matplotlib

Chapter 11: Basic Plots using Matplotlib

Area Plot, Bar Chart, Histogram

Chapter 12 : Specialized Visualization Tools using Matplotlib

Pie Charts, Box Plot, Scatter Plots, Bubble Plots

Chapter 13: Advanced Visualization Tools using Matplotlib

Waffle Chart, Word Clouds

Chapter 14: Introduction to Seaborn

Introduction to Seaborn, Seaborn Functionalities and Usage

Chapter 15: Spatial Visualizations and Analysis in Python with Folium

Introduction to Folium, Case Study

<b>BCO 119A</b>	<b>Introduction to Python</b>	<b>3:0:0</b>
-----------------	-------------------------------	--------------

## **Introduction to Python**

### Chapter 1: Introduction to Python

What is Python ?, Advantages and disadvantages, Downloading and installing, Python versions, Running Python scripts, Using the interpreter interactively, Using variables, String types: normal, raw, and Unicode, String operators and functions, Math operators and functions, Writing to the screen

### Chapter 2: Deep Dive into Python

Reading from the keyboard, Indenting is significant, Boolean, The if and elif statements, While loops, Using lists, Dictionaries, Using the 'for' statement, Tuples, Opening, reading, and writing a text file

### Chapter 3: Python Libraries

Using Pandas—the Python data analysis library, Series and Data Frames, Grouping, aggregating, and applying, Merging and joining

### Chapter 4: Error Handling

Dealing with syntax errors, Exceptions

### Chapter 5: Other Topics

RE objects, Pattern matching, Parsing data

### Chapter 6: Regression (Use Case Study)

Introduction to regression, Why use regression analysis ?, Types of regression

### Chapter 7: Other Regression Related Topics

Exploratory Data Analysis, Correlation Matrix, Visualizations using matplotlib, Implementing Linear Regression, Use Case: Churn Analysis, Implementing Linear Regression (using Scikit Learn), Results of Linear Regression

### Chapter 8: Advance

Machine Learning Algorithms, Support Vector Machine, Random Forest

<b>BCO 120A</b>	<b>Introduction to Machine Learning with Sound Lab</b>	<b>0: 0:2</b>	<b>2</b>
-----------------	--	---------------	----------

IBM Watson Studio

Lab 1: Gather and prepare the data

Lab 2: Build a machine learning model

Lab 3: Create predictions in a Node-RED application

Lab 4: Create multiclass classification models, IBM Watson Visual Recognition

Lab 5: Create UIs and integrate visual recognition

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

<b>BCO 011A</b>	<b>COMPUTER NETWORKS</b>	<b>3-1-0 [4]</b>
-----------------	--------------------------	------------------

### OBJECTIVES:

- To build an understanding of the fundamental concepts of computer networking.
- To familiarize the student with the basic taxonomy and terminology of the computer networking area.
- To introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
- To allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.

<b>UNIT 1</b>	Introduction -Hardware and software, Data communication, Networking, Protocols and standards. Data transmission concepts. Analog and digital transmission. Transmission impairments. Layered Architecture of Computer Networks, OSI and TCP/IP architectures Physical Layer- Guided transmission media and wireless transmission, Data encoding - Digital and analog data. Data communication interface - asynchronous and synchronous transmission, Data link layer - Flow control. Error detection and error control. HDLC and other data link protocols. Multiplexing – Frequency-division, synchronous time-division, and statistical time-division multiplexing
<b>UNIT 2</b>	Link Layer: Medium Access Control: CDMA, ALOHA, and Ethernet; Link Layer Addressing and Forwarding; Spanning Trees; The Channel Allocation Problem, Multiple Access Protocols, Ethernet, Wireless LANs, Broadband Wireless, Bluetooth, Data Link Layer Switching, Switched networks. Circuit-switched networks, switching concepts, Routing in circuit-switched networks. Control signaling. Packet switching principles. Routing and congestion control
<b>UNIT 3</b>	Network Layer: Network layer design issues. Routing algorithms , Flooding, Shortest path routing, Link State routing, Hierarchical routing, Broadcast and multicast routings, Routing in the Internet, Path Vector routing, OSPF routing. The network layer in the Internet: IP protocol: ARP and RARP, BOOTP, ICMP, DHCP, Network Address Translation(NAT) Internetworking
<b>UNIT 4</b>	Transport Layer:TCP introduction, Reliable/Un- Reliable Transport, TCP, UDP, Congestion Control, Intra-Domain Routing: Distance-Vector, Intra-Domain Routing: Link- State, Wireless Networks: 802.11 MAC, Efficiency considerations
<b>UNIT 5</b>	Application Layer: DNS-The Domain Name System, Electronic Mail, HTTP, FTP, Simple network management protocol (SNMP), The World Wide Web

### Course Outcome (CO) of Computer Network

At the end of this course students will have:

CO1: To provide an in-depth understanding of the terminology of network and concepts of OSI reference model and TCP/IP model.

CO2: To equip our students with technical concept of protocols, network interfaces, and design/performance issues in networks.

CO3: To be familiar with contemporary issues in networking technologies.

*Lead*  
Department of Computer Science & Engineering  
JECRC University, Jaipur-303905

CO4: To be familiar with network tools and to enhance analytical skills to develop innovative solutions.

CO5: To be familiar with message structure used in various type of network applications using the various protocols like SMTP,HTTP,FTP.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome

BCO 002B	DATA STRUCTURES AND ALGORITHMS	3-1-0 [4]
----------	--------------------------------	-----------

**OBJECTIVE:**

- To study various data structure concepts like Stacks, Queues, Linked List, Trees and Files
- To overview the applications of data structures.
- To be familiar with utilization of data structure techniques in problem solving.
- To have a comprehensive knowledge of data structures and algorithm.
- To carry out asymptotic analysis of algorithm.

<b>UNIT 1</b>	Introduction: Notions of data type, abstract data type and data structures. Importance of algorithms and data structures in programming. Notion of Complexity covering time complexity, space complexity, Worst case complexity & Average case complexity. BigOh Notation, Omega notation, Theta notation. Examples of simple algorithms and illustration of their complexity. Sorting- Bubble sort, selection sort, insertion sort, Quick sort; Heap sort; Merge sort; Analysis of the sorting methods. Selecting the top k elements. Lower bound on sorting.
<b>UNIT 2</b>	Stack ADT, Infix Notation, Prefix Notation and Postfix Notation. Evaluation of Postfix Expression, conversion of Infix to Prefix and Postfix Iteration and Recursion- Problem solving using iteration and recursion with examples such as binary search, Fibonacci numbers, and Hanoi towers. Tradeoffs between iteration and recursion.
<b>UNIT 3</b>	List ADT. Implementation of lists using arrays and pointers. Stack ADT. Queue ADT. Implementation of stacks and queues. Dictionaries, Hash tables: open tables and closed tables. Searching technique- Binary search and linear search, link list- single link list, double link list, Insertion and deletion in link list.
<b>UNIT 4</b>	Binary Trees- Definition and traversals: preorder, post order, in order. Common types and properties of binary trees. Binary search trees: insertion and deletion in binary search tree worst case analysis and average case analysis. AVL trees. Priority Queues -Binary heaps: insert and delete min operations and analysis.
<b>UNIT 5</b>	Graph: Basic definitions, Directed Graphs- Data structures for graph representation. Shortest path algorithms: Dijkstra (greedy algorithm) and Operations on graph, Worshall's algorithm , Depth first search and Breadth-first search. Directed acyclic graphs. Undirected Graphs, Minimal spanning trees and algorithms (Prims and Kruskal) and implementation. Application to the travelling salesman problem.

**Course OUTCOME (CO):**

CO1: Show the understanding of various data structure concepts like Stacks, Queues, Linked List, Trees and Files

CO2: Understand the applications of data structures.

CO3: Understand with utilization of data structure techniques in problem solving.

CO4: Use comprehensive knowledge of data structures and algorithm.

CO5: Use asymptotic analysis of algorithm.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
CO1	H												M		
CO2			H		M								M		
CO3		H							M			L		H	
CO4	H	M											L		L
CO5		M		H											L

<b>BCO 008B</b>	<b>OPERATING SYSTEMS</b>	<b>3-0-0 [3]</b>
-----------------	--------------------------	------------------

### **OJECTIVE:**

- To understand the structure and functions of OS
- To learn about Processes, Threads and Scheduling algorithms
- To understand the principles of concurrency and Deadlocks
- To learn various memory management schemes
- To study I/O management and File systems

<b>UNIT 1</b>	Introduction : Operating system and functions, Classification of Operating systems- Batch, Interactive, Time sharing, Real Time System, Multiprocessor Systems, Multiuser Systems, Multiprocess Systems, Multithreaded Systems, Operating System Structure- Layered structure, System Components, Operating System services, Monolithic and Microkernel Systems.
<b>UNIT 2</b>	Process Management-Process & Threads – Process States - Process Control Block – Process Scheduling – Operations on Processes, Threads, CPU Scheduler – Preemptive and Non- Preemptive; Dispatcher, Scheduling Criteria, Scheduling Algorithms – Process Management in UNIX
<b>UNIT 3</b>	Process Synchronization & Inter process Communication-Concurrent Processes, Co-operating Processes, Precedence Graph, Hierarchy of Processes, Critical Section Problem – Two process solution, Synchronization Hardware, Semaphores – Deadlock- detection, handling, prevention, avoidance, recovery, Starvation, Critical Regions, Monitors, Inter process communication
<b>UNIT 4</b>	Memory Management-Objectives and functions, Simple Resident Monitor Program (No design), Overlays – Swapping; Schemes – Paging – Simple, Multi-level Paging; Internal and External Fragmentation; Virtual Memory Concept, Demand Paging – Page Interrupt Fault, Page Replacement Algorithms; Segmentation – Simple, Multi-level, Segmentation with Paging, Memory Management in UNIX.
<b>UNIT 5</b>	I/O Management and Disk Scheduling: I/O devices, and I/O subsystems, I/O buffering, Disk storage and disk scheduling. File System: File concept, File organization and access mechanism, File directories, and File sharing, File system implementation issues, File system protection and security.

### **Course Outcome (CO):**

At the ends of this course students will have:

- CO1: Classify Unix Kernel mode with user mode & contrast between Kernel structures.
- CO2: Identify and estimate process management & thread management strategies along with their different operations
- CO3: Implement different system calls for various file handling operations.
- CO4: Determine paging and Caching techniques related to Virtual Memory.
- CO5: Ability to understand and analyze various disk scheduling and file system techniques

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i><b>Course Outcome</b></i>	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
CO1	H			M				L			L		H		L
CO2		M	L						M					M	
CO3			M		M									M	M

<b>BCO 232A</b>	<b>SOFTWARE ENGINEERING AND PROJECT MANAGEMENT</b>	<b>3-0-0 [3]</b>
-----------------	--	------------------

### Objective

- To learn about generic models of software development process.
- To understand fundamental concepts of requirements engineering and Analysis Modeling.
- To understand the different design techniques and their implementation.
- To learn various testing and maintenance measures

<b>UNIT 1</b>	Introduction- Introduction to Software Engineering, Software Components, Software Characteristics, Software Crisis, Engineering aspects of Software production – necessity of automation .Job responsibilities of Programmers and Software Engineers as Software developers. Software Development Life Cycle (SDLC)
<b>UNIT 2</b>	Process Models and Program Design Techniques- Software Development Process Models – Code & Fix model, Waterfall model, Incremental model, Rapid Prototyping model, Spiral (Evolutionary) model. Software Requirement Specifications (SRS), Management of User Needs, Data Flow Diagrams, Entity Relationship Diagrams, Decision Tables, SRS Document, Design Techniques – Structured Programming, Coupling and Cohesion, Abstraction and Information Hiding, Software Modeling Tools –Data flow Diagrams, UML and XML.
<b>UNIT 3</b>	Software Testing: Testing Objectives, Unit Testing, Integration Testing, Acceptance Testing, Regression Testing, Verification and Validation: Testing of Software Products – Black-Box Testing and White-Box Testing, Static Analysis, Symbolic Execution and Control Flow Graphs –Cyclomatic Complexity. Maintenance and its need and types of maintenance. CASE tools & graphical reporting tools.
<b>UNIT 4</b>	Project Management: project, project specification parameters, principle & life cycle, project management Plan, why the project is delayed? and scheduling activities, critical Path, PERT& CPM. Monitoring & Control: Change Control, Software Configuration Management (SCM).
<b>UNIT 5</b>	Quality Management and People Management- Introduction, Understanding Behavior, Organizational Behavior, Selecting The Right Person For The Job, Motivation, The Old man – Hackman Job Characteristics Model , Working in Groups, Organization and team structures, Decision Making, Leadership, Organizational Structures, Stress, Health And Safety.

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

## Course Outcome (CO):

At the end of this course students will have:

- CO1. Learn about software and models of software development process and their implementation prospects
- CO2. To understand fundamental concepts of requirements engineering and Analysis Modelling.
- CO3. To understand the importance of software testing and implementation of various testing approaches.
- CO4. To learn about importance of project management and monitoring of software projects
- CO5. To learn about software quality management and people management

----------	-----------------------	-----------

### List of Experiments

Experiment No	Aim
1	Write a C program to implement the various process scheduling mechanisms such as FCFS scheduling.
2	Write a C program to implement the various process scheduling mechanisms such as SJF Scheduling.
3	Write a C program to implement the various process scheduling mechanisms such as Round Robin Scheduling.
4	Write a C program to implement the various process scheduling mechanisms such as Priority Scheduling.
5	To implement deadlock avoidance & Prevention by using Banker's Algorithm.
6	To implement page replacement algorithms FIFO (First In First Out).
7	To implement page replacement algorithm LRU (Least Recently Used).
8	To implement page replacement algorithms Optimal (The page which is not used for longest time)
9	To implement the memory management policy- Paging.
10	To implement the memory management policy-segmentation.
11	Write a C Program to implement Sequential File Allocation method.
12	Write a C Program to implement Indexed File Allocation method.
13	Write a C Program to implement Linked File Allocation method.
14	Write a program to implement multi program variable task (MVT).
15	Write a program to implement multi program fixed task (MFT).

### **Course Outcome (CO):**

At the ends of this course students will have:

- CO1: Classify Unix Kernel mode with user mode & contrast between Kernel structures.
- CO2: Identify and estimate process management & thread management strategies along with their different operations
- CO3: Implement different system calls for various file handling operations.
- CO4: Determine paging and Caching techniques related to Virtual Memory.
- CO5: construct shell scripts.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i><b>Cours e Outco me</b></i>	<b>Program Outcome</b>												<b>Program Specific Outcome</b>		
	P O1	P O2	P O3	P O4	P O5	P O6	P O7	P O8	P O9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
CO1	H			M				L			L		H		L
CO2		M	L						M					M	
CO3			M		M									M	M
CO4	M		L									L

----------	-----------------------------------	-----------

### **List of Experiments**

1. Write a program to implement following searching algorithms using array data structure
  - 1.1 Matrix Addition and Subtraction
  - 1.2 Matrix Multiplication and Transpose
2. Write a program to implement following searching algorithms using array data structure
  - 2.1. Linear Search
  - 2.2. Binary Search
3. Write a program to implement following searching algorithms using array data structure
  - 3.1. Insertion Sort
  - 3.2 Bubble Sort
4. Write a program to implement following searching algorithms using array data structure
  - 4.1. Selection Sort
  - 4.2 Quick Sort
5. Write a program to implement following operations on stack using array data structure.
  - 5.1 Traversing
  - 5.2 Push
  - 5.3 POP
6. Write a program to implement following examples of recursion
  - 6.1 Fibonacci Series
  - 6.2 Factorial Function
  - 6.3 Tower of Hanoi
7. Write a program to implement Merge Sort.
8. Write a program to implement following operations on Queue using array data structure.
  - 8.1 Insertion8.2 Deletion8.3 Traversing
9. Write a program to implement Postfix evaluation.
10. Write a program to implement Infix to Postfix Notation.
11. Write a program to implement following operations on Link List data structure.
  - 11.1 Insertion at beginning
  - 11.2 Insertion at last
  - 11.3 Insertion at any location
12. Write a program to implement following operations on Link List data structure.
  - 12.1 Deletion at beginning
  - 12.2 Deletion at last
  - 12.3 Deletion at any location
13. Write a program to implement Doubly Link List
  - 13.1 Insertion13.2 Traversing

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

14. Write a program to implement Breadth First Search Algorithm.

15. Write a program to implement Depth First Search Algorithm.

**Course Outcomes:**

CO1: Show the understanding of various data structure concepts like Stacks, Queues, Linked List, Trees and Files

CO2: Understand the applications of data structures.

CO3: Understand with utilization of data structure techniques in problem solving.

CO4: Use comprehensive knowledge of data structures and algorithm.

CO5: Use asymptotic analysis of algorithm.

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

<b>BCO355A</b>	<b>Supervised Learning in Machine Learning</b>	<b>3-0-0</b>
----------------	--	--------------

## UNIT I: Difference Between Supervised and Unsupervised Learning

Machine learning, why we need machine learning, machine learning process State the different types of learning: Supervised, unsupervised and reinforcement learning,, Detailing out on labeled data and its types, classification and regression models, unlabeled data and its types, clustering model; Gradient Descent- Overview, Gradient Descent, Finding a Minimum Using Gradient Descent, Estimating the Gradient, Using the Gradient Descent, Example, Loss Function, Different Loss Functions,

## UNIT II: Regression Techniques

Regression Technique, Origin of Regression, Regression in Real World, regression concepts, Regression Types, Linear Regression Types, Linear Regression Variance, Co-Variance, Linear Regression Correlation Coefficient, OLS, R Squared, Goodness of fit, Linear Regression Using Gradient Descent, Gradient Descent Explained with an Example, Stochastic Gradient Descent, Cost Function –Partial Derivative, Testing Model Using Cross Validation, Cross Validation Types, regularized regression, Ridge Regression, lasso regression, L1 vs L2 Norm – Regression, Generalized Linear Regression, RANDOM COMPONENT OF A GLM

## UNIT III: Classification Techniques- Decision Tress

Classification Technique, Decision Tree, Decision Tree Illustration using Sample Dataset, concept of homogeneity., entropy, Entropy Explained with Rainfall Example, plot of entropy versus the proportionsm, Information Gain, Algorithms to Create a Decision Tree, Gini Index, Truncation and Pruning, Decision Tree Working Methodology, Decision Tree Tuning Parameters

## UNIT IV: Classification Techniques- Naïve Bayes

Naïve Bayes, bayes theorem., Example, Naïve Bayes Algorithm for Categorical Data, Popular Naive Bayes Classifiers, Types of Naive Bayes Classifier, Naïve Bayes for Text Classification, popular naive bayes classifiers, Naïve Bayes Algorithm, K Nearest Neighbour classification , Curse of Dimensionality, K-Factor, Implementation of KNN using Python

## UNIT V Ensemble Methods

Ensemble Methods ,Why Ensemble?, Example, Methods for Constructing Ensemble, advantages and disadvantages of ensembling. Random Forest, Random Forest Example, Random Forest Use Case, Random Forest Algorithm, Comparing other Models Accuracy, Bootstrapping and Bagging, Out of Bag Error, OOB Score Before Tuning, OOB and Hyper Parameter Tuning, Ensemble Model Using Majority Voting, Gradient Boosting, Weak Learner, Gradient Boosting Example, Moving towards XGBoost, Parameters of XGBoost

<b>BCO356A</b>	<b>Supervised Learning in Machine Learning Lab</b>	<b>3-0-0</b>
----------------	--	--------------

### **List of Programs**

1. Understanding the Learning Implementation on Jupyter Notebook
2. Using NumPy functions in Jupyter
3. Using Pandas in Jupyter
4. Using SciPy in Jupyter
5. Using Simple Linear Regression, calculate Gradient and Cost minimum, Along with line of best fit.
6. Understand Linear Regression and other regression techniques using house prices prediction dataset.
7. Understanding Decision tree with sample dataset.
8. KNN algorithm explained with Cancer Data. (Using Python)
9. Identifying optimal K value in K-means Clustering algorithm. (Using Python)
10. Random Forest algorithm explained with classification and Regression (Using Python)
11. Implement Gradient Boosting Machine using Python.
12. Understand Logistic Regression model using Iris dataset (using Python)

<b>BCO 376A</b>	<b>UI Specialist</b>	<b>3-0-0 [3]</b>
-----------------	----------------------	------------------

**OBJECTIVE:**

- Introduction to HTML5, CSS3
- Introduction to modern JavaScript

<b>UNIT 1</b>	Intoduction, Need of HTML, HTML Tags, HTML Elements, Formatting Text in HTML, Headings,HTML Paragraphs,Identifying HTML Elements, HTML Basics & Attributes,HTML Links, Lists, Colors, Tables, Symbols, Attributes, Overview of Attributes, Core Attributes, Styles, Class Attribute, Generic Attributes
<b>UNIT 2</b>	HTML5 introduced features, HTML5 form validate/no validate, HTML5 canvas, embedding audio, and video in a webpage, drag and drop,HTML5 Local Storage, HTML5 web workers and server sent events, HTML Attributes, Forms, Form Validation, Validation to HTML Page , CSS Semantics, CSS Selectors CSS Styling, CSS Color, CSS Backgrounds, Borders, Margins, Padding, Box Model, Heightwidth, Tables, Selectors, Display,CSS Buttons, CSS Animation, CSS Display, CSS Float & Clear, CSS Overflow, CSS Align- Horizontal & Center Responsive Web Design, View Port, Grid View, Media Queries, Flex Box
<b>UNIT 3</b>	Javascript, importance, What can JavaScript Do, Need of Javascript, Javascript with HTML Content, HTML Attributes, HTML DOM Elements Java script with CSS, HTML Nodes, Syntax, Rules, Writing Javascript, Tags, Programming Errors, Syntax Error, Runtime Error, Logical Errors, Data Types, Non-primitive, Javascript Data Types, Objects in Javascript, Events in Javascript Objects, Changing HTML Styles, Events, Event Handler Attributes, Adding Event Handlers, Using Element Attribute directly, Using Event Attribute, Using HTML DOM, Reacting to Events
<b>UNIT 4</b>	Introduction, Execution of Functions, Invoking Functions, As methods, As constructor, call(), arguments, apply(), bind(), Nesting Functions & Closure, Objects, Primitive Values, Strings & Objects, Creating JS Object, Literal Syntax, New Keyword,Adding Methods to Objects
<b>UNIT 5</b>	Creating arrays, elements in array access, changing array elements, objectsVs Arrays, recognizing Arrays, Looping Array, Array Methods, Adding Array Elements using Array Methods, Removing Last Array Elements, Converting Array into Strings, Converting and Joining Array into Strings with special separator, Array Methods & Manipulations, Sorting Array Methods , Iteraion Methods, The Map()

**Course OUTCOME (CO):**

CO1: Explain the essentials of HTML.

CO2: Understand the CSS Styling and selectors

CO3: Understand the JavaScript need and implementation.

CO4: Understand the JavaScript Functions, Objects and Events CO5: Explore JavaScript Arrays

BCO 373A	THINK PYTHON	3-1-0 [4]
----------	--------------	-----------

**OBJECTIVE:**

- Explain how to get the Python environment up and running and the basics of Python programming language.
- Describe how to program using Python, by learning concepts like variables, flow controls, data types, type conversion, objects, and classes; functions and how they are considered as objects; basics of iterators and generators; Python as a functional programming language and the concepts that help understand the functional programming aspect.
- Discuss the methods involved in data preprocessing and how outliers can be detected and treated.
- Define the basic concepts of exploratory data analysis and statistical modeling.

<b>UNIT 1</b>	Compiler vs. Interpreter, statically vs. Dynamically Typed Languages, Introduction to Python, Installing Python, Anaconda, Jupyter Notebook, Spyder, Components and Versions of Python, Difference between Python 2 and Python 3, Python Distributions
<b>UNIT 2</b>	Python REPL, Variables, control structures, functions and objects, First-class functions, immutable data, strict and non-strict evaluation, Recursion instead of an explicit loop state, Functions, iterators, and generators, writing pure functions, functions as first-class objects, Using strings, tuples and named tuples,
<b>UNIT 3</b>	Using lists, dicts, and sets, The itertools module, Best practices and clean coding, Reading data files into Python, writing files,, Introduction to Python libraries
<b>UNIT 4</b>	Introduction to Pandas and Basic Concepts of Pandas, Data Cleaning and Preparation, Handling Missing Data, filtering out Missing Data, Filling in Missing Data, Data Transformation, Removing Duplicates, Transforming Data Using a Function or Mapping, Replacing Values, Renaming Axis Indexes, Discretization and Binning, Detecting and Filtering Outliers, Permutation and Random Sampling, String Manipulation, Feature Engineering
<b>UNIT 5</b>	Derived Variables, Basic Exploratory Data Analysis, Methods for EDA and Examples, Statistical Modeling, Curve Fitting: Linear Regression, Nonlinear Regression

**Course OUTCOME (CO):**

CO1: Understand working with the IDEs and installation of important libraries.

CO2: Understand Python flow, structure, and functions.

CO3: Explore working with Python Lists

CO4: Explore the key concepts of pandas and data transformation.

CO5: Understand the working of derived variables.

BCO 235A	PROBABILISTIC MODELLING AND REASONING WITH PYTHON	2-0-0 [2]
----------	---	-----------

**Software:** Python, NumPy, Pandas, Matplotlib, Seaborn, SciPy

**Objectives:** *The objective of this course is to teach students the concepts of Statistics, probability, probability distribution, and other statistical methods to solve various engineering problems*

## UNIT – I

**Introduction to Statistics:** Introduction to Statistics. Role of statistics in scientific methods, current applications of statistics.

**Scientific data gathering:** Sampling techniques, scientific studies, observational studies, data management.

**Data description:** Displaying data on a single variable (graphical methods, measure of central tendency, measure of spread), displaying relationship between two or more variables, measure of association between two or more variables.

## UNIT – II

**Probability Theory:** Sample space and events, probability, axioms of probability, independent events, conditional probability, Bayes' theorem.

**Random Variables:** Discrete and continuous random variables. Probability distribution of discrete random variables, binomial distribution, poisson distribution. Probability distribution of continuous random variables, The uniform distribution, normal (gaussian) distribution, exponential distribution, gamma distribution, beta distribution, t-distribution,  $\chi^2$  distribution. Expectations, variance and covariance. Probability Inequalities. Bivariate distributions

## UNIT -III

**Point Estimations:** Methods of finding estimators, method of moments, maximum likelihood estimators, bayes estimators. Methods of evaluating estimators, mean squared error, best unbiased estimator, sufficiency and unbiasedness

**Interval Estimations:** Confidence interval of means and proportions, Distribution free confidence interval of percentiles

## UNIT - IV

**Test of Statistical Hypothesis and p-values:** Tests about one mean, tests of equality of two means, test about proportions, p-values, likelihood ratio test, Bayesian tests

**Bayesian Statistics:** Bayesian inference of discrete random variable, Bayesian inference of binomial proportion, comparing Bayesian and frequentist inferences of proportion, comparing Bayesian and frequentist inferences of mean

**Univariate Statistics using Python:** Mean, Mode, Median, Variance, Standard Deviation, Normal Distribution, t-distribution, interval estimation, Hypothesis Testing, Pearson correlation test, ANOVA F-test

<b>BCO280B</b>	<b>R Programming for Data Science and Data Analysis</b>	<b>3-0-0</b>
----------------	---	--------------

Objectives: The objective of this course is to teach students R Programming Language, basic functions in R programming language and critical techniques

Reference Books:

- Achim Klenke, (2014), Probability Theory A Comprehensive Course Second Edition, Springer, ISBN 978-1-4471-5360-3
- Christian Heumann, Michael Schomaker Shalabh (2016), Introduction to Statistics and Data Analysis With Exercises, Solutions and Applications in R, Springer International Publishing, ISBN 978-3-319-46160-1

Course Rationale: The course begins with the study of R Programming

Course Objectives:

R is a programming language for statistical computing and graphics that you can use to clean, analyze, and graph your data. It is widely used by researchers from diverse disciplines to estimate and display results and by teachers of statistics and research methods

Learning & Course Outcomes:

On completion of this course, the students are expected to learn

1. Open Source. ...
- 2) Platform Independent. ...
- 3) Machine Learning Operations. ...
- 4) Exemplary support for data wrangling. ...
- 5) Quality plotting and graphing. ...
- 6) The array of packages. ...
- 7) Statistics. ...

## UNIT – I

Getting Started with R and R Workspace: Introducing R, R as a programming Language, the need of R, Installing R, RStudio, RStudio's user interface, console, editor, environment pane, history pane, file pane, plots pane, package pane, help and viewer pane

R Workspace, R's working directory, R Project in R Studio, absolute and relative path, Inspecting an Environment, Inspect existing Symbols, View the structure of object, Removing symbols, Modifying Global Options, Modifying warning level, Library of Packages, Getting to know a package, Installing a Package from CRAN, Updating Package from CRAN, Installing package from online repository, Package Function, Masking and name conflicts

## UNIT – II

Basic Objects and Basic Expressions: Vectors, Numeric Vectors, Logical Vectors, Character Vectors, subset vectors, Named Vectors, extracting element, converting vector, Arithmetic operators, create Matrix, Naming row and columns, subsetting matrix, matrix operators,

creating and subsetting an Array, Creating a List, extracting element from list, subsetting a list, setting value, creating a value of data frame, subsetting a data frame, setting values, factors, useful functions of a data frame, loading and writing data on disk, creating a function, calling a function, dynamic typing, generalizing a function. Assignment Operators, Conditional Expression, using if as expression and statement, using if with vectors, vectorized if: ifelse, using switch, using for loop, nested for loop, while loop

### UNIT – III

Working with Basic Objects and Strings: Working with object function, getting data dimensions, reshaping data structures, iterating over one dimension, logical operators, logical functions, dealing with missing values, logical coercion, math function, number rounding functions, trigonometric functions, hyperbolic functions, extreme functions, finding roots, derivatives and integration, Statistical function, sampling from a vector, Working with random distributions, computing summary statistics, covariance and correlation matrix, printing string, concatenating string, transforming text, Formatting text, formatting date and time, formatting date and time to string, finding string pattern, using group to extract data, reading data

### UNIT – IV

Working with Data – Visualize and Analyze Data: Reading and Writing Data, importing data using built-in-function, READR package, export a data frame to file, reading and writing Excel worksheets, reading and writing native data files, loading built-in data sets, create scatter plot, bar chart, pie chart, histogram and density plots, box plot, fitting linear model and regression tree

#### Reference Books:

- R for Data Science by Hadley Wickham & Garrett Golemund

<b>BCO 339A</b>	<b>EC-Council Certified Security Specialist</b>	<b>4-0-0 [4]</b>
-----------------	---	------------------

### Course Outcomes:

CO1: Identify information security threats which reflect on the security posture of the organization

CO2: Knowledge of networks and various components of the OSI and TCP/IP model

CO3: Identify different types of cryptographic principles, cryptography attacks, and cryptanalysis tools.

CO4: Fundamentals of ethical hacking and pen testing

CO5: Understanding E-mail crime, computer forensics and writing investigative reports

### Syllabus:

<b>Module 1</b>	Information Security Fundamentals
<b>Module 2</b>	Networking Fundamentals
<b>Module 3</b>	Secure Network Protocols
<b>Module 4</b>	Information Security Threats and Attacks
<b>Module 5</b>	Social Engineering
<b>Module 6</b>	Hacking Cycle
<b>Module 7</b>	Identification, Authentication, and Authorization
<b>Module 8</b>	Cryptography
<b>Module 9</b>	Firewalls
<b>Module 10</b>	Intrusion Detection System
<b>Module 11</b>	Data Backup
<b>Module 12</b>	Virtual Private Network
<b>Module 13</b>	Wireless Network Security
<b>Module 14</b>	Web Security
<b>Module 15</b>	Ethical Hacking and Pen Testing
<b>Module 16</b>	Incident Response
<b>Module 17</b>	Computer Forensics Fundamentals
<b>Module 18</b>	Digital Evidence
<b>Module 19</b>	Understanding File Systems
<b>Module 20</b>	Windows Forensics
<b>Module 21</b>	Network Forensics and Investigating Network Traffic
<b>Module 22</b>	Steganography
<b>Module 23</b>	Analyzing Logs

*Blu*  
 Department of Computer Science and Engineering

## COURSE SYLLABUS

Module 1 - Getting to know Information Extraction (IE)

Module 2 - Getting to know SystemT

Module 3 - IE with AQL

Module 4 - AQL Basics

Module 5 - Advanced AQL

  
 Head  
 Department of Computer Science & Engineering  
 IECRC University Jaipur-303905

<b>BCO 123A</b>	<b>IBM Watson Studio</b>	<b>2-0-0 [2]</b>
-----------------	--------------------------	------------------

## Module 1: Overview

IBM Watson Studio, About Assets, Asset Types, Lineage, Profiles, Previews, IBM Watson APIs

## Module 2: Projects

Projects, Exporting Projects, Environment, Stopping Active Runtimes, Jobs

## Module 3: Preparing Data

Getting and Preparing Data in a Project, Refining Data, Data Annotation, Python Model Operator, Buckets, File paths, and Partitions in Cloud Object Storage, Cloud Function Operator, Event Streams (Source) Operator, Installing Python Libraries, MQTT (Source and Target) operators, Buckets, file paths, and partitions in Cloud Object Storage, Cloud Function operator, SPSS model operator, Event Streams (Source) operator, Congestion, Clickstream Example Streams Flow, Tutorials for streams flows, Tutorial: Design and create a streams flow in the canvas, Tutorial for using a predictive model with streaming data, Tutorial for metrics, Troubleshooting a streams flow

## Module 4: Data Science

Data Science, The cells in a Jupyter notebook, Deep learning libraries for notebooks, Using project-lib for Python, Using Python functions to work with Cloud Object Storage, Scheduling a notebook, Classification and Regression, Clustering, Survival Analysis, SPSS model visualizations, Random trees, RStudio

## Module 5: Machine Learning & AI Models

Machine Learning & AI Models, Training, Developing Apps, Machine Learning, Watson machine learning plans and compute usage, Watson Machine Learning authentication, AutoAI tutorial: Build a binary classification model, Machine Learning tutorials, Deep Learning sample apps, Python Flask tutorial: Build a web app that recognizes hand-drawn digits, Deploying an AutoAI model, Synthesized Neural Networks, Downloading and using NeuNetS models locally, Modeling, SQL optimization, End-to-end example for running a deep learning training run, Deep Learning Experiment Builder, Importing models into Watson Machine Learning, Deploying a model, Overview: Deploying Python functions in Watson Machine Learning, Managing models

## Module 6: Catalogs

Catalogs with IBM Watson Knowledge Catalog, Integrating with Information Governance Catalog

## Module 7: Governance

Data governance with Watson Knowledge Catalog, Data protection

BCO412A	Formal Language and Automata Theory (TCS)	3-0-0
---------	---	-------

**Introduction:** Alphabet, languages and grammars, productions and derivation, Chomsky hierarchy of languages.

**Regular languages and finite automata:** Regular expressions and languages, deterministic finite automata (DFA) and equivalence with regular expressions, nondeterministic finite automata (NFA) and equivalence with DFA, regular grammars and equivalence with finite automata, properties of regular languages, *Kleene's theorem*, pumping lemma for regular languages, *MyhillNerode theorem and its uses*, minimization of finite automata.

**Context-free languages and pushdown automata:** Context-free grammars (CFG) and languages (CFL), Chomsky and Greibach normal forms, nondeterministic pushdown automata (PDA) and equivalence with CFG, parse trees, ambiguity in CFG, pumping lemma for context-free languages, deterministic pushdown automata, closure properties of CFLs.

**Context-sensitive languages:** Context-sensitive grammars (CSG) and languages, linear bounded automata and equivalence with CSG.

**Turing machines:** The basic model for Turing machines (TM), Turing recognizable (recursively enumerable) and Turing-decidable (recursive) languages and their closure properties, variants of Turing machines, nondeterministic TMs and equivalence with deterministic TMs, unrestricted grammars and equivalence with Turing machines, TMs as enumerators.

**Undecidability:** Church-Turing thesis, universal Turing machine, the universal and diagonalization languages, reduction between languages and Rice's theorem, undecidable problems about languages.

**Basic Introduction to Complexity:** Introductory ideas on Time complexity of deterministic and nondeterministic Turing machines, P and NP, NP-completeness, Cook's Theorem, other NP-Complete problems.

#### Text Books:

1. *Introduction to Automata Theory, Languages, and Computation* John E. Hopcroft, Rajeev Motwani and Jeffrey D. Ullman.

#### Reference Books:

1. *Elements of the Theory of Computation*, Harry R. Lewis and Christos H. Papadimitriou.
2. *Automata and Computability*, Dexter C. Kozen.
3. *Introduction to the Theory of Computation*, Michael Sipser.
4. *Introduction to Languages and the Theory of Computation*, John Martin.

  
 Head

 JECRC University Jaipur-303905

BCO413A	Computer Organization & Architecture (TCS)	3-0-0
---------	--	-------

**Revision of basics in Boolean logic and Combinational/Sequential Circuits.**

**Functional blocks of a computer:** CPU, memory, input-output subsystems, control unit.

**Instruction set architecture of a CPU:** Registers, instruction execution cycle, RTL interpretation of instructions, addressing modes, instruction set. Outlining instruction sets of some common CPUs.

**Data representation:** Signed number representation, fixed and floating point representations, character representation.

**Computer arithmetic:** Integer addition and subtraction, ripple carry adder, carry look-ahead adder, etc. multiplication – shift-and-add, Booth multiplier, carry save multiplier, etc. Division restoring and non-restoring techniques, floating point arithmetic, IEEE 754 format.

**Introduction to x86 architecture.**

**CPU control unit design:** Hardwired and micro-programmed design approaches, design of a simple hypothetical CPU.

**Memory system design:** Semiconductor memory technologies, memory organization.

**Peripheral devices and their characteristics:** Input-output subsystems, I/O device interface, I/O transfers – program controlled, interrupt driven and DMA, privileged and non-privileged instructions, software interrupts and exceptions. Programs and processes – role of interrupts in process state transitions, I/O device interfaces – SCII, USB

**Pipelining:** Basic concepts of pipelining, throughput and speedup, pipeline hazards.

**Parallel Processors:** Introduction to parallel processors, Concurrent access to memory and cache coherency.

**Memory organization:** Memory interleaving, concept of hierarchical memory organization, cache memory, cache size vs. block size, mapping functions, replacement algorithms, write policies.

BCO415A	Object Oriented Programming (TCS)	3-0-0
---------	-----------------------------------	-------

**Procedural programming, An Overview of C:** Types Operator and Expressions, Scope and Lifetime, Constants, Pointers, Arrays, and References, Control Flow, Functions and Program Structure, Namespaces, error handling, Input and Output (C-way), Library Functions (*string*, *math*, *stdlib*), Command line arguments, Pre-processor directive

**Some difference between C and C++:** Single line comments, Local variable declaration within function scope, function declaration, function overloading, stronger type checking, Reference variable, parameter passing – value vs reference, passing pointer by value or reference, #define constant vs const, Operator new and delete, the typecasting operator, Inline Functions in contrast to macro, default arguments

**The Fundamentals of Object Oriented Programming:** Necessity for OOP, Data Hiding, Data Abstraction, Encapsulation, Procedural Abstraction, Class and Object.

**More extensions to C in C++ to provide OOP Facilities:** Scope of Class and Scope Resolution Operator, Member Function of a Class, private, protected and public Access Specifier, thisKeyword, Constructors and Destructors, friend class, error handling (exception)

**Essentials of Object Oriented Programming:** Operator overloading, Inheritance – Single and Multiple, Class Hierarchy, Pointers to Objects, Assignment of an Object to another Object, Polymorphism through dynamic binding, Virtual Functions, Overloading, overriding and hiding, Error Handling

**Generic Programming:** Template concept, class template, function template, template specialization

**Input and Output:** Streams, Files, Library functions, formatted output

**Object Oriented Design and Modelling:** UML concept, Use case for requirement capturing,

**Class diagram, Activity diagram and Sequence Diagram for design, Corresponding C++ code from design**

#### Text Books:

1. *The C++ Programming Language*, Bjarne Stroustrup, Addison Wesley.
2. *C++ and Object-Oriented Programming Paradigm*, Debasish Jana, PHI Learning Pvt. Ltd.

#### Reference Books:

1. *Programming – Principles and Practice Using C++*, Bjarne Stroustrup, Addison Wesley.
2. *The Design and Evolution of C++*, Bjarne Stroustrup, Addison Wesley.

BCO416A	Computational Statistics (TCS)	3-0-0
---------	--------------------------------	-------

**Multivariate Normal Distribution:** Multivariate Normal Distribution Functions, Conditional

Distribution and its relation to regression model, Estimation of parameters.

**Multiple Linear Regression Model:** Standard multiple regression models with emphasis on detection of collinearity, outliers, non-normality and autocorrelation, Validation of model assumptions.

**Multivariate Regression:** Assumptions of Multivariate Regression Models, Parameter estimation, Multivariate Analysis of variance and covariance

**Discriminant Analysis:** Statistical background, linear discriminant function analysis, Estimating linear discriminant functions and their properties.

**Principal Component Analysis:** Principal components, Algorithm for conducting principal component analysis, deciding on how many principal components to retain, H-plot.

**Factor Analysis:** Factor analysis model, Extracting common factors, determining number of factors, Transformation of factor analysis solutions, Factor scores.

**Cluster Analysis:** Introduction, Types of clustering, Correlations and distances, clustering by partitioning methods, hierarchical clustering, overlapping clustering, K-Means Clustering Profiling and Interpreting Clusters.

#### Text Books:

1. *An Introduction to Multivariate Statistical Analysis*, T.W. Anderson.
2. *Applied Multivariate Data Analysis, Vol I & II*, J.D. Jobson.
3. *Statistical Tests for Multivariate Analysis*, H. Kris.
4. *Programming Python*,

#### Reference Books:

1. *Regression Diagnostics , Identifying Influential Data and Sources of Collinearity*, D.A. Belsey, E. Kuh and R.E. Welsch
2. *Applied Linear Regression Models*, J. Neter, W. Wasserman and M.H. Kutner.
3. *The Foundations of Factor Analysis*, A.S. Mulaik.
4. *Introduction to Linear Regression Analysis*, D.C. Montgomery and E.A. Peck.

5. *Cluster Analysis for Applications*, M.R. Anderberg.
6. *Multivariate Statistical Analysis*, D.F. Morrison.
7. *Python for Data Analysis*, Wes Mc Kinney.

BCO418A	Database Management System (TCS)	3-0-0
---------	----------------------------------	-------

**Introduction:** Introduction to Database. Hierarchical, Network and Relational Models.

**Database system architecture:** Data Abstraction, Data Independence, Data Definition Language

(DDL), Data Manipulation Language (DML).

**Data models:** Entity-relationship model, network model, relational and object oriented data models, integrity constraints, data manipulation operations.

**Relational query languages:** Relational algebra, Tuple and domain relational calculus, SQL3, DDL and DML constructs, Open source and Commercial DBMS - MYSQL, ORACLE, DB2, SQLserver.

**Relational database design:** Domain and data dependency, Armstrong's axioms, Functional Dependencies, Normal forms, Dependency preservation, Lossless design.

**Query processing and optimization:** Evaluation of relational algebra expressions, Query equivalence, Join strategies, Query optimization algorithms.

**Storage strategies:** Indices, B-trees, Hashing.

**Transaction processing:** Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery.

**Database Security:** Authentication, Authorization and access control, DAC, MAC and RBAC models, Intrusion detection, SQL injection.

**Advanced topics:** Object oriented and object relational databases, Logical databases, Web databases, Distributed databases, Data warehousing and data mining.

#### Text Books:

1. Database System Concepts. Abraham Silberschatz, Henry F. Korth and S. Sudarshan.

#### Reference Books:

1. *Principles of Database and Knowledge – Base Systems*, Vol 1 by J. D. Ullman.
2. *Fundamentals of Database Systems*. R. Elmasri and S. Navathe.
3. *Foundations of Databases*. Serge Abiteboul, Richard Hull, Victor Vianu.

BCO 081B	PROGRAMMING WITH PYTHON	3-0-1 [3]
----------	-------------------------	-----------

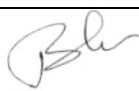

### OBJECTIVE:

- To study various core programming basics—including data types, control structures, algorithm development,
- To overview the applications of Python.
- To be familiar with program design with functions—via the Python programming language.
- Students will solve problems, explore real-world software development challenges, and create practical and contemporary applications

<b>UNIT 1</b>	<b>Introduction:</b> Features of Python, History of Python, installing Python; basic syntax, interactive shell, editing, saving, and running a script. Statements and Expressions, Variables, Operators, Precedence and Associativity, Data Types (Numbers, Booleans, Strings, None), Indentation and comments, Type Conversions, type() Function, membership operator
<b>UNIT 2</b>	<b>Control Flow Statements:</b> if, if-else, if-elif-else, while loop, range() Function, for loop, continue and break statements.  <b>Strings:</b> Creating and Storing Strings, Basic String Operations, String Slicing and Joining, String Methods, Formatting Strings
<b>UNIT 3</b>	<b>Lists, Tuples, Dictionaries, Sets:</b> Basic Operations, Indexing and Slicing, Built-In Functions, Using zip() Function  <b>Functions:</b> Function Definition and Calling the Function, The return Statement and void Function, Parameters and Arguments in a Function: Positional, Keyword, Default, Scope and Lifetime of Variables, the return Statement, returning multiple values, recursive functions, Lambda functions
<b>UNIT 4</b>	<b>Object-Oriented Programming:</b> classes, objects, the self-parameter and adding methods to a class, display class attributes and methods, __init__ method (constructor), __del__ method (destructor), using private instance variables and methods, inheritance, types of inheritance  <b>Regular Expression Operations:</b> using r prefix for regular expressions, using parentheses in regular expressions, compiling regular expressions using compile() method of re module, named groups
<b>UNIT 5</b>	<b>Graphics Programming: The Turtle Module:</b> moving the turtle in any direction, draw different shapes, the color, bgcolor, circle and speed method of turtle, drawing basic shapes using iterations  <b>The Tkinter Module:</b> Tk-the GUI Window, displaying images, tkinter Widgets: button, entry, text, canvas, frame, etc.

### Course Outcome:

- CO1. Understand the fundamental Python syntax and semantics
- CO2. Express proficiency in handling of strings and control flow statements
- CO3. Determine the methods to create and manipulate Python programs by utilizing various data structures.

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

- CO4. Articulate the object-oriented programming concepts used in Python.  
 CO5. Understanding the application of GUI tools in python

<b>.BCO 010C</b>	<b>DATABASE MANAGEMENT SYSTEMS</b>	<b>4-0-0 [4]</b>
------------------	------------------------------------	------------------

**OJECTIVE:**

- To provide knowledge of relational model
- To learn about ER diagrams.
- To learn about Query Processing and Transaction Processing

<b>UNIT 1</b>	Introduction - Database Systems versus File Systems, View of Data, Data Models, database languages, Database Users and Administrators. Transaction Management, Components of a Database management System. Entity-Relationship Model – Basic Concepts, Constraints, Keys, Design Issues, E-R Diagrams.
<b>UNIT 2</b>	Relational Model- Structures of relational databases, Integrity Constraints, Logical database Design, Tables, Views, Data Dictionary. Relational Algebra, Relational Calculus. SQL – Basic Structures, Query Handling, Triggers, Nested SQL Query, Embedded SQL,
<b>UNIT 3</b>	Relational Database Design- Functional Dependencies, Multi-valued Dependencies, Normal Forms, Decomposition into Normalized Relations.
<b>UNIT 4</b>	Fundamental Concepts of Transaction Management, ACID property. Serializability and testing for serializability, concurrency control schemes, lock-based protocols, two-phase locking protocols, graph-based protocols, time stamp-based protocols, deadlocks.
<b>UNIT 5</b>	File System: File organization- Heap File, Sequential File, Hash File, Clustered file, file operations, indexing, B-tree, B+ tree, Introduction to Data Mining, Data Farming, Data Warehousing

**Course Outcome (CO):**

At the ends of this course students will have:

CO1: Awareness of database management basics and different models that we use for database.

CO2: Design and architecture of relational model, relational algebra and SQL queries.

CO3: Implement different form of normalization.

CO4: Logical representation of internet database.

CO5: Analysis and concepts of transaction, concurrency and recovery systems.

BCO 009A	COMPUTER ORGANIZATION AND DESIGN	3-1-0 [4]
----------	----------------------------------	-----------

### OBJECTIVE:

- To understand the basic structure and operation of digital computer
- To study the design of arithmetic and logic unit and implementation of fixed-point and floating-point arithmetic operations
- To study the two types of control unit techniques and the concept of pipelining
- To study the hierarchical memory system including cache memories and virtual memory
- To study the different ways of communicating with I/O devices and standard I/O interfaces

<b>UNIT 1</b>	Basic organization of computers, Register transfer language (RTL), Bus and memory transfer, Arithmetic, logic, shift -micro operations, Types of registers and machine instructions, Fetch, decode and execute cycle.
<b>UNIT 2</b>	Assembly language programming, Instruction format, addressing modes, RISC vs CISC architectures.
<b>UNIT 3</b>	Information representation, Floating point representation (IEEE 754), computer arithmetic and their implementation; Fixed-Point, Signed and 2's complement Arithmetic: Addition, Subtraction, Multiplication and Division, Hardwired and Micro programmed Control.
<b>UNIT 4</b>	Memory Technology, static and dynamic memory, Memory address mapping and cache memory mapping techniques, Memory Hierarchy, Virtual memory and memory management unit
<b>UNIT 5</b>	I/O subsystems: Input-Output devices such as Disk, CD-ROM, Printer etc. Interfacing with IO devices, keyboard and display interfaces; Basic concepts Bus Control, Read Write operations, Programmed IO, Concept of handshaking, Polled and Interrupt-driven I/O, DMA data transfer.

### Course Outcome (CO):

At the ends of this course students will have:

CO1: Awareness of computer organization.

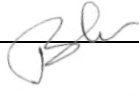

CO2: Design and architecture of machine.

CO3: Implement different system calls for various units.

CO4: Logical representation of storage, representation and management.

CO5: Analysis of I/O subsystem.

<b>BCO013B</b>	<b>Database Management System Lab</b>	<b>0-0-2</b>
----------------	---------------------------------------	--------------

- 1 Installation of MySQL
- 2 Analyze the problem and come with the entities in it. Identify what Data has to be persisted in the databases.
- 3 Represent all entities in a tabular fashion. Represent all relationships in a tabular fashion.
- 4 Creating of Tables on given problem
- 5 Applying Not Null, Check, Unique Constraints on database Tables.
- 6 Applying Primary Key, References, Foreign Key Constraints on database Tables.
- 7 Applying Insert, Select, Distinct Clause, Where Clause on database Tables.
- 8 Applying Update, Delete, Drop, on database Tables.
- 9 Applying table creation with select, Insert data using select, Renaming on database Tables.
- 10 Practice Queries using MINUS, UNION, INTERSECT, % operator.
- 11 Practice Queries using Group Functions.
- 12 Practice Queries using Group By, Having, Order By Functions.
- 13 Practice Queries using Arithmetic Operators, Comparison Operator.
- 14 Practice Queries using Logical Operator.
- 15 Practice Queries using any four String Functions.
- 16 Practice Queries using any four String Functions.
- 17 Practice Queries using Numeric Functions.
- 18 Practice Queries using Date Functions.

### List of Experiments

1. Write a Python program to print the documents (syntax, description etc.) of Python built-in function(s).
2. Write a Python program which accepts the radius of a circle from the user and compute the area.
3. Write a Python program to accept a filename from the user print the extension of that.
4. Write a Python program to print the calendar of a given month and year.
5. Write a Python program to calculate number of days between two dates.
6. Write a Python program to calculate the length of a string.
7. Write a Python program to multiplies all the items in a list.
8. Write a Python script to sort (ascending and descending) a dictionary by value.
9. Write a Python program to create a tuple with different data types.
10. Write a Python program to find those numbers which are divisible by 7 and multiple of 5, between 1500 and 2700 (both included).
11. Write a Python program to guess a number between 1 to 9.( User is prompted to enter a guess. If the user guesses wrong then the prompt appears again until the guess is correct, on successful guess, user will get a "Well guessed!" message, and the program will exit.)
12. Write a Python program to count the number of even and odd numbers from a series of numbers.
13. Write a Python function to find the Max of three numbers.
14. Write a Python function to sum all the numbers in a list.
15. Write a Python function that takes a list and returns a new list with unique elements of the first list.
16. Write a Python class to find validity of a string of parentheses, '(', ')', '{', '}', '[' and ']' . These brackets must be close in the correct order, for example "()" and "()[{}]" are valid but "[)", "({[})" and "{{{" are invalid.
17. Write a Python class to find a pair of elements (indices of the two numbers) from a given array whose sum equals a specific target number.
18. Write a Python class to implement pow(x, n).

BCO 223A	Open-Source Program with IOT	3-0-0 [3]
----------	------------------------------	-----------

### COURSE OBJECTIVE:

This course gives a foundation in the Internet of Things, including the components, tools, and analysis by teaching the concepts behind the IoT. It will describe the market around the Internet of Things (IoT), the technology used to build these kinds of devices, how they communicate and how they store data. This course will expose students to free open source software environment and introduce them to use open source packages.

### SYLLABUS:

<b>UNIT-I</b>	<b>The Foundations and Philosophies of Free and Open Source:</b> The Origins of Free Software, The Origins of Open Source, Difference Between Free Software and Open Source, Copyright and Licensing, Types of Free and Open Source Software Licenses
<b>UNIT-II</b>	<b>The IoT Open Source Ecosystem:</b> Introduction, Policy Context, IoT OSS Scope and Taxonomy, IoT OSS Ecosystem, Communities and Initiatives, IOT Open Source Project Analysis: Methodology and IoT project Taxonomy
<b>UNIT-III</b>	<b>IoT OSS and H2020 Projects:</b> ASSIST-IoT, VEDLIOT, IoT-NGIN, INGENIOUS, Intell-IoT, TERMINET
<b>UNIT-IV</b>	<b>IoT Analytics:</b> IoT Data and Big Data, Challenges of IoT Analytics Applications, IoT Analytics Lifecycle and Techniques, Requirements of IoT Big Data Analytics Platform, Data Analytic Techniques and Technologies, <b>IoT Network Connectivity Protocols:</b> Bluetooth Low Energy, 6LoWPAN, ZigBee, NFC, Wi-Fi, Cellular (4G/LTE)
<b>UNIT-V</b>	<b>The Rust Programming Language:</b> Writing and Running a Rust Program, Cargo, Variables and Mutability, Shadowing, Data Types, Functions, Control Flow, Ownership, Using Structs to Structure Related Data. <b>Project:</b> Number Guessing Game

### COURSE OUTCOME (CO)

At the end of this course students will have:

CO1: Understanding the need and importance of Free and Open Source

CO2: Understanding of various components of the IOT Open Source Ecosystem

CO3: Awareness of different IOT Open Source Projects

CO4: Ability to analyze IOT Open Source projects and differentiate between various network connectivity protocols

CO5: Ability to create IOT open source programs using the Rust programming language

<b>BCO357A</b>	<b>Unsupervised Learning and Neural Networks</b>	<b>3-0-0</b>
----------------	--	--------------

## UNIT I Dimensionality Reduction

Introduction, Singular Value Decomposition, SVD code:, Principal Component Analysis (PCA), Isometric Maps (Isomaps), Multidimensional Scaling (MDS), ISOMAPS with MDS, ISOMAPS (Code), Visualizing the ISOMAPS Data, Applying PCA on the Same Data, Visualization of PCA, Feature Selection Techniques, Wrapper Method

## UNIT II Clustering

What is Clustering and Why is it Important?, Techniques in Clustering, K-Means Clustering, Steps for K-Means Algorithms, Density Based Spatial Clustering (DBSCAN), Types of Points in DBSCAN, DBSCAN Example, DBSCAN: Advantages, DBSCAN: Disadvantages, Hierarchical Clustering, Dendrograms, Hierarchical Clustering Code, DBSCAN Dendrogram Visualization

## UNIT III Neural Networks

Introduction to Neural Networks, Types of Neural Networks, Perceptron, Limitations of Perceptron, Activation Functions, Types of Activation Functions, Linear Activation Function, Non- Linear Data, Non-Linear Activation Function (Sigmoid ), Non- Linear Activation Function (TanH), Non-Linear Activation Function (ReLu), Non-Linear Activation Function (Leaky ReLu), Derivative of Activation Functions Neural Networks, Feed Forward Network, ANN Forward Propagation, Flow of Data in ANN, Backpropagation, Cost Function in Backpropagation, ANN Evaluation, Complete Flow of Data in Neural Network, ANN Training ANN Design, Dropout in Neural Networks

## UNIT IV Understanding Images:

Understanding Images, Need of Convolution Neural Network Convolution, Neural Network Working, Working of CNN with Kernel, Understanding Convolution Mathematically, An Example of CNN, Convolution of Images, Convolution Neurons Visualization, Parameters for Feature Maps, Activation Function in Convolution Neural Network, Pooling Step, Advantages of Pooling, Batch Normalization, Typical Convolution Neural Network, Training CNN using Backpropagation, Steps for CNN Backpropagation, Example of Convolution Neural Network Architecture, Visualization of Convolutional Neural Networks,

## UNIT V RNN Overview

Using MLP instead of RNN, Recurrent Neural Network (RNN), Steps in Recurrent Neuron, RNN Mathematically, Example of Forward Propagation for RNN, Back Propagation in Recurrent Neural Network, Steps for Back Propagation, Applications of RNN, Limitations of RNN, LSTM Conveyor Belt Analogy, Architecture of LSTM, Gates in LSTM, Forget Gate, Input Gate, Output Gate

<b>BCO 378A</b>	<b>UX Expert with React Redux</b>	<b>3-1-0 [4]</b>
-----------------	-----------------------------------	------------------

**OBJECTIVE:**

- Understand Refreshing ES6 Specifications and Features
- Knowing React.js
- Know How does React Works?
- Learn Setting up React.
- Understand JSX
- Explain State in React.js
- Describe Props in React.js
- Discuss State Vs. Props

<b>UNIT 1</b>	Specifications and Features, Introduction, The let and const, The arrow functions, New Literal Syntax, Classes, Inheritance using extends, Default Parameter Values, Spread Operator (...), Iterators and Generators, Introduction to React, Features of React, Why we Need React
<b>UNIT 2</b>	ECMA Script, ES6 let and const, the arrow functions, New Literal Syntax, Classes, Inheritance using extends, Default Parameter Values, Spread Operator (...), Iterators and Generators, Features of React, Practical Application, Why need React, How React Works, Leveraging Virtual DOM, Setting up React
<b>UNIT 3</b>	Why JSX, Embedding JavaScript, Expression in JSX, JSX as an Expression, Nested elements in JSX, JSX Attributes, JSX Comments, JSX Styling and representation as object, The State of the Component, Defining State, Changing the State, Props, Validation, Validators
<b>UNIT 4</b>	Rendering Element, About render (), Creating React Element, Updating Element, components, Introducing Components, Types of Components, Functional Component, Functional Components as Stateless, Using Functional Component
<b>UNIT 5</b>	Redux Concepts, Redux Principles, Data Flow, Actions, Functions, Reduces, Testing, DevTools, React & Redux Integrate

**Course OUTCOME (CO):**

- CO1: Understand specifications and features ES6  
CO2: Learn about ECMA Script  
CO3: Analyse expression in JSX  
CO4: Learn rendering elements

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

CO5: Understand Redux Concepts

<b>BCO 380A</b>	<b>Backend Development</b>	<b>3-1-0 [4]</b>
-----------------	----------------------------	------------------

**OBJECTIVE:**

- Understand the Nodejs framework
- Learn asynchronous programming
- Learn about non-blocking, event-driven servers
- Understand reusable modules and distributable packages
- Understand the techniques and working of express

<b>UNIT 1</b>	What is Node.js, History of Node.js, Why Node.js, Node.js Architecture, Working and Features, Installation and Setup, Installing Node.js, Launching REPL, Environment, Installing Visual Studio, Code Editor, Components of Node.js
<b>UNIT 2</b>	Module Exports, Export Object, Export Functions, Export Functions as Class, Loading module from, Separate Folder, Modules, File System Module, Reading and Writing into, Files, Appending and Opening Files, Events and Event Emitters, Handling Events, Customized Class for Handling Events, In-built Modules File Systems, Operating System
<b>UNIT 3</b>	Writing to Buffers, Reading from Buffers, Concatenating Buffers, Copying Buffers, Slicing Buffers, The Stream Module, Reading From Stream, Writing to Stream, Pipes, Pipe Chaining
<b>UNIT 4</b>	Explain REST API, Describe Node.js express, Discuss the importance of express, Explain the installing process of express, Learn express request and response, Describe routing, REST API : Intro to API, History of API Development, Development of AJAX, CRUD

**Course OUTCOME (CO):**

- CO1: Explain the Node.js architecture  
CO2: Understand the concept of Modules, file system and events  
CO3: Explain the operations and buffers  
CO4: Explain REST API and Express  
CO5: Explain AJAX

BCO 239A	MACHINE LEARNING AND PATTERN RECOGNITION	3-0-0 [3]
----------	--	-----------

**Software:** Python, NumPy, Pandas, Matplotlib, Seaborn, SciPy, Scikit-Learn

**Objectives:** *The objective of this course is to teach students the basic concepts of machine learning, supervised learning, unsupervised learning, and reinforcement learning*

## UNIT – I

**Introduction:** Learning systems, real world applications of machine learning, why machine learning, variable types and terminology, function approximation

**Types of machine learning:** Supervised learning, unsupervised learning, reinforcement learning  
**Important concepts of machine learning:** Parametric vs non-parametric models, the trade-off

between prediction accuracy and model interpretability, the curse of dimensionality, measuring the quality of fit, bias-variance trade off, overfitting, model selection, no free lunch theorem

## UNIT – II

**Linear Regression:** Linear regression, estimating the coefficients, assessing the accuracy of coefficient estimates, assessing the accuracy of the model, multiple linear regression, qualitative

**Predictors Classification:** Logistic regression, estimating regression coefficients, making predictions, multiple logistic regressions, linear discriminant analysis, Bayes' theorem of classification, LDA for  $p=1$ , LDA for  $p>1$ , quadratic discriminant analysis

## UNIT – III

**Resampling Methods, Model Selection and Regularization:** Cross-validation, leave-one-out cross-validation, k-fold cross-validation, the bootstrap, subset selection, shrinkage methods, ridge and lasso regression, dimension reduction methods, principal components regression, partial least square

**Tree Based Methods:** Advantages and disadvantages of trees, regression Trees, classification trees, bagging, random forest, boosting

## UNIT – IV

**Support Vector Machine:** Maximum margin classifier, classification using a separating hyperplane, the maximal margin classifier, support vector classifier, support vector machines, classification with non-linear decision boundaries, support vector machine, one-versus-one classification, one-versus-many classification

**Unsupervised Learning:** Principle component analysis, what are principal components, clustering methods, k-means clustering, hierarchical clustering, Independent component analysis, latent semantic indexing, Markov Models, Hidden Markov Models

 JECRC University Jaipur-303905

<b>BCO 317A</b>	<b>Certified Network Defender</b>	<b>4-0-0 [4]</b>
-----------------	-----------------------------------	------------------

### Course Outcomes:

CO1: Ability to understand network security management

CO2: Ability to deploy Security Devices

CO3: Ability to implement Host Security

CO4: Ability to secure the Network Perimeter

CO5: Ability to respond to Incidents in network

### Syllabus:

<b>Module 01: Network Attacks and Defense Strategies</b>	This module introduces you to different network-based attacks faced by the organization to understand their working and develop defense strategies.
<b>Module 02: Administrative Network Security</b>	It involves developing or updating security infrastructure and continuously monitoring networks for any suspicious actions or unauthorized access
<b>Module 03: Technical Network Security</b>	Implementing authentication and protection controls for user verification to avoid theft of sensitive information or data. Introducing the concept of zero trust and its effectiveness in maintaining a better security posture
<b>Module 04: Network Perimeter Security</b>	Implementation and management of perimeter devices like firewalls, Intrusion Detection Systems, Intrusion Prevention Systems
<b>Module 05: Endpoint Security- Windows Systems</b>	Security of end-user devices and entry points by implying endpoint security on Windows devices.
<b>Module 06: Endpoint Security- Linux Systems</b>	Securing entry points or end-user devices by ensuring endpoint security on Linux devices
<b>Module 07: Endpoint Security- Mobile Devices</b>	Securing entry points or end-user devices by ensuring endpoint security on mobile devices
<b>Module 08: Endpoint Security-IoT Devices</b>	Fundamentals of IoT, IoT threats and security using endpoint security implementation

*[Signature]*  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

<b>Module 09: Administrative Application Security</b>	Understanding the methodologies of administrative application security and its importance to minimize the security-related vulnerabilities in the application
<b>Module 10: Data Security</b>	Implementing policies to safeguard data from unauthorized access using various techniques like encryption, hashing, tokenization, and other key management practices. Concept of data storage, data classification, data masking, retention and destruction
<b>Module 11: Enterprise Virtual Network Security</b>	In-depth understanding of virtualization, related threats, and security. Essentials of software-defined network (SDN) security, network function virtualization (NFV) security
<b>Module 12: Enterprise Cloud Network Security</b>	Introduction to cloud computing, threats, challenges and security across cloud platforms, concepts of container security, docker security, and Kubernetes security
<b>Module 13: Enterprise Wireless Network Security</b>	Understanding of wireless network security essentials, threats, attacks, and countermeasures.
<b>Module 14: Network Traffic Monitoring and Analysis</b>	Analysis and monitoring of logs from various perimeter network devices to identify any anomalies in the traffic.
<b>Module 15: Network Logs Monitoring and Analysis</b>	Analyzing the events generated by various devices in the network to identify signs of any suspicious activity or a potential incident
<b>Module 16: Incident Response and Forensic Investigations</b>	Understanding of incident management response process and methodologies to be followed in case of security incidents. Understanding of forensics investigation techniques and tools used for analysis.
<b>Module 17: Business Continuity and Disaster Recovery</b>	Understanding the importance of BCP and DR, related concepts and procedures required to allow smooth functioning of operations in case of a disaster
<b>Module 18: Risk Anticipation with Risk Management</b>	Risk management process, analyzing various risks that the organization is susceptible to and developing policies to manage them.
<b>Module 19: Threat Assessment with Attack Surface Analysis</b>	Analyzing the threats and attack vectors to develop solutions for their countermeasures
<b>Module 20: Threat Prediction with Cyber Threat Intelligence</b>	Developing a proactive approach by understanding various frameworks aiding in threat intelligence to anticipate the kinds of attacks hackers could use to gain access to the network.

<b>BCO 126A</b>	<b>STATISTICS 101, SPARK MLlib, MACHINE LEARNING- DIMENSIONALITY REDUCTION</b>	<b>1-0-0 [1]</b>
-----------------	--	------------------

## **Statistics 101**

### Module-1 Welcome to Statistics

Welcome to Statistics, data visualization, All about data, Statistics made easy with SPSS statistics, SPSS in 5 minutes, Lab

### Module -2 Descriptive Statistics

Types of data, mean medium mode, measure of dispersion, Statistics by data types, probability, lab

### Module-3 Advanced descriptive statistics

Statistics by group, visualization of group statistics, pivoting, crosstabs, correlation, lab- Advanced descriptive statistics

### Module-4 visualization

Visualization fundamentals, Descriptive and Statistical charts, scatterplots, Statistical charts, time series chart, lab- data visualization

### Module-5 from start to finish-“Beauty pays data”

Does beauty pays, weighted means standard deviation, data wrangling, descriptive statistics, reproducibility with syntax, lab- Does beauty pays

## **Spark MLlib**

### Module-1 SparkMlib Datatypes

Spark Mlib data types, Spark Mlib data types-local matrices, Spark Mlib data types-Block matrix, Spark Mlib data types-Row IndexedRow and coordinate distributed matrices

### Module-2 Review of Algorithm

Introduction to SparkMlib- Algorithm review, lab

### Module-3 Spark Mlib decision tree and random forest

Decision tree and random forest splitting features, Decision tree and random forest decision tree parameters specifiable and tunable, Decision tree and random forest decision tree stopping parameter, Decision tree and random forest random forest parameters, lab

  
 Department of Computer Science & Engineering  
 JCR University Jaipur-303905

Module-4 Spark Mlib clustering

K-means clustering, Gaussian mixture clustering, lab

### **Machine Learning - Dimensionality Reduction**

Module 1: Data Series

Learning Objectives, Introduction to Dimension Reduction , Dimension Reduction Goals

Module 2: Data Refinement

Learning Objectives, Principal Component Analysis

Module 3: Exploring Data

Learning Objectives, Exploratory Factor Analysis , Exploratory Factor Analysis 2

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

BCO 125A	DEEP LEARNING WITH TENSORFLOW	1-0-0 [1]
----------	-------------------------------	-----------

### **Module 1 – Introduction to TensorFlow**

- HelloWorld with TensorFlow
- Linear Regression
- Nonlinear Regression
- Logistic Regression
- Activation Functions

### **Module 2 – Convolutional Neural Networks (CNN)**

- CNN History
- Understanding CNNs
- CNN Application

### **Module 3 – Recurrent Neural Networks (RNN)**

- Intro to RNN Model
- Long Short-Term memory (LSTM)
- Recursive Neural Tensor Network Theory
- Recurrent Neural Network Model

### **Module 4 - Unsupervised Learning**

- Applications of Unsupervised Learning
- Restricted Boltzmann Machine
- Collaborative Filtering with RBM

### **Module 5 - Autoencoders**

- Introduction to Autoencoders and Applications
- Autoencoders
- Deep Belief Network

<b>BCO 124A</b>	<b>COGNITIVE DECISION SYSTEM FOR MANAGERS</b>	<b>3-0-0 [3]</b>
-----------------	---	------------------

## Module 1: Introduction

Track Agenda, Team Introduction,

Session 1: Cognitive Enterprise of Tomorrow

Session 2: Demonstration - Cognitive Systems

## Module 2: Analytics

Track Agenda,

Session 3: Predictive Analytics and Forecasting

Session 4: Classification and Segmentation

Session 5: Prescriptive Analytics and Optimization

Session 6: Analytics Lab 1 - Time Series

Session 6: Analytics Lab 2 - Logistic Regression

Session 6: Analytics Lab 3 - Clustering

Session 6: Analytics Lab 4 - Prescriptive Analytics and Optimization

## Module 3: Artificial Intelligence

Track Agenda

Session 7: Natural Language Processing

Session 8: Speech Recognition

Session 9: Computer Vision

Session 10: AI Lab - I

Session 10: AI Lab - II

Session 10: AI Lab - III

## Module 4: Data Platforms

Track Agenda

Session 11: Data Engineering – Art of the Possible

Session 12: Data Engineering – Science Underlying

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

Session 13: Art and Science Together

Session 14: Data Lab

Module 5: Systems and Solutions

Track Agenda

Session 15: Architecting a Cognitive System

Session 16: Policy, Ethics and Explain-ability

Session 17: Selling a Cognitive Solution

Session 18: An end-to-end journey of Industry Application

Conclusion

Track Agenda

Session 19: Hackathon

Session 20: Evaluation

<b>BCO424A</b>	<b>Software Engineering</b>	<b>3-0-0</b>
----------------	-----------------------------	--------------

Introduction: Programming in the small vs. programming in the large; software project failures

and importance of software quality and timely availability; engineering approach to software development; role of software engineering towards successful execution of large software projects;

emergence of software engineering as a discipline.

Software Project Management: Basic concepts of life cycle models – different models and milestones; software project planning – identification of activities and resources; concepts of feasibility study; techniques for estimation of schedule and effort; software cost estimation models

and concepts of software engineering economics; techniques of software project control and reporting; introduction to measurement of software size; introduction to the concepts of risk and

its mitigation; configuration management.

Software Quality and Reliability: Internal and external qualities; process and product quality; principles to achieve software quality; introduction to different software quality models like McCall, Boehm, FURPS / FURPS+, Dromey, ISO – 9126; introduction to Capability Maturity

Models (CMM and CMMI); introduction to software reliability, reliability models and estimation.

Software Requirements Analysis, Design and Construction: Introduction to Software Requirements Specifications (SRS) and requirement elicitation techniques; techniques for requirement modeling – decision tables, event tables, state transition tables, Petri nets; requirements documentation through use cases; introduction to UML, introduction to software

metrics and metrics based control methods; measures of code and design quality.

Object Oriented Analysis, Design and Construction: Concepts -- the principles of abstraction, modularity, specification, encapsulation and information hiding; concepts of abstract data type;

Class Responsibility Collaborator (CRC) model; quality of design; design measurements; concepts

of design patterns; Refactoring; object oriented construction principles; object oriented metrics.

Software Testing: Introduction to faults and failures; basic testing concepts; concepts of verification and validation; black box and white box tests; white box test coverage – code coverage,

condition coverage, branch coverage; basic concepts of black-box tests – equivalence classes, boundary value tests, usage of state tables; testing use cases; transaction based testing; testing for

non-functional requirements – volume, performance and efficiency; concepts of inspection.

**Text Books:**

1. *Software Engineering*, Ian Sommerville

**Reference Books:**

1. *Fundamentals of Software Engineering*, Carlo Ghezzi, Jazayeri Mehdi, Mandrioli Dino
2. *Software Requirements and Specification: A Lexicon of Practice, Principles and Prejudices*,  
Michael Jackson
3. *The Unified Development Process*, Ivar Jacobson, Grady Booch, James Rumbaugh
4. *Design Patterns: Elements of Object-Oriented Reusable Software*, Erich Gamma, Richard Helm, Ralph Johnson, John Vlissides
5. *Software Metrics: A Rigorous and Practical Approach*, Norman E Fenton, Shari Lawrence Pfleeger
6. *Software Engineering: Theory and Practice*, Shari Lawrence Pfleeger and Joanne M. Atlee
7. *Object-Oriented Software Construction*, Bertrand Meyer
8. *Object Oriented Software Engineering: A Use Case Driven Approach* --Ivar Jacobson
9. *Touch of Class: Learning to Program Well with Objects and Contracts* --Bertrand Meyer
10. *UML Distilled: A Brief Guide to the Standard Object Modeling Language* --Martin Fowler

<b>BCO420A</b>	<b>Operating System</b>	<b>3-0-0</b>
----------------	-------------------------	--------------

Introduction: Concept of Operating Systems (OS), Generations of OS, Types of OS, OS Services,

Interrupt handling and System Calls, Basic architectural concepts of an OS, Concept of Virtual

Machine, Resource Manager view, process view and hierarchical view of an OS.

Processes: Definition, Process Relationship, Different states of a Process, Process State transitions, Process Control Block (PCB), Context switching.

Thread: Definition, Various states, Benefits of threads, Types of threads, Concept of multithreads.

Process Scheduling: Foundation and Scheduling objectives, Types of Schedulers, Scheduling criteria: CPU utilization, Throughput, Turnaround Time, Waiting Time, Response Time.

Scheduling algorithms: Pre-emptive and non-pre-emptive, FCFS, SJF, RR; Multiprocessor scheduling: Real Time scheduling: RM and EDF.

Inter-process Communication: Concurrent processes, precedence graphs, Critical Section, Race

Conditions, Mutual Exclusion, Hardware Solution, Semaphores, Strict Alternation, Peterson's

Solution, The Producer / Consumer Problem, Event Counters, Monitors, Message Passing,

Classical IPC Problems: Reader's & Writer Problem, Dining Philosopher Problem, Barber's shop

problem.

Deadlocks: Definition, Necessary and sufficient conditions for Deadlock, Deadlock Prevention,

Deadlock Avoidance: Banker's algorithm, Deadlock detection and Recovery.

Concurrent Programming: Critical region, conditional critical region, monitors, concurrent languages, communicating sequential process (CSP); Deadlocks - prevention, avoidance, detection

and recovery.

Memory Management: Basic concept, Logical and Physical address maps, Memory allocation:

Contiguous Memory allocation – Fixed and variable partition– Internal and External fragmentation

  
 Head  
 Department of Computer Science & Engineering  
 Signal and Image Processing  
 303905

and Compaction.

Virtual Memory: Basics of Virtual Memory – Hardware and control structures – Locality of reference, Page allocation, Partitioning, Paging, Page fault, Working Set, Segmentation, Demand

paging, Page Replacement algorithms: Optimal, First in First Out (FIFO), Second Chance (SC),

Not recently used (NRU) and Least Recently used (LRU).

I/O Hardware: I/O devices, Device controllers, Direct Memory Access, Principles of I/O.

File Management: Concept of File, Access methods, File types, File operation, Directory structure, File System structure, Allocation methods (contiguous, linked, indexed), Free-space

management (bit vector, linked list, grouping), directory implementation (linear list, hash table),

efficiency and performance.

Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks.

Case study: UNIX OS file system, shell, filters, shell programming, programming with the standard I/O, UNIX system calls.

Text Books:

1. Operating System Concepts Essentials. Abraham Silberschatz, Peter Baer Galvin and Greg Gagne.

Reference Books:

1. Operating Systems: Internals and Design Principles. William Stallings.

2. Operating System: A Design-oriented Approach. Charles Patrick Crowley.

3. Operating Systems: A Modern Perspective. Gary J. Nutt.

4. Design of the Unix Operating Systems. Maurice J. Bach.

5. Understanding the Linux Kernel, Daniel Pierre Bovet, Marco Cesati.

p

Introduction to OR:

Origin of OR and its definition. Concept of optimizing performance measure, Types of OR problems, Deterministic vs. Stochastic optimization, Phases of OR problem approach – problem

formulation, building mathematical model, deriving solutions, validating model, controlling and

implementing solution.

Linear Programming:

Linear programming – Examples from industrial cases, formulation & definitions, Matrix form.

Implicit assumptions of LPP.

Some basic concepts and results of linear algebra – Vectors, Matrices, Linear Independence / Dependence of vectors, Rank, Basis, System of linear eqns., Hyperplane, Convex set, Convex polyhedron, Extreme points, Basic feasible solutions.

Geometric method: 2-variable case, Special cases – infeasibility, unboundedness, redundancy &

degeneracy, Sensitivity analysis.

Simplex Algorithm – slack, surplus & artificial variables, computational details, big-M method,

identification and resolution of special cases through simplex iterations.

Duality – formulation, results, fundamental theorem of duality, dual-simplex and primal-dual algorithms.

Transportation and Assignment problems:

TP - Examples, Definitions – decision variables, supply & demand constraints, formulation,

Balanced & unbalanced situations, Solution methods – NWCR, minimum cost and VAM, test for

optimality (MODI method), degeneracy and its resolution.

AP - Examples, Definitions – decision variables, constraints, formulation, Balanced & unbalanced

situations, Solution method – Hungarian, test for optimality (MODI method), degeneracy & its

resolution.

PERT – CPM:

Project definition, Project scheduling techniques – Gantt chart, PERT & CPM, Determination of

critical paths, Estimation of Project time and its variance in PERT using statistical principles, Concept of project crashing/time-cost trade-off.

Inventory Control:

Functions of inventory and its disadvantages, ABC analysis, Concept of inventory costs, Basics of

inventory policy (order, lead time, types), Fixed order-quantity models – EOQ, POQ & Quantity

discount models. EOQ models for discrete units, sensitivity analysis and Robustness, Special cases

of EOQ models for safety stock with known / unknown stock out situations, models under prescribed policy, Probabilistic situations.

Queuing Theory:

Definitions – queue (waiting line), waiting costs, characteristics (arrival, queue, service discipline)

of queuing system, queue types (channel vs. phase).

Kendall's notation, Little's law, steady state behaviour, Poisson's Process & queue, Models with

examples - M/M/1 and its performance measures; M/M/m and its performance measures; brief

description about some special models.

Simulation Methodology:

Definition and steps of simulation, random number, random number generator, Discrete Event

System Simulation – clock, event list, Application in Scheduling, Queuing systems and Inventory

systems.

Text Books:

1. Operations Research: An Introduction. H.A. Taha.

Reference Books:

1. Linear Programming. K.G. Murthy.
2. Linear Programming. G. Hadley.
3. Principles of OR with Application to Managerial Decisions. H.M. Wagner.
4. Introduction to Operations Research. F.S. Hiller and G.J. Lieberman.
5. Elements of Queuing Theory. Thomas L. Saaty.
6. Operations Research and Management Science, Hand Book: Edited By A. Ravi Ravindran.
7. Management Guide to PERT/CPM. Wiest & Levy.
8. Modern Inventory Management. J.W. Prichard and R.H. Eagle.

BCO422A	Design and Analysis of Algorithms	3-0-0
---------	-----------------------------------	-------

**Introduction:** Characteristics of Algorithm. Analysis of Algorithm: Asymptotic analysis of Complexity Bounds – Best, Average and Worst-Case behavior; Performance Measurements of

Algorithm, Time and Space Trade-Offs, Analysis of Recursive Algorithms through Recurrence

Relations: Substitution Method, Recursion Tree Method and Masters' Theorem.

**Fundamental Algorithmic Strategies:** Brute-Force, Heuristics, Greedy, Dynamic Programming,

Branch and Bound and Backtracking methodologies; Illustrations of these techniques for Problem Solving, Bin Packing, Knapsack, Travelling Salesman Problem.

**Graph and Tree Algorithms:** Traversal algorithms: Depth First Search (DFS) and Breadth First

Search (BFS); Shortest path algorithms, Transitive closure, Minimum Spanning Tree, Topological

sorting, Network Flow Algorithm.

**Tractable and Intractable Problems:** Computability of Algorithms, Computability classes – P,

NP, NP-complete and NP-hard. Cook's theorem, Standard NP-complete problems and Reduction techniques.

**Advanced Topics:** Approximation algorithms, Randomized algorithms, Class of problems beyond NP – P SPACE, Introduction to Quantum Algorithms.

#### Books:

<b>DBA006A</b>	<b>Introduction to Innovation, IP Management and Entrepreneurship</b>	<b>3-0-0</b>
----------------	---	--------------

## **UNIT – I**

### **Innovation: What and Why?**

Innovation as a core business process, Sources of innovation, Knowledge push vs. need pull innovations.

Class Discussion- Is innovation manageable or just a random gambling activity?

## **UNIT – II**

### **Building an Innovative Organization**

Creating new products and services, Exploiting open innovation and collaboration, Use of innovation

for starting a new venture

Class Discussion- Innovation: Co-operating across networks vs. ‘go-it-alone’ approach

## **UNIT – III**

### **Entrepreneurship:**

- Opportunity recognition and entry strategies
- Entrepreneurship as a Style of Management
- Maintaining Competitive Advantage- Use of IPR to protect Innovation

## **UNIT – IV**

### **Entrepreneurship- Financial Planning:**

- Financial Projections and Valuation
- Stages of financing
- Debt, Venture Capital and other forms of Financing

## **UNIT – V**

### **Intellectual Property Rights (IPR)**

- Introduction and the economics behind development of IPR: Business Perspective
- IPR in India – Genesis and Development
- International Context
- Concept of IP Management, Use in marketing

### **Text Books:**

1. Joe Tidd, John Bessant. Managing Innovation: Integrating Technological, Market and Organizational Change
2. Case Study Materials: To be distributed for class discuss

  
 Head  
 Department of Computer Science & Engineering

DBA005A	Marketing Research & Marketing Management	3-0-0
---------	---	-------

## UNIT – I

**Marketing Concepts and Applications:** Introduction to Marketing & Core Concepts, Marketing of Services, Importance of marketing in service sector.

**Marketing Planning & Environment:** Elements of Marketing Mix, Analyzing needs & trends in

Environment - Macro, Economic, Political, Technical & Social

**Understanding the consumer:** Determinants of consumer behavior, Factors influencing consumer behavior

**Market Segmentation:** Meaning & Concept, Basis of segmentation, selection of segments, Market

Segmentation strategies, Target Marketing, Product Positioning

## UNIT – II

**Product Management:** Product Life cycle concept, New Product development & strategy, Stages in New

Product development, Product decision and strategies, Branding & packaging

## UNIT – III

**Pricing, Promotion and Distribution Strategy:** Policies & Practices – Pricing Methods & Price

determination Policies. Marketing Communication – The promotion mix, Advertising & Publicity, 5 M's of

Advertising Management. Marketing Channels, Retailing, Marketing Communication, Advertising

## UNIT – IV

**Marketing Research:** Introduction, Type of Market Research, Scope, Objectives & Limitations

Marketing Research Techniques, Survey Questionnaire design & drafting, Pricing Research, Media

Research, Qualitative Research

**Data Analysis:** Use of various statistical tools – Descriptive & Inference Statistics, Statistical Hypothesis

Testing, Multivariate Analysis - Discriminant Analysis, Cluster Analysis, Segmenting and Positioning, Factor

Analysis

## UNIT – V

**Internet Marketing:** Introduction to Internet Marketing. Mapping fundamental concepts of Marketing

(7Ps, STP); Strategy and Planning for Internet Marketing

## Text Books:

1. Marketing Management (Analysis, Planning, Implementation & Control) – Philip Kotler
2. Fundamentals of Marketing – William J. Stanton & Others

  
Head

<b>BCO 023A</b>	<b>DESIGN AND ANALYSIS OF ALGORITHMS</b>	<b>3-0-0 [3]</b>
-----------------	--	------------------

### OBJECTIVES:

At the end of the course, the student should be able to:

- Design effective, efficient, elegant, and readable algorithms for various classes of computing problems
- Determine space and time complexity of algorithms by the use various algorithm design techniques like (divide and conquer, backtracking, greedy, etc.)

<b>UNIT 1</b>	Introduction, algorithms specification, time and space complexity, performance analysis, recurrence relations. Divide and Conquer – finding max min.
<b>UNIT 2</b>	Dynamic Programming and Greedy Methods – Huffman tree construction, Knapsack problem, 0/1 Knapsack problem, least common subsequence, matrix chain multiplication. Backtrack: 4-queen problem, Branch and Bound: assignment problem
<b>UNIT 3</b>	Graph algorithms–flow problems, String Matching Algorithms: Naive algorithm, automata and KMP matcher algorithms, Boyer-Moore algorithm
<b>UNIT 4</b>	Number Theory Problems – CRT, GCD algorithms, modular arithmetic, Lower Bound Theory; Approximate Algorithms – Set cover, vertex cover, .Randomized Algorithms – Las Vegas and Monte Carlo methods
<b>UNIT 5</b>	NP Completeness: Definitions of P, NP-Hard and NP-Complete Problems. Decision Problems..

**OUTCOMES:** After study of this subject student will be able to know

CO1: Various methods of calculating complexity

CO 2: Finding out the best method for different algorithms

CO3: About computational geometry, like Lower bound theory, modular arithmetic and CRT

CO4: Various Decision Problems like NP Complete, NP hard

CO5: Knowledge of Graph and its algorithm

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

<i><b>Cours e Outco me</b></i>	Program Outcome												Program Specific Outcome		
	P O 1	P O 2	P O 3	P O 4	P O 5	P O 6	P O 7	P O 8	P O 9	PO 10	PO 11	PO1 2	PS O1	PS O2	PS O3
CO1	H	H	M		M			M				L	H	M

<b>BCO 017A</b>	<b>FORMAL LANGUAGES &amp; AUTOMATION THEORY</b>	<b>3-1-0 [4]</b>
-----------------	---	------------------

**Objective:**

- To understand various Computing models like Finite State Machine, Pushdown Automata, and Turing Machine.
- To understand Decidability and Undesirability of various problems
- To construct pushdown automata and the equivalent context free grammars.
- To prove the equivalence of languages described by pushdown automata and context free grammars.
- To construct Turing machines and Post machines and prove the equivalence of languages described by Turing machines and Post machines.

<b>UNIT 1</b>	Basics of Strings and Alphabets, Finite Automata – DFA, transition graphs, regular languages, non-deterministic FA, equivalence of DFA and N DFA, Mealy and Moore Machine, minimization of Finite Automata,
<b>UNIT 2</b>	Regular grammars, regular expressions, equivalence between regular languages, properties of regular languages, pumping lemma. Relationship between DFA and Regular expression.
<b>UNIT 3</b>	Context Free Languages – Leftmost and rightmost derivation, parsing and ambiguity, ambiguity in grammar and languages, simplification of CFG, Normal forms
<b>UNIT 4</b>	Pushdown Automata – NDPDA, DPDA, context free languages and PDA, comparison of deterministic and non-deterministic versions, closure properties, pumping lemma for CFL,
<b>UNIT 5</b>	Turing Machines, variations, halting problem, PCP, Chomsky Hierarchy, Recursive and Recursive enumerable language, Rice Theorem.

**Course Outcomes:** At the end of the course, the student should be able to:

CO1: Understand and construct finite state machines and the equivalent regular expressions.

CO2: Prove the equivalence of languages described by finite state machines and regular expressions.

CO3: Construct pushdown automata and the equivalent context free grammars.

CO4: Prove the equivalence of languages described by pushdown automata and context free grammars.

CO5: Construct Turing machines and Post machines and prove the equivalence of languages described by Turing machines and Post machines

BCO 019A	ARTIFICIAL INTELLIGENCE	4-0-0 [4]
----------	-------------------------	-----------

### Objective:

- To explain the basic principles of artificial intelligence;
- To apply logic and structured concepts in knowledge representation;
- To discuss the applications of artificial intelligence;
- To implement heuristic search algorithms;
- To design a natural language processor and implement a simple expert system.

<b>UNIT 1</b>	Introduction- What is intelligence? Foundations of artificial intelligence (AI), Task of artificial intelligence, Techniques of artificial intelligence, Problem Solving- Formulating problems, problem types, states and operators, state space, Expert system and its components.
<b>UNIT 2</b>	Uninformed Search Strategies- Breath First Search, Depth First Search, Depth Limited Search, Informed Search Strategies- Heuristic Functions, Best First Search, Hill Climbing Algorithm, Problems and solutions of Hill Climbing, Iterative Deepening (IDA), A* algorithm, AO* Algorithm.
<b>UNIT 3</b>	Game playing- Introduction, Types of games, Minimax game algorithm, Alpha Beta cut-off procedure. Knowledge Representation- Role of Knowledge, Declarative Knowledge, Procedural Knowledge, Knowledge representation.
<b>UNIT 4</b>	Logics- propositional logics, First Order Predicate Logics (FOPL), Syntax of First Order Predicate Logics, Properties of Wff, Clausal Forms, Conversion to clausal forms.
<b>UNIT 5</b>	Planning- Introduction, Basic representation of plans, partial order planning, planning in the blocks world, Goal Stack Planning, Non-linear planning using constraint posting (TWEAK method).

### Outcomes:

*Upon the end of this course, student will be able to:*

CO1 : Familiar basic principles of artificial intelligence;

CO2 : Able to use logic and structured concepts in knowledge representation;

CO3 : To discuss the applications of artificial intelligence;

CO4 : To implement heuristic search algorithms;

CO5 :To design a natural language processor and implement a simple expert system.

BCO 035B	Programming in Java	4:0:0 [4]
----------	---------------------	-----------

<b>UNIT 1</b>	<b>Java Fundamentals:</b> Features of Java ,OOps concepts , Java virtual machine , Reflection byte codes ,Byte code interpretation , Data types, variable, arrays, expressions, operators, and control structures , Objects and classes
<b>UNIT 2</b>	<b>Java Classes:</b> Abstract classes ,Static classes ,Inner classes ,Packages,Wrapper classes Interfaces ,This ,Super ,Access control
<b>UNIT 3</b>	<b>Exception handling:</b> Exception as objects ,Exception hierarchy ,Try catch finally ,Throw, throws
<b>UNIT 4</b>	<b>IO package:</b> Input streams ,Output streams ,Object serialization ,De serialization ,Sample programs on IO files ,Filter and pipe streams
<b>UNIT 5</b>	<b>Multi threading:</b> Thread Life cycle ,Multi threading advantages and issues ,Simple thread program ,Thread synchronization .GUI: Introduction to AWT programming, Layout and component managers ,Event handling ,Applet class ,Applet life-cycle ,Passing parameters embedding in HTML ,Swing components – JApplet, JButton, JFrame, etc. Sample swing programs

#### Course Outcome:

At the end of this course student will:

CO1:Understand how object-oriented concepts are incorporated into the Java programming language

CO2: Develop problem-solving and programming skills using OOP concept

CO3:Understand the benefits of a well structured program

CO4:Develop the ability to solve real-world problems through software development in high-level programming language like Java

CO5:Develop efficient Java applets,threading and applications using OOP concept

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcomes	Program Outcomes												Program Specific Outcomes

BCO 007A	COMPUTER GRAPHICS	3-0-0 [3]
----------	-------------------	-----------

#### OBJECTIVE:

- To provide students with a foundation in graphical applications programming
- To introduce students with fundamental concepts and theory of computer graphics
- To give basics of application programming interface (API) implementation based on graphics pipeline approach

<b>UNIT 1</b>	<b>Introduction to Computer Graphics:</b> Overview of Computer Graphics, Computer Graphics Application and Software, Description of some graphics devices, Input Devices for Operator Interaction, Active and Passive Graphics Devices, Storage Tube Graphics Displays, Calligraphic Refresh Graphics Displays, Raster Refresh (Raster-Scan) Graphics Displays, Cathode Ray Tube Basics, Color CRT Raster Scan Basics, Video Basics, The Video Controller, Random-Scan Display Processor, LCD displays.
<b>UNIT 2</b>	<b>Scan conversion – lines, circles and ellipses; Filling polygons and clipping algorithms:</b> Scan Converting Lines, Mid-point criteria, Problems of Aliasing, end-point ordering and clipping lines, Scan Converting Circles, Scan Converting Ellipses, Filling Polygons, edge data structure, Clipping Lines algorithms Cohen-Sutherland and Liang-Barsky, Clipping Polygons, problem with multiple components.
<b>UNIT 3</b>	<b>Two-Dimensional Transformations:</b> Transformations and Matrices, Transformation Conventions, 2D Transformations, Homogeneous Coordinates and Matrix Representation of 2D Transformations, Translations and Homogeneous Coordinates, Rotation, Reflection, Scaling, Combined Transformation, Transformation of Points, Transformation of The Unit Square, Solid Body Transformations, Rotation About an Arbitrary Point, Reflection through an Arbitrary Line, A Geometric Interpretation of Homogeneous Coordinates, The Window-to-Viewport Transformations.
<b>UNIT 4</b>	<b>Three-Dimensional Transformations:</b> Introduction, Three-Dimensional Scaling, Three-Dimensional Shearing, Three-Dimensional Rotation, Three-Dimensional Reflection, Three-Dimensional Translation, Multiple Transformation, Rotation about an Arbitrary Axis in Space, Reflection through an Arbitrary Plane, Matrix Representation of 3D Transformations, Composition of 3D Transformations, Affine and Perspective Geometry, Perspective Transformations, Techniques for Generating Perspective Views, the Perspective Geometry and camera models, Orthographic Projections, Axonometric Projections, Oblique Projections, View volumes for projections
<b>UNIT 5</b>	<p><b>Visible-Surface Determination :</b> Techniques for efficient Visible-Surface Algorithm Categories of algorithms, Back face removal, The z-Buffer Algorithm, Scan-line method Painter's algorithms (depth sorting), Area sub-division method, BSP trees, Visible-Surface Ray Tracing, comparison of the methods.</p> <p><b>Illumination and Shading</b> Illumination and Shading Models for Polygons, Reflectance properties of surfaces, Ambient, Specular and Diffuse reflections, Atmospheric attenuation Phong's model, Gouraud shading, some examples.</p>

#### Course Outcome (CO):

At the ends of this course students will have:

Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

CO1: Understand the structure of modern computer graphics system  
 CO2: Understand the basic principles of implementing computer graphics primitives.  
 CO3: Familiarity with key algorithms for modeling and rendering graphical data  
 CO4: Develop design and problem solving skills with application to computer graphics

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

----------	----------------------	-----------

### List of Experiments

- 1 Write a Program to Show basic Transformation with OpenGL
- 2 Write a Menu Driven Program with OpenGL
- 3 Write a Program to draw a line using Bresenham's Algorithm with OpenGL
- 4 Write a Program to implement midpoint algorithm to draw circle
- 5 Write a Program to implement midpoint algorithm to draw ellipse
- 6 Program to implement 2d scaling about an arbitrary axis.
- 7 Write a program to implement DDA line Algorithm
- 8 Program to implement 2d rotation about an arbitrary axis.
- 9 Program to implement translation of a line and triangle.
- 10 Program to implement Cohen Sutherland line clipping.
- 11 Program to implement Sutherland Hodgeman polygon clipping.
- 12 Program to draw Bezier curve.
- 13 Program to draw b-spline curve.
- 14 Program to implement a line using slope intercept formula.
- 15 Write a program to implement Bresenham 's Algorithm

### **Course Outcome (CO):**

At the ends of this course studentswill have:

CO1: Understand the structure of modern computer graphics system

CO2: Understand the basic principles of implementing computer graphics primitives.

CO3: Familiarity with key algorithms for modeling and rendering graphical data

CO4: Develop design and problem solving skills with application to computer graphics

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specifice Outcome

CO4			H							L					L

H = Highly Related; M = Medium L = Low

BCO 068B	Programming in Java Lab	0-0-2
----------	-------------------------	-------

### 1. Operators and Expressions

- d. To write a java program to find the area of rectangle
- e. To write a java program to find the result of the following expressions
  - i)  $(a < 2) + (b > 2)$
  - ii)  $(b > 0)$
  - iii)  $(a + b * 100) / 10$
  - iv)  $a \& b$
 Assume  $a=10$  and  $b=5$
- f. To write a java program to print the individual digits of a 3 digit number.

### 2. Decision Making Statements

- a. write a java program to read two integers and print the larger number followed by the words "is larger". If the numbers are equal print the message "These numbers are equal".
- b. To write a java program to read an integer and find whether the number is odd or even
- c. To write a java program find the biggest of three integers.

### 3. Looping Statements

- a. To write a java program to find the sum of digits of a given number
- b. To write a java program to find the first 15 terms of Fibonacci sequence.
- c. To write a java program to print the Armstrong numbers.

### 4. Array

- a. To write a java program to find the largest and smallest number in an array.

### 5. Strings

- a. To write a java program that creates a string object and initializes it with your name and performs the following operations
  - i) To find the length of the string object using appropriate String method.
  - ii) To find whether the character 'a' is present in the string. If yes find the number of times 'a' appear in the name and the location where it appears

### 6. String Buffer

- a. To write a java program to create a StringBuffer object and illustrate how to append characters and to display the capacity and length of the string buffer
- b. To write a java program to create a StringBuffer object and illustrate how to insert characters at the beginning
- c. To write a java program to Create a StringBuffer object and illustrate the operations of the append () and reverse () methods.

### 7. Classes and Objects

- a. To write a java program to display total marks of 5 students using student class. Given the following attributes: Regno(int), Name(string), Marks in subjects(Integer Array), Total (int).

b. To write a program in java with a class Rectangle with the data fields width, length, area and colour. The length, width and area are of double type and colour is of string type. The methods are get\_length(), get\_width(), get\_colour() and find\_area().

Create two objects of Rectangle and compare their area and colour. If the area and colour both are the same for the objects then display “Matching Rectangles”, otherwise display “Non-matching Rectangle”.

## **8. Inheritance**

a. write a java program to create a Player class and inherit three classes Cricket\_Player, Football\_Palyer and Hockey\_Player.

## **9. Interfaces**

a. To write a java program to show how a class implements two interfaces.  
b. To write a java program to show that the variables in an interface are implicitly static and final and methods are automatically public

## **10. Packages**

a. To write a java program to create a package for Book details giving Book name, Author name, price and year of publishing.

## **11. Applets & AWT**

a. To write a java applet program to change the color of a rectangle using scroll bars to change the value of red, green and blue  
b. To write an applet program for creating a simple calculator to perform Addition, subtraction, Multiplication and Division using Button, Label and TextField component.

## **12. Exception Handling**

a. To write a java program to catch more than two exception  
b. To write a java program to create our exception subclass that throws exception if the sum of two integers is greater than 99.

## **13. Multithreading**

a. To write a java program for generating two threads, one for generating even number and one for generating odd number.

## **Course Outcome:**

At the end of this course student will:

CO1: Understand how object-oriented concepts are incorporated into the Java programming language

CO2: Develop problem-solving and programming skills using OOP concept

CO3: Understand the benefits of a well structured program

CO4: Develop the ability to solve real-world problems through software development in high-level programming language like Java

  
Department of Computer Science & Engineering  
Jai Group of Institutions  
Jaipur-303904

CO5:Develop efficient Java applets,threading and applications using OOP concept

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

BCO 025B	DESIGN& ANALYSIS OF ALGORITHMS LAB	0-0-2
----------	------------------------------------	-------

### List of Experiments

1. Write a Program to Explore a Binary Heap
2. Write a Program for Merging of two search trees
3. Write a program to implement Huffman tree construction
4. Write a Program for Computing a spanning tree having smallest value of largest edge
5. Write a Program for Finding the decimal dominant in linear time
6. Write a Program for Problems on Graphs. Etc.
7. Write a program to find Greatest Common Divisor
8. Write a program for fractional Knapsack problem
9. Write a program for 0/1 Knapsack problem
10. Write a program to implement Naive algorithm,
11. Write a program to implement KMP matcher algorithms,
12. Write a program to implement Boyer-Moore algorithm
13. Write a program to implement modular arithmetic
14. Write a program to implement Set cover,
15. Write a program to implement vertex cover

**OUTCOMES:** After study of this subject student will be able to know

CO1: Various methods of calculating complexity

CO 2: Finding out the best method for different algorithms

CO3: About computational geometry, like Lower bound theory, modular arithmetic and CRT

CO4: Various Decision Problems like NP Complete, NP hard

CO5: Knowledge of Graph and its algorithm

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BCO 319A</b>	<b>Certified Ethical Hacker</b>	<b>4-0-0 [4]</b>
-----------------	---------------------------------	------------------

### Course Outcomes:

CO1: Identify legal and ethical issues related to vulnerability and penetration testing.  
CO2: Plan vulnerability assessment and penetration test for a network.  
CO3: Determine ways to assess the effectiveness of security policies and procedures.  
CO4: Evaluate various techniques and tools used in network scanning.  
CO5: Describe best practices for securing Android, iOS, and Windows OS devices.

### Syllabus:

<b>Module 01: Introduction to Ethical Hacking</b>	Elements of Information Security, Cyber Kill Chain Methodology, MITRE ATT&CK Framework, Hacker Classes, Ethical Hacking, Information Assurance (IA), Risk Management, Incident Management, PCI DSS, HIPPA, SOX, GDPR
<b>Module 02: Footprinting and Reconnaissance</b>	Foot printing on the target network using search engines, web services, and social networking sites. Website, email, whois, DNS, and network foot printing on the target network
<b>Module 03: Scanning Networks</b>	Perform host, port, service, and OS discovery on the target network. Perform scanning on the target network beyond IDS and firewall
<b>Module 04: Enumeration</b>	NetBIOS, SNMP, LDAP, NFS, DNS, SMTP, RPC, SMB, and FTP Enumeration
<b>Module 05: Vulnerability Analysis</b>	Vulnerability research using vulnerability scoring systems and databases. Vulnerability assessment using various vulnerability assessment tools
<b>Module 06: System Hacking</b>	Online active online attack to crack the system's password. Buffer overflow attack to gain access to a remote system. Escalate privileges using privilege escalation tools. Escalate privileges in linux machine. Hide data using steganography. Clear Windows and Linux machine logs using various utilities. Hiding artifacts in Windows and Linux machines
<b>Module 07: Malware Threats</b>	Malware, Components of Malware, APT, Trojan, Types of Trojans, Exploit Kits, Virus, Virus Lifecycle, Types of Viruses, Ransomware, Computer Worms, Fileless Malware, Malware Analysis, Static Malware Analysis, Dynamic Malware Analysis, Virus Detection Methods, Trojan Analysis, Virus Analysis, Fileless Malware Analysis, Anti-Trojan Software, Antivirus Software, Fileless Malware Detection Tools
<b>Module 08: Sniffing</b>	Network Sniffing, Wiretapping, MAC Flooding, DHCP Starvation Attack, ARP Spoofing Attack, ARP Poisoning, ARP Poisoning Tools, MAC Spoofing, STP Attack, DNS Poisoning, DNS Poisoning Tools, Sniffing Tools, Sniffer Detection Techniques, Promiscuous Detection Tools
<b>Module 09: Social Engineering</b>	Social Engineering, Types of Social Engineering, Phishing, Phishing Tools, Insider Threats/Insider Attacks, Identity Theft

<b>Module 10: Denial-of-Service</b>	DoS Attack, DDoS Attack, Botnets, DoS/DDoS Attack Techniques, DoS/DDoS Attack Tools, DoS/DDoS Attack Detection Techniques, DoS/DDoS Protection Tools
<b>Module 11: Session Hijacking</b>	Session Hijacking, Types of Session Hijacking, Spoofing, Application-Level Session Hijacking, Man-in-the-Browser Attack, Client-side Attacks, Session Replay Attacks, Session Fixation Attack, CRIME Attack, Network Level Session Hijacking, TCP/IP Hijacking, Session Hijacking Tools, Session Hijacking Detection Methods, Session Hijacking Prevention Tools
<b>Module 12: Evading IDS, Firewalls, and Honeypots</b>	Bypass Windows Firewall. Bypass firewall rules using tunnelling. Bypass antivirus
<b>Module 13: Hacking Web Servers</b>	Web Server Operations, Web Server Attacks, DNS Server Hijacking, Website Defacement, Web Cache Poisoning Attack, Web Server Attack Methodology, Web Server Attack Tools, Web Server Security Tools, Patch Management, Patch Management Tools
<b>Module 14: Hacking Web Applications</b>	Web Application Architecture, Web Application Threats, OWASP Top 10 Application Security Risks – 2021, Web Application Hacking Methodology, Web API, Webhooks, and Web Shell, Web API Hacking Methodology, Web Application Security
<b>Module 15: SQL Injection</b>	SQL Injection, Types of SQL injection, Blind SQL Injection, SQL Injection Methodology, SQL Injection Tools, Signature Evasion Techniques, SQL Injection Detection Tools
<b>Module 16: Hacking Wireless Networks</b>	Wireless Terminology, Wireless Networks, Wireless Encryption, Wireless Threats, Wireless Hacking Methodology, Wi-Fi Encryption Cracking, WEP/WPA/WPA2 Cracking Tools, Bluetooth Hacking, Bluetooth Threats, Wi-Fi Security Auditing Tools, Bluetooth Security Tools
<b>Module 17: Hacking Mobile Platforms</b>	Mobile Platform Attack Vectors, OWASP Top 10 Mobile Risks, App Sandboxing, SMS Phishing Attack (SMiShing), Android Rooting, Hacking Android Devices, Android Security Tools, Jailbreaking iOS, Hacking iOS Devices, iOS Device Security Tools, Mobile Device Management (MDM), OWASP Top 10 Mobile Controls, Mobile Security Tools.
<b>Module 18: IoT Hacking</b>	IoT Architecture, IoT Communication Models, OWASP Top 10 IoT Threats, IoT Vulnerabilities, IoT Hacking Methodology, IoT Hacking Tools, IoT Security Tools, IT/OT Convergence (IIOT), ICS/SCADA, OT Vulnerabilities, OT Attacks, OT Hacking Methodology, OT Hacking Tools, OT Security Tools
<b>Module 19: Cloud Computing</b>	Cloud Computing, Types of Cloud Computing Services, Cloud Deployment Models, Fog and Edge Computing, Cloud Service Providers, Container, Docker, Kubernetes, Serverless Computing, OWASP Top 10 Cloud Security Risks, Container and Kubernetes Vulnerabilities, Cloud Attacks, Cloud Hacking, Cloud Network Security, Cloud Security Controls, Cloud Security Tools
<b>Module 20: Cryptography</b>	Cryptography, Encryption Algorithms, MD5 and MD6 Hash Calculators, Cryptography Tools, Public Key Infrastructure (PKI), Email Encryption, Disk Encryption, Cryptanalysis, Cryptography Attacks, Key Stretching

<b>BCO325B</b>	<b>NEURAL NETWORK AND DEEP LEARNING (Vision and NLP)</b>	<b>3-0-0 [3]</b>
----------------	--	------------------

Software: Python, NumPy, Pandas, Matplotlib, Seaborn, SciPy, Scikit-Learn, TensorFlow, Keras

*Objectives: The objective of this course is to teach students the basic concepts of neural networks, neurons, and deep learning*

## UNIT – I

**The neural network:** The neuron, linear perceptron, feed-forward neural network, limitations of

linear neurons, sigmoid, tanh, relu neurons, softmax output layer, information theory, cross entropy,

Kullback-Leibler divergence

**Training feed-forward neural network:** Gradient Descent, delta rules and learning rates, gradient

descent with sigmoidal neurons, the backpropagation algorithms, stochastic and minibatch gradient

descent, test sets, validation sets and overfitting, preventing overfitting

## UNIT – II

**TensorFlow:** Computation graphs, graphs, sessions and fetches, constructing and managing graph,

flowing tensors, sessions, data types, tensor arrays and shapes, names, variables, placeholders and

simple optimization, linear regression and logistic regression using tensorflow

**Implement Neural Network:** Introduction to Keras, Build neural network using Keras, Evaluating

models, data preprocessing, feature engineering, feature learning, overfitting, underfitting, weight

regularization, dropout, universal workflow of deep learning

## UNIT – III

**Moving beyond gradient descent:** Local minima vs global minima vs saddle, model identifiability,

correcting gradient points in wrong directions, Momentum based optimization, second order methods, learning rate adaption, adagrad, rmsprop, adam

**Convolutional Neural Network:** Convolution operation, filters and feature maps, motivation, sparse

interactions, parameter sharing and equivariant representation, padding and stride, max pooling, full

architectural description of convolutional network, build cnn using data augmentation, using pretrained convnet, visualize what convnet learn.

Department of Computer Science & Engineering  
IECR University Jaipur-303905

## UNIT – IV

**Embedding and Representation Learning:** Principle component analysis, working with text data, one-hot encoding of words and characters, word embedding, autoencoder architecture, denoising, sparsity, Word2vec framework, Skip-Gram architecture.

**Models for Sequence Analysis:** Analysing Variable-length inputs, Seq2seq with neural n-gram, part of speech tagger, dependency parse, syntaxnet, recurrent neural network, challenges with vanishing gradients, long short term memory units

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

BCO428A	Compiler Design	3-0-0
---------	-----------------	-------

**Introduction:** Phases of compilation and overview. Lexical Analysis (scanner): Regular languages, finite automata, regular expressions, relating regular expressions and finite automata,

scanner generator (lex, flex).

**Syntax Analysis (Parser):** Context-free languages and grammars, push-down automata, LL(1)

grammars and top-down parsing, operator grammars, LR(O), SLR(1), LR(1), LALR(1) grammars

and bottom-up parsing, ambiguity and LR parsing, LALR(1) parser generator (yacc, bison)

**Semantic Analysis:** Attribute grammars, syntax directed definition, evaluation and flow of attribute in a syntax tree.

**Symbol Table:** Basic structure, symbol attributes and management. Run-time environment: Procedure activation, parameter passing, value return, memory allocation, scope.

**Intermediate Code Generation:** Translation of different language features, different types of intermediate forms.

**Code Improvement (optimization):** control-flow, data-flow dependence etc.; local optimization,

global optimization, loop optimization, peep-hole optimization etc.

**Architecture dependent code improvement:** instruction scheduling (for pipeline), loop optimization (for cache memory) etc. Register allocation and target code generation.

**Advanced topics:** Type systems, data abstraction, compilation of Object Oriented features and

non-imperative programming languages.

## **UNIT – I**

**Management Theories:** Concept and Foundations of Management, Evolution of Management Thoughts

[Pre-Scientific Management Era (before 1880), Classical management Era (1880-1930), Neo-classical

Management Era (1930-1950), Modern Management era (1950-on word). Contribution of Management

Thinkers: Taylor, Fayol, Elton Mayo etc.

## **UNIT – II**

**Functions of Management-** Planning, Organizing, Staffing, Directing, Controlling

## **UNIT – III**

**Organization Behavior:** Introduction, Personality, Perception, Learning and Reinforcement, Motivation,

Group Dynamics, Power & Influence, Work Stress and Stress Management, Decision Making, Problems in

Decision Making, Decision Making, Organizational Culture, Managing Cultural Diversity

## **UNIT – IV**

**Organizational Design:** Classical, Neoclassical and Contingency approaches to organizational design;

Organizational theory and design, Organizational structure (Simple Structure, Functional Structure,

Divisional Structure, Matrix Structure)

## **UNIT – V**

**Managerial Ethics:** Ethics and Business, Ethics of Marketing & advertising, Ethics of Finance & Accounting,

Decision – making frameworks, Business and Social Responsibility, International Standards, Corporate

Governance, Corporate Citizenship, Corporate Social Responsibility

## **Text Books:**

1. Richard L. Daft, *Understanding the Theory and Design of Organizations*

## **Reference Books:**

1. Stephen P. Robbins, Timothy A. Judge, Neharika Vohra, *Organizational Behavior*

## **UNIT – I**

### **Introduction to Strategic Management**

- Importance of Strategic Management
- Vision and Objectives
- Schools of thought in Strategic Management
- Strategy Content, Process, and Practice
- Fit Concept and Configuration Perspective in Strategic Management

## **UNIT – II**

### **Internal Environment of Firm- Recognizing a Firm's Intellectual Assets**

- Core Competence as the Root of Competitive Advantage
- Sources of Sustained Competitive Advantage
- Business Processes and Capabilities-based Approach to Strategy

## **UNIT – III**

### **External Environments of Firm- Competitive Strategy**

- Five Forces of Industry Attractiveness that Shape Strategy
- The concept of Strategic Groups, and Industry Life Cycle
- Generic Strategies
- Generic Strategies and the Value Chain

## **UNIT – IV**

### **Corporate Strategy, and Growth Strategies**

- The Motive for Diversification
- Related and Unrelated Diversification
- Business Portfolio Analysis
- Expansion, Integration and Diversification
- Strategic Alliances, Joint Ventures, and Mergers & Acquisitions

## **UNIT – V**

### **Strategy Implementation: Structure and Systems**

- The 7S Framework
- Strategic Control and Corporate Governance

### **Text Books:**

Introduction to Machine Learning (ML); Relationship between ML and human learning; A quick survey of major models of how machines learn; Example applications of ML

Classification: Supervised Learning; The problem of classification; Feature engineering; Training and testing classifier models; Cross-validation; Model evaluation (precision, recall, F1-measure, accuracy, area under curve); Statistical decision theory including discriminant functions and decision surfaces;

Naive Bayes classification; Bayesian networks; Decision Tree and Random Forests; k-Nearest neighbor classification; Support Vector Machines; Artificial neural networks including backpropagation;

Applications of classifications; Ensembles of classifiers including bagging and boosting

Hidden Markov Models (HMM) with forward-backward and Viterbi algorithms; Sequence classification using HMM; Conditional random fields; Applications of sequence classification such as part-of-speech tagging

Regression: Multi-variable regression; Model evaluation; Least squares regression; Regularization; LASSO; Applications of regression

Association rule mining algorithms including apriori

Expectation-Maximization (EM) algorithm for unsupervised learning

Clustering: average linkage; Ward's algorithm; Minimum spanning tree clustering; K-nearest neighbors clustering; BIRCH; CURE; DBSCAN

8. Anomaly and outlier detection methods

<b>BCO 090A</b>	<b>INTERNET OF THINGS</b>	<b>2-0-0 [2]</b>
-----------------	---------------------------	------------------

### Course Objectives:

The objective of the course is to:

1. Introduction to IoT concepts.
2. Understand IoT Market perspective.
3. Data and Knowledge Management and use of Devices in IoT Technology.
4. Understand State of the Art – IoT Architecture.
5. Real World IoT Design Constraints, Industrial Automation and Commercial Building Automation in IoT.

<b>UNIT 1</b>	<b>M2M to IoT</b> -The Vision-Introduction, From M2M to IoT, M2M towards IoT-the global context, A use case example, Differing Characteristics.
<b>UNIT 2</b>	<b>M2M to IoT – A Market Perspective</b> – Introduction, Some Definitions, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. <b>M2M to IoT-An Architectural Overview</b> – Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.Sensor modules, nodes and systems.
<b>UNIT 3</b>	<b>M2M and IoT Technology Fundamentals</b> - Devices and gateways, Local and wide area networking, Data management, Business processes in IoT, Everything as a Service(XaaS), M2M and IoT Analytics, Knowledge Management
<b>UNIT 4</b>	<b>IoT Architecture-State of the Art</b> – Introduction, State of the art, <b>Architecture Reference Model</b> - Introduction, Reference Model and architecture, IoT reference Model
<b>UNIT 5</b>	<b>IoT Reference Architecture</b> - Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views. <b>Real-World Design Constraints</b> - Introduction, Technical Design constraints-hardware is popular again, Data representation and visualization, Interaction and remote control. <b>Industrial Automation</b> - Service-oriented architecture-based device integration, SOCRADES: realizing the enterprise integrated Web of Things, IMC-AESOP: from the Web of Things to the Cloud of Things, <b>Commercial Building Automation</b> - Introduction, Case study: phase one-commercial building automation today, Case study: phase two- commercial building automation in the future..

### Course Outcome (CO) of Internet of Things

At the end of this course students will have:

CO1: To provide the basic understanding of IoT concepts

CO2: To equip our students with the market perspective of IoT and have the knowledge of architectural overview of IoT.

CO3:To be familiar with contemporary issues in IoT and Data and Knowledge Management and use of Devices in IoT Technology.

CO4: To be familiar with IoT tools and to enhance analytical skills to develop innovative solutions, automation.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>BCO 064B</b>	<b>CLOUD COMPUTING</b>	<b>4-0-0 [4]</b>
-----------------	------------------------	------------------

**OBJECTIVE:** At the end of the course, the student should be able to:

1. To understand the architecture of Cloud.
2. To develop an understanding of various aspects of cloud computing.
3. To familiarize the students with fault Tolerance and security measures in cloud.

<b>UNIT 1</b>	<b>Understanding cloud computing:</b> Introduction to Cloud Computing - Benefits and Drawbacks - Types of Cloud Service Development - Deployment models
<b>UNIT 2</b>	<b>Cloud Architecture Technology and Architectural Requirements:</b> The Business Case for Clouds - Hardware and Infrastructure – Accessing the cloud – Cloud Storage – Standards- Software as a Service – Discovering Cloud Services Development tools. Three Layered Architectural Requirement - Provider Requirements - Service Centric Issues - Interoperability – QoS.
<b>UNIT 3</b>	Fault Tolerance - Data Management Storage and Processing - Virtualization Management - Scalability - Load Balancing - Cloud Deployment for Enterprises - User Requirement - Comparative Analysis of Requirement.
<b>UNIT 4</b>	<b>Security Management in Cloud:</b> Security Management Standards - Security Management in the Cloud Availability Management - SaaS Availability Management - PaaS Availability Management - IaaS Availability Management - Access Control - Security Vulnerability, Patch, and Configuration Management – Privacy in Cloud- The Key Privacy Concerns in the Cloud - Security in Cloud Computing.
<b>UNIT 5</b>	<b>Virtualization:</b> Objectives - Benefits - Virtualization Technologies - Data Storage Virtualization – Storage Virtualization – Improving Availability using Virtualization - Improving Performance using Virtualization- Improving Capacity using Virtualization.

**OUTCOMES:** At the end of the course, the student should be able to:

- Understand the architecture of Cloud.
- To develop an understanding of various aspects of cloud computing.
- Fault Tolerance and security measures in cloud.

BCO 028B	COMPILER CONSTRUCTION	3-0-0 [3]
----------	-----------------------	-----------

UNIT 1 Overview of compilation- The structure of a compiler and applications of compiler technology; Lexical analysis - The role of a lexical analyzer, specification of tokens, recognition of tokens, hand-written lexical analyzers, LEX, examples of LEX programs.

Introduction to syntax analysis -Role of a parser, use of context-free grammars (CFG) in the specification of the syntax of programming languages, techniques for writing grammars for programming languages (removal left recursion, etc.), non- context-free constructs in programming languages, parse trees and ambiguity, examples of programming language grammars.

UNIT 2 Top-down parsing- FIRST & FOLLOW sets, LL(1) conditions, predictive parsing, recursive descent parsing, error recovery. LR-parsing - Handle pruning, shift-reduce parsing, viable prefixes, valid items, LR(0) automaton, LR-parsing algorithm, SLR(1), LR(1), and LALR(1) parsing. YACC, error recovery with YACC and examples of YACC specifications.

UNIT 3 Syntax-directed definitions (attribute grammars)-Synthesized and inherited attributes, examples of SDDs, evaluation orders for attributes of an SDD, Dependency graphs-attributed and L-attributed SDDs and their implementation using LR-parsers and Recursive Descent parsers respectively.

UNIT 4 Semantic analysis- Symbol tables and their data structures. Representation of “scope”. Semantic analysis of expressions, assignment, and control-flow statements, declarations of variables and functions, function calls, etc., using S- and L-attributed SDDs (treatment of arrays and structures included). Semantic error recovery.

UNIT 5 Intermediate code generation - Different intermediate representations – quadruples, triples, trees, flow graphs, SSA forms, and their uses. Translation of expressions (including array references with subscripts) and assignment statements. Translation of control-flow statements – it- then-else, while-do, and switch. Short-circuit code and control-flow translation of Boolean expressions. Back patching. Examples to illustrate intermediate code generation for all constructs.

Run-time environments:- Stack allocation of space and activation records. Access to non-local data on the stack in the case of procedures with and without nesting of procedures.

---

<b>BCO 037A</b>	<b>ADVANCE PROGRAMMING IN JAVA</b>	<b>4-0-0 [4]</b>
---------------------	------------------------------------	------------------

**OBJECTIVES:-**Students will be able to know the following

- To learn the Java programming language: its syntax, idioms, patterns, and styles.
- To become comfortable with object oriented programming: Learn to think in objects
- To learn the essentials of the Java class library, and learn how to learn about other parts of the library when you need them.
- To introduce event driven Graphical User Interface (GUI) programming

<b>UNIT 1</b>	Revisited of GUI, Database Programming using JDBC Introduction to JDBC ,JDBC Drivers & Architecture CURD operation Using JDBC Connecting to non-conventional Databases. Connectivity with SQL server, Oracle and MS access.
<b>UNIT 2</b>	Networking , Networking Basics ,The Networking Classes and Interfaces InetAddress ,Factory Methods ,Instance Methods ,Inet4Address and Inet6Address, TCP/IP Client Sockets ,URL,URLConnection,Http URL Connection, The URI Class,Cookies, TCP/IP Server Sockets,Datagram, DatagramSocket ,DatagramPacket,
<b>UNIT 3</b>	RMI (Remote Method Invocation) RMI overview RMI architecture, Designing RMI application, Executing RMI application. Example demonstrating RMI
<b>UNIT 4</b>	Servlet: Web Application Basics. Architecture and challenges of Web Application.Introduction to servlet life cycle Developing and Deploying Servlets Exploring Deployment Descriptor (web.xml). Handling Request and Response Initializing a Servlet Accessing Database Servlet Chaining Session Tracking & Management Dealing with cookies Transferring Request Accessing Web Context Passing INIT and CONTEXT Parameter Sharing information using scope object Controlling concurrent access User Authentication Filtering Request and Response Programming Filter Filter Mapping Servlet Listeners .
<b>UNIT 5</b>	Basic JSP Architecture Life Cycle of JSP (Translation, compilation) JSP Tags and Expressions Role of JSP in MVC-2 JSP with Database JSP Implicit Objects Tag Libraries JSP Expression Language (EL) Using Custom Tag JSP Capabilities: Exception Handling Session Management Directives JSP with Java Bean.

**OUTCOMES:-**

Upon end of this course, students will be able to:

- About the Java programming language: its syntax, idioms, patterns, and styles.
- Become comfortable with object oriented programming: Learn to think in objects
- Learn the essentials of the Java class library, and learn how to learn about other parts of the library when you need them.
- Introduce event driven Graphical User Interface (GUI) programming

BCO 031B	Compiler Design Lab	0:0:2 [2]
----------	---------------------	-----------

## List Of Experiments

- 1 Familiarization with LEX by writing simple specifications for tokens such as identifiers, numbers, comments in C/C++, etc. All LEX specifications must be compiled and executed with appropriate inputs. At least ten such exercises must be completed in two lab classes.
- 2 LEX specification for tokens of the small language in ALSU's book
- 3 Complete the specifications in (2) above to make a complete lexical analyzer. (1 lab class)
- 4 Familiarization with YACC by writing simple specifications for desk calculator, variable declarations in C (only numbers and array). All YACC specifications must be compiled and executed with appropriate inputs. Note that this exercise also requires LEX specifications of the tokens involved. (2 lab classes)
- 5 YACC specifications for the syntax of the small language in ALSU's book (appendix A) (1 lab class)
- 6 Adding error recovery to (5) above to make a complete parser. (1 lab class)
- 7 S-attributed specification of the semantics of the small language in ALSU's book
- 8 Adding semantic error recovery to the semantic analyzer in (7) above to make a complete semantic analyzer. (1 lab class)
- 9 Intermediate code generation for the constructs of the small language in ALSU's book (appendix A) to be incorporated into the semantic analyzer of (8) above. Students doing this last assignment may be awarded bonus marks. (3 lab classes)
- 10 Write a programme to parse using Brute force technique of Top-down parsing.
- 11 Write a program for generating for various intermediate code forms
  - i) Three address code ii) Polish notation
- 12 Develop an operator precedence parser (Construct parse table also)
- 13 Develop a recursive descent parser
- 14 Develop a lexical analyser to recognize a few patterns.

<b>BCO 069A</b>	<b>Advance Programming in Java Lab</b>	<b>0-0-2</b>
-----------------	--	--------------

Exp.No.          Name of the Experiment

1          Design a registration page using HTML.

2          Implementing JDBC

Program 2(A) Write a program by using JDBC to execute insert, select and update query by using PreparedStatement and display the results.

Program 2(B) Write a program by using JDBC to execute an update query by using PreparedStatement and display the results.

Program 2(C) Write a program and execute ResultSetMetaData Interface by using JDBC.

3          Implementing Servlet

Program 3(A) Write a program and execute a simple servlet demonstrating servlet lifecycle.

Program 3(B) Write a program and execute a servlet program that receives input from html page.

Program 3(C) Write a program and execute ServletRequest and ServletResponse Interfaces with methods.

Program 3(D) Write a program and execute HttpServlet Class doGet() and doPost() Methods.

Program 3(E) Write a program to store the user information into Cookies. Write another program to display the above stored information by retrieving from Cookies.

4          Implementing JSP, JSP Custom Tags and Directives

Program 4(A) Write a program to connect HTML page, JSP page and mysql database.

Program 4(B) Write a program and implement custom tags in JSP

Program 4(C) Write a program and implement JSP directives.

5          Implementing JavaBean

Program 5 Write a program and implement Javabeans using JSP page.

6          Implementing JSP Standard ActionElements

Program 6 Write a program and implement JSP Standard ActionElements.

7          Implementing JSP Scripting Elements

Program 7: Write a program and execute JSP Scriptlets, Declarations and Expressions.

8          Learning session management

*Blu*  
Head  
Department of Computer Science and Engineering  
JECRC University Jaipur-303905

Program 8(A): Write program and execute session management using URL rewriting

Program 8(B) : Write program and execute session management using Hidden Fields.

Program 8(C) : Write program and execute session management using Cookie

Program 8(D): Write a program and execute session management using Session Objects.

## 9 Remote Method Invocation (RMI)

Program 9(A): Write a program and execute Remote Method Invocation

## 10 Configure web.xml

Program 10: Write a code to deploy web.xml file

## 11 Performing Client-Server Communication and Networking

Program 11(A): WAP to implement Client-Server Program

Program 11(B): WAP to implement InetAddress.

Program 11(C): WAP for Sending Email in java

## 12. Implementing Multithreading

Program 12: WAP to implement multithreading(three threads using single run method).

<b>BCO361A</b>	<b>Natural Language Processing</b>		<b>3-0-0</b>
----------------	------------------------------------	--	--------------

## UNIT I Natural Language Processing

### Introduction to Natural Language Processing

Types of NLP systems, How computer understands text, Terminologies used in NLP, Steps Involved in NLP, Steps involved in preprocessing , Pipeline of NLP Problems o Challenges in NLP

## UNIT II Words & Vectors

Concepts of words and vectors, Techniques of converting words to numbers, GloVe Word Embeddings, Word2Vec and its types, such as Skip Gram, Model and Continuous BOW o Advanced word vectors, limitations of CBOW and Skip Gram

## UNIT III Processing Techniques

Word window classification, Dependency parsing, Constituency parsing o Machine translation, Attention, End to end models for speech processing, Deep learning for speech recognition, Tree recursive neural networks o RNN for language modelling, Dynamic neural network for question answering

## UNIT IV: Case Studies

Smart Home Services Provider Uses Natural Language Generation to Create Highly Personalized Website Copy, Online Education Company Improves Customer Support with Autosuggestion of Macros, Using Natural Language for Health care Summaries, Microsoft Gets the Pulse of Customer Sentiment with Natural Language Processing

----------	-----------------	-----------

<b>UNIT 1</b>	Seven principles of Software Testing, SDLC vs STLC, Testing Life Cycle, Usability Testing, Why do we need Usability Testing, How to do Usability testing, Advantages & Disadvantages, Functional Testing, End to End Testing, Methods, Advantages & Disadvantages, Compatibility Testing, Types GUI testing, Techniques API testing, Advantages
<b>UNIT 2</b>	Selenium components, Selenium Architecture, TestNG Installing TestNg in Eclipse, TestNG annotations – Understanding usage, Setting priority of execution for test cases, Hard Assertion, Soft Assertion, TestNG Reports, ANT- Downloading & Configuring, XSLT report generation generation using TestNg and Ant
<b>UNIT 3</b>	Describe Selenium 3.x advantages and implementation, Define drivers for Firefox, IE, chrome, Iphone, Android etc, Analyse first Selenium Code, Differentiate between Close and Quit, Describe Firepath and firebug Add-ons installation in Mozilla, Inspect elements in Mozilla, Chrome and IE, Identifying WebElements using id, name, class, Generate own CssSelectors. Differentiate between performance of CssSelectors as compared to Xpaths, Define class attribute, Handle Dynamic objects/ids on the page, Analyse whether object is present on page or not
<b>UNIT 4</b>	Manual Testing, Manual Testing – How to Approach?, Manual Testing – Myth and fallacy, Defect Life Cycle, Qualities of a good Manual Tester, Manual Testing vs Automation Testing, Types, System Testing, Acceptance Testing, Unit Testing, Techniques, Integration Testing, Smoke- Sanity Testing
<b>UNIT 5</b>	Test Scenario, Test Case Design, Test Basis Traceability Matrix

#### Course OUTCOME (CO):

CO1: Understand the testing life cycle.

CO2: Learn about the selenium components.

CO3: Analyse Selenium 3.x advantages and implementation

CO4: Learn the essentials of manual testing.

CO5: Understand the test design framework.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Test Automation

<b>BCO399A</b>	<b>Application Containerization</b>	<b>3-0-0</b>
----------------	-------------------------------------	--------------

## Unit 1 Application Containerization

Understanding Containers: Transporting Goods Analogy, Problems in Shipping Industry before Containers, Shipping Industry Challenges, Container: The Saviour, Solution by Containers in the Shipping Industry, Challenges in the Software Industry, Problems in Software Industry Before Containers, Put that in Container! Solution by containers in the Software Industry

## Unit 2 Virtualization

Introduction, Hypervisor, Scope of Virtualisation, Containers vs Virtual Machines, Understanding Containers, Containerisation Platform, Runtime and Images, Container Platform, Container Runtime, The Chroot System, FreeBSD Jails, Linux Containers (LXC), Docker

## Unit 3 Introduction to Containerization

Docker architecture, Docker Daemon (Container Platform), Docker Rest API , CLIDifferent environments: (Dev, QA and Prod), Overcoming issues with different environments, Development Environment , Testing Environment, Staging Environment, Production Environment, Virtual machines for dev/deployments, Containers for dev/deployments, Advantages and drawbacks of containerization

## Unit 4 Orchestration Tools

What is orchestration?, Need of orchestration, Case study: Need of Orchestration , Need of Orchestration: Container and Microservices, Docker Swarm and Kubernetes, Architecture, AWS (ECS,EKS), AWS Elastic Container Services Architecture, Azure Kubernetes Services, Openshift, KUBERNETES ON CLOUD, Monitoring of container, How to monitor?

<b>BCO 188A</b>	<b>Cyber Forensic Investigation</b>	<b>3-0-0 (3)</b>
-----------------	-------------------------------------	------------------

**Objective:**

- To study the fundamentals of Computer Forensics
- To learn, analyze and validate Forensics Data
- To study the tools and tactics associated with Cyber Forensics

<b>UNIT 1</b>	File systems, Microsoft file structure, Examining NTFS disks, Microsoft BitLocker, Third Party Disk Encryption Tools, Windows Registry, Start-up Tasks, Virtual Machines, Macintosh file structure and boot process, UNIX and Linux disk structures and boot processes. Other Disk structures (CD, SCSI, IDE and SATA devices)
<b>UNIT 2</b>	Commercial Forensic Tools (Encase, FTK), Advanced Features of forensic tools (search, encryption and decryption, data carving), windows registry, memory analysis, advanced file system analysis (deleted and hidden data, metadata, temporary file, unknown\executable file analysis), applied decryption.
<b>UNIT 3</b>	Graphic files: recognition, lossless and lossy data compression, locating and recovering graphic files, Identifying unknown file formats.
<b>UNIT 4</b>	Virtual Machines, Network Forensics, Network tools, E-mail Investigation, E-mail forensics tools, Mobile Device Forensic.
<b>UNIT 5</b>	Computer Investigation, Evidence acquisition, Processing crime and Incidence scene, Preserving, Analysis, Digital forensic investigation procedures, Report writing, Ethics

**OUTCOMES:** At the end of the course, the student should be able to:

CO1: Understand the fundamentals of Computer Forensics

CO2: Learn the issues of Data Acquisition and Data Recovery

CO3: Explore networking in cyber forensics

CO4: Learn to analyze and validate forensics data

CO5: Be familiar with forensic tools and case studies

BCO 189A	Web and Android Security	3-0-1 [4]
----------	--------------------------	-----------

### OBJECTIVES:

- Introduce the concept of web application security concerns and its related issues.
- To familiarize the students with various types of analysis techniques ,attacks and tools.
- To introduce the various android application architecture and Security concerns.
- To introduce the various types of mobile attacks.

<b>UNIT 1</b>	Web applications: Introduction to web applications, Web application hacking, Overview of browsers, extensions, and platforms. Attacks, detection evasion techniques, and countermeasures for the most popular web platforms, including IIS, Apache, PHP, and ASP.NET Attacks and countermeasures for common web authentication mechanisms, including password-based, multifactor (e.g., CAPTCHA), and online authentication services like Windows Live ID.
<b>UNIT 2</b>	Advanced session analysis, hijacking, and fixation techniques, cross-site scripting, SQL injection, classic categories of malicious input, Overlong input (like buffer overflows), canonicalization attacks (like the infamous dot-dot-slash), and meta characters (including angle brackets, quotes, single quote, double dashes, percent, asterisk, underscore, newline, ampersand, pipe, and semicolon), beginner-to-advanced SQL injection tools and techniques, stealth-encoding techniques and input validation/ output-encoding countermeasures.
<b>UNIT 3</b>	Introduction to Android Applications and Mobile App Security: History of Android, Understanding Android Hardware and Software Architecture, Understanding Android Security Model. Understanding Android Permission Model for Application Security, Sandboxing, Codesigning, Encryption, rooting Devices, Understanding APK Understanding Directories and Files on an APK 9
<b>UNIT 4:</b>	Mobile Application Attacks 1: Setting up Mobile App Pentesting Environment, Interact with the Devices, Starting with Drozer, Understanding AndroidManifest.xml, Configuring, Burp and Traffic Interception, Traffic Interception Bypass, Weak Server Side Controls, Insecure Data Storage, Insufficient Transport Layer Protection, Unintended Data Leakage, Poor Authentication & Authorization 10
<b>UNIT 5</b>	Mobile Application Attacks 2: Broken Cryptography, Client Side Injections, Security Decisions via Untrusted Input, Improper Session Handling, Lack of Binary Protection, Exploiting Debuggable Applications, Developer Backdoor, Location spoofing to download location restricted apps, Configuring Live Device for Penetration Testing, Mitigation Approach for all Vulnerabilities.

### OUTCOMES:-

Upon completion of this course, the student will be able to:

CO1: Learn web application security concerns and its related issues.

CO2: Develop the Secure web application with help various of analysis techniques and knowledge of different attacks and tools.

CO3: Understand android application architecture and Security issues.

CO4: Know about various types of mobile attacks and to deal with these attacks and develop the secure application

CO5: Able to under the concepts testing, debugging.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

<b>BCO 189A</b>	<b>Web and Android Security Lab</b>	<b>0-0-2</b>
-----------------	-------------------------------------	--------------

1. Setting up Mobile App Pentesting Environment,interact with the Devices, Starting with Drozer
2. Configuring, Burp and Traffic Interceptionof Mobile Applications between client and server
3. Configuring Live Device for Penetration Testing,Mitigation Approach for all Vulnerabilities.
4. Performing static Analysis of Mobile Application using MOBSF
5. Perform the jailbreak/Root the Android phone and get admin level Privilege by using tools such as Superoneclick, superboot.
6. PerformingCross-application scripting error in Android Browser which leads to hacking the devices.
7. Detect application communication vulnerabilities and perform exploitation usingComDroid.
8. Perform Jailbreaking on iOS Devices.
9. Unlock the iPhone using tools such as iphonesimfree and anySIM.
10. Perform a method to send Malicious Payload to the victims iPhone and check whether you can take over the control the victim's phone.
11. Perform Man-in-the-Middle attack by intercepting the Wireless parameter of iPhone on wireless network.
12. Perform social engineering Attack method and send the malicious link and SMS tricks which contains Malicious web page.
13. Develop Backdoor,Location spoofing to download location restricted apps.
14. Performing dynamic analysis to find API/Web services vulnerabilities.
15. Performing reverse engineering on android applications
16. Performing network communication attacks in Android and iOS.
17. Performing authentication and session management attacks.

<b>BCO131A</b>	<b>Machine Learning with R</b>	<b>1-0-0 [1]</b>
----------------	--------------------------------	------------------

## Module 1 - Machine Learning vs Statistical Modeling

Learning Objectives, Introduction to Machine Learning (1:46), Learning vs Statistical Modeling (4:05), Supervised VS Unsupervised Learning (5:02), Supervised Learning - Classification (2:37), Unsupervised Learning (1:41), Lab

## Module 2 - Supervised Learning I

Learning Objectives, K-Nearest Neighbors (7:17), Decision Trees (5:18), Random Forests (3:46), Reliability of Random Forests (3:34), Advantages & Disadvantages of Decision Trees (1:25)

## Module 3 - Supervised Learning II

Learning Objectives, Regression Algorithms (3:48), Model Evaluation (5:10), Model Evaluation Overfitting & Underfitting (2:19), Understanding Different Evaluation Models (2:38)

## Module 4 - Unsupervised Learning

Learning Objectives, K-Means Clustering plus Advantages & Disadvantages (5:06), Hierarchical Clustering plus Advantages & Disadvantages (5:59), Measuring the Distances Between Clusters - Single Linkage Clustering (2:13), Measuring the Distances Between Clusters - Algorithms for Hierarchical Clustering (4:16), Density Based Clustering (3:44)

## Module 5 - Dimensionality Reduction & Collaborative Filtering

Learning Objectives, Dimensionality Reduction - Feature Extraction & Selection (5:30), Collaborative Filtering & Its Challenges (5:01), Lab

BCO 133A	MACHINE LEARNING WITH PYTHON	1:0:0 [1]
----------	------------------------------	-----------

## **Machine Learning with Python**

### **COURSE SYLLABUS**

#### **Module 1 - Intro to Machine Learning**

- Applications of Machine Learning
- Supervised vs Unsupervised Learning
- Python libraries suitable for Machine Learning

#### **Module 2 - Regression**

- Linear Regression
- Non-linear Regression
- Model evaluation methods

#### **Module 3 - Classification**

- K-Nearest Neighbour
- Decision Trees
- Logistic Regression
- Support Vector Machines
- Model Evaluation

#### **Module 4 - Unsupervised Learning**

- K-Means Clustering
- Hierarchical Clustering
- Density-Based Clustering

#### **Module 5 - Recommender Systems**

- Content-based recommender systems
- Collaborative Filtering

BCO 132A	DATA VISUALIZATION WITH PYTHON	1:0:0 [1]
----------	--------------------------------	-----------

## **Data Visualization with Python**

### **COURSE SYLLABUS**

#### **Module 1 - Introduction to Visualization Tools**

- Introduction to Data Visualization
- Introduction to Matplotlib
- Basic Plotting with Matplotlib
- Dataset on Immigration to Canada
- Line Plots

#### **Module 2 - Basic Visualization Tools**

- Area Plots
- Histograms
- Bar Charts

#### **Module 3 - Specialized Visualization Tools**

- Pie Charts
- Box Plots
- Scatter Plots
- Bubble Plots

#### **Module 4 - Advanced Visualization Tools**

- Waffle Charts
- Word Clouds
- Seaborn and Regression Plots

#### **Module 5 - Creating Maps and Visualizing Geospatial Data**

- Introduction to Folium
- Maps with Markers
- Choropleth Maps

BCO507A	Computer Networks		3-0-0
---------	-------------------	--	-------

**Introduction:** Computer networks and distributed systems, Classifications of computer networks,

Preliminaries of layered network structures.

**Data communication Components:** Representation of data and its flow, Various Connection

Topology, Protocols and Standards, OSI model, Transmission Media.

**LAN:** Wired LAN, Wireless LAN, Virtual LAN.

**Techniques for Bandwidth utilization:** Multiplexing - Frequency division, Time division and

Wave division, Concepts on spread spectrum.

**Data Link Layer and Medium Access Sub Layer:** Fundamentals of Error Detection and Error

Correction, Block coding, Hamming Distance, CRC; Flow Control and Error control protocols -

Stop and Wait, Go-back-N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Random Access, Multiple access protocols - Pure ALOHA, Slotted ALOHA, CSMA/CD, CDMA/CA

**Network Layer:** Switching, Logical addressing – IPV4, IPV6; Address mapping – ARP, RARP,

BOOTP and DHCP-Delivery, Forwarding and Unicast Routing protocols.

**Transport Layer:** Process to Process Communication, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), SCTP Congestion Control; Quality of Service (QoS), QoS

improving techniques - Leaky Bucket and Token Bucket algorithms.

**Application Layer:** DNS, DDNS, TELNET, EMAIL, FTP, WWW, HTTP, SNMP, Bluetooth, Firewalls.

**Network Security:** Electronic mail, directory services and network management, Basic concepts of Cryptography.

### Books:

1. *Computer Networks*, A. Tannenbaum.
2. *Data and Computer Communication*, William Stallings.

### Reference Books:

3. *Network Security*, Kaufman, R. Perlman and M. Speciner.
4. *UNIX Network Programming*, Vol. 1,2 & 3, W. Richard Stevens

<b>BCO509A</b>	<b>Information Security</b>	<b>3-0-0</b>
----------------	-----------------------------	--------------

**Overview of Security Parameters:** Confidentiality, integrity and availability; Security violation

and threats; Security policy and procedure; Assumptions and Trust; Security Assurance, Implementation and Operational Issues; Security Life Cycle.

**Access Control Models:** Discretionary, mandatory, roll-based and task-based models, unified

models, access control algebra, temporal and spatio-temporal models.

**Security Policies:** Confidentiality policies, integrity policies, hybrid policies, non-interference and

policy composition, international standards.

**Systems Design:** Design principles, representing identity, control of access and information flow,

confinement problem. Assurance: Building systems with assurance, formal methods, evaluating

systems.

**Logic-based System:** Malicious logic, vulnerability analysis, auditing, intrusion detection.

Applications: Network security, operating system security, user security, program security.

Special

Topics: Data privacy, introduction to digital forensics, enterprise security specification.

**Operating Systems Security:** Security Architecture, Analysis of Security in Linux/Windows.

**Database Security:** Security Architecture, Enterprise security, Database auditing.

### **Books:**

1. *Security Engineering*, Ross Anderson.
2. *Computer Security: Art and Science*, M. Bishop, Pearson Education.
3. *Information Security: Principles and Practice*, M. Stamp.

### **Reference Books:**

1. *Security in Computing*, C.P. Pfleeger, S.L. Pfleeger, J. Margulies.
2. *Secure Programming HOWTO*, David Wheeler.
3. *Browser Security Handbook*, Michael Zalewski.
4. *Handbook of Database Security*, M. Gertz, S. Jajodia.

BCO511A	Artificial Intelligence	3-0-0
---------	-------------------------	-------

## UNIT – I

**Introduction, Overview of Artificial intelligence:** Problems of AI, AI technique, Tic - Tac - Toe problem.

Intelligent Agents, Agents & environment, nature of environment, structure of agents, goal based agents, utility based agents, learning agents.

## UNIT – II

**Problem Solving, Problems, Problem Space & search:** Defining the problem as state space search, production system, problem characteristics, issues in the design of search programs.

## UNIT – III

**Search techniques:** Problem solving agents, searching for solutions; uniform search strategies: breadth

first search, depth first search, depth limited search, bidirectional search, comparing uniform search

strategies. Heuristic search strategies Greedy best-first search, A\* search, AO\* search, memory bounded

heuristic search: local search algorithms & optimization problems: Hill climbing search, simulated

annealing search, local beam search

## UNIT – IV

**Constraint satisfaction problems:** Local search for constraint satisfaction problems.

Adversarial search,

Games, optimal decisions & strategies in games, the minimax search procedure, alpha-beta pruning,

additional refinements, iterative deepening.

## UNIT – V

**Knowledge & reasoning:** Knowledge representation issues, representation & mapping, approaches to

knowledge representation. Using predicate logic, representing simple fact in logic, representing instant &

ISA relationship, computable functions & predicates, resolution, natural deduction.

Representing knowledge using rules, Procedural verses declarative knowledge, logic programming, forward verses

backward reasoning, matching, control knowledge.

## Text Books:

1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach
2. Artificial Intelligence, Russel, Pearson

## Reference Books:

1. Artificial Intelligence, Ritch & Knight, TMH
2. Introduction to Artificial Intelligence & Expert Systems, Patterson, PHI
3. Logic & Prolog Programming, Saroj Kaushik, New Age International
4. Expert Systems, Giarranto, VIKAS

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

<b>DEN013A</b>	<b>Business Communication &amp; Value Science</b>	<b>3-0-0</b>
----------------	---	--------------

- Understand the importance of diversity in workplace
- Identify the key aspects of communicative writing
- Apply communicative writing in real life scenarios
- Use charts and graphs in communicative writing
- Understand what is emotional intelligence
- Recognize the importance of emotional intelligence in personal and professional lives
- Understand why you would need public speaking at your workplace
- Identify the best practices of public speaking
- Apply public speaking in real life scenarios
- Recognize the importance of corporate social responsibility (CSR)
- Recognize the importance of corporate social responsibility (CSR)
- Recognize the attributes needed to function and grow in a corporate environment
- Recognize the best practices to share and receive feedback
- Apply emotional intelligence in real life scenarios
- Apply knowledge of multiple intelligences and learning styles in interpersonal interactions
- Recognize the impact of conflicts
- List the basic guidelines required to manage conflicts
- Recognize the key features of corporate etiquette
- Recognize the business idioms and corporate terms
- Apply the business idioms and corporate terms
- Recognize the impact of stress in life and work
- Identify the best practices to manage stress
- Recognize the importance of time management
- Identify the best time management practices

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

BCO513A	Data Mining and Analytics	3-0-0
---------	---------------------------	-------

## UNIT – I

**Introduction to Data Mining:** What is data mining? Related technologies - Machine Learning, DBMS, OLAP, Statistics, Stages of the Data Mining Process, Data Mining Techniques, Knowledge Representation Methods, Applications

## UNIT – II

**Data preprocessing:** Data cleaning, Data transformation, Data reduction, Discretization and generating concept hierarchies, Installing Weka 3 Data Mining System, Experiments with Weka - filters, discretization

**Data mining knowledge representation:** Task relevant data, Background knowledge, Representing input data and output knowledge, Visualization techniques

**Attribute-oriented analysis:** Attribute generalization, Attribute relevance, Class comparison, Statistical measures

## UNIT – III

**Data mining algorithms - Association rules:** Motivation and terminology, Example: mining weather data,

Basic idea: item sets, Generating item sets and rules efficiently, Correlation analysis

**Data mining algorithms - Classification:** Basic learning/mining tasks, Inferring rudimentary rules: 1R, algorithm, Decision trees, covering rules

**Data mining algorithms – Prediction:** The prediction task, Statistical (Bayesian) classification, Bayesian

networks, Instance-based methods (nearest neighbor), linear models

## UNIT – IV

**Descriptive analytics:** Data Modeling, Trend Analysis, Simple Linear Regression Analysis

**Forecasting models:** Heuristic methods, predictive modeling and pattern discovery, Logistic Regression:

Logit transform, ML estimation, Tests of hypotheses, Wald test, LR test, score test, test for overall

regression, multiple logistic regression, forward, backward method, interpretation of parameters, relation

with categorical data analysis. Interpreting Regression Models, Implementing Predictive Models

**Generalized Linear model:** link functions such as Poisson, binomial, inverse binomial, inverse Gaussian, Gamma.

**Non Linear Regression (NLS):** Linearization transforms, their uses & limitations, examination of nonlinearity, initial estimates, iterative procedures for NLS, grid search, Newton-Raphson, steepest descent,

Marquardt's methods. Introduction to semiparametric regression models, additive regression models.

Introduction to nonparametric regression methods

#### **UNIT – V**

**Time Series Analysis:** Auto - Covariance, Auto-correlation and their properties. Exploratory time series

analysis, Test for trend and seasonality, Exponential and moving average smoothing, Holt – Winter

smoothing, forecasting based on smoothing

**Linear time series models:** Autoregressive, Moving Average, Autoregressive Moving Average and

Autoregressive Integrated Moving Average models; Estimation of ARMA models such as Yule-Walker

estimation for AR Processes, Maximum likelihood and least squares estimation for ARMA Processes,

Forecasting using ARIMA models

**Prescriptive Analytics:** Mathematical optimization, Networks modeling-Multi-objective optimization Stochastic modeling, Decision and Risk analysis, Decision trees.

#### **Text Books:**

DBA011A	Financial & Cost Accounting	3-0-0
---------	-----------------------------	-------

## UNIT – I

**Accounting Concept:** Introduction, Techniques and Conventions, Financial Statements- Understanding & Interpreting Financial Statements

## UNIT – II

### Accounting Process:

- Book Keeping and Record Maintenance
- Fundamental Principles and Double Entry
- Journal, Ledger, Trial Balance, Balance Sheet, Final Accounts
- Cash Book and Subsidiary Books
- Rectification of Errors

## UNIT – III

**Financial Statements:** Form and Contents of Financial Statements, Analyzing and Interpreting Financial Statements, Accounting Standards.

*Class Discussion: Corporate Accounting Fraud- A Case Study of Satyam*

## UNIT – IV

**Cash Flow and Fund Flow Techniques:** Introduction, How to prepare, Difference between them

## UNIT – V

### Costing Systems:

- Elements of Cost
- Cost Behavior, Cost Allocation, OH Allocation
- Unit Costing, Process Costing, Job Costing
- Absorption Costing, Marginal Costing, Cost Volume Profit Analysis
- Budgets
- ABC Analysis

*Class Discussion: Application of costing concepts in the Service Sector*

### Text Books:

1. Robert N Anthony, David Hawkins, Kenneth Marchant, *Accounting: Texts and Cases*, McGraw-Hill
2. Case Study Materials: To be distributed for class discussion

<b>BCO 029A</b>	<b>Data Mining</b>	<b>4:0:0 [4]</b>
-----------------	--------------------	------------------

<b>UNIT 1</b>	Introduction: Basic concepts of data mining, including motivation and definition; different types of data repositories; data mining functionalities; concept of interesting patterns; data mining tasks; current trends, major issues and ethics in data mining
<b>UNIT 2</b>	Data Types of data and data quality; Data Preprocessing: data cleaning, data integration and transformation, data reduction, discretization and concept hierarchy generation; Exploring Data: summary statistics, visualization, multidimensional data analysis
<b>UNIT 3</b>	Association and Correlation Analysis: Basic concepts: frequent patterns, association rules - support and confidence; Frequent itemset generation - Apriori algorithm, FP-Growth algorithm; Rule generation, Applications of Association rules; Correlation analysis.
<b>UNIT 4</b>	Clustering Algorithms and Cluster Analysis: Concept of clustering, measures of similarity, Clustering algorithms: Partitioning methods - k-means and k-medoids, CLARANS, Hierarchical methods - agglomerative and divisive clustering, BIRCH, Density based methods - Subspace clustering, DBSCAN; Graph-based clustering - MST clustering; Cluster evaluation; Outlier detection and analysis.
<b>UNIT 5</b>	Classification: Binary Classification - Basic concepts, Bayes theorem and Naïve Bayes classifier, Association based classification, Rule based classifiers, Nearest neighbor classifiers, Decision Trees, Random Forest; Perceptrons; Multi-category classification; Model over fitting, Evaluation of classifier performance - cross validation, ROC curves.

#### **Outcomes:**

*Upon end of this course, Students will be able to*

- Implementation and use of the basic concepts and techniques of Data Mining.
- Develop skills of using recent data mining software for solving practical problems.
- Expand experience of doing independent study and research.

<b>BCO 101A</b>	<b>Salesforce - Technical Aspirants</b>	<b>4-0-0 [4]</b>
-----------------	---	------------------

### Course Objective (COs)

Possible usefulness of this course after its completion i.e. how this course will be practically useful to him once it is completed.

<b>CO 1</b>	Supplement the student skillset with Salesforce skills and differentiate in the job market.
<b>CO 2</b>	Benefit from the knowledge and experience of the Trailblazer Community.
<b>CO 3</b>	Build Student skills and personal brand in the Salesforce Ecosystem.
<b>CO 4</b>	Establish the student as a skilled Salesforce Developer

<b>Unit Number: 1</b>	<b>Title: Introduction to Trailhead</b>	<b>No. of hours: 5</b>
-----------------------	---	------------------------

### Content Summary:

Trailhead Basics, Trailhead Playground Management, Salesforce Platform Basics, CRM for Lightning Experience, Data Modeling, Build a Lemonade Stand App, Picklist Administration, Formulas & Validations, Data Management, Reports & Dashboards for Lightning Experience, Build a Data Model for a Recruiting App, Trailblazer Community Groups, Create Reports and Dashboards for Sales and Marketing Managers

<b>Unit Number: 2</b>	<b>Title: Lightning App Builder</b>	<b>No. of hours: 5</b>
-----------------------	-------------------------------------	------------------------

### Content Summary:

Lightning Experience Customization, Lightning App Builder, Salesforce Mobile App Customization, Customize the User Interface for a Recruiting App, Lightning Flow, Accounts & Contacts for Lightning Experience, Leads & Opportunities for Lightning Experience, Service Cloud for Lightning Experience, App Customization, Specialist Super badge

<b>Unit Number: 3</b>	<b>Title: Identity &amp; User Management</b>	<b>No. of hours: 5</b>
-----------------------	--	------------------------

### Content Summary:

Identity Basics, User Management, User Authentication, Data Security, Keep Data Secure in a Recruiting App, Automate Business Processes for a Recruiting App, Security Specialist

<b>Unit Number: 4</b>	<b>Title: Introduction to Process Builder</b>	<b>No. of hours: 5</b>
-----------------------	---	------------------------

### Content Summary:

Quick Start: Process Builder, Screen Flow Distribution, Platform Development Basics, Process Automation Specialist

Department of Computer Science & Engineering  
ECRC University Jaipur-303905

<b>Unit Number: 5</b>	<b>Title: Apex Programming</b>	<b>No. of hours: 10</b>
<b>Content Summary:</b> Developer Console Basics, Apex Basics & Database, Apex Triggers, Apex Testing, Asynchronous Apex, Visualforce Basics, Apex Integration Services, Apex Specialist Lightning Platform API Basics, Apex Metadata API, Salesforce Connect, Trail – Major Project, Salesforce Project		
<b>12. Brief Description of Self-learning components by students (through books/resource material etc.):</b>  <a href="https://trailblazercommunity.force.com/help/s/become-job-ready-developerediton">https://trailblazercommunity.force.com/help/s/become-job-ready-developerediton</a>

<b>BCO 056A</b>	<b>WIRELESS SENSOR NETWORKS</b>	<b>4-0-0 [4]</b>
-----------------	---------------------------------	------------------

**OBJECTIVE:** At the end of the course, the student should be able to:

- To understand the architecture of WSN.
- To identify the functionalities of layers in architecture.
- To analyse the working of main protocols of all layers.

<b>UNIT 1</b>	<b>INTRODUCTION</b> Challenges for wireless sensor networks, Comparison of sensor network with ad hoc network, Single node architecture – Hardware components, energy consumption of sensor nodes, Network architecture – Sensor network scenarios, types of sources and sinks, single hop versus multi-hop networks, multiple sinks and sources, design principles, Development of wireless sensor networks
<b>UNIT 2</b>	<b>PHYSICAL LAYER</b> Introduction, wireless channel and communication fundamentals – frequency allocation, modulation and demodulation, wave propagation effects and noise, channels models, spread spectrum communication, packet transmission and synchronization, quality of wireless channels and measures for improvement, physical layer and transceiver design consideration in wireless sensor networks, Energy usage profile, choice of modulation, Power Management.
<b>UNIT 3</b>	<b>DATA LINK LAYER</b> MAC protocols – fundamentals of wireless MAC protocols, low duty cycle protocols and wakeup concepts, contention-based protocols, Schedule-based protocols - SMAC, BMAC, Traffic-adaptive medium access protocol (TRAMA), Link Layer protocols – fundamentals task and requirements, error control, framing, linkmanagement.
<b>UNIT 4</b>	<b>NETWORK LAYER</b> Gossiping and agent-based uni-cast forwarding, Energy-efficient unicast, Broadcast and multicast, geographic routing, mobile nodes, Data-centric routing – SPIN, Directed Diffusion, Energy aware routing, Gradient-based routing – COUGAR, ACQUIRE, Hierarchical Routing – LEACH, PEGASIS, Location Based Routing – GAF, GEAR, Data aggregation – Various aggregation techniques.
<b>UNIT 5</b>	<b>CASE STUDY:</b> Target detection tracking, Habitat monitoring, Environmental disaster monitoring, Practical implementation issues, IEEE 802.15.4 low rate WPAN, Operating System Design Issues, Introduction to TinyOS – NesC, Interfaces, UNITS, configuration, Programming in TinyOS using NesC, Emulator TOSSIM.

**Course Outcome(CO):**

CO1: Understand and analyze the fundamental of sensor networks and energy efficient sensor node and network architectures.

CO2: Understand and analyze the design issues in physical Layer.

CO3: Understand and analyze different communication protocols and their performance.

CO4: The broad education necessary to understand and analyze different routing strategies.

CO5: Understand the modern tool used for wireless sensors networks.

BCO 086A	MACHINE LEARNING	4-0-0 [4]
----------	------------------	-----------

## Course Objectives

- To understand the basic concepts of learning and decision trees.
- To understand the neural networks and genetic algorithms
- To understand the Bayesian techniques
- To understand the instant based learning
- To understand the analytical learning and reinforced learning

UNIT 1	INTRODUCTION, CONCEPT LEARNING AND SUPERVISED LEARNING ALGORITHMS: Introduction, Types of learning, Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm , Linear Regression Model, Naïve Bayes Classifier, Decision Tree, K Nearest Neighbor, Logistic Regression, Support Vector Machine, Random Forest Algorithm.
UNIT 2	UNSUPERVISED LEARNING ALGORITHM: Clustering- K-means Clustering, Hierarchical Clustering, Probabilistic Clustering, Apriori Algorithm, Association Rule Mining, Gaussian Mixture Model, Expectation Maximization. ENSEMBLE LEARNING-Bagging, Boosting and Stacking
UNIT 3	REGULARIZATION- Overfitting, Underfitting, Bias-Variance trade off, Cost Function, Regularized Linear Regression and Regularized Logistic Regression, Model Selection and train/Validation/Test Sets, VC Dimension. STATISTICAL LEARNING- Feature Extraction, Principal Component Analysis, Singular Value Decomposition, Feature Selection and subset selection.
UNIT 4	NEURAL NETWORKS AND GENETIC ALGORITHMS Neural Network Representation – Problems – Perceptron – Multilayer Networks and Back Propagation Algorithms – Gradient Descent.
UNIT 5	ANALYTICAL LEARNING AND REINFORCED LEARNING Perfect Domain Theories – Explanation Based Learning – Inductive-Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning- Markov Decision Processes(MDP), Introduction to Natural Language Processing and Recommended System- Collaborative and Content based Filtering.

**OUTCOME:** On Completion of the course, the students will be able to

- Choose the learning techniques with this basic knowledge.
- Apply effectively neural networks and genetic algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.
- Choose and differentiate reinforcement and analytical learning techniques

### **List of Experiments**

(The following tasks can be implemented in a language of your choice or any tools available)

- 1) Implement the CANDIDATE – ELIMINATION algorithm. Show how it is used to learn from training examples.
- 2) Write a program to implement Linear Regression and Logistic Regression
- 3) Implement the ID3 algorithm for learning Boolean-valued functions for classifying the training examples by searching through the space of a Decision Tree.
- 4) Design and implement Naïve Bayes Algorithm for learning and classifying TEXT DOCUMENTS.
- 5) Implement K-Nearest Neighbor algorithm to classify the iris data set. Calculate the score also.
- 6) Write a program to implement Support Vector Machine. Also discuss the confusion matrix and score of model.
- 7) Apply EM algorithm to cluster a set of data and also apply K-Means algorithm on the same data set to compare two algorithms.
- 8) Build an Artificial Neural Network by implementing Back-Propagation algorithm and test the same using appropriate data set.
- 9) Implement the Non-Parametric Locally Weighted Regression Algorithm in order to fit data points. Select appropriate data set for your experiment and draw graph.
- 10) Build a Face detection system to recognize faces in a frame or image. You can use OpenCV for this task.

<b>MCO 056B</b>	<b>Advanced Data Structure and Algorithms Design</b>	<b>3-0-0</b>
-----------------	--	--------------

### Course Objective

- To understand the various algorithm design technique.
- To learn analysis techniques to analyze the algorithms.
- To understand the advanced data structures, intrinsic complexity analysis, problem settings

<b>UNIT 1</b>	<b>Advanced Data Structure:</b> Graph, B-tree, binomial heaps and, Fibonacci heap, Red black tree
<b>UNIT 2</b>	<b>Graph Algorithms:</b> Single source shortest paths-Belman-Ford algorithm, Dijkstra algorithm, all pairs shortest path and matrix multiplication, Floyd-Warshall algorithm, Johnson algorithm for sparse graph, maximum flow-Ford-Fulkerson method and maximum bipartite matching.
<b>UNIT 3</b>	<b>Number Theoretic Algorithm:</b> GCD, modular arithmetic, solving modular linear equation and Chinese remainder theorem. Amortized Analysis, Data Structures for Disjoint Sets
<b>UNIT 4</b>	<b>NP Completeness:</b> Polynomial time, polynomial time verification, NP completeness and reducibility, Cook's theorem, NP complete problems-clique problem, vertex cover problem, approximation algorithms-vertex cover problem, set covering problem, traveling salesman problem.
<b>UNIT 5</b>	<b>Probabilistic Algorithms:</b> Numerical probabilistic algorithm, Monte-Carlo algorithm and Las-Vegas algorithm, Sorting network

## **M.Tech. in Computer Science & Engineering Semester I**

<b>MCO 007B</b>	<b>Advanced Data Communication Network</b>	<b>3-0-0</b>
-----------------	--	--------------

### **Course Objective**

1. To provide a good conceptual understanding of advance computer networking
2. To understand various models and their functions
3. To have an advance understanding of performance evaluation
4. To understand network economics

UNIT 1:	The Motivation for Internetworking; Need for Speed and Quality of Service; History of Networking and Internet; TCP/IP and ATM Networks; Internet Services; TCP Services; TCP format and connection management; Encapsulation in IP; UDP Services, Format and Encapsulation in IP; IP Services; Header format and addressing; Fragmentation and reassembly; classless and subnet address extensions; sub netting and super netting; CIDR; IPv6;
UNIT 2:	Congestion Control and Quality of Service: Data traffic; Network performance; Effects of Congestion; Congestion Control; Congestion control in TCP and Frame Relay; Link-Level Flow and Error Control; TCP flow control; Quality of Service: Flow Characteristics, Flow Classes; Techniques to improve QoS; Traffic Engineering; Integrated Services;
UNIT 3:	High Speed Networks: Packet Switching Networks; Frame Relay Networks; Asynchronous Transfer Mode (ATM); ATM protocol Architecture; ATM logical connections; ATM cells; ATM Service categories; ATM Adaptation Layer;  Optical Networks: SONET networks; SONET architecture;  Wireless WANs: Cellular Telephony; Generations; Cellular Technologies in different generations; Satellite Networks;
UNIT 4:	Internet Routing: Interior and Exterior gateway Routing Protocols; Routers and core routers; RIP; OSPF; BGP; IDRP; Multicasting; IGMP; MOSPF; Routing in Ad Hoc Networks; Routing in ATM: Private Network-Network Interface;
UNIT 5:	Error and Control Messages: ICMP; Error reporting vs Error Correction; ICMP message format and Delivery; Types of messages;  Address Resolution (ARP); BOOTP; DHCP; Remote Logging; File Transfer and Access; Network Management and SNMP; Comparison of SMTP and HTTP; Proxy Server; The Socket Interface;

**Text Books:**

## M.Tech. in Computer Science & Engineering Semester II

MCO 003B	Advanced Operating Systems	3-0-0
----------	----------------------------	-------

### Course Objective:

- To introduce the state of the art in operating systems and distributed systems,
- Learn how to design modern operating systems.
- To understand how to engage in systems research in general and operating systems research in particular.
- To investigate novel ideas in operating systems through a semester-long research project.

UNIT 1:	<b>Operating System:</b> Definition, Operating System as Resource Manager. Types of Operating Systems: Simple Batch Processing, Multi-programmed Batch Processing, Time Sharing, Personal Computer systems, Parallel, Distributed and Real Time Operating Systems. Operating System Components, Services, Calls, System Programs, Operating System Structure, Virtual Machines, System Design and Implementation.
UNIT 2:	<b>Process Management:</b> Concepts, Scheduling, Operations, Co-operating processes, Inter-process Communication. Threads: Thread usage, threads in User Space, threads in Kernel, Hybrid Implementation, Scheduler Activation, Pop-up threads, Multithreading.  <b>CPU Scheduling:</b> Basic Concepts, Scheduling Criteria, Algorithms, Multiple-processor Scheduling, Real Time Scheduling, Algorithm Evaluation.
UNIT 3:	<b>Process Synchronization:</b> Critical Section Problem, Synchronization Hardware, Semaphores, Classical Problem of synchronization, Critical Regions, Monitors. Deadlock: Characteristics, Necessary Conditions, Prevention, Avoidance, Detection and Recovery.  <b>Memory Management:</b> Logical and Physical Address Space, Swapping. Contiguous Allocation: Singlepartitioned, Multi-partitioned. Non-contiguous Allocation: Paging, Segmentation, and Segmentation with Paging. Virtual Memory: Demand Paging, Page Replacement Algorithms, Allocation of Frames, Thrashing, Demand Segmentation.

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

UNIT 4:	<p><b>File and Directory System:</b> File Concepts, Access Methods, Directory Structure, Protection, File system Structure, Allocation Methods, Free Space Management, Directory Implementation, Recovery. <b>Secondary Storage Management:</b> Disk Structure, Dedicated, Shared, Virtual, Sequential Access and Random Access Devices, Disk Scheduling, Disk Management, Swap-space Management, Disk Reliability, Stable Storage Management.</p> <p><b>Protection and Security:</b> Threats, Intruders, Accidental Data Loss, Cryptography, User authentication, Attacks from inside the system, Attacks from outside the system, Protection Mechanism, Trusted Systems, Domain of Protection, Access Matrix, Programs Threats, System Threats.</p>
UNIT 5:	<p><b>Distributed systems,</b> topology network types, design strategies. Network operating structure, distributed operating system, remote services, and design issues. Distributed file system: naming and transparency, remote file access, Stateful v/s Stateless Service, File Replication.</p> <p><b>Distributed co-ordinations:</b> Event Ordering, Mutual Exclusion, Atomicity, Concurrency Control, Deadlock Handling, Election Algorithms, and Reaching Agreement. Case studies of Unix and MS-DOS operating system.</p>

### Suggested Books

1. Silberschatz and Galvin, "Operating System Concepts", Addison-Wesley publishing, Co.,1999.
2. A. S. Tanenbaum, "Modern Operating Systems", Pearson Education.
3. H.M. Dietel, "An Introduction to Operating System", Pearson Education.
4. D. M. Dhamdhare, "Operating Systems – A Concept Based Approach", Tata McGraw-Hill
- 5 M. Singhal, N. G. Shivaratri, "Advanced Concepts in Operating Systems", Tata McGraw-Hill.
6. William Stallings, "Operating Systems", Pearson Education

### Course Outcomes:

At the end of the course, the student should be able to:

- CO1. Understand the state of the art in operating systems and distributed systems, and how to design modern operating systems.
- CO2. Understand how to engage in systems research in general and operating systems research in particular.
- CO3. Investigate novel ideas in operating systems through a semester-long research project.

Department of Computer Science & Engineering  
IECRC University Jaipur-303905

<b>MCO 014B</b>	<b>Advanced Data Mining and Warehousing</b>	<b>3-0-0</b>
-----------------	---	--------------

**Course Objective:**

- To compare and contrast different conceptions of data mining
- To explain the role of finding associations in commercial market basket data.
- To characterize the kinds of patterns that can be discovered by association rule mining.
- To describe how to extend a relational system
- To find patterns using association rules.

<b>UNIT 1:</b>	<b>Overview:</b> Concept of data mining and warehousing, data warehouse roles and structures, cost of warehousing data, roots of data mining, approaches to data exploration and data mining, foundations of data mining, web warehousing, web warehousing for business applications and consumers, introduction to knowledge management, data warehouses and knowledge bases.
<b>UNIT 2:</b>	<b>Data Warehouse:</b> Theory of data warehousing, barriers to successful data warehousing, bad data warehousing approaches, stores, warehouse and marts, data warehouse architecture, metadata, metadata extraction, implementing the data warehouse and data warehouse technologies.
<b>UNIT 3:</b>	<b>Data Mining and Data Visualisation:</b> Data mining, OLAP, techniques used to mine the data, market basket analysis, current limitations and challenges to DM, data visualization. <b>Designing and Building the Data Warehouse:</b> The enterprise model approach of data mining design, data warehouse project plan, analysis and design tools, data warehouse architecture, specification and development.
<b>UNIT 4:</b>	<b>Web-Based Query and Reporting:</b> Delivering information over the web, query and reporting tools and business value, architectural approaches to delivering query capabilities over the web. <b>Web Based Statistical Analysis and Data Mining:</b> Analytical tools, business value from analytical tools, humble spreadsheet, determining the business value that analytical tools will deliver, statistical products overview – statistical analysis applications, correlation analysis, regression analysis, data discovery tools overview, data discovery applications, comparison of the products, architectural approaches for statistical and data discovery tools.
<b>UNIT 5:</b>	<b>Search Engines and Facilities:</b> Search engines and the web, search engine architecture, variations in the way the search facilities work and variations in indexing schemes. <b>Future of Data Mining and Data Warehousing:</b> Future of data warehousing, trends in data warehousing, future of data mining, using data mining to protect privacy, trends affecting the future of data mining and future of data visualization.

2. George M. Marakas, Modern Data warehousing, Mining and Visualization: core concepts, Printice Hall, First Edition,2002.

### Course Outcomes:

At the end of the course, students should be able to:

- CO1. Compare and contrast different conceptions of data mining as evidenced in both research and application.
- CO2. Explain the role of finding associations in commercial market basket data.
- CO3. Characterize the kinds of patterns that can be discovered by association rule mining.
- CO4. Describe how to extend a relational system to find patterns using association rules.
- CO5. Evaluate methodological issues underlying the effective application of data mining.

## Program Elective I

MCO 094B	Distributed Algorithms	3-0-0
----------	------------------------	-------

### Course Objective

1. To understand synchronous and asynchronous models
2. To learn algorithms of synchronous and asynchronous system
3. To understand shared memory concept of distributed operating system

<b>UNIT 1:</b>	Models of synchronous and asynchronous distributed computing systems: synchronous networks, asynchronous shared memory, asynchronous networks;
<b>UNIT 2:</b>	Basic algorithms for synchronous and asynchronous networks: leader election, breadth first search, shortest path, minimum spanning tree.
<b>UNIT 3:</b>	Advanced synchronous algorithms: distributed consensus with failures, commit protocols.
<b>UNIT 4:</b>	Asynchronous shared memory algorithms: mutual exclusion and consensus
<b>UNIT 5:</b>	Relationship between shared memory and network models; asynchronous networks with failures.

*At the end of the course, the student should be able to:*

CO1: Understand difference between synchronous and asynchronous system

CO2: Learn algorithms of distributed operating system

CO3: Understand shared memory concepts

CO4: Understand relation between shared memory and network models

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	H	M											M		
CO2	H	H	H	L		L					M	M	H	M	L
CO3	M												L		L
CO4	H	M		L		L							M		

- H = Highly Related; M = Medium L = Low

## Program Elective II

MCO 093A	Advance database management system	3-0-1
----------	------------------------------------	-------

### Course Objective

1. To learn the fundamentals of data models and to conceptualize and depict a database system using ER diagram.
2. To make a study of SQL and relational database design.
3. To understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
4. To know the fundamental concepts of transaction processing- concurrency control techniques and recovery procedure.

<b>UNIT 1:</b>	<b>Relational Databases:</b> Integrity Constraints revisited: Functional, Multi-valued and Join Dependency, Template Algebraic, Inclusion and Generalized Functional Dependency, Chase Algorithms and Synthesis of Relational Schemes. Query Processing and Optimization: Evaluation of Relational Operations, Transformation of Relational Expressions, Indexing and Query Optimization, Limitations of Relational Data Model, Null Values and Partial Information.
<b>UNIT 2:</b>	<b>Deductive Databases:</b> Datalog and Recursion, Evaluation of Datalog program, Recursive queries with negation. Object Oriented and Object Relational Databases: Modelling Complex Data Semantics, Specialization, Generalization, Aggregation and Association, Objects, Object Identity, Equality and Object Reference, Architecture of Object Oriented and Object Relational Databases
<b>UNIT 3:</b>	<b>Distributed Data Storage:</b> Fragmentation and Replication, Location and Fragment Transparency, Distributed Query Processing and Optimization, Distributed Transaction Modeling and Concurrency Control, Distributed Deadlock, Commit Protocols, Design of Parallel Databases, Parallel Query Evaluation.
<b>UNIT 4:</b>	<b>Advanced Transaction Processing:</b> Nested and Multilevel Transactions, Compensating Transactions and Saga, Long Duration Transactions, Weak Levels of Consistency, Transaction Work Flows, Transaction Processing Monitors.
<b>UNIT 5:</b>	<b>Active Databases:</b> Triggers in SQL, Event Constraint and Action: ECA Rules, Query Processing and Concurrency Control, Compensation and Databases Recovery. <b>Real Time Databases:</b> Temporal Constraints: Soft and Hard Constraints, Transaction Scheduling and Concurrency Control.

At the end of the course, the student should be able to

Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

CO1: Learn the fundamentals of data models and to conceptualize and depict a database system using ER diagram.

CO2: Make a study of SQL and relational database design.

CO3: Understand the internal storage structures using different file and indexing techniques which will help in physical DB design.

CO4: Know the fundamental concepts of transaction processing- concurrency control techniques and recovery procedure.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	H					M							H		H
CO2	H	M	H		H				L			M	M	H

## Program Elective III

MCO 016B	Information System Security	3-0-0
----------	-----------------------------	-------

### Course Objective:

- To perform a risk assessment of an information system.
- To identify the security requirements for an information system.
- To use available government information system security resources when designing systems.

UNIT 1:	<b>Introduction to Securitities:</b> Introduction to security attacks, services and mechanism, Classical encryption techniques substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, feistel structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES
UNIT 2:	<b>Modular Arithmetic:</b> Introduction to group, field, finite field of the form $GF(p)$ , modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principals of public key crypto systems, RSA algorithm, security of RSA
UNIT 3:	<b>Message Authentication Codes:</b> Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Securehash algorithm (SHA) <b>Digital Signatures:</b> Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS), proof of digital signature algorithm
UNIT 4:	<b>Key Management and distribution:</b> Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. <b>Authentication Applications:</b> Kerberos <b>Electronic mail security:</b> pretty good privacy (PGP), S/MIME.
UNIT 5:	<b>IP Security:</b> Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic transaction (SET). <b>System Security:</b> Introductory idea of Intrusion, Intrusion detection, Viruses and related threats, firewalls.

### **Outcomes:**

At the end of the course, students should be able to:

CO1: Perform a risk assessment of an information system.

CO2: Identify the security requirements for an information system.

CO3: Use available government information system security resources when designing systems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

## Program Elective IV

MCO 095B	Soft Computing	3-0-0
----------	----------------	-------

### Course Objective

To introduce the concepts in Soft Computing such as Artificial Neural Networks, Fuzzy logic-based systems, genetic algorithm-based systems and their hybrid models.

UNIT 1:	<b>Introduction:</b> Introduction to soft computing, soft computing vs. hard computing, various types of soft computing techniques, Requirement of Soft computing, Major Areas of Soft Computing, applications of soft computing, Concept of Neural Network, Definition, advantage of Neural network, Application scope of Neural network, Fuzzy computing, Genetic Algorithms, Hybrid System.
UNIT 2:	<b>Neural Network:</b> Structure and Function of a single neuron: Biological neuron, artificial neuron, definition of ANN, Taxonomy of neural net, Difference b/w ANN and human brain, characteristic and applications of ANN, single layer network, Mcculloch Pitts Model, learning rules – Hebbian, Delta, Perceptron learning and Windrow- Hoff, winner-take-all
UNIT 3:	<b>Perceptron:</b> Perceptron training algorithm, Linear separability, Introduction of MLP, different activation functions, Error back propagation algorithm, derivation of BBPA, momentum, limitation, characteristics and application of EBPA, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map and Radial Basis Function network, Recent Applications.
UNIT 4:	<b>Fuzzy Logic:</b> Fuzzy set theory, Fuzzy set versus crisp set, Crisp relation & fuzzy relations, Fuzzy systems: crisp logic, fuzzy logic, introduction & features of membership functions. Fuzzy rule base system: Fuzzy propositions, formation, decomposition & aggregation of fuzzy Rules, fuzzy reasoning, fuzzy inference systems, cuts for fuzzy sets, fuzzy decision making & Applications of fuzzy logic, Defuzzification methods.
UNIT 5:	<b>Genetic Algorithm:</b> Fundamental, basic concepts, working principle, encoding, fitness function, reproduction, Genetic modeling: Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional methods, Genetic-neuro hybrid systems, Genetic- Fuzzy rule based system.

### Course Outcomes:

- CO1. Learn soft computing techniques and their applications.
- CO2. Understand perceptrons and analyze various neural network architectures.
- CO3. Understand and explain the fuzzy systems.
- CO4. Understand and analyze the genetic algorithms and their applications.

<b>MCO 101A</b>	<b>Neural Networks Programming Techniques</b>	<b>3-0-0</b>
-----------------	---	--------------

### Course Objective:

- To explain basic concepts of neuron networks
- To explain multiple models of neural networks
- To understand applications of neural networks

<b>UNIT 1:</b>	Basics of ANN: Models to Neuron; Basic learning laws. Activation and Synaptic Dynamics: Activation dynamics models; Synaptic dynamics models; Stability and Convergence.
<b>UNIT 2:</b>	Analysis of Feed forward Neural Networks: Linear associative networks for pattern association; Single layer and Multilayer Perception network for pattern classification; Multi layer feed forward neural networks for pattern mapping
<b>UNIT 3:</b>	<b>Analysis of Feedback Neural Networks:</b> Linear auto associative networks; Hopfield model for pattern storage; stochastic networks; Boltzmann machine for pattern environment storage.
<b>UNIT 4:</b>	Competitive Learning Neural Networks: Basic competitive learning laws; Analysis of pattern clustering networks; Analysis of self-organizing feature mapping networks
<b>UNIT 5:</b>	Applications of ANN: Pattern classification problems; Optimization; Control.

### **Outcomes**

At the end of this course Students will be able to:

- Explain basic concepts of neural networks
- Explain different feed forward networks
- Explain different feedback networks
- Explain competitive learning
- Understand applications of ANN

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Program Elective I

MCO 016A	Information System Security	3-0-0
----------	-----------------------------	-------

### Course Objective:

- To perform a risk assessment of an information system.
- To identify the security requirements for an information system.
- To use available government information system security resources when designing systems.

UNIT 1:	<b>Introduction to Securitities:</b> Introduction to security attacks, services and mechanism, Classical encryption techniques substitution ciphers and transposition ciphers, cryptanalysis, steganography, Stream and block ciphers. Modern Block Ciphers: Block ciphers principles, Shannon's theory of confusion and diffusion, fiestal structure, Data encryption standard (DES), Strength of DES, Idea of differential cryptanalysis, block cipher modes of operations, Triple DES
UNIT 2:	<b>Modular Arithmetic:</b> Introduction to group, field, finite field of the form $GF(p)$ , modular arithmetic, prime and relative prime numbers, Extended Euclidean Algorithm, Advanced Encryption Standard (AES) encryption and decryption Fermat's and Euler's theorem, Primality testing, Chinese Remainder theorem, Discrete Logarithmic Problem, Principals of public key crypto systems, RSA algorithm, security of RSA
UNIT 3:	<b>Message Authentication Codes:</b> Authentication requirements, authentication functions, message authentication code, hash functions, birthday attacks, security of hash functions, Securehash algorithm (SHA) <b>Digital Signatures:</b> Digital Signatures, Elgamal Digital Signature Techniques, Digital signature standards (DSS), proof of digital signature algorithm
UNIT 4:	<b>Key Management and distribution:</b> Symmetric key distribution, Diffie-Hellman Key Exchange, Public key distribution, X.509 Certificates, Public key Infrastructure. <b>Authentication Applications:</b> Kerberos <b>Electronic mail security:</b> pretty good privacy (PGP), S/MIME.
UNIT 5:	<b>IP Security:</b> Architecture, Authentication header, Encapsulating security payloads, combining security associations, key management. Introduction to Secure Socket Layer, Secure electronic, transaction (SET). <b>System Security:</b> Introductory idea of Intrusion, Intrusion detection, Viruses and related threats, firewalls.

### **Outcomes:**

At the end of the course, students should be able to:

*CO1: Perform a risk assessment of an information system.*

*CO2: Identify the security requirements for an information system.*

*CO3: Use available government information system security resources when designing systems.*

## Program Elective II

MCO 057B	Ethical Hacking	3-0-0
----------	-----------------	-------

**Course Objective:** By the end of the course students will able to:

1. Learn various hacking methods.
2. Perform system security vulnerability testing.
3. Perform system vulnerability exploit attacks.
4. Produce a security assessment report
5. Learn various issues related to hacking.

UNIT 1:	<b>Hacking Windows:</b> BIOS Passwords, Windows Login Passwords, Changing Windows Visuals, Cleaning Your Tracks, Internet Explorer Users, Cookies, URL Address Bar, Netscape Communicator, Cookies, URL History, The Registry, Baby Sitter Programs.
UNIT 2:	<b>Advanced Windows Hacking:</b> Editing your Operating Systems by editing Explorer.exe, The Registry, The Registry Editor, Description of .reg file, Command Line Registry Arguments, Other System Files, Some Windows & DOS Tricks, Customize DOS, Clearing the CMOS without opening your PC, The Untold Windows Tips and Tricks Manual, Exiting Windows the Cool and Quick Way, Ban Shutdowns: A Trick to Play, Disabling Display of Drives in My Computer, Take Over the Screen Saver, Pop a Banner each time Windows Boots, Change the Default Locations, Secure your Desktop Icons and Settings.
UNIT 3:	<b>Getting Past the Password:</b> Passwords: An Introduction, Password Cracking, Cracking the Windows Login Password, The Glide Code, Windows Screen Saver Password, XOR, Internet Connection Password, Sam Attacks, Cracking Unix Password Files, HTTP Basic Authentication, BIOS Passwords, Cracking Other Passwords, .
UNIT 4:	<b>The Perl Manual:</b> Perl: The Basics, Scalars, Interacting with User by getting Input, Chomp() and Chop(), Operators, Binary Arithmetic Operators, The Exponentiation Operator(**), The Unary Arithmetic Operators, Other General Operators, Conditional Statements, Assignment Operators. The?: Operator, Loops, The While Loop, The For Loop, Arrays, THE FOR EACH LOOP: Moving through an Array, Functions Associated with Arrays, Push() and Pop(), Unshift() and Shift(), Splice(), Default Variables, \$_, @ARGV, Input Output, Opening Files for Reading, Another Special VariableS.

UNIT 5:	<b>How does a Virus Work?</b> What is a Virus?, Boot Sector Viruses (MBR or Master Boot Record), File or Program Viruses, Multipartite Viruses, Stealth Viruses, Polymorphic Viruses, Macro Viruses, Blocking Direct Disk Access, Recognizing Master Boot Record (MBR) Modifications, Identifying Unknown Device Drivers, How do I make my own Virus?, Macro Viruses, Using Assembly to Create your own Virus, How to Modify a Virus so Scan won't Catch it, How to Create New Virus Strains, Simple Encryption Methods.
---------	--

### **Course Outcome (CO):**

*At the end of this course, students will demonstrate ability to:*

1. Work on various hacking methods and use this method to stop cyber-crime.
2. Implement system security vulnerability testing and make system more secure.
3. Analyze system vulnerability exploit attacks and make some preventive measure for secure system.
4. Generate a security assessment report
5. Analyze various issues related to hacking.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>Course Outcome</b>	<b>Program Outcome</b>												<b>Program Specifice Outcome</b>

## Program Elective 3

MCO 064B	Digital Forensics	3-0-0
----------	-------------------	-------

### Course Objective:

1. The main objective of the course is to introduce the students to bring awareness in crimes and tracing the attackers.
2. Define digital forensics from electronic media.
3. Describe how to prepare for digital evidence investigations and explain the differences between law enforcement agency and corporate investigations.
4. Explain the various forensic technologies and protection of data.
5. To get familiarize with various Risk Management Techniques and their use.

<b>UNIT 1:</b>	Introduction & evidential potential of digital devices – Key developments, Digital devices in society, Technology and culture, Comment, Closed vs. open systems, evaluating digital evidence potential. Device Handling & Examination Principles: Seizure issues, Device identification, Networked devices, Contamination, Previewing, Imaging, Continuity and hashing, Evidence locations.
<b>UNIT 2:</b>	A sevenelement security model, A developmental model of digital systems, Knowing, Unknowing, Audit and logs , Data content, Data context. Internet & Mobile Devices The ISO / OSI model, The internet protocol suite, DNS, Internet applications, Mobile phone PDAs, GPS, Other personal technology.
<b>UNIT 3:</b>	Introduction to Computer Forensics, Use of Computer Forensics in Law Enforcement, Computer Forensics Assistance to Human Resources / Employment Proceedings, Computer Forensics Services, Benefits of Professional Forensics Methodology, Steps Taken by Computer Forensics Specialists, Who Can Use Computer Forensic Evidence?, Case Histories, Case Studies.
<b>UNIT 4:</b>	Types of Military Computer Forensic Technology, Types of Law Enforcement: Computer Forensic Technology, Types of Business Computer Forensic Technology, Specialized Forensics Techniques, Hidden Data and How to Find It, Spyware and Adware, Encryption Methods and Vulnerabilities, Protecting Data from Being Compromised, Internet Tracing Methods 65.
<b>UNIT 5:</b>	Homeland Security Systems. Occurrence of Cyber Crime, Cyber Detectives, Fighting Cyber Crime with Risk Management Techniques, Computer Forensics Investigative Services, Forensic Process Improvement, Course Content, Case Histories.

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

### **Course Outcome (CO):**

**At the end of this course, students will demonstrate ability to:**

CO1: The students are aware about cyber-crimes and tracing the attackers.

CO2: Learn about digital forensics and collection of digital forensics from electronic media.

CO3: Describe how to prepare for digital evidence investigations and explain the differences between law enforcement agency and corporate investigations.

CO4: Explain the various forensic technologies and protection of data.

CO5: To get familiarize with various Risk Management Techniques and their use.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Program Elective 4

MCO 059B	SECURITY THREATS & VULNERABILITIES	3-0-0
----------	------------------------------------	-------

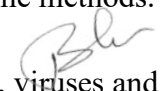

### Course Objective:

1. To impart the knowledge on various security threats and issues and how to overcome those issues.
2. To identify and explain the capability to handle various attackers and crime issues.
3. To educate various issues involved in threats overcome methods.
4. To impart the knowledge on various Forensic analysis and risk analysis.
5. To familiarize students with inner security issues involved in mail agents, viruses and worms.

UNIT 1:	Introduction: Security threats - Sources of security threats- Motives - Target Assets and Vulnerabilities. Consequences of threats- E-mail threats - Web-threats - Intruders and Hackers, Insider threats, Cyber crimes.
UNIT 2:	Network Threats: Active/ Passive – Interference – Interception – Impersonation – Worms – Virus – Spam"s – Ad ware - Spy ware – Trojans and covert channels – Backdoors – Bots - IP Spoofing - ARP spoofing - Session Hijacking - Sabotage-Internal treats- Environmental threats - Threats to Server security.
UNIT 3:	Security Threat Management: Risk Assessment - Forensic Analysis - Security threat correlation – Threat awareness - Vulnerability sources and assessment- Vulnerability assessment tools - Threat identification - Threat Analysis - Threat Modeling - Model for Information Security Planning.
UNIT 4:	Security Elements: Authorization and Authentication - types, policies and techniques - Security certification - Security monitoring and Auditing - Security Requirements Specifications - Security Policies and Procedures, Firewalls, IDS, Log Files, Honey Pots
UNIT 5:	Access control, Trusted Computing and multilevel security - Security models, Trusted Systems, Software security issues, Physical and infrastructure security, Human factors – Security awareness, training, Email and Internet use policies.

### At the end of the course, the student should be able to:

- CO1. The Student will gain the knowledge on various security threats and issues and how to overcome those issues.
- CO2. The student will get the capability to handle various attackers and crime issues.
- CO3. Learning various issues involved in threats overcome methods.
- CO4. Learning Forensic analysis and risk analysis.
- CO5. Learn inner security issues involved in mail agents, viruses and worms.

## Program Elective 5

MCO 058B	Cyber Laws And Security Policies	3-0-0
----------	----------------------------------	-------

### Course Objective:

1. To introduce the various cyber laws and their legal perspective.
2. To get familiarize with various Act related to information technology.
3. To aware the students with e business and legal issues.
4. To introduce the cyber ethics in various fields.
5. To provide practical exposure on cyber crime.

<b>UNIT 1:</b>	<b>Introduction to Cyber Law Evolution of Computer Technology :</b> Emergence of Cyber space. Cyber Jurisprudence, Jurisprudence and law, Doctrinal approach, Consensual approach, Real Approach, Cyber Ethics, Cyber Jurisdiction, Hierarchy of courts, Civil and criminal jurisdictions, Cyberspace-Web space, Web hosting and web Development agreement, Legal and Technological Significance of domain Names, Internet as a tool for global access.
<b>UNIT 2:</b>	<b>Information technology Act :</b> Overview of IT Act, 2000, Amendments and Limitations of IT Act, Digital Signatures, Cryptographic Algorithm, Public Cryptography, Private Cryptography, Electronic Governance, Legal Recognition of Electronic Records, Legal Recognition of Digital Signature Certifying Authorities, Cyber Crime and Offences, Network Service Providers Liability, Cyber Regulations Appellate Tribunal, Penalties and Adjudication.
<b>UNIT 3:</b>	<b>Electronic Business and legal issues:</b> Evolution and development in E-commerce, paper vs paper less contracts E-Commerce models- B2B, B2C, E security. <b>Application area:</b> Business, taxation, electronic payments, supply chain, EDI, E-markets, Emerging Trends.
<b>UNIT 4:</b>	<b>Cyber Ethics:</b> The Importance of Cyber Law, Significance of cyber-Ethics, Need for Cyber regulations and Ethics. Ethics in Information society, Introduction to Artificial Intelligence Ethics: Ethical Issues in AI and core Principles, Introduction to Block chain Ethics.
<b>UNIT 5:</b>	<b>Case Study on Cyber Crimes:</b> Harassment Via E-Mails, Email Spoofing (Online A Method Of Sending E-Mail Using A False Name Or E-Mail Address To Make It Appear That The E-Mail Comes From Somebody Other Than The True Sender, Cyber Pornography (Exm.MMS), Cyber-Stalking

At the end of the course, the student should be able to:

1. Familiar with various cyber laws and their legal perspective with practical aspects.
2. Know about various Act related to information technology.
3. Enhance their skills in the field e-business and legal issues in cyber space.

4. Learn the cyber ethics in various fields and their significance.
5. Get the practical exposure on cyber-security.

<b>MCO 061B</b>	<b>Ethical Hacking And Digital Forensic Tools Lab</b>	<b>0-0-2</b>
-----------------	---	--------------

### **Course Objectives:**

The main objective this practical session is that students will get the exposure to various forensic tools and scripting languages.

The following programs should be implemented preferably on platform Windows/Unix through perl, shell scripting language and other standard utilities available with UNIX systems.

:-

#### **Part A :**

1. Write a perl script to concatenate ten messages and transmit to remote server
  - a) Using arrays
  - b) Without using arrays.
2. Write a perl script to implement following functions:
  - a) Stack functions
  - b) File functions
  - c) File text functions
  - d) Directory functions
  - e) Shift, unshift, Splice functions.
3. Write a Perl script to secure windows operating systems and web browser by disabling Hardware and software units.
4. Write a perl script to implement Mail bombing and trace the hacker.
5. Write a shell script to crack UNIX login passwords and trace it when breaking is happened.

#### **Part B: Exposure on Forensic tools.**

1. Backup the images file from RAM using Helix3pro tool and show the analysis.
2. Introduction to Santhoku Linux operating system and features extraction.
3. Using Santoku operating system generates the analysis document for any attacked file from by taking backup image from RAM.
4. Using Santoku operating system generates the attacker injected viewing java files.
5. Using Santoku operating system shows how attackers opened various Firefox URL's and pdf document JavaScript files and show the analysis.
6. Using Santoku operating System files show how an attacker connected to the various network inodes by the specific process.
7. Using exiftool (-k) generate the any picture hardware and software.
8. Using deft\_6.1 tool recover the attacker browsing data from any computer.

#### **Using Courier tool Extract a hacker secret bitmap image hidden data.**

10. Using sg (Stegnography) cyber Forensic tool hide a message in a document or any file.
11. Using sg cyber Forensic tool unhide a message in a document or any file.
12. Using Helix3pro tool show how to extract deleted data file from hard disk or usb device.
13. Using Ghostnet tool hide a message into a picture or any image file.
14. Using kgbkey logger tool record or generate an document what a user working on system
15. Using pinpoint metaviewr tool extract a metadata from system or from image file.
16. Using Bulk Extractor tool extract information from windows file system.

**Course Outcomes:**

By the completion of this laboratory session Student

1. Will get the practical exposure to forensic tools.
2. Will gain the knowledge on perl and Unix scripting languages to implement various security attacks.
3. Will get the ideas in various ways to trace an attacker.

<b>MCO 061 B</b>	<b>Cryptography And Security Lab</b>	<b>0-0-2</b>
------------------	--------------------------------------	--------------

### Course Educational Objectives:

The objective of this course is that to understand the principles of encryption algorithms, conventional and public key cryptography practically with real time applications.

The following programs should be implemented preferably on platform Windows/Unix using C language (for 1-5) and other standard utilities available with UNIX systems (for 6-15) :-

1. Implement the encryption and decryption of 8-bit data using Simplified DES Algorithm (created by Prof. Edward Schaefer) in C
2. Write a program to break the above DES coding
3. Implement Linear Congruential Algorithm to generate 5 pseudo-random numbers in C
4. Implement Rabin-Miller Primality Testing Algorithm in C
5. Implement the Euclid Algorithm to generate the GCD of an array of 10 integers in C
6. a) Implement RSA algorithm for encryption and decryption in C  
b) In an RSA System, the public key of a given user is  $e=31, n=3599$ .  
Write a program to find private key of the User.
7. Configure a mail agent to support Digital Certificates, send a mail and verify the correctness of this system using the configured parameters.
8. Configure SSH (Secure Shell) and send/receive a file on this connection to verify the correctness of this system using the configured parameters.
9. Configure a firewall to block the following for 5 minutes and verify the correctness of this system using the configured parameters: (a) Two neighborhood IP addresses on your LAN (b) All ICMP requests (c) All TCP SYN Packets
10. Configure S/MIME and show email-authentication.
11. Implement encryption and decryption with openssl.
12. Implement Using IP TABLES on Linux and setting the filtering rules.
13. Implementation of proxy based security protocols in C or C++ with features like Confidentiality, integrity and authentication.
14. Working with Sniffers for monitoring network communication (Ethereal)
15. Using IP TABLES on Linux and setting the filtering rules

### Course Outcomes:

By the end of the course students will

1. Know the methods of conventional encryption.
2. Understand the concepts of public key encryption and number theory
3. Understand various applications of cryptography and security issues practically.

## Program Elective 6

<b>MCO 069B</b>	<b>Information Security Risk Management</b>	<b>3-0-0</b>
-----------------	---	--------------

### Course Objective

To understand and development of concepts required for risk-based planning and risk management of computer and information systems

UNIT 1:	An Introduction to Risk Management: Introduction to the Theories of Risk Management; The Changing Environment; The Art of Managing Risks.
UNIT 2:	The Threat Assessment Process: Threat Assessment and its Input to Risk Assessment; Threat Assessment Method; Example Threat Assessment
UNIT 3:	Vulnerability Issues: Operating System Vulnerabilities; Application Vulnerabilities; Public Domain or Commercial Off-the-Shelf Software; Connectivity and Dependence; Vulnerability assessment for natural disaster, technological hazards, and terrorist threats; implications for emergency response, vulnerability of critical infrastructures
UNIT 4:	The Risk Process: What is Risk Assessment? Risk Analysis; Who is Responsible?
UNIT 5:	Tools and Types of Risk Assessment: Qualitative and Quantitative risk Assessment; Policies, Procedures, Plans, and Processes of Risk Management; Tools and Techniques; Integrated Risk Management; Future Directions: The Future of the Risk Management.

**At the end of the course, the student should be able to:**

CO1: The ability to identify, analyse and articulate the importance of managing IS-related risk and security issues in organizations, and the relationship between these and the achievement of business value from IS/IT investments

CO2: The ability to identify, analyse, synthesize and evaluate the costs of not appropriately identifying and managing risk and security concerns in projects and organizations, resulting in IS/IT failures, dysfunctional systems, and systems which fail to deliver value to key stakeholders

CO3: The practical ability to develop and document IS/IT risk and security management plans that detail contingency planning strategies and practices

CO4: The ability to identify, analyze, synthesize and articulate the major theories and concepts associated with IS failure and the management of IS risk, including factors argued to lead to unsatisfactory outcomes with respect to IS/IT and Information Security

# Artificial Intelligence

## Program Elective 1

MCO 117A	Principles of Artificial Intelligence & Machine Learning	3-0-0
----------	--	-------

### Course Objective:

- Able to explain the basic principles of artificial intelligence
- Students can apply logic and structured concepts in knowledge representation and discuss the applications of artificial intelligence
- To implement and analyze uninformed and informed Search Strategies
- To implement and apply various game playing algorithms to different problems
- Understand and represent various types of logics and their forms
- To Understand various Learning techniques

<b>UNIT 1:</b>	<b>Introduction-</b> What is intelligence? Foundations of artificial intelligence (AI), Task of artificial intelligence, Techniques of artificial intelligence, Problem Solving Formulating problems, problem types, states and operators, state space.  <b>Knowledge Representation-</b> Role of Knowledge, Declarative Knowledge, Procedural Knowledge, Knowledge representation Techniques; conceptual graphs; structured representations; frames, scripts; issues in knowledge representation
<b>UNIT 2:</b>	<b>Uninformed &amp; Informed Search Strategies-</b> Breadth First Search, Depth First Search, Depth Limited Search, Heuristic Functions, Best First Search, Hill Climbing Algorithm, Problems and solutions of Hill Climbing, Iterative Deepening (IDA), A* algorithm, AO* Algorithm.
<b>UNIT 3:</b>	<b>Game playing-</b> Introduction, Types of games, Minimax game algorithm, Alpha Beta cut-off procedure. Case Study of Games
<b>UNIT 4:</b>	<b>Logics-</b> Propositional logics, First Order Predicate Logics (FOPL), Syntax of First Order Predicate Logics, Properties of Wff, Clausal Forms, Conversion to clausal forms.
<b>UNIT 5:</b>	<b>Machine Learning-</b> Definition of learning systems, Goals and applications of machine learning. Aspects of developing a learning system- Training data, Concept representation, Function approximation, Issues in machine learning. Types of machine learning-Learning associations. Supervised learning - Classification and regression trees, Support vector machines. Unsupervised learning - Clustering, Instance-based learning, K-nearest neighbor, Locally weighted regression, Radial basis function, Reinforcement learning

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

**Course Outcomes:** Upon the end of this course, student will be :

CO1: Familiar with the basic principles of artificial intelligence

CO2: To implement and analyze Uninformed and Informed Search algorithms

CO3: Able to represent and apply various logics and structured concepts in knowledge representation

CO4: To implement and apply various game playing algorithms to different problems

CO5: To understand various Learning techniques

**COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Program Elective 2

MCO 090B	Knowledge Engineering and Expert Systems	3-0-0
----------	--	-------

**Course Objective:** At the end of the course, the student should be able to:

- To explain and describe the concepts central to the creation of knowledge bases and expert systems.
- Knowledgeable about the tools and the processes used for the creation of an expert system.
- Student will know methods used to evaluate the performance of an expert system.
- Students will be able to examine properties of existing systems in a case-study manner, comparing differing approaches and software tools

<b>UNIT1</b>	<b>Introduction To Knowledge Engineering:</b> The Human Expert And An Artificial, Expert Knowledge Base And Inference Engine, Importance of Expert System, features of Expert System, Knowledge Acquisition And Knowledge Representation, Components of a Knowledge in Expert system
<b>UNIT2</b>	<b>Knowledge Acquisition &amp; Problem Solving process:</b> Introduction, Knowledge Acquisition and domain Expert, Selection of the domain, Selection of the Knowledge Engineers, Meetings and Plans, Organization of Meetings ,Documentation, Multiple domain Experts. Selecting the appropriate Problem, Rule Based Systems, and Heuristic Classifications Constructive Problem Solving.
<b>UNIT3</b>	<b>Design of Expert System:</b> Introduction, Stages in the Developing Expert System, Errors in Development stages, Software Engineering and Expert Systems, The Expert System Life Cycle, Expert System Design Examples, Case Based Reasoning, Semantic of Expert, Systems.
<b>UNIT4</b>	<b>Inference Engine:</b> Inference Engine, Insight of Inference Engine, Search Strategies, Forward Chaining Algorithm, Algorithms for forward Chaining- Baseline Version, Backward Chaining Algorithm, Algorithms for Backward Chaining-Baseline Version, Mixed Modes of Chaining, Work sheets for Forward and Backward Chaining
<b>UNIT 5</b>	<b>Software Tools:</b> Overview of Expert System Tools, Expert System Shells, Multiple Paradigm Environments, Abstract architectures, Potential Implementation Problems, Selecting a Software Tool, Implementation Mechanism of tools, Black Board Architecture, Reasoning under uncertainty and Truth Maintenance Systems, Case-study : DENDRAL and MYCIN

**Course Outcome:**

- CO1. To get introduced to the basic knowledge representation in Expert system
- CO2. Understand the Knowledge Acquisition & Problem Solving methods
- CO3. Understand, analyze and evaluate the performance of an expert system.
- CO4. Understand and identify various rules in inference engine
- CO5. Identify ,apply and compare Expert system software tool to solve real life problems

## Program Elective 3

MCO 082B	Pattern Recognition	3-0-0
----------	---------------------	-------

### Course Objective

- Understand how to generate pattern and explain how to analyze pattern features
- Understand how to build classifiers using non parametric methods.
- Learn and compare principles of parametric and non parametric classification
- Implement pattern recognition and machine learning theories
- Able to apply the pattern recognition theories to applications of interest

Module 1:	<b>Pattern Recognition Overview</b> Overview of Pattern Recognition- Relations of PR with other Systems, PR Applications, Different Approaches to Pattern Recognition, Classification and Description—Patterns and feature extraction with Examples—Training and Learning in PR systems—Pattern recognition Approaches.
Module 2:	<b>Statistical Pattern Recognition</b> Introduction to statistical Pattern Recognition, Gaussian Case and Class Dependency, Discriminate Function, Examples, Classifier Performance,
Module 3:	<b>Linear Discriminant Functions and Unsupervised Learning and Clustering</b> Introduction—Discrete and binary Classification problems—Techniques to directly obtain linear Classifiers, Formulation of Unsupervised Learning Problems—Clustering for unsupervised learning and classification.
Module 4:	<b>Syntactic Pattern Recognition</b> Overview of Syntactic Pattern Recognition—Syntactic recognition via parsing and other grammars, Graphical Approaches to syntactic pattern recognition, Learning via grammatical inference.
Module 5:	<b>Recognition of Syntactic Description</b> Recognition by Matching, Recognition by Parsing, CYK Parsing Algorithm, Augmented Transition Nets in Parsing, Graph Based structure representation, Structured Strategy to Compare Attributed Graphs

At the end of the course, the student should be able to:

### Course Outcomes:

- CO1. Understand and explain the process of Pattern Recognition.
- CO2. Apply probability theory to estimate classifier performance.
- CO3. Describe and analyze the principles of parametric and non parametric classification methods.
- CO4. Compare pattern classifications and pattern recognition techniques.
- CO5. Apply Pattern Recognition techniques to real world problems & Design systems

## Program Elective 4

<b>MCO 118A</b>	<b>Artificial Neural Network and Deep Learning</b>	<b>3-0-0</b>
-----------------	--	--------------

### Course Objectives

- To understand the concepts of Artificial neural networks
- To explore in-depth deep neural architectures for learning and inference
- To evaluate the performance of neural architectures in comparison to other machine learning method
- Familiar with the fundamental principles, theory and approaches for learning with deep neural networks
- Discuss Convolution Neural Network models to Applications

<b>UNIT1</b>	<b>Introduction to Artificial Neural Network :</b> Biological Neuron, Idea of computational units, McCulloch–Pitts unit and Thresholding logic, Linear Perceptron, Perceptron Learning Algorithm, Linear separability, Convergence theorem for Perceptron Learning Algorithm, Type of network architecture, Activation functions, Basic Learning rules
<b>UNIT2</b>	<b>Feed forward Networks:</b> Multilayer Neural Network, Gradient Descent learning, Back propagation, Empirical Risk Minimization, regularization, Radial Basis Neural Network bias-variance trade off, regularization - over fitting - inductive bias regularization - drop out - generalization.
<b>UNIT3</b>	<b>Recurrent neural networks:</b> Back propagation through time, Long Short Term Memory, Gated Recurrent Units, Bidirectional LSTMs, Bidirectional RNNs
<b>UNIT4</b>	<b>Deep Neural Networks:</b> Introduction, Difficulty of training deep neural networks, Greedy layer wise training. • Generative models: Restrictive Boltzmann Machines (RBMs), Introduction to MCMC and Gibbs Sampling, gradient computations in RBMs, Deep Boltzmann Machines. • Convolutional Neural Networks: LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet, Visualizing Convolutional Neural Networks, Guided Back propagation, Deep Dream, Deep Art, Fooling Convolutional Neural Networks. • Auto Encoders • Deep Reinforcement Learnin
<b>UNIT 5</b>	<b>Convolutional Neural Network:</b> Basic structure of Convolutional Network, Case studies: Alex net, VGGNet, GoogLeNet, Applications of CNN

 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

<b>MCO 089B</b>	<b>Pattern Recognition Lab</b>	<b>0-0-2</b>
-----------------	--------------------------------	--------------

### Course Objectives:

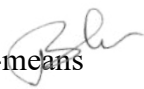

- To introduce the most important concepts, techniques, and algorithms • Assess and understand the challenges behind the design of machine vision systems.
- Understand the general processes of image acquisition, storage, enhancement, segmentation, representation, and description.
- Implement filtering and enhancement algorithms for monochrome as well as color images.

### Course Outcomes:

- CO1. To implement efficient algorithms for nearest neighbour classification, Linear Discriminate Function
- CO2. Able to identify the strengths and weaknesses of different types of classifiers & implement them on simple applications.
- CO3. Validate and assess and implement different clustering techniques
- CO4. Be able to combine various classifiers using fixed rules or trained combiners and boost their performance
- CO5. Understand the possibilities and limitations in implementation of pattern recognition techniques to different applications

### Course Contents: Exercises that must be done in this course are listed below:

- Lab 1. Implement a function for extracting the colour histogram of an image.
- Lab 2. Read all the images from the training set. For each image compute the colour histogram with general bin size  $m$  and save it as a row in the feature matrix  $X$ . Save the corresponding class label in the label vector  $y$ .
- Lab 3. Implement the  $k$ -NN classifier for an unknown image and for a general  $K$  value. Evaluate the classifier on the test set by calculating the confusion matrix and the overall accuracy.
- Lab 4. Try out different values for the number of bins for the histogram and the parameter  $K$  to see which feature attains the best performance. Convert the input image into Luv or HSV color-space before histogram calculation.
- Lab 5. Data visualization, central limit theorem, multivariate normal distribution, data whitening, non-parametric
- Lab 6. Implement Hierarchical clustering,  $k$ -means, fuzzy c-means
- Lab 7. Implementation of Bayesian classifier,  $k$ -NN classifier
- Lab 8. Linear regression, MMSE, MAP, MLE, quality measures
- Lab 9. Apply various dimensionality reduction methods whether through feature selection or feature extraction. Assess classifier complexity and regularization parameters

  
 Head  
 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

Lab 10. Combine various classifiers using fixed rules or trained combiners and boost their performance using some test data set from real world

Head  
Department of Computer Science & Engineering  
IECRC University Jaipur-303905

<b>MCO 120A</b>	<b>Artificial Neural Network and Deep Learning Lab</b>	<b>0-0-2</b>
-----------------	--	--------------

### Course Objectives:

At the end of the course

- The students should be able to design and implement machine learning solutions
- Understand classification, regression, and clustering problems;
- Able to evaluate and interpret the results of the algorithms.

### Course Outcomes:

CO1. Create a custom feed-forward network.

CO2. Design Constructing Layers and Setting Transfer Functions

CO3. Implement Discriminative Learning models: Logistic Regression, Perceptrons, Artificial Neural Networks.

### List of Experiments

Lab 1. Create a custom feed-forward network .It consists of the following sections:

Constructing Layers , Connecting Layers , Setting Transfer Functions, Weights and Biases , Training Functions & Parameters , Performance Functions , Train Parameters

Lab 2. Write a program to plot various membership functions.

Lab 3. Generate AND, NOT function using McCulloch-Pitts neural net program.

Lab 4. Generate XOR function using McCulloch-Pitts neural net.

Lab 5. Write a program for Perceptron net for an AND function with bipolar inputs and targets

Lab 6. Write a program of Perceptron Training Algorithm

Lab 7. Write a program of Back Propagation Algorithm.

Lab 8. Implement ANN and compare , regularization, overfitting, underfitting and drop out

**Lab 9.** Implement Convolutional Neural Networks (CNNs) and overcome overfitting with dropout.

**Lab 10.** Implement Convolutional Neural Networks (CNNs) for Object detection

 Department of Computer Science & Engineering  
 JECRC University Jaipur-303905

# Artificial Intelligence

## Program Elective 5

MCO 121A	Application of Artificial Intelligence in Industries	3-0-0
----------	--	-------

### Course Objectives

- Able to apply the concept of Artificial intelligence in various sectors
- Familiarize with applications of Artificial intelligence in banking applications.
- Appreciate the various applications in Communication and Education Industry.
- Identify the applications in Health care and Government sectors.
- Recognize the applications in Manufacturing industry and Transportations.

Module 1:	<b>AI in Banking :</b> Use of AI in banking and finance, Fraud detection, , Risk modeling and investment banks, Customer data management, Decreased customer experience and loyalty, Personalized marketing, Role of machine learning: Challenges of banking sector and securities, Widely used machine learning algorithms in banking and security, Fraud prevention and detection systems, Rule based and machine learning based approach in fraud detection, Anomaly detection: Ways to expose suspicious transactions in banks, Advanced fraud detection systems, Risk management systems, Current challenges and opportunities: Banking and security domain.
Module 2:	<b>AI in Communication, Media &amp; Healthcare:</b> Usage of AI in media and entertainment industry, Machine learning techniques for customer sentiment analysis, Real-time analytics in communication, Real time analytics and social media, Recommendations engines. The most important applications of machine learning in healthcare, Role of machine learning in drug discovery, Medical image analysis, Why deep learning for medical image analysis and Predictive medicine: Prognosis and diagnostics accuracy, Predictive medicine
Module 3:	<b>AI in Education &amp; Manufacturing:</b> Advantages of AI in education, learning analytics, Academic analytics, Action research, Educational data mining, Personalized adaptive learning, Learning analytics process, Case study: Application of ML in predicting students' performance. Applications in manufacturing industry, Deep learning for smart manufacturing, Machine learning for quality control in manufacturing, Case study, Construction of CNN, Experimental results, Efficiency of CNN for defect detection, Comparative experiments, Machine learning for fault assessment, Machinery failure prevention technology.

Module 4:	<b>AI in Government Administration:</b> Type of government problems appropriate for AI applications, AI for citizen services use cases, Answering questions, Routing requests, Translation, Drafting documents, Chat bots for communication between citizen and government, Media richness theory, Chatbots in the public sector, Case study, Data management services, Knowledge processing services, Application services.
Module 5:	<b>AI in Transportation &amp; Energy Sector:</b> Applications of ML and artificial intelligence in transportation, Incident detection, Predictive models, Application of AI in aviation and public transportation, Aviation, Shared mobility, Buses, Intelligent urban mobility, Autonomous vehicles, Autonomous transportation, Artificial intelligence use cases in logistics, Back office AI, Cognitive customs, Predictive logistics, Predictive risk management, Seeing thinking and speaking logistics operations, ML powered customer experience, Limitations of AI techniques in transportation, AI in Smart grid technologies, Key characteristics of smart grid, Machine learning applications in smart grid, Machine learning techniques for renewable energy generation, Forecasting etc Case studies

### Course Outcomes

- CO1. Familiarize, compare and analyze the role of AI in banking applications
- CO2. Analyze the applications in Media and Health care Industry
- CO3. Appreciate the various applications in manufacturing industry and Education sectors.
- CO4. Identify the problems in public sectors and role of AI in the solutions
- CO5. Recognize the applications and challenges in Transportation and Energy Sectors

## Cloud Computing Program Elective 1

<b>MCO 024B</b>	<b>Grid Computing</b>	<b>3-0-0</b>
-----------------	-----------------------	--------------

**Objective: The objectives of this course are to:**

1. Introduce a thorough understanding of Grid Computing concepts and how these can be applied in cloud computing.
2. Discuss and understand the Architecture and Applications of Grid Computing.
3. Develop the understanding of designing Grid Computing enabled software applications.

<b>UNIT 1:</b>	<b>Grid Computing:</b> values and risks – History of Grid computing, Grid computing model and protocols, Overview and types of Grids.
<b>UNIT 2:</b>	<b>Desktop Grids :</b> Background, Definition, Challenges, Technology, Suitability, Grid server and practical uses, Clusters and Cluster Grids, HPC Grids, Scientific in sight, Application and Architecture, HPC application, Development Environment and HPC Grids, Data Grids, Alternatives to Data Grid, Data Grid architecture.
<b>UNIT 3:</b>	<b>The open Grid services Architecture,</b> Analogy, Evolution, Overview, Building on the OGSA platform, Implementing OGSA based Grids, Creating and Managing services, Services and the Grid, Service Discovery, Tools and Toolkits, Universal Description Discovery and Integration .
<b>UNIT 4:</b>	<b>Desktop Supercomputing,</b> Parallel Computing, Parallel Programming Paradigms, Problems of Current parallel Programming Paradigms, Desktop Supercomputing Programming Paradigms, Parallelizing Existing Applications, Grid Enabling Software Applications, Needs of the Grid users, methods of Grid Deployment, Requirements for Grid enabling Software, Grid Enabling Software Applications.
<b>UNIT 5:</b>	Application integration, Application classification, Grid requirements, Integrating applications with Middleware platforms, Grid enabling Network services, Managing Grid environments, Managing Grids, Management reporting, Monitoring, Data catalogs and replica management, Portals, Different application areas of Grid computing.

### Course outcomes:

At the end of the course, the student should be able to:

- CO1. Compare modern concepts of Grid Computing.
- CO2. Analyse and understand the challenges in creating and managing Grid service Architecture.
- CO3. Build understanding of parallel and supercomputing programming paradigms.
- CO4. Integrate applications with middleware platforms.

# Cloud Computing

## Program Elective 1

<b>MCO 104B</b>	<b>Cloud Security: Course Outlines</b>	<b>3-0-0</b>
-----------------	--	--------------

**Objective: The objectives of this course are to:**

1. Introduce a thorough understanding of cloud security concepts and how these can be applied in the cloud computing.
2. Discuss and understand the legal and compliance issues for cloud provider and compliance for the cloud consumer.
3. Develop the understanding in designing backup/recovery, data replication solutions and tools that will serve to build, configure, protect, troubleshoot and manage the virtual resources in virtual environment.

<b>Unit I</b>	SECURITY CONCEPTS: Confidentiality, privacy, integrity, authentication, non-repudiation, availability, access control, defence in depth, least privilege, how these concepts apply in the cloud, what these concepts mean and their importance in PaaS, IaaS and SaaS. e.g. User authentication in the cloud; Cryptographic Systems- Symmetric cryptography, stream ciphers, block ciphers, modes of operation, public-key cryptography, hashing, digital signatures, public-key infrastructures, key management, X.509 certificates, OpenSSL.
<b>Unit II</b>	MULTI-TENANCY ISSUES: Isolation of users/VMs from each other. How the cloud provider can provide this; Virtualization System Security Issues- e.g. ESX and ESXi Security, ESX file system security, storage considerations, backup and recovery; Virtualization System Vulnerabilities- Management console vulnerabilities, management server vulnerabilities, administrative VM vulnerabilities, guest VM vulnerabilities, hypervisor vulnerabilities, hypervisor escape vulnerabilities, configuration issues, malware (botnets etc).
<b>Unit III</b>	VIRTUALIZATION SYSTEM-SPECIFIC ATTACKS: Guest hopping, attacks on the VM (delete the VM, attack on the control of the VM, code or file injection into the virtualized file structure), VM migration attack, hyperjacking.
<b>Unit IV</b>	TECHNOLOGIES FOR VIRTUALIZATION-BASED SECURITY ENHANCEMENT: IBM security virtual server protection, virtualization-based sandboxing; Storage Security- HIDPS, log management, Data Loss Prevention. Location of the Perimeter.
<b>Unit V</b>	LEGAL AND COMPLIANCE ISSUES: Responsibility, ownership of data, right to penetration test, local law where data is held, examination of modern Security Standards (eg PCIDSS), how standards deal with cloud services and virtualization, compliance for the cloud provider vs. compliance for the customer.

### Course outcomes:

At the end of the course, the student should be able to:

- CO5. Compare modern security concepts as they are applied to cloud computing
- CO6. Assess the security of virtual systems.
- CO7. Evaluate the security issues related to multi-tenancy,
- CO8. Appraise compliance issues that arise from cloud computing

## Cloud Computing Program Elective 2

MCO 105A	Managing Virtual Environment: Course Outlines	3-0-0
----------	---	-------

### Objective: The objectives of this course are to:

1. Familiarize student about the role and applications of virtual environment in cloud computing.
2. Incorporate the knowledge of advanced technologies to configure, manage and secure virtual resources.
3. Develop the concepts and tools that will serve to build, configure, protect, troubleshoot and manage the virtual resources in virtual environment.

UNIT I	PERFORMANCE MANAGEMENT IN A VIRTUAL ENVIRONMENT : Management techniques, methodology and key performance metrics used to identifying CPU, memory, network, virtual machine and application performance bottlenecks in a virtualized environment.
UNIT II	CONFIGURATION AND CHANGE MANAGEMENT : Configuration and change management goals and guidelines, tools and technologies in virtualized environments
UNIT III	SECURE VIRTUAL NETWORKING : Configuration and change management goals and guidelines, tools and technologies in virtualized environments; Virtual network security architecture, network segmentation and traffic isolation to secure a virtual network configuration
UNIT IV	PROTECTING THE MANAGEMENT ENVIRONMENT: Server authentication, authorization, and accounting, SSL certificates, server hardening; Protecting the host system: security architecture, controlling access to storage, hardening hosts, Hardening virtual machines; Virtual machine security architecture, security parameters; Protecting the host and virtual machine systems using server authentication, authorization, and accounting techniques.
UNIT V	TROUBLESHOOTING VIRTUAL ENVIRONMENTS: Interpreting host, network, storage, cluster and virtual machine log files. Network troubleshooting, traffic sniffing, storage access problems, iSCSI authentication and digests. Virtual machine migration, cluster errors with shares, pools, and limits; Command line interfaces and syntax, interpreting host, network, storage, cluster, virtual machine log files and network traces.

### Course Outcomes: Through this course students should be able to:

CO1: Identify and explain basic concepts and key performance matrices of virtualized computing resources.

CO2: Build understanding of statistics involved in virtual network security architecture and its configuration.

CO3: Formulate the core issues in troubleshooting and protecting virtual environment such as authentication, 10 authorization, privacy, and interoperability.

CO4: Solve common problems that can be encountered during virtual machine and virtual storage migration.

**Mapping course outcomes leading to the achievement of program outcomes and program specific outcomes:**

## Cloud Computing Program Elective 3

<b>MCO 102A</b>	<b>Cloud Storage Infrastructure: Course Outlines</b>	<b>3-0-0</b>
-----------------	--	--------------

**Objective: The objectives of this course are to:**

1. Incorporate a thorough understanding of virtualized data-center architecture, services, interface, and environment in student.
2. Familiarize student about the security regulations and governance in designing secure storage in virtualized and cloud environment.
3. Develop the understanding in designing backup/recovery, data replication solutions and tools that will serve to build, configure, protect, troubleshoot and manage the virtual resources in virtual environment.

<b>UNIT I</b>	<b>VIRTUALIZED DATA CENTER ARCHITECTURE:</b> Cloud infrastructures; public, private, hybrid. Service provider interfaces; SaaS, PaaS, IaaS. VDC environments; concept, planning and design, business continuity and disaster recovery principles. Managing VDC and cloud environments and infrastructures.
<b>UNIT II</b>	<b>INFORMATION STORAGE SECURITY &amp; DESIGN:</b> Storage strategy and governance; security and regulations. Designing secure solutions; the considerations and implementations involved. Securing storage in virtualized and cloud environments. Monitoring and management; security auditing and SIEM.
<b>UNIT III</b>	<b>STORAGE NETWORK DESIGN:</b> Architecture of storage, analysis and planning. Storage network design considerations; NAS and FC SANs, hybrid storage networking technologies (iSCSI, FCIP, FCoE), design for storage virtualization in cloud computing, host system design considerations.
<b>UNIT IV</b>	<b>OPTIMIZATION OF CLOUD STORAGE:</b> Global storage management locations, scalability, operational efficiency. Global storage distribution; terabytes to petabytes and greater. Policy based information management; metadata attitudes; file systems or object storage.
<b>UNIT V</b>	<b>INFORMATION AVAILABILITY DESIGN:</b> Designing backup/recovery solutions to guarantee data availability in a virtualized environment. Design a replication solution, local remote and advanced. Investigate Replication in NAS and SAN environments. Data archiving solutions; analyzing compliance and archiving design considerations.

### Outcomes:

At the end of the course, the student should be able to:

- CO1. Identify the philosophy, architecture, and practical use of virtualized data-center in cloud computing environment.
- CO2. Present fundamental skills, and techniques in optimization of cloud storage.
- CO3. Solve common problems that can be encountered during design and setup of backup/recovery and replication solutions virtualized environment.
- CO4. Build understanding of key privacy concerns in storage strategy and governance, security and regulations in cloud security management.

1. Mapping course outcomes leading to the achievement of program outcomes and program specific outcomes:

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

## Cloud Computing Program Elective 4

MCO 011A	Cloud Computing: Course Outlines	3-0-2
----------	----------------------------------	-------

### Course Objective:

5. To familiarize the philosophy, power, practical use of cloud.
6. To introduce fundamental principles, technology, and techniques of CC
7. To Discuss common problems that can be best solved with/in cloud
8. To Eliminate misconceptions about cloud computing

Module 1:	Understanding cloud computing: Introduction to Cloud Computing - Benefits and Drawbacks - Types of Cloud Service Development - Deployment models
Module 2:	Cloud Architecture Technology and Architectural Requirements: The Business Case for Clouds - Hardware and Infrastructure – Accessing the cloud – Cloud Storage – Standards- Software as a Service – Discovering Cloud Services Development tools. Three Layered Architectural Requirement - Provider Requirements
Module 3:	Service Centric Issues - Interoperability - QoS - Fault Tolerance - Data Management Storage and Processing - Virtualization Management - Scalability - Load Balancing - Cloud Deployment for Enterprises - User Requirement - Comparative Analysis of Requirement.
Module 4:	Security Management in Cloud: Security Management Standards - Security Management in the Cloud Availability Management - SaaS Availability Management - PaaS Availability Management - IaaS Availability Management - Access Control - Security Vulnerability, Patch, and Configuration Management – Privacy in Cloud- The Key Privacy Concerns in the Cloud - Security in Cloud Computing.
Module 5:	Virtualization: Objectives - Benefits - Virtualization Technologies - Data Storage Virtualization – Storage Virtualization – Improving Availability using Virtualization - Improving Performance using Virtualization-Improving Capacity using Virtualization.

### **Outcomes:**

At the end of the course, the student should be able to:

CO1: Identify the philosophy, power, and practical use of cloud.

CO2: Present fundamental principles, technology, and techniques of CC

CO3: Solve common problems that can be encountered during setup of virtual server and storage.

CO4: Build understanding of key privacy concerns in cloud security management.

## Cloud Computing Program Elective 5

<b>MCO 114B</b>	<b>Design and Development of Cloud Application: Course Outlines</b>	<b>3-0-2</b>
-----------------	---	--------------

**Objective: The objectives of this course are to:**

1. Incorporate the knowledge of functional design, tools and technology decisions in developing cloud applications.
2. Describe the working of third party APIs and their interconnectivity in cloud ecosystems.
3. Develop the conceptual thinking in designing Use Case to develop and deploy an advanced cloud application using framework and platform of choice to demonstrate an understanding of database,

<b>UNIT 1</b>	DESIGNING CLOUD BASED APPLICATIONS: Role of business analyst, requirements gathering, UML, use of state diagrams, wire frame prototypes, use of design tools such as Balsamiq. Selecting front end technologies and standards, Impact of growth in mobile computing on functional design and technology decisions
<b>UNIT 2</b>	CLOUD APPLICATION DEVELOPMENT: Technical architecture considerations – concurrency, speed and unpredictable loads. Agile development, team composition (including roles/responsibilities), working with changing requirements and aggressive schedules. Understanding Model View Controller (MVC). Advanced understanding of “views”, location, and the presentation layer: Advanced Ajax and JQuery. Presenting to different browsers and devices. Localization and internationalization; Understanding client location and device type. Mobile application development – Android, iOS, WP, RIM, Symbian
<b>UNIT 3</b>	STORING OBJECTS IN THE CLOUD Session management. Advanced database techniques using MySQL and SQL Server, blob storage, table storage. Working with Third Party APIs: Overview of interconnectivity in cloud ecosystems. Working with Twitter API, Flickr API, Google Maps API. Advanced use of JSON and REST.
<b>UNIT 4</b>	CLOUD APPLICATIONS AND SECURITY ISSUES: Understanding cloud based security issues and threats (SQL query injections, common hacking efforts), SSL, encrypted query strings, using encryption in the database. Authentication and identity. Use of OAuth. OpenID; Understanding QA and Support: Common support issues with cloud apps: user names and passwords, automated emails and spam, browser variants and configurations. Role of developers in QA cycle. QA techniques and technologies. Use of support forums, trouble ticketing.
<b>UNIT 5</b>	USE CASES: Design, develop and deploy an advanced cloud app using framework and platform of choice to demonstrate an understanding of database, presentation and logic. Application should demonstrate integration with third party API, sensitivity to geography of user (language, currency, time and date format), authentication of user, security, and awareness of client device/browser. Case Studies: Salesforce, Basecamp, Xero.com, Dropbox

**Course outcomes:**

At the end of the course, the student should be able to:

CO1 : Design and develop MVC inspired cloud based application.

CO2 : Assess the security issues and threat using encryption in cloud based database.

CO3 : Demonstrate the integration of cloud application of with third party API.

CO4 : Compare different architecture, frameworks and modern technologies in cloud based application development.

**Mapping course outcomes leading to the achievement of program outcomes and program specific outcomes:**

**Data Analytics**  
**Program Elective 1**

<b>MCO 127A</b>	<b>Advance Data Mining</b>	<b>3-0-0</b>
-----------------	----------------------------	--------------

**Pre-requisite** NIL

**Course Objectives**

1. Study the sequential patterns algorithms
2. Study the patterns from time series data.
3. Study the Temporal Patterns algorithms
4. Analysis of computing frameworks for Big Data analytics.

**Syllabus**

Unit 1	Sequential Pattern Mining concepts, primitives, scalable methods; Transactional Patterns and other temporal based frequent patterns, Mining Time series Data, Periodicity Analysis for time related sequence data, Trend analysis, Similarity search in Time-series analysis;
Unit 2	Mining Data Streams, Methodologies for stream data processing and stream data systems, Frequent pattern mining in stream data, Sequential Pattern Mining in Data Streams, Classification of dynamic data streams, Class Imbalance Problem; Graph Mining, Mining frequent subgraphs, finding clusters, hub and outliers in large graphs, Graph Partitioning;
Unit 3	Web Mining, Mining the web page layout structure, mining web link structure, mining multimedia data on the web, Automatic classification of web documents and web usage mining;
Unit 4	Distributed Data Mining, Distributed data mining framework, Distributed data source, Distributed data mining techniques, Distributed classifier learning, distributed clustering, distributed association rule mining and Challenges of distributed data mining;
Unit 5	Social Network Analysis, characteristics of social Networks.

Head  
Department of Computer Science and Engineering  
JECRC University Jaipur-303905

**Course Outcomes:** At the end of the course the student will be able to:

- CO1 Analyze Algorithms for sequential patterns.  
 CO2 Extract patterns from time series data.  
 CO3 Develop algorithms for Temporal Patterns.  
 CO4 Identify computing frameworks for Big Data analytics.  
 CO5 Extend the Graph mining algorithms to Web Mining.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES**

## Data Analytics

### Program Elective 2

<b>MCO 122A</b>	<b>Domain Specific Predictive Analytics</b>	<b>3-0-0</b>
-----------------	---	--------------

**Pre-requisite NIL**

### Course Objectives

1. It introduces theoretical foundations, algorithms, methodologies for analysing data in various domains such Retail, Finance, Risk and Healthcare.

<b>UNIT 1</b>	<b>Retail Analytics</b> Understanding Customer Profiling and Segmentation, Modelling Churn. Modelling Lifetime Value, Modelling Risk, Market Basket Analysis. <b>Risk Analytics</b> Risk Management and Operational Hedging An Overview, Supply Chain Risk Management, A Bayesian Framework for Supply Chain Risk Management, Credit Scoring and Bankruptcy Prediction
<b>UNIT 2</b>	<b>Financial Data Analytics</b> Financial News analytics Framework, techniques, and metrics, News events impact market sentiment, Relating news analytics to stock returns <b>Financial Time Series Analytics</b> Financial Time Series and Their Characteristics, Common Financial Time Series models, Autoregressive models, Markov chain models, Time series models with leading indicators, Long term forecasting
<b>UNIT 3</b>	<b>Introduction HealthcareAnalytics</b> An Introduction to Healthcare Data Analytics, Electronic Health Records, Privacy-Preserving Data Publishing Methods in Healthcare, Clinical Decision Support Systems
<b>UNIT 4</b>	<b>Healthcare Data Analytics</b> Natural Language Processing and Data Mining for Clinical Text Core NLP Components, Information Extraction and Named Entity Recognition, Social Media Analytics for Healthcare Tracking of Infectious Disease Outbreaks, Readmission risk Prediction
<b>UNIT 5</b>	<b>Genomic Data Analytics</b> Microarray Data, Microarray Data Analysis, Genomic Data Analysis for Personalized Medicine, Patient Survival Prediction from Gene Expression Data, Genome Sequence Analysis

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

### Course Outcome

CO1.Recognize challenges in dealing with data sets in domains such as finance, risk and healthcare.

CO2. Identify real-world applications of machine learning in domains such as finance, risk and healthcare.

CO3.Identify and apply appropriate algorithms for analyzing the data for variety of problems in finance, risk and healthcare.

CO4.Make choices for a model for new machine learning tasks based on reasoned argument

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

## Data Analytics Program Elective 2

MCO 123A	Exploratory Data Analysis	3-0-0
----------	---------------------------	-------

### Course Objectives

- 1.This course introduces the methods for data preparation and data understanding.
- 2.It covers essential exploratory techniques for understanding multivariate data by summarizing it through statistical methods and graphical methods.
- 3.Supports to Summarize the insurers use of predictive analytics, data science and Data Visualization

<b>UNIT 1</b>	<b>Introduction To Exploratory Data Analysis:</b> Data Analytics lifecycle, Exploratory Data Analysis(EDA) Definition, Motivation, Steps in data exploration, The basic data types Data Type Portability
<b>UNIT 2</b>	<b>Preprocessing-Traditional Methods And Maximum Likelihood Estimation</b> Introduction to Missing data, Traditional methods for dealing with missing data, Maximum Likelihood Estimation – Basics, Missing data handling, Improving the accuracy of analysis <b>Preprocessing Bayesian Estimation</b> Introduction to Bayesian Estimation, Multiple Imputation-Imputation Phase, Analysis and Pooling Phase, Practical Issues in Multiple Imputation, Models for Missing Notation Random Data
<b>UNIT 3</b>	<b>Data Summarization &amp; Visualization</b> Statistical data elaboration, 1-D Statistical data analysis, 2-D Statistical data Analysis, ND Statistical data analysis
<b>UNIT 4</b>	<b>Outlier Analysis</b> Introduction, Extreme Value Analysis, Clustering based, Distance Based and Density Based outlier analysis, Outlier Detection in Categorical Data
<b>UNIT 5</b>	<b>Feature Subset Selection</b> Feature selection algorithms filter methods, wrapper methods and embedded methods, Forward selection backward elimination, Relief, greedy selection, genetic algorithms for features election <b>Dimensionality Reduction</b> Introduction, Principal Component Analysis(PCA), Kernel PCA, Canonical Correlation Analysis, Factor Analysis, Multi dimensional scaling, Correspondence Analysis

Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

### Course Outcome

CO1.Handle missing data in the real world data sets by choosing appropriate methods.

CO2.Summarize the data using basic statistics. Visualize the data using basic graphs and plots. CO3.Identify the outliers if any in the data set.

CO4.Choose appropriate feature selection and dimensionality reduction

CO5.Techniques for handling multi-dimensional data

## Data Analytics

### Program Elective 3

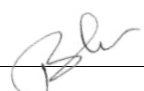

MCO 124A	BIG DATA FRAMEWORKS	3-0-1
----------	---------------------	-------

Pre-requisite NIL

### Course Objectives

1. To understand the need of Big Data, challenges and different analytical architectures
2. Installation and understanding of Hadoop Architecture and its ecosystems
3. Processing of Big Data with Advanced architectures like Spark.
4. Describe graphs and streaming data in Spark Expected

<b>UNIT 1</b>	<b>Introduction To Big Data</b> Data Storage and Analysis - Characteristics of Big Data – Big Data Analytics - Typical Analytical Architecture – Requirement for new analytical architecture – Challenges in Big Data Analytics – Need of big data frameworks
<b>UNIT 2</b>	<b>Hadoop Framework</b> - Hadoop – Requirement of Hadoop Framework - Design principle of Hadoop –Comparison with other system - Hadoop Components – Hadoop 1 vs Hadoop 2 – Hadoop Daemon's – HDFS Commands – Map Reduce Programming I/O formats, Map side join, Reduce Side Join, Secondary sorting, Pipelining MapReduce jobs
<b>UNIT 3</b>	<b>Hadoop Ecosystem</b> Introduction to Hadoop ecosystem technologies Serialization AVRO, Co-ordination Zookeeper, Databases HBase, Hive, Scripting language Pig, Streaming Flink, Storm
<b>UNIT 4</b>	<b>Spark Framework</b> Introduction to GPU Computing, CUDA Programming Model, CUDA API, Simple Matrix, Multiplication in CUDA, CUDA Memory Model, Shared Memory Matrix Multiplication, Additional CUDA API Features <b>Data Analysis with Spark Shell</b> Writing Spark Application - Spark Programming in Scala, Python, R, Java - Application Execution
<b>UNIT 5</b>	<b>Spark SQL and GraphX</b> SQL Context – Importing and Saving data – Data frames – using SQL – GraphX overview – Creating Graph – Graph Algorithms <b>Spark Streaming</b> Overview – Errors and Recovery – Streaming Source – Streaming live data with spark

  
Head  
Department of Computer Science & Engineering  
JECRC University Jaipur-303905

## Course Outcome

1. Discuss the challenges and their solutions in Big Data
2. Understand and work on Hadoop Framework and eco systems and Explain and Analyse the Big Data using Map-reduce programming in Both Hadoop and Spark framework.
3. Demonstrate spark programming with different programming languages.
4. Demonstrate the graph algorithms and live streaming data in Spark
5. Analyse and implement different frame work tools by taking sample data sets.

## Data Analytics

### Program Elective 4

<b>MCO 125A</b>	<b>Advance Python Programming for Data Analytics</b>	<b>3-0-1</b>
-----------------	--	--------------

### Prerequisites

Basic Knowledge of Python Programming

### Course Objectives

The course should enable the students

1. Describe the semantics of Python programming language and Illustrate the process of structuring the data using lists, dictionaries, tuples, strings and sets.
2. Illustrate the Object-oriented Programming concepts in Python.
3. Demonstrate the basic database design for storing data as part of a multi-step data gathering, analysis, and processing.
4. Familiarize the basics of machine learning using an approachable, and also understand the advantage of using Python libraries for implementing Machine Learning models.

### SYLLABUS

<b>UNIT-1</b>	<b>Introduction to Python</b> , use IDLE to develop programs, Basic coding skills, working with data types and variables, working with numeric data, working with string data, Python functions, Boolean expressions, selection structure, iteration structure, working with lists, work with a list of lists, work with tuples, work with dates and times, get started with dictionaries
<b>UNIT-2</b>	<b>Classes in Python</b> OOPS Concepts, Classes and objects , Classes in Python, Constructors, Data hiding, Creating Classes, Instance Methods, Special Methods, Class Variables, Inheritance, Polymorphism, Type Identification, Custom Exception Classes, Iterators, generators and decorators.
<b>UNIT-3</b>	<b>I/O and Error Handling In Python</b> Introduction, Data Streams, Creating Your Own Data Streams, Access Modes, Writing Data to a File, Reading Data From a File, Additional File Methods, Handling IO Exceptions, Errors, Run Time Errors, The Exception Model, Exception Hierarchy, Handling Multiple Exceptions, Working with Directories.
<b>UNIT-4</b>	<b>An Introduction to relational databases</b> SQL statements for data manipulation, Using SQLite Manager to work with a database, Using Python to work with a database, Creating a GUI that handles an event, working with components.
<b>UNIT-5</b>	<b>Implement Machine Learning algorithms</b> Usage of Numpy for numerical Data, Usage of Pandas for Data Analysis, Matplotlib for Python plotting, Seaborn for Static plots, interactive Dynamic visualizations, SciKit for Machine learning.

## Course Outcomes

CO1 Interpret the basic principles of Python programming language

CO2 Articulate the Object-Oriented Programming concepts such as encapsulation, inheritance and polymorphism as used in Python

CO3 Identify the commonly used operations involving file systems and regular expressions.

CO4 Implement database and GUI applications

CO5 Implement Machine Learning algorithms

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

## Data Analytics Program Elective 5

<b>MCO 126A</b>	<b>Text, Web and Social Media Analytic</b>	<b>3-0-0</b>
-----------------	--	--------------

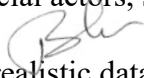

### Course Objectives

1. To provide an overview of common text mining and social media data analytic activities.
2. To understand the complexities of processing text and network data from different datasources.
3. To enable students to solve complex real-world problems for sentiment analysis and Recommendation systems.

<b>UNIT 1</b>	<b>Introduction to Text Mining</b> Text Representation- tokenization, stemming, stop words, TF-IDF, Feature Vector Representation, NER,N-gram modeling.
<b>UNIT 2</b>	<b>Mining Textual Data</b> Text Clustering, Text Classification, Topic Modeling-LDA,HDP
<b>UNIT 3</b>	<b>Introduction to Web-Mining</b> Inverted indices and Boolean queries.PLSI,Query optimization,pageranking. <b>Web Usage Web content Mining</b> Essentials of Social graphs,Social Networks,Models,Information Diffusion in Social Media.
<b>UNIT 4</b>	<b>Introduction to Social Media Network</b> Mining Social Media,Behavioral Analytics, Influence and Homophily,Recommendation in Social Media <b>Sentimental Mining</b> Sentiment Classification ,feature based opinion mining, comparative sentence and relational mining, Opinion spam.
<b>UNIT 5</b>	<b>Recent Threads</b> : Recent Trends in Text, Web and Social Media Analytics

### Course Outcome

1. Interpret the terminologies, metaphors and perspectives of social media analytics.
2. Apply a wide range of classification, clustering, estimation and prediction algorithms on Textual data.
3. Perform social network analysis to identify important social actors, subgroups and network properties in social media sites.
4. Apply state of the art web mining tools and libraries on realistic data sets as a basis for business decisions and applications.
5. Provide solutions to the emerging problems with social media such as behaviour analytics and Recommendation systems.

# **SYLLABUS**

## **Engineering Workshop (ELECTRICAL AND ELECTRONICS MODULE) (DEL010B)**

CODE- DEL010B	<b>ENGINEERING WORKSHOP (MODULE OF ELECTRONICS)</b>	0-0-2
------------------	---	-------

Experiment 01 ( ON VIRTUAL LAB)	Electronics Work Bench Software-Designing of Electronic Circuits and PCB designing using software.  <b>LINK FOR VIRTUAL LAB:</b> <a href="http://vlabs.iitkgp.ac.in/be/exp5/index.html"><u>http://vlabs.iitkgp.ac.in/be/exp5/index.html</u></a>
Experiment 02	Breadboard Circuit Designing -Circuit designing and to determine static resistance and dynamic resistance of p-n junction diode and plot the-I characteristics.
Experiment 03	PCB Designing: (a) Artwork & printing of a simple PCB. (b) Etching & drilling of PCB.
Experiment 04	C.R.O and Function Generator –To Generate a sine wave using a function generator and measure its amplitude and frequency using C.R.O.
Experiment 05	Digital Multimeter-Measurement of AC and DC voltage, current, capacitance and resistance using Digital Multimeter
Experiment 06 ( ON VIRTUAL LAB)	Generation of output waveform of half wave rectifier with and without filter capacitor and measure DC voltage, DC current, ripple factor with and without filter capacitor.  <b>LINK FOR VIRTUAL LAB:</b> <a href="http://vlabs.iitkgp.ac.in/be/exp6/index.html"><u>http://vlabs.iitkgp.ac.in/be/exp6/index.html</u></a>
Experiment 07 ( ON VIRTUAL LAB)	Generation of output waveform of full wave rectifier with and without filter capacitor and measure DC voltage, DC current, ripple factor with and without filter capacitor.  <b>LINK FOR VIRTUAL LAB:</b> <a href="http://vlabs.iitkgp.ac.in/be/exp7/index.html"><u>http://vlabs.iitkgp.ac.in/be/exp7/index.html</u></a>
Experiment 08	Designing of Bridge rectifier with and without filter capacitor and measure DC

  
**Head**  
 Department of Electronics & Communication Engineering  
 JECRC University, Jaipur-303905

	voltage, DC current, ripple factor with and without filter capacitor.
Experiment 09	Design a half wave rectifier using discrete components on a breadboard and measure DC voltage, DC current, ripple factor, with and without filter capacitor
Experiment 10	Design full wave rectifier using discrete components on a breadboard and measure DC voltage, DC current, ripple factor with and without filter capacitor.

### **IOT (INTERNET OF THINGS ) LAB EXPERIMENTS**

Experiment 1	Familiarization with Arduino/Raspberry Pi and perform necessary software installation.
Experiment 2	To interface LED/Buzzer with Arduino/Raspberry Pi and WAP{ to turn ON LED for 1 Sec after every 2 seconds.
Experiment 3	To interface Push button/Digital sensor (IR/LDR) with Arduino/Raspberry Pi and WAP to turn ON LED when push button is pressed or at sensor detection.
Experiment 4	To interface DHT11 sensor with Arduino/Raspberry Pi and WAP to print temperature and humidity readings.
Experiment 5	To interface motor using relay with Arduino/Raspberry Pi and WAP turn ON motor when push button is pressed.
Experiment 6	To interface OLED with Arduino/Raspberry Pi and WAP to print temperature and humidity readings on it.
Experiment 7	To interface Bluetooth with Arduino/Raspberry Pi and WAP to send sensor data to smartphone using Bluetooth.
Experiment 8	To interface Bluetooth with Arduino/Raspberry Pi and WAP to turn LED ON/OFF when '1'/'0' is received from smartphone using Bluetooth.
Experiment 9	Write a program on Arduino/Raspberry Pi to upload temperature and humidity data from thingspeak cloud
Experiment 10	Write a program on Arduino/Raspberry Pi to retrieve temperature and humidity data from thingspeak cloud.
Experiment 11	To install MySQL database on Raspberry Pi and perform basic SQL queries.
Experiment 12	Write a Program on Arduino/Raspberry Pi to publish temperature data to MQTT broker.
Experiment 13	Write a Program on Arduino/Raspberry Pi to subscribe to MQTT broker for temperature data and print it.
Experiment 14	Write a program to create TCP server on Arduino/Raspberry Pi and respond with humidity data to TCP client when requested.
Experiment 15	Write a Program to create UDP server on Arduino/Raspberry Pi and respond with humidity data to UDP client when requested.

  
**Head**  
 Department of Electronics & Communication Engineering  
 JECAC University Jaipur-303905

## ENGINEERING WORKSHOP (MODULE OF ELECTRICAL)

Experiment 01	Assemble house wiring including earthing for 1- phase energy meter, MCB, ceiling fan, tube light, three pin sockets and a lamp operated from two different positions. Basic functional study of components used in house wiring.
Experiment 02	To make house wiring for a lamp operated from two different positions.
Experiment 03	Prepare the connection of ceiling fan along with the regulator and vary the speed.
Experiment 04	Prepare the connection of single phase induction motor through 1- phase Auto transformer and vary the speed.
Experiment 05	Prepare the connection of three phase squirrel cage induction motor through 3- phase Autotransformer and vary the speed.
Experiment 06	Prepare the connection of Fluorescent Lamp, Sodium Vapor and Halogen Lamp and measure voltage, current and power in the Circuit.
Experiment 07	To verify the transformation ratio by measuring primary and secondary sides voltages of single phase transformer by using phase auto transformer.
Experiment 08	To find out relation b/w primary voltages and secondary voltages at different configurations and also relation b/w line voltage & phase voltage in & phase transformer.
Experiment 09	To run 3Q motor induction motor at varying speed by using 3 phase auto transformer.
Experiment 10	To measure power 3Q load. (a) By one watt meter method. (b) By two watt meter method. (c) By three watt meter method.

  
 Head  
 Department of Electronics & Communication Engineering  
 JECMC University, Jaipur-303905

## Engineering Graphics and Design (DM011A)

### ❖ Course Overview:

The course provides the fundamental knowledge on engineering graphics and design, which is used for technical communication in the industry. The practical expertise of L&T has been leveraged for the course development to help the learners understand and apply the knowledge as it is being done in the field. This course covers the fundamentals of engineering graphics involving geometrical 1D, 2D, and 3D objects. The knowledge of engineering graphics gained through this course can be applied to design and draw simple machine parts, small office and residential buildings. Computer Aided Design is introduced and discussed in a practical way with an exposure to Building Information Modelling. This course facilitates the learners to have a clear understanding on how to apply the knowledge of graphics in their respective disciplines for engineering design.

### ❖ Course Objective:

To help learners draw engineering drawings of objects in manual and computer aided drafting methods, read and interpret the drawing of simple machine components, buildings, etc., and apply the knowledge for creative engineering design

### ❖ Key Topics:

Drawing Codes | Manual Drafting | Traditional Engineering Graphics | Computer Graphics and Computer Aided Design | Solid Modelling | Building Information Modelling | Design Project

### ❖ Syllabus:

#### **Basics of Engineering Graphics, Projection of Points**

Introduction to Engineering Drawing, Manual & Computer Aided Design and Drafting, Lettering, Dimensioning, Geometrical Constructions, Plane Curves, Conic Sections, Cycloidal Curves, Involute – Projection of point placed in a quadrant – Projection of a line using first angle projection method, rotating line method, trapezoidal plane method – Solve & draw projections of a line kept inclined to two planes – Determination of true length, true inclinations & traces of a straight line

#### **Projection of Planes & Solids**

Description of plane shapes & solids - Drawing plane projections & solids using change of position and auxiliary plane method – Projection of solids with inclined axis – Drawing projection of solids using change of position and auxiliary plane method.

*Signature*  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

## Orthographic Projections & Sections of Solids

Visualization & drawing orthographic projections – Description & drawing of Plan, elevation, side elevation of objects, simple machine parts using first angle projection method – Description of section plane & portion of solid – Drawing sectional top view, front view, true shape of section on an auxiliary plane

## Isometric & Perspective Projection, Development of Surfaces

Drawing isometric view of solids (Box method) – Drawing isometric scale & construction of isometric projection from orthographic projection – Drawing perspective projection of small, large objects and building components using suitable methods – Drawing section plane & determining lateral surface – Determination of shortest distance between points – Drawing & determining shape of metal sheet to cut objects.

## Building Drawing, Solid Modeling, Building Information Modeling

Drawing plan, elevation and sectional elevation of a small residential & office building – Description & creation of Solid models in general and with respect to engineering – Designing and creating a new product & generating various views – Basics of Building Information Modeling (BIM)

### ❖ Case Studies

1. Building drawing of a small office building
2. Building drawing of a small office building

### ❖ Software used: AUTOCAD

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

L-T-P	Communication Skills (DEN001C)	Credits 2-0-1 3
-------	--------------------------------	-----------------

### **Syllabus: Theory**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> <i>Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture</i>
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> <i>Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration</i>
<b>UNIT 3</b>	<b>Composition:</b> <i>Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,</i>
<b>UNIT 4</b>	<b>Vocabulary Building:</b> <i>Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms</i>
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> <i>Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation</i>

### **Syllabus: Lab**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> <i>Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time-management, Following Deadlines etc</i>
<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> <i>Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc</i>
<b>UNIT 3</b>	<b>Composition:</b> <i>Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc</i>
<b>UNIT 4</b>	<b>Vocabulary Building:</b> <i>Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc</i>
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> <i>Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making</i>

DCO013A	Computer Programming and Logical Thinking	3: 0:0	3
---------	---	--------	---

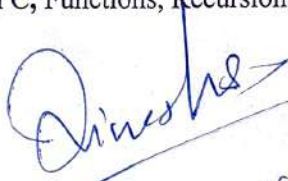

**Unit-1** Computer Fundamentals, Functional units of Computer: I/O devices, Primary and secondary memories Number System: Decimal, Binary, Octal, and hexadecimal, Fixed and floating Points, Character Representations, ASCII, EBCDIC, Binary Arithmetic, Negative Numbers and their Arithmetic, Floating point representation, Binary Codes, Cyclic Codes

**Unit-2** Programming Fundamentals, Algorithm development, Techniques of Problem-solving, Flowcharting, Stepwise Refinement.

**Unit -3** Basic of C Programming, Introduction of C language, Representation of Integer, Character, real, Data Types: Constants and Variables, Operators, Arithmetic Expression, Logical expression, Assignment statement, Structure of a C program, Header files, Directives

**Unit-4** Programming in C, Decision Control Structure, Alteration, and Iterations (While, do while, for loop, switch case), Arrays, String processing,

**Unit-5** Advance Concepts in C, Functions, Recursion, Pointers, Structure, Union, Files

L-T-P	Professional Skills (DEN002C)	Credits 2-0-1 3
-------	-------------------------------	-----------------

### Syllabus: Theory

UNIT 1	<b>Professional Grooming and Professional Culture:</b> Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
UNIT 2	<b>Advanced Grammar:</b> Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
UNIT 3	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports
UNIT 4	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms
UNIT 5	<b>Reading Comprehension:</b> Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction,

### Syllabus: Lab

L-T-P	Professional Skills Lab	Credits 2-0-1 3
-------	-------------------------	-----------------

UNIT 1	<b>Professional Grooming and Professional Culture:</b> Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
UNIT 2	<b>Advanced Grammar:</b> Exercise Sessions for Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
UNIT 3	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics
UNIT 4	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words
UNIT 5	<b>Reading Comprehension:</b> Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc

**Life Skills-I (Personality Development)**

**(Course Code- DEN003A)**

**Semester-III**

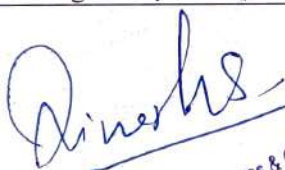

**All UG Programs**

**Common to all disciplines**

**Contact Hours (L-T-P): 1-0-2**

<b>L-T-P</b>	<b>Life Skills I</b>	<b>Credits 1-0-1 2</b>
--------------	----------------------	------------------------

<b>UNIT 1</b>	<ul style="list-style-type: none"><li>• Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion</li><li>• Basics of Narrating and describing things</li></ul>
<b>UNIT 2</b>	<ul style="list-style-type: none"><li>• Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview</li><li>• CV/Resume Drafting and HR Interview advance theory</li><li>• Basics of Video Interviews and Video Profiles for Job</li></ul>
<b>UNIT 3</b>	<ul style="list-style-type: none"><li>• Types of listening, advantages and disadvantages</li></ul>
<b>UNIT 4</b>	<ul style="list-style-type: none"><li>• Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report</li></ul>
<b>UNIT 5</b>	Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

**Head**  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-302005

### Electronics Devices (BEE001A)

**Unit 1:** Semiconductor physics: Allowed and forbidden energy bands, electrical conduction in solids, Density of state function, Statistical mechanics, Charge carriers in semiconductors, dopant atoms and energy levels, Extrinsic semiconductors, Statistics of donors and acceptors, charge neutrality, position of Fermi level, Carrier drift, Carrier diffusion, graded impurity distribution, Hall effect, Carrier generation and recombination, characteristics of excess carriers, A bipolar Transport.

**Unit 2:** The pn junction: basic structure of pn junction, zero applied bias, non-uniformly doped junctions, pn junction current, small signal model of the pn junction, generation and recombination currents, junction breakdown, charge storage and diode transients, the tunnel diode, schottky barrier diode, metal semiconductor ohmic contacts, heterojunctions.

**Unit 3:** The bipolar transistor: The bipolar transistor action, minority carrier distribution, low frequency common base current gain, non-ideal effects, Ebers-Moll model, Gummel-poon model, Hybrid equivalent model, Hybrid- $\pi$  Model, frequency limitations, large signal switching, polysilicon emitter BJT, silicon- germanium base transistor, heterojunction bipolar transistors.

**Unit 4:** Fundamentals of MOS field effect transistors: The two terminal MOS structure, capacitance voltage characteristics, basic MOSFET operation, Frequency limitations, CMOS technology, non ideal effects, MOSFET scaling, threshold voltage modifications, additional electrical characteristics, radiation and hot electron effects.

**Unit 5:** Discrete transistor amplifiers: Common-emitter fixed bias configuration, Voltage-divider bias, CE emitter bias configuration, Emitter follower configuration, Common-base configuration, Collector feedback configuration, Collector DC Feedback Configuration, Determining Current Gain, Effect of  $R_L$  and  $R_S$ , Two port systems approach, Cascaded systems, Darlington Connection.

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

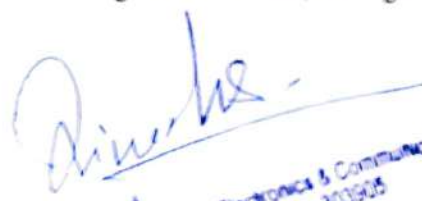

## Digital Electronics (BEE002A)

**Unit 1:** Introduction- Digital Systems; Data representation and coding; Logic circuits, integrated circuits; Analysis, design and implementation of digital systems; CAD tools. Number Systems and Codes- Positional number system; Binary, octal and hexadecimal number systems; Methods of base conversions; Binary, octal and hexadecimal arithmetic; Representation of signed numbers; Fixed and floating point numbers; Binary coded decimal codes; Gray codes; Error detection and correction codes - parity check codes and Hamming code.

**Unit 2:** Combinatorial Logic Systems- Definition and specification; Truth table; Basic logic operation and logic gates. Boolean Algebra and Switching Functions- Basic postulates and fundamental theorems of Boolean algebra, Standard representation of logic functions - SOP and POS forms; Simplification of switching functions - K-map and Quine-McCluskey tabular methods, Synthesis of combinational logic circuits.

**Unit 3:** Logic families-Introduction to different logic families; Operational characteristics of BJT in saturation and cut-off regions; Operational characteristics of MOSFET as switch; TTL inverter - circuit description and operation; CMOS inverter - circuit description and operation; Structure and operations of TTL and CMOS gates; Electrical characteristics of logic gates – logic levels and noise margins, fan-out, propagation delay, transition time, power consumption and power-delay product. Combinational Logic Modules and their applications-Decoders, encoders, multiplexers, demultiplexers and their applications, Parity circuits and comparators, Arithmetic modules- adders, subtractors and ALU, Design examples.

**Unit 4:** Sequential Logic systems- Definition of state machines, state machine as a sequential controller; Basic sequential circuits- latches and flip-flops: SR-latch, D-latch, D flip-flop, JK flip-flop, T flip-flop; Timing hazards and races; Analysis of state machines using D flip-flops and JK flip-flops; Design of state machines - state table, state assignment, transition/excitation table, excitation maps and equations, logic realization; Design examples. State machine design approach-Designing state machine using ASM charts, Designing state machine using state diagram, Design examples.

  
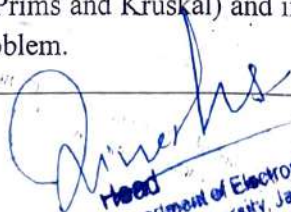

Head  
Department of Electronics & Communication Engineering  
JECRC University Jaipur-303905

**Unit 5:** Sequential logic modules and their applications- Multi-bit latches and registers, counters, shift register, application examples. Memory- Read-only memory, read/write memory – SRAM and DRAM. Programmable Logic Devices-PLAs, PALs and their applications; Sequential PLDs and their applications; State- machine design with sequential PLDs; Introduction to field programmable gate arrays (FPGAs).

### **DATA STRUCTURES AND ALGORITHMS (BEE079A)**

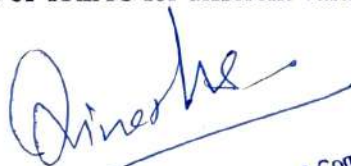

<b>UNIT 1</b>	Introduction: Notions of data type, abstract data type and data structures. Importance of algorithms and data structures in programming. Notion of Complexity covering time complexity, space complexity, Worst case complexity & Average case complexity. BigOh Notation, Omega notation, Theta notation. Examples of simple algorithms and illustration of their complexity. Sorting- Bubble sort, selection sort, insertion sort, Quick sort; Heap sort; Merge sort; Analysis of the sorting methods. Selecting the top k elements. Lower bound on sorting.
<b>UNIT 2</b>	Stack ADT, Infix Notation, Prefix Notation and Postfix Notation. Evaluation of Postfix Expression, conversion of Infix to Prefix and Postfix Iteration and Recursion- Problem solving using iteration and recursion with examples such as binary search, Fibonacci numbers, and Hanoi towers. Tradeoffs between iteration and recursion.
<b>UNIT 3</b>	List ADT. Implementation of lists using arrays and pointers. Stack ADT. Queue ADT. Implementation of stacks and queues. Dictionaries, Hash tables: open tables and closed tables. Searching technique- Binary search and linear search, link list- single link list, double link list, Insertion and deletion in link list.
<b>UNIT 4</b>	Binary Trees- Definition and traversals: preorder, post order, in order. Common types and properties of binary trees. Binary search trees: insertion and deletion in binary search tree worst case analysis and average case analysis. AVL trees. Priority Queues -Binary heaps: insert and delete min operations and analysis.
<b>UNIT 5</b>	Graph: Basic definitions, Directed Graphs- Data structures for graph representation. Shortest path algorithms: Dijkstra (greedy algorithm) and Operations on graph, Worshall's algorithm , Depth first search and Breadth-first search. Directed acyclic graphs. Undirected Graphs, Minimal spanning trees and algorithms (Prims and Kruskal) and implementation. Application to the travelling salesman problem.

  
 Head  
 Department of Electronics & Communication Engineering  
 JECRC University, Jaipur-303905

## Electronics Devices Lab (BEE005A)

### List of Experiments

1. Design and test diode clipping circuits on breadboard, using discrete components for peak clipping and peak detection.
  - i) Positive and Negative Clipping Circuit.
  - ii) Diode series positive and negative Clipping Circuit.
2. Design and test positive and negative clamping circuit on breadboard, using discrete components for a given reference voltage.
3. Graphical measurement of forward and reverse resistance in Zener diode characteristics.
4. Application of Zener diode: Zener diode as voltage regulator. Measurement of percentage regulation by varying load resistor.
5. Plot the I-V characteristics of BJT in CB and CE configuration using suitable discrete components.
6. Design discrete transistor amplifier with common-emitter fixed bias configuration and plot the frequency response.
7. Design discrete transistor amplifier with Voltage-divider bias configuration and plot the frequency response.
8. Design and setup an RC Coupled amplifier using BJT & to plot the frequency response of the RC-Coupled amplifier.
9. Design a BJT Darlington Emitter Follower and determine the Gain and plot the frequency response.
10. Verify Thevenin's theorem for DC Circuits.
11. Characteristic of FET: FET in common source configuration. Graphical measurement of its parameters  $g_m$  and  $r_d$  from input and output characteristics.
12. Characteristic of silicon-controlled rectifier.
13. To plot V-I Characteristics of DIAC.
14. To draw V-I characteristics of TRIAC for different values of Gate Currents.

Head,  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

### Digital Electronics Lab (BEE006A)

#### **List of Experiments**

1. To study and verify the truth table of logic gates.
2. Design and implementation of Adder and Subtractor using logic gates.
3. Design and implementation of BCD to excess-3 code converter using logic gates.
4. Design and implementation of Binary to gray code converter using logic gates.
5. Design and implementation of 4 bit binary Adder/ subtractor using IC 7483
6. Design and implementation of 4 bit binary BCD adder using IC 7483
7. Design and implementation of 2 bit Magnitude Comparator using logic gates.
8. Design and implementation of 16 bit odd/even parity checker generator using IC74180.
9. Design and implementation of multiplexer using logic gates, IC74150 and IC74154.
10. Design and implementation of De-multiplexer using logic gates, IC74150 and IC74154
11. Design and implementation of encoder using logic gates, IC7445 and IC74147
12. Design and implementation of decoder using logic gates, IC7445 and IC74147
13. Construction and verification of 4 bit ripple counter.
14. Design and implementation of 3-bit synchronous up/down counter.
15. Implementation of SISO, SIPO, PISO and PIPO shift registers using Flip- flops

#### Life Skills - 2 (Aptitude)

(COURSE CODE- DMA011A)

**Common to all disciplines**

**Contact Hours (L-T-P): 1-0-2**

L-T-P	Life Skills-II	Credits 1-0-1 2
-------	----------------	-----------------

UNIT 1	<b>Number System:</b> a. Number system b. Power cycle c. Remainder cycle d. Factors, Multiples e. HCF and LCM

Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

<b>UNIT 2</b>	<b>Data Arrangements and Blood Relations:</b> a. Linear Arrangement b. Circular Arrangement c. Multi-dimensional Arrangement d. Blood Relations
<b>UNIT 3</b>	<b>Time and Work:</b> a. Work with different efficiencies b. Pipes and cisterns c. Work equivalence d. Division of wages
<b>UNIT 4</b>	<b>Coding &amp; Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:</b> a. Coding and Decoding b. Series c. Analogy d. Odd Man Out e. Visual Reasoning
<b>UNIT 5</b>	<b>Percentages, Simple Interest and Compound Interest:</b> a. Percentages as Fractions and Decimals b. Percentage Increase / Decrease c. Simple Interest d. Compound Interest e. Relation Between Simple and Compound Interest
<b>UNIT 6</b>	<b>Permutation, Combination and Probability:</b> a. Fundamental Counting Principle b. Permutation and Combination c. Computation of Permutation d. Circular Permutations e. Computation of Combination f. Probability
<b>UNIT 7</b>	<b>Data Interpretation and Data Sufficiency:</b> a. Data Interpretation – Tables b. Data Interpretation - Pie Chart c. Data Interpretation - Bar Graph d. Data Sufficiency
<b>UNIT 8</b>	<b>Profit and Loss, Partnerships and Averages:</b> a. Basic terminologies in profit and loss b. Partnership c. Averages d. Weighted average e. Mixtures and allegations

Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

## **Principles of Communication (BEE014A)**

### **Module-1 AMPLITUDE MODULATION**

10 hours

**AMPLITUDE MODULATION:** Introduction, Amplitude Modulation: Time & Frequency – Domain description, Switching Modulator, Envelope detector. **DOUBLE SIDE BAND-SUPPRESSED CARRIER MODULATION (DSB-SC):** Time and Frequency–Domain description, Ring modulator, Coherent detection, Costas Receiver, Quadrature Carrier Multiplexing. **SINGLE SIDE-BAND SUPPRESSED CARRIER (SSB-SC) AND VESTIGIAL SIDEBAND METHODS OF MODULATION:** SSB Modulation, VSB Modulation, Frequency Translation, Frequency-Division Multiplexing, Theme Example: VSB Transmission of Analog and Digital Television.

### **Module-2 ANGLE MODULATION**

**10 hours**

**ANGLE MODULATION:** Basic definitions, Frequency Modulation: Narrow Band FM, Wide Band FM, Transmission bandwidth of FM Signals, Generation of FM Signals, Demodulation of FM Signals, FM Stereo Multiplexing, Phase-Locked Loop: Nonlinear model of PLL, Linear model of PLL, Nonlinear Effects in FM Systems, Super heterodyne Receiver.

### **Module-3 RANDOM VARIABLES & PROCESS 10 hours**

**RANDOM VARIABLES & PROCESS:** Introduction, Probability, Conditional Probability, Random variables, Several Random Variables. Statistical Averages: Function of a random variable, Moments, Random Processes, Mean, Correlation and Covariance function: Properties of autocorrelation function, Cross-correlation functions. **NOISE:** Shot Noise, Thermal noise, White Noise, Noise Equivalent Bandwidth, Noise Figure.

### **Module-4 NOISE IN ANALOG MODULATION 10 hours**

**NOISE IN ANALOG MODULATION:** Introduction, Receiver Model, Noise in DSB-SC receivers, Noise in AM receivers, Threshold effect, Noise in FM receivers, Capture effect, FM threshold effect, FM threshold reduction, Pre-emphasis and De-emphasis in FM.

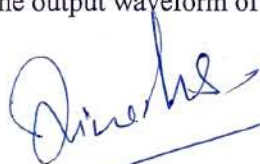

### **Module-5 DIGITAL REPRESENTATION OF ANALOG SIGNALS 10 hours**

**DIGITAL REPRESENTATION OF ANALOG SIGNALS:** Introduction, Why Digitize Analog Sources, The Sampling process, Pulse Amplitude Modulation, Time Division Multiplexing, Pulse-Position Modulation, Generation of PPM Waves, Detection of PPM Waves. The Quantization Process, Quantization Noise, Pulse-Code Modulation: Sampling, Quantization, Encoding, Regeneration, Decoding, Filtering, Multiplexing.

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

### Electronic Workshop (BEE017A)

1. Introduction & Hands on experience to use circuit creation & simulation software like TINAPRO, P-SPICE or ORCAD.
2. Design a half wave rectifier using ORCAD software. Calculate its  $V_{rms}$ , PIV, and Form Factor.
3. Design a full wave rectifier using ORCAD software. Calculate its  $V_{rms}$ , PIV, and Form Factor.
4. Design a Hartley oscillator and to observe its output waveform using ORCAD software. Find its frequency of oscillation.
5. Design a Colpitts oscillator and to observe its output waveform using ORCAD software. Find its frequency of oscillation.
6. Design a Wien-Bridge oscillator and to observe its output waveform using ORCAD software. Find its frequency of oscillation.
7. Design and obtain the frequency response of second order low pass filter using IC-741 by ORCAD software.
8. Design and obtain the output waveform of Integrator and Differentiator circuit IC-741 by ORCAD software.
9. Design and obtain the output waveform of Inverting, Non-inverting amplifier using IC - 741 by ORCAD software.
10. Design differential amplifier using BJT using ORCAD software. Calculate its CMRR.
11. Design of single stage class-C single tuned amplifier using ORCAD software. Plot its frequency response.
12. Design of current series feedback amplifier using ORCAD software. Plot its frequency response.
13. Design of voltage series feedback amplifier using ORCAD software. Plot its frequency response.
14. Design and obtain the output waveform of CMOS inverter by using ORCAD software.
15. Design and obtain the output waveform of CMOS NOR gate by using ORCAD software.
16. Design and obtain the output waveform of CMOS NAND gate by using ORCAD software.

Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

## Microprocessor & Microcontroller System (BEE020A)

**Unit 1:** Evolution of microprocessors, technological trends in microprocessor development. The Intel family tree. CISC Versus RISC. Applications of Microprocessors. 8086 Block diagram; description of data registers, address registers, pointer and index registers, PSW, Queue, BIU and EU. 8086 Pin diagram descriptions. Microprocessor BUS types and buffering techniques, 8086 minimum mode and maximum mode CPU module. Instruction formats, addressing modes.

**Unit 2:** Data transfer instructions, string instructions, logical instructions, arithmetic instructions, transfer of control instructions, process control instructions; Assembler directives. Writing assembly Language programs for logical processing, arithmetic processing, timing delays; loops, data conversions. Writing procedures, Data tables, modular programming, Macros.

**Unit 3:** 8086 Interrupt types and interrupt vector table. DOS interrupt INT 21 h functions. INT 10h and INT 16h functions. Intel 8086 bus cycles, instruction queue, 8086 CPU Read/Write timing diagrams in minimum mode and maximum mode, reset operation, wait state, halt state, hold state, lock operation, interrupt processing. Address decoding techniques.

**Unit 4:** Intel's 8255 description, 8255 different modes operation and interfacing with 8086. Interfacing ADC(0808/0809), DAC-(0808) using 8255. Wave form generation. Intel's 8251 description and operation. Intel's 8259. DMA operation. Intel's 8237. Intel's 8279. Intel's 8253. Introduction to i3, i5, i7 processors.

**Unit 5:** 8051 microcontroller pin diagram, Block diagram, Flag, RAM configuration, Register Banks, addressing modes, instruction set, 8051 programming & interfacing.

### Course Outlines

### BCO035A- PROGRAMMING in PYTHON

UNIT 1	<b>Introduction:</b> Features of Python, History of Python, installing Python; basic syntax, interactive shell, editing, saving, and running a script. The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages
UNIT 2	Introduction to Operators, Control statements: if-else, loops (for, while); short-circuit (lazy) evaluation. <b>Strings:</b> subscript operator, indexing, slicing a string, String methods & operations; strings and number system: converting strings to numbers and vice versa. Binary, octal, hexadecimal numbers. <b>Text files;</b> manipulating files and directories, os and sys modules; reading/writing text and numbers from/to a file; creating and reading a formatted file
UNIT 3	<b>Lists, tuples, and dictionaries;</b> basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries. <b>Design with functions:</b> hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Program structure and design. Recursive

Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

	functions.
<b>UNIT 4</b>	<b>Classes and OOP:</b> classes, objects, attributes and methods; defining classes; design with classes, data modeling; persistent storage of objects <b>OOP, continued:</b> inheritance, polymorphism Operator overloading ( <code>_eq_</code> , <code>_str_</code> , etc); abstract classes; Exception handling, try block
<b>UNIT 5</b>	<b>Graphical user interfaces;</b> Event-driven programming paradigm; tkinter module,,turtle module, creating simple GUI; buttons, labels, entry fields, dialogs; widget attributes - sizes, fonts, colors layouts, nested frames Multithreading, CSV(Accesing, updating, Creating)

### Basic Simulation Lab (BEE024A)

(Simulation Lab. Experiments may be carried out using MATLAB/ SCILAB)

1. Creating a One-Dimensional Array (Row / Column Vector) Exercise – Creating a vector of even whole numbers between 31 and 75; Creating a Two-Dimensional Array (Matrix of given size) and (A). Performing Arithmetic Operations - Addition, Subtraction, Multiplication and Exponentiation. (B). Obtaining Modified Matrix - Inverse, Transpose, with Appended and Deleted Elements;

2. Performing Matrix Manipulations - Concatenating, Indexing, Sorting, Shifting, Reshaping, Resizing and Flipping about a Vertical Axis / Horizontal Axis; Creating Arrays X & Y of given size (1 x N) and Performing

(A) Relational Operations - `>`, `<`, `==`, `<=`, `>=`, `~=`

(B) Logical Operations - `~`, `&`, `|`, XOR

3. Generating a set of Commands on a given Vector (Example: X = [1 8 3 9 0 1]) to

(A) Add up the values of the elements (Check with **sum**)

(B) Compute the Running Sum (Check with **sum**), where Running Sum for element j = the sum of the elements from 1 to j, inclusive.

(C) Compute the Sine of the given X-values (should be a vector).

Also, Generating a Random Sequence using **rand()** / **randn()** functions and plotting them.

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

4. Evaluating a given expression and rounding it to the nearest integer value using Round, Floor, Ceil and Fix functions; Also, generating and Plots of

(A) Trigonometric Functions -  $\sin(t)$ ,  $\cos(t)$ ,  $\tan(t)$ ,  $\sec(t)$ ,  $\csc(t)$  and  $\cot(t)$  for a given duration 't'.

(B) Logarithmic and other Functions –  $\log(A)$ ,  $\log_{10}(A)$ , Square root of A, Real  $n^{\text{th}}$  root of A.

5. Write a MATLAB program to generate an exponential Sequence.

$$X(n) = (a)^n \quad \text{for} \quad (i) 0 \leq a \leq 1 \quad (ii) -1 \leq a \leq 0 \quad (iii) a \leq -1 \quad (iv) a > 1$$

6. Write a MatLab program to generate the signal  $S(n) = 2 * n * (0.8^n)$  corrupted by the noise  $d(n)$  resulting the signal  $X(n)$ .

$$X(n) = s(n) + d(n).$$

Also down sample the corrupted signal

7. Creating a vector X with elements,  $X_n = (-1)^{n+1}/(2n-1)$  and Adding up 100 elements of the vector, X; And, plotting the functions, x, x3, ex and exp(x2) over the interval  $0 < x < 4$  (by choosing appropriate mesh values for x to obtain smooth curves), on

(A) A Rectangular Plot

(B) A Semi log Plot

(C) A log-log Plot

8. Generating a Sinusoidal Signal of a given frequency (say, 100Hz) and Plotting with Graphical Enhancements - Titling, Labelling, Adding Text, Adding Legends, Adding New Plots to Existing Plot, Printing Text in Greek Letters, Plotting as Multiple and Sub- Plots; Also, Making Non-Choppy and Smooth Plot of the functions,

$$f(x) = \sin(1/x) \text{ for } 0.01 < x < 0.1 \text{ and } g(x) = (\sin x) / x$$

9. To Plot the following Functions:

$$h(n) = \{4rn \cos[\pi * n(1+r)/m] + m \sin[\pi * n(1-r)/m]\} / [1 - 4rn/m]^2 * \pi * nm$$

$$h(0) = (1/m) + (r/(m * 4/\pi - 1))$$

$$h(|m/4|) = (-r/m) * [(2 * \cos\{(\pi/4 * r) * (1+4)\} - \cos\{\pi * (1-r)/4 * r\})]$$

*[Signature]*  
Head  
Department of Electronics & Communication Engineering  
JECAC University, Jaipur-303905

Given: -  $m=4$ ,  $r=0.1$

10. Creating A Structure, An Array of Structures and Writing Commands to Access Elements of the created Structure and Array of Structures; Also, Solving First Order Ordinary Differential Equation using Built-in Functions; And, Creating an  $M \times N$  Array of Random Numbers using **rand** and setting any value that is  $< 0.2$  to 0 and any value that is  $\geq 0.2$  to 1 by moving through the Array, Element by Element.

11. Write a MatLab/SciLab program to generate a Fibonacci series up-to 20.

12. Write a MatLab/SciLab program to check whether a number is prime or not.

13. Write a MatLab/SciLab program to convert a decimal number to binary.

14. Generating normal and integer random numbers ( $1 - D$  &  $2 - D$ ) and plotting them; Also, Writing a Script (which keeps running until no number is provided to convert) that asks for Temperature in degrees Fahrenheit and Computes the Equivalent Temperature in degrees Celsius. [Hint: Function **is empty** is useful]

15. Writing brief Scripts starting each Script with a request for input (using input) to Evaluate the function  $h(T)$  using if-else statement, where

$$\begin{aligned} h(T) &= (T - 10) \text{ for } 0 < T < 100 \\ &= (0.45 T + 900) \text{ for } T > 100 \end{aligned}$$

Exercise: Testing the Scripts written using

(A)  $T = 5$ ,  $h = -5$

(B)  $T = 110$ ,  $h = 949.5$

Also, Creating a Graphical User Interface (GUI); And, Curve Fitting using

(A) Straight line Fit

(B) Least Squares Fit

16. Interpolation based on following Schemes (A) Linear (B) Cubic (C) Spline Also, Generating the first Ten Fibonacci numbers according to the relation  $F_n =$

$F_{n-1} + F_{n-2}$  with  $F_0 = F_1 = 1$ , and computing the ratio  $F_n / F_{n-1}$  for the first 50 Fibonacci numbers.

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303205

### Control System (BEE035A)

**Unit 1: Introduction to Control Systems-** Introduction to Control system, control system terminology, classification of Control Systems. Mathematical Models of Systems- Differential equations of physical systems, transfer function of linear systems, block diagram models, block diagram reduction technique, Signal flow graph.

**Unit 2: Time Response Analysis-** Time response analysis - First Order Systems – Impulse, Ramp and Step Response analysis of second order systems - Steady state errors – P, PI, PD and PID Compensation.

**UNIT 3: Stability Analysis-** Stability, Routh-Hurwitz Criterion, Root Locus Technique, Construction of Root Locus, Stability, Dominant Poles, Application of Root Locus Diagram -

**UNIT 4: Frequency Response Analysis-** Frequency Response - Bode Plot, Polar Plot, Nyquist Stability Criterion - Relative Stability- Frequency Domain specifications, Parallel, series-parallel Compensators - Lead, Lag, and Lead Lag Compensators.

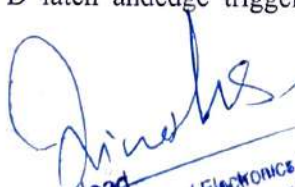

**Unit5: State Variable Models-** State variables of a dynamic system, state equation, transfer function from the state equation and vice-versa. State Transition Matrix, Controllability, Observability, Ackerman's formula, limitations of state variable feedback. Introduction to P/I/D and ON-OFF control actions.

### VLSI System (BEE034B)

**Unit 1:** Basic MOS transistors, Enhancement Mode transistor action, Depletion Mode transistor action, NMOS and CMOS fabrication.  $I_{ds}$  versus  $V_{ds}$  relationship, Aspects of threshold voltage, Transistor Transconductance  $g_m$ . Inverter, nMOS inverter, Pull up to Pulldown ratio for a NMOS Inverter and CMOS Inverter ( $B_n/B_p$ ), MOS transistor circuit Model, Noise Margin.

**Unit 2:** Combinational MOS Logic Circuit: NAND, NOR gate, Compound Gates, 2 input CMOS Multiplexer, Transmission Gate, Gate delays, CMOS-Gate Transistor sizing, Power dissipation.

**Unit 3:** Sequential MOS Logic Circuits: Behavior of Bistable Elements, SR Latch, clocked Latch and flip flop circuits, CMOS D latch and edge triggered flip flop, Basic Principles of Pass Transistor Circuits.

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

**Unit 4:** MOS Layers Stick/Layout Diagrams; Layout Design Rules, Issues of Scaling, Scaling factor for device parameters. Layout issues for inverter, Layout for NAND and NOR Gates, Complex Logic gates Layout, Layout optimization for performance.

**Unit 5:** Verilog and other design tools. VHDL Code for simple Logic gates, flip-flops, shift registers.

<b>PROJECT</b>	<b>BEE053A</b>
----------------	----------------

### Course Objectives:

1. Identifying real-life problems and suggest possible solutions.
2. Apply the technical knowledge gained from previous courses for project development.
3. Apply project management skills in development of project.
4. Show an ability to communicate technical information by means of written reports and oral presentation.
5. Design an electronic circuit with specified needs using hardware-software interfacing.

<b>Industry Internship</b>	<b>BEEL063B</b>
----------------------------	-----------------

Department of ECE provides Six months INTERNSHIP Program in curriculum which not only bridges the gap between Industry and Academia but also provides the opportunity to work in the Industrial Environment. This Internship aims at building a strong interface between the industry and the University and help students to realize their full potential.

- The cell has a systematic contact program with corporate where companies are invited to interview JU students for internship, on and off campus. It's a matter of great pleasure that figure of 100% internship placement has been achieved with more than 35% are getting stipend. Training cell also provide a hand holding to the interns, to successfully complete their internship. This is executed by Faculty Internship Guides (FIG's), who maintain a regular review rhythm (Telephonic, Email and Personal Visit) as per Internship guidelines with Industry guides.

Quality Internships possess five screening steps. Each and every student is assigned to one Internal (FIG – Faculty Internship Guide) and External (Industry Guide) Mentor for assessment of Internship.

Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

- First step involved the email feed-back by Industry guide on a scale of 0-10. More than 80% students got more than 8.
- Second step is first internal evaluation where presentation was given by students on research work progress. Proper feedback was given to students so that objectives of Internship is achieved.
- Third step deals with Telephonic talk with Industry Guide. Most of the guides were all praise for the students.
- Fourth step is Physical verification by Internal FIG visiting the Industry and rate the hands on training of the Intern. It is the most critical part of program for monitoring. Currently FIG's are in Industries for verification and we are getting great feedbacks by Industry personnel's
- Final step is the presentation of the project to Subject Expert External Examiner and other members of evaluation committee.

Internship transform students as best brain of the country where maximum are trend setters. These kind of Internships are unique in terms of real world exposure to industry work culture, sophisticated equipment's, machine learning, hi-fi softwares and practical training.

Hours: 48

## **Digital VLSI Circuits Design**

**Unit I MOS Transistor**-First Glance at the MOS device, MOS Transistor under static conditions, threshold voltage, Resistive operation, saturation region, channel length modulation, velocity saturation, Hot carrier effect-drain current Vs voltage charts, sub threshold conduction, equivalent resistance, MOS structure capacitance, CMOS logic.

**Unit II MOS Inverter, Switching characteristics & Interconnect Effects**- Delay Time, Interconnect Parasitic Capacitances, Resistance, RC Delays, Inductances, Gate Delays, Stage Ratio, Power Dissipation, CMOS Logic Gate Design, Transmission Gate, BiCMOS.

**Unit III Combinational Circuit Design**: NAND Gate, NOR Gate, Transient Analysis of NAND & NOR Gate. Sequential MOS Logic Gates: Behavior of Bistable element, CMOS latches & Clocked Flip-Flops, Clock Skew, Clocking Strategies.

**Unit IV CMOS Dynamic Logic Circuits**: Pass Transistor, 0 and 1 transfer, Charge Storage & Leakage, Voltage Bootstrapping, High Performance Dynamic CMOS Circuits: Domino CMOS Logic, NORA CMOS Logic, Zipper CMOS Circuits, TSPC Dynamic CMOS.

**Unit V Semiconductor Memories**: ROM, DRAM, SRAM, PLA, Cell, Leakage Circuit and Input/output Circuit.

### ***Course Outcome (CO):***

At the end of this course students will have:

CO1-Ability to understand MOSFET and their fabrication.

CO2- Ability to understand any combinational circuit analysis using MOSFET

CO3-Ability to understand & analyse sequential MOS circuits

CO4-Ability to draw layout of any circuit.

CO5-Ability to understand hardware description language.

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

**MICROCONTROLLER SYSTEM DESIGN**

**Unit I: 8051 MICROCONTROLLER** Architecture of 8051 - Signals - Operational features - Memory and I/O addressing - Interrupts - Instruction set - Applications - The software model - functional description - central processing unit pin descriptions - reduced instruction set computer concepts - bus operations - superscalar architecture - pipelining - branch prediction - the instruction and caches - floating point unit - protected mode operation - segmentation - paging, protection, multi tasking, exception and interrupts, input/ output.

**Unit II: 8096 MICROCOMPUTER**

8096 CPU Structure - 8096 Interrupts Structure - Interrupt Control - Priorities - Critical Register - Programmable Timers - Interrupts Density and Interval Considerations - Real Time Clock.

**Unit III: MOTOROLA MICROCONTROLLER** Instructions and addressing modes of 68HC11 - operating modes - hardware reset, interrupt system - parallel I/O ports - flats - real time clock - programmable timer - pulse accumulator - serial communication interface - analog to digital converter - hardware expansion - basic assembly language programming.

**Unit IV : PIC MICROCONTROLLER:** Central processing unit architecture - instruction set - interrupts - timers - memory - I/O port expansion - integrated circuit bus for peripheral chip access - A/D converter - universal asynchronous receiver transmitter - advanced risc machine architecture - advanced risc machine organization and implementation, advanced risc machine instruction set, thumb instruction set, basic advanced risc machine Assembly language program, advanced risc machine central processing unit cores.

**Unit V: ARM CONTROLLER**

Architecture - Memory Organization - Pipeline and cache concepts - ARM (32 bit) Architecture - Instruction set and Assembly Language Programming - ARM instruction set and THUMB instruction set - Switching between ARM and THUMB instructions.

**Course Outcome (CO):**

At the end of this course students will have:

CO1- an ability to program a microcontroller to perform various tasks

CO2- an ability to interface a microcontroller to various devices.

CO3- an ability to effectively utilize microcontroller peripherals

CO4- an ability to design and implement a microcontroller-based embedded system.

CO5- Understanding of Embedded system, programming, Embedded Systems on a Chip (SoC) and the use of VLSI designed circuits.

hours- 36

Research Methodology & Technical Communication

UNIT 1:	<b>Research Methodology-Introduction</b> Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, Problems Encountered by Researchers in India
UNIT 2:	<b>Defining the Research Problem</b> What is a Research Problem?, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem <b>Research Design</b> Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs
UNIT 3:	<b>Sampling Design</b> Census and Sample Survey, Implications of a Sample Design, Steps in Sampling Design, Criteria of Selecting a Sampling Procedure, Characteristics of a Good Sample Design, Different Types of Sample Designs, How to Select a Random Sample?, Random Sample from an Infinite Universe, Complex Random Sampling Designs <b>Measurement and Scaling Techniques</b> Measurement in Research, Measurement Scales, Sources of Error in Measurement, Tests of Sound Measurement, Technique of Developing Measurement Tools, Scaling, Meaning of Scaling, Scale Classification Bases, Important Scaling Techniques, Scale Construction Techniques

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303905

UNIT 4:	<b>Methods of Data Collection</b> Collection of Primary Data, Observation Method, Interview Method, Collection of Data through Questionnaires, Collection of Data through Schedules, Difference between Questionnaires and Schedules, Some Other Methods of Data Collection, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method <b>Processing and Analysis of Data</b> Processing Operations, Some Problems in Processing, Elements/Types of Analysis, Statistics in Research, Measures of Central Tendency, Measures of Dispersion, Measures of Asymmetry (Skewness), Measures of Relationship, Simple Regression Analysis, Multiple Correlation and Regression, Partial Correlation, Association in Case of Attributes
UNIT 5:	<b>Sampling Fundamentals</b> Need for Sampling, Some Fundamental Definitions, Important Sampling Distributions, Central Limit Theorem, Sampling Theory, Sandler's A-test, Concept of Standard Error, Estimation, Estimating the Population Mean ( $\mu$ ), Estimating Population Proportion, Sample Size and its Determination, Determination of Sample Size through the Approach Based on Precision Rate and Confidence Level, Determination of Sample Size through the Approach Based on Bayesian Statics

**Course Outcome (CO):**

At the end of the course, the student should be able to:

CO1 - Gain insights into how scientific research is conducted.

CO2 - Help in critical review of literature and assessing the research trends, quality and extension potential of research and equip students to undertake research.

CO3 - Learn and understand the basic statistics involved in data presentation.

CO4 - Identify the influencing factor or determinants of research parameters.

CO4 - assess critically the following methods: literature study, case study, structured surveys, interviews, focus groups, participatory approaches, narrative analysis, cost-benefit analysis, scenario methodology and technology foresight.

*Ainsha*  
 Head  
 Department of Electronics & Communication Engineering  
 JSSCE University, Mysore-576002

M.Tech. in VLSI & EMBEDDED SYSTEM Semester II

	Quantitative Techniques & Computer Applications Lab	0-0-1
--	--	-------

**Various Methods and Uses of Advance Excel Formulas:** V lookup, Hlookup, Sumif, Sumifs, Sumproduct, Dsum, Countif, Countifs, If, If error, Iserror, Isna, Isnumber, Isnontext, Isblank, Istext, Getpivotdata, Decount, Decounta, Or, And, Search, Index, Match Etc

**Various Methods and Uses of IF Conditions:** When should use the "IF" Conditions?, Creation of Multiple IF Conditions in One Cell, Use the IF Conditions with the Other Advance Functions, How to use nested IF statements in Excel with AND, OR Functions

**ADVANCED EXCEL OPTIONS :** Various Methods of Filter and Advance Filter options, Creating and Updating Subtotals, Various Methods of Text to Column options, Uses of Data Grouping and Consolidation options, Uses of Goal Seek and Scenarios Manager, Various Method of Sorting Data, Creating, Formatting and Modifying Chart, Data Validation, Creating drop down lists using different data sources, Linking Workbooks and Uses of Edit Link options, Excel Options, Customizing the Quick Access Tool Bar, Formula Auditing features and Trace formula error

**Pivot Tables & Charts :** Various Methods and Options of Pivot Table, Using the Pivot Table Wizard, Changing the Pivot Table Layout, Subtotal and Grand total Options, Formatting, Grouping Items, Inserting Calculated Fields, Pivot Table Options, Calculation in Pivot Table, Display and Hide Data in Field, Select, Move & Clear Pivot Data, Creating and Modifying Pivot Chart

**Advance Use of Function:** Mixing Function to get Various MIS Outputs, Creating Data Table, Advance Data Validation, Using conditional formatting with Formulas and Function, Using Name Manager, Array Formulas

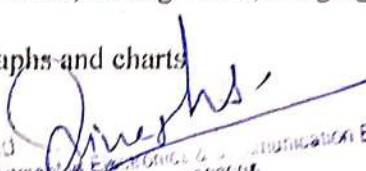

**Importing Data from External Sources: Macros,** What is a Macro?, Creating Excel Macro, Running Macros and Editing, Automating Tasks with Macro

**(A)SPSS Package**

**An Overview of SPSS :** Mouse and keyboard processing, frequently –used dialog boxes, Editing output, Printing results, Creating and editing a data file

**Managing Data:** Listing cases, replacing missing values, computing new variables, recording variables, exploring data ,selecting cases, sorting cases, merging files

**Graphs:** Creating and editing graphs and charts

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-303005

**Frequencies:** Frequencies, bar charts, histograms, percentiles

**Descriptive Statistics:** measures of central tendency, variability, deviation from normality, size and stability, Cross Tabulation and chi-square analyses, The means Procedure

**Bivariate Correlations:** Bivariate Correlation, Partial Correlations and the correlation matrix

**The T-test procedure:** Independent -samples, paired samples, and one sample tests

**The one-way ANOVA procedure:** One-way analysis of variance

**General Linear model:** Two-way analysis of variance

**General Linear model:** three-way analysis of variance and the influence of covariates, Simple Linear Regression, Multiple regression analysis, Multidimensional scaling, Factor analysis, Cluster analysis

**Course Outcome (CO):**

At the end of this course students will have:

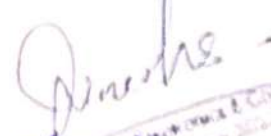

CO1. Identify system components and utilize computer hardware and software.

CO2. Become proficient in using the features of word processing in Microsoft Word.

CO3. Become proficient in using spreadsheet software and be able to create technical and complex spreadsheets for data analyses using Microsoft Excel.

CO4. Develop effective and professional business presentations using Microsoft Power Point.

CO5. Use the internet to research information and enhance their documents.

Department of Basic and Applied Sciences  
MCCRC, Hyderabad, August 2022

Faculty of Engineering and Technology  
M.Tech. in VLSI & Embedded System Semester I

Hours: 48

Contact Hours(L-T-P) : 4-0-0

**Computer Aided Design for VLSI Circuits**

**Unit I: Introduction to VLSI Design methodologies** - Review of Data structures and algorithms, Review of VLSI Design automation tools, Algorithmic Graph Theory and Computational Complexity, Tractable and Intractable problems, general purpose methods for combinatorial optimization.

**Unit II: Design rules: Layout Compaction** - Design rules, problem formulation, algorithms for constraint graph compaction, placement and partitioning, Circuit representation, Placement algorithms, Partitioning

**Unit III: Floor planning:** Floor planning concepts, shape functions and floorplan sizing, Types of local routing problems - Area routing, channel routing, global routing, algorithms for global routing.

**Unit IV: Simulation:** Simulation, Gate-level modeling and simulation, Switch-level modeling and simulation, Combinational Logic Synthesis, Binary Decision Diagrams, Two Level Logic Synthesis.

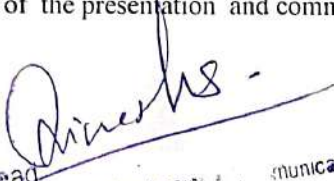

**Unit V: Modelling and synthesis:** High level Synthesis, Hardware models, Internal representation, Allocation assignment and scheduling, Simple scheduling algorithm, Assignment problem, High level transformations.

**Dissertation Part – II**

**MEE068A**

**Syllabus**

1. Identify a problem suitable to carry out dissertation work through literature
2. Apply the knowledge of writing skill on report writing.
3. Formulate the problem and identify suitable modeling paradigm.
4. Analyze the Problem and identify the solution Methodology
5. Analyze the Enhancement of the presentation and communication skill

  
Head  
Department of Electronics & Communication Engineering  
JECRC University, Jaipur-302005

**1.1.3 Total number of courses having focus on employability/ entrepreneurship/ skill development offered by the University during the year**

**Contact Hours (L-T-P): 2-0-2**

<b>L-T-P</b>	<b>DEN001C - Communication Skills</b>	<b>Credits 2-0-1 3</b>
--------------	---------------------------------------	------------------------

**Course Objectives**

1. To enhance English language competence in reading, writing, listening and speaking.
2. Switch the approach from teacher-centred to student-centred one.
3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. To link communication skills with the organizational behaviour.
6. To inculcate skills that are very much required for employability and adjust in the professional Environment.

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in different contexts.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels knowing the type of different standards of English

CO5: Ability to showcase employability skills and professional writing skills

**Syllabus: Theory**

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Communication: Meaning, Elements, Process, Types, Flows of Communication and Barriers to communication, basics of professional communication and professional ethics including Time-management, Respect for deadlines and corporate culture
<b>UNIT 2</b>	<b>Basic Writing Skills:</b> Parts of Speech, Elements of Sentences, Sentence types based on meaning and structure, Tenses, Voice, Narration
<b>UNIT 3</b>	<b>Composition:</b> , Basics of Letter Writing, Email Writing, Précis Writing, Essay Writing,
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms

<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Basics of Drafting a CV/Resume, Basics of Telephonic Interview and Online Interview, Basics of PPT presentation
---------------	---

### Syllabus: Lab

<b>UNIT 1</b>	<b>Basics of Organizational Communication:</b> Role Plays and presentations related to different corporate related matters- How to greet, how to deny politely, how to handle different types of problems related to the types of communication, how to avoid grapevine and use it in a positive manner, how to keep positive mindset during work pressure, Activities to teach Time-management, Following Deadlines etc
<b>UNIT 2</b>	<b>Write Dialogue from the different contexts of corporate culture:</b> Employee and Employer, Customer and Service Provider, Customer and Product Review, How to react on Day to day corporate interactions- Memo, Notice, Email, Circular etc
<b>UNIT 3</b>	<b>Composition:</b> , Letter Writing, Email Writing, Précis Writing, Essay Writing, Practice sessions by using Ms Word- Following the process of Drafting- Redrafting, Proof Reading, Editing etc
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Word Formation from one word form to another, Origin of Words, Affixes, Synonyms, Antonyms- Using video clips and comprehension passages to find out the difference between words, similarity between words, origin of words, neologism concepts etc
<b>UNIT 5</b>	<b>Professional and Technical Communication :</b> Drafting a CV/Resume, Practice Sessions on Telephonic Interview and Online Interview, Presenting projects, proposals etc through PPT Making,

### Methodology for Evaluation

1. *Internal Assessment (Theory)*
  - a) *Home Assignments: One from each Unit* : 15 Marks
  - b) *In Semester Tests (Minimum two)* : 30 Marks
  - c) *Attendance* : 05 Marks
2. *Term End (Theory)* : 50 Marks
3. *Internal Assessment (Lab)*
  - (a) *Daily Performance in the Lab* : 50 Marks
4. *Term End (Lab)* : 50 Marks

### Course Articulation Matrix: (Mapping of COs with POs andPSOs)

Course Outcome	Program Outcome							Program Specific Outcome					
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4	PSO5	PSO6
CO1	3	2	3					2	3	3	2	3	3
CO2	2	3	3					1	2	3	3	3	2
CO3	3	2	1				3		1	3	2	2	3

### B. Tech. (common to all disciplines)-I Semester

Contact Hours (L-T-P): 3-1-0

DMA001A	Engineering Mathematics-I	3: 1:0	4
---------	---------------------------	--------	---

### OBJECTIVE:

The objectives of this course are to make the students:

- To increase the student's appreciation of the basic role played by mathematics in modern technology.
- Incorporate the knowledge of advanced mathematics to support their concurrent and subsequent engineering studies.

- To develop the concepts and tools that will serve as building blocks towards tackling more advanced level of mathematics that they are likely to find useful in their profession when employed in the firm/industry/corporation in public or private sector
- 

<b>UNIT 1</b>	Point of inflexion and curve tracing (Cartesian coordinates only), curvature, convexity, concavity, point of inflexion and curve tracing.
<b>UNIT 2</b>	Limit, continuity and partial derivatives, Euler's theorem on homogenous functions, total derivative, approximate calculations; Maxima and minima of two and more independent variables; Method of Lagrange multipliers.
<b>UNIT 3</b>	Beta and Gamma functions and their properties. Surface and volumes of solids of revolutions. Double integrals, change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes.
<b>UNIT 4</b>	Vectors covering, laws of vector algebra, operations- dot, cross, triple products; Vector limits, continuity and derivatives, geometric interpretation; Gradient, divergence and curl formulae.
<b>UNIT 5</b>	Line integrals, simply connected regions, Line integrals, surface integrals, volume integral, Green's theorem, Stokes theorem and Gauss theorem.

#### **Text Books:**

1. B.V.Ramana, *Higher Engineering Mathematics*, Tata McGraw Hill, 2011.

#### **Reference Books:**

1. Erwin Kreyszig, *Advanced Engineering Mathematics*, Wiley 9th Edition, 2008
2. Maurice D. Weir and Joel Hass, *Thomas Calculus*, Pearson, 11th Edition, 2005.
3. *Higher Engineering Mathematics- B. S. Grewal*, Khanna Publications.

#### **Course Outcomes**

Upon successful completion of this course, the student will be able to:

- CO1 Understand the concepts of Asymptotes, curvature and curve tracing.
- CO2 Understand the functions of more than one independent variable and calculate partial derivatives along with their applications. Also obtain an idea for finding the extreme values of functions of more than one variable.
- CO3 Will be able to integrate a continuous function of two or three variables over a bounded region and be able to trace the curves.
- CO4 Understand the representation of vector and its properties.
- CO5 Understand line integral, surface integrals, volume integral, Green's theorem, Stokes theorem and Gauss theorem

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
CO1	H	H			M		M					M	H	L	
CO2		M		L	M		H				L	M	M		
CO3	H	H		M	M		H			L		M	M	M	
CO4	H	M		M	L		M					M		M	
CO5	H	H			M		H					M	H	M	

H = Highly Related; M = Medium L = Low

**B. Tech. (common to all disciplines)-I/II Semester**

**Contact Hours (L-T-P): 3-0-0**

<b>DPH001A</b>	<b>APPLIED PHYSICS</b>	<b>Total Credits: 3</b>
----------------	------------------------	-------------------------

**Course Objectives:**

1. Students will be able to demonstrate competency and profound understanding of the concepts in Quantum Mechanics and its applications, and band formation.
2. Students will be able better to understand and learn to design the laser system and its component, or process to meet desired needs within realistic constraints such as health and safety, manufacturability.
3. The graduates will able to understand the applications of quantum optics through Holography and communication through optical fibers.
4. Students will be able to know the application of optical technologies and the development of new technologies like photonics, spintronics, quantum computing and Nano-technology.

<b>UNIT 1</b>	<b>Quantum Mechanics:</b> Overview- Development of Quantum Mechanics, Compton Scattering, Wave Particle Duality, Uncertainty's Principle, Phase and Group velocities, Wave Packet, - Physical significance and its properties, Operators, Expectation values. Schrödinger's Time dependent and time independent Equations. <b>Applications:</b> Schrödinger's Equation and its Solution for particle in one-dimensional box and three-dimensional box. Degeneracy. Quantum statistics. *Overview of <b>AlphaDecay, Scanning and Tunnelling Microscopes.</b>
<b>UNIT 2</b>	<b>Free Electron Gas Model and its Applications:</b> Overview – Classical theory of Free electron, Quantum theory of free electrons, Density of energy states, Fermi energy levels. Band Theory of solids: formations of band, Band Gap in solids, Semiconductors: Intrinsic and Extrinsic, Carrier Concentrations, Position of Fermi levels in semiconductors, Conductivity and Mobility due to electrons and holes. <b>Solar cells and Photo cells.</b>
<b>UNIT 3</b>	<b>Quantum Optics: Coherence:</b> Spatial and Temporal coherence, Coherence length, Coherence time. Visibility as a Measure of Coherence. Spatial Coherence and Size of the Source. Temporal Coherence and Spectral Purity.

	<b>Laser:</b> Einstein's coefficients, Threshold conditions for laser action. Types of Lasers-Ruby laser, He-Ne laser. Semiconductor laser. Elementary ideas of Q-switching and Mode Locking. Idea of Homojunction and Hetrojunction lasers.
<b>UNIT 4</b>	<b>Holography:</b> Holography versus photography. Basic theory of Holography. Applications of Holography in Microscopy and Interferometry. <b>Optical Communication:</b> Optical fiber as optical wave-guide. Construction, Numerical Aperture and Angle of Acceptance. Applications and Types of optical fibres.
<b>UNIT 5</b>	<b>Applications of Optical Technologies:</b> Determination of thickness of thin films using interference technique. Elementary idea of anti-reflection coating. Optical filters. Applications of Diffraction: Bragg's law of X-Ray Diffraction. Polaroids and their industrial applications. <b>Overview of Upcoming Technologies</b> * Photonics * Spintronics * Quantum Computers * Nanotechnology and Nano-materials. Carbon Nano-tubes (CNTs).

### Course Outcomes

Upon successful completion of this course, the student will be able to:

- CO1: To learn the fundamental concepts on Quantum behaviour of matter in its micro state and its applications.
- CO2: Analyze and apply band theory of Solids in Solid State Physics and Electronics.
- CO3: Understand and apply techniques of LASER and coherent radiations in industry, medical, and day-to-day life activities.
- CO4: Apply concepts learnt in Quantum optics in Industry and in real life.
- CO5: Understand and importance of Spintronics to develop storage device with low threshold power, spin based transistor, Photonics for techno-farming, and Nano-technology for saving environment, advances in medical and energy efficiency in fuel cell.

### Suggested Books

1. Arthur Beiser, **Perspectives in Modern Physics**, McGraw Hill International.
2. H. S. Mani and G. K. Mehta, **Modern Physics**, East-West Press.
3. H Malik and AK Singh, **Engineering Physics**, McGraw Hill Education.
4. A. K. Ghatak, **Optics**, Tata McGraw Hill.
5. D. K. Bhattacharya and A. Bhaskaran: **Engineering Physics**, Oxford University Press.
6. S. Mani Naidu, **Engineering Physics**, Pearson.
7. A. K. Ghatak and Thyagrajan, **Fiber Optics**, Oxford University Press.
8. S. O. Pillai, **Solid State Physics**, Wiley Eastern.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

<b>DCO013A</b>	<b>Computer Programming and Logical Thinking</b>	<b>3: 0:0</b>	<b>3</b>
----------------	--	---------------	----------

**Course Objectives**

1. To impart adequate knowledge on the need for programming languages and problem-solving techniques.
2. To develop an in-depth understanding of functional and logical concepts of Programming Language
3. To provide exposure to problem-solving through programming skills
4. To familiarize the basic syntax and semantics of programming Language
5. To familiarize the different Operations on arrays, functions, pointers, structures, unions and files

**Unit I**

**Unit-1** Computer Fundamentals, Functional units of Computer: I/O devices, Primary and secondary memories Number System: Decimal, Binary, Octal, and hexadecimal, Fixed and floating Points, Character Representations, ASCII, EBCDIC, Binary Arithmetic, Negative Numbers and their Arithmetic, Floating point representation, Binary Codes, Cyclic Codes

**Unit-2** Programming Fundamentals, Algorithm development, Techniques of Problem-solving, Flowcharting, Stepwise Refinement.

**Unit –3** Basic of C Programming, Introduction of C language, Representation of Integer, Character, real, Data Types: Constants and Variables, Operators, Arithmetic Expression, Logical expression, Assignment statement, Structure of a C program, Header files, Directives

**Unit–4** Programming in C, Decision Control Structure, Alteration, and Iterations (While, do while, for loop, switch case), Arrays, String processing,

**Unit–5** Advance Concepts in C, Functions, Recursion, Pointers, Structure, Union, Files

### Course Outcomes (CO)

- CO1 Understand the basic structure of computer and numbering methods
- CO2 Understand the representations of data and various algorithm
- CO3 Choose the right data representation formats based on the requirements of the problem
- CO4 Develop programming skills using the fundamentals and basics of Programming Language
- CO5 Implement different Operations on arrays, functions, pointers, structures, unions and files

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome

### **List of Experiments**

Students are required to perform any ten experiments out of the following list of experiments.

1	To convert a Galvanometer into an Ammeter of given range and calibrate it.
2	To convert a Galvanometer into a Voltmeter of given range and calibrate it.
3	To study the variation in resistance of a Semiconductor with temperature and to determine its energy bandgap.
4	To determine specific Resistance of a wire by Carrey-Foster's Bridge.
5	To determine the height of an unknown object using Sextant.
6	To determine Resolving power of Telescope.
7	To determine Dispersive Power of a Prism using Mercury light source and Spectrometer.
8	To determine the wavelength of prominent lines of Mercury by using plane Diffraction Grating and Spectrometer.
9	To measure Numerical Aperture of an Optical Fiber.
10	To determine the profile of He-Ne LASER beam.
11	To determine wavelength of Sodium light source using Newton's Rings experiment.
12	To study shift in fringes in interference experiment using Michelson's interferometer
13	To study the characteristics of Solar Cell
14	To study the photoelectric effect and determine the Planck's constant "h".
15	To verify the Brewster's law and to find the Brewster's angle
16	To study the polarization of Laser light using polarimeter.

### **Course Outcomes-**

While graduating, students of the Applied Physics Lab program would be able to:

CO1: Demonstrate the working knowledge of fundamental Physics, that of Electricity, Electronics and Mechanics and their applications in engineering disciplines.

CO2: The ability to formulate, conduct, analyze and interpret experiments in engineering physics.

CO3: Use modern engineering physics techniques and tools, including laboratory instrumentation.

CO4 Communicate their ideas effectively, both orally and in writing; and function effectively in multidisciplinary teams.

CO5: Able to establish strong correlation between theory and experiments for better experiential learning.

<b>DME001A</b>	<b>Engineering Graphics and Design</b>	<b>3: 0: 0 3</b>
----------------	--	------------------

**❖Course Overview:**

The course provides the fundamental knowledge on engineering graphics and design, which is used for technical communication in the industry. The practical expertise of L&T has been leveraged for the course development to help the learners understand and apply the knowledge as it is being done in the field. This course covers the fundamentals of engineering graphics involving geometrical 1D, 2D, and 3D objects. The knowledge of engineering graphics gained through this course can be applied to design and draw simple machine parts, small office and residential buildings. Computer Aided Design is introduced and discussed in a practical way with an exposure to Building Information Modelling. This course facilitates the learners

to have a clear understanding on how to apply the knowledge of graphics in their respective disciplines for engineering design.

### ❖Course Objective:

To help learners draw engineering drawings of objects in manual and computer aided drafting methods, read and interpret the drawing of simple machine components, buildings, etc., and apply the knowledge for creative engineering design

### ❖Key Topics:

Drawing Codes | Manual Drafting | Traditional Engineering Graphics | Computer Graphics and Computer Aided Design | Solid Modelling | Building Information Modelling | Design Project

### ❖Syllabus:

#### **Basics of Engineering Graphics, Projection of Points**

Introduction to Engineering Drawing, Manual & Computer Aided Design and Drafting, Lettering, Dimensioning, Geometrical Constructions, Plane Curves, Conic Sections, Cycloidal Curves, Involute – Projection of point placed in a quadrant – Projection of a line using first angle projection method, rotating line method, trapezoidal plane method – Solve & draw projections of a line kept inclined to two planes – Determination of true length, true inclinations & traces of a straight line

#### **Projection of Planes & Solids**

Description of plane shapes & solids - Drawing plane projections & solids using change of position and auxiliary plane method – Projection of solids with inclined axis – Drawing projection of solids using change of position and auxiliary plane method.

#### **Orthographic Projections & Sections of Solids**

Visualization & drawing orthographic projections – Description & drawing of Plan, elevation, side elevation of objects, simple machine parts using first angle projection method – Description of section plane & portion of solid – Drawing sectional top view, front view, true shape of section on an auxiliary plane

#### **Isometric & Perspective Projection, Development of Surfaces**

Drawing isometric view of solids (Box method) – Drawing isometric scale & construction of isometric projection from orthographic projection – Drawing perspective projection of small, large objects and building components using suitable methods – Drawing section plane & determining lateral surface – Determination of shortest distance between points – Drawing & determining shape of metal sheet to cut objects.

#### **Building Drawing, Solid Modeling, Building Information Modeling**

Drawing plan, elevation and sectional elevation of a small residential & office building – Description & creation of Solid models in general and with respect to engineering – Designing and creating a new product & generating various views – Basics of Building Information Modeling (BIM)

### ❖Case Studies

1. Building drawing of a small office building

2. Building drawing of a small office building

❖ **Software used: AUTOCAD**

<b>DCO014AA</b>	<b>Computer Programming and Logical Thinking Lab</b>	<b>0:0:2</b>
<b>1 Credit</b>		

1. Write a program to print a hello world in c .
2. Write a program in c to check even or odd.
3. Write a program to find odd numbers in c.
4. Write a program to print Armstrong numbers from 1 to 500.
5. Write a program for prime numbers between 1 to 100.
6. Write a program to check a palindrome number.
7. Factorial program in c using for loop
8. Write a c program to reverse a given number.
9. Write a program to add the two numbers.
10. Write a program to swap a number using a third variable.
11. write a program to make personal information as in CV.
- 12 Write a program to print the following pattern.

\*

\* \*

\* \* \*

- 14 Write a program to print the following pattern.

\* \* \*

\* \*

\*

- 15 Write a program to reverse an input string in c .
- 16 Write a program to print addition, multiplication, division, and subtraction of the numbers.
- 17 Write a program to print a table of any number.
18. Write a program to implement switch case .
19. Write a program to implement Function.
20. Write a program to implement Recursive Function.
21. Write a program to implement structure in C.
22. Write a program to implement UNION in C.
23. Write a program to implement ENUM in C.

**Contact Hours (L-T-P): 2-0-0**

<b>L-T-P</b>	<b>DIN001A - Cultural Education I</b>	<b>Credits</b>	<b>2-0-0</b>	<b>2</b>
--------------	---------------------------------------	----------------	--------------	----------

### **Course Objectives**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

### **Course Outcomes (CO):**

**At the end of this course students will have:**

- CO1: Ability to acknowledge and appreciate the richness of Indian Culture  
 CO2: Ability to represent the culture ethics in real life

### **UNIT-I Holy Scriptures-A**

1. Introduction to Vedanta and Bhagavad Gita, Goals of Life – Purusharthas, Introduction to different DharmGranthas (Various religious scriptures from Hindu, Muslim, Christian, Bodh, Jain religions)
2. Introduction to Yoga, Overview of Patanjali's Yoga Sutras

### **UNIT-II Society and Culture-I**

3. Introduction to Indian Culture and Major Symbols of Indian Culture
4. Major Indian Cultural and Ethical Values- Respect, Compassion, Kindness, Forgiveness, Introspection, Honesty, Justice, Loyalty, Devotion, Self Sacrifice, Hospitality, VasudhevKutumbkum

### UNIT-III India in Progress-I

5. Education , Science and Technology in Ancient India
6. Values from Indian History- War of Mahabharata, War of Kalinga, Freedom Struggle of India, Major Farmer Movements, Major Religious and Social Upliftment Movements

### UNIT-IV Great Indian Personalities-I

7. Life and works of the Great People of India- Sushruta, Dadhichi, Ashtvakra, Anusuya, Panini, Charaka, Kalidas, Aryabhatta, Samudragupta, Ashoka, Chandragupt Mourya, Porus, Satyabhama, Dhruv, Prahlad, Chankya, Varahmihira, Bhism, Karan, Dronacharya, Meera Bai, Surdas, Dadudayal, Kabir, Mahatma Budhha, Mahavir, Guru Nanak Dev, Guru Gobind Singh, Mohammad Saheb, Jesus Christ, Veer Shivaji, Maharana Pratap, Maharani Laxmi Bai, Maharani Padmini, Hadi Rani Shal Kanwar, Panna Dhai

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by committee of teachers.

### Suggested Reading:

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

### References

### Contact Hours (L-T-P): 2-0-2

L-T-P	DEN002C - Professional Skills	Credits 2-0-1 3
-------	-------------------------------	-----------------

### Course Objectives

1. To enhance Professional competence in reading, writing, listening and speaking.
2. Switch the approach from providing information about the language to use the language.

3. Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
4. Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
5. Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
6. Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

#### Course Outcomes (CO):

**At the end of this course students will have:**

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in professional scenario.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

CO5: Ability to enhance professional writing skills in tune with professional scenario.

#### Syllabus: Theory

<b>UNIT 1</b>	<b>Professional Grooming and Professional Culture:</b> Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
<b>UNIT 2</b>	<b>Advanced Grammar:</b> Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
<b>UNIT 3</b>	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms
<b>UNIT 5</b>	<b>Reading Comprehension:</b> Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction,

#### Syllabus: Lab

L-T-P	Professional Skills Lab	Credits	2-0-1	3
UNIT 1	<b>Professional Grooming and Professional Culture:</b>			

	Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
<b>UNIT 2</b>	<b>Advanced Grammar:</b> Exercise Sessions for Common errors related to prepositions, articles, models, Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
<b>UNIT 3</b>	<b>Composition:</b> Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics
<b>UNIT 4</b>	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words
<b>UNIT 5</b>	<b>Reading Comprehension:</b> Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc

### Methodology for Evaluation

1. Internal Assessment (Theory)
  - a) Home Assignments: One from each Unit : 15 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
  - c) Attendance : 05 Marks
2. Term End (Theory) : 50 Marks
3. Internal Assessment (Lab)
  - (a) Daily Performance in the Lab : 50 Marks
4. Term End (Lab) : 50 Marks

### Course Articulation Matrix: (Mapping of COs with POs andPSOs)

Course Outcome	Program Outcome							Program Specific Outcome					
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4	PSO5	PSO6
CO1	3	2	3					2	3	3	2	3	3
CO2	2	2	3					1	2	3	3	3	M
CO3	3	2	1				3		1	3	2	2	3
CO4	2	3	3					2	M	3	3	3	3
CO5	3	3	1					2	2	3	3	3	3

### Suggested Readings:

1. Felixa Eskey. Tech Talk, University of Michigan. 2005
2. Michael Swan. Practical English Usage, Oxford University Press. 2005
3. Anderson, Paul. Technical Communication: A Reader Centered Approach, V Edition, Hercourt, 2003.

4. Thampi, G. Balamohan. Meeting the World: Writings on Contemporary Issues. Pearson, 2013.
5. Lynch, Tony. Study Listening. New Delhi: CUP, 2008.
6. Kenneth, Anderson, Tony Lynch, Joan Mac Lean. Study Speaking. New Delhi: CUP, 2008.
7. Marks, Jonathan. English Pronunciation in Use. New Delhi: CUP, 2007.
8. Syamala, V. Effective English Communication For You (Functional Grammar, Oral and Written Communication): Emerald, 2002.

**Contact Hours (L-T-P): 3-1-0**

<b>DMA002A</b>	<b>Engineering Mathematics-II</b>	<b>3:1:0 [4]</b>
----------------	-----------------------------------	------------------

**Objective:** At the end of the course, the student should be able to:

- To provide a brief, hands-on overview of ordinary differential equations and Higher order linear differential equation with constant coefficients.
- To understand the second order linear differential equations with variable coefficients.
- To make utilization of Linear Partialdifferential equations–someimportantequations Heat, wave and Laplace equation.
- To understand the Laplace transform, Inverse Laplace transform and their applications
- To familiarize and Analyzenumerical solution of a differential equation by Euler's, Modified Euler's, Predictor Corrector and Runge Kutta fourth order Methods.

<b>UNIT1</b>	Introduction, Elementary row and column transformations ,Linear dependence, Consistency of linear system of equations, Inverse of a matrix, Rank of a Matrix, System of linear equations (Homogenous and Non-homogeneous);Eigenvaluesandeigenvectors, Cayley's Hamilton theorem.
<b>UNIT2</b>	Convergence of sequence and series, tests for convergence, power series, Taylor's series. Series for exponential, trigonometric and logarithmic functions.
<b>UNIT3</b>	Ordinarydifferential equation (first order first degree), Homogenous differential Equation, Linear differential equation, Exact differential equation, Higher order linear differential equation with constant coefficients.
<b>UNIT4</b>	Linearequations withvariablecoefficients: Homogenous form, Exact form, Change of dependent variable, Normal form, Change of independent variable and method of variation of parameters.
<b>UNIT 5</b>	Series solutions of second order linear differential equations with variable coefficients (Complementary functions only). First order partial differential equations, solutions of first order linear and non-linear PDEs.

**Text Books:**

1. B.V.Ramana, Higher Engineering Mathematics, Tata McGraw Hill, 2011.

**Reference Books:**

**Recommended Books:**

1. Erwin Kreyszig , Advanced Engineering Mathematics, Wiley 9th Edition, 2008
2. Thomas and Finney, Calculus and Analytical Geometry, Narosa Publishing House. New Delhi, 2002.
3. M.Ray and Chaturvedi, A Text Book of Differential Equations, Students Friends & Co.

Publisher, Agra, 1998.

4. Maurice D. Weir and Joel Hass, Thomas Calculus, Pearson, 11th Edition, 2005.

### Outcomes:

**At the end of this course, students will be able to:**

CO1: Use matrices, determinants and techniques for solving systems of linear equations in the different areas of Linear Algebra. Understand the definitions of Vector Space and its linear Independence. Solve Eigen value problems and apply Cayley Hamilton Theorem.

CO2: Understanding convergence of sequence and series.

CO3: Identify, analyze and subsequently solve physical situations whose behavior can be described by First order and first degree ordinary differential equations and Higher order linear differential equation with constant coefficients.

CO4: Determine solutions to second order linear differential equations with variable coefficients.

CO5: Understanding the series solutions of second order linear differential equations with variable coefficients

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

CO4	H	H	M	M	M			L	L			L			M
CO5	H	H	M	M	M	L			L			L	H		

H = Highly Related; M = Medium L=Low

### B. Tech. (common to all disciplines)-II Semester

Contact Hours (L-T-P): 3-0-0

DEE002A	Basic Electrical and Electronics Engineering	3-0-0
---------	--	-------

### Objective

- To understand basic concepts required in understanding electrical and electronic circuits
- To understand the concept of Semiconductor Diode and their applications.

- The student will be able to understand fundamental circuit analysis techniques and basic electronics backgrounds, including PN Diode and Opto-Electronic Devices.
- To understand basic concepts of construction and working of single phase Transformer.
- To understand basic concepts of Electrical DC Circuit.
- The student will be able to understand the concept of Various Binary Number Systems and conversions.
- To understand Logic Gates and Logic Circuit focusing on basic and universal gates.

<b>UNIT 1</b>	<b>Electrical-DC Circuit</b> – Ohm’s law, Kirchoff’s Current Law( KCL) & Kirchoff’s Voltage Law (KVL), Voltage & Current Sources, Star-Delta and Delta-Star transformations, Nodal & Mesh Analysis.
<b>UNIT 2</b>	<b>Transformers</b> - Principle of operation and construction of single phase transformers (core and shell types). EMF equation, losses, efficiency and voltage regulation
<b>UNIT 3</b>	<b>Semiconductors</b> - Comparison of Insulator, conductor and semiconductor with energy band diagrams. Semiconductor materials-Intrinsic and Extrinsic semiconductor (P-type and N-type SC), Crystal structures of p-type and N type materials, resistivity, conductivity, mobility.
<b>UNIT 4</b>	<b>Electronics Devices</b> - Diode, PN diode-construction, working and V-I plot, Diode as a Rectifier, Half Wave and Full Wave Rectifiers, Zener Diode – construction, Operation, characteristics; Opto-Electronic Devices – LEDs, Photo Diode.
<b>UNIT 5</b>	<b>Digital Electronics</b> -Number Systems: Binary system, Hexadecimal System, Octal system, Decimal system, Code conversions.  <b>Basic Logic Gates</b> (AND, OR , NOT), Universal Gates(NAND and NOR) and other gates(EX-OR,EX-NOR), Truth Tables.

### **Course Outcome (CO):**

At the end of this course students will have:

CO1- To understand, analyze and solve DC electrical circuits

CO2- To understand basic concepts of construction and working of single phase Transformer.

CO3- Ability to understand the physical properties of different types of semiconductors used in fabricating devices.

CO4- Ability to understand the functioning of PN junction diode and explains its main application as rectifiers and opto-electronic devices.

CO5- Ability to understand the concept of Various Binary Number Systems and Codes, Logic Gates and Logic Circuit.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

**Contact Hours (L-T-P): 3-0-0**

DCO001A	Computer Programming in C++	3: 0:0	3
---------	-----------------------------	--------	---

**OBJECTIVE:**

- *To perform object oriented programming solution and develop solutions to problems demonstrating usage of control structure, modularity, classes, I/O and the scope of the class members*
- *To demonstrate adeptness of object oriented programming in developing solution to problems demonstrating usage of data abstraction, encapsulation and inheritance*
- *To demonstrate ability to implement one or more patterns involving dynamic binding and utilization of polymorphism in the solution of problems*
- *To learn syntax and features of exception handling*
- *To demonstrate the ability to implement solution to various I/O manipulation operations and the ability to create two-dimensional graphic components using applets*

<b>UNIT 1</b>	C++ Overview, C++ Characteristics, Object-Oriented Terminology, Polymorphism, encapsulation ,inheritance, Object-Oriented Paradigm, Abstract Data Types, I/O Services, Standard Template Library, Standards Compliance, Functions and Variables. Declaration and Definition
<b>UNIT 2</b>	Variables: Dynamic Creation and Derived Data, Arrays and Strings in C++,Classes in C++, Defining Classes in C++, Classes and Encapsulation, Member Functions, Friend function ,Inline function
<b>UNIT 3</b>	Using Constructors, Multiple Constructors and Initialization Lists, Using Destructors to Destroy Instances, Using Destructors to Destroy Instances, Operator Overloading: operator overloading of unary and binary operator, Function Overloading, Working with Overloaded Operator Methods
<b>UNIT 4</b>	Constant and Static Class Members, Inheritance, Overview of Inheritance, Defining Base and Derived Classes, Single, Multiple, multilevel, hybrid hierarchical inheritance. Constructor and Destructor Calls in inheritance, virtual function, virtual base class,
<b>UNIT 5</b>	Input and Output in C++ Programs, Standard Streams, Manipulators, Unformatted Input and Output. Working with files.

### **Course Outcome (CO):**

At the end of this course, students will demonstrate ability to:

CO1: Understand object-oriented programming features in C++,

CO2: Apply these features to program design and implementation,

CO3: Develop applications using Object Oriented Programming Concepts.

CO4: Implement features of object oriented programming to solve real world problems.

CO5: Develop the ability to implement software in high-level programming language like C++

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome

2. The C++ Programming Language:Bjarne Stroustrup

<b>DCH002A</b>	<b>Engineering Chemistry</b>	<b>3-0-0</b>
----------------	------------------------------	--------------

**Objectives of Chemistry**

- 1.The purpose of this course is to emphasize the relevance of fundamentals and applications of chemical sciences in the field of engineering.
- 2.The courses have been conceived in such a way that they take into account appropriate combinations of old and new emerging concepts in the chemical sciences area and their current and potential uses in engineering.
- 3.The Course attempt to address the principles of general chemistry and specific topics relevant to various engineering disciplines, wherein the students can apply this learning in their respective areas of expertise.

<b>UNIT 1</b>	<p><b>Water and Analysis :</b> Types of impurities in Water, Hardness of Water, Disadvantages of Hard Water, Temporary and Permanent hardness. Units and inter conversions of Units. Estimation of hardness by EDTA Methods.. Methods of Treatment of Water for Domestic Purposes - Sedimentation, Coagulation, Filtration, Disinfection, Sterilization, Chlorination, Break point chlorination, Ozonization. Water for Industrial purpose, Water for Steam Making-Boiler Troubles, Carry Over, Priming and Foaming, Boiler Corrosion, Scales and Sludges, Caustic Embrittlement.</p> <p><b>Water Treatment:</b> Internal Treatment methods, Colloidal, Phosphate, Calgon,</p>
---------------	--

	Carbonate, Sodium aluminate Conditioning of Water. External Treatment methods, Lime-Soda Process, Zeolite Process, Ion- Exchange Process, Numerical Problems on EDTA Methods and Lime-Soda process.
<b>UNIT 2</b>	<p><b>Fuels :</b>Classification of Fuels, Calorific value,Determination of calorific value of a solid and liquid fuel, Bomb &amp; Boy's Gas Calorimeter, Carbonization, Beehive Oven Method, Ottohaffman's Byproduct Method, Petroleum,Cracking- fluidized catalytic cracking. Reformation of petrol, Knocking, Octane number, Cetane number, Synthetic petrol, Bergius process and Fischer-Tropsch process.</p> <p><b>Lubricants:</b> Principles and function of lubricants - Types of Lubrication and Mechanism -Thick Film or Hydrodynamic Lubrication, Thin Film or Boundary Lubrication, Extreme Pressure Lubrication. Classification and properties of lubricants-Viscosity, flash and fire point, cloud and pour point, aniline point and Neutralization Number, Precipitation No.</p>
<b>UNIT 3</b>	<p><b>Electrochemistry and Corrosion</b></p> <p>Electrochemical Cell, EMF of Cell, Electrode potential. Electrochemical Series. Chemical (Dry) and Electrochemical(Wet) corrosion. Types of corrosion; stress corrosion, stress cracking, water line corrosion, bimetallic corrosion etc. Factors affecting corrosion, Protection from corrosion, Protective coatings, cathodic protection, sacrificial Anodic protection and modification in designs.</p>
<b>UNIT 4</b>	<p><b>Nano particles&amp; New engineering materials:</b> Terminology- scales of nano-systems- nanoparticles: introduction-atoms to molecules-quantum dots-shrinking of bulk materials to quantum dots. Different types of nanoparticles. Various approaches in nanoparticle synthesis Characterisation of nanomaterials : Important methods for the characterisation of nanomaterials Applications of nanomaterials :Catalysis, Electronics &amp; Telecommunication, Medicines, Composites, Energy sciences Molecular electronic devices, An Introduction to polymers for electronic industry, Organic conducting polymers</p>
<b>UNIT 5</b>	<p><b>Principles and Concepts of Green Chemistry:</b> Sustainable development, atom economy, reducing toxicity. Waste: production, problems and prevention. Green Synthesis and Catalysis; Environmentally benign processes,Green oxidation and photochemical reactions, Microwave and Ultrasound assisted reactions. Water as a reaction medium. Green chemistry in material science, synthesis of porous polymers, green nanotechnology.</p> <p>Green energy sources, efficiency and sustainability, energy from biomass and solid waste, Biofuels, alcohol, hydrogen production technology, biofuels from Jatropa. Industrial case studies.</p>

### Suggested Books

1. Engineering Chemistry by J C Kuriacose and J. Rajaram, Tata McGraw-Hill Co, New Delhi (2004)
2. B.K. Sharma, "Engineering Chemistry", Krishna Prakasam Media (P) Ltd., Meerut, 2001.
3. A text book of Engineering Chemistry by Jain & Jain, Dhanpat Rai Publishing Company, New Delhi(15 Edition) (2006).
4. An introduction to Electrochemistry by Samuel Glasstone, Affiliated east west press private Ltd.
5. C. N. R. Rao and A. Govindraj, Nanotubes and Nanowires, Royal Society of Chemistry
6. Chemistry of Engineering Materials by C.P. Murthy, C.V. Agarwal and A. Naidu BS Publication Hyd. 2007.
7. Text book of Engineering Chemistry by Shashi Chawala, Dhanpat Rai Publishing Company, 15th edition New Delhi (2004).
8. Green Chemistry: An Introductory Text: Edition 3 Author: Mike Lancaster

### **Course outcome**

CO-1 Students will be able to explain the impurities of water (mainly hardness) and boiler troubles and also different methods to remove hardness of water.

CO-2 Students will be able to analyze the basic knowledge of various types of Fuels, Lubricants their properties and Industrial Applications.

CO-3 Students will be able to understand relate electrochemistry and corrosion.

CO-4 Students will be able to understand about different types of nano materials and polymers

CO-5 Students will be able to understand the basic concept of Green chemistry and its emerging applications in Industries and for protection of environment.

### **Engineering Chemistry Lab-**

<b>DCH003A</b>	<b>Chemistry Lab</b>	<b>0-0-2</b>
----------------	----------------------	--------------

### **List of Experiments**

1. Determination of cell constant and conductance of solutions.
2. Calibration of pH meter and determination of pH of a solution
3. Identification of a drugs using thin layer chromatography (TLC) and Column chromatography
4. Estimation of total hardness of water-EDTA method
5. Estimation of dissolved oxygen by Winkler's method
6. Estimation of chloride in water

7. Estimation of fluoride content in water by SPANDANS method
8. Determination of the viscosity of a lubricating oil by using Redwood viscometer
9. Determination of the Flash & Fire point of a lubricating oil by using Pensky Martin's apparatus
10. Determination of the Cloud & pour point of a lubricating oil
11. Determination of wavelength of absorption maximum and colorimetric estimation of  $\text{Fe}^{3+}$  in solution
12. Flame photometric estimation of  $\text{Na}^+$  to find out the salinity in sand
13. Synthesis of polymers (a) Urea-formaldehyde resin (b) Phenol-formaldehyde resin and their characterization
14. Adsorption of acetic acid on charcoal and Isotherm study
15. Preparation of Biodiesel from vegetable oil

#### Suggested Books

1. Text book of Engineering Chemistry Practicals by Shashi Chawala, Dhanpat Rai Publishing Company, 15th edition New Delhi (2004).
2. Vogel's text book for quantitative analysis
3. Vogel's text book for qualitative analysis

	<b>ENGINEERING WORKSHOP</b>	<b>0-0-2(1)</b>
--	-----------------------------	-----------------

#### DME010A - Mechanical Engineering Group

<b>Module 1 :</b> (Compulsory for Mechanical Engineering Students )	
	To Prepare a job on lathe machine by performing turning, facing and chamfering as per given drawing. To drill holes in metal sheet as per given drawing.
	To make a Square fit from the given mild steel pieces. To Prepare cylinder as per given drawing by using sheet metal working
	To Prepare a T-lap/Cross lap joint using carpentry.
	To Prepare a /butt joint in arc welding shop. To join and cut thin metal sheet with the help gas welding.
<b>Module 2 :</b> (Optional for All )	
	To prepare NC Part Programming for Given Drawing . To prepare the Job on CNC Milling M/C
	Fault Analysis of House hold Refrigerator Analysis of Air Conditioner of Air Conditioner

	Maintenance Service of Petrol Engine with assembly procedures. Maintenance Services of Diesel Engine with assembly procedures
--	--

### **DEL010A - Electrical Engineering Group:**

Experiment 1: Dismantling and assembly of ceiling fan.

Experiment 2: Dismantling and assembly of geyser.

Experiment 3: Dismantling and assembly of blower.

Experiment 4: Dismantling and assembly of AC/refrigerator.

### **DEE002A - Electronics Engineering Group:**

Experiment 01	Electronics Work Bench Software-Designing of Electronic Circuits and PCB designing using software.
Experiment 02	Breadboard Circuit Designing -Circuit designing and to determine static resistance and dynamic resistance of p-n junction diode and plot the-I characteristics.
Experiment 03	Digital ICs- Verification of Truth table of basic & universal Logic Gates using Bread board and Integrated Circuits (ICs).
Experiment 04	C.R.O and Function Generator –To Generate a sine wave using a function generator and measure its amplitude and frequency using C.R.O.
Experiment 05	Digital Multimeter-Measurement of AC and DC voltage, current, capacitance and resistance using Digital Multimeter
Experiment 06	Observe output waveform of half wave rectifier with and without filter capacitor and measure DC voltage, DC current, ripple factor with and without filter capacitor.
Experiment 07	Observe output waveform of full wave rectifier with and without filter capacitor and measure DC voltage, DC current, ripple factor with and without filter capacitor.
Experiment 08	Designing of Bridge rectifier with and without filter capacitor and measure DC voltage, DC current, ripple factor with and without filter capacitor.
Experiment 09	Design a half wave rectifier using discrete components on a breadboard and measure DC voltage, DC current, ripple factor, with and without filter capacitor

Experiment 10	Design full wave rectifier using discrete components on a breadboard and measure DC voltage, DC current, ripple factor with and without filter capacitor.
---------------	---

### DCO006A - Computer Science & Engineering Group:

1. Introduction to PC Hardware
  - a. RAM, ROM, Motherboard, SMPS, Processor
2. Hardware installation and assembly of PC
  - a. Desktop
  - b. Laptop
3. PC debugging, troubleshooting and Maintenance
4. Software installation and Configuration
  - a. Installation of operating System (Windows, Linux/UNIX, Server)
  - b. Basic utility and maintenance software
5. Working and functioning of different Buses, I/O Ports, graphic cards.
6. Installation of printer / modem /scanner and other input and output devices.
7. Configuring BIOS set up, Recovery, Preventive maintenance & Anti-Virus
8. Study of different types of Network cables and Practically implement the cross-wired cable and straight through cable using clamping tool
9. Configuring and Practically implement Network Devices
  - a. Repeater
  - b. Hub
  - c. Switch
  - d. Bridge
  - e. Router
  - f. Gate Way
10. Install and Configure Wired and Wireless NIC and transfer files between systems in LAN and Wireless LAN.
11. Connect the computers in Local Area Network.
12. Transfer files between systems in LAN using FTP Configuration, install Print server in a LAN and share the printer in a network
13. Installation of Ms Office 200x.

### DCI007A - Civil Engineering Group:

#### Experiments

1. To study about measurement units, equipment and their application.
2. Drawing and setting out of a building (single room only) as per the given existing building/plan respectively.
3. Visual representation & identification of construction materials, equipment and building components.
4. Mixing, handling and placing of cement mortar and concrete.
5. Masonry, plastering and finishing of wall.
6. Application of wall putty and paint.
7. Application of base coat and laying of tile flooring of one square meter.
8. To study about installation of various water supply and sanitary fittings.
9. To determine pH, hardness and turbidity of the given sample of water.

#### Course Outcomes:

**At the end of this course, students will be able to:**

CO1: use conventional surveying tools such as chain/tape, compass, level in the field.

CO2: know about construction materials, equipment, components and their uses.

CO3: use of exterior materials on walls and floors.

CO4: install of various water supply and sanitary fittings.

CO5: find properties of water

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
<b>CO1</b>	H		H		H			M	H		M		H	H	
<b>CO2</b>	H	H		M	H	L			H			M	H	H	L
<b>CO3</b>	H	H		M				M	H		H		H	H	
<b>CO4</b>	H	H		M	H		M	M		L	H		H	L	
<b>CO5</b>	M	H	M		H			M	H		H	L	H	H	

H = Highly Related

M = Medium

L=Low

### **Cultural Education II**

**Common to all disciplines**

**Contact Hours (L-T-P): 2-0-0**

<b>L-T-P</b>	<b>DIN002A - Cultural Education II</b>	<b>Credits 2-0-0 2</b>
--------------	--	------------------------

#### **Objectives**

1. To make the students feel gratitude towards the rich religious and cultural heritage of India.
2. To understand the role of great personalities and movements in the progress of India.

#### **Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the richness of Indian Culture

CO2: Ability to represent the culture ethics in real life

### **UNIT-I Holy Scriptures-II**

1. Bhagavad Gita and Life Management

2. Highlights of Indian Scriptures - Major Incidents and terms from various religious scriptures including Ramayana, Mahabharata, Guru Granth Saheb, Bible, Quran, Jain Scriptures, Bodh Scriptures
3. Historicity of Ramayana and Mahabharata

### **UNIT-II Society and Culture-II**

4. Indian Society: Its Strengths and Weaknesses
5. Health and Lifestyle related issues
6. Conservation of cultural heritage

### **UNIT-III India in Progress-II**

7. Role & Position of Women in Indian Society- Rituals like Sati, Dakin, Kanyavadh, Pardah, Devdasi, Child Marriage, Measures of Women Empowerment including Education, Constitutional and other Rights
8. Indian Models of Economy, Business and Management

### **UNIT-IV Great Indian Personalities-II**

9. Life and works of the Great People of India- Raja Ram Mohan Roy, Swami Vivekanand, Madan Mohan Malviya, Ishwarchand VidyaSagar, Jyotiba Phule, Homi Bhabha, B.R. Ambedkar, Mahatma Gandhi, Chandra Shekhar Aazad, Abdul Hamid, Badshah Khan, Bhagat Singh, Ashfaqullah, Vir Sawarkar, Vir Banda Bahadur, Vir Haqiqat Rai, Subhash Chandra Bose, Mother Teresa, Jagdish Chandra Basu, JRD Tata, Ratan Tata, Dada Saheb Phalke, Major Dhyan Chand, A P J Abdul Kalam, Kailash Satyarthi, Aruna Roy, Mahasweta Devi, Udaya Kumar, Narayan Murthy, Azim Premji

\*Each student shall write a detailed Report/ Critique on one topic from section -A to C and one Great Personality from Section- D leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce by a committee of teachers.

### **Suggested Reading:**

1. Glory of Indian Culture (English) Paperback by Giriraj Shah
2. Historicity of Vedic and Ramayan Eras: Scientific Evidences from the Depths of Oceans to the Heights of Skies by Saroj Bala , Kulbhushan Mishra

### **References**

<https://knowindia.gov.in/culture-and-heritage/lifestyle-values-and-beliefs.php>

<b>DCO002A</b>	<b>Computer Programming in C++Lab</b>	<b>0:0:2</b>
<b>1 Credit</b>		

1. Write a program for understanding of C++ program structure without any CLASS declaration. Program may be based on simple input output, understanding of keyword using.
2. Write a Program to Understand Structure & Unions.
3. Write a C++ program to demonstrate concept of declaration of class with public & private member, constructors, object creation using constructors, access restrictions, defining member functions within and outside a class. Scope resolution operators, accessing an object's data members and functions through different type of object handle name of object, reference to object, pointer to object, assigning class objects to each other.
4. Write a Program, involving multiple classes (without inheritance) to accomplish a task & demonstrate composition of class.
5. Write a Program to Demonstrate Friend function, classes and this pointer.
6. Write a Program to Demonstrate Inline functions.
7. Write a Program to Demonstrate pointers to derived classes.
8. Write a Program to demonstrate dynamic memory management using new & delete & static class members.
9. Write a Program to demonstrate an operator overloading, operator functions as member function and/ or friend function, overloading stream insertion and stream extraction, operators, overloading operators etc.
10. Write a Program to demonstrate use of protected members, public & private protected classes, multilevel inheritance etc.
11. Write a Program for multiple inheritance, virtual functions, virtual base classes, abstract classes
12. Write a Program to Demonstrate use of Constructors and Destructors.
13. Write a Program to Develop with suitable hierarchy, classes for Point, Shape, Rectangle, Square, Circle, Ellipse, Triangle, Polygon, etc. Design a simple test application to demonstrate dynamic polymorphism.

<b>L-T-P</b>	<b>DLW005A – A Professional's Approach to Law and Ethics</b>	<b>Credits: 3</b>
<b>3-0-0</b>		

❖ **Course overview:**

This course is structured keeping in mind the need to familiarize the learners with various laws they would be required to apply in their professional life on a day-to-day basis. The contents of the course are divided into lessons that deal with various areas of law, such as:

- Study of professional ethics
- Insights into law of contract
- Study on dispute resolution
- Study on labour laws
- Study on Intellectual Property Rights and Taxation.
- Insights into basic laws governing companies.

❖ **Course Objectives:**

The Course aims addressing the following aspects:

- to enable learners to make informed ethical and legal choices in their professional capacity.
- to sensitize the learners to the legal and ethical issues that may arise during the course of their employment.
- To provide adequate exposure to the various laws that are relevant in their day-to-day professional life.

❖ **Syllabus:**

**General Principles of Contracts Management:**

Performance, Joint Liabilities, Impossibility, Excusable Non-performance and Doctrine of Frustration. Breach of Contract, Consequences, Remedies and different forums for Enforcement of Contract. Performance, Joint Liabilities, Impossibility, Excusable Non-performance and Doctrine of Frustration.

**Professional Ethics, Arbitration and Mediation:**

Evolution and Salient Provisions of the Arbitration Act. Salient Features of Arbitration: Notice invoking arbitration, Eligibility of an arbitrator, Seat vs Venue, Challenging the Arbitral Award. Alternate Dispute Resolution methods and Confidentiality.

Resource Allocation and Resource Levelling, Case Study on Schedule Compression, PERT to Predict the Probability of Project Completion.

**Corporate and Commercial Laws:**

Definitions and Terms under Company Law, and authentication of contracts. Company Act and the Landmarks under this act. Basic Definitions and Terms under Insolvency Code and Corporate Insolvency Resolution Process (CIRP). Competition Law, Anti-Competitive agreements and abuse of dominant position

**Taxation, Labour Laws:**

Basic terms under Income Tax Act and Sources of Income. Overview of (Foreign Exchange Management Act) FEMA, Foreign Trade Policy and other Special Scenarios.

Industrial Disputes Act, Building and Other Construction Workers Act. Social Security Laws and Health and Safety Laws.

**Environmental Protection laws, IPR:**

Overview of Environmental Laws in India, Environment Impact Assessment and understanding Sustainable Development, Overview of International Conventions on Environment Protection.

An Introduction to Intellectual Property Law, Copyrights and Trademarks, General legal recourse for Copyright infringement, Trademark infringement, Design infringement and IP Issues, Software and Business Method Patenting in India & in other Jurisdictions.

**Non Credit Course**

<b>DCH001A</b>	<b>Environmental Sciences</b>	<b>2-0-0</b>	<b>0</b>
----------------	-------------------------------	--------------	----------

**The objectives of Environment science are to-**

1. Create an awareness about environmental problems among students
2. Impart basic knowledge about the environment and its allied problems.
3. Develop an attitude of concern for the environment.
4. Motivate public through students to participate in environment protection and environment improvement.
5. Acquiring skills to help the concerned individuals in identifying and solving environmental problems.

<b>UNIT 1</b>	<b>The Multidisciplinary Nature of Environmental Studies:</b> The Multidisciplinary Nature of Environmental Studies Definition, scope and importance need for public awareness.
<b>UNIT 2</b>	<p><b>Natural Resources Renewable and Non-renewable Resources:</b> •Natural resources and associated problems.</p> <p>(a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.</p> <p>(b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.</p> <p>(c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.</p> <p>(d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, Case studies. (e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.</p> <p>(f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.</p> <p>• Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.</p>
<b>UNIT 3</b>	<p><b>Ecosystems, Biodiversity and Its Conservation:</b> •Concept of an ecosystem.</p> <p>•Structure and function of an ecosystem.</p> <p>•Producers, consumers and decomposers.</p> <p>•Energy flow in the ecosystem. Ecological succession.</p> <p>•Food chains, food webs and ecological pyramids.</p> <p>•Introduction, types, characteristic features, structure and function of the following ecosystem: (a) Forest ecosystem (b) Grassland ecosystem (c) Desert</p>

	<p>ecosystem (d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)</p> <p><b>Biodiversity and Its Conservation</b></p> <ul style="list-style-type: none"> <li>• Introduction, definition: genetic, species and ecosystem diversity.</li> <li>• Biogeographical classification of India.</li> <li>• Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.</li> <li>• Biodiversity at global, National and local levels.</li> <li>• India as a mega-diversity nation. Hot-spots of biodiversity.</li> <li>• Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.</li> <li>• Endangered and endemic species of India.</li> <li>• Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.</li> </ul>
<b>UNIT 4</b>	<p><b>Environmental Pollution:</b> • Definition, Causes, effects and control measures of</p> <p>(a) Air pollution                      (b) Water pollution                      (c) Soil pollution  (d) Marine pollution      (e) Noise pollution                      (f) Thermal pollution  (g) Nuclear hazards</p> <ul style="list-style-type: none"> <li>• Solid waste management: Causes, effects and control measures of urban and industrial wastes.</li> <li>• Role of an individual in prevention of pollution. • Pollution case studies.</li> <li>• Disaster management: Floods, earthquake, cyclone and landslides.</li> </ul>
<b>UNIT 5</b>	<p><b>Social Issues and the Environment, Human Population and the Environment, Field Work:</b> • From unsustainable to sustainable development.</p> <ul style="list-style-type: none"> <li>• Urban problems related to energy.</li> <li>• Water conservation, rain water harvesting, watershed management.</li> <li>• Resettlement and rehabilitation of people; its problems and concerns. Case studies.</li> <li>• Environmental ethics: Issues and possible solutions.</li> <li>• Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.</li> <li>• Wasteland reclamation.</li> <li>• Consumerism and waste products.</li> <li>• Environment Protection Act.</li> <li>• Air (Prevention and Control of Pollution) Act.      • Water (Prevention and Control of Pollution) Act.</li> <li>• Wildlife Protection Act.                      • Forest Conservation Act.</li> <li>• Issues involved in enforcement of environmental legislation.</li> <li>• Public awareness.</li> </ul> <p><b>Human Population and the Environment</b></p> <ul style="list-style-type: none"> <li>• Population growth, variation among nations.</li> <li>• Population explosion—Family Welfare Programme.</li> <li>• Environment and human health.</li> <li>• Human rights.</li> </ul>

	<ul style="list-style-type: none"> <li>•Value education.</li> </ul> <p>HIV/AIDS.</p> <ul style="list-style-type: none"> <li>• Women and Child Welfare. •Role of Information Technology in environment and human health.</li> </ul> <p><b>Field Work</b></p> <ul style="list-style-type: none"> <li>• Visit to a local area to document environmental assets—river/forest/grassland/hill/ mountain.</li> <li>• Visit to a local polluted site—Urban/Rural/Industrial/Agricultural.</li> <li>• Study of common plants, insects, birds.</li> <li>•Study of simple ecosystems—pond, river, hill slopes, etc.</li> </ul> <p>(Field work equal to <b>5 lecture hours</b>) • Case Studies.</p>
--	---

### **Course Outcome (CO)**

**After the completion of the course, student will be able to:**

**CO-1:** Recognize the history, structure, function, interactions and trends of key socio-environmental systems on personal, organizational and intellectual level regarding our surroundings through different media.

**CO-2:** Examine the generation of scientific knowledge and how that knowledge is presented, evaluated, framed and applied for environmental protection by conservation of Natural resources.

**CO-3:** Articulate a coherent philosophy of the environment and consider ethical bases for responding to environmental questions.

**CO-4:** Understand the role of conservation of resources and public awareness in prevention of pollution and ultimately for the sustainable development of society.

**CO-5:** Understand the social responsibility towards protection of environment and society

### **CO/PO Mapping**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO-1	H	M	H	H	H	H	M
CO-2	M	H	H	M	M	H	M
CO-3	M	H	H	L	H	H	H
CO-4	M	M	H	M	H	H	H
CO-5	H	H	H	H	H	H	H

<b>L-T-P</b>	<b>DEN003A- LIFE SKILLS I</b>	<b>CREDITS: 2</b>
<b>1-0-2</b>		

### **COURSE OBJECTIVE**

- To prepare the students as per the industry demands.
- Switching to Activity and Task based Teaching modules.
- To focus on the linguistic aspects in relation to life situations.
- Facilitating the aspects of behavioral skills in language.
- Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
- Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

#### **UNIT 1**

- Basics of Debates / Speeches / Addressing the public / Extempore/Group Discussion
- Basics of Narrating and describing things

#### **UNIT 2**

- Telephonic Etiquette: Casual and formal Telephonic Communication, Telephonic Interview

#### **UNIT 3**

- CV/Resume Drafting and HR Interview advance theory
- Basics of Video Interviews and Video Profiles for Job
- Types of listening, advantages and disadvantages

#### **UNIT 4**

- Basics of Group Discussion, Presenting New Idea/Concept/Proposal/ Project/ Report

**UNIT 5** Types of personalities, Perspective towards things, ideas, views, codes, Life skills related to Multicultural environment and emotional intelligence like- Self-confidence, Self-esteem, Self-motivation, Decision making, Resourcefulness, Risk Taking, Conflict management, Stress management, Team Building etc

<b>L-T-P</b>	<b>DIN003A - VALUE EDUCATION AND ETHICS I</b>	<b>CREDITS: 1</b>
<b>1-0-0</b>		

### **COURSE OBJECTIVE**

- To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.
- Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

#### **Lessons from the Ramayana**

Introduction to Ramayana, the first Epic in the world – Influence of Ramayana on Indian values and culture – Storyline of Ramayana – Study of leading characters in Ramayana – Influence of Ramayana outside India – Relevance of Ramayana for modern times.

#### **Lessons from the Mahabharata**

Introduction to Mahabharata, the largest Epic in the world – Influence of Mahabharata on Indian values and culture – Storyline of Mahabharata – Study of leading characters in Mahabharata – Kurukshetra War and its significance - Relevance of Mahabharata for modern times.

#### **Lessons from the Upanishads**

Introduction to the Upanishads: Sruti versus Smrti - Overview of the four Vedas and the ten Principal Upanishads - The central problems of the Upanishads – The Upanishads and Indian Culture – Relevance of Upanishads for modern times – A few Upanishad Personalities: Nachiketas, SatyakamaJabala, Aruni, Shvetaketu.

#### **Message of the Bhagavad Gita**

Introduction to Bhagavad Gita – Brief storyline of Mahabharata - Context of Kurukshetra War – The anguish of Arjuna – Counsel by Sri. Krishna – Key teachings of the Bhagavad Gita – Karma Yoga, Jnana Yoga and Bhakti Yoga - Theory of Karma and Reincarnation – Concept of Dharma – Concept of Avatar - Relevance of Mahabharata for modern times.

#### **Life and Message of Swami Vivekananda**

Brief Sketch of Swami Vivekananda's Life – Meeting with Guru – Disciplining of Narendra - Travel across India - Inspiring Life incidents – Address at the Parliament of Religions – Travel in United States and Europe – Return and reception India – Message from Swamiji's life.

### **Life and Teachings of Spiritual Masters India**

Sri Rama, Sri Krishna, Sri Buddha, AdiShankaracharya, Sri Ramakrishna Paramahansa, Swami Vivekananda.

### **Insights into Indian Arts and Literature**

The aim of this course is to present the rich literature and culture of Ancient India and help students appreciate their deep influence on Indian Life - Vedic culture, primary source of Indian Culture – Brief introduction and appreciation of a few of the art forms of India - Arts, Music, Dance, Theatre.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will be required to make a Power Point Presentation on the learning and face Viva-voce. Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

### **Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

<b>L-T-P</b>	<b>BES016A- Solid Mechanics</b>	<b>Credits:4</b>
<b>3-1-0</b>		

### **Course Objective:**

- To gain knowledge of simple stresses, strains and deformation in components due to external loads.
- To assess stresses and deformations through mathematical models of beams twisting bars or combinations of both.
- Effect of component dimensions and shape on stresses and deformations are to be understood.
- The study would provide knowledge for use in the design courses

### **Unit-I Introduction to Simple Stress and Strain**

**(8 Hours)**

Introduction of mechanics, definition of strength of materials, deformable body concept, Loads and their classification. Stresses, unit, difference between stress and pressure, classification and

brief discussion. Strain, classification and brief discussion, elastic constant, elastic constant relationship.

Stress vs strain diagram for different material, Strain energy principle, material properties such as resilience, proof resilience, modulus of resilience, toughness, hardness, ductility, malleability, brittleness, difference between hardness and brittleness.

Principal of superposition Bars in series and parallel, bars fixed at both the ends, Thermal stresses and strains.

## **Unit-II Compound Stresses and Strains**

**(8 Hours)**

Two dimensional system, stress at a point on a plane, principal stresses and principal planes, Mohr circle of stress, ellipse of stress and their applications. Two dimensional stress-strain system, principal strains and principal axis of strain, circle of strain and ellipse of strain. Relationship between elastic constants.

## **Unit-III Analysis of Beams**

**(8 Hours)**

Beam, type of beams, Supports reaction, shear force and bending moment, sign convention, relationship between rate of loading, shear force and bending moment, Shear force and Bending Moment diagram for Cantilever, Simply supported and Overhanging beams.

Theory of Pure bending, derivation and analysis of pure bending equation, Effect of cross sectional shape on beam strength, Shear stresses in beams.

## **Unit-IV Analysis of Pure Torsion**

**(8 Hours)**

Pure torsional couple, derivation of pure torsion equation, analysis of pure torsion equation. Torsional shear stress distribution, shear stresses in solid and hollow shaft.

Shaft/ circular bars in series, parallel and fixed in both the ends. Strain energy in circular bar due to torsion. Application to close-coiled helical springs – Maximum shear stress in spring section including Wahl's Factor – Deflection of helical coil springs under axial load

## **Unit-V Deflection of Beam**

**(8 Hours)**

Elastic curve of Neutral axis of the beam under normal loads – Evaluation of beam deflection and slope: Double integration method, Macaulay Method, and Moment area Method, Strain Energy Method

Thin and Thick cylindrical and spherical shells, Deformation in thin cylindrical and spherical shells, Concept of Auto-fritage and Wire Binding, Theories of Failure.

**Course Outcomes:** After learning the course the students should be able to:-

- CO1. Apply the principles of equilibrium, superposition, and compatibility to estimate the stress-strain behavior of linear elastic solids under axial and torsional loading
- CO2. Analyze stresses at inclined planes and construct Mohr's circle to predict the principal and maximum shear planes and apply the theories of failure
- CO3. Construct shear force and bending moment diagrams, to estimate the bending stress distribution in beams of various cross sections

- CO4. Apply torsion equation to find torsional stresses in circular shafts in series and parallel.  
 CO5. Use different analytical method to find deflection in beam of various cross section under bending.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome	
	PO 1	PO2	PO3	PO4	PO5	PO6	PO 7	PO8	PO9	PO1 0	PO1 1	PO1 2	PSO 1	PS O2

<b>L-T-P</b>	<b>BES017A- THERMODYNAMICS</b>	<b>CREDITS:4</b>
<b>3-1-0</b>		

**COURSE OBJECTIVE**

To present a comprehensive and rigorous treatment of classical thermodynamics while retaining an engineering perspective. To lay the groundwork for subsequent studies in such

fields as Fluid mechanics, Heat transfer, IC Engine and to prepare the students to effectively use thermodynamics in the practice of engineering.

### **UNIT-I Fundamental Concepts:**

**(7 Hours)**

Macroscopic and Microscopic Approach, Thermodynamic systems - closed, open and isolated. Surrounding and Boundary, Thermodynamic Property, Thermodynamic Equilibrium, state, path, processes and cycles, Quasi-static process, Concept of temperature, Thermodynamic Work and Heat, work transfer to different processes. Zeroth law of thermodynamics, Concept of ideal and real gases.

### **UNIT-II First Law of Thermodynamics:**

**(8 Hours)**

Energy and its Forms, Concepts of Internal Energy, First Law of Thermodynamics, Specific Heat Capacities, Enthalpy. Perpetual Motion Machine of First Kind, 1st Law Applied to Non-Flow Process, Steady Flow Process & Transient Flow Process. Steady-Flow Engineering Devices, Limitations of First Law.

### **UNIT-III Second Law of Thermodynamics:**

**(8 Hours)**

Thermal Reservoir Heat Source and Sink, Heat Kelvin- Planck and Clausius Statements, Heat Engine, efficiency of Heat Engine, Refrigerator and Heat Pump, COP, Perpetual Motion Machine of Second Kind, Carnot Cycle, the Carnot Theorem and its Corollaries, the thermodynamic temperature scale. Reversible and irreversible processes,

### **UNIT-IV Entropy principle:**

**(8 Hours)**

Clausius inequality, concept of entropy, entropy principle, Temperature Entropy Plot, Entropy Change in Different Processes, Introduction to Third Law of Thermodynamics. Available energy , Availability, Irreversibility, Thermodynamic Relations: Tds Relations, Enthalpy and Internal Energy as a Function of Independent Variables, Specific Heat Capacity Relations, Clapeyron Equation, Maxwell Relations.

### **UNIT-V Properties of Pure Substance:**

**(8 Hours)**

Properties of pure substances. Thermodynamic properties of pure substances in solid, liquid and vapour phases. Phase rule, P-V, P-T, T-V, T-S, H-S diagrams, Properties of Dry, Wet and Superheated Steam, Property Changes during Steam Processes and Measurement of Dryness Fraction of Steam.

### **Text Books::**

1. Nag.P.K., “Engineering Thermodynamics”, Tata McGraw-Hill, New Delhi 2020.

### **Reference Books:**

1. YunusCengel and Michael Boles, “Thermodynamics (SI Units)”, 7th Edition, Tata McGraw Hill, 2012
2. Moran, M. J., Shapiro, H. N., Boettner, D. D., & Bailey, M. Fundamentals of Engineering Thermodynamics: John Wiley & Sons. 2008

3. Engineering Thermodynamics Third Edition SI Units Version Engineering Series R. K. Rajput 2016

**Course Outcomes:** After learning the course the students should be able to:-

- CO1. Students will be able to analyze and evaluate various thermodynamic cycles used for energy production - work and heat, within the natural limits of conversion  
 CO2. Formulate the first law of thermodynamics for a closed systems and arrange the change in energy in the closed systems via heat and work transfer  
 CO3. Analyze the problems on heat engines, refrigeration and entropy by applying second law of thermodynamics  
 CO4. Apply the principle of increase of entropy to evaluate the feasibility of a thermodynamic process, and third law of thermodynamics.  
 CO5. Illustrate the T-v, P-T diagrams and P-v-T surfaces of pure substances., Applying, Analyze the processes on T-v diagrams to solve advanced engineering problems

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3

H = Highly Related; M = Medium L = Low

<b>-T-P</b>	<b>BES018A - Engineering Materials</b>	<b>CREDITS:3</b>
3-0-0		

**Prerequisite:** Engineering Physics and Engineering Chemistry.

**COURSE OBJECTIVE:**

- Give an introduction to metals, ceramics and polymeric materials in the context of a molecular level understanding of bonding.

- Give the beginning student an appreciation of recent developments in materials science & engineering within the framework of this class.

### **UNIT-I Basic crystallography and crystal structures**

**07 Hrs**

Atomic structure and inter-atomic bonding, Crystal systems, Bravais lattice, Space lattice, Lattice Structure, unit cells, Co-ordination number, atomic packing factor, Structure of crystalline solids, Indexing of directions and planes, Inter-planar spacing and angles.

### **UNIT-II Crystal defects and their significance**

**08 Hrs**

Point defects and their role in materials processing, performance and failure. Point defects: thermodynamics, Schottky and Frenkel defect. Dislocations, Burgers vector, types of dislocations, Dislocation movement, slip systems. Planar defects: stacking faults, grain boundaries (low angle and high angle), Twinning. Surface defects, non-equilibrium structures such as metallic glasses.

### **UNIT-III Mechanical Properties**

**08 Hrs**

Mechanical Properties of Materials, Concepts of stress and strain, Stress-Strain diagrams, Properties obtained from the Tensile test, Elastic deformation, Plastic deformation. Impact Properties, Strain rate effects and Impact behaviour. Hardness of materials.

### **UNIT-IV Phase Diagram**

**10 Hrs**

Introduction to Solid Solution, Hume-Rothery rule, Solid-solution Strengthening mechanism, Phase, Gibbs' Phase rule, Equilibrium and Non-Equilibrium diagrams, Classification of Equilibrium phase diagrams, Iron-carbon equilibrium diagram. Classification of Non-Equilibrium phase diagrams (TTT & CCT). Heat Treatment: Various types of heat treatment processes such as Annealing, Normalizing, Quenching, Tempering and Case hardening.

### **UNIT-V Ceramics and Composite**

**07 Hrs**

Introduction of Ceramic Materials, ceramic structures, silicate structures, processing of ceramics, Properties of ceramics, Glasses, Introduction of Composite Materials, development routes of composite materials, Natural and synthetic Composites. Classification of Composite (MMC, CMC, PMC), Properties and Applications.

**Course Outcomes:** After learning the course the students should be able to:

<b>Course Outcomes</b>	<b>Statement</b>	<b>Bloom's Knowledge Level</b>
<b>CO1</b>	Analyze the structure of materials and basic concepts of materials like unit cell, FCC, BCC, HCP, etc.	Analyze
<b>CO2</b>	Develop a basic understanding of the structure-property relationship of a variety of materials	Apply
<b>CO3</b>	Describe and discriminate concept of mechanical behavior of materials	Evaluate

- CO4** Understand how to tailor material properties of ferrous and non-ferrous alloys. Construction and identification of phase diagrams and reactions to create desired microstructure. **Create**
- CO5** Describe metals, ceramics, polymers, and their composite materials. **Evaluate**

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	H				L							H		L	
CO2	M		L			M					L		L		
CO3	M		H		H				H			M		M	
CO4	L		M			L		M		L					L
CO5	L	M		M			L			L		L	M

<b>L-T-P</b>	<b>BME131A- Mechanisms &amp; Machines</b>	<b>CREDITS: 4</b>
<b>3-1-0</b>		

**COURSE OBJECTIVE:**

- This is an introductory course on mechanism. Students will gain exposure to various methods of analysis and synthesis of mechanisms.

**UNIT-I: Introduction of Four Bar chains mechanism**

**(12 Hours)**

Introduction- General Concepts, Introduction of Simple mechanism, Different types of Kinematics pair, Grublers rule for degree of freedom, Grashof's Criterion for mobility determination. Inversions of 3R-P, 2R-2P chains.

**UNIT-II: Kinematic & Dynamic Analysis of Four Bar chains mechanism**

**(10 Hours)**

Kinematic Analysis- Concepts of vectorial analysis. Velocity and Acceleration Analysis of planar mechanisms.

Dynamic Analysis- Slider-crank mechanisms, turning moment computations.

### UNIT-III: Gears

(10 Hours)

Gears- Geometry of tooth profiles, Law of gearing, Involute profile, interference, helical, spiral and worm gears, simple, compound gear trains. Epicyclic gear trains – Analysis by tabular and relative velocity method, fixing torque.

### UNIT-IV: Governors

(10 Hours)

Governors Terminology, Centrifugal governors-Watt governor, Dead weight governors-Porter & Proell governor, Spring controlled governor-Hartnell governor, Sensitivity, Stability, Hunting, Isochronism, Effort and Power of governor, Controlling force diagrams for Porter governor and Spring controlled governors

### UNIT-V: Gyroscopes

(10 Hours)

Gyroscopes : Gyroscopic Motion Principles, Gyroscopic torque, Effect of gyroscopic couple on the stability of aero planes, naval ships & automobiles.

#### Text Book:

1. Rattan.S.S., “Theory of Machines”, McGraw-Hill Education (India) Pvt. Ltd.”, IV Edition 2017.

#### References Books:

1. Wilson, Charles E., “ Kinematics and dynamics of machinery” Pearson Education, 2008
2. R.L. Narton , “Kinematics and dynamics of machinery”, McGraw-Hill Education (India) Pvt. Ltd.”, 2009.

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Analyze various inversion of mechanism.

CO2. Describe the kinematic and dynamic study of motion in four bar chain mechanism.

CO3. Analyze motion transmission elements like gears, gear trains.

CO4. Describe the concepts of governors, its force analysis and related terminologies.

CO5. Describe the concepts of gyroscope, its force analysis and related terminologies.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome	
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	L	M							H				M	
CO2		M		H										L

CO3	H					H								
CO4		L		M					L					H
CO5	M	L		M					L					H

H = Highly Related; M = Medium L = Low

<b>L-T-P</b>	<b>DMA003A– Life Skills - 2 (Aptitude)</b>	<b>Credits: 2</b>
<b>1-0-2</b>		

### Course Objectives

1. Students will be able to interpret and communicate quantitative information and mathematical and statistical concepts using language appropriate to the context and intended audience.
2. Students will be able to make sense of problems, develop strategies to find solutions, and persevere in solving them.
3. Students will be able to reason, model, and draw conclusions or make decisions with mathematical, statistical, and quantitative information.
4. Students will be able to critique and evaluate quantitative arguments that utilize mathematical, statistical, and quantitative information.
5. Students will be able to use appropriate technology in a given context.

### Syllabus: Theory

#### UNIT 1 Number System:

- a. Number system
- b. Power cycle
- c. Remainder cycle
- d. Factors, Multiples
- e. HCF and LCM

#### UNIT 2 Data Arrangements and Blood Relations:

- a. Linear Arrangement
- b. Circular Arrangement
- c. Multi-dimensional Arrangement
- d. Blood Relations

#### UNIT 3 Time and Work:

- a. Work with different efficiencies
- b. Pipes and cisterns
- c. Work equivalence
- d. Division of wages

#### UNIT 4 Coding & Decoding, Series, Analogy, Odd Man Out and Visual Reasoning:

- a. Coding and Decoding
- b. Series
- c. Analogy
- d. Odd Man Out
- e. Visual Reasoning
- UNIT 5 Percentages, Simple Interest and Compound Interest:**
  - a. Percentages as Fractions and Decimals
  - b. Percentage Increase / Decrease
  - c. Simple Interest
  - d. Compound Interest
  - e. Relation Between Simple and Compound Interest
- UNIT 6 Permutation, Combination and Probability:**
  - a. Fundamental Counting Principle
  - b. Permutation and Combination
  - c. Computation of Permutation
  - d. Circular Permutations
  - e. Computation of Combination
  - f. Probability
- UNIT 7 Data Interpretation and Data Sufficiency:**
  - a. Data Interpretation – Tables
  - b. Data Interpretation - Pie Chart
  - c. Data Interpretation - Bar Graph
  - d. Data Sufficiency
- UNIT 8 Profit and Loss, Partnerships and Averages:**
  - a. Basic terminologies in profit and loss
  - b. Partnership
  - c. Averages
  - d. Weighted average
  - e. Mixtures and allegations

## Methodology for Evaluation

1. Internal Assessment
  - a) Class/ Home Assignments (Minimum One from each Unit) : 30 Marks
  - b) In Semester Tests (Minimum two) : 30 Marks
2. Term End : 40 Marks

\*Note: Minimum one class assignment shall be given in each turn in the Lab which will be attempted by the students in the class itself and evaluated by the end of the day. Balance work shall be completed at home and submitted at the beginning of the next turn in Lab.

## Suggested Reading:

1. Speed Mathematics, Secrets of Lightning Mental Calculations, by Bill Handley, Master Mind books;
2. The Trachtenberg Speed System of Basic Mathematics, Rupa& Co., Publishers;
3. How to Ace the Brainteaser Interview, by John Kador, Mc Graw Hill Publishers.
4. Quick Arithmetics, by Ashish Agarwal, S Chand Publ.;
5. Quicker Maths, by M tyra& K Kundan, BSC Publishing Co. Pvt. Ltd., Delhi;
6. Owl Purdue University online teaching resources.

### **Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Demonstrate procedural fluency with real number arithmetic operations and use those operations to represent real-world scenarios and to solve stated problems. Demonstrate number sense, including dimensional analysis and conversions between fractions, decimals, and percentages. Determine when approximations are appropriate and when exact calculations are necessary.

CO2: Solve linear equations, graph and interpret linear models, and read and apply formulas. Demonstrate a basic understanding of displays of univariate data such as bar graphs, histograms, dotplots, and circle graphs, including appropriate labeling.

CO3: Take charge of their own learning through good classroom habits, time management, and persistence. Participate in the classroom community through written and oral communication.

<b>L-T-P</b>	<b>DIN004A-Value Education and Ethics II</b>	<b>Credits: 1</b>
<b>1-0-0</b>		

### **Course Objectives**

1. To give exposure to students about richness and beauty of Indian way of life. India is a country where history, culture, art, aesthetics, cuisine and nature exhibit more diversity than nearly anywhere else in the world.

2. Making students familiar with the rich tapestry of Indian life, culture, arts, science and heritage which has historically drawn people from all over the world.

### **Yoga and Meditation**

The objective of the course is to provide practical training in YOGA ASANAS with a sound theoretical base and theory classes on selected verses of Patanjali's Yoga Sutra and Ashtanga Yoga. The coverage also includes the effect of yoga on integrated personality development.

### **Rajasthan Mural Art and Painting**

Mural painting is an offshoot of the devotional tradition in Rajasthan. A mural is any piece of artwork painted or applied directly on a wall, ceiling or other large permanent surface. In the

contemporary scenario Mural painting is not restricted to the permanent structures and are being done even on canvas. Rajasthani mural paintings are the frescos depicting mythology and legends, which are drawn on the walls of temples, principally in Rajasthan. Ancient temples and tourists places in different States of Rajasthan, display an abounding tradition of mural paintings mostly dating back between the 9th to 12th centuries when this form of art enjoyed Royal patronage. Learning Mural painting through the theory and practice workshop is the objective of this course.

### **Course on Organic Farming and Sustainability**

Organic farming is emerging as an important segment of human sustainability and healthy life. 'Haritamritam' is an attempt to empower the youth with basic skills in tradition of organic farming and to revive the culture of growing vegetables that one consumes, without using chemicals and pesticides. Growth of Agriculture through such positive initiatives will go a long way in nation development. It is a big step in restoring the lost harmony of nature.

### **Benefits of Indian Medicinal Systems**

Indian medicinal systems are one of the most ancient in the world. Even today society continues to derive enormous benefits from the wealth of knowledge in Ayurveda of which is recognised as a viable and sustainable medicinal tradition. This course will expose students to the fundamental principles and philosophy of Ayurveda and other Indian medicinal traditions.

### **Traditional Fine Arts of India**

India is home to one of the most diverse Art forms world over. The underlying philosophy of Indian life is 'Unity in Diversity' and it has led to the most diverse expressions of culture in India. Most art forms of India are an expression of devotion by the devotee towards the Lord and its influence in Indian life is very pervasive. This course will introduce students to the deeper philosophical basis of Indian Art forms and attempt to provide a practical demonstration of the continuing relevance of the Art.

### **Science of Worship in India**

Indian mode of worship is unique among the world civilisations. Nowhere in the world has the philosophical idea of reverence and worshipfulness for everything in this universe found universal acceptance as it in India. Indian religious life even today is a practical demonstration of the potential for realisation of this profound truth. To see the all-pervading consciousness in everything, including animate and inanimate, and constituting society to realise this truth can be seen as the epitome of civilizational excellence. This course will discuss the principles and rationale behind different modes of worship prevalent in India

### **Insights into Indian Classical Music**

The course introduces the students into the various terminologies used in Indian musicology and their explanations, like Nadam, Sruti, Svaram – svara nomenclature, Stayi, Graha, Nyasa, Amsa, Thala,- Saptatalas and their angas, Shadangas, Vadi, Samavadi, Anuvadi. The course takes the students through Carnatic as well as Hindustani classical styles.

### **Insights into Traditional Indian Painting**

The course introduces traditional Indian paintings in the light of ancient Indian wisdom in the fields of aesthetics, the Shadanga (Six limbs of Indian paintings) and the contextual stories from

ancient texts from where the paintings originated. The course introduces the painting styles such as Madhubani, Kerala Mural, Pahari, Cheriya, Rajput, Tanjore etc.

### **Insights into Indian Classical Dance**

The course takes the students through the ancient Indian text on aesthetics the Natyasastra and its commentary the AbhinavaBharati. The course introduces various styles of Indian classical dance such as Bharatanatyan, Mohiniyattam, Kuchipudi, Odissi, Katak etc. The course takes the students through both contextual theory as well as practice time.

### **Indian Martial Arts and Self Defense**

The course introduces the students to the ancient Indian system of self-defense and the combat through various martial art forms and focuses more on traditional Kerala's traditional KalariPayattu. The course introduces the various exercise technique to make the body supple and flexible before going into the steps and techniques of the martial art. The advanced level of this course introduces the technique of weaponry.

### **Social Awareness Campaign**

The course introduces the students into the concept of public social awareness and how to transmit the messages of social awareness through various media, both traditional and modern. The course goes through the theoretical aspects of campaign planning and execution.

### **Organic Farming in Practice**

Organic agriculture is the application of a set of cultural, biological, and mechanical practices that support the cycling of farm resources, promote ecological balance, and conserve biodiversity. These include maintaining and enhancing soil and water quality; conserving wetlands, woodlands, and wildlife; and avoiding use of synthetic fertilizers, sewage sludge, irradiation, and genetic engineering. This factsheet provides an overview of some common farming practices that ensure organic integrity and operation sustainability.

### **Ayurveda for Lifestyle Modification**

Ayurveda aims to integrate and balance the body, mind, and spirit which will ultimately leads to human happiness and health. Ayurveda offers methods for finding out early stages of diseases that are still undetectable by modern medical investigation. Ayurveda understands that health is a reflection of when a person is living in harmony with nature and disease arises when a person is out of harmony with the cycles of nature. All things in the universe (both living and non-living) are joined together in Ayurveda. This leaflet endow with some practical knowledge to rediscover our pre- industrial herbal heritage.

### **Life Style and Therapy using Yoga**

Yoga therapy is the adaptation of yogic principles, methods, and techniques to specific human ailments. In its ideal application, Yoga therapy is preventive in nature, as is Yoga itself, but it is also restorative in many instances, palliative in others, and curative in many others. The therapeutic effect comes to force when we practice daily and the body starts removing toxins and the rest is done by nature.

\*Each student shall write a detailed Report/ Critique on one topic leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. In addition to s/he will

be required to make a Power Point Presentation on the learning and face Viva-voce.

Alternatively a Student may undertake a Project on any one of the topics and submit a detail Project Report leading to publication of Newspaper/ Magazine article or a review paper in a Research Journal. If the topic is related to Performing Arts including Yoga, Marshal Arts etc. the performance on stage may be given instead of PPT. In case of Fine Arts, an exhibition or a portfolio may be presented in place of PPT.

**On the basis of the above points, a panel of experts from the department will award the credits.**

**Course Outcomes (CO):**

**At the end of this course students will have:**

CO1: Ability to acknowledge and appreciate the ethical beauty of India

CO2: Ability to incorporate the values of human lives in real life applications

<b>L-T-P</b>	<b>BME108B- DESIGN OF MACHINE ELEMENTS-I</b>	<b>Credits:4</b>
<b>3-1-0</b>		

**Course Objective:**

The primary objective of this course is to demonstrate how engineering design uses the many principles learned in previous engineering science courses and to show how these principles are practically applied.

**Unit I:Introduction:** Design Considerations, Design Methods, Engineering Materials and their Mechanical properties, types of codes & standards in Design. Design considerations in castings, Forgings & welded assemblies. Behavior of ductile & brittle material, Stress-Strain diagram for various materials. Factor of safety.

**Design for Static Loading:** Introduction: Stresses in members subjected to axial, shear, Bending, Torsion & Eccentric loading. Stress tensor, Uni-axial, Biaxial & Tri-axial stress state, Principal Stresses in members subjected to combination of static loads.

**Theories of Failure:** Failure Criterion & problems - Maximum Normal Stress theory, Maximum Shear stress theory, Distortion energy theory

**Cotter & Knuckle Joints:** Design procedure

**Unit: IIStress Concentration:** Definition, Reason for occurrence, Methods to reduce, Stress concentration factor. Design of stress concentrated members subjected to various loads.

**Design for Variable Loading:** Types of variable/Cyclic loads, Mean & amplitude Stresses, Fatigue Failure, Endurance Limit & Strength, S-N Diagram. Goodman and Soderberg criterion,

**Modifying factors:** Size effect, surface effect, Reliability, stress concentration effects etc. Problems on design of members for finite & infinite life in members subjected to individual & combined loading. Cumulative damage in fatigue.

**Unit III:Riveted Joints: Introduction, method of riveting, material and qualities of rivets,** types of rivet head and riveted joint, design of lap and butt joint and important term used in riveted joint, caulking and fullering, failure, strength and efficiency of riveted joint, Design of longitudinal & circumferential joint for various types, eccentric loaded riveted joint.

**Welded joints:** Introduction, advantages and disadvantages of welded joint over riveted joint, basic and supplementary elements of weld simple, types of welded joint, polar moment of inertia

and section modulus. Strength of Butt, parallel, transverse welds, eccentrically loaded welded joint subjected to torsion & Bending moment.

#### Unit IV:

**Threaded joint:** Introduction, important terms used in screw threads, forms of screw thread, location of screw joint, common types of screw fastening, designation of screw thread, and standard dimensions of screw thread, stresses due to static loading, external forces and combined forces. Bolt of uniform strength, design of nut, bolted joint under eccentric loading (Load acting parallel and perpendicular to the axis of the bolt), eccentric load on a bracket with circular base and eccentric load acting in the plane contain the bolts.

**Power screws:** Forms of threads, terminology, Torque in lifting & lowering the load, self locking screw, efficiency of screw (Square, ACME, self-locking), Design of screw & Nut for power screw

**Unit V: Shafts keys and coupling:** Design of shaft under combined bending, twisting and axial loading; shock and fatigue factors, design for rigidity, Design of shaft subjected to dynamic load, Design of keys and coupling.

**Course Outcomes:** After learning the course the students should be able to: -

CO1. Understand design considerations and standards Describe the design process, material selection, Design under static loading condition

CO2. Understand the concept of stress concentrations, design under variable loading conditions.

CO3. Understand design of fastening (permanent and temporary) and their load analysis in different fields of applications

CO4. Understand standards and terminology of threaded fasteners with important design consideration and practices. Design and applications of power screws

CO5. Understand standards of design shafts keys and coupling.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome	
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

2. Sharma and Purohit; Design of Machine elements; PHI
3. Ganesh Babu K and Srithar k; Design of Machine Elements; TMH

<b>L-T-P</b>	<b>BME009B – Fluid Mechanics &amp; Machines</b>	<b>CREDITS: 3</b>
<b>3-0-0</b>		

**COURSE OBJECTIVE:**

To give the student a foundation in the fundamentals of fluid mechanics and machines practice in the analytical formulation of fluid mechanics problems using Newton's Laws of motion and thermodynamics.

**UNIT I: Basic Concepts and Properties****(7 Hours)**

Fluid—definition, distinction between solid and fluid Modules and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension, Buoyancy. Fluid statics concept of fluid static pressure, absolute and gauge pressures – pressure measurements by manometers and pressure gauges. Hydrostatic forces on submerged surfaces, Stability of floating bodies.

**UNIT II: Fluid Kinematics and Fluid Dynamics****(8 Hours)**

Fluid Kinematics - Flow visualization – lines of flow - types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- Equation of streamline - stream function - velocity potential function - circulation - flow net. Fluid dynamics - equations of motion - Euler's equation along a streamline - Bernoulli's equation, applications - Venturi meter, Orifice meter, Pitot tube. Dimensional analysis - Buckingham's Pi theorem- applications - similarity laws and models. Reynolds transport theorem, Sub sonic and Super sonic flow, similitude.

**UNIT III: Incompressible Fluid Flow****(8 Hours)**

Viscous flow - Navier - Stoke's equation (Statement only)-Shear stress, pressure gradient relationship - laminar flow between parallel plates - Laminar flow through circular tubes. (Hagen Poiseuille's equation). Hydraulic and energy gradient – flow through pipes - Darcy -Weisback's equation – pipe roughness -friction factor- Moody's diagram-minor losses - flow through pipes in series and in parallel - power transmission. Boundary layer flows, boundary layer thickness and boundary layer separation. Drag and lift coefficients. Rayleigh and Fanno lines.

**UNIT IV: Hydraulic Turbines****(8 Hours)**

Fluid machines definition and classification - exchange of energy-Euler's equation for turbo machines - Construction of velocity vector diagram's - head and specific work - components of energy transfer - degree of reaction. Hydro turbines definition and classifications - Pelton turbine -

Francis turbine - propeller turbine Kaplan turbine .Working principles - velocity triangles - work done - specific speed – efficiencies -performance curve forturbines.

## UNIT V: Hydraulic Pumps

(8 Hours)

Pumps definition and classifications. Centrifugal pump classifications, working principles, velocity triangles, specific speed, efficiency and performance curves. Reciprocating pump classification, m principles, indicator diagram, work saved by air vessels and performance curves, cavitation in pumps Rotary pumps working principles of gear and vane pumps. Dimensionless numbers and their significance.

### Text Books:

1. A Textbook of Fluid Mechanics, by RK Rajput, S. Chand Publishing, 2019, ISBN 9352837207, 9789352837205. 2011

### Reference Books:

1. Som S.K– Introduction to Fluid Mechanics – TMH 2008
2. Bedford Wylie Streeter – Fluid Mechanics – Tata McGraw Hill.2011
3. Fluid Mechanics & Machines by R.K Bansal, Laxmi Publications 2016

**Course Outcomes:** After learning the course the students should be able to:-

Understand the basic concept of fluid and properties of fluid.

- |     |   |
|-----|---|
| CO1 | To identify and analyze the variation in properties of fluids with pressure.  |
| CO2 | Analyze the basic concepts of fluid-statics, kinematics and dynamics with their applications.   |
| CO3 | Understand and the implementation of continuity equation, discharge of flow in major and minor losses through pipes and to learn the hydraulic gradient energy. |
| CO4 | Implement the fluid concept in viscous and tursoniklent flow.   |
| CO5 | Analyze and evaluate the performance of pumps and turbine.  |

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	H					H			M		L	M	L	M
CO5	H	H	M		L		M			H	L		M	M

H = Highly Related; M = Medium L = Low.

<b>L-T-P</b>	<b>BME181A- Manufacturing Process</b>	<b>Credits:3</b>
<b>3-0-0</b>		

### Course Objective:

The objective of the course is to impart fundamental knowledge on production process such as casting, joining forming and sheet metal working processes and their applications.

### Unit-I: Introduction of Production Engineering

(6 Hours)

Introduction to manufacturing Processes, historical background, Classification of manufacturing Processes, Importance of manufacturing. Economic & technological considerations in manufacturing. Various types of Production, Job Shop, Batch type, Continuous, Discrete, selection of manufacturing Process. Role of computers in manufacturing. Introduction of casting process, classification of casting process, Sand mould casting, advantages and limitation of casting process. Types of Sand, composition, Properties and testing methods

### Unit-II: Casting Process

(8 Hours)

Sand mold casting:- Basic principles with simple examples of a solid casting and a hollow casting Mold preparation, Core and Core making Gating system and its design, pouring basin, sprue, runner and risers. Gating ratio and its applications. Advantages, limitations and applications of top gate, bottom gate, parting gate and step gate; Estimation of pouring time for top gate and bottom gate type molds, Riser design and its placement, Melting, Pouring and Fluidity.CO<sub>2</sub> molding ,shell molding ,centrifugal casting , investment casting ,Permanent mold casting ,slush casting, Hot chamber and cold chamber Die casting; methods, Slush casting; principle and use, Casting defects; types, causes and remedy

### Unit-III : Metal Forming Processes:

(10 Hours)

Introduction of metal forming, classification, advantage and limitation. Plastic deformation of metals, stress-strain relationships, Hot working and Cold working, principle, purpose, relative advantages and applications. Forging:-Definition and classification giving few example of application; work materials different forging operations, drop forging and press forging (pressing)

methods and use; Forging dies ;types and materials Rolling:-Introduction ; basic principles and general applications; types of rolling mills & rolled-sections , Characteristics and applications of hot rolling and cold rolling; various rolling processes and applications and rolled products; Roll pass design for different products Wire drawing and Extrusion:- Basic principles and requirements; Classification, methods and applications, Forward and Backward Extrusion , wire/tube drawing and its application. Defects in metal forming processes.

#### **Unit- IV: Sheet metal Working processes**

**(8 Hours)**

Description and operation of processes, process of shearing, punching, piercing, blanking, trimming, perfecting, notching, lancing, embossing, coining, bending, forging and drawing press, tool dies, auxiliary equipment, safety devices, stock feeders, scrap cutters, forces, pressure and power requirements .different types of Die and Punch set used in sheet metal working . Powder Metallurgy: Powder production methods, compaction and sintering. Applications of powder metallurgy

#### **Unit-V: Welding Processes**

**(8 Hours)**

Introduction of welding process, welding classification, principal of an arc generation. Fusion welding: - Introduction; basic principle, definition and major classification; characteristics and applications of different fusion welding processes arc welding, Shielded metal arc welding. Principles. Methods, requirements and application of other arc welding processes like TIG,MIG ,Resistance welding, Gas welding , Solid state welding such as Friction, pressure and explosion welding,, plasma arc welding, Laser welding , electron beam welding , ultrasonic welding ,Brazing, Soldering and their applications.

#### **Text Books:**

1. Dr. P.C.Sharma –A Text Book of Production Technology S.Chand & Company New Delhi Edition: 2021-22,

#### **Reference Book:**

1. Rao P.N. - Manufacturing Technology VOL-I & II - Tata Mc Graw Hill, New Delhi Edition: 2017
2. Manufacturing Engineering and Technology – Kalpakjian (Addison Wesley) Edition: 2018
3. Principles of Metal Casting – RW Heine, CR Loper and PC Rosenthal (Tata-McGraw Hill ,1986)

**Course Outcomes:** After learning the course the students should be able to:-

CO1: To understand fundamentals of manufacturing Process and acquiring knowledge of Sand molding processes.

CO-2To acquire knowledge of various Casting Processes & and their applications.

CO-3 To acquire knowledge of various metal forming processes used in manufacturing.

CO-4 To understand fundamentals of various sheet metal working processes used in manufacturing.

CO5 -To acquire the knowledge of various types of welding operations and its importance

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome													Program Specific Outcome
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO2

<b>L-T-P</b>	<b>BME132A- <u>MECHANICS OF MACHINES LAB</u></b>	<b>Credits: 1</b>
<b>0-0-2</b>		

**List of Experiments**

1. Experiment on Gears tooth profile, interference etc.
2. Experiment on Gear trains
3. Experiment on longitudinal vibration
4. Experiment on transverse vibration
5. Experiment on Watt governor
6. Experiment on Porter governor
7. Experiment on Proell governor

8. Experiment on Hartnell governor
9. Experiment on critical speed of shaft
10. Experiment on gyroscope
11. Experiment on static balancing
12. Experiment dynamic balancing
13. Experiment on Brake
14. Experiment on clutch
15. To determine radius of Gyration “K” of given pendulum.

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Analyze planar mechanism how it works and what output takes place.

CO2. Analyze various inversion of mechanism.

CO3. Describe the concepts of machines, mechanisms and related terminologies.

CO4. Analyze various motion transmission elements like gears, gear trains, cams, belt drive and rope drive.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome	
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO12	PSO1	PSO2

CO4		L		M					L					H

H = Highly Related; M = Medium L = Low

<b>L-T-P</b>	<b>BME152A – Metallurgy</b>	<b>Credits:3</b>
<b>3-0-0</b>		

**Prerequisite:** Engineering Chemistry and Engineering Materials.

**Learning Objectives:**

- The module provides a systematic overview of the major principles of metallurgy.
- Students successfully completing the module will have a critical awareness of how these principles relate to current issues in exploiting structural alloys in engineering applications.

**UNIT-I Introduction****08 Hrs**

Introduction to metallurgy, the impact of materials on progress, classifications of materials, extraction of iron from iron ores, types of ores, cupola furnace, blast furnace, their reactions, pig iron production, the manufacture of steel, basic oxygen steelmaking (BOS), electric arc steelmaking, the microstructural nature of carbon steels, the uses of plain carbon steels, hot working vs cold working of metals, recovery and recrystallization temperature.

**UNIT-II The Formation of Alloys****08 Hrs**

Introduction to solid solution, Hume-Rothery rule, solid-solution strengthening mechanism, phase, Gibb's phase rule, equilibrium and non-equilibrium diagrams, classification of equilibrium phase diagrams, iron-carbon equilibrium diagram. Classification of non-equilibrium phase diagrams (TTT & CCT), various types of heat treatment processes, the solid solution, intermediate phases, eutectics and eutectoids, strengthening mechanisms in alloys, exercises.

**UNIT-III Modern Steel Alloy Developments****08 Hrs**

Nickel steels, chromium steels, nickel-chromium, steels containing molybdenum, steels containing vanadium, heat-resisting steels, manganese steels, steels containing tungsten, steels containing cobalt, steels containing boron, steels containing silicon, steels containing copper, high-strength low-alloy (HSLA) steels and other 'micro-alloyed' steels.

**UNIT-IV Other Non-ferrous Metals and Alloys****08 Hrs**

Magnesium-base alloys, zinc-base die-casting alloys, nickel-chromium high-temperature alloys, bearing metals, fusible alloys, titanium and its alloys, uranium, some uncommon metals, exercises.

**UNIT-V Metallic Corrosion and Its Prevention****08 Hrs**

The mechanism of corrosion, electrolytic action or wet corrosion involving mechanical stress, electrolytic action or wet corrosion involving electrolytes of non-uniform composition, the prevention of corrosion, the use of a metal or alloy which is inherently corrosion-resistant, protection by metallic coatings, protection by oxide coatings, protection by other non-metallic coatings, cathodic protection, properties and applications.

**Course Outcomes:** After learning the course the students should be able to:

Course Outcomes	Statement	Bloom's Knowledge Level
CO1	To develop students' knowledge of current methods to recover base metals from natural ores.	Apply
CO2	To understand structure insensitive and physical properties of materials, recovery, recrystallization and grain growth phenomenon in metals and alloys.	Analyze
CO3	To develop students' individual skills at performing relevant heat, mass and thermodynamic calculations for the extraction of base metals.	Evaluate

- CO4** Phase rules, phase diagrams, solid state reactions, analyze the microstructure of iron and steels using phase diagram and modify the microstructure and properties using different heat treatments. Create
- CO5** To develop the students' decision-making skills as required for the design, improvement, operation, and profitability of non-ferrous extractive metallurgical processing. Evaluate

<b>L-T-P</b>	<b><u>BME021C - MECHANICAL VIBRATION</u></b>	<b>CREDITS:3</b>
<b>3-0-0</b>		

### **Course Objective:**

At the end of this course, the student will fully understand and appreciate the importance of vibrations in mechanical design of machine parts that operate in vibratory conditions, be able to obtain linear vibratory models of dynamic systems with changing complexities (SDOF, MDOF).

### **UNIT-I**

**Introduction:** Vibration Terminology, Kinematics of simple vibrating motion Simple harmonic motions, and Representation of harmonic motion. Degree of freedom, Types of Vibration, Addition of Simple Harmonic Motions, phenomenon of Beats, Work done by a Harmonic Force (Problems)

### **UNIT-II Free vibrations of single degree of freedom:**

Undamped free vibration, Equations of motions, general solution of free vibration, Torsional vibrations, Springs in Series & Parallel, Energy Methods (Problems), Damped free vibration, Types of Damping, Free Vibration with Viscous Damping, Logarithmic Decrement.

### **UNIT-III Forced vibrations:**

Forced Vibration with constant harmonic excitation, forced vibration with rotating and reciprocating mass, Vibration isolation and Transmissibility, Vibration measuring instruments. (Problems) Two Degree of Freedom System: Two Degree of Freedom System, Principal modes, Torsional System, Vibration absorbers.

### **UNIT-III Multi Degree of Freedom System:**

Equation of Motion, Influence coefficients, Eigen Values and Eigen Vectors, Torsional Vibration of Multi-Rotor System. (Problems) Geometric method, Stability of equilibrium points, Method of harmonic balance.

Numerical Methods: Rayleigh's method, Dunkerley's equation, Stodola's Method, Rayleigh-Ritz's method, Method of Matrix iteration, Holzer's method (Problems)

### **UNIT-V Continuous systems:**

Transverse vibration of strings, longitudinal vibrations of bars, Lateral vibration of beams, Torsional vibration of circular shafts, whirling of shafts.

**Course Outcome (CO):**

At the end of this course students will have:

CO1:Appreciating the need and importance of vibration analysis in mechanical design of machine parts that operation vibratory conditions.

CO2: Ability to analyze the mathematical model of a linear vibratory system to determine its response

CO3: Understand the variations of magnification factor and phase angles with the frequency of excitation and the phenomena of resonance and beats.

CO4: Formulate the equations of motion of MDOF systems using Newton's second law, influence coefficients, the natural frequencies of vibration and the modal vectors by solving the eigenvalue problem.

CO5: Determine the free-vibration solution for continuous system using a linear superposition of the mode shapes and the initial conditions.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome

<b>L-T-P</b>	<b>BME114B – DESIGN OF MACHINE ELEMENTS-II</b>	<b>Credits:3</b>
<b>3-0-0</b>		

### **Course Objective:**

The primary objective of this course is to demonstrate how engineering design uses the many principles learned in previous engineering science courses and to show how these principles are practically applied.

**Unit I Springs:** Design of helical compression and tension springs, consideration of dimensional and functional constraints, leaf springs and torsion springs; fatigue loading of springs, surge in spring; special springs.

**Unit II Brakes & Clutches:** Materials for friction surface, uniform pressure and uniform wear theories, Design of friction clutches: Disk , plate clutches, cone & centrifugal clutches.

**Unit III Spur and Helical Gears:** Force analysis of gear tooth, modes of failure, beam strength, Lewis equation, form factor, formative gear and virtual number of teeth; Gear materials; Surface strength and wear of teeth; strength against wear; Design of straight tooth spur and Helical Gears. Bevel Gears: Application of bevel, formative gear and virtual number of teeth; Force analysis; Lewis equation for bevel gears; Strength against wear; Design of bevel gear.

#### **Unit IV:**

**Journal Bearing:** Types of lubrication, viscosity, hydrodynamic theory, design factors, temperature and viscosity considerations, Reynold's equation, stable and unstable operation, heat dissipation and thermal equilibrium, boundary lubrication, dimensionless numbers, Design of journal bearings, Rolling-element Bearings: Types of rolling contact bearing, bearing friction and power loss, bearing life; Radial, thrust & axial loads; Static & dynamic load capacities; Selection of ball and roller bearings; lubrication and sealing.

**Unit V Design of I.C. Engine Components:** General design considerations in I C engines; design of cylinder; design of piston and piston-rings; design of connecting rod; design of crankshaft.

**Course Outcomes:** After learning the course the students should be able to: -

- CO1. Understanding of standards and various parameters in design consideration of helical and leaf springs.
- CO2. Describe the design process friction clutches in power transmission system and calculation of stresses.
- CO3. Understanding of standards and terminology of gears with important design consideration and practices.
- CO4. Understanding of standards and various parameters in design consideration of sliding and rolling contact bearings.
- CO5. Understanding of standards and terminology of IC engine prominent components with important design consideration and practices.

<b>L-T-P</b>	<b>BME115B–PRODUCTION ENGINEERING</b>	<b>CREDITS:3</b>
<b>3-0-0</b>		

### COURSE OBJECTIVE:

The objective of the course is to impart fundamental knowledge on metal cutting, machine tool and unconventional processes and their applications.

### UNIT-I

Metal Cutting: Mechanics of metal cutting. Designation of single point cutting tool according to ASA system, Orthogonal Vs oblique cutting. Mechanics of chip formation, types of chips. Shear angle relationship. Merchant's circle analysis. Cutting forces, power required.

**UNIT-II** Tool wear and wear mechanism, Taylor's tool life, tool failure criterion, Basic idea of machinability. Tool economics, maximum production criterion and minimum cost criterion, Cutting fluids/lubricants, Tool material.

**UNIT-III:**Multi edged tools: Simple mechanics of multi edge cutting tool, calculation of machining time, geometry of twist drills, Form tools-application. Milling process, classification, Up milling vs down milling. Calculation of maximum chip thickness.Broaching process, tools-type's materials and applications, Grinding & Super-finishing: Grinding wheel, abrasive & bonds.Grinding wheel specifications. Grinding wheel wear, attritions wear & fracture wear. Dressing & truing. Surface grinding, cylindrical grinding & centerless grinding.honing, lapping

**UNIT- IV:** Machine Tools: Working principle, constructions and operations of Turret and capstan lathe, shaper and planer machine, milling. Dividing head and types of indexing and tool layout Turret and capstan lathe.

**UNIT-V:** Metrology and Inspection: Standards of linear measurement, line and end standards, Limit, fits and tolerances. Interchangeability and standardization. Linear and angular measurements devices, sine bar and system comparators: Sigma, Johansson's Microkrator. Measurement of geometric forms like straightness, flatness, roundness.Tool maker's microscope, profile projector, autocollimator.

Interferometry: principle and use of interferometry, optical flat. Measurement of screw threads and gears.

Surface texture: Surface roughness, quantitative evaluation of surface roughness and its measurement

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Understand about various metal cutting operation there mechanics.

CO2. Discuss features and applications of reciprocating machine tools like shaper, planer and slotting machine.

CO3. Explain the features and applications of lathe, milling, drilling and broaching machines

CO4. Identify suitable metrological methods for measuring the components.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

1. Manufacturing Engineering and Technology – Kalpakjian (Addison Wesley)
2. Modern Production Engineering - Groover
3. Principles of Metal Casting – RW Heine, CR Loper and PC Rosenthal (Tata-McGraw Hill).

<b>L-T-P</b>	<b>BME117B – Internal Combustion Engines</b>	<b>CREDITS: 3</b>
<b>3-0-0</b>		

#### **COURSE OBJECTIVE:**

The objective of the course is to understand the operation of internal combustion engines and perform theoretical calculations to obtain thermodynamic efficiencies and then assess operating losses, calculate engine operating parameters.

#### **UNIT-I Heat engines**

**(8 Hours)**

Basic Concepts-Air standard cycles and fuel-air cycles Assumptions, Otto, Diesel & Dual cycles, comparison of cycles, fuel air cycle, Valve Timing diagram, Actual engine cycle.

#### **UNIT-II S.I. Engines**

**(8 Hours)**

Theory of Carburetion, Types of carburetors. Combustion in spark Ignition engines, stages of combustion, flame propagation, rate of pressure rise, abnormal combustion. Phenomenon of Detonation in SI engines, effect of engine variables on Detonation. Combustion chambers. Rating of fuels in SI engines. Additives.

### **UNIT-III C.I. Engines**

**(8 Hours)**

Fuel supply system, types of fuel pump, injector and distribution system, Combustion in compression ignition engines, stages of combustion, factors affecting combustion, Phenomenon of knocking in CI engine. Effect of knocking. Types of combustion chambers rating of fuels in CI engines. Additives; Comparison of knocking in SI & CI engines, Concepts of Supercharging and Turbo charging.

### **UNIT-IV IC Performance characteristics & Testing of I.C. Engines**

**(8 Hours)**

Introduction to Indian Standards for testing of I.C. Engine, Mean effective pressure, indicated power, brake power, friction power, Methods to determine power and efficiencies Variables affecting performance of engine, characteristic curves, heat balance sheet, Methods of improving engine performance; super & turbocharged engines.

### **UNIT-V Fuels and Emissions**

**(8 Hours)**

Chemical structure & important qualities of the Engine fuels - (SI & CI engines), Diesel, and Gasoline fuels- Indian specifications. Alternate fuels (SI & CI engines)- Liquid fuels, gaseous fuels, hydrogen engines (LPG, HC NG (15%, 20%, 25 % Blends Hydrogen and Biofuels), Air pollution due to IC engine, Engine emissions, Hydrocarbon emissions, (HC) & PPM & Carbon monoxide emissions (CO), oxides of Nitrogen (NO<sub>x</sub>) Euro norms , Bharat stage norms, Emission control methods for SI and CI engines, Electronic control module, Catalytic converters.

#### **Text Book:**

1. Ganesan.V., “Internal combustion engines”, Tata McGraw-Hill Publishing Company Limited, IV Edition 2012.

#### **Reference Books:**

1. Heywood, John B, “Internal combustion engine fundamentals”, Tata McGraw-Hill Publishing Company Limited, 2017.

2. R.K. Rajput, “Internal combustion engines”, Laxmi Publications, 2005.

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Understand the principle of heat engine.

CO2. Understand the normal & abnormal combustion in spark ignition engines.

CO3. Understand the normal & abnormal combustion in compression ignition engines.

CO4. Understand the performance characteristics & testing of I.C. Engines.

CO5. Understand the Phenomenon of engine emissions & alternate Fuels.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>0-0-2</b>		

**List of experiments**

- 1 Introduction to Machining operations
- 2 Introduction to Centre Lathe Machine.
- 3 Introduction to Capstan Lathe Machine
- 4 Introduction to Shaper Machine
- 5 To perform various cutting operation on Lathe
- 6 To make a 10 T.P.I. (R.H.) thread on M.S. bar for hexagonal bolt with the help of centre lathe machine as per given figure.
- 7 Machining of hexagon in shaping machine
- 8 Machining of square in shaping machine

- 9 Measurement of angle using sinebar& slip gauges. Study of limit gauges.
- 10 To do angular measurement using level protector
- 11 Adjustment of spark plug gap using feeler gauges.

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Understand the various cutting operation on Lathe.

CO2. Understand the cutting operation on shaper machine.

CO3. Illustrate on different metrological tools and perform measurements in quality impulsion..

CO4. Locate appropriate measuring instrument according to a specific requirement.

**List of Experiments:**

1. To study of CI Engine (Two stroke and four stroke)
2. To study of SI Engine (Two stroke and four stroke)
3. Determination of Valve timing diagram

4. Heat Balance of SI engine
5. Heat Balance of CI Engine
6. Study of Battery Ignition system and Electronic Ignition System
7. Study of Diesel fuel pump
8. Study of Diesel fuel injectors
9. Study of Carburetors
10. Study of Fuel Injection system in SI Engine
11. Study of lubricating system in CI Engines
12. Study of MPFI system.

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Demonstrate a basic understanding of engine function, performance, and design methodology

CO2. Understand the functionality of two stroke and four stroke SI and CI engine.

CO3. Understand the various injection systems and various ignition systems used in IC Engine.

CO4. Understand the impact of IC Engine on environment .

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome

0-0-2	BME122B - <u>Computer Aided Engineering Lab</u>	
-------	---	--

### **Course Objective:**

- The course will enable students to use powerful design tools in their future classes and work. These are sustained by numerous practical examples to provide the student with intensive hands-on experience with CAD Package (Creo /Solid Work).
- Knowledge acquired will likely reflect in the way that students express and implement engineering ideas.

Exercise 1: Assembly Drawings(Part drawings should be given)

1. Plummer block (Pedestal Bearing)2. Rams Bottom Safety Valve 3.1.C. Engine connecting rod4. Screw jack (Bottle type)5.*Tailstock of lathe*6. *Machine vice*7. *Tool Head of a shaper*

Exercise 2. Create 3D sheet models using Miter Flange, Hem, Jog Creating Break, Corner/Corner Trim , Closed Corners, Rip, Fold/Unfold, Forming Tools. Inserting Cross Break, Welded Corner, Adding Corner Trim, Lofted bend, Conversion of Solid Body To Sheet Metal.  
( 5 models)

Exercise 4: Create 3D models using Fillet features, Inserting Hole types, Creating Chamfer Creating Shell & Draft, Rib( 5 Models)

Exercise 6: Verify Grashof law (four bar link mechanisms) constraint analysis.

Exercise 7: Determine weight of 3D model by defining the physical properties of material and applying different materials.

Exercise 8: Determine the stresses in the members of truss.

Exercise 9. Determine the deformation of bar when subjected to tensile/compressive load.

Exercise 10. Design and create 3d model of knuckle joint to connect two circular rods subjected to an axial tensile load. Select suitable materials for the parts.

Exercise 11. Determine the thermal stresses in composite bar.

**Course Outcomes:** After learning the course the students should be able to:-

- CO1 Ability to use standard software tools to create part assemblies.
- CO2 Ability to create fully constrained solid models that can be quickly modified using standard software tools.
- CO3 Ability to use, identify and explain standard features in solid modeling including protrusions, revolutions, cutouts, and patterns.

- CO4 Ability to use standard software tools to create engineering drawings, or other documents, to fully describe the geometries and dimensions of parts, as well as to document assemblies according to standard practice.

**LIST OF EXPERIMENTS** (Minimum 12 experiment of the following)

1. Determination of the time period of a thread pendulum having different lengths and material
2. Determination of the time period of a Rod pendulum with a length of 800mm

3. Determination of the time period of a rod and thread pendulum with same centre of gravity distance
4. Determination of the reduced pendulum length of a reversible pendulum
5. Determination of the time period of a pendulum with bifilar suspension, having different suspended mass
6. Determination of spring constants
7. Determination of Natural Frequencies of Free Un-Damped Oscillations
8. Determination of Natural Frequencies of Free Damped Oscillations
9. Determination of the Amplitude of Forced Un-Damped Oscillations
10. Determination of the Amplitude of Forced Damped Oscillations
11. Determination of the Natural Frequency of Un-Damped Torsional Vibrations
12. Determination of the Natural Frequency of Damped Torsional Vibrations.
13. To determine the radius of gyration of given bar using bifilar suspension.
14. To verify the dunker ley's rule
15. To determine the radius of gyration of a compound pendulum.

**Course Outcomes:** At the end of this course students will be:

CO 1: Able to practically relate learned fundamental information about vibration phenomenon

CO 2: Able to gain skills of modeling of vibration problems encountered in application and examining vibration response, establishing relation between real system and physical model, and to be formed mathematical model from physical model, methods used examining of vibrations and its usage fields.

CO3: Able to calculate solution of mathematical model and to be interpreted of its results

CO4: Able to apply general information about definition and finding remedy of the vibration problems encountered in machineries.

<b>L-T-P</b>	<b>BME020B – HEAT AND MASS TRANSFER</b>	<b>Credits:3</b>
<b>3-0-0</b>		

### Course Objective:

- To train students with good scientific and engineering breadth so as to comprehend, analyze, design and create novel products and provide solution for the real life problems

**Unit-1 Basic Concepts:** Modes of heat transfer, Fourier's law, Newton's law, Stefan Boltzman law; thermal resistance and conductance, analogy between flow of heat and electricity, combined heat transfer process; Conduction: Fourier heat conduction equation, its form in rectangular, cylindrical and spherical coordinates, thermal diffusivity, linear one dimensional steady state conduction through a slab, tubes, spherical shells and composite structures, electrical analogies, critical-insulation-thickness for pipes, effect of variable thermal conductivity.

**Unit 2 Extended surfaces (fins):** Heat transfer from a straight and annular fin (plate) for a uniform cross section; error in measurement of temperature in a thermometer well, fin efficiency, fin effectiveness, applications; Unsteady heat conduction: Transient and periodic conduction, heating and cooling of bodies with known temperatures distribution, systems with infinite thermal conductivity, response of thermocouples.

**Unit 3 Convection:** Introduction, free and forced convection; principle of dimensional analysis, Buckingham 'pie' theorem, application of dimensional analysis of free and forced convection, empirical correlations for laminar and turbulent flow over flat plate and tubular geometry; calculation of convective heat transfer coefficient using data book.

**Unit 4 Heat exchangers:** Types- parallel flow, counter flow; evaporator and condensers, overall heat transfers coefficient, fouling factors, log-mean temperature difference (LMTD), method of heat exchanger analysis, effectiveness of heat exchanger, NTU method; Mass transfer: Fick's law, equi-molar diffusion, diffusion coefficient, analogy with heat transfer, diffusion of vapour in a stationary medium.

**Unit 5 Thermal radiation:** Nature of radiation, emissive power, absorption, transmission, reflection and emission of radiation, Planck's distribution law, radiation from real surfaces; radiation heat exchange between black and gray surfaces, shape factor, analogical electrical network, radiation shields. Boiling and condensation: Film wise and drop wise condensation;

Nusselt theory for film wise condensation on a vertical plate and its modification for horizontal tubes; boiling heat transfer phenomenon, regimes of boiling, boiling correlations.

**Course Outcome (CO):**

At the end of this course students will have:

CO1: describe and explain the different types of reciprocating internal combustion engine and their typical design features and performance characteristics.

CO2: describe and explain the gas exchange process and power boosting by means of turbo charging.

CO3: describe and explain the heat transfer and its relation to thermal loading of engine component and cooling.

CO4: computer rate of heat release based on measured dynamic cylinder pressure.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>L-T-P</b>	<b>BME038B - <u>FINITE ELEMENT ANALYSIS</u></b>	<b>Credits:3</b>
<b>3-0-0</b>		

### **Course Objective:**

**UNIT I: Basic concepts-** The standard discrete system, Plane stress and plane strain problems, Computer procedures for Finite element analysis

**UNIT II: Finite elements of direct approach problems** – spring network, fluid flow through circular pipes, torsion of circular shafts, resistance network etc. Assemblage coefficient matrix

**UNIT III: Shape function of 1D and 2D elements-** Element Types- Triangular, rectangular, quadrilateral, iso-parametric elements, Automatic mesh generation schemes

**UNIT IV: Application to structural mechanics' problems-** Generalization of the finite element concepts- weighted residual and vibrational approaches. 1D Bar elements, truss, beams Axisymmetric stress analysis.

**UNIT V: FEA in Steady State Field Problems-** Introduction, heat conduction, FEA of fins, composite walls, fluid mechanics, vibration analysis.

### **Text Books:**

1. Rao S.S. The Finite Element Method in Engineering, Pergamon Press.

### **Reference Books:**

1. Robert D. Cook., David S., Malkus Michael E Plesha , Concepts and Applications of Finite Element Analysis.
2. Reddy J.N, An Introduction to Finite Element Method, McGraw-Hill International Student Edition
3. O.C. Zienkiewicz and R.L. Taylor, The Finite Element Methods, Vol.1. The basic formulation and linear problems, Vol.1, Butterworth Heineman.

**COURSE OUTCOMES:** At the end of this course students will be:

CO1: Able to obtain and understand the fundamental theory of FEA method.

CO2: Able to develop the ability to generate the governing FE Equations for systems governed by partial differential equations.

CO3: Able to understand the use of basic Finite elements for structural application using truss, beam, frame and plane elements.

CO4: Able to understand the application and use of FE methods for heat transfer problems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

<b>L-T-P</b>	<b>BME123B – REFRIGERATION AND AIR CONDITIONING</b>	<b>CREDITS: 3</b>
<b>3-0-0</b>		

**COURSE OBJECTIVE:**

- This course deals with the design and implementation of refrigeration and air conditioning systems, to understand the principles of refrigeration and air conditioning.
- To calculate the cooling load for different applications.
- o select the right equipment for a particular application.
- To design and implement refrigeration and air conditioning systems using standards.

**UNIT-I Introduction:** Principles and methods of refrigeration, freezing, mixture cooling by gas reversible expansion, throttling, evaporation, Joule Thomson coefficient of performance, Vortex tube and Thermoelectric refrigeration, Adiabatic demagnetization, Air refrigeration cycles- Joule's cycle, Bell-Coleman cycle, Boot-strap cycle, reduced ambient cycle and regenerative cooling cycles.

**UNIT-II Vapour Compression refrigeration System:** Vapour compression cycle, P-h and T-S diagrams, deviation from Theoretical cycle, sub-cooling and superheating, effects of condenser and evaporator pressure on COP, Removal of flash gas, multiple expansion and compression with

flash inter cooling, low temperature refrigeration, Cascade Refrigeration system, Dry ice, production of dry ice, Air liquefaction system.

**UNIT-III Vapour Absorption refrigeration System:** Theoretical and practical systems such as aqua-ammonia, Electrolux and other systems, Refrigerants: Nomenclature and Classification, Desirable properties, comparative study, leak detection methods, common refrigeration, environment friendly refrigerants and refrigerant mixtures, Brine and its properties.

**UNIT-IV Psychrometry:** Calculation of psychrometric properties on air by table and charts, Psychrometric processes, Sensible heating and cooling, evaporative cooling, cooling dehumidification, heating and humidification, mixing of air stream, sensible heat factor, principle of air conditioning, requirements of comfort air conditioning, ventilation standards, infiltrated air loads, fresh air load human comfort, effective temperature and chart, heat production and regulation of human body.

**UNIT-V Air Conditioning Loads:** Calculation of summer and Winter Air conditioning loads, Bypass factor of coil, calculation of supply air rate and its condition, room sensible heat factor, grand sensible heat factor, effective sensible heat factor, dehumidified air quantity, Problems on cooling load calculation, Air distribution and ventilation systems.

**Course Outcomes:** After learning the course the students should be able to:-

CO1. Understand the basic principle of refrigeration.

CO2. Understand the types of refrigeration system and their application on various aspect of engineering.

CO3. Understand the basic principle and working of air conditioning.

CO4. Understand the impact of refrigeration on environment.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1				H	L									L
CO2			L		M									H
CO3		M												
CO4					H								H	

*H = Highly Related; M = Medium L = Low*

**Text Books:**

1. C.P Arora - Refrigeration & Air Conditioning; TMH
2. Manohar Prasad - Refrigeration & Air Conditioning; New Age Publications

**Reference Books:**

1. Heywood, Jhohn B. - Internal Combustion Engine Fundamentals – TMH,
  2. Ballaney P I - Refrigeration & Air Conditioning - Khanna Book Publishing Co. (I) Ltd.
- Taylor, Charles F - Internal Combustion Engine Vol-1 & Vol-2 - Mit Press London

<b>L-T-P</b>	<b>BME047B - Robotics: Mechanics &amp; Control</b>	<b>Credits:3</b>
<b>3-0-0</b>		

**Course Objective:**

To train students with good scientific and engineering breadth so as to comprehend, analyze, design and create novel products and provide solution for the real life problems.

UNIT I: Introduction to Robotics- Robot, Robotics, Types of Robot, Robot classification, Types of Robot, Degrees of freedom.

UNIT II: Kinematics and Dynamics of Robotic linkages (open ended type manipulators)-

Frames, Transformations: Translation and rotation, Denavit-Hartenberg parameters, Forward and Inverse Kinematics, Jacobian, Dynamics: Equations of motion, Newton-Euler formulation.

UNIT III: Sensors and actuators- Strain gauge, resistive potentiometers, Tactile and force sensors, tachometers, LVDT, Piezoelectric accelerometer, Hall effect sensors, Optical Encoders, Pneumatic and Hydraulic actuators, servo valves, DC motor, stepper motor, drives.

UNIT IV: Control of Manipulators- Feedback control of II order linear systems, Joint control, Trajectory control, Controllers, PID control

UNIT V: Robot Programming-Language-overview, commands for elementary operations.

**Text Books:**

1. John J. Craig, Introduction to Robotics: Mechanics and Control, Addison-Wesley.

**Reference Books:**

1. Spong M. W., and Vidyasagar M., Robot Dynamics and Control, John Wiley & Sons.
2. Murray R. M., et al, A Mathematical Introduction to Robotic Manipulation, CRC Press,
3. Waldron K. J., and Kinzel G. L., Kinematics, Dynamics and Design of Machinery, John Wiley

Course Outcome:

**Course Outcomes:** After learning the course the students should be able to:-

- CO1. Familiarize with anatomy, specifications and applications of Robots
- CO2. Obtain kinematic model of robotic manipulators
- CO3. Choose the appropriate sensors and actuators for robots
- CO4. Choose appropriate Robotic configuration and gripper for a particular application
- CO5. Familiarize with Robot Programming-Language

<b>L-T-P</b>	<b>BME124B NON CONVENTIONAL ENERGY RESOURCES</b>	<b>Credits:3</b>
<b>3-0-0</b>		

### **UNIT 1: Introduction:**

Fossil fuel based systems. Impact of fossil fuel based systems. Non-conventional energy – Seasonal variations and availability. Renewable energy – sources and features. Hybrid energy systems Distributed energy systems and dispersed generation (DG)

### **UNIT 2: Traditional Energy Systems:**

Sources.Features and characteristics. Applications: Transport – bullock cart, horse carriage, camels; Agriculture – ox plough, water lifting devices; Human power – bicycle, cycle rickshaw etc.; House hold – cooking (bio mass), lighting etc.

### **UNIT 3: Solar Thermal Systems**

Solar radiation spectrum.Radiation measurement.Technologies. Applications: Heating, Cooling, Drying, Distillation, Power generation

**Solar Photovoltaic Systems:** Operating principles. Photovoltaic cell concepts. Cell, module, array. Series and parallel connections. Maximum power point tracking. Applications: Battery charging, Pumping, Lighting, and Peltier cooling

#### **UNIT 4: Micro-Power generation system**

**Micro-hydel:** Operating principles. Components of a micro-hydel power plant. Types and characteristics of turbines. Selection and modification. Load balancing.

**Wind:** Wind patterns and wind data. Site selection. Types of windmills. Characteristics of wind generators. Load matching

**Biomass:** Operating principles. Combustion and fermentation. Anaerobic digester. Wood gasifier. Pyrolysis. Applications: Biogas, Wood stoves, Bio diesel, Combustion engine.

**Wave Energy Systems:** Shoreline systems. Near shore systems. Off shore systems

#### **UNIT : 5: Economics of non-conventional energy system**

**Costing:** Life cycle costing (LCC). Solar thermal system LCC. Solar PV system LCC. Microhydel LCC. Wind system LCC. Biomass system LCC

**Hybrid Systems:** Need for Hybrid Systems. Range and type of Hybrid systems. Case studies of Diesel-PV, Wind-PV, Microhydel-PV, Biomass-Diesel systems, electric and hybrid electric vehicles.

**Course Outcomes:** After learning the course the students should be able to:-

- CO1. Understand the need of non convention energy resources.
- CO2.
- CO3. Understand the basic principle and working of air conditioning.
- CO4. Understand the impact of refrigeration on environment.

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i>Course Outcome</i>	<i>Program Outcome</i>												<i>Program Specific Outcome</i>

2. Rai G.D., Non - Conventional Energy Sources 5 Edition, Khanna Publication.

<b>L-T-P</b>	<b>BME024B - <u>Heat and Mass transfer lab</u></b>	<b>Credits:1</b>
<b>0-0-2</b>		

#### **LIST OF EXPERIMENT** (Minimum 12 experiment of the following)

1. Conduction - Composite wall experiment
2. Conduction - Composite cylinder experiment
3. Convection - Pool Boiling experiment
4. Convection - Experiment on heat transfer from tube-natural convection.
5. Convection - Heat Pipe experiment.
6. Convection - Heat transfer through fin-natural convection .
7. Convection - Heat transfer through tube/fin-forced convection.
8. Any experiment on Stefan's Law, on radiation determination of emissivity, etc.
9. Any experiment on solar collector, etc.
10. Heat exchanger - Parallel flow experiment
11. Heat exchanger - Counter flow experiment
12. Any other suitable experiment on critical insulation thickness.
13. Conduction - Determination of thermal conductivity of fluids.
14. Conduction - Thermal Contact Resistance Effect.
15. Determination of specific heat of air

**Course Outcomes:** At the end of this course students will be:

CO 1: Able practically relate to concepts discussed in the Heat & Mass Transfer course

CO 2: Able to conduct various experiments to determine thermal conductivity and heat transfer coefficient in various material

CO3: Able to calculate solution of mathematical model and to be interpreted of its results

CO4: Able to apply general information about definition and finding in heat transfer area

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	M	M	L										L	L
CO2	L	M	L	L	M								M	H
CO3	M	L	L										M	L
CO4	H	M	L		H								H	L

<b>L-T-P</b>	<b>BME126B-FINITE ELEMENT ANALYSIS LAB</b>	<b>Credits:1</b>
<b>0-0-2</b>		

**List of Experiments**

- Study of a FEA package and modeling stress analysis of
  - Bars of constant cross section area, tapered cross section area and stepped bar
  - Trusses – (Minimum 2 exercises)
  - Beams – Simply supported, cantilever, beams with UDL, beams with varying load etc
- Stress analysis of a rectangular plate with a circular hole
- Thermal Analysis – 1D & 2D problem with conduction and convection boundary conditions.
- Dynamic Analysis
  - Fixed – fixed beam for natural frequency determination

b. Bar subjected to forcing function

c. Fixed – fixed beam subjected to forcing function

**COURSE OUTCOMES:** At the end of this course students will be:

CO1: Able to obtain and understand the fundamental theory of FEA method.

CO2: Able to develop the ability to generate the governing FE Equations for systems governed by partial differential equations.

CO3: Able to understand the use of basic Finite elements for structural application using truss, beam, frame and plane elements.

CO4: Able to understand the application and use of FE methods for heat transfer problems.

***MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:***

Course Outcome	Program Outcome												Program Specific Outcome	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO3	M	L	L										M	
CO4	H	M	L		H								H	

L-T-P	BME026B – Automobile Engineering	CREDITS: 3
3-0-0		

**Course Objective:**

- To understand the construction and working principle of various parts of an automobile.
- To have the practice for assembling and dismantling of engine parts and transmission system

## **UNIT I Vehicle Structure and Engines**

Types of automobiles, vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines –components functions and materials, variable valve timing (VVT).

## **UNIT II Engine Auxiliary Systems**

Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), Engine emission control by three way catalytic converter system, Emission norms (Euro and BS).

## **UNIT III Transmission Systems**

Clutch-types and construction, gear boxes and their classification - manual and automatic, gear shift mechanisms, automobile drive system, Over drive, transfer box, transaxle, types of flywheel, torque converter, propeller shaft, slip joints, universal joints ,Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.

## **UNIT IV Steering, Brakes and Suspension Systems**

Steering geometry and types of steering gear box-Power Steering, Types of Front Axle, Types of Suspension Systems, Types of braking system such as Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control.

## **UNIT V Alternative Energy Sources**

Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles, Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.

**COURSE OUTCOMES:** at the end of this course students are able to:

CO1:understand the working of different parts of automobile.

CO2: assemble or dismantle the Automobile Engine.

CO3: understand the environmental implications of automobile emissions.

CO4: understand how the different fuels can be used in various automobiles.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome												Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3

- 1- Ganesan V. **Internal combustion engines**, Tata McGraw-Hill Education

**Reference Books:**

- 1- Joseph Heitner, Automotive Mechanics, Principles and Practices, CBS Pub.
- 2- Kripal Singh, Automotive Engineering Khanna Pub.
- 3- Newton & Steeds, Automotive Engineering 7. Emission standards from BIS and Euro –I and Euro-III

<b>L-T-P</b>	<b>BME128A – CIM &amp; NTM</b>	<b>Credits:3</b>
<b>3-0-0</b>		

**Learning Objectives:**

- To build concrete foundation for their core branch as a thinker, inter disciplinary thoughts
- To educate students by covering different aspects of computer Aided Manufacturing.

- To create strong skills of writing CNC programs, PLC programs.
- To educate students to understand different advances in manufacturing system like: GT, CAPP and FMS

**Unit: 1 Computer Aided Manufacturing:** CAM Concepts, Objectives & scope, Nature & Type of manufacturing system, Evolution, Benefits of CAM, Role of management in CAM, Concepts of Computer Integrated Manufacturing, Impact of CIM on personnel, Role of manufacturing engineers, CIM Wheel to understand basic functions.

**Unit: 2 NC/CNC Machine Tools:** NC and CNC Technology: Types, Classification, Specification and components, Construction Details, Controllers, Sensors and Actuators, CNC hardware: Re circulating ball screw, anti friction slides, step/servo motors. Axis designation, NC/CNC tooling. Fundamentals of Part programming, Types of format, Part Programming for drilling, lathe and milling machine operations, subroutines, do loops, canned Cycles, parametric sub routines.

**Unit: 3 Group Technology and CAPP:** Introduction, part families, part classification and coding systems: OPITZ, PFA, FFA, Cell design, rank order clustering, composite part concepts, Benefits of group technology. Approaches to Process Planning, Different CAPP system, application and benefits.

**Unit:4 Flexible Manufacturing System:** Introduction & Component of FMS, Needs of FMS, general FMS consideration, Objectives, Types of flexibility and FMS, FMS lay out and advantages. Automated material handling system: Types and Application, Automated Storage and Retrieval System, Automated Guided Vehicles, Cellular manufacturing, Tool Management, Tool supply system, Tool Monitoring System, Flexible Fixturing, Flexible Assembly Systems.

**Unit:5 Integrated Production Management System:** Introduction, PPC fundamentals, Problems with PPC, MRP-I, MRP-II. Just in Time philosophy: JIT & GT applied to FMS, concepts of Expert System in Manufacturing and Management Information System.

**COURSE OUTCOME: after learning the course the students should be able to:**

1. Students will describe basic concepts of CAM application and understand CAM wheel. Can suggest best material with better wear properties
2. Students will prepare CNC programs for manufacturing of different geometries on milling and lathe machines.
3. Students will prepare logic diagram for different application of automation.
4. Students will prepare Process planning for different components

<b>L-T-P</b>	<b>BME027B - OPERATION RESEARCH</b>	<b>CREDITS:4</b>
<b>3-1-0</b>		

### COURSE OBJECTIVE:

Students enable to apply mathematical, computational and communication skills needed for the practical utility of Operations Research.

Identify and develop operational research models from the verbal description of the real system.

**UNIT-I Introduction and History of Operation Research:** Development of operations Research, characteristics and scope of operations Research, operations Research in Management, Models in operations Research, Model Formulation, Types of mathematical models, Limitations of operations Research.

**Linear Programming Methods:** L.P. models, simplex method, Algebra of simplex method, Big M method, unconstrained variables, sensitivity analysis, Duality, essence of duality theory, Application of sensitivity analysis.

**UNIT-II Transportation:** Introduction to model, matrix terminology, Formulation and solution of Transportation model north west corner method (NWCM), row and column minima (LCET), VAM, optimality test-stepping stone, and MODI method.

Assignment Models: Introduction, Formulation and solution of assignment model, Hungarian method. Typical assignment problems like optimal assignment of crews and travelling salesman problem.

**UNIT-III Network Problems:** Introduction to network logic, Numbering of events (Fulkerson Rule), PERT calculations - Forward path, back-ward path. Slack, probability, comparison with PERT, Critical path, floats. Project cost, crashing the network, updating (PERT and CPM).

**UNIT-III Queuing Theory:** Introduction, Applications of queuing Theory, Waiting time and idle time costs, single channel queuing theory and multi-channel queuing theory with Poisson, Arrivals and exponential services, Numerical on single channel and multi-channel queuing theory

Sequencing Problems: Introduction, processing jobs through two machines, three machines, Replacement theory

**UNIT-V Game theories and techniques:** Theory of games, competitive games, Rules and Terminology in game Theory, Rules for game theory- saddle point, dominance, mixed strategy (2 x2 games) , mixed strategy (2 x n games or m x 2 games), mixed strategy (3 x3 games), two person zero sum games, n-person zero sum games.

**COURSE OUTCOMES:** AT THE END OF THIS COURSE STUDENTS WILL BE:

CO1: Able to identify and develop operational research models from the verbal description of the real system.

CO2: Able to understand the mathematical tools that are needed to solve optimization problems.

CO3: Able to use mathematical software to solve the proposed models.

CO4: Able to develop a report that describes the model and the solving technique, analyze the results and propose recommendations in language understandable to the decision making processes in management engineering.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome				Program Outcome										Program Specific Outcome

1. Hira and Gupta – Operation Research – S. Chand Publication

**Reference Books:**

2. Ebert, Ronald J – Production and operation mangment concept models and behavior – PH
3. Gillet Billy E – Introduction to operation research – TMH
4. Hillier and Lieberman - Introduction to operation research- McGraw-Hill

<b>L-T-P</b>	<b>BME127A – <u>TRIBOLOGY AND MAINTENANCE</u></b>	<b>Credits:4</b>
<b>3-1-0</b>		

**Course Objective:**

- To train students with good scientific and engineering breadth so as to comprehend, analyze, design and create novel products and provide solution for the real life problems

**UNIT I:** Surfaces and Friction- Topography of Engineering surfaces- Contact between surfaces - Sources of sliding Friction -Adhesion Ploughint- Energy dissipation mechanisms, Friction Characteristics of metals - Friction of non-metals. Friction of lamellar solids - friction of Ceramic materials and polymers - Rolling Friction. Source of Rolling Friction - Stick slip motion - Measurement of Friction.

**UNIT II:** Wear- Types of wear - Simple theory of Sliding Wear Mechanism of sliding wear of metals - Abrasive wear. Materials for Adhesive and Abrasive wear situations - Corrosive wear - Surface Fatigue wear situations - Brittle Fracture wear - Wear of Ceramics and Polymers - Wear Measurements.

**UNIT III:** Lubricants and Lubrication Types- Types and properties of Lubricants – Testing methods - Hydrodynamic Lubrication – Elasto hydrodynamic lubrication- Boundary Lubrication - Solid Lubrication Hydrostatic Lubrication.

**UNIT IV:** Film Lubrication Theory- Fluid film in simple shear - Viscous flow between very close parallel plates - Shear stress variation, Reynolds Equation for film Lubrication - High speed unloaded journal bearings - Loaded journal bearings - Reaction torque on the bearings -Virtual Coefficient of friction - The Somerfield diagram.

**UNIT V:**Surface Engineering and Materials for Bearings- Surface modifications - Transformation Hardening, surface fusion - Thermo chemical processes - Surface coatings Plating and anodizing Fusion Processes - Vapour Phase processes - Materials for rolling Element bearings - Materials for fluid film bearings - Materials for marginally lubricated and dry bearings.

**COURSE OUTCOME:**

1. Can analyze the wear of material in different application
2. Can suggest best material with better wear properties
3. Can understand the role of Tribology in different application
4. Can suggest better lubricant for particular application

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>L-T-P</b>	<b>BME129A – CIM &amp; NTM Lab</b>	<b>Credits:2</b>
<b>0-0-2</b>		

**List of Experiments:**

1. Study of Computer Integrated System: Basics, Types of Manufacturing, role of management and CIM wheel
2. NC/CNC technology: Definition, Classification, Specification, Construction details, Sensors and Actuators, and different controllers.
3. CNC part Programming: Lathe and Milling jobs
4. Exercise on PLC for Simple problems.
5. Problems on GT and Industrial case problems on coding
6. Problems on CAPP and Industrial case problems
7. Study of Flexible Manufacturing system
8. Study of Robotics Technology
9. Problems on MRP-I, MRP-II
10. Study of Expert System in Manufacturing and MI

**COURSE OUTCOME:** after learning the course the students should be able to:

1. Students will describe basic concepts of CAM application and understand CAM wheel.  
Can suggest best material with better wear properties
2. Students will prepare CNC programs for manufacturing of different geometries on milling and lathe machines.
3. Students will prepare logic diagram for different application of automation.

### **List of Experiments**

1. Study/ demonstration of Valve mechanism.
2. Assembling and dismantling of Gear Box.
3. Study of Gear Mechanism of Rear Axle.
1. Study/ demonstration of Steering and suspension mechanism.
2. Study/ demonstration of Automobile Braking System.
3. Study/ demonstration of Chassis and Suspension System.
4. Study/ demonstration of Ignition system of I.C. Engine.
5. Study/ demonstration of Fuel Supply System of C.I. Engines- Injector & Fuel Pump.
6. Study/ demonstration of engine cooling system.
7. Comparative study of technical specifications of common small cars (such as Maruti Swift, Hyundai i20, Chevrolet Aveo, Tata Indica, Ford Fusion etc.
8. Comparative study & technical features of common scooters & motorcycles available in India.
9. Visit of an Automobile factory.
10. Visit to a Modern Automobile Workshop.
11. Experiment on Engine Tuning.

### **COURSE OUTCOME:after learning the course the students should be able to:**

1. Students will describe basic concepts of CAM application and understand CAM wheel.  
Can suggest best material with better wear properties
2. Students will prepare CNC programs for manufacturing of different geometries on milling and lathe machines.

3. Students will prepare logic diagram for different application of automation.
4. Students will prepare Process planning for different components

1.1.3 Total number of courses having focus on employability/ entrepreneurship/ skill development offered by the University during the year

## **M. Tech.**

### **Course Contents for M. Tech Program**

<b>L-T-P</b>	<b>DMA017A – Research Methodology</b>	<b>Credits: 2</b>
<b>2-0-0</b>		

### **Course Objectives**

1. To understand basic concepts of research and its methodologies
2. To Identify appropriate research topics
3. To Select and define appropriate research problem and parameters
4. To understand hypothesis formulation and testing
5. To learn fundamentals of thesis writing

<b>UNIT 1</b>	<b>Research Fundamentals and Terminology</b> Importance of Research in Management Decisions Defining Research Problems and Formulation of Hypothesis
	<b>Research Design</b> Type of Research Design, Natural Experiments , Formal Type of Experiments,
<b>UNIT 2</b>	Evaluation of Experiments , Selecting Relevant Variables, Validity of Experiments. Sample design , Steps in sample design, Criteria for selection of sample ,Different types of sample design ,The Sampling Process
<b>UNIT 3</b>	<b>Data Analysis</b> Methods and Techniques of Data Collection
	Type of Data , Distinction between primary Data and Secondary, Data Collection Procedure for primary Data, Data preparation and Preliminary Analysis, Presentation of Data, Oral Presentation Statistical Analysis and Interpretation of Data
<b>UNIT 4</b>	<b>Hypothesis Testing:</b> Null and alternative hypothesis, Level of significance, Type I and type II error, Two-tailed and one-tailed tests, Procedure of hypothesis testing, Power of hypothesis test, difference Hypothesis Testing, Multivariate Analysis of Data, Multiple Linear Regression,

## UNIT 5

### Report writing and Presentation

Fundamental of Report Writing and Formatting of Reports ,Additional Statistics in Research

#### Course Outcome :

1. Student will able to understand basic concepts of various research areas
2. Student will able to identify appropriate research topics concerned to Engineering field
3. Student will select and define appropriate research problem and its related parameters
4. Student will able to prepare the hypothesis and testing of hypothesis.
5. Student will able to develop skill of thesis /Dissertation writing .

<b>L-T-P</b>	<b>MME102B-<u>Advance Manufacturing Process I</u></b>	<b>Credits:3</b>
<b>3-0-0</b>		

#### Course Objective:-

- To impart students with the knowledge of the various aspects of the manufacturing and machining terminologies and to expose them to the mechanics of machining.

**UNIT I. Introduction to Manufacturing and Machining:** Identify the necessity of “manufacturing”, Define with examples the concept of “manufacturing”, List the main classifications of the manufacturing processes with examples , State the main purposes of “machining” , Define with examples the concept of “machining” , State with example the principles of “machining”, Define the concept of “machine tools”.

**UNIT II. Basic working principle, configuration, specification and classification of machine tools:** (a) Describe the basic functional principles of machine tools (i) Illustrate the concept of Generatrix and Directrix (ii) Demonstrate Tool – work motions (iii) Give idea about machine tool drives (b) Show configuration of basic machine tools and state their uses (c) Give examples of machine tools - specification (d) Classify machine tools broadly

**UNIT III. Tool Geometry:** (a) learn geometry of single point turning tools (i) concept of rake and clearance angles (ii) systems of description of tool geometry (b) Study and show tool geometry (i) Machine Reference System (ASA) (ii) Tool Reference System

**UNIT IV. Mechanics of Machining :** (i) State the purposes of conversion of tool angles (ii) Identify the four different methods of conversion of tool angles (iii) Employ the graphical method for conversion of Rake angles, clearance angles, Cutting angles From ASA to ORS and ORS to ASA systems (iv) Convert rake angle and clearance angle from ORS to NRS (v) Demonstrate tool angle’s relationship in some critical conditions.

**UNIT V. Mechanism of chip formation :** (i) describe with illustration the mechanism of chip formation in machining • ductile materials and brittle materials (ii) illustrate and assess geometrical characteristics of ductile chips : •chip reduction coefficient & cutting ratio , shear angle and cutting strain (iii) Identify and state the causes, characteristics and effects of built – up – edge (BUE) formation. (iv) Classify chips and identify the condition for different chip forms.

**Orthogonal and oblique cutting:** (i) define and distinguish, with illustrations, between orthogonal cutting and oblique cutting (ii) identify the causes of oblique cutting and chip flow deviation (iii) determine angle of chip flow deviation. (iv) illustrate and deduce effective rake angle (v) state the effects of oblique cutting

.

**Text Books:**

1. Metal cutting theory and practice - A. Bhattacharyya

**Reference Book:**

1. Manufacturing Science by Amitabha Ghosh and Mallik
2. Modern machining process - PANDEY AND SHAH

**Course Outcome :-**

- Students will be able to understand the various terminologies of the machining tool and its mechanism and also will be able to analyse the mechanism of chip formation under different conditions

<b>L-T-P</b>	<b>MME103B - <u>Industrial Engineering</u></b>	<b>Credits:3</b>
<b>3-0-0</b>		

### **Course Objectives:**

- To take the right decisions to optimize resources utilization by improving productivity of the Lands, Buildings, People, Materials, Machines, Money, Methods and Management effectively

### **UNIT-I:**

**INDUSTRIAL ENGINEERING:** Meaning, Definition, Objective, Need, Scope, Evolution and developments.

**PRODUCTIVITY:** Definition of productivity, individual enterprises, task of management Productivity of materials, land, building, machine and power. Measurement of productivity, factors affecting the productivity, productivity improvement programs, wages and incentives (simple numerical problems).

### **UNIT 2**

**WORK STUDY:** Definition, objective and scope of work study. Human factors in work study. Work study and management, work study and supervision, work study and worker.

**METHOD STUDY:** Definition, objective and scope of method study, activity recording and exam aids. Charts to record moments in shop operation – process charts, flow process charts, travel chart and multiple activity charts. (With simple problems).

### **UNIT 3**

**WORK MEASUREMENT:** Definition, objective and benefit of work measurement. Work measurement techniques. Work sampling: need, confidence levels, sample size determinations, random observation, conducting study with the simple problems.

**TIME STUDY:** Time Study, Definition, time study equipment, selection of job, steps in time study. Breaking jobs into elements, recording information. Rating & standard Rating, standard performance, scale of rating, factors of affecting rate of working, allowances and standard time determination. Predetermined motion time study – Method time measurement (MTM)

### **UNIT 4**

**ERGONOMICS:** Introduction, areas of study under ergonomics, system approach to ergonomics model, man-machine system. Components of man-machine system and their functions – work capabilities of industrial worker, study of development of stress in human body and their consequences. Computer based ergonomics.

DESIGN OF MAN-MACHINE SYSTEM: Fatigue in industrial workers, Quantitative qualitative representation and alphanumeric displays, Controls and their design criteria, control types, relation between controls and displays, layouts of panels and machines. Design of work places, influence of climate on human efficiency. Influence of noise, vibration and light.

## UNIT 5

CURRENT TRENDS: Introduction to Agile manufacturing, Lean and Six Sigma, Value Engineering, Just in time, Total quality management, Enterprise resource planning, Supply chain and logistics management.

### Text Books:

1. “Introduction to work study”ILO, - III Revised Edition, 1981
2. “Engineered work Measurement” - Weldon, ELBS, Marvin E. Mundel- Motion and Time study, PHI, 1<sup>st</sup> edition, 1991.

### Reference Books:

1. “Human Factors in Engineering Design” - S Sanders and E J McCormick, 6th Edition, McGraw Hill
2. “Work Study and Ergonomics “- S Dalela and Sourabh, Chand Publishers, 3rd edition.

### Course Outcomes:

- It encourages students creative thinking and development of a deeper understanding and intuitive feel for the subject.

<b>L-T-P</b>	<b>MME104B- <u>Advanced Engineering Materials</u></b>	<b>Credits:3</b>
<b>3-0-0</b>		

### Course Objective:-

- To introduce students the different types of the composites compositions and their mechanical properties.

**UNIT1. Introduction:** Classifications of Engineering Materials, Concept of composite materials, Matrix materials, Functions of a Matrix, Desired Properties of a Matrix, Polymer Matrix (Thermosets and Thermoplastics), Metal matrix, Ceramic matrix, Carbon Matrix, Glass Matrix etc. Types of Reinforcements/Fibers: Role and Selection of reinforcement materials, Types of fibres, Glass fibers, Carbon fibers, Aramid fibers, Metal fibers, Alumina fibers, Boron Fibers, Silicon carbide fibers, Quartz and Silica fibers, Multiphase fibers, Whiskers, Flakes etc., Mechanical properties of fibres. Material properties that can be improved by forming a composite material and its engineering potential

**UNIT2. Various types of composites:** Classification based on Matrix Material: Organic Matrix composites, Polymer matrix composites (PMC), Carbon matrix Composites or Carbon-Carbon Composites, Metal matrix composites (MMC), Ceramic matrix composites (CMC); Classification based on reinforcements: Fiber Reinforced Composites, Fiber Reinforced Polymer

(FRP) Composites, Laminar Composites, Particulate Composites, Comparison with Metals, Advantages & limitations of Composites

**UNIT3. Fabrication methods:** Processing of Composite Materials: Overall considerations, Autoclave curing, Other Manufacturing Processes, Fiber-only performs, Combined Fiber-Matrix performs, Manufacturing Techniques: Tooling and Specialty materials, Release agents, Peel plies, release films and fabrics, Bleeder and breather plies, bagging films

**UNIT4. Testing of Composites:** Mechanical testing of composites, tensile testing, Compressive testing, Intralaminar shear testing, Inter-laminar shear testing, Fracture testing etc.

**UNIT5. Characterisations techniques:** SEM, TEM, XRD, DSC, DTA, TGA, DMA etc.

**Text book:**

1. Mechanical Metallurgy by G. Dieter Mc-Graw Hill

**Reference book:**

1. Thermal Analysis of Materials by R.F. Speyer, Marcel Decker
2. Engineering Materials: Polymers, Ceramics and Composites A.K Bhargava Prentice Hall of India
3. Materials characterization, Vol. 10, ASM hand book

**Course Outcome :-**

- Students will be able to develop the basic knowledge of different types of engineering materials and how they are being fabricated.
- They will be aware of various mechanical changes when advanced materials are subjected to the mechanical testing.

<b>L-T-P</b>	<b>MME105B- <u>Advanced Manufacturing Process Lab</u></b>	<b>Credits:1</b>
<b>0-0-2</b>		

**List of Experiments**

- Hydraulic Bulge test and Erichsen test
- Mechanical properties of powder compacts
- Experiments on Rolling, Deep Drawing, Extrusion

- Uni-axial compression test to obtain true stress-strain data and to obtain the effects of lubrication
- Plane strain compression test for sheet type of specimen to obtain stress-strain behavior,
- Temperature distribution in arc welding
- Weld quality tests
- Work space analysis of manipulator.
- Experiments on TIG and MIG welding to find out the mechanical properties of metals
- Hydraulic and Pneumatic circuits
- Operation of tool and cutter grinder, twist drill grinder, Centreless grinder
- Determination of cutting forces in turning
- Inspection of parts using tool makers microscope, roughness and form tester
- PLC programming

<b>L-T-P</b>	<b>DMA018A – Research Methodology Lab</b>	<b>Credits: 1</b>
<b>0-0-2</b>		

#### **SPSS Package -**

**An Overview of SPSS :** Mouse and keyboard processing, frequently –used dialog boxes, Editing output, Printing results, Creating and editing a data file

**Managing Data:** Listing cases, replacing missing values, computing new variables, recording variables, exploring data ,selecting cases, sorting cases, merging files

**Graphs:** Creating and editing graphs and charts

**Frequencies:** Frequencies, bar charts, histograms, percentiles

**Descriptive Statistics:** measures of central tendency, variability, deviation from normality, size and stability, Cross Tabulation and chi-square analyses, The means Procedure

**Bivariate Correlation:** Bivariate Correlation, Partial, Correlations and the correlation matrix

**The T-test procedure:** Independent –samples, paired samples, and one sample tests

**The one way ANOVA procedure:** One way analysis of variance

**General Linear model:** three –way analysis of variance and the influence of covariates, Simple Linear Regression, Multiple regression analysis, Multidimensional scaling, Factor analysis, Cluster analysis

<b>L-T-P</b>	<b>MME202B- <u>Computer Aided Manufacturing</u></b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### **Course Objective:-**

- Conceptualization of product, impart the knowledge of the advanced computer aided manufacturing.

## **UNIT I**

### **Introduction**

The meaning and origin of CAM- the changing manufacturing and management scene – External communication - islands of automation and software-dedicated and open systems-manufacturing automation protocol - product related activities of a company- marketing engineering – production planning - plant operations - physical distribution- business and financial management.

## **UNIT II**

### **Components of CAM**

Building blocks of flexible manufacturing system; Manufacturing Machines and their Design

Consideration e.g. CNC Turn, CNC Mill etc., Pallet, CMM, Measuring Probes, Robots, Job Loading & Unloading Arm, Work Transfer stations, Assembly Stations, Automated Storage Retrieved System (ASRS), Material Handling Systems: Automated Guided Vehicles (AGV), Conveyers, Computer Control System. Mechatronics: Sensors, Actuators, Convertors, Modular Automation.

## **UNIT III**

### **Shop Floor Control & Integration of Components**

Shop floor control-phases -factory data collection system -automatic identification methods- Bar code & RFID technology-automated data collection system, Integration of manufacturing & business functions.

### **TEXT BOOK:**

1. Nanua Singh “Systems Approach to Computer Integrated Design and Manufacturing” John Wiley & Sons, Inc
2. Mikell.P.Groover “Automation, Production Systems and computer integrated manufacturing”, Pearson Education 2001.

### **REFERENCE BOOKS:**

1. Nand K. Jha “Hand-book of Flexible Manufacturing Systems” Academic Press, 1991

2. Yoremkoren, “Computer Integrated Manufacturing System”, McGraw-Hill, 1983.
3. Ranky, Paul G., “Computer Integrated Manufacturing”, Prentice Hall International, 1986.
4. David D.Bedworth, Mark R.Hendersan, Phillip M.Wolfe “Computer Integrated Design and Manufacturing”, McGraw-Hill.
5. Roger Hanman “Computer Intergrated Manufacturing”, Addison – Wesley, 1997.
6. Mikell.P.Groover and Emory Zimmers Jr., “CAD/CAM”, Prentice Hall of India Pvt. Ltd., New Delhi-1, 1998.
7. Kant Vajpayee S, “Principles of Computer Integrated Manufacturing”, Prentice Hall India, 2003.

**Course Outcome :-**

- Students will have the knowledge of different manufacturing materials and their applications in real world

<b>L-T-P</b>	<b>MME208B - Computer Aided Analysis &amp; Design</b>	<b>CREDITS: 3</b>
<b>3-0-0</b>		

**COURSE OBJECTIVE:**

The course aim at exposing a higher degree student with advanced concepts in the field of computer-aided-design. One may expect to gain a basic understanding of how CAD has become a need of modern engineering design. Also, emphasis would be given on the mathematical concepts that form the backbone of CAD tools; this is to enable a student to appreciate the subtleties of using CAD as a design tool.

**UNIT-I Introduction-**

Engineering Design, Computer as an Aid to the Design Engineer, Computer Graphics terminology, Graphics Standards and Software, Designer-Computer Interaction, Computer Aided Mechanism and Machine Element Design.

**UNIT-II Transformations and Projections**

Definition, Rigid Body Transformations, Deformation. Generic Transformation in Two-Dimensions, Transformations in Three-Dimensions. Computer Aided Assembly of Rigid Bodies, Projections, Orthographic Projection, Oblique Projections.

**UNIT-III Differential Geometry of Curves**

Curve Interpolation, Curve Fitting Representing Curves, Differential Geometry of Curves

#### **UNIT-IV Design of Curves**

Ferguson's or Hermite Cubic Segments, Composite Ferguson Curves Curve Trimming and Re-parameterization, Blending of Curve Segments, Three-Tangent Theorem, Composite Bézier Curves

#### **UNIT-V Splines**

Definition, Polynomial Splines, B-Splines (Basis-Splines), Newton's Divided Difference Method, Divided Difference Method of Compute B-Spline Basis Functions, Recursion Relation to Compute B-Spline Basis Functions, B-Spline Curves, Interpolation with B-Splines, Non-Uniform Rational B-Splines (NURBS).

#### **TextBooks:**

1. Anupam Saxena & Birendra Sahay; Computer Aided Engineering Design, Springer.

#### **Reference Books:**

1. Chris McMahon and Jimmie Browne - CAD/CAM – Principle Practice and Manufacturing Management, Addison Wesley England, 1998
2. D. F. Rogers and J. A. Adams, Mathematical Elements in Computer Graphics, McGrawHill, 1990

<b>L-T-P</b>	<b>MME209B- Quality Reliability &amp; Maintenance Engineering</b>	<b>CREDITS: 3</b>
<b>3-0-0</b>		

#### **COURSE OBJECTIVE:**

To train students with good scientific and engineering breadth so as to comprehend, analyze, design and create novel products and provide solution for the real life problems.

#### **UNIT-I Introduction-**

Quality function, Dimensions of Quality, Quality Engineering terminology, Brief history of quality methodology, Statistical methods for quality improvement, Quality costs – four categories costs and hidden costs. Brief discussion on sporadic and chronic quality problems. Introduction to quality function deployment.

#### **UNIT-II**

Quality Assurance, Definition and concept of quality assurance, departmental assurance activities. Quality audit concept, audit approach etc. structuring the audit program, planning and performing audit activities, audit reporting, ingredients of a quality program.

#### **UNIT-III**

Definition of SQC, benefits and limitation of SQC, control–chance and assignable cause’s variation. Basic principles of control charts, choice of control limits, sample size and sampling frequency, rational subgroups. Analysis of patterns of control charts.. Process capability

#### UNIT-IV

Control Charts for Variables- Controls charts for X bar and Range, statistical basis of the charts, development and use of X bar and R charts interpretation of charts. Control charts for X bar and standard deviation (S), development and use of X bar and S chart. Brief discussion on – Pre control X bar and S control charts with variable sample size, control charts for individual measurements,

#### UNIT-V

Reliability and Life Testing- Failure models of components, definition of reliability, Mean time to failure (MTTF); Mean time between failure, (MTBF) and mean time to repair (MTTR) Failure rate, bath tub curve types of failure, reliability evaluation in simple cases of exponential failures in series, Maintainability and availability- simple problems, paralleled and series-parallel device configurations, Element Redundancy, Unit redundancy, Standby redundancy, Redundancy and improvement factors evaluations.

#### TextBooks:

1. D C Montgomery; Introduction to statistical Quality Control, John Wiley and Sons.

#### Reference Books:

1. Janet L Novak and Kathleen C Bosheers ;The QS9000 Documentation Toolkit,” Prentice Hall PTR
2. Gupta.R.C, “Statistical Quality Control”, Khanna Publishers, New Delhi.
3. Mahajan M.“Statistical Quality Control”, Dhanpat Publishers, New Delhi.

<b>L-T-P</b>	<b>MME205B– <u>Computer Aided Manufacturing Lab</u></b>	<b>Credits:1</b>
<b>0-0-2</b>		

#### List of Experiments

- AGV planning
- ASRS simulation and performance evaluation
- Machines, AGVs and AS/RS integrated problems
- JIT system
- Kanban flow
- Material handling systems
- M.R.P. Problems
- Shop floor scheduling etc.

- Hydraulic and Pneumatic circuits
- Closed loop control systems
- Study of the chip formation in turning process
- Study of operation of tool and cutter grinder, twist drill grinder, Centreless grinder
- Determination of cutting forces in turning
- Experiments in unconventional manufacturing processes-AJM and study of USM, EDM, Laser Machining and Plasma spraying
- Inspection of parts using tool makers microscope, roughness and form tester
- Study of micro-controllers, programming on various CNC machine tools and also controllers
- Studies on PLC programming
- Study and programming of robots
- Condition monitoring in machining process using acoustic emission.

<b>L-T-P</b>	<b>MME301B- Production and Operation Management</b>	<b>Credits:3</b>
<b>3-1-0</b>		

### **Course Objective:-**

#### **Unit No.1**

##### **Introduction to production & operations systems.**

Definitions of Production Management; Production Process; Production: The Heart of an Organization; Objectives of Production Management; Scope of Production Management.

#### **Unit No.2**

Definition of Operations Management: An Outline of Operations Strategy; Factors Affecting Operations Management; Objectives of Operations Management; Functions and Scope of Operations Management: Planning, Organizing, Controlling.

#### **Unit No.3**

Productivity : Importance, productivity ratio, productivity measurement, productivity index  
Forecasting : Methods —moving average, exponential smoothing, Regression analysis.

Production Planning & Control : Aggregate planning. Sequencing, Line balancing, Flow control, Dispatching, expediting, Gantt chart, line of balance, learning curve

#### **Unit No.4**

Project Management : PERT & CPM Critical path, Most likely time estimate , Resource leveling

## Unit No.5

Inventory Control ,Materials requirement planning. Material Handling and Facility Layout.

### Text Books:

1. Everett E. Adam and Ronald J Ebert, Production and Operation Management: Concepts, Models & Behaviour, PHI New Delhi
2. Chary SN, Production, and Operations Management- Concepts, Methods and Strategy, PHI New Delhi 2005
3. Buffa. ES, Modern Production Management; John Willey, New York 1993
4. Ajay Garg, Production and Operations Management, TMH, Delhi

### Reference Books:

5. Richard B Chase, Ravi Shankar, F.R. Jacobs, N.J. Aquilano, Operations and Supply Management TMH, Delhi
6. R Panneerselvam Book, Production and Operations Management, PHI New Delhi
7. Joseph Martinich, Production and Operations Management, TMH, Delhi
8. K Aswathappa, Production and Operations Management, TMH, Delhi

### Course Outcome :-

- Students will have an knowledge of various techniques of Production and Operation Management methods and their applications and how the simulation techniques can reduce the lead time in manufacturing industries.

<b>L-T-P</b>	<b>MME303B- Total Quality Management</b>	<b>Credits:3</b>
<b>3-0-0</b>		

### Course Objective:-

- To learn the basic concepts of quality and quality from organizational point of view.
- To learn the concept of total quality management from western and Japanese approach.
- To learn the internal politics, quality culture, education and training of the organization.
- To be aware of international/national Quality awards.

## Unit No.1

**Evolution of Quality** -Historical Perspective,Basic Concepts of Quality,Vision, Mission and Objectives of an Organization,Corporate Structure in an Organization and Role of Quality Quality Planning, Quality By Design, Quality Costs and Cost of Failure, Waste Control, How Quality Benefits Business.

## **Unit No.2**

Quality and Competitiveness in Business, Zero Defects and Continuous Improvement, Role of Leadership and Commitment in Quality Deployment, Team Building, Motivation and Rewards, Total Employee Empowerment, Quality Functions -Measurement, Inspection, Testing, Calibration and Assurance

## **Unit No.3**

Design Control and Conformity, Tolerance and Variability, PDCA Cycle, Juran Trilogy, Crosby's 10 points and Deming's 14 Points Customers Requirements, Customer-Supplier and Chain Links, Establishing Customer Focus-Customer, Satisfaction, Measurement and Customer Retention Product Liability, Total Quality Concepts and CWQC, Difference in Western And Japanese Approach of TQM, Basic Philosophy and Fundamental Models of TQM,Total Quality and Ethics

## **Unit No.4**

Internal Politics and Total Quality Management, Quality Culture, Education and Training Implementing Total Quality Management -An Integrated System Approach ,Total Preventive Maintenance

## **Unit No.5**

Self-Assessment, International/National Quality Awards:Malcolm Baldrige Award, Deming Prize,European Award, Rajeev Gandhi Award, CII Exim Award, Jamna Lal Bajaj Award, Golden Peacock Award

### **CourseOutcome:-**

- ☐Students should be able to Quality environment of the organization.
- ☐Student should be able to know the TQM approachfor manufacturing/service organizationin length.
- ☐Student should be able to know various Quality terms like Tolerance and Variability, PDCAcycle,Crosby's 10 points and Deming's 14 Points.
- ☐Student should be able to know international/national Quality awards

**Text Book:**

- 1.Total Quality Management by N.V.R Naidu, G. Rajendra New Age international,,FirstEdition,Jan 2006
- 2.Total Quality Management by R.SNaagarazan ,New Age international,3e, 2015.
- 3.Quality Control & Application by B. L. Hanson & P. M. Ghare, Prentice Hall of India, 2004.

**Reference Books :**

- 1.Total Quality Management by V.SBagad Technical Publications, First Edition,Jan 2008
- 2.Total Quality Management by S. RajaramDreamtechPress,First Edition, Jan 2008

<b>L-T-P</b>	<b>MME302B- <u>Advanced Welding Technology</u></b>	<b>Credits:3</b>
<b>3-1-0</b>		

**Course Objective:-**

- Introducing the concepts of welding and their different types of welding processes for joining two metals.

**UNIT I .Welding Power Sources:**

Types of power sources, External V-I characteristics for constant current and constant voltage power sources, Rectifiers, Solid-state Rectifiers, Inverter systems, Duty cycle.

**Arc welding consumables:**

Types of electrodes, AWS and Indian system of classification and coding of covered electrode for mild steel, Shielding gases and associated mixtures.

**UNIT II. Metal transfer:**

Short circuit/ dip transfer, Free flight, Globular type, Spray type, Forces affecting metal transfer, Weld bead geometry and shape factors, Weld dilution.

**UNIT III. Arc welding processes:**

Electric arc welding principle, MIG: -welding equipment and processes, shielding gas, types of metal transfer. Tungsten inert gas arc welding (GTAW): - welding equipment, electrodes, inert gases and torches. Submerged arc welding (SAW):- principle of processes, applications, fluxes and welding electrodes used. CO2 welding: - difference from MIG welding, Principle of operation, equipment, welding parameters and applications.

**Solid state welding:**

Introduction, main features and applications of Ultrasonic welding, Friction welding and Explosive welding.

**Welding of plastics:**

Difficulties in welding of Plastics, Processes for welding of Plastics.

**UNIT IV. Weldability of specific Materials:**

Stainless Steel, Aluminum and Cast Iron.

**Surfacing and metal spraying:**

Surfacing methods such as SMAW, MIG, TIG, SAW. Thermal spraying: Introduction, Procedures, Applications, Advantages and Disadvantages.

**Thermal cutting of metals:**

introduction, types, principle and operation of flame and plasma cutting.

**Under water Welding:**

Introduction, methods and applications

**UNIT V. Automation in Welding:**

Introduction, Semiautomatic welding, Automatic welding, Welding mechanization, Flexible Automated Welding, Robotic welding, Types of Welding Robots, Robot Selection Mechanics, Joint tracking system.

**Text Book:**

1. Modern welding technology:- carry H. B. (PH).

**Reference Book:**

1. Welding technology :- R. S. Parmar
2. AWS- welding handbook(IV – VI) Edition
3. Welding technology :- A. C. Devis
4. Welding and welding Technology :- Little (TMH)

**Course Outcome :-**

- Students will have the knowledge of different welding processes and their applications in real world

<b>L-T-P</b>	<b>MME304B - <u>Product Design and Development</u></b>	<b>Credits: 3</b>
<b>3-0-0</b>		

### **Course Objective:**

- To train students with good scientific and engineering breadth so as to comprehend, analyze, design and create novel products and provide solution for the real life problems

**Unit I: Introduction:** Significance of product design, product design and development process, sequential engineering design method, the challenges of product development,

**Product Planning and Project Selection:** Identifying opportunities, evaluate and prioritize projects, allocation of resources

**Unit II: Identifying Customer Needs:** Interpret raw data in terms of customers need, organize needs in hierarchy and establish the relative importance of needs.,

**Product Specifications:** Establish target specifications, setting final specifications,

**Concept Generation:** Activities of concept generation, clarifying problem, search both internally and externally, explore the output,

**Unit III: Industrial Design:** Assessing need for industrial design, industrial design process, management, assessing quality of industrial design,

**Unit IV: Concept Selection:** Overview, concept screening and concept scoring, methods of selection.

**Theory of inventive problem solving (TRIZ):** Fundamentals, methods and techniques, General Theory of Innovation and TRIZ, Value engineering Applications in Product development and design, Model based technology for generating innovative ideas

**Unit V: Concept Testing:** Elements of testing: qualitative and quantitative methods including survey, measurement of customers' response,

**Intellectual Property:** Elements and outline, patenting procedures., claim procedure,

**Design for Environment:** Impact, regulations from government, ISO system.,

### **Text books:**

1. Ulrich K. T, and Eppinger S.D, Product Design and Development, Tata McGraw Hill

### **Reference Books:**

1. Inventive thinking through TRIZ: a practical guide, By Michael A. Orloff, Springer.
2. Systematic innovation: an introduction to TRIZ ; (theory of inventive Problem Solving), By John Terninko, AllaZusman, CRC Press.

### Course Outcomes:

At the end of this course students will develop:

CO1: An ability to create ideas for successful and generic product development.

CO2: Ability to identify customer needs for product specification generation

CO 3: Ability to apply all the steps involved in concept generation and concept selection as a part of product development.

CO4: Ability to carry out cost and benefit analysis through various cost models. Students will Be familiar with the design protection and Intellectual Property.

CO5 : Ability to understand and apply all the necessary components of Industrial Design and theory of inventive problem solving.

<b>BHH001A(TH)</b>	<b>Foundation Course in Food Production-1</b>	<b>CR-2</b>
--------------------	---	-------------

**Course Objective:-** The Student will get knowledge about:

1. Know the history of cooking, its modern developments and develop brief idea of various cuisines;
2. Understand the professional requirements of kitchen personnel and the importance and maintenance of hygiene;
3. Have insight of kitchen organization, duties and responsibilities of kitchen staff, workflow, and kitchen equipment's;
4. Have through knowledge raw materials and understanding basic bakery.

<b>Unit No.</b>	<b>Topic</b>
<b>1.</b>	<b>INTRODUCTION TO COOKERY</b> <ul style="list-style-type: none"> <li>• Origin of modern cookery</li> <li>• Classical and modern kitchen brigade, duties and responsibilities of various chefs</li> <li>• Kitchen layout and work flow, co-operation and co-ordination with other departments.</li> <li>• The attributes of a culinary professional, importance of personal hygiene, uniform and protective clothing, food and kitchen safety.</li> </ul>
<b>2</b>	<b>Basic Cookery Fundamentals</b> <ul style="list-style-type: none"> <li>• Identification of tools and Equipments used in kitchen</li> <li>• Identification of commonly used ingredients</li> <li>• Various textures and consistencies</li> <li>• Techniques used in pre-preparation and preparation.</li> <li>• Effect of heat on flour, protein and colour pigments.</li> <li>• Principles of heat transfer- conduction, convection and radiation</li> <li>• Dry, moist and special methods of cooking, principles, advantages and disadvantages of each</li> <li>• Care and precautions to be taken in Kitchen</li> </ul>
<b>3</b>	<b>Stocks and Sauces</b> <ul style="list-style-type: none"> <li>• Stocks- definition, types, recipes, storage, uses, care and precautions</li> <li>• Sauces- introduction, classification of mother sauces, recipes, derivatives, uses, care and precautions.</li> </ul>
<b>4</b>	<b>Basic Bakery Fundamentals</b> <ul style="list-style-type: none"> <li>• Identification of tools and equipments used in bakery</li> <li>• Identification, selection and use of commonly used ingredients- flour, sugar, salt, raising agents, shortening agents, egg etc</li> <li>• Baking food at various temperatures- importance and understanding of temperature.</li> </ul>
<b>5</b>	<b>Bread- I</b> <ul style="list-style-type: none"> <li>• Bread- ingredients used and their role in bread making</li> <li>• Definition</li> <li>• Steps in bread making</li> <li>• Different methods of bread making</li> <li>• Faults in bread and measures to remove/ avoid them</li> <li>• Bread improvers and various other flours used for bread making- ray flour, multi grain flour, potato flour, their characteristic and uses.</li> </ul>

--	--

**Course Outcome (CO):**

At the end of this course students will have to know about:

CO1: History of cooking, its modern developments.

CO2: Kitchen and personal hygiene.

CO3: Kitchen organization.

CO4: 4. Methods of cooking, knowledge of raw materials and Basic Bakery

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

<b>BHH-011A</b>	<b>Foundation Course in Food Production-1 –LAB.</b>	<b>Credits 4</b>
-----------------	---	------------------

**Course Objective:-** The Student will get knowledge about:

1. Use knives and kitchen equipment safely to cut meat, vegetables and other ingredients.
2. Define and use cooking terms accurately.
3. Use and convert recipes to produce desired quantities.
4. Weigh and measure ingredients and portions accurately.
5. Season food to achieve desired product outcomes.
6. Prepare a variety of protein, vegetable, starch, and dessert items in a professional kitchen.
7. Apply ethical and sustainability decision making in food production.

Practical No.	Topic
1	Familiarization to working in kitchen
2	Introduction to Equipments and tools, uses cares and precautions
3	Food safety, personal hygiene and work area hygiene
4	Knife handling and basic vegetable cuts
5	Stock making
6	Sauces and their derivatives (2-4 commonly used ones)
7	Cooking methods; actual cooking of various dishes;
8	Basic bread preparations and some varieties of international bread
9	Basic cookies.

### Text Books And Reference Books:

Bali, P. S. (2009). Food Production Operations. New Delhi; Oxford University Press.

Kinton, R., & Ceserani, V. (2005). The Theory of Catering. London: E. Arnold.

Essential Reading / Recommended Reading

Escoffier, A. (1979). The Complete Guide To The Art Of Modern Cookery: The first translation into English in its entirety of Le Guide Culinaire. London: Heinemann.

Larousse, L. (2001). Larousse Gastronomique: The World's Greatest Cookery Encyclopedia. Hamlyn.

### Couse Outcome-

After the completion of the course, students will:

· CO1. Understand the basic operations of a professional kitchen with regard to safety procedures and hygiene and claim an insight into the basic hierarchy in the kitchen and their placement in the brigade with regard to their skills and experiences.

CO2. Identify different types of equipment and their safety operating procedures and also to know the various kinds of modern cooking equipment's and their uses in the kitchen.

· CO3 Familiarize with various cooking methods with regard to taste and texture and to know the utensils and equipment used in various cooking methods.

· CO4 Identify types of vegetables, their selection, storage criteria, pigments and their effects on heat and also to list the cuts of vegetables and their uses in cookery.

· CO5 Comprehend various types of stocks, and sauces; to know their preparation, storage criteria and their uses in the kitchen.

<b>BHH002A</b>	<b>FOUNDATION COURSE IN FOOD &amp; BEVERAGE SERVICE– I</b>	<b>CR-2 (TH)</b>
----------------	--	------------------

**Course Objective:-** The Student will get knowledge about:

1. Develop an insight into the growth of Catering Industry In the world from medieval period till recent times.
2. Understand the different components of the catering industry) the functions of various departments of a hotel, and their relationship with Food & Beverage service department, in order to acquire professional Competence at basic levels in the principles of Food service and its related activities.
3. Acquire the requisite technical skills for competent service of Food and Beverage
4. Understand different non-alcoholic beverages with their preparation and services.

Unit No.	Topic
01	<b>THE HOTEL &amp; CATERING INDUSTRY</b> <ul style="list-style-type: none"> <li>• Introduction &amp; growth of hotel industry.</li> <li>• Role of catering establisBHHent in tourism industry.</li> <li>• Classification of food &amp; beverage operations.</li> <li>• Commercial: residential/ non residential.</li> <li>• Welfare: industrial/ institutional transport (air, rail, road &amp; sea)</li> </ul>
02	<b>ORGANIZATION OF FOOD &amp; BEVERAGE SERVICE DEPARTMENT</b> <ul style="list-style-type: none"> <li>• Principle staff of various types of food and beverage operations.</li> <li>• Duties and responsibilities of food and beverage service personnel.</li> <li>• Attributes of food and beverage service personnel.</li> <li>• Interdepartmental relationship between food and beverage and other department</li> </ul>
03	<b>FOOD &amp; BEVERAGE SERVICE EQUIPMENT</b> <ul style="list-style-type: none"> <li>• Criteria for selection for equipment.</li> <li>• Usage of various service equipment major and minor(electrical and non</li> </ul>

	electrical) • Tableware (flatware, cutlery, hollowware) • Chinaware, glassware and disposable • Furniture & linen • Specialized service equipment. • Care and cleaning
04	<b>FOOD AND BEVERAGE SERVICE METHODS</b> • Factors dividing the types of service of food. • Categorization of service methods: table service, self service, Assisted service, single point service, specialized service or service In situ, gueridon service
05	<b>Food &amp; beverage terminology related to the inputs of the semester</b>

**Course outcome:-** At the end of course the student should know about:-

CO1. Understand the role of F & B department its functions and staffing

CO2. Identify and use the different types of restaurant equipment.

CO3. Understand the Professional attributes of F& B staff.

CO4. Understand the role of Ancillary department in F&B.

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

<b>BHH-012A</b>	<b>Foundation Course in Food and Beverage Service-1(LAB.)</b>	<b>Credits 2</b>
-----------------	---	------------------

#### **Course Objectives—**

- 1.To understand the development of the food service industry
2. To identify various types of restaurants and understand their features.
3. To comprehend various equipment used in the restaurant
4. To learn and create various napkin folds
5. To learn the various cover setup for food and beverage service.
6. To understand the procedure of taking a guest's order and service of water

S.No	Topic
01	Food Service areas – Induction & Profile of the areas
02	Ancillary F&B Service areas – Induction & Profile of the areas
03	Familiarization of F&B Service equipment
04	Care & Maintenance of F&B Service equipment
05	Cleaning / polishing of EPNS items by: - Plate Powder method - Polivit method - Silver Dip method - Burnishing Machine
06	<b>Basic Technical Skills</b> Task-01: Holding Service Spoon & Fork Task-02: Carrying a Tray / Salver Task-03: Laying a Table Cloth Task-04: Changing a Table Cloth during service Task-05: Placing meal plates & Clearing soiled plates Task-06: Stocking Sideboard Task-07: Service of Water Task-08: Using Service Plate & Crumbing Down Task-09: Napkin Folds Task-10: Changing dirty ashtray Task-11: Cleaning & polishing glassware
07	Tea – Preparation & Service
08	Coffee - Preparation & Service
09	Juices & Soft Drinks - Preparation & Service • Mock tails • Juices, Soft drinks, Mineral water, Tonic water
10	Cocoa & Malted Beverages – Preparation & Service

#### Learning Outcome---

After completing the course, the students will be able to know how to;

CO1 Identify the different equipment used in food and beverage service

CO2. Create napkin folds

CO3 Set a table cover for a la carte and table d’hote

CO4. Identify the various room service management techniques that can be adapted in a hotel

CO5 Take food and beverage orders.

CO6 Serve water according to the order from guests

<b>BHH003A</b>	<b>FOUNDATION COURSE IN ACCOMMODATION OPERATIONS– I</b>	<b>CR-2</b>
----------------	---	-------------

**Course Objective:-**

The students will get knowledge about:

1. Organization, function of Housekeeping department and its different sections.
2. Different departments Housekeeping co-ordinates with.
3. Procedure of cleaning different status of room.
4. Cleaning equipment and cleaning agent.

<b>S.No.</b>	<b>Topic</b>
01	<b>INTRODUCTION TO HOUSE KEEPING DEPARTMENT</b> <ul style="list-style-type: none"><li>• Meaning and definition</li><li>• Importance of house keeping</li><li>• Responsibilities of the housekeeping department</li><li>• The role of house keeping in hospitality</li></ul>
02	<b>ORGANISATION OF THE HOUSEKEEPING DEPARTMENT</b> <ul style="list-style-type: none"><li>• Layout of the house keeping department</li><li>• Organizational framework of the department (large/medium/small hotel)</li><li>• Role of key personnel in housekeeping</li></ul>

	<ul style="list-style-type: none"> <li>• Job description and job specification of staff in the department</li> <li>• Duties and responsibilities of housekeeping staff</li> <li>• Attributes and qualities of the housekeeping staff –skills of a good housekeeper.</li> </ul>
03	<b>House Keeping Control Desk</b> <ul style="list-style-type: none"> <li>• Role of control desk</li> <li>• Housekeeping control desk</li> <li>• Importance, role, check list, handling lost and found articles</li> <li>• Forms, formats and registers used in the control desk</li> <li>• General operations of control desk, briefing, debriefing, gate pass</li> <li>• Inter departmental relationship, Handling Telephone Calls</li> <li>• Types of keys, Key Control</li> </ul>
04	<b>Cleaning Equipment</b> <ul style="list-style-type: none"> <li>• Types of equipments</li> <li>• Operating principles of equipment</li> <li>• Characteristics of good equipment (mechanical/manual)</li> <li>• Cleaning products (domestic and industrial)</li> </ul> Care and maintenance.
05	<b>Cleaning Of Public Area</b> <ul style="list-style-type: none"> <li>• Cleaning process</li> <li>• Cleaning and upkeep of public area, lobby, cloak room/ restaurant/ bar/ banquet hall/ administration office/ lifts and elevators/ staircase/ back area/ front area/ corridor.</li> </ul>

**Course outcome:-**

By end of this semester students able to know about:

CO1. Understand the structure function, Importance and different section of housekeeping department.

CO2. Co-ordination with other department of hotel.

CO3. Perform different types of cleaning.

CO4. Handling of cleaning equipment & cleaning agents

<b>BHH014A</b>	<b>FOUNDATION COURSE IN FRONT OFFICE OPERATIONS – I (LAB)</b>	<b>CR 1</b>
----------------	---	-------------

**Course Objective**—Analyzes hotel front office positions and the procedures involved in reservation, registration, accounting for and checking our guests, and principles and practices of night auditing.

Covers the complete guest operation in both traditional and computerized operations

S.No.	Topic
1	Appraisal of front office equipment and furniture
2	Rack, Front desk counter & bell desk
3	Filling up of various preformats
4	Welcoming of guest
5	Telephone handling
6	Role play: • Reservation • Arrivals • Luggage handling • Message and mail handling • Paging

#### Course Outcome

Upon successful completion of the course, the Student will be able to

CO 1. Explain the function and operation of the various systems, forms, equipment, and computer applications found in the front office.

CO2. Construct an efficient reservation system that records crucial information while avoiding problems in processing various types of reservations.

CO 3. Construct a registration system that helps ensure a hotel's profitability while meeting the needs of guests by using effective guestroom sales techniques and efficient credit establishment procedures.

CO 4. Develop an efficient communication system to operate within the front office and between the front office and departments such as housekeeping and maintenance.

DCH001A	ENVIRONMENTAL STUDIES	CR-4 (TH)
---------	-----------------------	-----------

### Objectives:

Environmental studies deals with every issue that affects an organism. It is essentially a multidisciplinary approach that brings about an appreciation of our natural world and human impacts on its integrity. It is an applied science as it seeks practical answers to making human civilization sustainable on the earth's finite resources. Its components include biology, geology, chemistry, physics, engineering, sociology, health, anthropology, economics, statistics, computers and philosophy. As we look around at the area in which we live, we see that our surroundings were originally a natural landscape such as a forest, a river, a mountain, a desert, or a combination of these elements. Most of us live in landscapes that have been heavily modified by human beings, in villages, towns or cities. But even those of us who live in cities get our food supply from surrounding villages and these in turn are dependent on natural landscapes such as forests, grasslands, rivers, seashores, for resources such as water for agriculture, fuel wood, fodder, and fish.

The basis objective of this course is to provide basic understanding to the students with the nature and the environment.

S.NO.	Topic
<b>UNIT I</b>	The <b>Multidisciplinary</b> nature of environmental studies Definition; Scope and importance, Need for public awareness.
<b>UNIT II</b>	<p>Natural Resources: Renewable and non-renewable resources: Natural resources and associated problems.</p> <p>a) Forest resources: Use and Over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.</p> <p>b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.</p> <p>c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.</p> <p>d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.</p> <p>e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, Case studies.</p> <p>f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.</p> <p>- Role of an individual in conservation of natural resources. - Equitable use of resources for sustainable lifestyles.</p>
<b>UNIT III</b>	<p>Concept of an ecosystem.</p> <p>- Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem:</p> <p>a. Forest ecosystem</p> <p>b. Grassland ecosystem</p> <p>c. Desert ecosystem</p> <p>d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries).</p>
<b>UNIT IV</b>	<p>Biodiversity and its Conservation</p> <p><input type="checkbox"/> Introduction-Definition: genetic, species and ecosystem diversity.</p>

	<ul style="list-style-type: none"> <li><input type="checkbox"/> Biogeographical classification of India.</li> <li><input type="checkbox"/> Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.</li> <li><input type="checkbox"/> Biodiversity at global, National and local levels.</li> <li><input type="checkbox"/> India as a mega-diversity nation.</li> <li><input type="checkbox"/> Hot-spots of biodiversity.</li> <li><input type="checkbox"/> Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.</li> <li><input type="checkbox"/> Endangered and endemic species of India.</li> <li><input type="checkbox"/> Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.</li> </ul>
<b>UNIT V</b>	<p>Environmental Pollution: Definition, Causes, effects and control measures of: -</p> <ul style="list-style-type: none"> <li>a. Air pollution</li> <li>b. Water pollution</li> <li>c. Soil pollution</li> <li>d. Marine pollution</li> <li>e. Noise pollution</li> <li>f. Thermal pollution</li> <li>g. Nuclear hazards</li> </ul> <p>- Solid waste Management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution. Pollution case studies. - Disaster management: floods, earthquake, cyclone and landslides</p>
<b>UNIT-VI</b>	<p>Social Issues and the Environment</p> <ul style="list-style-type: none"> <li>- From Unsustainable to Sustainable development.</li> <li>- Urban problems related to energy.</li> <li>- Water conservation, rain water harvesting, watershed management.</li> <li>- Resettlement and rehabilitation of people; its problems and concerns. Case studies.</li> <li>- Environmental ethics: Issues and possible solutions.</li> <li>- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.</li> <li>- Wasteland reclamation.</li> <li>- Consumerism and waste products.</li> <li>- Environment Protection Act.</li> <li>- Air (Prevention and Control of Pollution) Act.</li> <li>- Water (Prevention and Control of Pollution) Act.</li> <li>- Wildlife Protection Act. - Forest Conservation Act.</li> <li>- Issues involved in enforcement of environmental legislation.</li> <li>- Public awareness.</li> </ul>
<b>UNIT-7</b>	<p>: Human Population and the Environment</p> <ul style="list-style-type: none"> <li>- Population growth, variation among nations. Population explosion-Family welfare Programme. Environment and human health. Human Rights. Value Education. HIV/AIDS. Women and Child Welfare.</li> <li>- Role of information Technology in Environment and human health.</li> <li>- Case Studies.</li> </ul>
<b>UNIT-8</b>	<p>: <b>Field Work (Practical).</b></p> <ul style="list-style-type: none"> <li>- Visit to a local area to document environmental assets-river/forest/grassland/hill/mountain.</li> <li>- Visit to a local polluted site-Urban/Rural/Industrial/Agricultural.</li> </ul>

	<ul style="list-style-type: none"> <li>- Study of common plants, insects, birds.</li> <li>- Study of simple ecosystems-pond, river, hill slopes, etc.</li> </ul>

<b>BHH015A</b>	<b>FOUNDATION COURSE IN FOOD PRODUCTION – II</b>	Cr.-2 (TH)
----------------	--	------------

**Course Objective:-** The Student will get knowledge about:

1. The various commodities required for food production, their market forms, selection, storage and use.
2. The fundamentals of menu planning & standard recipes
3. The basic culinary skills
4. The bread& cake making process and various pastes
5. Basic preparation soup and Sauce

#### Unit 1 **Vegetable and Fruit Cookery**

- Vegetables- definition
- Classification and uses
- Fruits- definition
- Classification and uses
- Cares and precautions while using these.

#### Unit 2 **Soups and Salad**

- Soups- classification
- Basic recipes
- Definition
- Garnishes and accompaniments
- International soups.
- Salads- definition
- Classification
- Menu examples
- Various dressings.

#### Unit 3 **Meat and Fish Cookery**

- Introduction to meat cookery
- Composition of meat
- Processing
- Preservation and curing.
- Cuts of beef, veal, pork, lamb and poultry- their uses
- Standard purchase specification
- Menu examples.
- Introduction to fish cookery- classification of fish with examples,

- Various cuts of fish
- Standard purchase specification
- Egg cookery – composition of egg, std. purchase specification and various egg preparations

#### Unit 4 **Menu and Recipe**

- Brief introduction to menu
- Menu formulation
- Standard recipes
- Recipe calculation

#### Unit 5 **Sponge, Pastry and Pastry Cream**

- Sponge- definition
- Types
- Role of different ingredients used
- Processes- single stage, double stage etc.
- Faults and measures to remove/ avoid them.
- Pastries- puff pastry, flaky pastry, choux pastry, short crust pastry etc.
- Ingredients used and their role in pastry making
- Definition
- Recipes
- Different methods
- Faults in pastries and measures to remove/ avoid them
- Basic pastry creams, uses in confectionary, Preparation and care in production.

REFERENCE BOOKS: Larousse Gastronomique-Cookery Encyclopedia, Paul Hamlyn Professional Baking-Wayne Glasslen Modern Cookery-Philip E Thangam Baking-Martha Day Classical Food Preparation & Presentation-W K H Bode The Creative Art Of Garnishes-Yvette Stachowiak

**Course outcome:-**At the end of course the student should know about:-

CO1. Various commodities.

CO2. Menu planning and standard recipe.

CO3. Culinary skills.

CO 4. Bakery science.

<b>BHH019A</b>	<b>FOUNDATION COURSE IN FOOD PRODUCTION – II LAB</b>	<b>CR-4</b>
----------------	--	-------------

#### **Course Objectives----**

1. To acquire skills in the practical sessions which will guide them in their forth coming semesters
2. To prepare simple Indian and European dishes.
3. To gain knowledge about various classical ingredients of Indian and European dishes, their importance and their taste and texture.

- i. Preparation of basic continental cookery- stews, soups, and basic meat and fish

- preparations;
- ii. Preparation of classical continental dishes (3 course menus);
- iii. Preparation of basic Indian menus;
- iv. Preparation of different types of pastry i.e. choux pastry, puff pastry, short crust pastry;
- v. Preparation of egg custard based dessert (hot and cold) like caramel custard mousse etc;
- vi. Preparation of tarts and pies
- vii. Demonstration of egg preparation – fried, poached, scramble, omelet, etc.

#### Course Outcome

After the completion of the course, students will able to

CO1. To make simple Indian and European dishes

CO2. Acquire knowledge in various European and Indian dishes

CO3. Equipped in their basic presentation skills

BHH-016A	FOUNDATION COURSE IN FOOD & BEVERAGE SERVICE – II	CR-2 (TH)
----------	---	-----------

#### Course Objective:-

The Student will get knowledge about:

1. Understand various restaurant services.
2. Understand type of meal and menu.
3. Develop knowledge of the restaurant control system.
4. Understand the processing manufacturing and service of cigar and cigarettes.

#### Unit 1 Types of Meals

- Breakfast- introduction, types service methods.
- A' la carte & table de hote setups.
- Brunch, lunch, high tea, supper, elevenses and others.

#### Unit 2 Menu

- Menu knowledge and accompaniments
- Menu meaning and types. Table de hote and a la carte.
- Menu planning
- Considerations and constraints
- Menu terms, menu design, classical French menu
- Classical hors d' oeuvres
- Cover and service: Indian regional dishes,

#### Unit 3 Control Methods

- Billing methods: duplicate and triplicate methods
- K .O. T & B.O.T
- Computerized K .O. T

#### Unit 4 Room Service

- Introduction

- General principles
- Types: Centralized and de-centralized
- Tray trolley setups for breakfast & others meals.
- Forms and formats, order taking
- Thumb rules, suggestive selling
- Breakfast cards
- Layout and setup of common meals
- Lead time of order taking to clearance.

#### Unit 5 **Non -alcoholic beverages**

- Beverages definition and classification
- Hot beverages types
- Preparation and service
- Cold beverages types
- Preparation and service

#### **F & B terminology Related to the Inputs of the Semester**

##### REFERENCE BOOKS:

Sudhir Andrews: F & B Service Trg. Manual

Denni R. Lillicrap: F & B Service

John Walleg: Professional Restaurant Service

Brian Varghese: Professional F& B Service Management

Brown, Heppner & Deegan: Introduction to F&B Service

##### **Course outcome:-**

**At the end of course the student should know about**

**CO1. Understand the difference among various services eg. American Service, Russian Service, English Service, French Service.**

**CO2. Understand the various types of standard Menus used in star hotels**

**CO3. Understand the Food & Beverages Outlets Operation Control System.**

**CO4. Understand about the non- Alcoholic beverage.**

<b>BHH-020A</b>	<b>FOUNDATION COURSE IN FOOD &amp; BEVERAGE SERVICE – II LAB.</b>	<b>CR-2(PR)</b>
-----------------	---	-----------------

##### **Course Objectives-**

**Food and Beverage Service foundation is a basic course to introduce the various skills required for operating a restaurant. The course will allow students to comprehend the equipment and basic methods followed in the restaurant. Restaurants or food service organizations will find difficult to operate without having personnel who understand the basic food service equipment. This course will deal with the identification of equipment used in the restaurant, basic napkin folding, simple cover set up, cover for a la carte and table d'hote, service of water and skills for handling service spoon and fork. Students will learn these so that they can understand the**

**higher level course in future. This course will enable students to orient and understand the service skills which are necessary for food and beverage personnel.**

1. To understand the development of the food service industry
  2. To identify various types of restaurants and understand their features.
  3. To comprehend various equipment used in the restaurant
  4. To learn and create various napkin folds
  5. To learn the various cover setup for food and beverage service.
  6. To understand the procedure of taking a guest's order and service of water
- To understand the service skills involved using Service Spoon and Fork

<b>BHH-017A</b>	<b>FOUNDATION COURSE IN ACCOMMODATION OPERATIONS – II</b>	<b>CR-2(TH)</b>
-----------------	---	-----------------

**Course Objective:-**

**The students will get knowledge about:**

1. The public area cleaning task.
2. Floors – types of floor finishes, methods of cleaning.
3. Learn about inspection of guest room.
4. Cleaning and care of metals: Brass, silver etc. and their compositions.

**Unit 1 Hotel Guest Room**

- |   |
|---|
| <ul style="list-style-type: none"> <li>• Lay-out of a guest room</li> <li>• Types of guest rooms</li> <li>• Knowledge of rooms – Furniture/ fixtures/ fitting/ soft furnishing/ accessories/amenities in a guest room (to be dealt in brief only)</li> <li>• Daily cleaning of (occupied/ departure/vacant/under repair/VIP rooms) weekly cleaning/ spring cleaning / special cleaning</li> <li>• Evening service / second service</li> </ul> |
|---|

- Contract cleaning
  - Rules on a guest floor.
- Unit 2 House Keeping Supervision**
- Role of Supervisor
  - Importance of inspection
  - Check-list for inspection
  - Typical areas- usually neglected, where special attention is required.

**Unit 3 Cleaning Agents**

- Characteristics of good cleaning agent
- General criteria for selection
- Classification
- Polishes / floor seal
- Use, care & storage of cleaning agents.

**Unit 4 Safety Awareness and First Aid**

- Concept and importance
- Safety : accidents, fires (cause, procedure)
- Security : security of guest/ staff/ public areas/rooms
- First aid: concept and emergency procedures.

**Unit 5 Pest Control**

- Areas of infestation
- Types of pests
- Preventive measures and control measures.
- Waste Disposal

**Glossary of terms (with reference to 3<sup>rd</sup> semester syllabus)**

**Course outcome:-**

**By end of this semester students able to know about:-**

**CO1. The different area of hotel and their cleaning process.**

**CO2. Wall and floor finishes and their use in hotel.**

**CO3. Experience of all housekeeping routines system.**

**CO4. The uses and composition metal, leather glass, wood etc.**

<b>BHH-021A</b>	<b>FOUNDATION COURSE IN ACCOMMODATION</b>	<b>CR-1(PR)</b>
-----------------	---	-----------------

	<b>OPERATIONS – II LAB.</b>	
--	-----------------------------	--

**Course Objective-**The main objectives of the course are to:

- Help to prepare students to meet the challenges associated with the housekeeping department
- Provide an overview of the key issues of housekeeping and maintenance management.
- To understand the theoretical and practical knowledge that constitutes the work of housekeeping
- To illustrate the complexities and demands of working in the industry through the scope of housekeeping.

<ul style="list-style-type: none"> <li>• Room attendant trolley;</li> <li>• Bed making;</li> <li>• Turn down service;</li> <li>• Cleaning of guest rooms (departure, occupied, vacant);</li> <li>• Cleaning of public areas;</li> <li>• Inspection of guest rooms &amp; public areas with the help of checklist;</li> <li>• First aid.</li> </ul>
---

**Course Outcomes-**After completion of this course student are able to

CO1 . Address the techniques which include establishing par levels for different types of inventories, CO2. Taking physical inventory, and implementing effective inventory control procedures.

CO3. Generate different type of reports.

CO4. Make checklist for linen, minibar and room.

CO5. To maintain the log book and other registers.

CO6. To maintain the log book and other registers

<b>BHH-018A</b>	<b>FOUNDATION COURSE IN FRONT OFFICE OPERATIONS – II</b>	<b>CR-2(TH)</b>
-----------------	--	-----------------

**Course Objective:-** The Student will get knowledge about:

1. Registration, its types, importance and other aspects.
2. Check in procedure for various categories of guest.
3. Meaning and Procedure of Night Auditing.
4. Room Tariff Fixation.

<b>Unit 1</b>	<b>Job profile of Front Office Personnel</b>
---------------	--

- Job description / job specification.
- Unit 2 Front Office Operation**
- Guest cycle,
  - Front office forms, front desk,
  - Front office equipments, CAS,PMS
  - Functions and importance of front office
- Unit 3 Front Office responsibilities**
- Log book, information directory, mail handling
  - Telephone service, Interdepartmental communication
  - Guest services
- Unit 4 Accommodation Product**
- Brochures/tariff cards, types of guest rooms
  - Types of room rates, basis of charging room rates
  - Meal plan
- Unit 5 Reservation**
- Reservation and sales, types of reservation,
  - Sources and modes of reservation, systems- manual, semi-automated, fully automated, role of new technology in reservation
  - Reservation records, reservation reports.
  - Global Distribution Systems

**Learning outcome:-**

**By the end of this course student would be able to**

**CO1. Understand and handle FIT & GIT guest arrival.**

**CO 2. Understand the procedure of reports prepared**

**CO3. Understand various types of Tariff found in Hotels.**

**CO4. Understand Room Keys Handling**

<b>BHH-022A</b>	<b>FOUNDATION COURSE IN FRONT OFFICE OPERATIONS – II LAB.</b>	<b>CR-1(PR)</b>
-----------------	---	-----------------

**Course Objective---**

The aim is to provide the student with basic skills required at the reception, management of customer service operations and front-office operations from the Opera PMS point of view, and the basics of security and safety in accommodation business.

1. Identification of equipment used in front office
2. Various Forms & Formats used in front office
3. Responding to a reservation query
4. Product knowledge and description
5. Role play of accepting reservation request
6. Filling of reservation form.

**Reference:**

1. Principal Of Hotel Front Office Operation by Sue Baker
2. Managing Front Office Operation by Michael L Kasvana- AH And MA
3. Front Office Manual by Sudhir Andrews
4. Professional Hotel Management Concept, Principals by Dr. Jagmohan Negi.

**Course Outcomes-**

.After completion of the course students will be expected to be able to:

CO1• Describe the basic functions common to property management systems

CO2• Identify, describe and differentiate between both front house and backhouse property management system modules.

CO3• Identify stand-alone technology systems that may interface with PMS

CO4• Describe the basic functions of a point of sale system (POS)

<b>BHH023A</b>	<b>APPLICATION OF COMPUTER</b>	<b>CR-1 PR</b>
----------------	--------------------------------	----------------

### Course Objective---

1. Students will understand the fundamentals of computer architecture and computing theory.
2. Students will be able to design, develop, document, and test software using current techniques.
3. Students will demonstrate the ability to give presentations and write technical reports.

#### Unit 1 **Introduction to Computer**

- What is a computer?
- Characteristics of Computer System
- Block diagram
- Components of a computer system
- Generation of computers
- Programming languages
- Generation of languages
- Storage devices- floppy disks, CD ROMs, HDD
- Input Output Devices

#### Unit 2 **Operating Systems**

- Introduction, Application Software, System Software
- Functions
- Types
- Components case studies- DOS, Windows.

#### Unit 3 **Introduction to DBMS**

- Data
- Data types
- Advantages
- Introduction to FoxPro
- Creating a database
- Searching, sorting, indexing, writing simple programmes
- Overview of MS access.

#### Unit 4 **Word Processing, Spread Sheets and Features of Power Point**

- What is word processing?
- Features of MS Word
- Editing commands and mail merge
- What is spreadsheet?
- Features, formulate and functions
- If-statement, preparing sample, work sheets, different graphs.
- Preparing a presentation and an organization chart.

#### Unit 5 **Introduction to Internet**

- What are the following: internet, network, intranet, extranet, LAN, MAN, WAN, network topologies, www, search engines, e-mail, and websites?
- Introduction to e-commerce.

### Reference:

Fundamentals of Computers, V. Rajaraman, Prentice Hall India

Mastering Microsoft Office, Lonnie E. Moseley & David M. Boodey, BPB Publication.

Computer Fundamentals, P.K.Sinha, BPB Publication

### Course Outcome---

Students will demonstrate the ability to solve problems in the discipline.

1. Students will demonstrate interpretive skills, including the ability to: a) analyze data statistically, b) interpret results of experiments, c) draw reasonable conclusions based on experimental results.
2. Students will learn and demonstrate standards of professional behaviour, including rules of ethics and etiquette.
3. Students will develop and demonstrate the ability to work effectively in a group on a common problem.
4. Students will demonstrate the ability to search the relevant literature of the discipline to find information that addresses a specific problem.
5. Students will demonstrate the ability to produce a technical document.

<b>BHH026A</b>	<b>ACCOMMODATION OPERATIONS-1</b>	<b>Cr-2(TH)</b>
----------------	-----------------------------------	-----------------

### Course Objective-

1. To understand the planning of facilities and space management.
2. To Practice listening to comments and complaints using positive and negative language and responding appropriately.
3. To detail out the procedures for different departmental processes

#### Unit 1 **Management of Linen**

- Classification of linen and size
- Selection criteria for various linen items
- Activities of the linen room
- Layout and equipment in the linen room
- Purchase of linen
- Linen hire- quality and quantity
- Calculation of linen requirements
- Storage and inspection
- Linen control-procedures and records
- Stock taking-procedures and records
- Recycling of discarded linen
- Par stock
- Inventory control
- Condemned linen- procedure
- Marking and monogramming.

#### Unit 2 **Management of Uniforms**

- Purpose of uniforms, No. of sets issuing
- Producing and exchange of uniform
- Selection and designing of uniforms
- Advantages of providing uniforms to staff
- Stock taking procedures
- Uniform records
- Layout and planning of uniform room.

#### Unit 3 **Sewing Room**

- Activities and areas to be provided,
- Equipments provided.

#### Unit 4 **Laundry**

- Duties and responsibility of laundry staff (laundry manager, dry cleaning supervisor, presser, laundry clerks, valet runner, laundry attendants)
- Types of laundry.

#### Unit 5 **Flow process of Laundry**

- Importance and principles of flow process in laundry
- Stages in wash cycle
- Laundry equipment and machines
- Layout of the laundry
- Role of the laundry agents
- Classification of laundry agents
- Dry cleaning
- Guest laundry /valet services

- Collection and delivering care in the laundry guest articles.

**Glossary of terms (with reference to 4th semester syllabus)**

**Course Outcome- The student will able to**

CO1. Understand laundry operations

CO2. Know about sewing and linen room operations.

CO3. Explain procedure followed in Housekeeping Department

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

<b>BHH027A</b>	<b>FRONT OFFICE OPERATIONS-1</b>	<b>Cr.2(TH)</b>
----------------	----------------------------------	-----------------

### Course Objective--

To enable the students to learn the front office cashiering function.

To demonstrate the importance of effective managements of hotel assets.

To explain the Check-out Procedures and guest handling operations.

Unit 1	<b>Registration</b> <ul style="list-style-type: none"> <li>• Pre-registration activity and registration activities</li> <li>• Registration record</li> <li>• Room and rate assignment</li> <li>• Methods of payments</li> <li>• Issuing of room key</li> <li>• Fulfilling special request</li> <li>• Creative option</li> <li>• Selling the guest room</li> <li>• Upgrading of guest room</li> <li>• When guest cannot be accommodated.</li> </ul>
Unit 2	<b>Guest Complaints</b> <ul style="list-style-type: none"> <li>• Different categories,</li> <li>• Identifying complaints,</li> <li>• Handling complaints,</li> <li>• Follow-up procedures.</li> </ul>
Unit 3	<b>Lobby and Bell Desk Operation</b> <ul style="list-style-type: none"> <li>• Role of lobby manager</li> <li>• Role of GRE</li> <li>• Function of bell desk, concierge desk, car valet operation</li> <li>• VIP handling.</li> </ul>
Unit 4	<b>Front Office Security Function</b> <ul style="list-style-type: none"> <li>• Role of front office in hotel security</li> <li>• Electronic locking system</li> <li>• Use of key card</li> <li>• Surveillance &amp; access control</li> </ul>

- Protection of funds and safe deposit boxes.

#### Unit 5                      **Crisis Management in Hotel**

- Definition,
- Emergency situations and handling procedures.
- Importance of crisis management

#### **Text Books And Reference Books:**

Bhatnagar, S. K. (2010). Hotel Front Office. Oxford publications.

Ismail, A. Front Office Operation Management (5 ed.). Thomson and Delmer.

Essential Reading / Recommended Reading

Micheal Kasavanna, R. B. (2012). Managing Front office Operations (8 ed.). Prentice Hall.

#### **Course Outcome---**

After successfully completing this course, students will be able to:

1. Enhance managerial decision making skills
2. To learn to handle conflicting situations that may arise during guest Interactions
3. Impart the knowledge of revenue calculations and other techniques to improve the overall profitability of the hotel.
4. Evaluate hotel performance and analyse strategies for revenue generations.

<b>DBA 021A</b>	<b>BASIC ACCOUNTING</b>	<b>CR- 2(TH)</b>
-----------------	-------------------------	------------------

**Course Objective-** To identify different costing methods and its role in product costing.

- To Analyse and apply costing techniques in practical situations.
- To Explain the costing methods used in hospitality industry.
- To apply the material pricing methods in practical context.
- To Prepare and analyse the cost sheet.

**Unit 1                      Accounting Theory**

- Business transaction and basic terminology
- need to study
- Accounting,,: accounting functions, purpose of accounting records, accounting principles, concepts and conventions

**Unit 2                      Account Records**

- Principle of double entry system
- Journal entries, ledger, and subsidiary books- cash sales & purchase books, bank reconciliation statement

**Unit 3                      Financial Statements**

- Basic financial statements
- Trial balance, preparation of final accounts,
- basic adjustments to final accounts,
- Methods of presenting final accounts -practical problems with adjustments

**Unit 4                      Depreciation Reserves and Provisions**

- Meaning,
- Basic methods with practical problems

**Unit 5                      Computer Application**

- Computerised Accounting System
- Database concepts for Accounting

<b>BHH028A</b>	<b>FOOD SCIENCE AND NUTRITION</b>	<b>CR_3 (TH)</b>
----------------	-----------------------------------	------------------

**Course Objective:-**The student will get knowledge about

1. The significance of food in his daily life
2. The terms like food, health, nutrition, malnutrition, and nutritional status.
3. Calculation of recommended dietary allowances, adulteration.
4. Understand the relationship of macro & micro nutrients to health

Unit 1	<b>Fundamentals of Nutrition</b> <ul style="list-style-type: none"><li>• Introduction to nutrition</li><li>• Objectives in the study of nutrition</li><li>• Functions of food</li><li>• Food groups and food habits.</li></ul>
Unit 2	<b>Major Nutrients</b> <ul style="list-style-type: none"><li>• Carbohydrates</li><li>• Lipids, proteins</li><li>• Vitamins</li><li>• Minerals</li><li>• Water</li><li>• Their classification</li><li>• Functions and Food sources</li><li>• Deficiency</li><li>• Calorie</li><li>• BMR, SDA, RDA, energy requirement for various age groups.</li><li>• Pasteurization, sterilization and preservation</li></ul>
Unit 3	<b>Microbes</b> <ul style="list-style-type: none"><li>• Bacteria- Shape, Size, Movement, Growth Phase, Growth requirements</li><li>• Molds- morphology, growth factors, beneficial and harmful effects</li><li>• Yeast- morphology, physiology, and economic importance</li></ul>

Unit 4	<b>Food Adulteration</b>
	<ul style="list-style-type: none"> <li>• Meaning and definition</li> <li>• Types of adulteration and contamination</li> <li>• Laws of prevention.</li> </ul>
Unit 5	<b>Balance Diet and Diet Therapy</b>
	<ul style="list-style-type: none"> <li>• Definition and importance of balance diet</li> <li>• Factors affecting meal planning</li> <li>• Calculation of nutritive value of dishes</li> <li>• Planning special diet (children, adult, old age, and adolescence)</li> <li>• Low calorie diet</li> <li>• Fiber restricted diet</li> <li>• High fiber diet etc.</li> </ul>

**Reference:**

Food science & nutrition, III Ed. Sunitra Roday, Oxford university press

Handbook of Hygiene Control in the Food Industry, II Ed. Huub, John, Domagoj, Elsevier

**Course outcome:-**By the end of this course student would be able to

CO1. Understand the importance of nutrition and good health in his day to day life.

CO2. Know the composition, functions sources of nutrients.

CO3. Understand the effects of excess & deficiency of nutrients.

CO4. Modify attitudes and practices of use existing nutrition

**BHH038A | FOOD PRODUCTION OPERATIONS –II LAB.**

**CR-4(PR)**

Course Objective—The objective of the course is to teach students to prepare three course menu from various international cuisines, making sandwiches, cakes and meringues.

- Three course menu of international cuisine.
- Making of different sandwiches.
- Making of cakes and gateaux.
- Different; icings and meringues.

#### Reference:

- The Professional Pastry Chef by Friberg.

2. The Wilton Ways of Cake Decorations by Hamlyn Publishing.
3. Chocolate by Carolyn Humphries.
4. International Cook Book, Cavendish House
5. Time- Life series- The Cooking of Various Countries.

**COURSE OUTCOME- the student will able to—**

**CO1. Prepare and plan three course menu from various international cuisines.**

**CO2. Make different types of sandwiches.**

**CO3. Make cakes and Meringue**

<b>BHH035A</b>	<b>ACCOMMODATION OPERATIONS–II</b>	<b>CR-2(TH)</b>
----------------	------------------------------------	-----------------

Course Objective----In this course, we look at lodging as a set of products and services that have evolved out of guest needs and preferences. We begin with the evolution of lodging to fit transportation and destination patterns and individual guest preferences. We then delineate different types of lodging properties, discussing the distinguishing characteristics of each. Emphasis is given to ensure the efficient managing and functioning of hotel housekeeping department.

1. To Identify and understand the business of rooms division department in hotels.
2. Figure out the trends in the housekeeping department in various size hotels and design specifications.

Unit 1	<b>Fibers and Fabrics</b>
	<ul style="list-style-type: none"> <li>• Definition of fiber</li> <li>• Classification of fibers, the origin</li> <li>• Characteristics and use of each</li> <li>• Methods of construction (knitting, weaving and braiding) and making of fiber</li> <li>• Weaving</li> <li>• Classification of weaves</li> <li>• Fabrics commonly used in hotels</li> <li>• Identification of yarns</li> <li>• Classification of dyed and printed fabrics</li> <li>• Various finishes of fabrics.</li> </ul>
Unit 2	<b>Stain Removal</b>
	<ul style="list-style-type: none"> <li>• Definition</li> <li>• Classification of stains</li> <li>• General rules of stain removal</li> <li>• Stain removal methods.</li> </ul>
Unit 3	<b>Interior decoration, Colour, Lighting</b>
	<ul style="list-style-type: none"> <li>• Importance</li> <li>• Definition &amp; types</li> <li>• Classification</li> <li>• Principles of design: harmony, rhythm, balance, proportion, emphasis</li> <li>• Element of design: line, form, color, texture.</li> <li>• Colour: Color wheel, importance &amp; characteristics</li> <li>• Classification of colours</li> <li>• Colour scheme</li> <li>• Lighting: Classification</li> <li>• Types &amp; importance</li> <li>• Application</li> </ul>
Unit 4	<b>Floor &amp; Wall Covering</b>
	<ul style="list-style-type: none"> <li>• Types and characteristics</li> <li>• Carpets: selection, types, characteristics</li> <li>• Care and maintenance</li> </ul>
Unit 5	<b>Refurbishment and Redecoration</b>
	<ul style="list-style-type: none"> <li>• Definition</li> <li>• Factors</li> <li>• Procedure and task involved</li> <li>• Snagging list.</li> </ul>

**Course Outcome**---After completion of this course the student will able to:

- CO 1.Plan their work schedule and staff job allocation.
- CO 2Forecast and prepare departmental budget.
- CO 3Track the purchasing and buying methods used in hotels.
- CO4Analyse the different type of contract services.
- CO5 Implement the strain removal procedures.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

<b>BHH036A</b>	<b>FRONT OFFICE OPERATIONS-II</b>	<b>CR.-2</b>
----------------	-----------------------------------	--------------

Course Objective--- This course aims to feminize students with the operational and managerial prospect of the front office department in the hotel industry. Introduction to property management system (PMS), front office accounting; planning and evaluating operations, front office budgeting, visitors tabular ledger (VTL), sales record and control of sale of room and food, settlement of bills, night audit, credit control, occupancy ratios and yield management.

S.NO.	TOPIC
	<b>PLANNING &amp; EVALUATING FRONT OFFICE OPERATIONS</b> A. Setting Room Rates (Details/Calculations thereof) - Hubbart Formula, market condition approach & Thumb Rule - Types of discounted rates – corporate, rack etc. B. Forecasting techniques C. Forecasting Room availability D. Useful forecasting data • % of walking • % of overstay • % of under stay E. Forecast formula F. Types of forecast G. Sample forecast forms H. Factors for evaluating front office operations
2	<b>BUDGETING</b> A. Types of budget & budget cycle B. Making front office budget C. Factors affecting budget planning D. Capital & operations budget for front office E. Refining budgets, budgetary control F. Forecasting room revenue G. Advantages & Disadvantages of budgeting
3	<b>PROPERTY MANAGEMENT SYSTEM</b> A. Fidelio/ IDS/ Shawman B. Amadeus

Course Outcome---After completion of this course student will be able to--

- To explore the tools and technique of management accounting for analysis to understand different business strategies.
- To be able to analyze the affairs of the business through ratios.
- To prepare cash flow statements
- To make budgets both fixed and flexible

<b>DBA026A</b>	<b>Methods and Techniques of Research</b>	<b>CR 2(TH)</b>
----------------	---	-----------------

Research methodology will be taught in the theory class of VII semester to prepare students on how to approach the subject of research project in the VIII semester. Topics are allotted to the students in the beginning of VII th semester to prepare the students to peruse the project under guidance of the concerned faculty. Final preparation of the project will be submitted for presentation at the end of VIII semester.

<b>Unit 1</b>	<b>Introduction to Research Methodology</b>
	<ul style="list-style-type: none"> <li>• Meaning and objectives of research, types of research, research approaches, significance of research, research methods vs methodology, research process, criteria of good research, problem faced by researches, techniques involved in defining a problem.</li> </ul>
<b>Unit 2</b>	<b>Research Design</b>
	<ul style="list-style-type: none"> <li>• Meaning and need for research design, features and important concepts relating to research design, different research designs, important experimental designs.</li> </ul>
<b>Unit 3</b>	<b>Sample Design</b>
	<ul style="list-style-type: none"> <li>• Sample survey, implication of sample design, steps in sample design, criteria for selecting a sampling procedure, characteristics of a good sample design, different types of sample design, measurement scales, important scaling techniques.</li> </ul>

Unit 4

**Methods of Data Collection**

- Collection of primary data, collection through questionnaire and schedule collection of secondary data, difference in questionnaire and schedule, different methods to collect secondary data

Unit 5

**Data Analysis Interpretation and Presentation Techniques**

- Hypothesis testing, basic concepts concerning hypothesis testing, procedure and flow diagram for hypothesis testing, test of significance, chi-square analysis, report presentation techniques.

- Calculation of yield management ratios
- Role play: situation handling on various accommodation aspects
- Preparation of sales letter, brochures, promotional letter
- Internet advertising, promotion & sale of accommodation product.
- Travel Agent Voucher
- Itinerary

<b>BHM020A</b>	<b>ACCOMMODATION OPERATIONS-1</b>	<b>Cr-2(TH)</b>
----------------	-----------------------------------	-----------------

**Course Objective-**

1. To understand the planning of facilities and space management.
2. To Practice listening to comments and complaints using positive and negative language and responding appropriately.
3. To detail out the procedures for different departmental processes

**Unit 1 Management of Linen**

- Classification of linen and size
- Selection criteria for various linen items
- Activities of the linen room
- Layout and equipment in the linen room
- Purchase of linen
- Linen hire- quality and quantity
- Calculation of linen requirements
- Storage and inspection
- Linen control-procedures and records
- Stock taking-procedures and records
- Recycling of discarded linen
- Par stock
- Inventory control
- Condemned linen- procedure
- Marking and monogramming.

**Unit 2 Management of Uniforms**

- Purpose of uniforms, No. of sets issuing
- Producing and exchange of uniform
- Selection and designing of uniforms
- Advantages of providing uniforms to staff
- Stock taking procedures
- Uniform records
- Layout and planning of uniform room.

**Unit 3 Sewing Room**

- Activities and areas to be provided,
- Equipments provided.

**Unit 4 Laundry**

- Duties and responsibility of laundry staff (laundry manager, dry cleaning supervisor, presser, laundry clerks, valet runner, laundry attendants)
- Types of laundry.

**Unit 5 Flow process of Laundry**

- Importance and principles of flow process in laundry
- Stages in wash cycle
- Laundry equipment and machines
- Layout of the laundry
- Role of the laundry agents
- Classification of laundry agents
- Dry cleaning
- Guest laundry /valet services
- Collection and delivering care in the laundry guest articles.

**Glossary of terms (with reference to 4th semester syllabus)**

**Course Outcome- The student will able to**

CO1. Understand laundry operations

CO2. Know about sewing and linen room operations.

CO3. Explain procedure followed in Housekeeping Department

<b>BHM021A</b>	<b>FRONT OFFICE OPERATIONS-1</b>	<b>Cr.2(TH)</b>
----------------	----------------------------------	-----------------

#### Course Objective--

To enable the students to learn the front office cashiering function.

To demonstrate the importance of effective managements of hotel assets.

To explain the Check-out Procedures and guest handling operations.

Unit 1	<b>Registration</b> <ul style="list-style-type: none"> <li>• Pre-registration activity and registration activities</li> <li>• Registration record</li> <li>• Room and rate assignment</li> <li>• Methods of payments</li> <li>• Issuing of room key</li> <li>• Fulfilling special request</li> <li>• Creative option</li> <li>• Selling the guest room</li> <li>• Upgrading of guest room</li> <li>• When guest cannot be accommodated.</li> </ul>
Unit 2	<b>Guest Complaints</b> <ul style="list-style-type: none"> <li>• Different categories,</li> <li>• Identifying complaints,</li> <li>• Handling complaints,</li> <li>• Follow-up procedures.</li> </ul>
Unit 3	<b>Lobby and Bell Desk Operation</b>

- Role of lobby manager
- Role of GRE
- Function of bell desk, concierge desk, car valet operation
- VIP handling.

#### Unit 4            **Front Office Security Function**

- Role of front office in hotel security
- Electronic locking system
- Use of key card
- Surveillance & access control
- Protection of funds and safe deposit boxes.

#### Unit 5            **Crisis Management in Hotel**

- Definition,
- Emergency situations and handling procedures.
- Importance of crisis management

#### **Text Books And Reference Books:**

Bhatnagar, S. K. (2010). Hotel Front Office. Oxford publications.

Ismail, A. Front Office Operation Management (5 ed.). Thomson and Delmer.

Essential Reading / Recommended Reading

Micheal Kasavanna, R. B. (2012). Managing Front office Operations (8 ed.). Prentice Hall.

#### **Course Outcome---**

After successfully completing this course, students will be able to:

1. Enhance managerial decision making skills
2. To learn to handle conflicting situations that may arise during guest Interactions
3. Impart the knowledge of revenue calculations and other techniques to improve the overall profitability of the hotel.
4. Evaluate hotel performance and analyse strategies for revenue generations.

<b>BHM022A</b>	<b>BASIC ACCOUNTING</b>	<b>CR- 2(TH)</b>
----------------	-------------------------	------------------

**Course Objective-**To identify different costing methods and its role in product costing.

- To Analyse and apply costing techniques in practical situations.
- To Explain the costing methods used in hospitality industry.
- To apply the material pricing methods in practical context.
- To Prepare and analyse the cost sheet.

**Unit 1                      Accounting Theory**

- Business transaction and basic terminology
- need to study
- Accounting, : accounting functions, purpose of accounting records, accounting principles, concepts and conventions

**Unit 2                      Account Records**

- Principle of double entry system
- Journal entries, ledger, and subsidiary books- cash sales & purchase books, bank reconciliation statement

**Unit 3                      Financial Statements**

- Basic financial statements
- Trial balance, preparation of final accounts,
- basic adjustments to final accounts,

• Methods of presenting final accounts -practical problems with adjustments
<b>Unit 4 Depreciation Reserves and Provisions</b>
• Meaning,
• Basic methods with practical problems
<b>Unit 5 Computer Application</b>
• Computerised Accounting System
• Database concepts for Accounting

#### Reference

<b>BHM023A</b>	<b>FOOD SCIENCE AND NUTRITION</b>	<b>CR_3 (TH)</b>
----------------	-----------------------------------	------------------

**Course Objective:-**The student will get knowledge about

1. The significance of food in his daily life
2. The terms like food, health, nutrition, malnutrition, and nutritional status.
3. Calculation of recommended dietary allowances, adulteration.
4. Understand the relationship of macro & micro nutrients to health

<b>Unit 1</b>	<b>Fundamentals of Nutrition</b>
• Introduction to nutrition	
• Objectives in the study of nutrition	
• Functions of food	
• Food groups and food habits.	
<b>Unit 2</b>	<b>Major Nutrients</b>
• Carbohydrates	
• Lipids, proteins	
• Vitamins	

- Minerals
- Water
- Their classification
- Functions and Food sources
- Deficiency
- Calorie
- BMR, SDA, RDA, energy requirement for various age groups.
- Pasteurization, sterilization and preservation

**Unit 3 Microbes**

- Bacteria- Shape, Size, Movement, Growth Phase, Growth requirements
- Molds- morphology, growth factors, beneficial and harmful effects
- Yeast- morphology, physiology, and economic importance

**Unit 4 Food Adulteration**

- Meaning and definition
- Types of adulteration and contamination
- Laws of prevention.

**Unit 5 Balance Diet and Diet Therapy**

- Definition and importance of balance diet
- Factors affecting meal planning
- Calculation of nutritive value of dishes
- Planning special diet (children, adult, old age, and adolescence)
- Low calorie diet
- Fiber restricted diet
- High fiber diet etc.

**Reference:**

Food science & nutrition, III Ed. Sunitra Roday, Oxford university press

Handbook of Hygiene Control in the Food Industry, II Ed. Huub, John, Domagoj, Elsevier

**Course outcome:-**By the end of this course student would be able to

CO1. Understand the importance of nutrition and good health in his day to day life.

CO2. Know the composition, functions sources of nutrients.

CO3. Understand the effects of excess & deficiency of nutrients.

CO4. Modify attitudes and practices of use existing nutrition

**BHM023A**

**Fundamentals of French**

**CR 2(TH)**

**Course Objective** – The course objective is to teach basic French to the students that can be used in hotel industry.

**Unit - 1:**

- Pronunciation - The Alphabet - The Accents; Formules de politesse ;
- The numbers: Cardinal Ordinal;
- Time (only 24 hr clock);

- Weights & Measures;
- The subjective pronouns;
- Auxiliary verbs : etre and avoir

**Unit - 2:**

- Self introduction; presenting and introducing other person;
- Name of vegetables and fruits; Conjugation of first group of verbs;
- Days of the week; Months of the year; Date;
- The definite and indefinite articles

**Unit - 3:**

- Name of the Countries and their Nationalities;
- Conjugation of second group of verbs; Adjectives of place;
- Preposition of place; Describing a place (your city/ tourist place)

**Unit - 4 :**

- Vocabulary describing family;
- Describe your family; Name of dairy products and Cereals;
- Negation; Conjugation of irregular verbs : venir, aller;
- Demonstrative Adjectives Simple translation

**(Oral)**

- Role-playing of different situations
- Understanding questions Conversation
- Picture composition

<b>CR-2(TH)</b>
-----------------

**Course Objectives-**To provide an in-depth knowledge of purchasing and kitchen management, and also important knowledge of hot and cold desserts.

**Unit 1 Sandwiches**

- Sandwiches- definition
- Types and parts
- Types of breads used
- Different fillings and their classification
- Spreads and garnishes making
- Storing of sandwiches.

**Unit 2 International Cuisine-II**

- Geographic location
- Historical background
- Staple food with regional influences
- Specialties and recipes, in relation to the following cuisines- Germany, Middle Eastern, Mexican, Chinese etc.

**Unit 3 Purchase and Storage**

- Introduction to purchase

Head  
Department of Hotel Management  
JECRC University, Jaipur-303905

- Purchasing system
- Purchase specification
- Purchasing techniques
- Storage

**Unit 4 Icings and Meringues**

- Icings- types and uses
- Methods of preparation
- Recipes and difference between icings and toppings
- Meringues- definition and types
- Preparation methods
- Factors affecting stability
- Cooking of meringues.

**Unit 5 Cakes and Gateaux**

- Cakes and gateaux- definition
- Types
- Regional specialties
- Role of different ingredients used
- Faults and remedies
- Care and precautions.

**COURSE OUTCOME**

CO 1) To enable students about the managerial aspects

CO 2) To teach students about quality and Portion control.

CO 3) To master the students in particular area of culinary skill

CO4) To train the students in Cold Kitchen

CO5) To train the students in terms of menu planning

**Course Outcome**—After doing this course the student will able to:

CO 1 Prepare Banquet Equipment and Setups

CO2. Take Orders and Serve Drinks in banquets and bar.

CO 3 Identification of upcoming events and conferences.

CO 4 Handle the smooth banquet operations.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M						
CO2		M					
CO3				H			
CO4	H						

- H = Highly Related; M = Medium L = Low

<b>BHM036A</b>	<b>FOOD &amp; BEVERAGE OPERATIONS – II LAB</b>	<b>CR.-2 (PR)</b>
----------------	--	-------------------

Course Objective---The objective of this course to give operational knowledge of restaurant and bar operations like taking of orders, making mock tails etc.

- Supervising F& B outlets and service
- Taking an order for food and spirits
- Preparation of cocktail's & mocktail's
- Service of spirits (whisky, rum, brandy, vodka, gin), liqueurs
- Flaring Skills

**Course Outcome-** The student will able to

CO1. Supervise the F&B outlets.

CO2. Take Orders of Food and Spirits

CO3. Serve alcoholic beverages

CO4. Do flaring

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M						
CO2		M					
CO3				H			
CO4	H						

- H = Highly Related; M = Medium L = Low

<b>BHM031A</b>	<b>ACCOMMODATION OPERATIONS–II</b>	<b>CR-2(TH)</b>
----------------	------------------------------------	-----------------

Course Objective----In this course, we look at lodging as a set of products and services that have evolved out of guest needs and preferences. We begin with the evolution of lodging to fit transportation and destination patterns and individual guest preferences. We then delineate different types of lodging properties, discussing the distinguishing characteristics of each. Emphasis is given to ensure the efficient managing and functioning of hotel housekeeping department.

1. To Identify and understand the business of rooms division department in hotels.
2. Figure out the trends in the housekeeping department in various size hotels and design specifications.

**Unit 1      Fibers and Fabrics**

- Definition of fiber
- Classification of fibers, the origin
- Characteristics and use of each
- Methods of construction (knitting, weaving and braiding) and making of fiber
- Weaving
- Classification of weaves
- Fabrics commonly used in hotels
- Identification of yarns
- Classification of dyed and printed fabrics
- Various finishes of fabrics.

#### Unit 2            **Stain Removal**

- Definition
- Classification of stains
- General rules of stain removal
- Stain removal methods.

#### Unit 3            **Interior decoration, Colour, Lighting**

- Importance
- Definition & types
- Classification
- Principles of design: harmony, rhythm, balance, proportion, emphasis
- Element of design: line, form, color, texture.
- Colour: Color wheel, importance & characteristics
- Classification of colours
- Colour scheme
- Lighting: Classification
- Types & importance
- Application

#### Unit 4            **Floor & Wall Covering**

- Types and characteristics
- Carpets: selection, types, characteristics
- Care and maintenance

#### Unit 5            **Refurbishment and Redecoration**

- Definition
- Factors
- Procedure and task involved
- Snagging list.

**Course Outcome---**After completion of this course the student will able to:

- CO 1. Plan their work schedule and staff job allocation.  
 CO 2. Forecast and prepare departmental budget.  
 CO 3. Track the purchasing and buying methods used in hotels.  
 CO 4. Analyse the different type of contract services.  
 CO 5. Implement the stain removal procedures.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1		M					
CO2	H						
CO3				M			
CO4			H				

- H = Highly Related; M = Medium L = Low

<b>BHM037A</b>	<b>ACCOMMODATION OPERATIONS –II LAB.</b>	<b>CR-1(PR)</b>
----------------	--	-----------------

Course Objective- The objective of this course is to make students familiar with laundry operations and its handling.

- Laundry equipment handling
- Laundry operations
- Handling different types of fabrics in manual & mechanical laundry
- Stain removal

Course Outcome---After completion of this course the student will able to:

CO 1.Plan the laundry linen handling

CO 2Forecast and make budget for laundry chemicals

CO3 Implement the strain removal procedures with proper chemical

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1		M					
CO2	H						
CO3				M			

- H = Highly Related; M = Medium L = Low

<b>BHM032A</b>	<b>FRONT OFFICE OPERATIONS-II</b>	<b>CR.-2</b>
----------------	-----------------------------------	--------------

Course Objective--- This course aims to feminize students with the operational and managerial prospect of the front office department in the hotel industry. Introduction to property management system (PMS), front office accounting; planning and evaluating operations, front office budgeting, visitors tabular ledger (VTL), sales record and control of sale of room and food, settlement of bills, night audit, credit control, occupancy ratios and yield management.

S.NO.	TOPIC
	<b>PLANNING &amp; EVALUATING FRONT OFFICE OPERATIONS</b> A. Setting Room Rates (Details/Calculations thereof) - Hubbart Formula, market condition approach & Thumb Rule - Types of discounted rates – corporate, rack etc. B. Forecasting techniques C. Forecasting Room availability D. Useful forecasting data • % of walking • % of overstay • % of under stay E. Forecast formula F. Types of forecast G. Sample forecast forms H. Factors for evaluating front office operations
2	<b>BUDGETING</b> A. Types of budget & budget cycle B. Making front office budget C. Factors affecting budget planning D. Capital & operations budget for front office E. Refining budgets, budgetary control F. Forecasting room revenue G. Advantages & Disadvantages of budgeting
3	<b>PROPERTY MANAGEMENT SYSTEM</b> A. Fidelio/ IDS/Shawman B. Amadeus

Course Outcome---After completion of this course student will be able to--

- To explore the tools and technique of management accounting for analysis to understand different business strategies.
- To be able to analyze the affairs of the business through ratios.
- To prepare cash flow statements
- To make budgets both fixed and flexible

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1			M				
CO2			L				
CO3	M						
CO4	M						

H = Highly Related; M = Medium L = Low Course Outcome---STUDENT WILL ABLE TO-

CO1 .Manage restaurant effectively .  
 CO2 knowledge about Bar Operations  
 CO3 knowledge about Mock tails and Cocktails.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

<i>Course Outcome</i>	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M		L				
CO2			L				
CO3		M					
CO4		H					

H = Highly Related; M = Medium L = Low

**BHM038A**

**FRONT OFFICE OPERATIONS-II LAB.**

**CR.-1(PR)**

**COURSE OBJECTIVE-**The objective of this course is to familiarise students with cash and credit handling in front office.

1. To understand the practical aspect of PMS in the computer lab
2. To learn the opening of guest folio, posting of transaction and charges, closing of account
3. Handling credit cards
4. Foreign exchange procedures
5. Calculating occupancy ratios

**COURSE OUTCOME-** The student will able to

CO1. Handling cash transactions.

CO2. Credit transactions.

CO3. Handling foreign currency.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

<i>Course Outcome</i>	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	M		L				
CO2			L				
CO3		M					

H = Highly Related; M = Medium L = Low

Head  
 Department of Hotel Management  
 JECRC University, Jaipur-303905

<b>BHM033A</b>	<b>Hotel Maintenance</b>	<b>CR 2(TH)</b>
----------------	--------------------------	-----------------

The subject will provide information regarding the basic services and different types of engineering and maintenance systems in hotel industry. This subject will help students to understand various aspects and importance of engineering department in Hotel. At the end of the semester students will be thorough with various maintenance, refrigeration and air conditioning, fuels, electricity, safety and security, water distribution systems and energy conservation in hotel.

### **Chapter – 1 Maintenance & Replacement Policy**

1.1 Maintenance and Calibration of equipment – Meaning and importance

1.2 Importance of Maintenance department in Hotel Industry

1.3 Organization chart of Maintenance department in 3/4/5 star hotels

1.4 Duties & responsibilities of Chief Engineer of a hotel

1.5 Types of maintenance and their advantages and disadvantages

- Breakdown/ Corrective Maintenance

- Preventive Maintenance

- Predictive Maintenance

1.6 Contract Maintenance

- Need of contract maintenance

- Types: Lump sum, Unit price/ Unit Rate,

Cost plus upper limit contract

1.7 Maintenance charts for -

- Swimming Pool: Daily basis and Quarterly basis

- Kitchen: Daily basis and Quarterly basis

1.8 Replacement of Equipments:

- Reasons for replacement

- Economic replacement of equipments (Graph)

### **Chapter – 2 Refrigeration**

2.1 Definitions: Heat, Temperature, Sensible heat, Latent Heat, Relative Humidity, Zero law of Thermodynamics, 2<sup>nd</sup> Law of Thermodynamics,.

2.2 Methods of Heat Transfer:

- Conduction

- Convection

- Radiation

2.3 Refrigeration:

- Principle of Refrigeration

- Unit of Refrigeration

- Refrigerants: Properties and Types

- Block diagram and working of Vapour

Compression Refrigeration Cycle

- Block diagram and working of Vapour

Absorption Refrigeration Cycle

2.4 Domestic Refrigerator

- Block Diagram and working

- Maintenance

- Defrosting: Need, Methods

## 2.5 Walk in Freezer/ Cold Storage

- Block diagram
- Working

## **Chapter – 3 Air Conditioning**

### 3.1 Types of AC

Unitary AC: Window AC and Split AC

Block Diagram and Working of both

### 3.2 Factors affecting Load on AC

### 3.3 Factors affecting AC Comfort

## **Chapter – 4 Fuels**

### 4.1 Types of Fuels

### 4.2 Comparison of various Fuels: Solid, Liquid and Gaseous

### 4.3 Fuels used in Hotel Industry

## **Chapter – 5 Electricity**

### 5.1 Types of Electricity supply: Single and Three Phase

### 5.2 Types of Fuse: Re-wireable, Cartridge, Miniature Circuit Breakers (MCB)

### 5.3 Importance and method of Earthing System

### 5.4 Calculation of Electricity Bill

## **Chapter – 6 Water Systems**

### 6.1 Sources of water.

### 6.2 Adverse effects of Hard water

### 6.3 Methods of purification& water softening: Ion Exchange, Lime Soda.

### 6.4 Water Distribution System: Up Feed and Down Feed (Hot & Cold)

### 6.5 Traps, Water Closets and Flushing Systems

- Types, diagrams, functions.

### 6.6 Various Plumbing Fixtures

## **Chapter – 7 Energy & Its Conservation**

### 7.1 Various energy sources: Conventional & Non- Conventional: - their examples, advantages and disadvantages

### 7.2 Need of energy conservation

### 7.3 Simple Methods of energy conservation in Kitchen, Guest rooms.

### 7.4 Use of Solar Energy in Hotel

## **Chapter – 8 Safety and Security in Hotel**

### 8.1 Causes of Accidents

### 8.2 Prevention / Control of Accidents

### 8.3 Safety Issues in Hotel:

- Guest Key Control
- Kitchen Safety
- Slip & Fall

## **Reference Books:**

1. Hotel Engineering – Sujit Ghosal – Oxford University Press
2. Hotel Engineering – R.K. Chhatwal
3. Hotel Maintenance – Arora

BHM034A	BASIC HYGIENE AND HACCP	CR-2 (TH)
---------	-------------------------	-----------

**Course Objective-**The subject will provide information regarding Personal Hygiene, Food Hygiene Practices used in Hospitality Industry. It also covers the Importance of HACCP and its principles.

S.No.	Topic
01	<b>Food Hygiene</b> <ul style="list-style-type: none"> <li>• Meaning and definition of hygiene</li> <li>• General principles of food hygiene</li> <li>• Personal hygiene.</li> <li>• Concepts and understanding (HACCP)</li> <li>• Recycling / Quality Audit</li> <li>• Hazard analysis</li> </ul>
02.	<b>Receiving and Storage</b> <ul style="list-style-type: none"> <li>• Food safety in receiving and storage</li> <li>• Food labeling</li> <li>• Operating procedures for receiving and storage.</li> <li>• Food storage condition, Storage of Specific Foods-Meat, Poultry, Egg, Seafood, Dairy Products &amp; Vegetables</li> </ul>
03	<b>Food Safety in Kitchen</b> <ul style="list-style-type: none"> <li>• Food safety in kitchen</li> <li>• Design and facilities</li> <li>• Sources of Food Contamination, Contamination of Water</li> <li>• Kitchen equipments, Dish washing</li> <li>• Garbage Disposal</li> <li>• Food poisoning</li> </ul>
04	<b>Hygiene in Service Department</b> <ul style="list-style-type: none"> <li>• Food safety in service department</li> <li>• Location</li> <li>• Design and facilities</li> <li>• Cleanliness and maintenance of machines</li> <li>• Control of operations</li> <li>• Sanitary Procedures while serving and displaying food –rules to be observed while handling food in mobile food units, Outdoor catering, street side catering units.</li> <li>• Do's and Don't while handling food.</li> </ul>
05.	<b>Hygiene In House Keeping</b> <ul style="list-style-type: none"> <li>• Food safety in house keeping department</li> <li>• Design and facilities</li> </ul> Pest and rodent control

**Course Outcome-** After completion of this course student able to –

CO1. Identify the risks and hazards in food preparation

CO2. Define food poisoning, understand how it occurs and the main causes of food contamination
