**BHH501D | FOOD PRODUCTION OPERATIONS –II**

**CR-2(TH)**

**Course Objectives-**To provide an in-depth knowledge of purchasing and kitchen management, and also important knowledge of hot and cold desserts.

### Unit 1 **Sandwiches**

- Sandwiches- definition
- Types and parts
- Types of breads used
- Different fillings and their classification
- Spreads and garnishes making
- Storing of sandwiches.

### Unit 2 **International Cuisine-II**

- Geographic location
- Historical background
- Staple food with regional influences
- Specialties and recipes, in relation to the following cuisines- Germany, Middle Eastern, Mexican, Chinese etc.

### Unit 3 **Purchase and Storage**

- Introduction to purchase
- Purchasing system
- Purchase specification
- Purchasing techniques
- Storage

### Unit 4 **Icings and Meringues**

- Icings- types and uses
- Methods of preparation
- Recipes and difference between icings and toppings
- Meringues- definition and types
- Preparation methods

- Factors affecting stability
  - Cooking of meringues.
- Unit 5 Cakes and Gateaux**
- Cakes and gateaux- definition
  - Types
  - Regional specialties
  - Role of different ingredients used
  - Faults and remedies
  - Care and precautions.

#### **COURSE OUTCOME**

CO 1) To enable students about the managerial aspects

CO 2) To teach students about quality and Portion control.

CO 3) To master the students in particular area of culinary skill

CO4) Cold Kitchen

CO5) To train the students in terms of menu planning

#### **BHH511D FOOD PRODUCTION OPERATIONS –II LAB.**

**CR-4(PR)**

Course Objective—The objective of the course is to teach students to prepare three course menu from various international cuisines, making sandwiches, cakes and meringues.

- Three course menu of international cuisine.
- Making of different sandwiches.
- Making of cakes and gateaux.
- Different; icings and meringues.

#### Reference:

1. The Professional Pastry Chef by Friberg.
2. The Wilton Ways of Cake Decorations by Hamlyn Publishing.
3. Chocolate by Carolyn Humphries.
4. International Cook Book, Cavendish House
5. Time- Life series- The Cooking of Various Countries.

**COURSE OUTCOME- the student will able to—**

**CO1. Prepare and plan three course menu from various international cuisines.**

**CO2. Make different types of sandwiches.**

**CO3. Make cakes and Meringue**

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

**BHH502D FOOD & BEVERAGE OPERATIONS – II**

**CR.-2 (TH)**

Course Objective----The primary objective of this course is:

Get to Know the Food and Beverage Division.

Demonstrate Knowledge of Menus and Point-of-Sale Equipment

Get to Know the Job of a Banquet Setup Employee Reference Books:

1. Food & Beverage Service- Lillicrap & Cousins
2. Modern Restaurant Service- John Fuller
3. Beverage Book- Andrew, Dunkin & Cousins
4. Bar & Beverage Book- Mary Porter & Kostagris
5. Alcoholic Beverages- Lipinski & Lipinski

**Unit 1 Spirits**

- Introduction and definition
- Classification of spirits
- Production of spirits (pot / patent)
- Whisky – Manufacturing , Whisky's from Scotland , America , Ireland , Canada and India, Brand Names
- Rum – Manufacturing , types , brand Names
- Gin – Manufacturing , types, brand Names
- Vodka - Manufacturing , types, brand Names
- Tequila - Manufacturing , types, brand Names
- Brandy & Cognac – Manufacturing , types , brand Names
- Standards and measuring scales of spirits
- IMFL / Heritage Liquor

**Unit 2 Liqueurs & Bitters**

- Definition
- Importance of Liqueurs in Alcoholic Drinks

	<ul style="list-style-type: none"> <li>• Different types of Liqueurs</li> <li>• Production</li> <li>• Brand names , origin , flavor &amp; service</li> </ul>
Unit 3	<b>Cocktail &amp; Mixology</b> <ul style="list-style-type: none"> <li>• History of Cocktail</li> <li>• Types of Cocktail</li> <li>• Art of Mixology</li> <li>• Methods of making cocktails</li> <li>• Mocktails</li> </ul>
Unit 4	<b>Bar operations- I</b> <ul style="list-style-type: none"> <li>• Introduction to bar</li> <li>• Types &amp; parts of bar ( front / under / back)</li> <li>• Bar equipment &amp; glassware</li> <li>• Layout of bar</li> <li>• Bar hierarchy</li> <li>• Etiquettes &amp; mannerism for handling Bar</li> <li>• Introduction to flaring</li> <li>• Glossary of professional bar terms</li> </ul>
Unit 5	<b>Tobacco</b> <ul style="list-style-type: none"> <li>• History of tobacco</li> <li>• Manufacturing &amp; types</li> <li>• Storage &amp; service</li> <li>• Brand names &amp; their origins</li> <li>• Cigar's</li> </ul>

**Course Outcome**—After doing this course the student will able to:

CO 1Prepare Banquet Equipment and Setups

CO2. Take Orders and Serve Drinks in banquets and bar.

CO 3Identification of upcoming events and conferences.

CO 4 Handle the smooth banquet operations.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

<b>BHH512D</b>	<b>FOOD &amp; BEVERAGE OPERATIONS – II LAB</b>	<b>CR.-2 (PR)</b>
----------------	--	-------------------

Course Objective---The objective of this course to give operational knowledge of restaurant and bar operations like taking of orders, making mock tails etc.

<ul style="list-style-type: none"> <li>• Supervising F&amp; B outlets and service</li> </ul>
--

- Taking an order for food and spirits
- Preparation of cocktail's & mocktail's
- Service of spirits (whisky, rum, brandy, vodka, gin), liqueurs
- Flaring Skills

**Course Outcome-** The student will able to

CO1. Supervise the F&B outlets.

CO2. Take Orders of Food and Spirits

CO3. Serve alcoholic beverages

CO4. Do flaring

<b>BHH503D</b>	<b>ACCOMMODATION OPERATIONS–II</b>	<b>CR-2(TH)</b>
----------------	------------------------------------	-----------------

Course Objective----In this course, we look at lodging as a set of products and services that have evolved out of guest needs and preferences. We begin with the evolution of lodging to fit transportation and destination patterns and individual guest preferences. We then delineate different types of lodging properties, discussing the distinguishing characteristics of each. Emphasis is given to ensure the efficient managing and functioning of hotel housekeeping department.

1. To Identify and understand the business of rooms division department in hotels.
2. Figure out the trends in the housekeeping department in various size hotels and design specifications.

**Unit 1                      Fibers and Fabrics**

- Definition of fiber
- Classification of fibers, the origin
- Characteristics and use of each
- Methods of construction (knitting, weaving and braiding) and making of fiber
- Weaving
- Classification of weaves
- Fabrics commonly used in hotels
- Identification of yarns
- Classification of dyed and printed fabrics

	<ul style="list-style-type: none"> <li>• Various finishes of fabrics.</li> </ul>
<b>Unit 2</b>	<b>Stain Removal</b>
	<ul style="list-style-type: none"> <li>• Definition</li> <li>• Classification of stains</li> <li>• General rules of stain removal</li> <li>• Stain removal methods.</li> </ul>
<b>Unit 3</b>	<b>Interior decoration, Colour, Lighting</b>
	<ul style="list-style-type: none"> <li>• Importance</li> <li>• Definition &amp; types</li> <li>• Classification</li> <li>• Principles of design: harmony, rhythm, balance, proportion, emphasis</li> <li>• Element of design: line, form, color, texture.</li> <li>• Colour: Color wheel, importance &amp; characteristics</li> <li>• Classification of colours</li> <li>• Colour scheme</li> <li>• Lighting: Classification</li> <li>• Types &amp; importance</li> <li>• Application</li> </ul>
<b>Unit 4</b>	<b>Floor &amp; Wall Covering</b>
	<ul style="list-style-type: none"> <li>• Types and characteristics</li> <li>• Carpets: selection, types, characteristics</li> <li>• Care and maintenance</li> </ul>
<b>Unit 5</b>	<b>Refurbishment and Redecoration</b>
	<ul style="list-style-type: none"> <li>• Definition</li> <li>• Factors</li> <li>• Procedure and task involved</li> <li>• Snagging list.</li> </ul>
	<b>Glossary of terms</b>

**Course Outcome**---After completion of this course the student will able to:

- CO 1. Plan their work schedule and staff job allocation.  
CO 2. Forecast and prepare departmental budget.  
CO 3. Track the purchasing and buying methods used in hotels.  
CO 4. Analyse the different type of contract services.  
CO 5. Implement the stain removal procedures.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

**BHH505D**

**Professional Skills Development**

**Cr.2 TH.**

**Course Objectives/Course Description—**

To prepare the students towards successful campus placement

To inculcate the need and importance of acquiring employability skills

## **Unit-1**

### **Attitude Building**

Introduction and icebreaker, meaning and need for building positive attitude, Concept of attitude, positive attitude, benefits of having positive attitude, ways to acquire positive attitude

## **Unit-2**

### **Group Discussion**

Introduction and icebreaker, myths about group discussion, types of GD, do's and don'ts of group discussion, role of body language and communication in GD

## **Unit-3**

### **Personality Development**

Introduction/ Activity, meaning of Personality, Determinants of Personality, Know your Personality - Kersey's Temperament Sorter Test, Positive Thinking, How to Build Positive Self-esteem, SWOT analysis, How to handle Adversities.

## **Unit-4**

### **Interview Skills**

Introduction/icebreakers, meaning and importance, professional dress code and body language

## **Unit-5**

### **Resume Writing**

Introduction and activities need for resume writing, formats, types, and tips for creating impressive resumes, internet resume and video resume.

## **Unit-6**

### **Time Management**

Introduction and icebreaker, myths about time management, time interrupters, techniques of time management, time management matrix, importance of time management.

## **Unit-7**

### **Leadership Skills**

Icebreakers/ Activities, concept and need, types of leaders, techniques of acquiring leadership skills

## **Unit-8**

Icebreakers and activities, meaning and styles and decision making, Exercise/case study.

### **Text Books And Reference Books:**

- Khera, S, You can win.
- Covey, S, The Seven Habits of Highly Effective People,
- Covey, S, The 8th Habit: From Effectiveness to Greatness,
- Covey, S, First Things First,
- Covey, S, The Leader in Me,
- Covey, S, The SPEED of Trust

<b>BHH506D</b>	<b>Methods and Techniques of Research</b>	<b>CR 2(TH)</b>
----------------	---	-----------------

Research methodology will be taught in the theory class of VII semester to prepare students on how to approach the subject of research project in the VIII semester. Topics are allotted to the students in the beginning of vii th semester to prepare the students to peruse the project under guidance of the concerned faculty. Final preparation of the project will be submitted for presentation at the end of VIII semester.

<b>Unit 1</b>	<b>Introduction to Research Methodology</b>
<ul style="list-style-type: none"><li>• Meaning and objectives of research, types of research, research approaches,</li></ul>	

significance of research, research methods vs methodology, research process, criteria of good research, problem faced by researches, techniques involved in defining a problem.

## Unit 2      **Research Design**

- Meaning and need for research design, features and important concepts relating to research design, different research designs, important experimental designs.

## Unit 3      **Sample Design**

- Sample survey, implication of sample design, steps in sample design, criteria for selecting a sampling procedure, characteristics of a good sample design, different types of sample design, measurement scales, important scaling techniques.

## Unit 4      **Methods of Data Collection**

- Collection of primary data, collection through questionnaire and schedule collection of secondary data, difference in questionnaire and schedule, different methods to collect secondary data

## Unit 5      **Data Analysis Interpretation and Presentation Techniques**

- Hypothesis testing, basic concepts concerning hypothesis testing, procedure and flow diagram for hypothesis testing, test of significance, chi-square analysis, report presentation techniques.

5. Punjabi Cuisine, Premjit Gills

**BHH602D**

**FOOD & BEVERAGE SERVICE OPERATIONS-III**

**CR-2(TH)**

**Unit 1                    Banquets and Buffets**

- History and types of banquets
- Formal banquets, Informal banquets
- Hierarchy of banquet department, duties & responsibilities
- Banquet sales, menus,
- Booking procedure
- Banquet formats – FP / BPO
- Banquet booking diary
- Space area requirement,
- Mise-en-place
- Duty allocation, service, table and sitting plans, toasting
- Types of buffet – breakfast, cold buffet, sit down, fork and finger
- Planning and organizing, sequence of food display
- Service, buffet check list, supplies.

**Unit 2                    Guéridon Service**

- History of guéridon
- Definition
- Advantages and disadvantages
- Types of trolleys used
- Equipment
- Types of alcohol used and their role
- Points to be considered while operations
- Factors to create impulse buying.

**Unit 3                    Planning & Operations Of Various F&B Outlets**

- Restaurants & bar - Layouts of functional area and ancillary areas
- Factors and steps in planning
- Space requirement
- Planning staff requirement
- Selecting and planning restaurant furniture & fixture
- Selection of heavy and light equipment, approximate cost.

**Unit 4                    Managing F&B Outlet**

- Supervisory skills
- Standard operating procedure
- Handling guest complaints
- Guest satisfaction
- Duty roasters for F & B outlets
- Trash management system (segregation and disposal)
- Breakage control and cost awareness of inventory items.

**Unit 5                    Bar Operations –II**

- Bar planning and designing
- Bar menus, bar formats and cards
- Bar control methods, bar licenses & bar stock
- Bar staffing, bar thefts and frauds
- Bar equipment, glassware and their measurements and uses.

- Planning and organizing lunch service and function catering
- Preparing dishes on gueridon trolley
  - Crepe suzette
  - Banane au rhum
  - Omelette au rhum
  - Steak Diane
  - Pineapple flambé

6. Modern Restaurant Service – John Fuller
7. Profitable Menu Planning – John Drysale

Course Objective----In this course, we look at lodging as a set of products and services that have evolved out of guest needs and preferences. We begin with the evolution of lodging to fit transportation and destination patterns and individual guest preferences. We then delineate different types of lodging properties, discussing the distinguishing characteristics of each. Emphasis is given to ensure the efficient managing and functioning of hotel housekeeping department.

1.To Identify and understand the business of rooms division department in hotels.

2.Figure out the trends in the housekeeping department in various size hotels and design specifications.

**Unit 1 Planning and Organizing**

- Area inventory list
- Frequency schedules
- Performance and Productivity standards
- Time and Motion study
- Standard operating manuals – job procedures
- Job allocation and work schedules
- Calculating staff strength and Planning duty roasters
- Budgeting- The role of executive Housekeeper, types, Importance,
- Purchasing system, controlling expenses
- Performance appraisal

**Unit 2 Flower Arrangement**

- Flower arrangements in hotels
- Equipment and material required for flower arrangement
- Conditioning of Plant material
- Styles of flower arrangements
- Principles of design as applied to flower arrangement

**Unit 3 Soft Furnishing, Windows**

- Curtains and its types
- Care and cleaning of curtains, Blinds
- Loose covers and cushions
- Care and cleaning
- Different types of windows
- Use and care of window.

**Unit 4 Energy and Water conservation in house-keeping operations, Green Environment, Air Purifier**

**Unit 5 Housekeeping Services & Facilities in institutions other than Hotels,**

**Course Outcome**---After completion of this course the student will able to:

CO 1.Plan their work schedule and staff job allocation.

CO 2Forecast and prepare departmental budget.

CO 3Track the purchasing and buying methods used in hotels.

CO4Analyse the different type of contract services.

CO5 Implement the energy and water conservation procedures.

<b>BHH604D</b>	<b>FRONT OFFICEMANAGEMENT</b>	<b>CR.-2(TH)</b>
----------------	-------------------------------	------------------

Course Objective--- This course aims to feminize students with the operational and managerial prospect of the front office department in the hotel industry.

Introduction to property management system (PMS), front office accounting; planning and evaluating operations, front office budgeting, visitors tabular ledger (VTL), sales record and control of sale of room and food, settlement of bills, night audit, credit control, occupancy ratios and yield management.

**Unit 1 Yield Management**

- Introduction and concept, hotel industry application,
- Differential rates,
- Booking horizons,
- Yield management software system
- Measuring yield

**Unit 2 Accommodation Management Aspect**

- Tariff decision,
- Various approaches to room pricing,
- Special room rates,
- Forecasting room availability: forecasting data, forecast formula,
- Budgeting for operation,
- Evaluating front office operation
- Occupancy ratios

**Unit 3 Hotel Sales**

- Selling concept,
- Purpose,
- Reading customer,
- Direct sales: travel agents, tour operators, hotel booking agencies
- Reaching customers
- E Commerce

**Unit 4 Tourism**

- Introduction, Types of tourism
- Importance
- Function: transport, travel agents, tour operators, travel formalities,
- Economic impact
- Threats and obstacles to tourism – modes of travel

**Unit 5 Six Sigma**

- Inception of six sigma in hospitality
- Various tools:
  - 5-why's
  - Kaizen
  - Fish bone
  - Single point lesson
  - Visual control
  - Poka-yoke
- Concepts of:
  - Area effective teams (AETS)
  - Process effectiveness teams (PETS)

- Total quality management (TQM)

Course Outcome---After completion of this course student will be able to--

- To explore the tools and technique of management accounting for analysis to understand different business strategies.
- To be able to analyze the affairs of the business through ratios.
- To prepare cash flow statements
- To make budgets both fixed and flexible

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

CO4	M						

H = Highly Related; M = Medium L = Low

<b>BHH614D</b>	<b>FRONT OFFICEMANAGEMENT LAB.</b>	<b>CR.-1(PR)</b>
----------------	------------------------------------	------------------

- Calculation of yield management ratios
- Role play: situation handling on various accommodation aspects
- Preparation of sales letter, brochures, promotional letter
- Internet advertising, promotion & sale of accommodation product.
- Travel Agent Voucher
- Itinerary
- **PMS – Rooms Management**

#### Reference:

1. Managing Computers In Hospitality Industry by Michael casavana and Cahell
2. Front Office Operations by Colin Dix & Chris Baird
3. Hotel Front Office Management by James Bardi
4. Management Front Office Operations by Kasavana & Brooks
5. Front Office Training Manual by Sudhir Andrews
6. Managerial Accounting And Hospitality Accounting by Raymond S ScBHHidgall

<b>BHH606D</b>	<b>Hospitality Law and Risk Management</b>	<b>CR 2(TH)</b>
<b>Unit 1</b>	<b>Law Relating to Hotel-Guest Relationship</b>	

- Definition – hotel and lodging house
- Manager of a hotel
- Owner of a lodging house
- Paying guest, Premises, tenant etc.
- Refusal of accommodation
- Eviction of a guest from hotel room
- Duties, rights and responsibilities of innkeeper towards guest
- Hotel lien

#### Unit 2            **Licenses and Permits**

- Licenses and permits for hotel and catering establishments
- Procedure for obtaining, renewing licenses, suspension and termination of licenses
- Liquor licenses- Types,
- Drinking in the licensed premises
- Different types of permits

#### Unit 3            **Food Legislation**

- Definition- adulterant
- Adulterated food
- Public analyst
- Central food laboratory
- Food inspectors and their power and duties
- Procedure to be followed by food inspectors
- Report of public analyst
- Notification of food poisoning

#### Unit 4            **Industrial Employment Standing Order Act 1946**

- Industrial Employment Standing Order Act 1946- Model standing order, show cause notice, charge sheet, domestic enquiry, discharge and dismissal of employee

#### Unit 5            **Employees Organizations and Welfare**

- Factories Act- Definition – factory, manufacturing process, adult, adolescent, child, young person calendar year, week, provision regarding health, safety and welfare
- Payment of Wages Act - Definitions industrial establishments, wages, deductions allowed under the act.
- Trade Union Act- Scope, eligibility, fund, registration, rights on the part of the employer and employee

**BHH615D**

**Research Report (Submission)**

**CR 2**

### **Purpose of Project**

The project is intended to serve the student develop ability to apply multidisciplinary concepts, tools and techniques to deal with any subject related to hospitality industry. Emphasis should be placed on industry sponsored projects.

**Types of Project**

The project may be one of the following type:

- a. Comprehensive case study
- b. Inter Organizational study
- c. Field study

**Project Supervision**

Each project shall be guided by supervisor duly appointed by the department/ coordinator.

**Project Proposal (Synopsis)**

Synopsis of the Project should be prepared in consultation with the guide and submitted in the department. The synopsis should clearly state the objectives and research methodology of the proposed project to be undertaken. It should have full detail of the rationale, description of universe sampling, research instruments to be used, limitations if any and future directions for further research etc.

**Project Documentation**

Project report should be properly documented and will include Executive summary, Research design & Methodology, Literature review and analysis, conclusion and recommendations and bibliography.

**Project Submission**

Final draft of the project should be submitted in the department duly certified by the concerned guide.

**Project Presentation & Evaluation**

Formal presentation and evaluation of the project before internal and external panel constituted by the department/coordinator together with selected target audience.

----------------	--	----------------

**Course Objectives-**To provide an in-depth knowledge of purchasing and kitchen management, and also important knowledge of hot and cold desserts

**Unit 1 Larder**

- Introduction to larder
- Definition
- Equipment used
- Layout
- Common terms used in larder
- Larder control
- Functions of larder.

**Unit 2 Charcutière**

- Introduction to charcutière
- Sausages- definition
- Types
- Types of casings
- Types of fillings
- Additives
- Binding agents and preservatives
- Forcemeat- types, Preparation and uses
- Cured Meats : Ham, Bacon, Gammon
- Galantines and ballotines- definition, preparation, uses with menu, examples and differences.
- Pates- definition, preparation, uses with menu, examples and differences.
- Mousses and mousselines- definition, preparation, uses with menu, examples and differences.

**Unit 3 Cold Sauces and Marinades**

- Chaud froid- definition
- Types and uses
- Preparation and precautions
- Aspic and Gelee- definition and uses
- Difference and preparation
- Truffle- sources, cultivation, uses and types of truffles
- Brines, cures and marinades- types, methods, preparation, uses and differences.
- Quenelles, parfaits, roulades,

**Unit 4 Frozen Desserts and Chocolates**

- Frozen desserts- types and classification
- Ice-creams- definition
- Method of preparation
- Role of stabilizers

- Over run
- Additives and preservatives used
- Chocolates- definition
- History, types, manufacturing and processing
- Tempering
- Cocoa butter
- White chocolate and its applications.

#### Unit 5              **Non- Edible Displays**

- Ice carvings
- Gum pastes
- Tallow sculptures
- Fruit and vegetable display
- Salt dough
- Pastillage
- Chocolate work.

#### **COURSE OUTCOME**

CO 1) To enable students about the managerial aspects

CO 2) To teach students about quality and Portion control.

CO 3) To master the students in particular area of culinary skill

CO4) Cold Kitchen

COe5To train the students in terms of menu planning

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

SCHOOL OF HUMANITIES AND SOCIAL SCIENCES  
DEPARTMENT OF ENGLISH

BOARD OF STUDIES : BA (HONORS) ENGLISH

ACADEMIC SESSION: 2021-22

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

## **Program Description**

Bachelor of Arts in English is a three-year undergraduate programme designed to prepare students to understand the use of the English language effectively by building vocabulary and introduce them to current ideas and issues. The programme offers deep insights into the world of literature and enables the students to critically appreciate major literary works. It strengthens the linguistic capabilities of the student through theoretical and practical sessions. The students are introduced to the political, social, cultural, economic and intellectual backgrounds of various periods in literary history. This opens up student vision and capability to acquire an understanding of life. After successful completion of the course, students can opt for careers like media & advertising, writing & publishing, journalism, public relations, content writing & blogging, creative writing, teaching and academia, etc.

## **Vision**

Our vision prevails in providing a perfect gateway to the new students who enter the core levels of learning, the freedom of enquiry, the pursuit of truth and care for others through teaching, scholarship and service of the highest calibre.

## **Mission**

Our mission is:

- To familiarize students with literary and aesthetic concepts.
- To inculcate Communication skills and Life skills for the holistic development of the students.
- To instill research and investigative aptitude in learners.
- To promote integrative research approach towards learning.
- To future ready our students by identifying their caliber and inclination and place them in a professional and competitive space.

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

### **Programme Outcomes (POs):**

**PO1 Domain knowledge:** Apply the knowledge of domain subjects, science, computer fundamentals, and humanities & social science specialization to the solution of complex individual & social problems.

**PO2 Critical Thinking:** Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

**PO3 Problem Analysis:** Stimulate into adopting an enquiring attitude towards the problems encountered, developing solutions & appreciation of the different contexts

**PO4 Design/development of solutions:** Design solutions for complex psychological, economical, political & social problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO5 Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO6 Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern IT tools including prediction and modeling to complex activities with an understanding of the limitations.

**PO7 Environment and sustainability:** Understand the impact of the professional solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

**PO8 Ethics:** Recognize the diversity and complexity of ethical dilemmas in the real world, and educate oneself to base one's actions on responsibility, and respect for human rights

**PO9 Multidisciplinary approach:** To develop multidisciplinary perspective in reference to historical, social, psychological, economic, political & cultural context.

**PO10 Effective Communication:** Articulate ideas and perspectives, by developing and enhancing the communicative skills of listening, speaking, reading, and writing in interpersonal and interactive contexts, in print and in electronic media, for various audiences and purposes.

**PO11 Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO12 Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context of socio-technological change.

*Arulinda Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

## **PROGRAMME SPECIFIC OUTCOMES FOR B.A. (HONS) ENGLISH**

**PSO-1:** Demonstrate & understand: knowledge of literary traditions, British Literature, Literatures in English and translations, genres, literary movements, and authors, in classroom discussions and debates.

**PSO-2:** Critically analyze and interpret texts/characters/themes through close reading, by drawing on relevant linguistic, cultural, and historical information, scholarship, and theories.

**PSO-3:** Write focused and convincingly argued essays, in grammatically correct and appropriate English, giving evidence of students' understanding of the prescribed texts and their contexts.

**PSO-4:** Develop four Language Skills LSRW, through practice in the controlled technological environment of the Advanced Language Lab, the skills of effective listening, and clear and impactful spoken communication, for various roles, interactions and audiences.

**PSO-5:** Scope of employability and entrepreneurship in the field of Media and Journalism, Teaching, Public Relations, Human Resource, Civil Service, Creative Writing etc.

*Arulinda Basuman*  
Head

**Faculty of Humanities and Social Science**  
**Department of English**  
**BA (Hons.) English**  
**Detailed Syllabi**

#### SEMESTER I

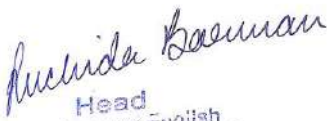

##### Core Course 1: Modern Language Usage and Applied Linguistics (BEN001C)

##### Course Objectives:

- To develop among students an insight in the process of word formation and transformation.
- To develop among students an insight into the structure of English language and develop their skills of grammatical analysis and description.
- To introduce rhetorical structures for effective writing.
- To give basic information about English sounds and phonemic transcriptions in British English (Received Pronunciation) and American English.
- To sensitize the learner about the nuances of English speech sounds, word accent, intonation and rhythm.
- To introduce core components of linguistics like phonology, morphology, syntax, semantics, discourse and pragmatics through this course.

##### Course Content

Unit 1	<b>Grammar and Usage</b>
	Basic Sentence Types
	Sentence Elements and Pattern
	Phrase Structure
Unit 2	<b>Theme Writing</b>

  
 Head  
 Department of English  
 JECRC University, JAIPUR

	<b>Vocabulary</b> One Word Substitution Idioms and Phrases Synonyms and Antonyms
Unit 3	<b>Literary Appreciation</b> <b>Focus, Theme and Emphasis</b>
Unit 4	<b>Aspects of Pronunciation</b> Knowledge of Phonemic Symbols for Sounds of English Transcription of Words and Word Stress Word Structure (Elementary Morphology) Intonation

### Suggested Readings:

- A S Hornby: A Guide to Patterns and Usage
- CIEFL: Material on Morphology and Phonology from the Distance Education Dept.
- George Yule: The Study of Language, CUP
- Geoffrey Leech: English Grammar for Today (Longman)
- Praveen K Thaker: Appreciating English Poetry, A Practical Course and Anthology, Orient Longman
- Krishna Mohan and Meenakshi Rama: Effective English Communication, Tata MacGraw Hill
- V Sasikumar and PV Dhamija: Spoken English, Tata MacGraw Hill L G Alexander: Poetry and Prose Appreciation for Overseas Students, Longman.

### Course Outcomes -

**CO1** – Student will be able to analyze specific sounds & understand systematic properties of sound system of English.

**CO2** - Student will be able to identify the symbols of all the 44 English sounds, and try to produce Received Pronunciation and transcription of the sounds.

**CO3** – Student will be able to recognize and analyze the grammatical system of English and other languages.

**CO4** – Student will be able to understand the cognitive and social dimensions of first and second language acquisition.

**CO5** – Student will be able to compare and contrast languages in terms of systematic differences in phonetics, phonology, morphology, syntax, semantics, and pragmatics.

### Course Articulation Matrix: (Mapping of COs with POs and PSOs)

CO5	3	2	2	2		3				3	3	2	3	2	3	3	2

### Core Course 2: Classical European Literature (BEN002C)

#### Course Objectives

- explore the historical, cultural, and philosophical origins of tragedy, comedy and Epics; engage with these genres in their distinctive form, style, and characterization, including their representation of human aspirations, foibles, grandeur, and vulnerability;
- examine representations of disability in mythology
- examine the debate over tragic fate and human suffering, and to locate its enduring influence over subsequent humanist writings;
- study the history of ideas pertaining to the human-social-divine interface in theorizations on form, narrative, social organization, and aesthetics
- study gendered explorations of human relations in classical literature in multiple genres, and to examine a woman writer's standpoint on love, war and the primacy of the gendered self.

#### Course Content

Unit 1	<b>Homer</b> The Iliad tr. E V Rieu (Harmondsworth : Penguin, 1975)
Unit 2	<b>Sophocles</b> Oedipus: The King tr. Robert Fagles in Sophocles: The Three Theban Plays (Harmondsworth: Penguin, 1984)
Unit 3	<b>Plautus</b> The Pot of Gold tr. E F Watling (Harmondsworth : Penguin, 1965) <b>Ovid</b> Selection from Metamorphoses 'Bacchus (Book III), Pyramus and Thisbe (BookIV), Philomela (Book VI) tr. Mary M Innes (Harmondsworth : Penguin, 1975)

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 4	<p><b>Plato</b> 'Theory of Art'; in Republic, Book 10 (Penguin Classics, 2007) pp. 240- 48; 335-53.</p> <p><b>Aristotle</b> Poetics, translated with an introduction and notes by Malcolm Heath, (London: Penguin, 1996) chaps. 6–17, 23, 24, and 26.</p>
Unit 5	<p><b>Sappho</b> (i) 'On the Throne of Many Hues, Immortal Aphrodite'; (ii) 'Some Say an Army of Horsemen', from Lyrics 1, trans. Diane J. Rayor and Andre Lardinois, in A New Translation of Complete Works, (2014).</p> <p><b>Horace</b> 'Ars Poetica', trans. H. Rushton Fairclough (Harvard University Press, 1929). Pp 451-73</p>

### Suggested Topics and Background Prose Readings for Class Presentations Topics

The Epic  
Comedy and Tragedy in Classical  
Drama  
The Athenian City State  
Catharsis and Mimesis  
Satire  
Literary Culture in August  
Rome

### Suggested Readings:

- Aristotle, Poetics translated by Malcolm Heath (London: Penguin 1996). Chapters 6 – 17, 23, 24 and 26.
- Plato, The Republic, Book X, tr. Desmond Lee (London: Penguin 2007).
- Horace, Ars Poetica tr. H Rushton Fairclough, Horace: Satires, Epistles and Ars Poetica (Cambridge Mass: Harvard University Press 2005) pp. 451 - 73.
- Bowra, C.M. Heroic Poetry (1954).
- Ford, Andrew. The Poetry of the Past (1992).
- Lawrence, W.W. Beowulf and Epic Tradition (1928).
- Pollock, Sheldon. The Language of Gods in the World of Men (University of California Press, 2006).

### Course Outcomes:

**CO1:** The student will have a perception on the wider concepts of European history.

**CO2:** The students would be able to relate to the historical past of the literary text and connect it to the present to trace the development of forms and ideas over time.

**CO3:** The student will be able to understand how reason and emotion interact in the various situations of grandeur and suffering.

**CO4:** The student will be able to apply the humanist perspective in interactive debates on explorations of human relations in different situations.

### Course Articulation Matrix: (Mapping of COs with POs and PSOs)

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Course Outcome	Program Outcomes												Program Specific outcomes				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5

### Indian Writing – Indian Literature in English Translation (BEN021C)

#### Course Objectives:

- To give students a glimpse of the vast diversity of modern Indian writing in bhasha traditions.
- To show students the polyphonic tumultuous richness of the 19th and 20th centuries from peasant life in colonial India, to the mythical reality to real reality through the myriad life-worlds of the poems and stories.
- To encourage students in a deeper engagement with and a nuanced discussion of issues of history, memory, caste, gender and resistance through poems, stories and prose selections.
- To acquaint students with the concept of 'twice born' form of writing. In the process it partakes of both the native and alien perspectives and has an inherent inclination to be postcolonial

#### Course Content

Unit 1	<b>Premchand</b> 'The Shroud', in <i>Penguin Book of Classic Urdu Stories</i> , ed. M. Assaduddin <b>Ismat Chughtai</b> 'The Quilt', in <i>Lifting the Veil: Selected Writings of Ismat Chughtai</i> , tr.M. Assaduddin <b>Gurdial Singh</b> 'A Season of No Return', in <i>Earthy Tones</i> , tr. Rana

## **Foundation Course 2: Professional Skills (DEN002A)**

### **Course Objectives**

- To enhance Professional competence in reading, writing, listening and speaking.
- Switch the approach from providing information about the language to use the language.
- Minimize the Grammar Translation Method of ELT while trying to replace it with Direct Method.
- Introduce Communicative Method of ELT and focusing the teaching pedagogy on the student-centred learning rather than on the teacher-centred learning.
- Ability to master three major forms of communications which are vital in academic and professional settings namely professional presentations, interviews and group communications respectively.
- Providing a deep insight into the techniques for delivering effective presentations, winning job interviews, and actively participating in various forms of group communication.

### **Course Content**

UNIT 1	<b>Professional Grooming and Professional Culture:</b> Basics of corporate culture, Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
--------	---

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

UNIT 2	<b>Advanced Grammar:</b> Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
UNIT 3	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports
UNIT 4	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms
UNIT 5	<b>Reading Comprehension:</b> Reading different types of documents including Passages, Reports, Technical Essays, Speeches, Research Articles, Newspaper articles, Interviews etc-Skimming and Scanning-Inference and Deduction,

#### Syllabus: Lab

UNIT 1	<b>Professional Grooming and Professional Culture:</b> Role plays and Activities on Dressing sense-personal hygiene, Cultural adaptability, Body language components: undesirable and desirable body language, Team-ship, Leadership, Stress and Conflict management
UNIT 2	<b>Advanced Grammar:</b> Exercise Sessions for Common errors related to prepositions, articles, models , Conditionals, Determiners etc, Punctuation, Proof-reading and Editing of Documents
UNIT 3	<b>Composition:</b> , Memo, Notice, Circular, Book Review, Research Article, Reports – Giving Assignments based on practical applications, Practice sessions on different topics
UNIT 4	<b>Vocabulary Building:</b> Words often misspelt, One Word Substitution, Phrasal Verbs, Idioms- Activities related to the appropriate use of words
UNIT 5	<b>Reading Comprehension:</b> Practice Reading Unseen Paragraphs- Finding Suitable title, Summarizing, Analyzing, Finding new words etc

#### Suggested Readings:

- Anderson, Paul. Technical Communication: A Reader Centered Approach, V Edition, Hercourt, 2003.
- Felixa Eskey. Tech Talk, University of Michigan. 2005
- Kenneth, Anderson, Tony Lynch, Joan Mac Lean. Study Speaking. New Delhi: CUP, 2008.
- Lynch, Tony. Study Listening. New Delhi: CUP, 2008.
- Marks, Jonathan. English Pronunciation in Use. New Delhi: CUP, 2007.
- Michael Swan. Practical English Usage, Oxford University Press. 2005
- Syamala, V. Effective English Communication For You (Functional Grammar, Oral and Written Communication): Emerald, 2002.
- Thampi, G. Balamohan. Meeting the World: Writings on Contemporary Issues. Pearson, 2013.

#### Course Outcomes (CO):

##### At the end of this course students will have:

CO1: Ability to design a language component or process to meet desired need within realistic, Constraints such as economic, environmental, social, political, ethical, scenario

CO2: Ability to analyze the usage of English words in professional scenario.

CO3: An understanding of technical and academic articles' comprehension.

CO4: The ability to present oneself at multinational levels as per the demand of the corporate culture

#### Course Articulation Matrix: (Mapping of COs with POs and PSOs)

*Ruchika Basuman*  
Head  
Department of English

### **Language and Linguistics – Introduction to Phonetics and Phonology (BEN028C)**

#### **Course Objectives**

- To introduce the students to the different branches of Phonetics.
- To introduce the students to the mechanism of producing various speech-sounds.
- To introduce the students to the vowel and consonant sounds and their application in words.
- To introduce students to the paralinguistic features of stress, tone and rhythm.
- To introduce to syllables and the concepts related to phonology.

#### **Course Content**

<b>UNIT 1</b>	Introduction to Phonetics: Definition and branches. Brief sketch of articulatory, acoustic and auditory phonetics
<b>UNIT 2</b>	Speech and Sounds: Formation of speech sounds; Organs of Speech: Air stream mechanisms  Sounds formed using non-pulmonic air stream: Ejectives, implosives and clicks

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

<b>UNIT 3</b>	Classification of speech sounds: Segmentals  Vowels and Consonants  Classification of consonants: Place and manner of articulation, voiceless and voiced consonants  Classification of vowels: Concept of cardinal vowels Semivowels and diphthongs Phonetic Transcription
<b>UNIT 4</b>	Formation and Classification of speech sounds: Suprasegmentals: Stress, Rhythm, and Intonation
<b>UNIT 5</b>	Phonology: Definitions of phoneme and allophones. Syllable: Types and structure of Syllable

 Head  
 Department of English  
 JECRC University, JAIPUR

Unit 4	<b>Editing and Preparing for Publication</b> a) Editing and proof reading your manuscript b) Preparing a manuscript for Publication
--------	---

### Prescribed Text

*Creative Writing: A Beginners' Manual* by Anjana Neira Dev et al. for The Department of English University of Delhi New Delhi Pearson 2008.

### Recommended Additional Resources

*Cambridge Companion to Creative Writing* edited by David Morley and Philip Nielsen. Cambridge University Press: Cambridge 2012.

### Suggested Methods of Internal Evaluation

It is recommended that students be asked to prepare a portfolio of original writings which will include any 4 from:

- Illustrated examples using tropes and figures of speech in writing
- A Poem
- A Short Story
- A Dramatic Sequence
- Writing for Children -- a poem/short story/dramatic sequence
- A Dummy Manuscript

A poem/short story/dramatic sequence in a different form from the one used in a)/b)/c)

### Course Outcomes

**CO1** - This course will introduce students to a variety of tropes and figures of speech and sensitize them to the texture of literary language.

**CO2** - This will help them to understand the importance of reading with a view to unlocking the writers' craft.

**CO3** - The students will be introduced to the various forms of poetry fiction and drama and the wide range of possible genres within them.

**CO4** - The students will be made aware of the range of career opportunities that exist within the field of creative writing as well as within the realm of theatre and performance.

**CO5** - This course will encourage students to revise their work critically and inculcate the skills of editing and preparing their work for publication.

### Open Elective 2: Reading Shakespeare

#### Course Objectives:

- This Course intends to familiarize students with the writings of Shakespeare.
- The student will be familiarized with the tradition of Elizabethan Theatre and English (Shakespearean) Sonnets.
- The aim of this course familiarizes the student with the society of the 16<sup>th</sup> century England and its depiction in dramas of Shakespeare.

#### Course Content:

Unit 1	<b>Sonnets:</b> Sonnet 30: When to the sessions of sweet silent thought Sonnet 55: Not Marble, nor the gilded monuments
--------	---

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

	Sonnet 104: To me, fair friend, you never can be old
<b>Unit 2</b>	Merchant of Venice OR As You Like It
<b>Unit 3</b>	Julius Caesar
<b>Unit 4</b>	Othello

#### **Suggested Readings:**

- Stephen Greenblatt: *Will in the World: How Shakespeare became Shakespeare* (2004)
- Harold Bloom: *Shakespeare: The World as a Stage*
- A.C. Bradley: *Shakespearean Tragedy*
- Patrick Cheney ed. *The Cambridge Companion to Shakespeare's Poetry*
- Michael Dobson ed. *The Oxford Companion to Shakespeare*
- John Julius Norwich, *Shakespeare's Kings: The Great Plays and the History of England in the Middle Ages: 1337-1485*
- Samuel Taylor Coleridge, *Coleridge on Shakespeare: The text of the Lectures of 1811-12*
- Stanley Wells ed. *William Shakespeare: A Textual Companion*

#### **Course Outcomes:**

**At the end of this course the student will be able to:**

CO1: The Student will have an understanding of the Sonnet form of Poetry.

CO2: The student will gain an insight of the society of 16<sup>th</sup> century England.

CO3: The student will gain knowledge of the traditional dramatic structure of Elizabethan Age.

CO4: The students will be able to analyse different types and forms of drama.

CO5: This course will encourage the students to indulge in reading more dramas and understand the history and society of the time in which the drama is set.

## **SEMESTER IV**

### **Core Course 9: British Prose and Fiction I (BEN009C)**

#### **Course Objectives:**

- To introduce the students with the beginnings of prose writing culture in English Literature.
- To acquaint students with the growth and development of the English novel through the eighteenth and a major part of the nineteenth century,
- To introduce the students to the social and cultural contexts, and the major trends in fiction writing.
- To develop an understanding of structure and style of prose writing as being different from poetry and drama.

#### **Course Content:**

<b>Unit 1</b>	<b>Francis Bacon</b> Of Studies Of Simulation and Dissimulation
<b>Unit 2</b>	<b>Daniel Defoe</b> Robinson Crusoe
<b>Unit 3</b>	<b>Hannah More</b> Village Politics: Addressed to all the Mechanics, Journeymen and Day-Laborers in Great Britain

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

<b>Unit 4</b>	<b>George Eliot</b> Silas Mariner
<b>Unit 5</b>	<b>Jonathan Swift</b> Gulliver's Travels (Book III & IV)

### **Suggested Topics and Readings for Class Presentations**

Rise of English Prose (Essays, Political Discourses)  
The English Novel  
Print Culture and Readership  
The Picaresque Novel  
Travel Fiction  
English Society and Novels

### **Core Course 12: British Prose and Fiction II (BEN012C)**

#### **Course Objectives:**

- To understand how fiction records and alters social and cultural realities.
- To understand the strategies of narrative, theme and image that fiction uses to take forward this task.
- Get a wide exposure of eminent writers like Jane Austen, Emily Bronte, Charles Lamb, William Hazlitt and Charles Dickens and Virginia Woolf's famous description of Shakespeare's sister. Their unique styles of writing and imagination help to enhance their creative writing skills.
- Conceptualize the Genre of Novel and its types viz. Allegorical, Gothic, Historical, Epistolary, Picaresque, and Psychological.
- Become well acquainted with the literary genre of Novel, Non-Fiction, Essays and Short Story and literary devices of allegory and metaphor, satire, and stream of consciousness technique

#### **Course Content**

Unit 1	<b>Jane Austen</b> Pride and Prejudice
--------	---

*Arulinda Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 2	<b>Emily Bronte</b> Wuthering Heights
Unit 3	<b>Charles Lamb</b> Essays of Elia [Any two]  <b>William Hazlitt</b> On Posthumous Fame – Whether Shakespeare was in love of it. On the Literary Character
Unit 4	<b>D H Lawrence</b> Love Among the Haystacks  <b>Thomas Hardy</b> Life's Little Ironies [Any Two Stories]
Unit 5	<b>Virginia Woolf</b> A Room of One's Own <b>Charles Dickens</b> Great Expectations

#### **Suggested Topics and Readings for Class Presentations:**

Women in English Society in the Nineteenth Century

Psychoanalysis

Industrialization

Memory and Present

Matrimony in English Culture

#### **Suggested Readings:**

- Booth, Wayne C. *The Rhetoric of Fiction*.
- Chakrabarty, Dipesh, *Provincialising Europe*.
- Ford, Boris, General Editor. *From Dickens to Hardy, Pelican History of English Literature*, Vol. VI.
- Frazer, G.S. *The Modern Writer and His World* (Pelican, 1964).
- James, Henry. "The Art of Fiction".
- M. Kirkham, *Jane Austen, Feminism and Fiction* (Brighton, 1983)
- Raymond Williams, 'Introduction', in *The English Novel from Dickens to Lawrence* (London: Hogarth Press, 1984) pp. 9–27.
- Rich, Adrienne. *A Human Eye: Essays on Art in Society*, 1997-2008.
- *The Cambridge Companion to Modernism*. Ed. Michael Levenson (Cambridge: CUP, 1999).
- Trotter, David. "The Modernist Novel."
- Weston, Jessie. *From Ritual to Romance*.
- Wollstonecraft, Mary. *A Vindication of the Rights of Woman* (1792).
- Woolf, Virginia. "Modern Fiction" in *The Common Reader*.

#### **Course Outcomes:**

**CO1:** The student will understand the social, historical and political backgrounds of the world of the novelists and short story writers through the elaborate and allegorical descriptions.

**CO2:** The student will recognize the didactic issues underlying the author's work -- his or her insights into the principles that govern human behavior.

**CO3:** The student will be able to identify a variety of literary devices such as (though not limited to) plot, characterization, exposition, point of view,

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

themes, motifs, symbols, style, tone, atmosphere, climax, dialogue, imagery, irony, motivation, narration, pacing, realism, naturalism, voice, satire, and etc.

**CO4:** The student will acquire a broad perspective of the essays, commentaries and novel as literary genres and the relevant historical, geographical, and cultural identity-based backgrounds.

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

### **Discipline Specific Elective - 4**

#### **World Literature – Asian Literature (BEN018C)**

#### **Course Objectives**

- To develop skills in formal description, textual analysis, and interpretation through close reading of primary texts, and to refine skills of analytical writing and scholarly argumentation using literary sources.
- Do enable students to put select novels and short-stories into context to be able to understand socio-cultural space of Asia.

#### **Course Content**

UNIT 1	<b>Elif Shafak</b> The Architect's Apprentice
UNIT 2	<b>Jasmine Darznik</b> Song of a Captive Bird
UNIT 3	<b>Haruki Murakami</b> A Wild Sheep Chase
UNIT 4	<b>Khaled Hosseini</b> <i>A Thousand Splendid Suns</i>

*Renuka Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

UNIT 5	<b>Romesh Guneseakra</b> Reef  <b>Kamila Shamsie</b> Kartography
--------	--

### Suggested Readings

- Elif Shafak. *The Architect's Apprentice*. Penguin, 2015.
- Haruki Murakami. *A Wild Sheep Chase*. Vintge, 1982.
- Jasmine Darznik. *Song of a Captive Bird*. Random House, 2018.
- Kamila Shamsie. *Kartography*. Mariner Books, 2001.
- Khaled Hosseini. *A Thousand Splendid Suns*. Riverheads, 2007.
- Romesh Guneseakra. *Reef*. Granta Books. 1994, 1994.

### Course Outcomes (CO):

**At the end of this course students will have:**

**CO1:** textual analysis, and interpretation through close reading of primary texts, and to refine skills of analytical writing and scholarly argumentation using literary sources.

**CO2:** select novels and short-stories into context to be able to understand socio-cultural space of Asia. **CO3:** understanding of Asian cultures and global interactions through historical traditions in diverse Asian cultures

**CO4:** challenge issues, confronts the reader with political debates and moral uncertainties

### Course Articulation Matrix: (Mapping of COs with POs and PSOs)

### Indian Writing – War and Partition Literature (BEN024C)

#### Course Objectives:

- To enable an understanding of the affective dimensions of the Partition in varied geopolitical spaces.
- To aid the student in comprehending the country's postcolonial realities.
- To introduce students to the following topics through the study of literary texts: colonialism nationalisms and the Partition of India in 1947 communalism violence and the British Rule in India homelessness exile and migration women and children in the Partition refugees rehabilitation and resettlement borders and borderlands.

#### Course Content

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 1	<b>Intizar Husain</b> Basti, tr. Frances W. Pritchett
Unit 2	<b>Amitav Ghosh</b> The Shadow Lines. <b>Bhishm Sahani</b> Tamas
Unit 3	<b>Bapsi Sidhwa</b> Cracking India/Ice Candy Man
Unit 4	<b>Sa'adat Hasan Manto</b> Toba Tek Singh <b>Navtej Singh</b> An Evening in Lahore
Unit 5	<b>Jibbananda Das</b> I Shall Return to This Bengal <b>Gulzar</b> Toba Tek Singh (Poem)

#### Films

*Garam Hawa* (dir. M.S. Sathyu, 1974).

*Khamosh Paani: Silent Waters* (dir. Sabiha Sumar, 2003).

*Subarnarekha* (dir. Ritwik Ghatak, 1965)

#### Suggested Topics and Readings for Class Presentation Topics

Colonialism, Nationalism, and the Partition

Communalism and Violence

Homelessness and Exile

Women in the Partition

#### Background Readings and Screenings

- Ritu Menon and Kamla Bhasin, 'Introduction', in *Borders and Boundaries* (New Delhi: Kali for Women, 1998).
- Sigmund Freud, 'Mourning and Melancholia', in *The Complete Psychological Works of Sigmund Freud*, tr. James Strachey (London: Hogarth Press, 1953) pp. 3041–53.
- Sukrita P. Kumar, *Narrating Partition* (Delhi: Indialog, 2004).
- Urvashi Butalia, *The Other Side of Silence: Voices from the Partition of India* (Delhi: Kali for Women, 2000).

#### Course Outcomes

**CO1** – Student will develop a strong understanding of the complex politics that led to the partition of the Indian subcontinent into the two states of India and Pakistan.

**CO2** – Student will have an insight to human and social costs of geo-political power struggles.

**CO3** – Student will have an understanding of how “History” informs literature.

**CO4** – Student will be able to comprehend the sense of alienation and exile in the context of partition.

**CO5** – Student will be able to understand the role and position of women during partition.

*Ruchida Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

**Language and Linguistics – Introduction to Morphosyntactics (BEN030C)**

**Course Objectives**

- To introduce the students to the different branches of Morphology.
- To introduce the different types of morphemes that helps in word formation.
- To introduce the students to the process of word formation.
- To introduce students to the basic concepts of syntax.
- To introduce the students to the basic syntactic concepts that helps in sentence formation.

**Course Content**

UNIT 1	Introduction to Morphology: Morphemes, Morphs, Allomorphs, Branches of Morphology: Inflectional & Derivational Morphology
UNIT 2	Types of Morphemes: Free & Bound Morphemes, Roots / Stems / Bases / Affixes, Inflectional / Derivational Morphemes, Paradigms & Zero Allomorphs, Superfixes Classification of Words: Structure & Classification A.Simple / Complex / Compound / Compound-Complex Words
UNIT 3	Processes of Word Formation: Affixation / (Multiple Affixation), Inflection, Derivation, Back Formation, Compounding, Combining Forms, Reduplication, Clipping, Blending, Echoism / Onomatopoeia, Coinage / Invention, Borrowing, Conversion
UNIT 4	Parts of Speech / Word Classes A.Content Words / Open Classes of Words 1.Nouns / Verbs / Adjectives / Adverbs B.Function Words / Closed Classes of Words 1.Syntactic Devices 2.Noun Determiners 3.Auxiliaries 4.Intensifiers

  
 Head  
 Department of English  
 JECRC University, JAIPUR

UNIT 5	Phrase structure, Clause structure, Sentence structure
--------	--

### Miscellaneous – Children Literature and Studies (BEN036C)

#### **Course Objectives:**

- To appreciate the value of multicultural and international children's literature in developing an understanding of and appreciation for other cultures through literary genres
- To understand how authors use literary devices to get their message through
- To understand how children's books support children's development (cognitive, social, emotional, language and aesthetic development)
- To appreciate how adults scaffold children's thinking through dialogic reading and read aloud activities
- Knowledge and understanding of the interrelatedness of local, global, international and intercultural issues, trends and systems through the use of children's literature that addresses global issues

#### **Course Content**

Unit 1	<b>Lewis Carroll</b> Looking Through the Glass
Unit 2	<b>Jane Wang</b> The Prince and the Dressmaker <b>E B White</b> Charlotte's Web
Unit 3	<b>Fairytales</b> Cindrella, Sleeping Beauty, Red Riding Hood <b>Vishnu Sharma</b> Panchtantra (any two stories) <b>Satyajit Ray</b> Feluda Series (Any two Stories)

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 4	<b>Ruskin Bond</b> Room on the Roof and The Flight of Pigeons <b>Ogden Nash</b> Children Party
Unit 5	<b>Roald Dahl</b> Snow White and the Seven Dwarf <b>R L Stevenson</b> My Shadow  <b>Shel Silverstein</b> Falling Up The Wild Cherote Snowball

### Readings

- “Children’s Books: History and Trends”
- “Organising Children’s Literature by Genre” (these are Chapter 5 and Chapter 6 from Tunnell, Michael O, James S. Jacobs, Terrel A Young and Gregory Bryan. *Children’s Litertaure: Briefly*. Pearson: Boston, 2012. Print)
- Charles Sarland: “Ideology”
- Karín Lesnik-Oberstein: “Essentials: What is Children’s Literature? What is Childhood?”
- Peter Hunt: “Introduction: The World of Children’s Literature Studies”

### Course Outcomes

**CO1** – Student will understand how children’s books support children’s multiple perspectives and empathy while promoting their cognitive, social, emotional, language and aesthetic development.

**CO2** - Understand developmentally appropriate practices in which literature can and does support the goals of early childhood education.

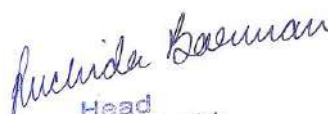

**CO3** - Student will be able to apply technology to organize and integrate assessment information.

**CO4** – Student will be able to recognize the importance of ELLs’ home languages and language varieties, and build on these skills as a foundation for learning English.

**CO5** – Student will be able to recognize how to cognitively engage children with and without disabilities.

### Discipline Specific Elective - 5

#### World Literature – Canadian Literature (BEN019C)

#### Course Objectives

- To introduce the students to Canadian literature through the close reading of the selected texts.
- To make them approach selected texts for their literary value and cross cultural importance

#### Course Content

UNIT 1	Michael Ondaatje: <i>The English Patient</i>
UNIT 2	Wilfred Campbell : “The Winter Lake” A. J. M. Smith : “Live as Old Proud King in Parable”
UNIT 3	George Ryga : <i>Ecstasy of Rita Joe</i>
UNIT 4	Margaret Atwood : <i>The Handmaid’s Tale</i>
UNIT 5	Alice Munro : “Red Dress” Alistair MacLeod : “As Birds Bring Forth the Sun”

#### Suggested Readings

- Alice Munro. “Red Dress”. Project Gutenberg.
- Alistair MacLeod. “As Birds Bring Forth the Sun”
- George Ryga. *Ecstasy of Rita Joe*. Talonbooks, 1970.
- Margaret Atwood. *The Handmaid’s Tale*. Picador, 1985.
- Michael Ondaatje. *The English Patient*. McClelland & Stewart, 1992.
- Mosaics: An Anthology of Canadian Literature. Mainspring Publishers. Chennai-600042.

#### Course Outcome:

**At the end of this course students will have:**

**CO1:** Identify and explain key literary terms, in relation to Canadian style

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

**CO2:** Explain Canadian historical and geographical content, with reference to the individual literary pieces

**CO3:** Interpret readings through written submissions, including proper vocabulary analysis

**CO4:** Indicate what type of audience each Canadian author is addressing

**CO5:** Explain why each author's style is unique to the individual piece

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

### **Indian Writing – Literature of Peripherals (BEN025C)**

#### **Course Objectives:**

- Since the twentieth century, literary texts from varied contexts in India have opened up new discursive spaces from within which the idea of the normative is problematized. Positions of marginality, whether geographical, caste, gender, disability, or tribal, offer the need to interrogate the idea of the normative as well as constitutions of the canon. Though this engagement has been part of literary academic analysis, it has just begun making its foray into the syllabus of English Departments of Indian universities
- This paper hopes to introduce undergraduate students to perspectives within Indian writing that acquaint them with both experiences of marginalization, alongside with examining modes of literary stylistics that offer a variation from conventional practice

#### **Course Content**

### Suggested Topics and Readings for Class Presentations

Community, Marginalization  
Dalit Literature, Caste in Literature  
Images and representation in Literature  
Gender,  
Marginalization of Gender, Caste, Disability and Location  
North Eastern Literature

### Suggested Readings:

- Anwesha Ghosh, *Identity and Marginality in India: Settlement Experience of Afghan Migrants*
- Asmita Bhattacharyya and Sudeep Basu ed. *Marginalities in India: Themes and Perspectives*
- Bala Ramulu Chinnala, *Marginalized Communities and Decentralized Institutions in India: An Exclusion and Inclusion Perspective*
- Barua, Manjeet. "Political Literature from the North East".
- Baruah, Sanjeev. *India Against Itself*.
- Chandra, N.D.R. and Nigamananda Das. *Ecology, Myth and Mystery: Contemporary Poetry in English from North East India*.
- Daruwalla, Keki N. "Poetry and the North East".
- Hazarika, Sanjoy. *Strangers of the Mist: Tales of War and Peace from India's Northeast*.
- Horam, M. *North East India: A Profile*.
- Karmawphang, Desmond Lee and Robin Ngangom, eds. *Anthology of Contemporary Poetry*.
- Kashyap, Aruni. "Some Thoughts on Literature from India's North East".
- Nadeem Hasnain, *Sociology of Marginalized Communities and Weaker Sections in India*
- Rajakishor Mahana, *Negotiating Marginality: Conflicts over Tribal Development in India*
- Samrat Choudhary, *Insider Outsider - Dhkars, Chinkies & Role Reversals: Writings from the Northeast of India*
- Santosh Gupta and Bandana Chakrabarty ed. *Dalit Writing: Emerging Perspectives*
- Supriya Agarwal, Neha Arora and Ved Prakash ed. *Understanding Marginality: Cultural and Literary Perspectives*
- Yasmin Saikia and Amit R. Baishya ed. *Northeast India: A Place of Relations*
- Yatindra Singh Sisodia and Tapas Kumar Dalapati ed. *Social Inclusion of Marginalised in India: State policies and Challenges*

*Renuka Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

### Course Outcomes

**CO1** - Students will approach to literature through the lens of varied identity positions and evolve in them a fresh critical perspective for reading literary representations

**CO2** – Student will be able to explore various forms of literary representations of marginalization as well as writing from outside what is the generally familiar terrain of Indian writing in schools

**CO3** – Student will be aware of the different ways in which literary narratives are shaped, especially since some of the texts draw on traditions of the oral mythic folk and the form of life-narrative as stylistics

**CO4** – Student will understand how literature is used also to negotiate and interrogate this hegemony

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

### Miscellaneous – Life Narratives (BEN037C)

#### Course Objectives:

- To learn the elements of biography and autobiography
- To determine what information is included in biographies and autobiographies.
- To identify the text structure used in biographies and autobiographies and explain why it is used.
- To compare/contrast the use of point of view and text structure in biographies and autobiographies

#### Course Content

Unit 1	<b>Binodini Dasi</b> <i>My Story and Life as an Actress</i> , pp. 61-83 (New Delhi: Kali for Women, 1998). <b>A.Revathi</b> <i>Truth About Me: A Hijra Life Story</i> , Chapters One to Four, pp. 1-37 (New Delhi: Penguin Books, 2010.)
Unit 2	<b>Mark Twain</b> Own Autobiography (excerpts) <b>Dalai Lama</b> Freedom and Exile (excerpts)
Unit 3	<b>Sylvia Nasar</b> <i>A Beautiful Mind</i>

  
Head  
Department of English  
JECRC University, JAIPUR

Unit 4	<b>Laura Hillenbrand</b> Unknown: A World War II Story of survival, resilience and redemption
Unit 5	<b>J. Drew Lanham</b> The Home Place: Memoirs of a Colored Man's Love Affairs with Nature

### **Suggested Topics and Background Prose Readings for class Presentations:**

Self and society

Role of memory in writing Autobiography as resistance

Autobiography as rewriting history

### **Readings:**

- James Olney, 'A Theory of Autobiography' in *Metaphors of Self: the meaning of autobiography* (Princeton: Princeton University Press, 1972) pp. 3-50.
- Laura Marcus, 'The Law of Genre' in *Auto/biographical Discourses* (Manchester: Manchester University Press, 1994) pp. 229-72.
- Linda Anderson, 'Introduction' in *Autobiography* (London: Routledge, 2001) pp.1- 17.
- Mary G. Mason, 'The Other Voice: Autobiographies of women Writers' in *Life/Lines: Theorizing Women's Autobiography*, Edited by Bella Brodzki and Celeste Schenck (Ithaca: Cornell University Press, 1988) pp. 19-44.

### **Course Outcomes**

**CO1** – Student will learn about the form and elements of biography and autobiography.

**CO2** – Student will be able to plan a personal narrative using pre writing technique.

**CO3** – Student will be able to identify key language, structure, organization and presentational features in life writing.

**CO4** – Student will learn to interpret biography and autobiography as rewriting of history.

**CO5** – Student will be able to read the text in context of self and society.

### **Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

### **Open Elective 3: Reading Poetry (DEN005A)**

#### **Course Objectives:**

- To familiarize the student with different poetic forms of expression.
- To introduce the students to different poetic appreciation techniques and structures of criticism.
- To make the student read and understand poetry of different poets belonging to different ages, societies and cultures.
- To make the student familiar with different societal issues presented by the poets through the poems.

#### **Course Content:**

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

<b>Unit 1</b>	Types of Poetry (Sonnet, Lyric, Ballad, Elegy, Ode, Epic, Mock-Epic, etc.) Appreciation of Poetry (Plot, Language, Rhyme, Tone, Figures of Speech & Thought, etc.)
<b>Unit 2</b>	<b>Rudyard Kipling</b> If <b>Kabir Das</b> Are You Looking for Me? What is seen is not Truth
<b>Unit 3</b>	<b>Samuel Taylor Coleridge</b> The Rime of The Ancient Mariner <b>Kamala Das</b> The Looking Glass A Hot Noon in Malabar
<b>Unit 4</b>	<b>Maya Angelou</b> Still, I Rise / Caged Bird <b>Jayant Mahapatra</b> Hunger A Summer Poem

### Suggested Readings

Rene Wellek, *Genre Theory, The Lyric and Erlebnis*  
Susan Stewart, from *Poetry and the Fate of Senses* (Introduction and Chapter I)  
Aamir Mufti, *Towards A Lyric History of India*  
Loius Martz, *The Poetry of Meditation*  
Martin Heidegger, *Poetically, Man Dwells*  
Plato, *Ion*  
David Buchan, from *Ballad and the Folk*  
Susan Manning, *Antiquarianism, Balladry, and the Rehabilitation of Romance*  
Brian McHale, —*Beginning to Think about Narrative in Poetry*, *Journal of Narrative* 17 (2009): 11–30.  
Peter Hühn and Jörg Schöner, —Introduction: *The Theory and Methodology of the Narratological Analysis of Lyric Poetry*. In *The Narratological Analysis of Lyric Poetry: Studies in English Poetry from the 16th to the 20th Century*, edited by Peter Hühn and Jens Kiefer, 1–14. Berlin: de Gruyter, 2005  
Bruce Heiden, *Narrative in Poetry: A Problem of Narrative Theory*  
Gilles Deleuze, *The Logic of Sense —Introduction: Is There a There There?* from *Sean Latham and Gayle Rogers, Modernism: Evolution of an Idea* (London: Bloomsbury, 2015), pp. 1-16.

### Course Outcomes:

CO1: The student will be able to identify and understand the different types of poetry and appreciate it critically.  
CO2: The student will be able to address the different societal issues presented in different poetries.  
CO3: The student will be able to compare the poetry of Indian descent with that of other western countries and point out the similarities and dissimilarities in them.  
CO4: They will get a sense that poetry is not only written text but also the spoken word and has oral as well as aural possibilities.

### SEMESTER VI

#### Core Course 13: Postcolonial Literature (BEN013C)

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

**Course Objectives:**

- To introduce the students to post-colonial literature that includes the theory and concepts of post-colonial studies.
- To familiarize students with development and practice of post-colonial theory.
- To enable students to make a critical analysis of a work of art within the frames of post-colonial studies.
- To facilitate students to gain knowledge about the terms and concepts exclusives of post-colonial literature

**Course Content**

Unit 1	<b>Chinua Achebe</b> Man of The People
Unit 2	<b>Gabriel Garcia Marquez</b> Chronicle of a Death Foretold
Unit 3	<b>Jean Rhys</b> Wide Sargasso Sea
Unit 4	<b>Bessie Head</b> The Collector of Treasures <b>Ama Ata Aidoo</b> The Girl who can <b>Grace Ogot</b> The Green Leaves  <b>Pablo Neruda</b> Tonight I can write The Way Spain Was
Unit 5	<b>Derek Walcott</b> A Far Cry from Africa Names <b>David Malouf</b> Revolving Days Wild Lemons <b>Mamang Dai</b> Small Towns and the River The Voice of the Mountain

**Suggested Topics and Background Prose Readings for Class Presentations Topics**

De-colonization, Globalization and Literature

Literature and Identity Politics

Writing for the New World Audience

Region, Race, and Gender

Postcolonial Literatures and Questions of Form

**Readings**

- Franz Fanon, 'The Negro and Language', in Black Skin, White Masks, tr. Charles Lam Markmann (London: Pluto Press, 2008) pp. 8–27.
- Gabriel Garcia Marquez, the Nobel Prize Acceptance Speech, in Gabriel Garcia Marquez: New Readings, ed. Bernard McGuirk and Richard Cardwell (Cambridge: Cambridge University Press, 1987)
- Ngugi wa Thiong'o, 'The Language of African Literature', in Decolonising the Mind (London: James Curry, 1986) chap. 1, sections 4–6.

*Ruchida Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

### Course Outcomes

**CO1** - Students will gain knowledge about the terms and concepts exclusive to the post-colonial literature.

**CO2** - Students will be familiarized with the development of post-colonial literature

**CO3** - Students will be acquainted with the major theories and reputed writers who practice those theories.

**CO4** - Students will understand that how the colonial power has provoked from the nation in their search for a literature of their own.

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

Course Outcome	Program Outcomes												Program Specific outcomes				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5

### Core Course 14: Dissertation I (BEN014C)

#### Course Objectives:

- To develop research aptitude in students so that they can design and conduct an original and ethical research.
- To make students write a dissertation in the MLA format.
- To learn researches like empirical/data based (quantitative, qualitative, or mixed-methods)
- To do critical review of research and theory.
- To gain insights about the domain researched and critically reflecting on the steps of the research process.

#### Course Content

Unit 1	Abstract & Introduction: Understanding the area of research, ethical guidelines of research, and finalization of Topic; Theoretical underpinnings
Unit 2	Review of Literature: Understanding and exploration of related research in the discipline
Unit 3	Methodology: Designing the Study, Methods of Data Collection as per the requirements of the topic and design

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 4	Data Analysis & Discussion: Qualitative and/or Quantitative Analysis as per the design and aims of the research
--------	---

### Course Outcomes

CO 1: Students will be able to design and conduct an original and ethical research.

CO 2: Students will be able to write a dissertation in the MLA format.

CO 3: Students will learn researches like empirical/data based (quantitative, qualitative, or mixed-methods)

CO 4: Students will be able to do critical review of research and theory.

CO 5: They will gain insights about the domain researched and critically reflecting on the steps of the research process.

### Discipline Specific Elective 6

#### World Literature – Caribbean Literature (BEN020C)

#### Course Objectives

- To introduce the students to Caribbean literature through the close reading of the selected texts.
- To make them approach selected texts for their literary value and cross cultural importance

#### Course Content

UNIT 1	<b>Derek Walcott:</b> “A Far Cry from Africa” <b>Nancy Morejon:</b> “Black Woman”
UNIT 2	<b>V. S. Naipaul:</b> Half a Life

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

UNIT 3	<b>Olive Senior:</b> “Summer Lightning” <b>Jamaica Kincaid:</b> “In the Night”
UNIT 4	<b>Aimé Césaire:</b> <i>The Tragedy of King Christophe</i>
UNIT 5	<b>John Agard:</b> “Half-Caste” <b>Edward Baugh:</b> “The Carpenter’s Complaint”

### Suggested Readings:

- Selections from Caribbean Literature. Mahaam Publishers, Chennai – 78.
- V. S. Naipaul. *Half a Life*. Pan Macmillan, 2012.
- Derek Walcott: “A Far Cry from Africa”. Poets.org.
- Nancy Morejon: “Black Woman”. Poets.org.
- Aimé Césaire: *The Tragedy of King Christophe*. Grove Press, 1970.
- John Agard: “Half-Caste”. Amnesty.org.
- Edward Baugh: “The Carpenter’s Complaint”. Amnesty.org.
- Olive Senior: “Summer Lightning” Project Gutenberg.
- Jamaica Kincaid. Collected Poems.

### Course Outcomes

**At the end of this course students will have:**

**CO1:** the understanding of the background of Caribbean Literature.

**CO2:** Explain Caribbean historical and geographical content, with reference to the individual literary pieces

**CO3:** associate the context of Caribbean literature in English with the socio cultural contexts of other streams in New Literatures in English.

**CO4:** Indicate what type of audience each Caribbean author is addressing

**CO5:** Explain why each author’s style is unique to the individual piece

### Course Articulation Matrix: (Mapping of COs with POs and PSOs)

### Indian Writing – Contemporary Literature in English (BEN026C)

### Course Objectives

- This paper seeks to introduce the students to genres such as romance, modern Indian fiction, fantasy/mythology, which have a —mass appeal, and can help us gain a better understanding of the popular roots of Indian literature.
- To enable students to trace the rise of popular modern culture in India, and the emergence of genre fiction and bestsellers
- To familiarize students with debates about culture, traditions, myths, superstitions etc.

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

- To help them engage with debates about the canonical and non-canonical, and hence investigate the category of literary and non-literary writing.

### Course Content

UNIT 1	<b>Agha Shahid Ali</b> “The Country Without a Post Office”  <b>Basharat Peer</b> Curfewed Night
UNIT 2	<b>Ashwin Sanghi</b> Chanakya Chants
UNIT 3	<b>Manjula Padmanabhan</b> <i>Harvest</i>
UNIT 4	<b>Vikram Seth</b> “Round and Round”, “At Evening” <b>Meena Alexander</b> “Without Place”
UNIT 5	<b>Meena Kandaswamy, Arundhati Subramaniam, Sohini Basak, Aditi Rao, Akhil Katyal</b> Selected Poems  <b>Aravind Adiga</b> <i>The White Tiger</i>

### Suggested Topics and Readings for Class Presentations

Culture and Tradition in India  
Modernization in India  
Indian Myth and Folklore  
Emerging Sensibilities of Indian People

### Suggested Reading:

- Ashley, B., ed. *The Study of Popular Fiction* (London: Pinter, 1989).
- Bennett, T., ed. *Popular Fiction: Technology, Ideology, Production, Reading* (London & New York: Routledge, 1990).
- Cawelti, J.G. *Adventure, Mystery and Romance* (Chicago: University of Chicago Press, 1976).
- Gelder, Ken. *Popular Fiction: The Logics and Practices of a Literary Field* (London & New York: Routledge, 2004).
- Harrex, S. C. *The Fire and the Offering: The Modern Indian Novel in English*.
- King, Bruce. *New Literatures in English*.
- Nandan, Satendra, ed. *Language and Literature in Multicultural Contexts*.
- Palmer, J. *Potboilers: Methods, Concepts and Case Studies in Popular Fiction* (London & New York: Routledge, 1991).
- Pawling, C., ed. *Popular Fiction and Social Change* (London: Macmillan 1984).

### Course Outcomes

**CO1** - Students will be able to differentiate between canonical and the popular literature.

**CO2** - Students will be able to understand the effectiveness of the modern fiction, fantasy/mythology and romance which have a mass appeal.

**CO3** - Students will have better understanding of the popular roots of literature.

**CO 4** - Students will be able to identify Indian Traditions which guide the life of Indian People in such contemporary literature.

*Arundhati Subramaniam*  
Head  
Department of English  
JECRC University, JAIPUR

**Language and Linguistics – New Concepts of Linguistics (BEN032C)**

**Course Objectives**

- To introduce the students to the latest and new branches of linguistics like Sociolinguistics wherein the society and language change is studied.
- To introduce the students to the latest and new branches of linguistics like Psycholinguistics wherein the language change is studied in terms of language.
- To introduce the students to the latest and new branches of linguistics like Neuro-linguistics wherein the neurological concepts in language change is studied.
- To introduce the students to the latest and new branches of linguistics like Cognitive Linguistics wherein the cognitive factors and language change is studied.
- To introduce the students to the latest and new branches of linguistics like Computational Linguistics wherein the modern age technology especially artificial intelligence is studied in terms of language change.

**Course Content**

UNIT 1	Sociolinguistics: Introduction, Speech Communities, High prestige and Low prestige varieties, Social network, Class aspirations in language, Sociolinguistic codes and factors, Language Change, language varieties, Bilingualism, Multilingualism, Code- switching, Code-mixing, Pidgins and Creoles.
UNIT 2	Psycholinguistics: Introduction, language and speech, language acquisition, language production, language comprehension, accommodation, behavioral tasks, eye-movements, production errors, Psycholinguistics and Neuro-imaging, Competence and Performance, Language acquisition in children, Innateness Hypothesis.

  
 Head  
 Department of English  
 JECRC University, JAIPUR

UNIT 3	Neuro-linguistics: Introduction, language and the brain, Cerebral dominance, Localization and Lateralization, Equipotentiality Hypothesis and Critical Period Aphasia, Dyslexia and stuttering, Schizophrenia, Autism, Dysarthria, Mother's depression, Developmental Language Disorders
UNIT 4	Cognitive Linguistics: Introduction, Conceptual metaphor theory, Cognitive and construction grammar, Cognitive perspective on Natural language processing
UNIT 5	Computational Linguistics: Introduction, Artificial Intelligence and Language, Different approaches of development, structural and production.

### Suggested Reading:

### Miscellaneous – Travels and Travelogues (BEN037C)

#### Course Objectives:

- Exploring contemporary travel writing and the genre it represents, literary and non fiction.
- To acquire knowledge about the studied texts and about an important and popular literary genre.
- To develop the student's ability to analyse and discuss travel narratives in the light of, and aided by, relevant theory.

#### Course Content

Unit 1	<b>Khuswant Singh's</b> <i>City Improbable: Writings on Delhi</i> , Penguin Publisher <b>Al Biruni:</b> Chapter LXIII, LXIV, LXV, LXVI, in <i>India by Al Biruni</i> , edited by Qeyamuddin Ahmad, National Book Trust of India
Unit 2	<b>Ernesto Che Guevara:</b> <i>The Motorcycle Diaries: A Journey around South America</i> (the Expert, Home land for victor, The city of viceroys), Harper Perennial
Unit 3	<b>William Dalrymple:</b> <i>City of Dijn</i> (Prologue, Chapters I and II) Penguin Books <b>Rahul Sankrityayan:</b> <i>From Volga to Ganga</i> (Translation by Victor Kierman) (Section I to Section II) Pilgrims Publishing
Unit 4	<b>Nighat M. Gandhi:</b> <i>Alternative Realities: Love in the Lives of Muslim Women</i> , Chapter 'Love, War and Widow', Westland, 2013 <b>Elisabeth Bumiller:</b> <i>May You be the Mother of a Hundred Sons: a Journey among the Women of India</i> , Chapters 2 and 3, pp.24-74 (New York: Penguin Books, 1991)

*Rukhmi Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 5	<b>Daniel Defoe:</b> Robinson Crusoe <b>Paul Theroux:</b> <i>The Great Railway Bazaar</i> (Chapters 8 to 16)
--------	---

### Suggested Topics and Background Prose Readings for Class Presentations

Travel Writing and Ethnography  
Gender and Travel  
Globalization and Travel  
Travel and Religion  
Orientalism and Travel

### Readings

- Casey Balton, 'Narrating Self and Other: A Historical View', in *Travel Writing: The Self and The Other* (Routledge, 2012), pp.1-29
- Sachidananda Mohanty, 'Introduction: Beyond the Imperial Eyes' in *Travel Writing and Empire* (New Delhi: Katha, 2004) pp. ix –xx.
- Susan Bassnett, 'Travel Writing and Gender', in *Cambridge Companion to Travel Writing*, ed. Peter Hulme and Tim Young (Cambridge: CUP,2002) pp, 225-241
- Tabish Khair, 'An Interview with William Dalrymple and Pankaj Mishra' in *Postcolonial Travel Writings: Critical Explorations*, ed. Justin D Edwards and Rune Graulund (New York: Palgrave Macmillan, 2011), 173-184

### Course Outcomes

- CO1** – Student will acquire knowledge of the forms, techniques, and uses of the "fourth genre" of creative nonfiction.
- CO2** – Student will be familiarized with the forms and purposes of contemporary nonfiction travel writing.
- CO3** – Student will gain knowledge of the many themes of travel writing, which explores subjects that are personal, political, scientific, cultural, historical, and more.
- CO4** – A student will have a passport to "virtual travel" and thus a better understanding of the world and an improved sense of global geography.

### Open Elective 4: Popular Literature in English (DEN007A)

#### Course Objectives:

- This paper seeks to introduce the students to genres such as romance, detective fiction, fantasy/mythology, which have a —mass appeal, and can help us gain a better understanding of the popular roots of literature.
- To enable students to trace the rise of print culture in England, and the

*Ruchika Basuman*  
Head  
Department of English  
JECRC University, JAIPUR

emergence of genre fiction and bestsellers

- To familiarize students with debates about culture, and the delineation of high and low culture
- To help them engage with debates about the canonical and non-canonical, and hence investigate the category of literary and non-literary fiction.

#### Course Content

<b>Unit 1</b>	<b>George Orwell</b> Animal Farm
<b>Unit 2</b>	<b>Paulo Coelho</b> The Alchemist
<b>Unit 3</b>	<b>Nicholas Sparks</b> The Notebook
<b>Unit 4</b>	<b>Chitra Banerjee Divakaruni</b> The Palace of Illusions

#### Readings

- Chelva Kanaganayakam, 'Dancing in the Rarefied Air: Reading Contemporary Sri Lankan Literature' (*ARIEL*, Jan. 1998) rpt, Malashri Lal, Alamgir Hashmi, and Victor J. Ramraj, eds., *Post Independence Voices in South Asian Writings* (Delhi: Doaba Publications, 2001) pp. 51–65.
- Felicity Hughes, 'Children's Literature: Theory and Practice', *English Literary History*, vol. 45, 1978, pp. 542–61.
- Leslie Fiedler, 'Towards a Definition of Popular Literature', in *Super Culture: American Popular Culture and Europe*, ed. C.W.E. Bigsby (Ohio: Bowling Green University Press, 1975) pp. 29–38.
- Sumathi Ramaswamy, 'Introduction', in *Beyond Appearances?: Visual Practices and Ideologies in Modern India* (Sage: Delhi, 2003) pp. xiii–xxix.

#### Course Outcomes

**CO1** - Students will be able to differentiate between canonical and the popular literature.

**CO2** - Students will be able to understand the effectiveness of the modern fiction, fantasy/mythology and romance which have a mass appeal.

**CO3** - Students will have better understanding of the popular roots of literature.

**CO 4** - Students will be able to differentiate between 'sense' and 'nonsense' in literature.

## **Program Description**

Master of Arts in English is a two year post-graduate program designed to prepare students to understand the use of the English language effectively by building vocabulary and introduce them to current ideas and issues. The course on English engages with literatures in English and the cultures with historical connections with English or translated into English and interprets and formulates cultural theories. In its concerns with literature, the subject engages with (a) processes of creativity and of appreciation i.e., poetics and aesthetics; (b) comparative literature across languages and cultures; (c) the act of literary representation and of methodologies, traditions and schools of interpretation; (d) the connection between visual representation, verbal image building and the nature of the mimetic act; and (e) with the politics of language. Language is multi-functional and is used in multiple contexts – communication, diplomacy, power, art and ideas amongst many others. The program offers deep insights into the world of literature and enables the students to critically appreciate major literary works. It strengthens the linguistic capabilities of the student through theoretical and practical sessions. The students are introduced to the political, social, cultural, economic and intellectual backgrounds of various periods in literary history. This opens up student vision and capability to acquire an understanding of life. After successful completion of the course, students can opt for careers like media & advertising, writing & publishing, journalism, public relations, content writing & blogging, creative writing, teaching and academia, etc.

Eligibility criterion is 55% in any discipline from a recognized higher institution.

## **Vision**

Our vision prevails in providing a perfect gateway to the new students who enter the core levels of learning, the freedom of enquiry, the pursuit of truth and care for others through teaching, scholarship and service of the highest calibre.

## **Mission**

Our mission is:

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

- To familiarize students with literary and aesthetic concepts.
- To inculcate Communication skills and Life skills for the holistic development of the students.
- To instill research and investigative aptitude in learners.
- To promote integrative research approach towards learning.
- To future ready our students by identifying their caliber and inclination and place them in a professional and competitive space.

### **Masters in English**

#### **Programme Outcomes (POs):**

**PO1 Critical Thinking:** The students acquire in depth knowledge in the field of social sciences, Literature and Humanities. The critical analytical perspective will make them sensitive and sensible to solve the issues related with the man and mankind.

**PO2 Inter-disciplinary Approach:** Learners will integrate the various theories and methodologies in their chosen focus area(s), including interconnections between them as well as their connections with larger social and environmental contexts.

**PO3 Research Aptitude:** The students will know about research in their respective subjects. Students get knowledge of various research methods and can realize the importance of research to find solutions of a specific issue.

**PO4 Effective Communication:** Engage in inter and intra personal communications, behavioural change communication and proficiency in information Communication Technology.

**PO5 Environment and Sustainability:** The students will be sensitized towards the environment and work towards sustainable development and also on the issues of women empowerment, gender equality and sustainable practices in order to enable them to apply them in day to day life.

*Ruchida Bauman*  
 Head  
 Department of English  
 JECRC University, JAIPUR

**PO6 Ethics:** Students will cultivate a better understanding of the values of equality, ethics and morality that support in reasoned judgment at all stages of life and use ethical practices in research.

**PO7 Effective Citizenship:** Inculcate values of patriotism and of unity, and transfer these values to real-life through selfless volunteering and activism, for promoting community welfare.

#### **PROGRAMME SPECIFIC OUTCOMES FOR MA ENGLISH**

**PSO1:** To familiarise with the writers of English literature across different ages and continents, their theories, perspectives, models and methods.

**PSO2:** To be able to demonstrate competence in analysis and critically analyse scholarly work in the areas of English language teaching, literary research and translation.

**PSO3:** To develop the technical skills and ethical decisions appropriate for the holistic professional development in the field.

### **Core Course 2: Research Methodology (MEN002A)**

#### **Course Objectives**

- To familiarize students with the basic concepts of research on the post-graduate level before heading towards higher dimensions of research.
- To enable students to understand various paradigms of research, its tools, ethics and challenges related to English studies and related fields and develop creative and academic skills in them.

#### **Course Content**

<b>Unit 1</b>	<b>Introduction to Research Methodology:</b> Aims and principles of Research, Selection of a topic, Sources, Evaluation of Sources, Research aids, Literature Review, Research Plan, Research Hypothesis, Data collection- Primary and Secondary Sources
<b>Unit2</b>	<b>The Mechanics of Research:</b> Documentation, Format of a research paper, Preparation of thesis and dissertations, Proofreading
<b>Unit 3</b>	<b>Principles of Citation:</b> Schools of Citation, Why we Cite? ; In-text Citation, Quotations, APA Citation and References, MLA Citation and Work-cited, Chicago Manual Style: Citation and Bibliography, Footnotes
<b>Unit 4</b>	<b>What is literary research? (This unit incorporates following essays from <i>Research Methods in English Studies: Gabriele Griffin</i>)</b> o Textual Analysis as a Research Method (Catherine Belsey) o Archival Methods (Carolyn Steedman) o Discourse Analysis (Gabriele Griffin), o Creative Writing as a Research Method (Jon Cook)
<b>Unit 5</b>	<b>Ethics in Research and Plagiarism</b>

#### **Suggested Readings:**

- Academic Writing 1: Paragraph: Alice Savage and Mausod Shafiei
- Academic Writing: A Handbook for International Students: Stephen Bailey
- MLA handbook for Writers of Research Papers: Latest edition
- Peter Winch's "Can we understand ourselves?" (From Philosophical Investigations 20: 3 July, 1997)
- Quentin Skinner's "Motives, Intentions and Interpretation" (From —Visions of PoliticsI,
- Research Methodology: Methods and Techniques: C. R. Kothari
- Research Methods in English Studies: Gabriele Griffin
- Research Methods in English: M.P. Sinha

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

**Course Outcomes:****By the end of this course, the students will be able to:****CO1:** Understand the basic concepts of research and Research Methodology**CO2:** Formulate their own research and write research papers, Articles, Thesis and Dissertations.**CO3:** Cite the sources used in his/her research properly in different styles according to the requirements.**CO4:** Apply proper research methods pertinent to English Studies and Related Fields**CO5:** To undertake ethical research by following the various guidelines set for the best practice in Research.***Course Articulation Matrix: (Mapping of COs with POs and PSOs)***

### Course Outcomes (CO):

Students will be able to:

**CO1:** Define and Evaluate gender as a social construct.

**CO2:** Identify the ways gender, power, privilege, and oppression play out across a range of cultures and human experiences.

**CO3:** Demonstrate an understanding of gender as it intersects with sexuality, race, ethnicity, religion, class and other critical variables.

**CO4:** Analyze human interactions and social/political systems using a "gender lens".

**CO5:** Conduct scholarly research on key gender issues and/or debates.

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

Course Outcomes	Program Outcomes							Program Specific Outcomes

### DSE 1: Language Brain and Mind (MEN021A)

#### Course Objectives

- Understand the historical development of ideas in Linguistics in relation to ideas in Philosophy, Psychology and Neurology.
- Analyze the connection between linguistic and cognitive concepts
- Comprehend the basic components of language processing

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

- Understand the neurobiological underpinnings of language organization in the brain
- Understand how the brain processes Sign Language of the Deaf

### Course Content

UNIT 1	Introduction to Language, Brain and Mind <ul style="list-style-type: none"> <li>• Behaviorism: Proponents and Critics</li> <li>• Cognitive Revolution: Computational Theory of Mind, Modularity of Mind, Functionalism, Connectionism</li> </ul>
UNIT 2	Language and Cognitive Concepts <ul style="list-style-type: none"> <li>• Sapir-Whorf Hypothesis</li> <li>• Colour terms</li> <li>• Mass and Count Terms</li> <li>• Numerical cognition</li> </ul>
UNIT 3	Cognitive basis of Language <ul style="list-style-type: none"> <li>• Competence and Performance</li> <li>• Mental Representations and the Psychological reality of linguistic structure: Language and Memory; the sentence superiority effect</li> <li>• Language Processing: planning, production, comprehension, reading</li> </ul>
UNIT 4	Neurobiological basis of Language <ul style="list-style-type: none"> <li>• Acquisition of Language: First Language Acquisition, Critical Period Hypothesis, Second Language Acquisition, Multilingualism</li> <li>• Aphasia and other language disorders</li> <li>• Experimental evidence for brain organization</li> </ul>
UNIT 5	Sign Language in the Brain <ul style="list-style-type: none"> <li>• Language in the visual-gestural modality</li> <li>• Sign Language Acquisition: Critical Period and effects of late language acquisition</li> <li>• Similarities and Differences between Sign Language and Spoken Language Processing in the Brain</li> <li>• Lateralisation</li> <li>• Brain Lesions in Signers</li> </ul>

### DSE 1: Film Studies (DSE025A)

#### Course Objective:

- Develop and display an understanding of critical analysis of film through careful examination of cinematic adaptations of literary texts, focusing on character development, dramatic structure, and performance among other narrative devices.
- Utilize the terminology of film analysis, both those terms shared with literary discussion and those specific to cinema
- Evaluate and display an understanding of the possibilities and problems involved in the transposition of literature to film, applying terminology and critical skills.
- Understanding the semiotics of visual representation;

*Ruchida Bauman*  
 Head  
 Department of English  
 JECRC University, JAIPUR

- Critical analysis and appreciation of cinematic techniques; and
- Transference of text to image.

### Course Content

## Discipline Specific Elective - 2

### DSE 2: Memory, History and Mythologies (MEN014A)

#### Course Objectives

- Understand genres of historical narratives, including historiography, ethnology and anthropology.
- Identify social and cultural factors that help shape our identities by analyzing firsthand reflections and creating their own personal identity charts.
- To make students understand that identity is not only valuable for their own social, moral, and intellectual development, it also serves as a foundation for examining the choices made by individuals and groups in the past as well as in the present.
- Understand the cultural and historical significance of myths
- Identify universal mythic patterns
- Develop a cross-cultural perspective on myths
- Understand the fundamentals of Mnemoculture
- Recognize the role of performative art within mythology

#### Course Content

<b>UNIT 1</b>	<b>Memory, History and Identity</b> <ul style="list-style-type: none"> <li>- Performance of the Past: Theories of History, Memory and Identity, and Cultural Histories</li> <li>- Framing and Reframing Identity: Mapping the Terrain of Memory - Individual to Collective</li> <li>- Unstuck in Time: The Sudden Presence of the Past - The Politics of Subversion</li> <li>- Tracing the Ghost and Geography of Violence-</li> <li>- The Contested Place of Memory</li> <li>- The Ubiquitous Past-Present and Lost</li> <li>- Making History: Narratives and Counter-narratives</li> </ul>
---------------	--

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

UNIT 2	<p><b>Performative Identities: Indelible Memories</b></p> <p>Memory and discordant Images: Political Lives of Dead Bodies; Burials, Mass Graves, Exhumations, Bodies of Great People. Identity and the Politics of Remembrance: Engendered Memories; Culinary Discourses and Politics of Food; Folktales and Folklore The Economy of Memory: Consumption of/and Heritage, Heritage Tourism, Cultural Property and Identity Ethics and Limits of Representation: Can Culture <i>Belong</i> to any One Group? Can Culture be Copyrighted?</p> <p>William Golding: <i>Lords of Flies</i>  Joanna Harris: <i>Chocolat</i>  Lisa See: <i>Snow Flower and A Secret Fan</i>  Arthur Golden: <i>Memoir of Geisha</i></p>
UNIT 3	<p><b>Myths, Symbols and Meaning Making</b></p> <p>The unit seeks to familiarize students with the anthropology of myths and establish the connect between myths, rituals, symbols. The attempt is to elucidate the cross-cultural overlaps that myths bring to the fore.</p> <p>Sir James George Frazer: <i>The Golden Bough: A Study in Magic and Religion</i>  Amar Chitra Katha  Hesiod: "Theogony"  Aesop's Fables  Geoffrey Chaucer: <i>The Canterbury Tales</i></p>
UNIT 4	<p><b>Mythical Imagination and Re-interpretation</b></p> <p>The focus of this unit is on contemporary Indian mythical narratives. The texts under this unit will help locate the manner in which myths have been reinterpreted and retold according to contemporary ambiances and offer alternate and multiple readings of such narratives. The unit will also bring to the fore the difference between 'myth' and 'history', decoding of myths under the ambit of popular imagination and culture.</p> <p>Chitra Devakaruni: <i>The Forest of Enchantment</i> Devdutt Patnaik: <i>Shikhandi</i>  Carole, Satyamurti. <i>Mahabharata - a Modern Retelling.</i></p>

### Course Outcomes (CO):

Students will be able to:

**CO1** - Critically engage with representations of the past in the present and use the evidence in interrogating historical accounts and memory.

**CO2** - Critically reflect and engage with the interface between the past and the present, fostering a healthy appreciation for history and its imprint on our present world.

**CO3** - Define the cultural and historical significance of myths

**CO4** - Explain the politics of 'myth' creation through oral presentation and writing

**CO5** - Analyze the role and politics of performative art and mythology

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

Course Outcomes	Program Outcomes							Program Specific Outcomes		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

### DSE 2: Gender Studies and Theories (MEN018A)

#### Course Objectives:

- Demonstrate knowledge of the history of women's studies as an academic discipline, with an understanding of its growth and relation to the fields of gender and sexuality studies.

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

- Articulate and understand the history of feminism and the ways in which feminism has enhanced the lives of women and men.
- Demonstrate fluency in feminist theories and methodologies and their applications to a number of different academic fields.
- Recognize shifting definitions of “man” and “woman” in relation to evolving notions of “masculinity” and “femininity.”
- Appreciate women’s contributions to society historically, culturally, and politically.
- Appreciate variations in women’s experiences across time, nations, and cultures.
- Analyze the ways in which the media has a role in the shaping of identity, particularly along intersections of gender, race, and class.

#### Course Content

<b>UNIT 1</b>	<b>Liberal Feminism</b> <ul style="list-style-type: none"> <li>• Historical Development of Liberal Feminist Thought.</li> <li>• Issues of Equal opportunity and Structural Impediments</li> <li>• Welfare Orientation</li> <li>• Critique of Liberal Feminism</li> </ul>
<b>UNIT 2</b>	<b>Marxist and Socialist Feminism</b> <ul style="list-style-type: none"> <li>• <b>Marxist Feminism</b> <ul style="list-style-type: none"> <li>– Origin of Family, private property and state</li> <li>– Sexual Division of Labour</li> <li>– Contemporary Marxist Feminism</li> <li>– Critique of Marxist Feminism</li> </ul> </li> <li>• <b>Socialist Feminism</b> <ul style="list-style-type: none"> <li>– Dual Systems Theory : Patriarchy and Capitalism</li> <li>– Critique of Dual System Theory</li> <li>– Towards Unified- Systems Theory: Gender Division of Labour and alienation</li> <li>– Critique of Unified Systems Theory</li> </ul> </li> </ul>

## **DSE 2 - Language, Society and Language Change (DEN022A)**

### **Course Objectives**

- Providing extensive knowledge of theoretical postulates that govern the representation of language in society
- Providing updated literature on the interface between language and society along with different social variables
- Providing functional theories that address the issues of language change and language convergence.
- Providing the skills to analyze the concept of language change in terms of society.
- Providing the research aptitude to analyze the sociolinguistics factors in ELT.

### **Course Content**

UNIT 1	Unit-1: Structural, cognitive and functional perspectives to study the human language <ul style="list-style-type: none"> <li>• Saussure and Structuralism</li> <li>• Chomsky and Cognitive paradigm</li> <li>• Dell Hymes and Functional paradigm</li> </ul>
UNIT 2	Social decorum and different social thinkers <ul style="list-style-type: none"> <li>• Functional perspective on Society: Max Weber, Emile Durkheim, Talcott Parsons, R.K. Merton,</li> <li>• Conflict perspective on Society: Karl Marx, Engels</li> <li>• Interaction perspective: G.H. Mead</li> <li>• Indian society: M.N.Srinivas, Andre Beteille</li> </ul>

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

UNIT 3	Linguistics and its interface with Anthropology <ul style="list-style-type: none"> <li>● Kinship terms, Usage of Pronominals across Indian Languages</li> <li>● Joking and Avoidance relationships in Society and Languages</li> <li>● Proverbs, Folk tales and Social Decorum</li> <li>● Language, Dialects and Geography</li> <li>● Speech Community and Linguistic Identity with reference to Language Movements in India</li> </ul>
UNIT 4	Language Variation <ul style="list-style-type: none"> <li>● Labov and Language variation</li> <li>● Sapir-Whorf Hypothesis: Linguistic Determinism and Linguistic Relativity</li> <li>● Language and Gender: Feminist Discourse and Masculinity studies in relation to Indian Languages</li> </ul>
UNIT 5	Applied fields in Language and Society <ul style="list-style-type: none"> <li>● Language Education policies</li> <li>● Indian Constitution and Linguistic rights</li> <li>● Bilingualism, Multilingualism</li> <li>● Language change and Sociophonetic studies</li> <li>● Sociolinguistics of Sign Languages</li> <li>● Politeness Phenomena manifested in terms of pronominal usage and the use of syntactic strategies to achieve politeness</li> </ul>

#### Course Outcomes (CO):

At the end of this course students will be able to:

CO1: Recognize the interfaces between social variables and linguistic variables

CO2: Analyze the main phonetic, phonological structures of a language and to compare them to the cross-linguistically more frequent structures

*Ruchida Bauman*  
 Head  
 Department of English  
 JECRC University, JAIPUR

CO3: To demonstrate different perspectives such as Conflict, Functional and Interactional models to study the structures of the society and the verbal repertoire

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

## **DSE 2: Adaptations, Relocations and Reworking Studies (DSE026A)**

### **Course Objective**

- Look closely into the relation between cinema and literature, with the help of a few samples of fiction (and other forms) made into films.
- Understand the various ways in which literature and the moving image diverge as well as correspond through the theory of narrative while being a source of long conflict through much of the history of film studies.
- Understand the politics and process of adaptation of literary forms into cinematic forms
- Understand elementary concepts of cinema, cinema history and practice and the basics of adaptation theory.

### **Course Content**

Unit 1	<b>Theories, practices, forms, adaptations, migrations</b> "What is Adaptations?" Adaptations. (Critical Idiom series) Critical Essay on Transformations. Adaptations Across Medium: From Text to Image. Intertextuality Counter Discourses: J.M. Coetzee's 'Foe OR Jean Rhys's Wide Sargossa Sea.
--------	---

*Ruchida Bauman*  
 Head  
 Department of English  
 JECRC University, JAIPUR

Unit 2	<b>Myth and Newness : Across Cultures</b> Sashi Tharoor: The Great Indian Novel Thomas Mann: "The Transposed Head" & Girish Karnad's Hayavadana
Unit 3	<b>Indian Reworkings:</b> The Yayati Story V.S. Khandekar: Yayati Girish Karnad: Yayati Adya Rangacharya: Sanjeevni. Raj Gopalachari: Some Chapters on Yayati
Unit 4	<b>Western Reworkings:</b> The Hamlet Narrative Tom Stoppard: Rosencrantz and Guildenstern are dead Hamlet: The Film (BBC Production)
Unit 5	<b>Robin Cohen</b> Introduction (Chapter 1) to <i>Global Diasporas</i> <b>Butler, Octavia E.</b> <i>Parable of the Sower</i>

### Suggested Readings

- Beja, Morris. Ed. "Adaptation' from the Anthology". Film and Literature.
- Bluestone, Bernard. "Introduction" Novels into Films. Indiana University Press

### Course Outcomes

**At the end of the course the student will be able to-**

**CO1:** Be acquainted with filmic adaptations and film studies within the context of cultural studies.

**CO2:** Understand how adaptations enable us to rework literature and rethink attitudes about issues of gender, ethnicity, class, history, and identity.

**CO3:** Make comprehensive comparative analyses of film and fiction as they will be familiar with terms and theory pertaining to film studies and adaptation studies.

**CO4:** Learn politics and processes of adaptation

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

## SEMESTER - III

### Core Course 7: Critical Theory (MEN007A)

#### Course Objectives

- undertake an in-depth study of structuralism and post-structuralism theories, their application in literary studies
- critique gender discrimination and ideological formations
- equip students with essential tools of research in literary studies via introducing them to modernism and post-modernist theoretical postulations in literary studies
- enable students to apply theoretical postulations concerned with cultural studies in literary texts.
- to equip students with postcolonial theory and practice

#### Course Content

<b>UNIT 1</b>	<b>Structuralism and Post-structuralism</b> Ferdinand de Saussure: 'Nature of the Linguistic Sign' Roland Barthes: 'Death of the Author' Michel Foucault: 'What is an Author?' Jacques Derrida: 'Structure, Sign and Play in the Discourse of Human Sciences'
<b>UNIT 2</b>	<b>Feminist Theory</b> Sandra M. Gilbert and Susan Gubar: Chapter 2 of <i>The Mad Woman in the Attic</i> Monique Wittig: 'One is Not Born a Woman' Judith Butler: Excerpts from Chapter 3 'Subversive Bodily Acts,' <i>Gender Trouble: Feminism and the Subversion of Identity</i>
<b>UNIT 3</b>	<b>Modernism and Postmodernism</b> Louis Althusser: Excerpts from <i>Ideology and Ideological State Apparatuses</i> Jean Francois-Lyotard: 'Defining the Postmodern' Jean Baudrillard: 'The Procession of Simulacra'

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

<b>UNIT 4</b>	<b>Cultural Studies</b> Stuart Hall: 'Cultural Studies and Theoretical Legacies' Jurgen Habermas: 'The Public Sphere: An Encyclopedia Article' Raymond Williams: 'Literature'
<b>UNIT 5</b>	<b>Postcolonial Theory</b> Edward Said: <i>Orientalism</i> (Introduction) Chinua Achebe: 'Colonialist Criticism' Ngugi wa Thiong'o: 'Quest for Relevance' Michael Hardt and Antonio Negri: 'Empire'

### Suggested Reading:

- Eagleton, Terry (1983). *Literary Theory: An Introduction*. Oxford: Blackwell.

- Thiong'o, Ngugi wa (1986). *Decolonizing the Mind: The Politics of Language in African Literature*. London: Oxford. 87-109.

### Suggested Extra Readings:

- Ashcroft, Bill, et al. (2002). *The Empire Writes Back: Theory and Practice in Post-Colonial Literatures*. London: Routledge.
- Barry, Peter (1999). *Beginning Theory: An Introduction to Literary and Cultural Theory*. Manchester and New York: Manchester UP.
- Tyson, Lois (2013) *Critical Theory Today*. New York: Routledge.

### Course Outcomes (CO):

**At the end of the course students will be able to-**

**CO1:** Familiarize students with the literary premises and intellectual background pertinent to important eras of the literary and critical theory.

**CO2:** Encourage students to discover their own literary and critical "theories" as they read.

**CO3:** Know how to read, comprehend, discuss, analyze, and interpret critical texts of all types. Special emphasis will be placed on the cultivation of critical thinking, writing, and conversational skills.

**CO4:** Historicize and contextualize foundational theoretical and critical texts.

**CO5:** Employ critical methodologies appropriate to the practice of critical disciplines.

*Course Articulation Matrix: (Mapping of COs with POs and PSOs)*

### Core Course 8: Literature from Victorians to Moderns (MEN008A)

#### Course Objectives

- Familiarize the students to the literature produced in Britain in the 19<sup>th</sup> and 20<sup>th</sup> centuries.
- Enable students to understand the concept of marriage and sexuality, the concept of utilitarianism and its role in human life.
- Enable students to understand the existing conflict between faith and doubt in Victorian society
- Enable the students to know about the modernist canon founded on Ezra Pound's idea of 'make it knew' Understand the historical background including the socio political changes in 20<sup>th</sup> century
- Understand the literary criticism and innovative techniques introduced by the writers of 20<sup>th</sup> century.

#### Course Content

<b>Unit 1</b>	<b>Walter Pater</b> The Postscript from <i>Appreciations: An Essay on Style</i> <b>Mathew Arnold</b> The Study of Poetry
<b>Unit2</b>	<b>Charlotte Bronte</b> Jane Eyre <b>Charles Dickens</b> Hard Times
<b>Unit 3</b>	<b>Mathew Arnold</b> Thyrsis <b>Lord Alfred Tennyson</b> The Lotos Eaters <b>Robert Browning</b> A Grammarian's Funeral Prophyria's Lover <b>Gerard Manley Hopkins</b> The Windhover
<b>Unit 4</b>	<b>W.B. Yeats</b> Sailing to Byzantium Lapiz Lazuli <b>T.S. Eliot</b> The Wasteland

  
Head  
Department of English  
JECRC University, JAIPUR

<b>Unit 5</b>	<b>Virginia Woolf</b> To The Lighthouse <b>George Orwell</b> 1984 / Animal Farm
---------------	--

### Suggested Readings

- Chakrabarty, Dipesh, Provincialising Europe.
- Ford, Boris, General Editor. From Dickens to Hardy, Pelican History of English Literature, Vol. VI
- Moers, Ellen. Literary Women. London, The Women's Press, 1978.
- Woolf, Virginia. "Elizabeth Barrett Browning" from *The Common Reader*.

### Course Outcomes:

**At the end of the course, the student will be able to-**

**CO1:** Understand the prevailing conflict between science and religion in Victorian era.

**CO2:** Comprehend the concept of marriage and sexuality and its impact on the then society.

**CO3:** Understand the new techniques i.e. Psycho analysis and stream of consciousness.

**CO4:** Analyze the various aspects of women's movement along with the different causes contributed to the rise of such movement and the aftermath of the movement and its impact on society.

**CO5:** Analyze the decay and decadence of morality and human values in the modern age.

*Course Articulation Matrix: (Mapping of COs with POs and PSOs)*

### Core Course 9: American Literature (MEN009A)

#### Course Objectives

- Cover a wide area of American literature across genres, ethnicities and historical times
- Understand the historical background of American literature and the American dream.
- Understand the changes brought about by modernism and urbanization in the American cultural landscape.
- Engage the student in understanding the changing notions of class, gender, ethnicity in a postcolonial, diasporic and neo-colonial world order.

*Ruchida Bauman*  
 Head  
 Department of English  
 JECRC University, JAIPUR

- Engage the student in understanding the cultural milieu of America through the various forms and movements in literature
- Give a glimpse into social realism and American novel, folklore and American novel.
- Develop a skill to appreciate the American poetry.

### Course Content

<b>Unit 1</b>	<b>Walt Whitman</b> A Passage to India <b>Wallace Stevens</b> Emperor of Ice cream <b>Ralph Waldo Emerson</b> The Snow Storm <b>Emily Dickinson</b> Hope is a thing with Feathers I felt a Funeral in my Brain
<b>Unit2</b>	<b>Ralph Waldo Emerson</b> Self-Reliance <b>Henry David Thoreau</b> Civil Disobedience <b>Walt Whitman</b> Introduction to Leaves of Grass
<b>Unit 3</b>	<b>Edgar Allen Poe</b> The tell-tale heart <b>Willa Cather</b> On Gull's Road <b>Nathaniel Hawthorne</b> Young Goodman Brown
<b>Unit 4</b>	<b>Alice Walker</b> Color Purple <b>F Scott Fitzgerald</b> The Great Gatsby
<b>Unit 5</b>	<b>Eugène O'Neil</b> The Hairy Ape <b>Arthur Miller</b> The Death of A Salesman

### Suggested Readings:

### DSE 3: Nation, Boundaries and Identities (MEN015A)

#### Course Objectives

- Provide a basic understanding of the idea of nation-state, identity and boundaries.
- Familiarise students with multiple narratives on nation formation and nationalism through an intersectional standpoint.
- Introduce students to the politics behind the social construction of Identities.
- Understand the mode in which power and privilege works within the context of citizenship.

#### Course Content

UNIT 1	<b>Concept of Communities, Nation and National</b>
	The unit explores the idea of nation and nationalism. The notion of belongingness to - an identity, a territory, an ethnic group, shared belief systems and so on - that

*Poojida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

	<p>could delineate on multiple levels the notions of being national and anti- national.</p> <p>Discuss the idea of Nation, State, Narrative of Nation, Citizenship and Right, National and Anti-national</p> <ol style="list-style-type: none"> <li>1. Ernest Renan's "What is a Nation?"</li> <li>2. Ernest Gellner's Nation and Nationalism(excerpts)</li> <li>3. Partha Chatterjee's ,The Nation and its Fragments: Colonial and Postcolonial Histories</li> <li>4. Homi Bhabha's 'Dissemination: Time, Narrative, and the Margins of the Modern Nation' in Homi Bhabha's Nation and Narration.</li> <li>5. Etienne Balibar's "Citizen Subject" and Dan Smith's "Ethical Uncertainties of Nationalism "</li> </ol>
<b>UNIT 2</b>	<p><b>A Nationalist Discourses</b></p> <p>This unit explores multiple discourses on nationalism that emerge from various parts of the world and how these discourses are formulated and reformulated based on socio-political factors of a particular period. A significant focus of the unit is to trace how nationalist discourses are largely defined by the presence of the 'other.'</p> <ol style="list-style-type: none"> <li>1. <i>Kanthapura</i> by Raja Rao</li> <li>2. <i>Road from The Elephant Pass</i> by Nihal De Silva</li> <li>3. <i>Bread Giver</i> by Anzia Yezierska</li> </ol>
<b>UNIT 3</b>	<p><b>Borders and Bordering Practices</b></p> <p>This unit attempts to capture some of the notions of borders, the need for these borders and various bordering practices that exclude people/citizens to be part of the nation state.</p> <ol style="list-style-type: none"> <li>1. <i>Tamas</i> by Bhishm Sahni</li> <li>2. <i>Tropic of Orange</i> by Karen Tei Yamashita</li> <li>3. <i>The Refugees</i> by Viet Thanh Nguyen</li> </ol>

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

<b>UNIT 4</b>	<p><b>Migration</b> The unit explores some of the questions that processes of migration poses to the larger understanding of nation-state , as well as to that of political and cultural identity that nationalist discourses attempts to assert.</p> <ol style="list-style-type: none"> <li>1. <i>The Joy Luck Club</i> by Amy Tan</li> <li>2. <i>Exit West</i> by Mohsin Hamid</li> <li>3. <i>On Beauty</i> by Zadie Smith</li> </ol>
<b>UNIT 5</b>	<p><b>Post-coloniality on Temporal and Spatial Vectors</b> This module will introduce coloniality, modernity as well as spatiality thereby linking the discourses on postcolonial question with time and space. Readings around theorisations of space and human geography, as well as basic postcolonial concepts will be included here.</p> <ol style="list-style-type: none"> <li>1. <i>Waiting for the Barbarian</i> by J M Coetzee</li> <li>2. <i>The Hundred Foot Journey</i> by Richard C Morais</li> </ol>

### Course Outcomes (CO):

#### Students will be able to:

**CO1** – To interpret and apply the concepts and ideas introduced in the class to various spaces of engagement - local, national and global.

**CO2** - Recognize the necessity to engage with multiple narratives and the intersection of gender, caste, religion etc, in framing the contours of national(ism).

**CO3** - Problematised singular understanding of nationalism and Identity

**CO4** - Critically evaluate and compare the discourse on citizenship with that of the discourse on statelessness

**CO5** - Locate and position issues, problems, and areas that can generate new modes of thinking about spatiality and temporality in the context of postcolonial discourses

**Course Articulation Matrix: (Mapping of COs with POs and PSOs)**

Course Outcomes	Program Outcomes							Program Specific Outcomes		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

### **DSE 3 – Issues in Applied Linguistics (MEN023A)**

- Course Objectives**

- The students will be introduced with the latest issues in Linguistics related to Translation.
- The students will be introduced with the latest issues in Linguistics related to Media.
- The students will be introduced with the latest issues in Linguistics related to Business Communication.
- The students will be introduced with the latest issues in Linguistics related to English Language Teaching.
- The students will be introduced with the latest issues in Linguistics related to Lexicography.

### **Course Content**

<b>UNIT 1</b>	Linguistics and Translation Principles of translation; types of translation; interpretation and transcreation; problems of translation
<b>UNIT 2</b>	Linguistics and Media Language use in print media; language in advertising; language in TV and cinema;

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

	political discourse; language and empowerment
<b>UNIT 3</b>	Linguistics and Business Communication Interpersonal and business communication; message structure and message rewriting; effective textual strategies: clarity, conciseness, consistency and coherence; content, style and persuasion; document summarization; report writing.
<b>UNIT 4</b>	Linguistics and Language Teaching Learning theories and language teaching; notions of mother tongue (M.T.) and other tongue (O.T.); second and foreign language teaching; methods of language teaching; syllabus design and language testing.
<b>UNIT 5</b>	Linguistics and Lexicography Structure and function of lexeme, types of dictionaries; dictionary making: collection, selection and organization of materials; problems in dictionary making.

### **Skill Enhancement Course 1: Introduction to Theatre and Performance (DEN009A)**

#### **Course Objectives:**

- The course is intended for students who specialize in English Literature. The idea is to acquaint them with historical processes at work to understand the way in which techniques/methodology of drama have evolved over a period of time.
- There are two aspects to this course. One is the development of aesthetics in the Indian context from the pre-independence to post- independence period. The course also looks at censorship acts the politics of the market and other factors to locate the socio-political context of drama. There will also be a discussion of the popular forms of performance in India.
- The second aspect is the development of theories and practice of drama in Europe and their impact on the Indian context.

#### **Course Content**

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

Unit 1	<b>Introduction</b> <ul style="list-style-type: none"> <li>• What is a text?</li> <li>• What is a performance?</li> <li>• The uniqueness of the dramatic text: Literature and/or Performance?</li> <li>• The politics of a Dramatic text: endorsement status quo vs. subversion</li> </ul>
Unit 2	<b>Theories of Performance</b> <ul style="list-style-type: none"> <li>• Performance theory (Richard Schechner/Dwight Conquergood)</li> <li>• Radical theories (Bertolt Brecht Augusto Boal)</li> <li>• Classical theories (Natyashastra Aristotle)</li> </ul>
Unit 3	<b>The State the Market and the History of Theatre</b> <ul style="list-style-type: none"> <li>• Under British rule (Viceroy Northbrook–censorship <i>Neeldarpan Nabanna</i>– IPTA)</li> <li>• (Popular forms: Jatra Tamasha Nautanki Burrakatha Dastangoi and others)</li> <li>• Modern Indian theatre in the post-independence period <ul style="list-style-type: none"> <li>○ (Bourgeois theatre and theatre of change Feminist theatre)</li> <li>○ (Street theatre Janam)</li> </ul> </li> </ul>

### **Core Course 12: Dissertation II (MEN012A)**

#### **Course Objectives:**

- To develop research aptitude in students so that they can design and conduct an original and ethical research.
- To make students write a dissertation in the MLA format.
- To learn researches like empirical/data based (quantitative, qualitative, or mixed-methods)
- To do critical review of research and theory.
- To gain insights about the domain researched and critically reflecting on the steps of the research process.

#### **Course Content**

Unit 1	Abstract & Introduction: Understanding the area of research, ethical guidelines of research, and finalization of Topic; Theoretical underpinnings
Unit 2	Review of Literature: Understanding and exploration of related research in the discipline
Unit 3	Methodology: Designing the Study, Methods of Data Collection as per the requirements of the topic and design
Unit 4	Data Analysis & Discussion: Qualitative and/or Quantitative Analysis as per the design and aims of the research

#### **Course Outcomes**

CO 1: Students will be able to design and conduct an original and ethical research.

CO 2: Students will be able to write a dissertation in the MLA format.

CO 3: Students will learn researches like empirical/data based (quantitative, qualitative, or mixed-methods)

CO 4: Students will be able to do critical review of research and theory.

CO 5: They will gain insights about the domain researched and critically reflecting on the steps of the research process.

#### Discipline Specific Elective 4

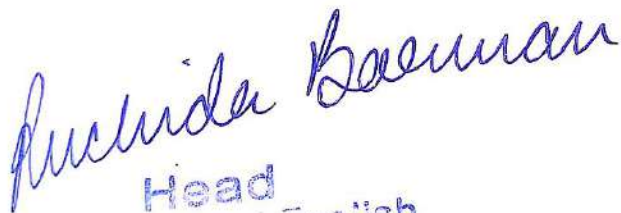

#### DSE 4: Popular Culture (MEN016A)

##### Course Objectives

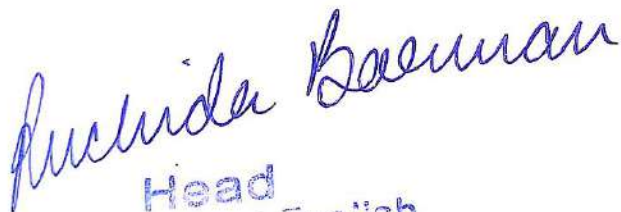

- To understand the politics of production, distribution and dissemination of ideologies within and without popular cultures in India
- To trace a history of the origin and development of popular culture in India
- To recognize the politics involved in creating content for mass consumption
- To understand the theoretical and academic debates that surround popular culture studies
- 

##### Course Content

<b>UNIT 1</b>	<b>Introduction: What is Popular Culture</b> This section is intended to be an introduction to popular culture and the presence of popular culture studies in academia. It will engage with the divergent strands of popular culture studies as agential or escapist and how it operates within the country.
	What is Popular Culture? The History and Evolution of the Genre
	Popular Culture Studies in Academia
	Popular Culture in India
	Mass media, subculture, counterculture, mainstream, consumerism,
	globalization, sensationalism, cyberculture, contraculture and other keywords.

  
 Head  
 Department of English  
 JECRC University, JAIPUR

<b>UNIT 2</b>	<p><b>Cinema and Music</b></p> <p>This unit will engage with the ever popular Hollywood and the dominant discourses that surround it whether it be agency or popularity and the homogenization that comes with it. The intention is to use this vantage point to demystify Hollywood and re-engage with popular cinema and music from across the country.</p> <p>Hollywood Cinema and Music</p> <p>Bollywood Cinema and Music</p> <p>Regional Cinema and Music</p> <p><i>The Great Gatsby</i> by F Scott Fitzgerald</p> <p><i>The Age of Movies: Selected Writings</i> of Pauline Kael</p>

  
 Head  
 Department of English  
 JECRC University, JAIPUR

<b>UNIT 3</b>	<p><b>Everyday and Street Culture</b></p> <p>This module engages with the everyday and street cultures that become part of our practices of the daily. It looks at a wide variety of cultural forms from television, sports, street food, fine dining, shopping, eating out, home delivery, stardoms, fan cultures to fashion.</p> <ul style="list-style-type: none"> <li>• Television</li> <li>• Reality Shows</li> <li>• Television Dramas</li> <li>• Cricket and Sports</li> <li>• Street Food</li> <li>• Shopping</li> <li>• Stardoms and Fan Cultures</li> <li>• Fashion : Elite and Street, Sustainable Fashion etc</li> </ul> <p><i>The Devil Wears Prada</i> by Laurence Weishberger  <i>Shopoholic Series</i> by Sophie Kinsella (any one book)</p>
<b>UNIT 4</b>	<p><b>Folkculture and Festivals</b></p> <p>This unit will engage with cultural festivals, melas, art forms, folk cultural forms and other expressions. It will look into the politics of appropriation and subversion and examine the ideas of subcultures, countercultures, contracultures and mainstream cultures.</p>

*Ruchida Bauman*  
Head  
Department of English  
JECRC University, JAIPUR

<p><b>UNIT 5</b></p>	<p><b>Social Media Cultures</b>  This section deals with the ubiquitous and inescapable social media landscape we operate within. It will engage with ideas of space and place as reconstituted by these public-private and surveilled spaces and what it does to create our sense of selves and identities.</p> <p>Facebook, Instagram, Whatsapp, Twitter</p> <p>Youtube, Vimeo, Dailymotion</p> <p>Digital Fandoms</p> <p>Open Source and Torrents</p> <p>Art and Aesthetics in the Age of Digitization</p> <p>Cyberspace, Surveillance and Security</p> <p>Celebrity Cultures</p> <p>Online Shopping</p> <p><u>Eleven</u> by David Llewellyn</p> <p><u>The Book of Numbers</u> by Joshua Cohen</p> <p>NW by Zadie Smith</p> <p>Instagram poetry by Atticus, Tyler Knott Gregson, Christopher Pointdexter, Makeblackpoetry.</p>

## **PROGRAMME DESCRIPTION**

The Bachelor of Arts (Honors) in Psychology is a full-time undergraduate programme offered to students pursuing their Bachelor of Arts degree at JECRC University. The Honors program is offered to students who have passed their 12<sup>th</sup> Grade with at least 50% in any of the disciplines offered by the school. The program offers papers from different disciplines of psychology along with laboratory and field experience, elementary statistics and research.

### **Vision:**

The Psychology Department's vision is to gain national and international recognition as a research-oriented, teaching-intensive department while using advance scientific knowledge to develop innovative solutions for important life problems both locally and globally.

### **Mission:**

- To promote the advancement of scientific discipline of psychology through the synergistic relationship between teaching, research, and service.
- To provide competence & interdisciplinary knowledge to students so they are able to develop skills and are ready for vocational world.
- To prepare skilled psychologist and counselors to create awareness about mental health at community, national & international level.
- To cultivate in students professional ethics, a sense of social responsibility, cultural sensitivity, and good citizenship in a globalized world.

## SYLLABUS:

### Semester –I

### BPS001C - INTRODUCTION TO PSYCHOLOGY (Core Course)

#### COURSE OBJECTIVES:

1. Provide sufficient knowledge and information about the nature and scope of psychology.
2. Identify, and create an understanding of individual, social and cultural diversity
3. Compare & construct the knowledge of human behavior in social contexts and situations.
4. Apply and integrate theoretical knowledge in various practical situations and display usefulness of psychological concepts

#### Syllabus:

UNIT	DETAILS
UNIT-1	Psychological Perspectives and Approaches: Definitions of Psychology, Scope, Brain, Mind & Behavior, Methods, Subfields, Psychology in modern India. Sensation & Perception: Sensation, Absolute threshold. Difference threshold. JND. Psychophysics and psychophysical methods, Depth perception: Monocular and binocular cues. Perceptual constancies. Extra sensory perception. Attention. Factors affecting attention-subjective and objective.
UNIT-2	Learning: Definition. Trial and error learning, Classical conditioning, Operant conditioning: Reinforcement, punishment, shaping, schedules of reinforcement. Social and cognitive learning: Observational learning. Latent learning, Insight learning. Memory: Encoding, storage and retrieval processes. Sensory, short term and long-term memories. Chunking, Measuring memory: Forgetting, amnesia, Strategies for remembering.
UNIT-3	Motivation and Emotion: Physiological and cognitive bases of motivation; expression and perception of emotions; physiological correlates and theories of emotion.
UNIT-4	Intelligence: Concept of intelligence: Psychometric and cognitive approaches to intelligence; Gardner's multiple intelligences; Emotional Intelligence, Heredity, environment and intelligence; Group differences in intelligence; Extremes of intelligence
UNIT-5	Self & Personality: Nature of personality; Bio psychosocial foundations of personality; Culture, gender and personality; Theories & approaches, Measuring personality. Know Thy Self: Self-Concept, Self-Esteem, Self-Efficacy & Self-regulation Self-determination theory; Enhancing cognitive potential and self enhancement.

#### COURSE OUTCOMES:

CO 1: Demonstrate an understanding of theoretical perspectives in psychology, key terms, concepts, and principles associated with major topics in psychology.

CO 2: Evaluate & acquire both factual knowledge and the ability to conceptualize and apply this knowledge to their own behavior

  
Head  
Department of Psychology  
JECRC University, JAIPUR

CO 3: Apply principles of the scientific method and critical thinking in Psychology.  
CO 4: Asses the ways of interacting with others and their roles in culture and society.

  
Head  
Department of Psychology  
JECRC University, JAIPUR

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAMME SPECIFIC OUTCOMES

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5
CO1	3	3	2	2	2				1	1			3	2		1	
CO2	3	3	2	1		2	2	1			3	2	1	2		2	
CO3	1	3	2	3	3	1						2		1		2	3
CO4			1		2		2	3		3	2						3

**3 = Highly Related; 2 = Medium; 1 = Low**

### BPS002C – SOCIAL PSYCHOLOGY-I (Core Course)

#### COURSE OBJECTIVES:

- Development of the self and the dynamics of interpersonal attraction, prosocial behaviour, aggression, prejudice, group processes and attitude formation and change in a social context.
- Appreciate how individual behavior is influenced by social and cultural contexts.
- Develop an understanding of functioning of dyads, groups and organization.
- Understand how social problems can be analyzed in terms of various social psychological theories.

#### Syllabus:

UNIT	DETAILS
<b>UNIT-1</b>	Introduction: Nature and scope of Social Psychology; Levels of social analysis; Critique to Social Psychology Overview of the history and current trends of Social Psychology (Including development in India)

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

<b>UNIT-2</b>	Understanding self and evaluating the social world: Making of the self; Social Cognition, Social Perception, Impression Management Attitudes (Attitude-Behavior Link; Strategies for attitude change)
<b>UNIT-3</b>	Social Interactions and Influence: Interpersonal Attraction, Social Influence Processes (Conformity, Compliance and Obedience)

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

<b>UNIT-4</b>	Group Dynamics: Nature of Groups; Basic Processes, Group Performance, Group Decision Making; Group Interaction (Facilitation, Loafing)
<b>UNIT-5</b>	Aggression & Pro-Social behavior: Aggression, Causes of Human Aggression, Prevention and Control of Aggression, Pro Social behavior & altruism.

### COURSE OUTCOMES:

CO 1: Understanding of basic concepts and familiarity with relevant methods students will be able to learn the applications of psychology in everyday life.

CO 2: Learn the applications of psychology in their social life by getting acquainted with the skills pertaining to social reality and evaluating the social situations.

CO 3: Comprehend the nature of scientific methods employed to study behavior in the social context.

CO 4: Describe the development of the self and the dynamics of interpersonal attraction, pro social behavior

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	3	3		1	1	3	2	1		1	2	1	2	3		2	3
CO2	1		3	2	3				1	2		2	1	3	3	2	
CO3	1	3	2		1	2	2		2						1		
CO4				1			2	1		2	2	3	1				1

**3 = Highly Related; 2 = Medium; 1 = Low**

**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

**BPS003D – STATISTICAL METHODS FOR PSYCHOLOGY (Core course)****COURSE OBJECTIVES:**

1. Familiarize with the psychological research and basics of statistical methods and tools used in descriptive statistics of quantitative research.
2. Develop competence in test construction and taking appropriate decisions based on test scores.
3. Understand the statistical concepts of psychological assessment
4. Develop understanding of the ethics, culture and best practices in psychological assessment.

**Syllabus:**

UNIT	DETAILS
UNIT-1	Introduction to Psychological Assessment: Theory and Practice challenges of Psychological measurement: Frequency Distribution Introduction, frequency table: Raw and grouped data Diagrams and graphs-Pie diagram, histogram, frequency polygon- Frequency curves, Ogives.
UNIT-2	Test construction: Steps in test development, item analysis, types of psychological tests Measure of Central Tendency Meaning-Characteristics-Mean, median, mode- Computation merits and demerits.
UNIT-3	Measure of Dispersion Range: quartile deviation, mean deviation, standard deviation and variance- Coefficient of variance.
UNIT-4	Correlation: Concept and Types- Pearson's Product Moment Correlation (Assumed & Actual Mean), Spearman's rank order correlation, Standard error of mean $\bar{t}$ test (Independent group), Interpretation of $\bar{t}$ values & levels of significance.
UNIT-5	Applications of Psychological testing: clinical, organizational and business, Educational counseling, military and career guidance settings. Ethical Issues of Psychological Testing, International guidelines and challenges of cultural applications.

**COURSE OUTCOMES:**

CO1: Explain and apply the concepts and procedures of descriptive statistics

CO2: Define and identify basic concepts in inferential and descriptive statistics.

CO 3: Create in-depth knowledge about the psychological concepts using the tools of statistics.

CO 4: Create in-depth knowledge about the ethics, culture and practices in psychological assessment.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM  
OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5

  
 Head  
 Department of Psychology  
 JECRC University, JAIPUR

## BPS015C –INTRODUCTION TO PSYCHOLOGY LAB

### COURSE OBJECTIVES:

1. To understand administration of psychological tests, interpretation of scores and report writing.
2. To learn evaluation procedures and evaluation of psychological tests.
3. To develop skills of psychology on the basis of psychological test results.
4. To develop the scientific aptitude for conducting experiments

### Syllabus: Psychometric tests/ Experiments/ Projects based on following

#### (Any 5)

1. Perceptual illusions and constancies
2. Learning
3. Memory
4. Forgetting
5. Emotions
6. Motivation
7. Achievement
8. Aptitude

❖ **Survey based project**

❖ **Assignment**

### COURSE OUTCOMES:

CO 1: Administration and interpretation of psychological tests

CO 2: Evaluate subjects on the basis of the results of the tests

CO 3: Learn the methodology of using the tests manuals and writing reports

*Vandana Kurnar*  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

CO 4: Gain the insight of conducting experiments

  
Head  
Department of Psychology  
JECRC University, JAIPUR

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM  
OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	PSO 4	PSO 5
CO1	2	1		2	3	3		1			1	2	3	2			2
CO2	3	2						1	1			2	3	3	2		
CO3	3	2	1	1	1	2		2			2		3	3	2		
CO4	3			2	3	2		2	1		1	2	3	2	3		2

**3 = Highly Related; 2 = Medium; 1 = Low**

**BPS016C – SOCIAL PSYCHOLOGY-I LAB  
COURSE OBJECTIVES:**

1. To understand the administration of tests based on concepts of Social psychology
2. To learn the variety of practical methods used in social psychology
3. To apply theories within social domain of psychology practically through psychometric test
4. To understand the concepts of social surveys and social psychology experiments

**Syllabus: Psychometric tests/ Experiments/ Projects based on following  
(Any 5)**

1. Analysis of Self
2. Social attitude
3. Interpersonal attraction
4. Aggression
5. Prosocial Behavior
6. Decision Making
7. Social Perception
8. Level of compliance

- ❖ Character analysis
- ❖ Sociometry

**COURSE OUTCOMES:**

- CO 1: Administration of social psychology tests and their importance in assessing social phenomenon  
 CO 2: Learn several of methods to analyze social data in psychology  
 CO 3: Able to apply the knowledge of social psychology in practical domain  
 CO 4: Able to design surveys and social experiments

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM  
OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5
CO1	2	1		2	3	3		1			1	2	3	2			2
CO2	3	2				2		1	1			2	3	3	2		3
CO3	3	2	1	1	1	2		2			2		3	3	2		3
CO4	3			2	3	2		2	1		1	2	3	2	3		2

**3 = Highly Related; 2 = Medium; 1 = Low**

**Semester –II**

**BPS004C – BIOLOGICAL BASIS OF BEHAVIOUR (Core Course)**

**COURSE OBJECTIVES:**

1. Understand CNS, brain structures and related functions.
2. Recognize sensory and motor divisions of the Nervous System.
3. Identify the process by which memories are formed and the neurological pathways related to hunger, emotions and sleep.
4. Analyze the various sleep disorders and circadian rhythms in sleep.

**Syllabus:**

UNIT	DETAILS
<b>UNIT-1</b>	Introduction to Physiology: Origin, Nature, Importance. Neurons: Structure, Synapses and reflexes, Neural Impulse Transmission, Neural Transmitter, Role of Neurotransmitters. Homeostasis, Mechanism of Homeostasis.
<b>UNIT-2</b>	Nervous System: CNS, PNS, Lateralization of Brain, Techniques used for studying Brain Pathology.
<b>UNIT-3</b>	Physiological Basis of Behavior: Sensation, Structure & function of Visual & Auditory System, Endocrine System & Behavior, Nature, Role of hormones on Human behavior.
<b>UNIT-4</b>	Physiology of Motivation & Emotions: Neural basis of Motivation & Emotions, Communication of Emotions, Physiological theories of Motivation & Emotions, Role and mechanism of Hunger and Thirst.
<b>UNIT-5</b>	Circadian Rhythms – Homeostasis, Mechanism of Homeostasis. Dreams: Sleep Cycle, REM, nREM, Sleep Cycle. Disorders of Sleep, Insomnia, Narcolepsy, Slow waves Sleep.

**COURSE OUTCOMES:**

CO 1: Understand the fundamental physiological processes, historical development and scientific methods underlying human behavior.

CO 2: Create better understanding about the working of Nervous System.

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

CO 3: Apply learning the complexities associated with the formation of memories and neurological pathways related to hunger, emotions, and sleep.

  
Head  
Department of Psychology  
JECRC University, JAIPUR

CO 4: Learn diagnosis of the sleeping patterns and disorders based on the knowledge of circadian rhythms in sleep.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO 1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO 1	PSO 2	PSO 3	PSO4	PSO5

**BPS005D – HUMAN DEVELOPMENT AND PEDAGOGY (Core Course)**

**COURSE OBJECTIVES:**

1. Examine and discuss major theories of child development
2. Analyze the interdependence of the cognitive, psychosocial and physical domains of development.
3. Examine and evaluate the role of play and its relationship to development at various stages.
4. Analyze the effect of biological, environment & cultural influence on developmental of children of all ages.

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

**Syllabus:**

UNIT	DETAILS
<b>UNIT-1</b>	Introduction: Meaning and concept of development, lifespan perspective, theories of development, factors influencing development (Nature & Nurture), principles of growth and development, difference between growth, maturation and development.
<b>UNIT-2</b>	Prenatal & Infancy Period: Genetic foundations, prenatal development, environmental influences, child birth and birth complications, motor and perceptual development in infancy, early deprivation and enrichment.
<b>UNIT-3</b>	Development in Childhood: Pre-school, middle and late childhood, physical, cognitive, intellectual, language, social, moral, and emotional development.
<b>UNIT-4</b>	Adolescence & Young Adulthood: Puberty, transition to adulthood, psychological impacts of pubertal events, sexuality in adolescent health, challenges of cognitive development, forming relationships and choosing career, Old age: Problems & developmental/psychological issues.
<b>UNIT-5</b>	Areas of Development: Cognitive development (Piagetian, Core-Knowledge and Vygotskian, information processing perspective), components and theories of language development, emotional development and theory of attachment, moral development and theory of social understanding.

**COURSE OUTCOMES:**

CO 1: Understand the theories related to child development.

CO 2: In-depth understanding of cognitive, psychological and physical domains of development.

CO 3: Analyze how play is important in relationship to child development at various stages.

CO 4: Apply how biological, environmental, and cultural factors influence child development at various levels of age.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## **BPS006C– BASICS OF PSYCHOPATHOLOGY (Core Course)**

### **COURSE OBJECTIVES:**

1. Acquire knowledge and skills for distinguishing normal and abnormal behavior and learn the criteria of determining abnormality.
2. Develop familiarity with the current diagnostic systems (current edition of the Diagnostic and Statistical Manual of Mental Disorders and International Classification of Diseases- Mental Disorder section).
3. Develop sensitivity towards individual and cultural diversity
4. Understand clinical picture and etiology of major psychological disorders.

### **Syllabus:**

<b>UNIT</b>	<b>DETAILS</b>
<b>UNIT-1</b>	Introduction: Criteria Of Abnormality, Causal Factors, Classification (DSM & ICD), Clinical Assessment, Intervention.
<b>UNIT-2</b>	Schizophrenia spectrum and other psychotic disorders, Dissociative Disorders, Somatic symptom & related disorders (Clinical picture & cases)
<b>UNIT-3</b>	Depressive Disorders, Bipolar and related disorders, Anxiety Disorders, Obsessive-Compulsive and related disorders, Trauma- and stressor-related disorders, Disruptive, impulse-control, and conduct disorders (Clinical picture & cases)
<b>UNIT-4</b>	Sexual Disorders, Gender dysphoria, Personality disorders, Substance Related Disorders(Clinical Picture & dynamics)
<b>UNIT-5</b>	Neurocognitive & Neurodevelopmental disorders: Learning Disabilities, Autism Spectrum Disorder, Attention Deficit Hyperactivity Disorder(Clinical picture and dynamics)

### **COURSE OUTCOMES:**

CO1: Understand about abnormality and so that one becomes able to distinguish between normal and abnormal behavior.

CO2: Learn about current diagnostic systems of mental disorders.

CO3: Become sensitive towards individual and cultural diversity.

CO4: Analyze & apply the clinical picture and etiology of major psychological disorders.

#### BPS017C –PSYCHOBIOLOGY LAB

##### COURSE OBJECTIVES:

- To understand the core practical premises of biological psychology
- To explore applications and implications of key concepts from Biopsychology
- To develop aptitude of basic research methods and techniques in Biological Psychology.
- To cultivate the critical thinking and research methods necessary to administer experiments & evaluate hypotheses

##### Syllabus: Psychometric tests/ Experiments/ Projects based on following

##### (Any 5)

- Biofeedback
- Arousal & Reaction Time
- Neural basis of Emotions
- Hormonal effects
- Hunger/ thirst
- Dreams
- Insomnia
- Sleep disorders

❖ **Case study**

❖ **Brain studies review**

##### COURSE OUTCOMES:

- CO 1: Develop practical aptitude towards the theoretical concepts of biopsychology  
CO 2: Enhance ability to practically apply the key concepts of biopsychology  
CO 3: Ability to organize and use certain research methods in biopsychology  
CO 4: Formulate hypotheses and evaluate results

*Vandana Kurnar*  
**Head**  
Department of Psychology  
JECRC University, JAIPUR

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM

**BPS018C - BASICS OF PSYCHOPATHOLOGY LAB  
COURSE OBJECTIVES:**

1. To understand practical issues related to psychological assessment of mental disorders
2. To learn selection & application of psychometric tests for assessing psychopathology
3. To analyze diagnostic tests of abnormal behavior
4. To use methods of case study, interview & observation to understand real-world problems in relation to abnormality

**Syllabus: Psychometric tests/ Experiments/ Projects based on following  
(Any 5)**

1. WAIS (Performance/ Verbal)
2. MMPI
3. TAT
4. Rorschach
5. Anxiety Scale/ Death Anxiety
6. Depression
7. Reaction to frustration
8. EPQ/ EPI

- ❖ **Project on any of the Disorders**
- ❖ **Case or research analysis on Sexual variants / gender dysphoria**
- ❖ **Analytical report on recent DSM version**

**COURSE OUTCOMES:**

CO 1: Students will learn to psychologically assess the issues of abnormality  
CO 2: Students will learn the basic diagnostic tests administered for psychopathology  
CO 3: Students will learn the application of the psychometric tests

  
**Head**  
Department of Psychology  
JECRC University, JAIPUR

CO 4: Students will learn various assessment techniques in psychopathology

  
Head  
Department of Psychology  
JECRC University, JAIPUR

## BPS024C - Introduction to Positive Psychology

### COURSE OBJECTIVES:

1. Introduce students to the basic concepts of Positive Psychology.
2. Discuss the historical development of positive psychology.
3. Understand the core theory and methods of positive psychology.
4. Explore the research advances and applications of Positive Psychology.

### Syllabus:

UNIT	DETAILS
UNIT-1	Definition; goals & assumptions;
UNIT-2	Historical development- Origins, Development, and Influences
UNIT-3	<b>Core theory and methods:</b> -Initial theory: three paths to happiness -PERMA -Character Strengths and Virtues -Flow
UNIT-4	Research advances and applications of Positive Psychology

### COURSE OUTCOMES:

CO1: Learn about how positive psychology will help tackle everyday problems.

CO2: Understand how Positive Psychology as a discipline developed and apply it to present day scenario.

CO3: Develop a proper understanding of core theories and methods in positive psychology.

CO4: Understand research advances and applications of Positive Psychology and be well versed with recent trends in Positive Psychology.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5
CO1	3	2	2	3			2	2			3	2	3	2		3	3

## Semester –III

### BPS007D – RESEARCH METHODS IN PSYCHOLOGY (Core Course)

## COURSE OBJECTIVES:

1. Develop awareness of the basic features of various types of research and understanding of the use of basic terminology used in human research.
2. Understand the distinctive features of a select qualitative research methods and plan small qualitative research.
3. Understand the importance of maintaining ethical and moral integrity of the researcher.
4. Educate with the process and the methods of quantitative and qualitative psychological research traditions.

## Syllabus:

UNIT	DETAILS
UNIT-1	Fundamentals of research methods in psychology: Scientific research, Variables- operational definitions; Problem: Define problem, criteria of problem statements; Hypothesis: Types of hypothesis, Hypothesis testing, Planning research, Steps in scientific research.
UNIT-2	Populations and Samples in Research: Sampling fundamentals: universe, population, sample size, sampling frame, Sampling process and sampling error; Types of sampling.
UNIT-3	Methods of Data Collection: Observation technique, Questionnaires; attitude scales; projective tests; sociometry; psychometric tests; Surveys; Interview methods & Focus Group Discussion and case studies.
UNIT-4	Experimental Research Design: Definition of experiment, importance of experiment in psychology, field vs Laboratory experiment; Experimental designs: within group and between group designs. Matched pair design, Single participant design.
UNIT-5	Psychological testing: Characteristics of a test, scales of measurement standardization, reliability, validity, norms, applications & issues.

**COURSE OUTCOMES:**

CO1: Become aware about the role of various types of research and terminologies associated with human research.

CO2: Able to plan simple research strategies and its requirements.

CO3: Able to plan qualitative methodologies in research.

CO4: Develop in-depth understanding of qualitative and quantitative methodologies in human research.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5
CO1	3	1		2	1	3	1	3		1		1	2	3		1	3
CO2	3	2	3	2				3	1	2		2	3	3	3	2	3
CO3	3	3	2			2	2	3	2			3			1	3	2
CO4	3			1	1		1	3		3	3	3	3			3	1

**3 = Highly Related; 2 = Medium; 1 = Low**

**BPS008C– FUNDAMENTALS OF COGNITIVE PSYCHOLOGY (Core Course)**

**COURSE OBJECTIVES:**

1. Develop a core competency in the area of cognitive psychology, focusing on topics such as language, memory, problem solving, reasoning and decision making.
2. Communicate how the human brain interprets and manipulates information.
3. Understand human psychology from cognitive perspective and participate as an active recipient of cognitive phenomena around us.
4. Analyze various cognitive phenomena of everyday experience often taken for granted.

**Syllabus:**

UNIT	DETAILS
UNIT-1	Introduction to Cognition: Meaning and various cognitive processes, interdisciplinary nature. Development, Emergence, Alternate approaches & Research Methods in Cognitive psychology.

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

<b>UNIT-2</b>	Perceptual Processes: Object Recognition, Attention, Consciousness, Perceptual Organizational Processes; Multisensory interaction and Integration - Synesthesia, Comparing the senses, Perception and Action.
---------------	---

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

<b>UNIT-3</b>	Memory: Working Memory- Research on working Memory, Factors affecting the capacity of working memory, Baddeley's working memory Approach; Long Term Memory: Memory Strategies: Practice, Mnemonics using Imagery, Mnemonics using organization, Metacognition
<b>UNIT-4</b>	Language Comprehension and Production: Psycholinguistics and Neurolinguistics; Speech Perception- Characteristics, Theories; Reading & Writing process, Bilingualism
<b>UNIT-5</b>	Problem Solving, Reasoning and Decision Making: Approaches, Factors, Creativity, Heuristics in decision making- representativeness, availability and Anchoring and adjustment; The framing effect, Overconfidence in decisions, The Hindsight Bias.

### COURSE OUTCOMES:

CO 1: Learn about cognitive psychology and its related topics like language, memory, problem solving, reasoning and decision making.

CO 2: Learn about the interpretation ability of brain in manipulating information.

CO 3: Comprehend the knowledge of cognitive phenomenon of daily life

CO 4: Critically evaluate the cognitive aspects of knowledge and will develop holistic view of the experience

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5
CO1	3	3		2	2	3	1	2		1		1	2	3		1	3

### BPS019C – FUNDAMENTALS OF COGNITIVE PSYCHOLOGY LAB COURSE OBJECTIVES:

1. To develop an understanding of mental processes through psychometric tests

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

2. To draw connections between mind, brain and behavior through observation & experiments
3. To learn about available tools for analyzing data regarding cognitive processes
4. To demonstrate domains of cognition through experimentation

  
Head  
Department of Psychology  
JECRC University, JAIPUR

**Syllabus: Psychometric tests/ Experiments/ Projects based on following (Any 5)**

1. Cognitive control
2. Reasoning
3. Problem solving skills
4. Perceptual styles
5. Working memory
6. Change blindness
7. Mnemonics
8. Psycholinguistics

- ❖ Comparative study of psycholinguistics and neurolinguistics
- ❖ Project on NLP or other advanced cognition expansion methods
- ❖ Psychological review on recent advancement in Cognitive Psychology

**COURSE OUTCOMES:**

CO1: Students will be acquainted with psychometric tests for analyzing mental processes

CO2: They will be use techniques of observation & experimentation to understand mind, brain & behavior

CO3: Students will be able to collect data for analyzing cognitive processes

CO4: Students will be able to understand different practical domains of cognitive psychology

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5

CO4	3		2	1	3		1	3		3	3	3	3	2		3	

**3 = Highly Related; 2 = Medium; 1 = Low**

## **BPS031C- GENDER DIVERSITY AND INCLUSION (LGBTQIA+)**

### **COURSE OBJECTIVES:**

1. Acquiring foundational knowledge and theories of gender diversity and inclusion.
2. Recognize and focus on the issues related to LGBTQIA+ and understand the eminence of their identity development.
3. Inculcate the importance of gender equality and gender diversity in contemporary times and various areas.
4. Develop an understanding about the importance framework of Queer therapy.

### **Syllabus:**

<b>UNIT</b>	<b>DETAILS</b>
<b>UNIT-1</b>	Gender diversity: Definition, nature & understanding at global and national level, concept of inclusion and related issues, factors accounting gender diversity and its importance.
	Gender inequality: Areas, nature & growth, stigma as the basis of gender inequality,

<b>UNIT-2</b>	fostering gender equality and diversity in the workplace and other areas, impact of gender inequality and gender diversity.
<b>UNIT-3</b>	Management of diversity, women empowerment and Indian society, meta theories on the origin of sex differences; quantifying femininity and muscularity.
<b>UNIT-4</b>	LGBTQIA+: Definition of LGBTQ Psychology, LGBTQ identity development in youth, contemporary contexts of LGBTQ issues, Queer affirmative theory and its benefits

## COURSE OUTCOMES

CO1: Analyse issues associated with LGBTQ community and gender inequality.

CO2: Identifying the problems and integrating the significant of Queer therapy in recent contexts.

CO3: Enhance the important significance of diversity and how it shapes life experiences.

CO4: Gaining an increased understanding of how to manage issues of diversity in multiple areas.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome												Program Specific Outcome				
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3	PSO4	PSO5
CO1	3	3							2		3	3	3			3	3

**Semester –IV**

**BPS009C – COUNSELLING AND THERAPIES (Core Course)**

**COURSE OBJECTIVES:**

1. Define and understand the purpose of guidance and counseling
2. Get an overview of different types of counseling specialties.
3. Understanding counseling theories.
4. Understand the counseling process and appreciate ethical practices in counseling.

  
Head  
Department of Psychology  
JECRC University, JAIPUR

**Syllabus:**

UNIT	DETAILS
<b>UNIT-1</b>	Introduction: Counseling, & Guidance: Definition and Purpose; Application : Applications: Child Counseling; Career Counseling; Crisis Intervention: Suicide, Grief, and Sexual Abuse, Marriage, Couple and family Counseling, School and college counseling, Abuse and Disability Counseling.
<b>UNIT-2</b>	Therapeutic Processes: Building Therapeutic Relationships; Working in a Therapeutic Relationship; Termination, Expectations and goals; characteristics of counselee and counselors; role and functions of the counselors.
<b>UNIT-3</b>	Counseling Theories 1: Psychoanalytic, Adlerian, Humanistic Approaches: Client-Centered, Gestalt, Existential
<b>UNIT-4</b>	Counseling Therapies 2: Behavioral Therapy, REBT, Reality Therapy, Cognitive therapy, Dialectical Behaviour Therapy Solution focused counseling, Integrative approach
<b>UNIT-5</b>	Ethics and Multicultural issues: Ethical and Legal aspects of counseling, Counseling in a multicultural society.

**COURSE OUTCOMES:**

CO 1: Learn the purpose and scope of counseling and guidance

CO 2: Analyze different skills and specialties of counseling

CO 3: Learn the theories and concepts of counseling and guidance that will help in real life settings of counseling sessions

CO 4: Knowledge of conducting counseling sessions and will also be updated about the ethics of counseling settings and rights of the counselee.

## **BPS010C – SOCIAL PSYCHOLOGY-II (Core Course)**

### **COURSE OBJECTIVES:**

1. Apply the knowledge of social psychological research to individual and societal problems.
2. Demonstrate the knowledge in social psychological research to resolve everyday social issues.
3. Evaluate the strengths and weaknesses of applied research.
4. Analyze the strengths and weaknesses of policies and interventions.

### **Syllabus:**

<b>UNIT</b>	<b>DETAILS</b>
<b>UNIT-1</b>	Background and Key Social Psychological Theories & Research Techniques in Applied Social Psychology
<b>UNIT-2</b>	Social psychology and health: Health belief model, health compromising behaviors; health promotion, cognitive response and dual process models of persuasive change; stress and health.
<b>UNIT-3</b>	Social psychology and environment: Human interaction with environment, environmental hazards and challenges; environmental attitudes, risk perceptions, encouraging pro-environmental behavior.
<b>UNIT-4</b>	Social psychology and consumer behavior: Economic and social-psychological approaches, meanings of money, social beliefs and value systems, consumer socialization.
<b>UNIT-5</b>	Understanding Yourself and Your Relationships, Youth Experiences Related to Education and Social Problems, Family Violence, addiction & law

### **COURSE OUTCOMES:**

CO 1: Learn the importance of social psychological research for dealing with the issues of individual and the society.

CO 2: Apply research to the students to be able to resolve day-to-day social issues.

CO 3: Compare the strengths and weaknesses of applied research.

CO 4: Compare the strengths and weaknesses of policies and interventions.

## BPS020C – SOCIAL PSYCHOLOGY-II LAB

### COURSE OBJECTIVES:

1. To understand the methods of investigation used in advanced social psychology
2. To assess experimental methods and analyze data of social psychology experiments
3. To familiarize students with practical applications of social psychology in different settings.
4. To analyze real-world problems using psychometric tests in social psychology

### Syllabus: Psychometric tests/ Experiments/ Projects based on following (Any 5)

1. Health belief
2. Pro-environment behavior
3. Consumer Socialization
4. Person perception
5. Pro-social behavior
6. Social conformity
7. Cooperation and competition
8. Experiential deprivation

- ❖ **Project on prevailing Social issue**
- ❖ **Psychological analysis of close relationships**

### COURSE OUTCOMES:

- CO 1: Students will be able to understand methods of assessment in advanced social psychology  
CO 2: Students will be able to apply and analyze experiments on the concepts of social world  
CO 3: Students will learn practical aspects of social psychology theories in different contexts  
CO 4: Students will gain proficiency in using psychometric tests to solve real issues of society

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF

**BPS021C – COUNSELLING AND THERAPIES LAB  
COURSE OBJECTIVES:**

1. To understand the administration and analysis of psychometric tests of vocational counseling
2. To understand selection & application of aptitude & creativity assessment tests
3. To equip the students with professional and practical skills specific to counseling psychology
4. To develop applied counseling and communication skills required for working in the counseling contexts

**Syllabus: Psychometric tests/ Experiments/ Projects based on following  
(Any 5)**

1. Study of grief
2. Suicidal tendencies
3. Marital relationship
4. Substance abuse
5. Adjustment
6. Counseling skills analysis
7. Identifying causes for therapies
8. Assessment of Interpersonal orientation of feelings / behavior

- ❖ Use of SPSS
- ❖ Analytical Reports on Mock Counseling sessions
- ❖ Writing Case Profile for diagnosis purpose
- ❖ Counselee interview report

**COURSE OUTCOMES:**

- CO 1: Students will be able to administer tests for vocational counseling  
 CO 2: Student will understand the application of aptitude & creativity assessment techniques  
 CO 3: Students will be equipped with professional & practical skills of counseling psychology  
 CO 4: Students will develop applied knowledge of counseling skills

#### **Sem 4: BPS032C- GENDER AND MENTAL**

#### **HEALTHCOURSE OBJECTIVES**

1. Introduce the theoretical concept of the importance of mental health among different gender.
2. Enhance the understanding and skills of various factors affecting the mental health.
3. Understanding the importance of psychological side of sexuality.
4. Inculcate the knowledge of risk factors associated with gender and other areas of mental health.

#### **Syllabus:**

UNIT	DETAILS
UNIT-1	Understanding gender and mental health, gender differences in mental health, impact on mental health, association between gender and mental health.
UNIT-2	Gender and mental in Indian context, biological and sociocultural influences on gender and mental health; impact of media on mental health of men & women; Key issues affecting women's mental health.
UNIT-3	The psychological side of human sexuality: Cognitive differences; social & personality differences, theories of gender role development and its importance.
UNIT-4	Gender specific risk factors; association between gender and emotional health; gender and mental dysfunction

#### **COURSE OUTCOMES**

CO1: Gaining increased knowledge and exposure about the determinants of specific mental health risks.

CO2: By exploring the importance and association between gender and mental health.

CO3: Develop and expand clarity about theories and development of gender role.

CO4: Able to plan and become aware about mental health and human sexuality among the society.

## **PROGRAMME DESCRIPTION**

Masters of Arts in Clinical Psychology or MA Clinical Psychology is a full time postgraduate course of two years, which is divided into four semesters at JECRC University. Clinical psychology addresses a breadth of mental, emotional and behavioral disorders. Clinical psychology is designed to integrate the science of psychology with the prevention and treatment of a wide variety of complicated human problems. The eligibility criteria for this course require BA Hons. degree in psychology/clinical psychology with a minimum of 55% aggregate from a recognized college/university.

### **Vision:**

The Psychology Department's vision is to gain national and international recognition as a research-oriented, teaching-intensive department while using advance scientific knowledge to develop innovative solutions for important life problems both locally and globally.

### **Mission:**

- To promote the advancement of scientific discipline of psychology through the synergistic relationship between teaching, research, and service.
- To provide competence & interdisciplinary knowledge to students so they are able to develop skills and are ready for vocational world.
- To prepare skilled psychologist and counselors to create awareness about mental health at community, national & international level.
- To cultivate in students professional ethics, a sense of social responsibility, cultural sensitivity, and good citizenship in a globalized world.

Head  
Department of Psychology  
JECRC University, JAIPUR

## SYLLABUS:

### SEMESTER –I

#### MPS001A: Introduction to Clinical Psychology

#### COURSE OBJECTIVES:

1. To demonstrate an awareness of the range of mental health problems with their underlying causal factors
2. To understand the working knowledge of the theoretical application of clinical models and interventions
3. To be able to integrate alternative or complementary theoretical frameworks in overall management of mental health problems.
4. To familiarize students with psychological assessments and interventions in the field of clinical psychology

UNIT	DETAILS
UNIT-1	Introduction: Scope of clinical psychology; overview of the profession and practice; history and growth; professional role and functions; current issues and trends; areas of specialization; ethical and legal issues; code of conduct.
UNIT-2	Mental health and illness: Mental health care – past and present; stigma and attitude towards mental illness; concept of mental health and illness; perspectives, Epidemiology: Epidemiological studies in Indian context; socio-cultural correlates of mental illness
UNIT-3	Self and relationships: Self-concept, self-image, self-perception and self-regulations in mental health and illness; learned helplessness and attribution theories; social skill model; interpersonal and communication models of mental illness; stress diathesis model, resilience, coping and social support
UNIT-4	Introduction to Clinical Assessment and Interventions Assessment Processes: planning, data-collecting, interpreting, and communicating findings; Clinical Interview: components and basic skills; Diagnosis and Classification: basic issues and skills; Other assessment components and skills (Intellectual, Neuropsychological, Personality and Behavioral assessment)
UNIT-5	General issues in interventions: Nature of specific therapeutic variables (client, therapist, relationship). Course of intervention; Various perspectives (briefly): Psychodynamic, Humanistic-Existential, Behavioral-Cognitive, Group & Family

#### COURSE OUTCOMES:

- CO 1: Apply the knowledge of clinical psychology by understanding the roots of mental health  
CO 2: Evaluate different clinical models for deeper understanding of mental health issues  
CO 3: Analyze and apply different assessments and interventions of clinical psychology  
CO 4: Apply basic clinical assessments for self-analysis

  
Head  
Department of Psychology  
JECRC University, JAIPUR

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	2			1		1	3	2	3
CO2	3	1	2		2	2		3		1
CO3	3	2	3		3		3	3	2	2
CO4	2	2	3				2	2		1

**3 = Highly Related; 2 = Medium; 1 = Low**

## MPS002A: Psychology of Personality

### COURSE OBJECTIVES:

1. To describe and differentiate among the major psychological approaches, terms, and theories which explain personality.
2. To practically apply acquired insight of personality to one's own life

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

3. To be able to compare and discuss different personality theories with regards to strengths and weaknesses

  
Head  
Department of Psychology  
JECRC University, JAIPUR

4. To apply critical perspectives & cultural competence through interpersonal awareness and sensitivity of others

UNIT	DETAILS
<b>UNIT-1</b>	Who am I? Understanding the Building Blocks of Personality, Personality Traits, Situations and Behaviors, Personality Assessment, Personality Judgment, Using Personality Traits to Understand Behavior
<b>UNIT-2</b>	Biological aspects: Anatomy and Physiology of Personality, Genetics, Personality Stability, Inheritance of Personality, The Neuroscience of Personality, Intrapsychic Foundations of Personality
<b>UNIT-3</b>	Psychoanalytic aspects of personality, Neo-analytic and ego aspects, Behaviorist and learning aspects, Cognitive and social-cognitive aspects, Trait and skill aspects
<b>UNIT-4</b>	Humanistic, existential, and positive aspects of personality, Person-situation interactionist, Regulation and Motivation: Self-Determination Theory
<b>UNIT-5</b>	Gender and Personality, Male-female differences, Stress, adjustment, & health differences, Sexual Orientation & personality issues.

### COURSE OUTCOMES:

CO 1: Understand the of basis of personality development through theories, approaches & different models

CO 2: Apply the different aspects of personality development for clinical analysis

CO 3: Develop research design to conduct clinical research projects based on personality, behavior and mental health issues

CO 4: Use clinical assessment tools for understanding the difference between various traits and types of personality for clinical/research purpose

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
<b>CO1</b>	3	3			2	1		3	1	3
<b>CO2</b>	2	2						3	2	2
<b>CO3</b>	2	2	3			1	3	1	1	3
<b>CO4</b>	1	2	3					2		2

**3 = Highly Related; 2 = Medium; 1 = Low**

### **MPS003A: Research Methods in Clinical Psychology-I**

#### **COURSE OBJECTIVES:**

1. To understand the basics of scientific process of quantitative research
2. To be able to understand & apply the knowledge of variables, sampling and methods of data collection
3. To use the knowledge of experimental designs to design an experiment in quantitative research
4. To comprehend and use the knowledge of identifying faults in research designs and designing an experimental quantitative research proposal

<b>UNIT</b>	<b>DETAILS</b>
<b>UNIT-1</b>	Philosophical roots of quantitative research; History of scientific research in psychology; Definition of research; Purpose and need of psychological research. Experimental, Exploratory, Correlational and descriptive research in psychology; Ethical issues in psychological research
<b>UNIT-2</b>	Conceptualization, operationalization and measurement; Causality and experimentation; Definition and nature of variables; operationally defining variables; Independent variables; Dependent variables; formulation of research problems and hypothesis; Different types of hypothesis; Experimental manipulation and control of variables; steps in quantitative research
<b>UNIT-3</b>	Population and sample: Basic assumptions; Sampling distribution; Sampling techniques: probability and non-probability sampling
<b>UNIT-4</b>	Methods of data collection: observational methods, surveys, questionnaires, interviewing methods, case study methods, and psychometric tests.
<b>UNIT-5</b>	Adequate vs. Inadequate (faulty) research design; Types of experimental design based on subjects and factors; Within-subjects, between subjects, single subject, single factor, and factorial design; Sources of error variance and its management in the various types of experimental designs; Mixed designs.

#### **COURSE OUTCOMES:**

- CO 1: Demonstrate knowledge of research designs in quantitative research and the scientific process of research
- CO 2: Design an experiment with manipulation can control of the variables.
- CO 3: Differentiate various data collection and sampling methods employed in quantitative research
- CO 4: Write a quantitative research proposal in the domain of Clinical Psychology

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	1	2	3						1	3
CO2	2	2	3		2		2	2	2	
CO3	3	1	3		3	1			2	1
CO4	2	2	3		2				2	3

**MPS030A: Psych Practical Lab-I**

**COURSE OBJECTIVES:**

1. To use relevant criteria to assess the quality and appropriateness of a psychological test and evaluate its strengths and weaknesses for clinical purposes.
2. To be able to synthesize and integrate collateral information from multiple sources and discuss the rationale for psychological assessment as relevant to the areas being assessed
3. To use the knowledge of administration of psychometric testee to apply psychological assessment in clinical context.
4. To comprehend and use the knowledge to integrate the findings in service activities.

**Psychometric tests/ Experiments/ Projects based on following**

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

1. Introduction and administration of Case history
2. Mental status examination (MSE)
3. Muller Lyer Illusion

  
Head  
Department of Psychology  
JECRC University, JAIPUR

4. Personality Inventories
5. Self-esteem scales

- ❖ Collection of reports based on MSE
- ❖ Using personality tests for identifying clinical mental health issues
- ❖ Attending seminar of relatable topics

#### **COURSE OUTCOMES:**

CO 1: Carry out the clinical work-up and discuss the diagnostic possibilities based on the history and mental status examination of the clients with psychological/neuropsychological problems

CO 2 Select and justify the use of psychological tests and carry out the assessment as per the specified procedures in investigating the relevant domains.

CO 3: Interpret the findings in the backdrop of the clinical history and mental status findings and arrive at a diagnosis.

CO 4: Prepare the report of the findings as relevant to the clinical questions

#### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	3	3						3	1	3
CO2	1	2		2		3		1	3	3
CO3	3	1		2		3		3	2	3
CO4	3	1						3	1	2

**3 = Highly Related; 2 = Medium; 1 = Low**

 JECRC University, JAIPUR

**Sem 1: MPS021A: Introduction to Art therapy as supportive**

**therapyCOURSE OBJECTIVES:**

1. Introduce students to the basic concepts of Art Therapy.
2. Discuss Art Therapy as a supportive therapy in General Illnesses
3. Understand Art Therapy as a supportive therapy for children who have experienced trauma
4. Explore art therapy as a supportive therapy for eating disorders

**Syllabus:**

UNIT	DETAILS
UNIT-1	Art Therapy- Definition and History
UNIT-2	Art Therapy as a supportive Therapy in General Illnesses: -Cancer -Heart Disease

  
Head  
Department of Psychology  
JECRC University, JAIPUR

<b>UNIT-3</b>	<b>Art Therapy as a supportive Therapy for Children who have experienced Trauma</b> -Alleviating Trauma induced emotions within children
<b>UNIT-4</b>	<b>Art Therapy as a supportive Therapy for Eating Disorders</b> -Anorexia -Bulimia -Binge Eating

### **COURSE OUTCOMES:**

**CO1:** Learn how art therapy developed as a psychotherapy

**CO2:** Understand how Art Therapy may be used as a supportive therapy in general illnesses

**CO3:** Develop and understanding about how art therapy may be used as a supportive therapy for children who have experienced trauma

**CO4:** Explore how art therapy may be useful in dealing with eating disorders

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<b>Course Outcome</b>	<b>Program Outcome</b>							<b>Program Specific Outcome</b>		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
<b>CO1</b>		2	2			1	3	3		
<b>CO2</b>	2	3	2	2		1	3	3	3	3
<b>CO3</b>	2	3	2	2		1	3	3	3	3
<b>CO4</b>	2	3	2	2		1	3	3	3	3

### **MPS033A: Psychology of Indian Perspective (AECC-I)**

#### **COURSE OBJECTIVES:**

1. To develop an understanding of the concepts of Indian psychological thought.
2. To understand the process of self and personality from a developmental perspective and its involvement in health and healing.

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

3. To facilitate an understanding into mapping selfhood in the context of relationships, motivation, action and agency.
4. To learn to formulate strategies to address issues in therapeutic, educational and organizational settings from the indigenous Indian perspective.

## Syllabus:

UNIT	DETAILS
UNIT-1	Introduction: What is Indian psychology; relevance and scope; historical developments; distinction from western psychology.
UNIT-2	Indian Perspectives on Cognition: Nature of reality; manas and higher mental states; types of knowing; methods of knowing; yoga as research method.
UNIT-3	Self and Consciousness: What is self? self as consciousness; states of consciousness; self as knower, as enjoyer, as doer; ego-identity and soul identity; self and society
UNIT-4	Health, Happiness and Well-being: Concepts; mental health — concept, symptoms and treatment; suffering and healing; theories of happiness and well-being; self-growth and liberation

## COURSE OUTCOMES:

CO 1: Being students of Indian origin, the students will be able to understand the Indian psychological thought more effectively.

CO 2: Students will be able to discover more perspective about their own personality, their self, and will be able to use that for healing and health.

CO 3: With selfhood mapping the students will be able to have better perspective about relationships, motivation, action and agency.

CO 4: The students will learn to apply indigenous Indian perspective in issues in therapeutic, educational and organizational settings.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	3	2		2	1		1	3	2	3
CO2	3	2	2		2	2		3		1
CO3	3	2	3		3		3	3	2	2
CO4	3	2	3				2	2	2	1

## SEMESTER –II

### MPS004A: Psychopathology -I

#### COURSE OBJECTIVES:

1. To understand the etiology and current classificatory systems of mental disorders
2. To learn about the different symptoms, course and prognosis of mental disorders
3. To be able to differentiate and apply the knowledge of mental disorders as per Indian and western perspective
4. To use and apply the knowledge of psychiatric disorders for the purpose of internship and clinical training

UNIT	DETAILS
------	---------

  
 Head  
 Department of Psychology  
 JECRC University, JAIPUR

<b>UNIT-1</b>	Introduction to psychopathology: Definition; concepts of normality and abnormality; clinical criteria of abnormality; continuity (dimensional) versus discontinuity (categorical), and prototype models of psychopathology; classification and taxonomies – reliability and utility; classificatory systems DSM, ICD, currently in use and their advantages and limitations. Approach to clinical interviewing and diagnosis; case history; mental status examination; organization and presentation of psychiatric information; diagnostic formulation
<b>UNIT-2</b>	Indian thoughts: Concept of mental health and illness; nosology and taxonomy of mental illness; social identity and stratification (Varnashrama Vyawastha); concept of – cognition, emotion, personality, motivation and their disorders.
<b>UNIT-3</b>	Signs and symptoms: Disorders of consciousness, attention, motor behavior, orientation, experience of self, speech, thought, perception, emotion, and memory. Organic mental disorders: Dementia, delirium and other related conditions with neuralgic and systemic disorders – types, clinical features, etiology and management.
<b>UNIT-4</b>	Psychoses: Schizophrenia spectrum and other psychotic disorders, affective disorders, delusional disorders and other forms– types, clinical features, etiology and management. Neurotic, trauma & stressor-related and somatic symptom and other related disorders: types, clinical features, etiology and management.
<b>UNIT-5</b>	Behavioral, emotional and developmental disorders of childhood and adolescence: Intellectual disabilities and neurodevelopmental disorders: Classification, etiology and management

#### **COURSE OUTCOMES:**

CO 1: Contrast and compare the models of etiology of mental disorders

CO 2: Demonstrate the ability to use DSM V and ICD classificatory systems

CO 3: Apply the understanding of skills required to diagnose various disorders.

CO 4: Write case study reports with mental status examination and case history.

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	3	2						2	1	3
CO2	3	2		1		3		1	3	3
CO3	3	1		1	2	2		3	3	3
CO4	3	2						3	2	3

**MPS005A: Psychology of Cognition**

**COURSE OBJECTIVES:**

1. Develop a core competency in the area of cognitive psychology, focusing on topics such as language, memory, problem solving, reasoning and decision making.
2. Communicate how the human brain interprets and manipulates information.
3. Understand human psychology from cognitive perspective and participate as an active recipient of cognitive phenomena around us.
4. Analyze various cognitive phenomena of everyday experience often taken for granted.

**Syllabus:**

UNIT	DETAILS
------	---------

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

<b>UNIT-1</b>	Introduction to Cognition: Meaning and various cognitive processes, interdisciplinary nature. Development, Emergence, Alternate approaches & Research Methods in Cognitive psychology.
<b>UNIT-2</b>	Perceptual Processes: Object Recognition, Attention, Consciousness, Perceptual Organizational Processes; Multisensory interaction and Integration - Synesthesia,

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

	Comparing the senses, Perception and Action.
<b>UNIT-3</b>	Memory: Working Memory- Research on working Memory, Factors affecting the capacity of working memory, Baddeley's working memory Approach; Long Term Memory: Memory Strategies: Practice, Mnemonics using Imagery, Mnemonics using organization, Metacognition
<b>UNIT-4</b>	Language Comprehension and Production: Psycholinguistics and Neurolinguistics; Speech Perception- Characteristics, Theories; Reading & Writing process, Bilingualism
<b>UNIT-5</b>	Problem Solving, Reasoning and Decision Making: Approaches, Factors, Creativity, Heuristics in decision making- representativeness, availability and Anchoring and adjustment; The framing effect, Overconfidence in decisions, The Hindsight Bias.

### COURSE OUTCOMES:

CO 1: Learn about cognitive psychology and its related topics like language, memory, problem solving, reasoning and decision making.

CO 2: Learn about the interpretation ability of brain in manipulating information.

CO 3: Comprehend the knowledge of cognitive phenomenon of daily life

CO 4: Critically evaluate the cognitive aspects of knowledge and will develop holistic view of the experience

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
<b>CO1</b>	3	1		1				2	1	
<b>CO2</b>	3	2			1	3		2		1
<b>CO3</b>	3	2	2		2	3		2		2
<b>CO4</b>	3	1	2		2			2		3

## MPS006A: Research Methods in Clinical Psychology-II

### COURSE OBJECTIVES:

1. To understand skills on designing qualitative & clinical research
2. To be able to collect qualitative data using various methods in the field of clinical psychology
3. To develop the skills of manual and computer aided data analysis in interdisciplinary research
4. To apply skills of proposal writing and reporting qualitative research.

UNIT	DETAILS
UNIT-1	Defining qualitative research; Historical development of qualitative research; Key philosophical and methodological issues in qualitative research; Different traditions of qualitative research; Grounded theory, Narrative approach, Ethnography, Action research and Discourse analysis
UNIT-2	Conceptualizing research questions, issues of paradigm, Designing samples, Theoretical sampling, Contrasting qualitative with quantitative approach in research process Issues of Credibility and trustworthiness
UNIT-3	What is qualitative data? Various methods of collecting qualitative data: participant observation, interviewing, focus groups, life history and oral history, documents, diaries, photographs, films and videos, conversation, texts and case studies
UNIT-4	Analyzing Qualitative Data: Different traditions of qualitative data analysis; thematic analysis, Narrative analysis, Discourse analysis, Content analysis
UNIT-5	Review of different article related to the different traditions of qualitative research. Developing Qualitative research proposal, Qualitative data analysis software, Simulated techniques on different data collection methods

### COURSE OUTCOMES:

CO 1: Contrast and compare different qualitative research methods

CO 2: Design qualitative research study and use different data collection techniques

CO 3: Apply the knowledge of manual & computer aided data scrutiny for analyzing result.

CO 4: Create research proposal and conduct qualitative research

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

### **MPS031A:Psych Practical Lab-II**

#### **COURSE OBJECTIVES:**

1. To give practical experience to the students in administering and scoring psychological tests and interpreting the scores
2. To be able to synthesize and integrate collateral information from multiple sources and discuss the rationale for psychological assessment as relevant to the areas being assessed
3. To acquaint the students with the basic procedure and design of psychology experiments.
4. To encourage and guide the students to undertake a small-scale research project.

#### **Psychometric tests/ Experiments/ Projects based on following**

1. Introduction and administration of Case history
2. Emotional Intelligence Scale
3. Clinical Analysis Questionnaire
4. Bhatia Battery
5. Projective techniques

- ❖ **Project on clinical cases**
- ❖ **Using projective techniques**
- ❖ **Writing analysis of National & International research papers**

#### **COURSE OUTCOMES:**

CO 1: Carry out the clinical work-up and discuss the diagnostic possibilities based on the history and mental status examination of the clients with psychological/neuropsychological problems

CO 2 Select and justify the use of psychological tests and carry out the assessment as per the specified procedures in investigating the relevant domains.

CO 3: Interpret the findings in the backdrop of the clinical history and mental status findings and arrive at a diagnosis.

CO 4: Prepare the report of the findings as relevant to the clinical questions

**Sem 2: MPS022A: Art therapy**

**Techniques –I**

**COURSE OBJECTIVES:**

1. Discuss the evolution of art therapy techniques
2. Understand different art therapy techniques of evoking expression within the client
3. Explore various techniques on how to facilitate expression within the client through art therapy
4. Using techniques to facilitate decisions on what to do and why to do it.

**Syllabus:**

UNIT	DETAILS
UNIT-1	Evolution of Art Therapy Technique
UNIT-2	<b>Evoking Expression:</b> - Warming Up -Pictorial Stimuli

  
**Head**  
 Department of Psychology  
 JECRC University, JAIPUR

	-Visual Starters -Using the Non-dominant Hemisphere -Stimulating Materials and Methods -Regressive Media Help in Dealing with Shame -Mental Imagery -A Series of Images
<b>UNIT-3</b>	<b>Facilitating Expression:</b> -Motivational Techniques -Artistic Interventions -Drawing Workbooks and Guides
<b>UNIT-4</b>	<b>Deciding on what to do and why:</b> -Specific Tasks Help a Family to –See Problems

### COURSE OUTCOMES:

**CO1:** Learn about the evolution of art therapy techniques.

**CO2:** Understand how to evoke expression through various art therapy techniques.

**CO3:** Using various art therapy techniques to facilitate expression

**CO4:** Exploring various art therapy techniques to help on deciding what to do and why to do it.

**BOARD OF STUDIES: B.A. (Hons.) Political Science**

**FOR ACADEMIC SESSION 2021-22**

  
Head  
Department of Political Science  
JECRC University, JAIPUR

### **Program Description**

Bachelor of Arts in Political Science (Hons.) is a Three-year Undergraduate programme designed to prepare students to understand the theoretical and practical aspects of Political Science. Political Science equips students with an understanding of the political institutions and laws that govern all businesses function. It also sharpens students understanding of organizational dynamics and human relations. JECRC University offers B.A (Hons.) in Political Science, to enrich the young minds for understanding the current events in a larger context. The students are introduced to the political, social, cultural and economic backgrounds of various countries across the globe. After the successful completion of the course, students can opt for Masters Degree in Political Science, prepare for Civil Services, Competitive Exams, and go for Research in the field of their interest and many more.

### **Vision**

The Department of Political Science endeavors to generate new knowledge and produce students who are trained in Political Science. The primary purpose of the Department is to pursue knowledge and understanding of the political aspects of the human endeavor; to transmit this knowledge to others; to relate this knowledge to the real world in creative, critical, and constructive ways; and to encourage through pedagogical means a real interest in politics.

### **Mission**

The Department of Political Science strives to achieve academic excellence in teaching, research and extension. The mission of the Department is to communicate the knowledge of political science as a scholarly discipline through education of undergraduate students in the core principles and specialties of political science. Our mission is to make the students a politically aware citizen and contribute towards the society and Nation at large.

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

**SCHOOL OF HUMANITIES & SOCIAL SCIENCES**

**DEPARTMENT OF POLITICAL SCIENCE**

**ACADEMIC SESSION 2021-22**

**PROGRAM OUTCOME**

<b>PO1</b>	<b>Domain knowledge:</b> Apply the knowledge of domain subjects, science, computer fundamentals, and humanities & social science specialization to the solution of complex individual & social problems
<b>PO2</b>	<b>Critical Thinking:</b> Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives
<b>PO3</b>	<b>Problem Analysis:</b> Stimulate into adopting an enquiring attitude towards the problems encountered, developing solutions & appreciation of the different contexts
<b>PO4</b>	<b>Design/development of solutions:</b> Design solutions for complex psychological, economical, political & social problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
<b>PO5</b>	<b>Conduct investigations of complex problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions
<b>PO6</b>	<b>Modern tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern IT tools including prediction and modeling to complex activities with an understanding of the limitations
<b>PO7</b>	<b>Environment and sustainability:</b> Understand the impact of the professional solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development
<b>PO8</b>	<b>Ethics:</b> Recognize the diversity and complexity of ethical dilemmas in the real world, and educate oneself to base one's actions on responsibility, and respect for human rights
<b>PO9</b>	<b>Multidisciplinary approach:</b> To develop multidisciplinary perspective in reference to historical, social, psychological, economical, political & cultural context.
<b>PO10</b>	<b>Effective Communication:</b> Articulate ideas and perspectives, by developing and enhancing the communicative skills of listening, speaking, reading, and writing in interpersonal and interactive contexts, in print and in electronic media, for various audiences and purposes
<b>PO11</b>	<b>Individual and team work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings

  
Head  
Department of Political Science  
JECRC University, JAIPUR

<b>PO12</b>	<b>Self-directed and Life-long Learning:</b> Acquire the ability to engage in independent and life-long learning in the broadest context of socio-technological change.
-------------	---

#### **PROGRAMME SPECIFIC OUTCOMES (PSOs)(Political Science)**

<b>PS0 1</b>	Locate, identify, analyze and evaluate diverse sources of arguments, knowledge and approaches in political science.
<b>PS0 2</b>	Identify, analyze and evaluate the historical origins of contemporary political actors, institutions and systems, and the broader historical context of current political issues and debates.
<b>PS0 3</b>	Understand the world, different societies, and have awareness of ethical problems, social rights, values and responsibility to the self and to others.
<b>PS0 4</b>	Have a sense of civic responsibility. They will evolve an awareness as well as understanding of the professionalism and ethical behavior that guide the discipline of political science with respect to research design, practice and the principles of academic integrity.
<b>PS0 5</b>	Assess how global, national and regional developments affect society. .

**Semester IV**

**Research Methodology:**

**Course Objectives:**

**CO1.** To acquaint the students with research methodology

**CO2.** To give an orientation to the students to the techniques of documentation.

**CO3.** Enable students to carry out investigation of various political issues through primary and secondary sources.

**CO4.** Establish links between theory and methods within their field of study

**CO5.** Learn to apply techniques of research to their study.

## Course Content

Unit 1	Social Science Research- Meaning, nature, objectives, importance and problems; Research process; Types of Research- Historical, Descriptive, Exploratory and Scientific .
Unit 2	Research problems- Selection and formulation, defining a research problem; Research design- meaning, features, types and construction of Research Design, Concept and Hypothesis
Unit 3	Sampling Design- Meaning, Steps, Characteristics, Types- Probability and Non Probability sampling techniques .
Unit 4	Sources of data – primary, secondary; Data collection- Interview, Observations, Questionnaire, Schedules
Unit 5	Data analysis- Classification, Tabulation, Descriptive analysis, Bibliography; Report Writing, The use of computers in Research, Ethics in Research

**Course Outcome: Upon completion of this course, students will be able**

**to:** **CO1.** Apply research techniques through field visits and preparation of

reports. **CO2:** Present the findings of their project in a written report.

**CO3** To assist the students to get the feeling of approaches and tools they might use in their own research

**CO4** Student is capable of choosing research methods appropriate for resolving the professional tasks.

**Paper Title: Project****Course Objectives:**

- To acquaint the students with research methodology
- To orient the students to the techniques of documentation

This paper requires two hours of self study outside the class so as to acquaint them with the techniques of Data/ Information collection and Data/Information analysis so as to arrive at valid conclusions.

**The outcome of this course is to:**

1. Understand the basic concept of research and its methodologies
2. Identify, explain, and apply the basic concepts of research, such as variables, sampling, reliability, and validity
3. Identify the overall process of designing a research study from its inception to its report.

**Semester V (Open Elective)****DPO002A: Human Rights (Credit-3)****Course Objectives:**

**CO1.** This will acquaint students to build an understanding of human rights.

**CO2.** The student will have thorough study of specific issues in a comparative perspective.

**CO3.** Makes student understand the state response to issues related to structural violence questions.

**CO4.** Seeks to anchor all issues in the Indian context, and pulls out another country to form a broader comparative frame.

**CO5.** Student can apply and understand the different theories related to Human Rights.

**Course Content**

Unit 1	Human Rights: Theory and Institutionalization
Unit 2	Understanding Human Rights: Three Generations of Rights
Unit 3	Institutionalization: Universal Declaration of Human Rights
Unit 4	Structural Violence Gender and Violence: India and Pakistan
Unit 5	Terrorism and Insecurity of Minorities: USA and India

**Course Outcome: Upon completion of this course, students will be able to:**

CO1 Critically analyzes the issues related to Human Rights.

CO2: Identify role of the State in dealing with issues related to Human Rights.

CO3. Develop a comparative perspective.

CO4. Create awareness about Human Rights.

### **Semester: VI**

### **Paper Title: Dissertation (Credit-10)**

#### **Course Objectives:**

- CO1.** To create awareness regarding current trends, issues and research as related to various aspects of Political Science..
- CO2.** Inculcating an interdisciplinary comparative approach to research
- CO3.** Updating knowledge in pertinent areas of research
- CO4.** To acquaint the students with research methodology
- CO5.** Prepare the student for higher research through the use of research methodology.

**Course Outcome: Upon completion of this course, students will be able to:**

CO1. Have a deeper knowledge of methods in the major subject/field of study.

CO2. To contribute to research and development work.

CO3. To plan and use adequate methods to conduct qualified tasks in given framework.

CO4. Carry out investigation of various political issues through primary and secondary sources.

# Semester I

## LEGAL ENGLISH

**Subject Code:** BAL092A/BSL092A/BBL092A

**Maximum Marks:** 100

### **Course Outcomes:**

After completion of this course, the student will:

- CO1: Be able to understand the importance of poems and short stories and historical background of English literature.
- CO2: Be able to explore grammar for purpose reading and writing legal texts.
- CO3: Be able to improve their legal vocabulary, writing skills such as application, letter, etc and presentation skills.
- CO4: Be able to demonstrate their well supported communications skills and essays using different patterns of development taking into consideration purpose and audience.
- CO5: Be able to help students overcome their legal English problems and expend their general legal problems.

### **Module I: INTRODUCTION OF LEGAL ENGLISH**

History & Characteristics of Legal English, meaning of Language, Importance of language, Relation of Language with law, Meaning of Legal Language, Importance of legal language, Scope of Legal Language, Legal and ordinary meaning of words, Hints for effective Legal Writing, Constitutional Provisions relating to language, Problems of legal language.

### **Module II: LEGAL TERMS**

Usage of Latin words, expressions and **Legal Latin words and phrases – Legal Terminology:** *ab initio, ad valorem, ad idem, affidavit, alibi, amicus curiae, a priori, a posteriori, bonafide, malafide, caveat emptor, caveat venditor, corpus juri, casus belli, compos mentis, de jure, de facto, de nova, ex parte, ipso facto, ex-gratia, ejusdemgenieris, in limine, nolo contendere, per se, prima facie, suomotu, and other similar terms*

### **Module III: LEGAL MAXIMS**

Maxims in Civil and Criminal law:

*Audi alteram partem, actus non facit reum nisi mens sit rea, bonafides non patitur ut bis idem exigatur, damnum sine injuria esse potest, commodum ex injuria sua non habere debet, delegatus non potest delegare, extra territorium jus dicenti impune non paretur, Ex Turpi Causa Non Oritur Actio, de minimis non curat lex, Dolo Malo Pactum Se Non Servaturum, and other similar maxims.*

### **Module IV: FUNDAMENTALS OF LEGAL WRITING**

- Brief writing and drafting of legal issues
- Case commentary, review
- Legislation and literature review
- Legal review: Newspaper

- Passages & Paragraphs from leading cases
- Essay Writing on topics of legal interest
- Translation: Hindi to English and English to Hindi
- Legal correspondence
- Judgment Drafting

## Module V: MANIFESTATIONS OF LEGAL LANGUAGE

Significance of Legal language by way of:

- Legal Transcripts & Texts
- Landmark Judgments
- Legislations, Statutes and Treaties

## COMPUTER SCIENCE- I

**Subject Code:** BAL002A/ BSL002A/ BBL002A

**Maximum Marks: 70**

### **Course Outcomes:**

After completion of this course, the student will:

CO1: Be able to understand fundamentals of computers such as anatomy, classification, operating system etc.

CO2: Be able to explore evolution, definition of operating systems and be able to operate the computers.

CO3: Be able acquainted with the usage of MS Word, Excel and Power Point Presentations.

CO4: Have knowledge of Definition, Scope, History, Applications, services internet and networking system.

CO5: Have ability to apply knowledge of computing and ability to identify formulae and develop solutions to computational challenges.

### **Module I: INTRODUCTION OF COMPUTER**

Computer and its components; Characteristics of Computer, Generation of Computer, Software, Hardware and firmware, Types of Computer, Language data processing. Storage devices: RAM, DRAM, SRAM, ROM, PROM, EPROM, Secondary Memory, Magnetic disk, Compact disk, Pen drive, and Hard disk.

### **Module II: TEXT PROCESSING**

Introduction to Word Processing, Advantage of Word Processing, Creating, Saving and Editing a document, Selecting, Deleting, Replacing Text, Copying text to another file, Formatting Text and Paragraph, Using the font Dialog Box, Paragraph formatting using Bullets and Numbering in Paragraphs, Checking Spelling, Line spacing, Margins, Space before and after paragraph. Basic Editing, Formatting, Copying and Moving Text and Object, Editing features, Paragraph Formatting, Tables, Lists, Page Formatting, Inserting Graphics, Pictures and Table of Contents, Advanced Tools.

### **Module III: DATA PROCESSING**

Numbers, formula, Editing Data in a cell, Excel functions, Using a Range with Sum, Moving and copying data, Inserting and deleting Row and Columns in the worksheet. Highlights and Main functions: creating and Using Templates, Working with Data: Manipulating Data Names and Ranges, filters and sort and validation Lists, Data from External Sources, Using and formatting tables, Basic formulas and use of functions, Data Analysis Using charts and Graph, Using the format cells Dialog box, Using charts wizard to create a chart, Validation to sheet. Splitting worksheet window into two four panes, freezing columns and rows on screen for worksheet title, Attaching comments to cell, finding and replacing data in the worksheet. Protecting worksheet.

#### **Module IV: PRESENTATION E-SOURCES**

Introduction of slide presentation, Slide show, Formatting, Creating a Presentation, Inserting clip Arts, Adding Objects, Applying Transitions, Animation effects, formatting and checking text. Database: Introduction to database, functions of database, creating and manipulating database. E-Sources and Legal Research: Use of Internet Explorer and search Engine for Legal Information, International Legal service Providers, National Legal Service Providers, and Referencing Plagiarism.

#### **Module V: HTML**

Tags layout of HTML document, Creating HTML Document, Adding comment, Heading, color settings, inserting an image, hyper link, listings, tables, frames and forms.

#### **Text & References:**

- Introduction to computers, Peter Norton, TMH
- Computer Fundamentals, P. K. Sinha, BPB

CO5		1			2		1		2		3

## PSYCHOLOGY-I

**Subject Code:** BAL003A

**Maximum Marks:** 100

### **Course Outcomes:**

At the end of the course, students will be able to:

- CO1. Understand the basic principles, introduction and methods of Psychology
- CO2. Gain knowledge of attention and perception to understand human Psychology
- CO3. Understand individual's approach to cognitive learning.
- CO4. Discuss memory and forgetting to observe the human brain.
- CO5. Analyze types of thinking and theories of language in legal practice.

### **Module I: INTRODUCTION TO PSYCHOLOGY**

Definition and Goals of Psychology. Leadership: Definition and Functions of Leaders; Characteristics of A Leader, Theories of Leadership, Effective Leadership.

### **Module II: MOTIVATION**

Types of Motives: Biogenic and Sociogenic Motives. The Need Hierarchy Model; Techniques of Assessing Motivation; Emotions: Nature, Types And Physiology Of Emotions. Theories of Emotions: James- Lange, Canon-Bard and Schachter-Singer Theory.

### **Module III: LEARNING**

Meaning and Definition of Learning; Operant Conditioning, Classical Conditioning, Cognitive Learning; Reinforcement and Punishment; Escape and Avoidance Learning and Social Learning.

Adjustment, Stress and Coping: Definition & Nature of Adjustment and Stress; Types and Sources of Stress; Coping and Stress Management Techniques.

### **Module IV: PERSONALITY AND ATTITUDES**

Trait and Type Approaches; Biological and Socio-Cultural Determinants; Techniques of Assessment; Psychometric and Projective. Nature and Function of Attitudes; Theories, Formation. Human Intelligence: Meaning and Nature of Intelligence – Theories of Intelligence. Determinants of Intelligence, Genetic and Environmental Influences; Measurement of Intelligence. Different Tests of Intelligence.

### **Module V: MEMORY AND FORGETTING**

Basic Processes: Encoding, Storage, Retrieval; Stages of Memory: Sensory Memory, Short Term Memory & LTM; Models of Memory, Levels of Processing. Measurement of Memory; Causes Of Forgetting.

## **ECONOMICS-I**

**Subject Code:** BAL004A/BBL003A

**Maximum Marks:** 100

### **Course Outcomes:**

After completion of this course, the student will:

CO1: Analyze the performance and functioning of markets and institutions in the context of social and economic problems.

CO2: Learn economic models in domestic and global contexts to analyze individual decision making.

CO3: Understand economic principles and how they apply to a wide range of real-world issues.

CO4: Learn master the theoretical and applied tools necessary to critique and create economic research and how to articulate pragmatic, principles-based policies to enhance economic well-being and promote social justice.

CO5: Emphasizes the importance of making choices between desirable alternatives.

### **Module I: INTRODUCTION TO ECONOMICS**

- Basic concept of Economics: Definition, Scope, Basic problems.
- Form of economic analysis: Macro V/S Microeconomics, Normative V/S Positive economics, Static V/S Dynamic, Partial V/S General and Long-run V/S Short-run.
- Free Enterprise: Capitalism, Socialism, Mixed Economy and Economic Planning.
- Economics offences and economic legislation.

### **Module II: INTRODUCTION TO MICROECONOMICS & THEORY OF SUPPLY AND CONSUMER BEHAVIOUR**

- Theory of consumer behavior
- Theories of Demand- Demand function, Law of Demand.
- Concept of Utility and Utility theory-Utility Approach, Indifference Curve Approach.
- Law of Diminishing Marginal Utility and Equi-Marginal Utility.
- Law of Supply, Supply Function.
- Price determination, Shift of Demand and Supply.
- Elasticity of Demand and Supply.
- Applications of Demand and Supply- Tax floor and ceilings, Applications of Indifference curves-Tax, Labor and Work.
- Law of Consumer Surplus.

### **Module III: REVENUE & MARKET STRUCTURE**

- Revenue Concepts
- Classification of Markets- Pure and Perfect Competition, Monopolistic, Imperfect Competition, Monopoly (Anti- Monopoly Law), Duopoly, Oligopoly and Cartels, Types of Horizontal Cartels, Market allocating Cartels and Price Fixing Cartels
- Concept of Dumping- to be substantiated with the cases of International Court of Justice,

Competition Law.

#### **Module IV: INTRODUCTION TO MACRO ECONOMICS & THEORY OF MONEY**

- Interdependence of Micro and Macro Economics.
- Basic Concepts-Stock and Flows, National Products, Domestic Product, Aggregate Consumption
- Circular Flow of Income.
- National Income, Real and Nominal GNP.
- Inflation-Demand Pull and Cost Push, Inflation and Rate of Interest.
- Function of Money, Classification, Supply and Demand for Money.
- Effects of Money on Output and Prices.
- Money Markets and Capital Markets.
- Inflation and Deflation
- Concepts of Banking Sector: Bank Rate, Cash Reserve Ratio(CRR), Statutory Liquidity Ratio(SLR)

#### **Module V: INTRODUCTION TO INDIAN ECONOMY**

- Indian Economy: Structure and condition
- Trends of Population growth
- Post-Independence economic policy in India (1991).
- Unemployment and Employment Generation Schemes in India.
- Poverty and Special study of Rural Poverty in India.

## **LAW OF TORTS (ACCIDENTIAL CLAIMS) AND CONSUMER PROTECTION ACT**

**Subject Code:** BAL006A/BSL006A/BBL006A

**Maximum Marks:** 100

### **Course Outcomes:**

After completion of this course, the student will:

CO1: Be able to explore the evolution, meaning and nature of the Law of Torts

CO2: Be able to understand principle of tortious liability and general defenses available against tortious actions.

CO3: Be able to analyze specific torts against property, human body, freedom and reputation and gain a new and unique perspective of the world through spotting tort issues in everyday conduct.

CO4: Be able to understand the logistics of bringing and resolving torts cases including the role of judge and jury, burden of proof issues and the difference between bright-line rules and factor-based tests.

CO5: To introduce students to fundamental principles of tort law.

### **Module I: INTRODUCTION TO TORT**

Nature and Definition of Torts; Tort distinguished from Contract, Quasi-Contract, Crime, Mental element in torts, Motive, Intention, Malice and its kinds, General Condition of Liability in Torts: Wrongful act, Legal damage, Legal remedy: *Ubi jus ibi remedium*; Maxims: *Damnum sine injuria*, *Injuria sine damnum*, Malfeasance, Misfeasance and non-feasance, Joint tort feasons, Vicarious liability, Rule of strict liability, Rule of absolute liability, Liability for animals.

### **Module II: SPECIFIC TORTS, GENERAL DEFENSES AND DAMAGES**

**Specific Torts:** Negligence and contributory negligence, Assault, Battery, False imprisonment and abuses, Malicious prosecution, Nuisance, Trespass and its kinds, Defamation, General remedies in torts.

**General Defenses:** *Volenti non fit injuria*, Act of God, Inevitable accidents, Plaintiff's default, Private defense, Judicial and *quasi*-judicial act.

**Damages:** Damages and its kinds, Remoteness of damage, Judicial and extra judicial remedies, Cyber Tort.

### **Module III: CONSUMER PROTECTION**

The concept of a Consumer and Consumer Dispute, Shift from Caveat Emptor to Caveat Venditor, Brief overview of Consumer Protection Act, 2019; Consumer Protection Act, 2019: The Aims and Objectives of the Consumer Protection Act, 2019, Definition of 'Consumer', Rights of Consumers, Enforcement of Consumer Rights, Unfair Trade Practices, Defect In Goods, Product Liability & Penal Consequences, Unfair Contracts, Deficiency In

Service: Medical, Legal, Electricity, Housing, Postal Services, Banking, Education, Telecom.

#### **Module IV: E-FILING AND REDRESSAL MECHANISM**

E-Filing of Complaints; Consumer Protection Councils under the Consumer Protection Act, Redressal mechanism under the Consumer Protection Act, 2019: Jurisdiction, Powers And Functions, Appeal, Judicial Review ; Administrative Remedies; Consumer Courts; Provision For Alternate Dispute Resolution; Central Consumer Protection Authority; Penalties For Misleading Advertisement.

#### **Module V: ACCIDENTAL CLAIMS UNDER MOTOR VEHICLES ACT**

##### **Motor Vehicles Act, 1988:**

Salient features, Settlement of claims, Motor accidental claims tribunals, Insurance, Insurer's liability for third party risk.

##### **The Motor Vehicles (Amendment) Act 2019:**

Key features & Penalties

## COMPUTER SCIENCE (COMPUTER LAB – I)

**Subject Code:** BAL015A/BSL015A/BBL015A

**Maximum Marks:** 30

### LIST OF EXPERIMENTS

#### **POWERPOINT:**

Introduction to the IDE of Power Point, Introduction to various toolbars like – Quick access, Placeholders, creating title slides, slide shows, Introduction to layouts, themes, Clipboard, font paragraph, Drawing & Editing, Animations, Transitions, Spell Check, Outline, Tab, slides tabs, Sorter view and Printing

#### **MS WORD:**

Introduction to IDE of Microsoft Word, Functionality of various tool bars – Quick Access, Title, Ribbon, Ruler, and Status Bars. Understanding document Views, Formatting, Editing and Understanding non printing characters, Using AutoText, Using Indentation & Alignment, and Style set Page breaks, Page numbers and Setting Page Layouts and Printing Documents

#### **MS EXCEL:**

Introduction to Electronic Spreadsheet, Worksheet, Cells, Quick Access Toolbar, Formula Bar, Status Bar, Clipboard, Font, Alignment, Number, Cells, Styles, Editing, Perform Mathematical Calculations, Working with Headers & Footers, Perform Automatic Calculations, Perform Advanced Mathematical Calculations, Work with Long Text, format Numbers, Excel Functions, Using Reference Operators and Printing Charts: Creating and applying chart layout, Adding Labels, Switching Data, Changing the Chart Style, Size and Position, Chart Type

## **LAW OF CONTRACT-I**

**Subject Code:** BAL022A/BSL022A/BBL022A

**Maximum Marks:** 100

### **Course Outcomes:**

After the completion of this course, the student will:

CO1: Be able to explore fundamental concepts and terminology of contracts and the procedure involved in the formation of contracts.

CO2: Be able to identify relevant legal issues on given set of facts in the area of contract law and explain the basic elements of forming an enforceable contract and agreement.

CO3: Be able to understand the modes of discharge of contract and the performance of quasi-contract.

CO4: Be able to examine a range of approaches to written communication, and apply the critical thinking required to find out most appropriate solutions to complex legal problems in the area of contract law.

CO5: Provide the detailed knowledge of the legal principles and rules used to determine the existence of an enforceable agreement.

### **Module I: FORMATION OF CONTRACT**

Meaning and nature of contract, Offer/Proposal (Definition, Communication, Revocation, General/Specific offer, Invitation to treat), Acceptance (Definition, Communication, Revocation, Tenders / Auctions), E-Contract.

### **Module II: CONSIDERATION AND CAPACITY**

Consideration (Definition, Essentials, Privity of Contract), Capacity to enter into a contract (Minor's position, Nature / effect of minor's agreements).

### **Module III: VALIDITY OF CONTRACT**

Unlawful consideration and object, Free Consent, Coercion, undue influence, Misrepresentation, Fraud, Mistake, Contingent contract, Quasi contracts, Effect of void, voidable, valid, illegal, unlawful and uncertain agreements contracts.

### **Module IV: DISCHARGE AND PERFORMANCE OF CONTRACT, REMEDIES**

Discharge of Contracts, Performance, Time and Place of performance, Impossibility of performance and frustration, Breach – Anticipatory & Present, Special power of Indian Judiciary to award fair and just damages and not liquidated damages.

**Remedies:** Damages, Remoteness etc., Injunction, Specific performance, Quantum Merit.

### **Module V: SPECIFIC RELIEF ACT, 1963**

Recovery of property, Specific performance of contracts, Rescission of Contract, Declaratory Decree, Injunctions: Temporary and Perpetual, Mandatory.

**Text & References:**

# SEMESTER II

## INDIAN LEGAL HISTORY

**Subject Code:** BAL005A/BSL005A/BBL005A

**Maximum Marks: 100**

### Course Outcomes:

After the completion of this course, the student will:

CO1: Be able to explore the history of intellectual developments in law-making during British Period.

CO2: Have knowledge about emergence of Adalat System in India.

CO3: Be able to understand the kinds of crime committed in the society at that time.

CO4: Be able to understand English legal system with Indian legal system that existed at that time.

CO5: Study the development of legal system.

### Module I

- Emergence of East India Company : Development of authority under charters
- Administration of Justice in Madras 1639-1726
- Administration of Justice in Bombay 1668-1726
- Administration of Justice in Calcutta before 1726
- The mayor's Courts and the Genesis of the Charter of 1726, Provisions of the Charter, Charter of 1753, and Defects of judicial system.

### Module II

- Adalat System
- Grant of Diwani
- Execution of Diwani Functions
- Judicial Plan of 1772
- Defects of the Plan
- New Plan of 1774
- Reorganization of Adalats in 1780
- Reforms of 1781
- The Regulating Act of 1773
- The Charter of 1774 and Establishment of Supreme Court at Calcutta
- Defects of the Supreme Court

### Module III

- Act of Settlement, 1781
- Major Defects
- Supreme Court of Calcutta, Bombay and Madras
- Judicial Reforms of Lord Cornwallis
- Reforms in Administration of Criminal Justice

## **Module IV**

- The Charter Act of 1833
- The Charter Act of 1853: Main Provisions and Defects
- Main Provisions of the Indian Council Act, 1861
- The Indian Council Act of 1892

## **Module V**

- The Govt. of India Act, 1909
- Minto-Morley Reforms
- Defects of the Act
- Montague-Chelmsford Reforms 1919
- Dual System
- The Govt. of India Act, 1935 (Background)
  - i. Federalism
  - ii. Provisional Autonomy
- Indian Independence Act, 1947

### **Some Landmark Cases-**

- (a) Issue of Raja Nand Kumar (1775): Whether A Judicial Murder?
- (b) The Patna Case (1777-79)
- (c) The Cossijurah Case
- (d) The Case Of Kamaludin

## **GENERAL ENGLISH**

**Subject Code:** BAL093A/BSL093A/BBL093A

**Maximum Marks:** 100

### **Course Outcomes:**

After the completion of the course, the student will:

CO1: Be able to understand the importance of poems and short stories and historical background of English literature.

CO2: Be able to explore grammar for purpose of reading and writing legal texts.

CO3: Be able to improve their legal vocabulary, writing skills such as application, letter, etc and presentation skills.

CO4: Be able to demonstrate their well supported communications skills and essays using different patterns of development taking into consideration purpose and audience.

CO5: To develop interest in and appreciation of literature.

### **Module I: POEMS**

- My Last Duchess-Robert Browning
- The Dance of the Eunuchs : Kamala Das

### **Module II: ESSAYS**

- On the Rule of the Road- A. G. Gadiner
- Of Revenge - Francis Bacon

### **Module III: GRAMMAR& VOCABULARY**

- Tenses
- Passive Voice
- Narration
- Idioms and Phrases
- One Word Substitution

### **Module IV: WRITING SKILLS**

- CV and Resume
- Paragraph
- Précis

### **Module V: PRESENTATION SKILLS & READING COMPREHENSION**

- Power Point Presentation
- Translation
- Train to Pakistan - Khushwant Singh

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcomes	Program Outcomes							Program Specific Outcomes			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4
CO1			3	3		1		3			
CO2			1			2		3			2
CO3		3					3		1		
CO4					2					2	
CO5		1			2		1		2		3

## COMPUTER SCIENCE-II

**Subject Code:** BAL009A/BSL009A/BBL009A

**Maximum Marks:** 70

### **Course Outcomes:**

After the completion of the course, the student will:

CO1: Be able to understand history and features of computer operating software such as DOS and UNIX.

CO2: Be able to explore Identify problems and formulate solutions for systems and organizations while reconciling conflicting objectives and finding computer based solution.

CO3: Be able to develop abilities to learn about electronic spreadsheet, charts and editing.

CO4: Be able to explore about multimedia, database, topology, concept of networking and computer networking.

CO5: To Understand the basics of python programming, Features, history, data types and variables.

### **Module I**

Basics of Python Programming: Features of Python, History of Python, The Future of Python, Installing Python, Running Python program, Writing and Executing First Python Program.

### **Module II**

Literal Constants, Numbers, Strings, Variables and Identifiers, Data Types, Input Operation, Comments, Reserved Words, Indentation.

### **Module III**

Operators and Expressions, Expressions in Python, Operations on Strings, Concatenation, Multiplication (or String Repetition), Other Data Types, Tuples, Lists, Dictionary, Type Conversion.

### **Module IV**

Decision Control, Function and Modules: Introduction to Decision Control Statements, Selection/Conditional Branching Statements, Basic Loop Structures/ Iterative Statements, while loop, Nested Loops, the break Statement, The continue Statement, The pass Statement, The else Statement used with Loops.

### **Module V**

Function: Function Definition, Function Call, Variable Scope and Lifetime, return statement, Lambda. Functions or Anonymous Functions, Documentation Strings, Recursive Functions.

CO3		3					3		1		
CO4					2					2	
CO5		1			2		1		2		3

## PSYCHOLOGY-II

**Subject Code:** BAL010A

**Maximum Marks:** 100

### **Course Outcomes:**

After completion of this course, the student will:

CO1: To study the intersection two critical relationships: one between brain function and behavior and other between the environment and behavior.

CO2: Understand science that seeks to understand behavior and mental processes.

CO3: Learn major perspectives of psychology: behavioral, biological, cognitive, humanistic, evolutionary, psychodynamic, and socio cultural

CO4: Understanding agoraphobia, specific phobias, social phobia, obsessive compulsive disorder, generalized anxiety disorders.

CO5: Students will be able to demonstrate skills in communication ethical behavior, complex cognitive possesses relevant to the field of psychology

### **Module I: HUMAN INTELLIGENCE**

Meaning and Nature of Intelligence-Theories of Intelligence.

### **Module II: DETERMINANTS OF INTELLIGENCE**

Genetics and Environmental Influences; Measurement of Intelligence. Different Tests of Intelligence.

### **Module III: MEMORY AND FORGETTING**

Basic Processes: Encoding, Storage, Retrieval; Stages of Memory: Sensory Memory, Short Term Memory & LTM; Models of Memory, Levels of Processing. Measurement of Memory; Causes Of Forgetting.

### **Module IV: PREJUDICE AND DISCRIMINATION**

Nature and Components of Prejudice; Acquisition of Prejudice; Reduction of Prejudice. Communication: Communication Models; Verbal and Non-Verbal Communication; Language and Social Inter Action; Barriers in Communication.

### **MODULE V: DISORDERS**

Anxiety Disorder Panic Disorder and Agoraphobia, Specific Phobias, Social Phobia, Obsessive Compulsive Disorder, Generalized Anxiety Disorder.

Mood Disorder, Schizophrenia: Delusional Disorder, Brief Psychotic Disorder.

CO2			1			2		3			2
CO3		3					3		1		
CO4					2					2	
CO5		1			2		1		2		3

## **ECONOMICS-II**

**Subject Code:** BAL011A/BBL011A

**Maximum Marks:** 100

### **Course Outcomes:**

After completion of this course, the student will:

CO1: Analyze the performance and functioning of markets and institutions in the context of social and economic problems.

CO2: Learn economic models in domestic and global contexts to analyze individual decision making.

CO3: Understand economic principles and how they apply to a wide range of real-world issues.

CO4: Learn master the theoretical and applied tools necessary to critique and create economic research and how to articulate pragmatic, principles-based policies to enhance economic well-being and promote social justice.

CO5: Students study the principle economic objective of stable prices economic growth, full employment and the balance of the payment.

### **Module I: MONEY AND BANKING**

- Indian Banking Structure
- The Central Bank of India (RBI)- functions and credit control policy (CRR, SLR, Repo Rate, reverse repo rate)
- Commercial Banking- functions, organization and operation
- Banks v/s NBFIs, meaning and role of NBFIs
- Unorganized money market

### **Module II: MACRO ECONOMICS & PRINCIPLES OF PUBLIC FINANCE**

- Problems in estimation of National Income
- Inflation-meaning and types of inflation
- Effects of inflation on the economy, measures to control inflation
- Deficit Financing- meaning and role in economic development
- Business cycle-meaning, phrases and its features
- Concept of Consumer protection and unfair trade practices
- Concept of public finance, public finance v/s private finance
- Tax system-meaning of taxation, canons of taxation
- Classification of taxes
- Fiscal policy -concept, objectives and instruments

### **Module III: INTERNATIONAL TRADE**

- Meaning of free trade, arguments for and against free trade

- Protection-arguments for and against protection
- Foreign exchange-meaning and determination of foreign exchange rate
- Concept of Forward and spot exchange rate, hedging
- Fixed and flexible exchange rate

#### **Module IV: ECONOMIC REFORMS (A) & ECONOMIC REFORMS (B)**

- New economic policy of 1991- key features
- Globalization in India- Concept and growth, Advantages and disadvantages of globalization for a developing economy
- Foreign Aid – types and need for foreign aid
- Concept of FDI and FII , Advantages and disadvantages of FDI inflow
- Reforms to strengthen Indian money market
- Reforms to strengthen Indian banking sector
- The role of public and private sector in the economy
- Concept of SMEs and their contribution in the economy

#### **Module V: INDIAN ECONOMY**

- Concept of Financial inclusion and Micro-financing
- Concept of poverty and poverty alleviation programmes in India
- Land reforms in India and commercialization of agriculture.

## COMPUTER SCIENCE-II (COMPUTER LAB-II)

**Subject Code:** BAL018A/BSL018A/BBL018A

**Maximum Marks:** 30

### Course Outcomes:

The purpose of this course is to enhance the practical knowledge based on prescribed theory course. The students will be able to enhance their analyzing and problem-solving skills after implementation of all the given experiments.

1. Write a program to demonstrate different number data types in python.
2. Write a program to perform different arithmetic operations on numbers in python.
3. Write a program to create, concatenate and print a string and accessing sub- string from a given string.
4. Write a python script to print the current date in following format "Sun May 29 02:26:23 IST 2017"
5. Write a python program to create, append and remove lists in python.
6. Write a program to demonstrate working with tuples in python
7. Write a program to demonstrate working with dictionaries in python
8. Write a python program to find largest of three numbers
9. Write a python program to convert temperature to and from Celsius to fahrenheit.
10. Write a python program to construct the following pattern using nested for loop
11. Write a python program to print prim numbers less than 20:
12. Write a python program to find factorial of a number using recursion:
13. Write a python program to that accepts length of three sides of a triangle as inputs. The program should indicate whether or not the triangle is a right-angled triangle (use Pythagorean theorem):
14. Write a python program to define a module to find Fibonacci Numbers and import the module to another program.
15. Write a python program to define a module and import a specific function in that module to another program.
16. Write a script named copyfile.py. This script should prompt the user for the names of two text files. The contents of the first the second file.
17. Write a program that inputs a text file. The program should print all of the unique words in the file in alphabetical order
18. Write a Python class to convert an integer to a roman numeral.
19. Write a Python class to implement pow (x, n)
20. Write a Python class to reverse a string word by word.

## **LAW OF CONTRACT – II**

**Subject Code:** BAL032A/BSL032A/BBL032A

**Maximum Marks:** 100

### **Course Outcomes:**

After completion of this course, the student will:

CO1: Be able to explore contract of indemnity, guarantee, pledge and bailment.

CO2: Be acquainted with the knowledge of special contracts such as concept of sale and agreement.

CO3: Be able to understand the definition and nature of partnership and have knowledge process of registration of firm & responsibilities of partners.

CO4: Be able to appreciate the legal services required in corporate offices that can enhance his relevance as a lawyer in society.

CO5: enable the student to better appreciate the law governing special contracts like indemnity, guarantee, agency, etc. which are more relevant in contemporary society.

### **Module I: INDEMNITY AND GUARANTEE/BAILMENT AND PLEDGE**

Meaning, Distinction between Indemnity and Guarantee, Right / Duties of Indemnifier, Indemnified and Surety, Discharge of Surety, Kinds of Guarantee, Bailment and Pledge: Meaning and Distinction, Rights and Duties of Bailor / Bailee, Pawnor/Pawnee, Lien, Termination of Bailment.

### **Module II: AGENCY**

Definitions of Agent and Principal, Appointment of an Agent, Authority of an Agent, Creation of agency: by, agreement, Ratification and law, Relation of principal / agent, subagent and substituted agent, Ratification of Agents, Authority, Revocation of Agency Authority, Effects of Agency on Contracts with third person, Personal Liability of, agents, Termination of agency.

### **Module III: SALE OF GOODS ACT 1930**

Contract of Sale: Nature and definition, Conditions and Warranties, Transfer of Property and Title, Performance of, the contracts, rights of unpaid seller, suit for breach of contract.

### **Module IV: THE INDIAN PARTNERSHIP ACT, 1932**

Nature of partnership firm, Relations of partners to one another and outsiders, Rights /Duties of partners *inter se*, Partnership Property: Relations of Partners to third parties, Liability for holding out, Minor as a partner; Incoming, and outgoing partners, Dissolution of Partnership Firm, Modes of Dissolution, Consequences of dissolution, Registration of firms and effects of non-registration.

### **Module V: THE COMMERCIAL COURTS ACT, 2015**

Definitions, Constitution of Commercial Courts, Commercial Divisions and Commercial Appellate Divisions, Specified Value, Pre-Institution Mediation and Settlement, Appeals, Transfer of Pending Suits, Amendments to The Provisions Of The Code Of Civil Procedure, 1908.

# SEMESTER III

<b>BAL/BBL/BCL/BSL013A</b>	<b>CONSTITUTIONAL LAW- I</b>	<b>Maximum Marks:100</b>
----------------------------	------------------------------	--------------------------

**COURSE OUTCOMES: After completion of this course, the student will:**

CO1: be able to explore the meaning, nature and features of Indian Constitution and historical background of making of the constitution.

CO2: be able understand emerging complex issues related to equality and social justice.

CO3: be able to analyze fundamental rights of citizens including legal persons and their scopes and limitations.

CO4: be able to examine various theories of secularism, directive principles of state policy and methods of constitutional amendments.

**SYLLABUS:**

<b>Module-I</b>	<ul style="list-style-type: none"> <li>a. Indian Constitution in the making</li> <li>b. Nature and Special features of the Constitution.</li> <li>c. Citizenship of India</li> </ul>
<b>Module-II</b>	<b>Equality and Social Justice</b> <ul style="list-style-type: none"> <li>a. Equality before the law and equal protection of laws</li> <li>b. Classification for differential treatment: constitutional validity</li> <li>c. Justice to the weaker sections of society: scheduled castes, scheduled tribes and other backwards class, women and children.</li> </ul>
<b>Module-III</b>	<ul style="list-style-type: none"> <li>(a)Speech and expression               <ul style="list-style-type: none"> <li>ii. Media, press and information</li> </ul> </li> <li>(b)               <ul style="list-style-type: none"> <li>i. Freedom of speech and contempt of court</li> <li>ii. Freedom of assembly</li> </ul> </li> </ul>
<b>Module-IV</b>	<ul style="list-style-type: none"> <li>(a) Right to life and personal liberty: meaning, scope and limitations</li> <li>(b)               <ul style="list-style-type: none"> <li>i. Rights of an accused-double jeopardy, self-incrimination and retroactive punishment</li> <li>ii. Preventive detention-constitutional policy</li> </ul> </li> </ul>
<b>Module-V</b>	<ul style="list-style-type: none"> <li>(a)               <ul style="list-style-type: none"> <li>i. Concept of Secularism : historical perspective</li> <li>ii. Indian constitutional provisions relating Secularism</li> </ul> </li> <li>(b)               <ul style="list-style-type: none"> <li>i. Freedom of religion and its scope</li> </ul> </li> </ul>

	ii. Religion and the State : its limitations and minority rights
<b>Module-VI</b>	(a) i. Directive Principles-directions for social change-A new social order. ii. Fundamental Rights and Directive Principles, inter-relationship-judicial Balancing. (b) i. Constitutional amendments-to strengthen Directive Principles. ii. Reading Directive Principles into Fundamental Rights.
<b>Module-VII</b>	(a) i. Methods of Constitutional amendments ii. Limitations upon constitutional power of amendments (b) i. Development of the basic Structure : Doctrine ii. Judicial activism and its Restraint

## WRITING FOR MEDIA

Course Code : RJM102A	L: 4	T/P : 0	CREDITS : 4
-----------------------	------	---------	-------------

### Objectives of the Course:

1. To equip students with the nuances of writing.
2. To develop linguistic and communication abilities.
3. To develop the knowledge of grammar, vocabulary, syntax, spellings and punctuation.
4. To inculcate the skills of translation.
5. To help them understand paragraph writing.

### Unit - I [Essentials of Good Writing]

L-12

1. Writing: Art and Craft, Significance
2. Purpose of Media Writing:
  - i. Writing to Inform
  - ii. Writing to Describe
  - iii. Writing to Persuade
  - iv. Writing to Educate
3. The ABCD of Media Writing
  - i. Accuracy
  - ii. Brevity
  - iii. Clarity
  - iv. Discernment
4. Principles of Media Writing
5. Vocabulary
  - i. Vocabulary Building: Using Dictionaries and Thesauri
  - ii. Understanding the Misunderstood Word
  - iii. Rules of Spelling
6. Overcoming Grammar Problems
7. Punctuation

### Unit - II [The Art of Putting Words Together]

L-10

1. The Sentence
  - i. Concision/Clarity
2. Emphasis
  - i. Total Emphasis (That applies to the Whole Sentence)
  - ii. Partial Emphasis (That Applies to a word or Group of Words)
3. Rhythm - Words and How they Sound
4. Variety
  - i. Variety & Recurrence
5. Changing Sentence Length & Pattern
6. Breaking Monotony

### Unit - III [Putting Sentences Together]

L-12

1. The Paragraph
2. Concise Ideas
  - i. Ideas Dissected into Elements
3. Elements as Paragraphs & Sub Paragraphs
  - i. Putting Paragraphs Together - Logical Sequencing
4. The Complete Picture - The First Draft
5. Reading ALOUD For Further Changes

## IT FOR MEDIA

Course Code : BJM 104A	L: 4	T/P : 0	CREDITS : 4
------------------------	------	---------	-------------

### Objectives of the Course:

1. To describe basics of design and graphics.
2. To apply various elements and principles of design to visual and graphic communication.
3. To inform about colour scheme and production.
4. To make students efficient in desktop publishing.
5. To acquaint students with the printing process.

### Unit-I [Principles of Design & Graphics]

L-12

1. Basics of Design and Graphics
2. Elements and principles of design
3. Tools of Design: QuarkXpress, Illustrator, In-design, Corel Draw and Photoshop
4. Typography : Physical form, aesthetics and classifications
5. Colour: Physical forms, psychology, colour scheme and production

### Unit-II [Layout]

L-12

1. Components of layout and layout planning
2. Advertisement layout
3. Broadsheet and Tabloid layout
4. Magazine & Book Layout

### Unit-III [Visuals and Design]

L-12

1. Visuals : Physical forms, functions & editing
2. Poster Design
3. Logo Design
4. Brochure Design

### Unit-IV [DTP & Printing]

L-12

1. Basics of Desktop Publishing
2. Printing Process, Printing Material
3. Printing Methods - Letter Press, Cylinder Press, Rotary Press, Screen, Offset,
4. Paper and finishing: Types, size, GSM(Weight)

### Course Outcomes: After the completion of the course, students will be able to:

- CO1: Develop entrepreneurship skills.
- CO2: Learn effective communication through visual and design.
- CO3: Understand the growth and development of typography.
- CO4: Know about effective application of colors.
- CO5: Develop desktop publishing skills.

#### Unit-IV [Translation in Journalism]

L- 14

1. Concept & Definition of Translation.
2. Nature & Norms of Translation.
3. Types of Translation
  - i. Word to Word Translation
  - ii. Literal Translation
  - iii. Summarized Translation
  - iv. Free Translation
  - v. Translation based on appropriate reference
  - vi. Translation according to pronunciation (Translation of words & sentences from the source language as it is)
  - vii. Paraphrased Translation (Using Synonyms)
4. The need and importance of Translation in Journalism.
5. The process of Translation and How to maintain its originality:
  - i. Source Material Perception (Comprehending the Source Language)
  - ii. Analyzing the text or Source Material
  - iii. Transfer of Language (Translation Process)
  - iv. Revision of the Translated Text
  - v. Co-ordination & Comparison of Source Language with Original Text and Thus Final Text in Target Language.
6. Guidelines for Translation:
  - i. Don't Omissionize
  - ii. KISS rule
  - iii. Maintaining Originality
  - iv. Summarize with Clarity
  - v. Adhere to Norms of Translation.
7. Practice of Translation from Hindi to English & Vice – Versa.

**Course Outcomes:** After the completion of the course, Students will be able to

- CO1: Learn the purpose of media writing.  
 CO2: Develop communication skills through media writing.  
 CO3: Know about vocabulary and syntax.  
 CO4: Learn entrepreneurship skills by means of translation.  
 CO5: Develop communication skills to be a social leader.

## IT FOR MEDIA LAB

(PHOTOSHOP, COREL DRAW, PAGEMAKER, QUARK XPRESS, INDESIGN)

Course Code : BJM 107A	L : 0	T/P : 2	CREDITS : 2
------------------------	-------	---------	-------------

### Objectives of the Course:

1. To describe DTP software used for design and layout.
2. To design and create layouts of newspapers and magazines.
3. To know about effective visual communication through printing technology.
4. To skill students in design various PR tools.
5. Understand relation between media and technology.

### Exercises and Assignments

1. To work with different textures, color schemes and other elements on at least 10 different topics/themes.
2. To work on various types of calligraphic and typographic letterforms
3. Use of colors in different schemes-complementary, analogous, split complementary, triad, soft, dark and monochromatic.
4. To visit printing press.
5. Following assignments can be given to students in each of these software- Photo Shop, Coral Draw, Illustrator, Quark Xpress, In Design
  - A. Design a visiting card
  - B. Design a postcard
  - C. Design a poster
  - D. Design a brochure
  - E. Design a magazine (at least 16 pages)
  - F. Prepare a tabloid
  - G. Prepare a front page of a newspaper

**Course Outcomes:** After the completion of the course, students will be able to;

CO1: Design various media material (e.g. Newspaper and magazine).

CO2: Know operations of design software.

CO3: Design various public relation (PR) material (visiting card, poster & booklet etc.).

CO4: Explore print designs.

CO5: Design a brochure and house journal.

Course Outcome	Program Learning Outcomes

CO4	H	M	M				H				
CO5	H	M	M	H			M				

**Internal Assessment:** Students should maintain a file & soft copy of their assignments/jobs duly checked and signed by the concerned faculty. The marks assigned for internal evaluation are 50.

# WRITING FOR MEDIA LAB

Course Code : MM 106A	L : 0	T/P : 2	CREDITS : 2
-----------------------	-------	---------	-------------

**Objective of the Course:** On completion of the course students should be able:

1. To make them understand effective media writing.
2. To know about printing technologies.
3. To enrich student's social media writing skills.
4. To help them know about typography.
5. To help them understand research writing.

## Exercises and Assignments

1. Hindi and English typing
2. News writing, Feature writing and Article writing
3. Story writing, Satire, Essay writing, reportage, travelogue, Memoirs
4. Writing for blog and website, WhatsApp and mobile writing.
5. Social Media writing to enrich their own social media profile.

**Course Outcomes:** After the completion of the course, students will be able to:

- CO1: Publish a newspaper, magazine or other media material, independently.  
 CO2: Write for various social media platforms.  
 CO3: Know use of media tools for content writing.  
 CO4: Work on writing skills for effective social messages.  
 CO5: Develop typing skills.

## WEB MEDIA

Course Code : BJM 409A	L : 4	T/P : 0	CREDITS : 4
------------------------	-------	---------	-------------

### Objectives of the Course:

1. To explain new media technology for journalistic purpose
2. To describe online discussion forums keeping in mind cyber laws and create blogs.
3. To understand the language and write the text for social media.
4. To understand various dimensions of cybercrimes and security
5. To understand the basics of website designing.

### Unit-I [Cyber Communication and Internet]

L-12

1. Cyber Communication
  - i. Meaning and definition
  - ii. Features of Online Communication
2. Internet
  - i. Characteristics
  - ii. Networking, ISP and browsers
  - iii. Types of websites, Video conferencing, Webcasting

### Unit-II [Web Media]

L-14

1. Digital media and communication, ICT and digital divide
2. Information Society, New World Information Order and E-governance
3. Convergence : Need, nature and future of convergence
4. Emerging Trends: Mobile Technology, Social Media & Web 2.0, Social Networking Websites.

### Unit-III [Online Journalism]

L-14

1. Online Journalism-difference in news consumption, Presentation and uses
2. Online Writing & Editing: do's and don'ts
3. Cyber Crimes & Security : Types and Dimension
4. Cyber Laws & Ethics and the difficulty in enforcing them

### Unit-IV [Web Designing and Web Series]

L-8

1. Writing for various web platform
2. OTT
3. Current trends: News and Analysis platforms
4. Basics of Web designing

**Course Outcomes:** After the completion of the course, students will be able to;

CO1: Understand the purpose & features of Online Communication for the betterment of the society.

CO2: Handle the tools and techniques of Online Media.

CO3: Make websites and write text for the same.

CO4: Empower them by imparting education about cyber-crimes and security.

CO5: Understand media convergence.

## TELEVISION JOURNALISM AND PRODUCTION LAB

Course Code : BJM 405A	L : 0	T/P : 2	CREDITS : 2
------------------------	-------	---------	-------------

### Objectives of the Course:

1. To prepare a video brief
2. To handle various aspects of TV production and direction
3. To write scripts for TV
4. To apply production and post-production techniques effectively to produce a video program.
5. To understand ideation

### Exercises/Assignments

1. Preparation of a video brief
2. Idea generation – fiction and non fiction
3. Developing an idea into story
4. Script and story board
5. Production schedule
6. Budget
7. Floor plan
8. Lighting plan
9. Shooting script
10. Production of a programme
11. Post production

At the end students will produce a programme [fiction/non-fiction]

**Course Outcomes:** After the completion of the course, students will be able to;

CO1: Analyze and work in the TV industry.

CO2: Write stories and collect news for the TV news and entertainment industry.

CO3: Produce different formats of TV programs.

CO4: Work on editing softwares.

CO5: Understand post-production work

Course Outcome	Program Learning Outcomes

**Internal Assessment:** The students should maintain a file & soft copy of their assignments/jobs duly checked and signed by the concerned faculty. The marks assigned for internal evaluation are 50.

### Instructions for External Examiner for Oral & Practical Examination

  
 Dean  
 School of Mass Communication  
 Jyoti University, Jaipur-302005

A.	A student should be evaluated on the basis of assignments undertaken by him/her during the Ad & PR kept and preserved in a file & soft copy. (30marks)
B.	The examiner should also interview the student to find out his/her level of understanding of Ad& PR.(20 marks)
Max Marks	The marks prescribed for evaluating a student by the External Examiner are 50.

  
 School of Mass Communication  
 EDUITE UNIVERSITY

## WEB MEDIA LAB

Course Code : BJM 407A	L : 0	T/P : 2	CREDITS : 2
------------------------	-------	---------	-------------

### Objectives of the Course:

1. To use search engines effectively
2. To write content for Social Media
3. To learn computer languages
4. To design websites.
5. To create and maintain blogs.

### Exercises/Assignments

1. To create and maintain blogs
2. Analyze different elements and content of a news website. Distinguish between news, views, opinions, advertisements
3. Web publishing, learning HTML, creating a simple web page with links to text document, graphics and audio & video document
4. Students in groups should create a dynamic website with each one given a different assignment regarding the components of website.
5. Fact checking tools.

**Course Outcomes:** After the completion of the course, students will be able to;

CO1: Understand the purpose and the features of the Online Communication for the betterment of the society.

CO2: Handle the tools and techniques of the Online Media.

CO3: Make websites and write text for the same.

CO4: Understand the basics of fact checking.

CO5: Impact knowledge about creating and maintaining blogs.

Course Outcome	Program Learning Outcomes

**Internal Assessment:** The students should maintain a files & soft copy of their assignments/jobs duly checked and signed by the concerned faculty. The marks assigned for internal evaluation are 50.

### Instructions for External Examiner for Oral & Practical Examination

A.	Students will be evaluated on the basis of individual and group assignments undertaken by him/her during the semester. The examiner will see the website (hard & soft copy) made by the students. (30 marks)
B.	The examiner should also interview the student to find out his/her level of understanding of new media as a medium and his/her skills in web designing. (20 marks)

Max Marks	The marks prescribed for evaluating a student by the External Examiner are 50.
-----------	--

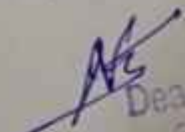

## DISSERTATION

Course Code : BJM 607A	L : 0	T/P : 0	CREDITS : 6
------------------------	-------	---------	-------------

The Dissertation carries 100 Marks. It will be evaluated by External and Internal Examiners separately from out of 50 marks each. The External Examiner will be appointed by the HOD. This must be based on a Media research Project.

The Dissertation should contain the following components:-

1. **Title or Cover Page:** The title should contain the following information:- University logo at the top, project title, student's name and role number, course, year, supervisor's name, Name of the University and the department.
2. **Preface:** A good preface should be straight to the point, not too descriptive but fully informative. First paragraph should state what was accomplished with regard to the objectives. The abstract does not have to be an entire summary of the project but rather a concise summary of the scope and results of the project.
3. **Acknowledgement:** Acknowledgement to any advisory or financial assistance received in the course of work may be given.
4. **Certificate:-** ( By project supervisor) A certificate from the project guide to be enclosed.
5. **Table of Contents:-** Title and subtitles are to correspond exactly with those in the text.
6. **Introduction:-** Here a brief Introduction to the problem that is a central to the project and an outline of the structure of the rest of the report should be provided. Project objective is a must where as a hypothesis is to be included necessary. The Introduction should aim to catch the imagination of the reader, so excessive detail should be avoided.
7. **Research Design:** This Section aims at an experimental design, Methodology should be mentioned in details including modifications if any.
8. **Hypothesis:** This Section consists of pre-assumed measures of the researcher based on empirical findings related to Research topic.
9. **Literature Review:** This Section should contain a detail list of related literature reviewed by the Project Investigator while preparing.
10. **Research Findings:** A Conclusion should be final section in which the outcome of the work is mentioned.
11. **Results & Discussions:** Present results, discuss and compare these with those from other workers, etc. In writing, these section, emphasis should be given on what has been performed and achieved in the course of the work, rather than discuss in the detail what is readily available in the text books. Avoid abrupt changes in contents from section to section and maintain a lucid flow throughout the thesis. An opening and closing paragraph in every chapter could be included to aid in smooth flow. Note that in writing the various sections, all figures and tables should as far as possible be next to the associated text, in the same orientation as the main text, numbered, and given appropriate titles or captions. All major equations should be numbered and unless it is really necessary never write in 'Point' form.
12. **Suggestions and Recommendations:** This section must contain material briefly supported by some suggestive recommendations.
13. **Appendices:-** The Appendix consists of material which is of interest to the reader but not an integral part of the thesis and any problem that have arisen that may be useful to document for future reference.
14. **References/Bibliography:-** This should include papers and books referred to in the body of the report. These should be ordered alphabetically on the author's surname. The titles of the Journals preferably should not be abbreviated; if they are, abbreviations must comply with an internationally recognized system.
- 15 **Examples:** Footnotes to be given.

School of Mass Communication  
Jawahar Education Trust, Bangalore

## FIRST SEMESTER INTRODUCTION TO COMMUNICATION

Course	Code	L : 4	T/P :	CREDITS
BJM101A			0	: 4

**Objectives of the Course:** Students should be able

1. To understand human communication.
2. To explain different types of communication.
3. To explain the importance of communication with others.
4. To differentiate between mass communication and mass media.
5. To acquaint students with the theories and the models of communication.

### Unit-I [Defining Communication] L-12

1. Understanding human communication
2. Brief history with special reference to India.

#### 3 Communication: Definition,

1. Communication: Types
2. Communication: Five senses of communication
3. Non-verbal communication: Body language, gestures, eye contact.
4. Evolution of Indian languages

### Unit-II [Introduction to Mass Communication] L-12

1. Mass Communication: Meaning, Functions and Elements
2. Brief introduction to Mass Media: Newspapers and Journalism
3. Audio and/or Visual Communication: Photographs, Films, Radio, Television & New Media
4. Folk Media
5. Intercultural Communication

### Unit-III [Communication Theories] L-12

1. What is Communication Theory?
2. A brief introduction to Communication theories
  - i. Multistep Theory
  - ii. Selective Exposure, Selective Perception, Selective Retention
  - iii. Play Theory
  - iv. Uses & Gratification Theory
  - v. Cultivation Theory
  - vi. Agenda Setting Theory

### Unit-IV [Communication Models] L-12

1. What is Communication Model?
2. A brief introduction to Communication Models
  - i. SMCR Model
  - ii. Shannon & Weaver Model
  - iii. Wilbur Schramm Model
  - iv. Lasswell Model
  - v. Gate Keeping Model
  - vi. Gerbner's Model

**Course Outcomes:** After the completion of the course, CO1: Students will be able to communicate effectively.

  
Dean  
First Semester Communication

CO2: Students will be able to know about various communication models and theories. CO3: Students will be able to understand social interactions to be social leaders. CO4: Students will be able to know about visual communication.

CO5: Students will be able to disseminate communication among various cultures.

### MEDIA RESEARCH LAB

<b>Course Code : BJM 508A</b>	<b>L : 0</b>	<b>T/P : 2</b>	<b>CREDITS : 2</b>
-----------------------------------	--------------	--------------------	------------------------

#### Objectives of the Course:

1. To apply research techniques in media studies.
2. To conduct media research
3. To write research project
4. Acquire knowledge about research design
5. To measure media effects and media agenda

#### Exercises/Assignments

1. Using any of the research technique students will conduct media research culminating
  - a. into hard and soft copies of the report.
2. Following studies will have to be conducted by the students who will prepare the reports based on the study :
  - i. Constructing the research design
  - ii. Conducting a survey – preparing questionnaires and schedule
  - iii. Analysis of any media context
  - iv. Measuring media effects and media agenda
  - v. Pre-testing/evaluation tools for audio-video, print, publicity material
  - vi. Writing the report

**Course Outcomes:** After the completion of the course, students will be able to:

CO1: Understand the philosophy, concept and process of communication & media research based on social issues.

CO2: Conduct media researches on the basis of different research methodologies. CO3: Analyze the data on the basis of different statistical tools.

CO4: Able to handle ICT tools for media research.

CO5: Enhance leadership qualities by doing impactful research.

**Internal Assessment:** Students should be evaluated on the basis of research report prepared by them after conducting the assigned project as mentioned above. An internal faculty will be assigned as research guide by the Director of the institute for each student. The marks prescribed for internal evaluation are 50.

**Instructions for External Examiner for Oral & Practical Examination**

### MEDIA RESEARCH

Course Code : BJM 503A	L : 4	T/P : 0	CREDITS : 4
---------------------------	-------	------------	-------------

**Objectives of the Course:**

1. To explain the process of media research.
2. To develop the skills of research design and sampling.
3. To inculcate the skills of surveying the society as well as industry.
4. To impart the knowledge of basics of statistics and media metrics.
5. To learn primary research skills.

#### Unit-I [Research and its Designs] L-10

1. Meaning, objectives and types of research
2. Research Approaches – quantitative and qualitative
3. Research Process – the steps involved
4. Research Design – Meaning and different types
5. Sampling – Selecting a sample, types of sampling – Probability and Non- Probability
6. Hypothesis /Research Questions

#### Unit-II [Research Methods and Data Collection] L-14

1. Primary and Secondary data
2. Observation method
3. Interview method
4. Collection of data through questionnaire
5. Collection of data through schedule
6. Content Analysis
7. Case Study Method
8. Focus group interview and Group discussions.

#### Unit-III [Survey] L-10

1. Survey – Meaning, Characteristics and types
2. Public opinion surveys, TRPs
3. BARC and TAM
4. Readership survey, IRS, NRS,
5. Election related survey – opinion poll, exit poll and Psephology.

#### Unit-IV [Data Analysis and Report Writing] L-14

1. Writing a proposal, synopsis, abstract for a project.
2. Processing of data – editing, coding, classification, tabulation
3. Measures of central tendency – Mean, median and mode.
4. Analysis and interpretation of data
5. Report writing – parts of a report, steps involved.
6. Measuring impact, evaluation, monitoring and feedback.
7. Plagiarism and how to check plagiarism in research

**Course Outcomes:** After the completion of the course, students will be able to: CO1: Understand the concept of communication research and its processes.  
CO2: Gain knowledge about need, role and types of communication research. CO3: Able to learn practical skills of conducting media research.  
CO4: Analyse the data using different statistical tools.  
CO5: Able to learn research as per demands and requirements of the industry.

Course Code: BJM 503A

**Note 1: Instructions for Paper Setter/Moderator for External Examination:**

Maximum Marks	100 (Maximum marks will be converted proportionately into 50 marks)
Time	3 hours
Compulsory question	Q.no.1, 10 Multiple Choice question of 10 marks each. For framing this question, any topic from any unit can be selected.
Setting of other questions	Q.no.2. Very short type question 5 X 2 marks=10 (Maximum word limit 50 words) Q.no.3. short type question 5 X 6 marks=30 (Maximum word limit 150 words) Q.no.4. Long type question 5 X10 marks=50 (Maximum word limit 300 words)

**Note2: Instructions for Paper Setter/Moderator Internal Examinations:**

Internal assessment is based on Continuous evaluation System. The Total Marks for the Internal assessment will be 50-mark. Internal assessment is divided into four parts:-

First Internal Semester (In Sem.) Examination-15 Marks Second Internal Semester (In Sem.) Examination-15

Marks Attendance Assessment- 5 Marks

Assignments & Activities Assessment- 15 Marks

**Suggested Readings:**

1. Graham, Myrton Media Audience Research & Cengage Learning Inc.
2. C.R. Kothari Research Methodology: Methods and Techniques, Wishwa Parkashan, New Delhi
3. S.R. Sharma & Anil Chaturvedi Research in Mass Media, Radha Publications,

New Delhi

1. G.R. Basotia & K.K. Sharma Research Methodology, Mangal Deep Publications
2. Sadhu Singh Research Methodology in Social Science, Himalaya Publishing House, Mumbai
3. Flick, Uwe Introducing Research Methodology
4. Dayal, Manoj Media Metrics

## Media Research Lab

Course Code : MJM005A	L : 0	T/P : 2	CREDITS : 2
-----------------------	-------	---------	-------------

**Objectives of the Course:** On completion of the course students should be able:

1. To understand the tools and methods of Media Research
2. To apply research techniques in media studies.
3. To write research project
4. To conduct media research

### Exercises & Assignments

1. Writing a Research Proposal on significance of media in war against crimes/ Commodification of Women in Media
2. Design a Google form for Data Collection (Survey Method).
1. Using any of the research technique students will conduct media research culminating into hard and soft copies of the report.
2. Following studies will have to be conducted by the students who will prepare the reports based on the study:
  - i. Constructing the research design
  - ii. Conducting a survey – preparing questionnaires and schedule
  - iii. Analysis of any media context
  - iv. Measuring media effects and media agenda
  - v. Pre-testing/evaluation tools for audio-video, print, publicity material
  - vi. Writing the report

**Course Outcomes:** After the completion of the course, students will be able to;

- CO1: Understand the philosophy, concept and process of communication & media research based on social issues.
- CO2: Conduct media researches on the basis of different research methodologies.
- CO3: Analyze the data on the basis of different statistical tools.

## Television Program Production Lab

Course Code : MJM015A	L : 0	T/P : 2	CREDITS : 2
-----------------------	-------	---------	-------------

### Objectives of the Course:

1. To prepare a video brief
2. To handle various aspects of TV production and direction
3. To write scripts for TV
4. To apply production and post-production techniques effectively to produce a video program.
5. To understand ideation

### Exercises/Assignments

1. Preparation of a video brief
2. TV writing for Different Types of Visuals
3. Idea generation – fiction and non-fiction
4. Film and TV Fiction Script writing exercises
5. Script and story board
6. Production schedule
7. Budget
8. Floor plan
9. Lighting plan
10. Shooting script
11. Production of a programme
12. Post production

**Course Outcomes:** After the completion of the course, students will be able to;

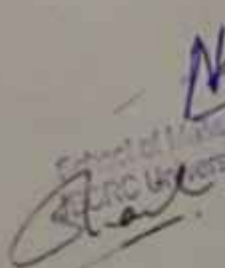

CO1: Analyze and work in the TV industry.

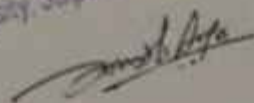

CO2: Write stories and collect news for the TV news and entertainment industry.

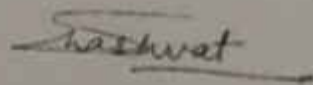

CO3: Produce different formats of TV programs.

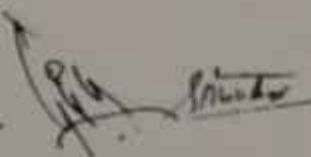

CO4: Work on editing softwares.

CO5: Understand post-production work

  
School of Mass Communication  
JECRC University, Jaipur-302005

## Radio Program Production Lab

Course Code : MJM016A	L : 0	T/P : 2	CREDITS : 2
-----------------------	-------	---------	-------------

### Objectives of the Course:

1. To prepare an audio brief
2. To apply various elements of radio production for producing different radio formats
3. To write and record effectively for radio
4. To produce radio interviews, discussions, features and documentaries
5. To learn the basics of sound editing.

### Assignments/Activities

1. Research and Preparation of audience profile
2. Writing Radio News Bulletin
3. Production of field based Radio Reports, Features and Documentaries
4. Production of Radio programmes in different formats for Community Radio.
5. Production of Podcasts.
6. Writing Radio Feature.
7. Making Radio Documentary.
8. Preparing Radio Talk Show.
9. Making Jingles.
10. Sound editing exercises

Course Outcomes: - After the completion of the course, students will be able to  
CO1: Make a Radio bulletin.  
CO2: Produce various Radio Programs including Jingles and News.  
CO3: Write Radio Script and record the Voice.  
CO4: Take Interviews and Documentaries on various issues for radio.  
CO5: Acquire the knowledge of sound editing.

## Art of Photography (Lab)

Course Code : MJM017A	L : 0	T/P : 2	CREDITS : 2
-----------------------	-------	---------	-------------

### Objectives of the Course:

1. To handle DSLR and other types of cameras.
2. To compose and shoot in different lighting conditions.
3. To make photo features on specific topics.
4. To learn shooting in studio and outdoor.
5. To learn the concept of photo-editing.

### Exercises/Assignments

1. Outdoor Shoot:
  - i. Using Digital SLR and Mobile camera/developing an idea and practice
  - ii. Making a Photo feature on a specific topic by using self-clicked photographs from Digital Camera
  - iii. Photographs should be of 4x6 size. A photo feature should comprise 10-16 photographs.
2. Studio Photo Shoot:

Shooting exercise in artificial lights.
3. Photo Lab
  - i. Use of software for modification of picture
  - ii. Editing of captured images with the help of Photoshop
  - iii. Preparing a softcopy of photo feature

**Course Outcomes:** After the completion of the course, students will be able to;

CO1: Understand and handle the various kinds of cameras.

CO2: Analyze and use of light for indoor and outdoor shooting.

CO3: Understand different genres of the photography.

CO4: Do photo-editing.

CO5: Develop entrepreneurship skills in photography.

## PROGRAM OUTCOMES

**PO 1. Disciplinary Knowledge and Skills:** Good knowledge and understanding of major concepts, theoretical principles in Biotechnology and its allied fields. The knowledge about the experimental findings in Biotechnology and its different subfields like Cell biology, Biochemistry, Microbiology, Genetic Engineering, medical biotechnology, environmental biotechnology, plant biotechnology, molecular biology, industrial biotechnology and immunology including broader interdisciplinary subfields like Chemistry, Mathematics, Life sciences, Environmental sciences, Computer science, Information Technology, forensic science and etc.

**PO 2. Skilled communicator:** Ability to transmit complex technical information relating all areas in Biotechnology in a clear and concise manner in writing and oral ability to present complex and technical concepts in a simple language for better understanding.

**PO 3. Critical thinker and problem solver:** Ability to employ critical thinking and efficient problem solving skills in all the basic areas of Biotechnology

**PO 4. Sense of inquiry:** Capability for asking relevant/appropriate questions relating to the issues and problems in the field of Biotechnology, and planning, executing and reporting the results of a theoretical or experimental investigation

**PO 5. Skilled project manager:** Capable of identifying/mobilizing appropriate resources required for a project, and manage a project through to completion, while observing responsible and ethical scientific conduct; and safety and laboratory hygiene regulations and practices.

**PO 6. Ethical awareness / reasoning and Environmental Sustainability:** The graduate should be capable of demonstrating ability to think and analyze rationally with modern and scientific outlook and identify ethical issues related to one's work, avoid unethical behavior such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights, and adopting objectives, unbiased and truthful actions in all aspects of work. Understand the issues of environmental contexts and sustainable development.

**PO 7. Self-directed, Team player and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context social technological changes. Capable of working effectively in diverse teams in both classroom, laboratory, Biotechnology projects and workshop and in industry and field-based situations.

Course code	Course Title	L	P	Contact Hr.	Contact Hr.	Total Credit
BMI070A	Cell and Molecular Biology	4	1	4	2	5

**Course outcome (CO)**

On completion of the course, students are able to:

CO1- Understand the cell structural organization and function of cell organelles.

CO2- Understand the structure of DNA and its component.

CO3- Understand the cell cycle and its regulation along with extracellular control of cell growth and apoptosis.

CO4- Understand the transcription in prokaryotes and its regulation.

CO5- Understand the concept of split genes, concept of introns and exons and processing of rRNA.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	0	1	0	0	1
CO2	1	2	0	1	0	0	1
CO3	3	3	1	0	1	2	0
CO4	2	2	2	0	0	2	1
CO5	2	3	2	0	0	2	1

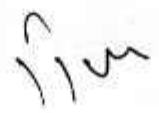

3 = Highly Related; 2 = Medium; 1 = Low

**CELL AND MOLECULAR BIOLOGY(BMI070A)**

**Unit I**

  
Dr. Shambhant B. Redgejer

Concepts of cell- Prokaryotic & Eukaryotic cells. Cell organization of Prokaryotic cells with special reference to Bacteria. Eukaryotic cells - cell wall & plasma membrane; structure & function of cell organelles and inclusions. Episome, Mesosome, Flagella and Fimbriae.

## Unit II

Experimental evidences for nucleic acid as genetic material. Structure of DNA; Models of DNA replication. Enzymes, proteins and other factors involved in DNA replication. Mechanism of DNA replication in prokaryotes & eukaryotes Super helicity in DNA, linking number, topological properties.

## Unit III

Cell cycle: Eukaryotic Cell Cycle, Regulation of Cell cycle progression, Events of Mitotic Phase, Meiosis and Fertilization. Cell cycle and Programmed cell death- Control system, intracellular control of cell cycle events, Apoptosis, extracellular control of cell growth and apoptosis.

## Unit IV

Transcription: Definition, difference from replication, promoter - concept and strength of promoter RNA Polymerase and the transcription unit. Transcription in Eukaryotes: RNA polymerases, general Transcription factors. Translational machinery, Charging of tRNA, aminoacyl tRNA synthetases, Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes, Fidelity of translation, Inhibitors of protein synthesis in prokaryotes and eukaryote

## Unit V

Split genes, concept of introns and exons, RNA splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: si RNA, miRNA and its significance.

### Suggested Readings:

1. Karp, G., Cell and Molecular Biology: Concepts and Experiments, 6<sup>th</sup> Edition, 2010, John Wiley & Sons. Inc.
2. De Robertis, E.D.P. and De Robertis, E.M.F. Cell and Molecular Biology, 8<sup>th</sup> Edition, 2006, Lippincott Williams and Wilkins, Philadelphia.
3. Cooper, G.M. and Hausman R.E., The Cell: A Molecular Approach, 5<sup>th</sup> Edition, 2009, ASM Press & Sunderland, Washington, D.C.
4. Becker W.M., Kleinsmith L.J., Hardin. J. and Bertoni G. P., The World of the Cell, 7<sup>th</sup> Edition, 2009, Pearson Benjamin Cummings Publishing

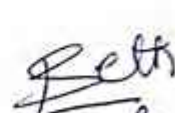

### Cell and Molecular Biology (BMI071A)

- 1) To analyze prepared slides of mitosis.

  
Dr. Shankar B. Badgujar

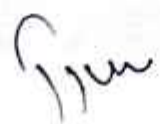

- 2) To perform and identify different stages of mitosis in onion root tip.
- 3) To analyze prepared slides of meiosis.
- 4) To perform and identify different stages of meiosis in onion flower bud.
- 5) To prepare the slide of giant chromosome.
- 6) Isolation of genomic and plasmid DNA from *E.coli*
- 7) Estimations of DNA using diphenylamine reagent, and UV spectrophotometer (A260 measurement)
- 8) Estimations of RNA using orcinol reagent, and UV spectrophotometer (A260 measurement)
- 9) Resolution and visualization of DNA by Agarose Gel Electrophoresis.

**B.Sc. Semester- I**  
**Course-Biological Macromolecules**  
**Course Code-BBI021B**  
**Lectures: 4 Hrs/week**

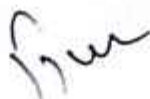

UNIT 1	Molecular Interaction and vitamins
UNIT 2	Carbohydrates
UNIT 3	Lipids
UNIT 4	Amino acids and Proteins
UNIT 5	Nucleic acids

#### Course outcome

CO-1 Students will be able to describe the basics of biomolecules and carbohydrates  
 CO-2 Students will be able to illustrate different types of lipids and relate their structure to their role in biological systems.

  
 Dr. Shambant B. Badgaj

CO-3 Students will be able to recognize amino acid structures and illustrates the function of proteins.

CO-4 Students will be able to describe/recognize nucleic acids, DNA and RNA.

Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	3	2	2	2	2
CO2	3	2	3	1	2	2	1
CO3	3	2	2	1	2	2	2
CO4	2	3	3	2	2	1	2

1-LOW, 2-MEDIUM, 3-HIGH

**BBI021B: BIOLOGICAL MACROMOLECULES**

**Credit(s):4**

**Unit-I**

**Molecular interactions:** The concept of pH, dissociation and ionization of acids and bases, Lewis acid and base, buffers and their role in biology, buffering mechanism, Henderson-Hasselbalch equation, biological buffer and Their Importance

**Vitamins:** Structure and biochemical properties of water soluble and fat soluble vitamins and their coenzyme activity.

**Unit-II**

**Carbohydrates:** Introduction, biological importance. Definition, Classification, Monosaccharides other than glucose, glycosidic bond, disaccharides, polysaccharides (starch, glycogen, peptidoglycan) Hetero polysaccharides, Mutarotation, osazone formation, Inversion of Sucrose

**Unit-III**

**Lipids:** Introduction Structure, distribution and biological importance of fats and fatty acids; Chemical properties and characterization of Fats, Waxes, Cerebrosides, gangliosides, phospholipids and their types and proteolipids; Steroids and Prostaglandins

**Unit-IV**

  
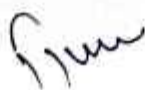

Dr. Sharmistha B. Badgoler

17

**Amino acids:** Definition, Classification, Structure and types; **Proteins:** Classification, structure and properties, biologically active peptides, classification and properties of proteins, structure of proteins-primary, secondary, tertiary and quaternary structure of proteins.

#### Unit-V

**Nucleic acids:** Structure of purines, pyrimidines, nucleosides and nucleotides; Structure, types and biological role of RNA and DNA

#### Text / Reference Books

3. Albert L. Lehninger, David L. Nelson, and Michael M. Cox.; Principles of Biochemistry, 2<sup>nd</sup> Edition, Worth Publishers, 33 Irving Place, New York
4. Jeremy M Berg, John L Tymoczko, and Lubert Stryer; Biochemistry, 5th edition, 2002.

#### BBI022B: Biological Molecules Lab 1

Credit(s): 1

1. To prepare the solutions of given normality and its standardization.
2. To Calibrate the pH meter by using different buffer solutions
3. To Prepare the buffer solutions
4. To determine the pKa value and hence the Dissociation constant of a given acid by using pH meter.
5. To perform Qualitative estimation of carbohydrates
6. To perform Qualitative estimation of proteins
7. To perform Qualitative estimation of lipids
8. To Determine the acid value of oil

Nishikant B

**B.Sc. Semester- I**  
**Course- Microbiology**  
**Course Code: BBI023B**  
**Lectures: 4 Hrs/week**

UNIT 1	History, classification and staining
UNIT 2	Diversity, morphology and microbial associations
UNIT 3	Bacterial Growth, cultivation and preservation
UNIT 4	Nutritional classification, Control of Growth of Microbes
UNIT 5	Virus structure and types

**Course outcome**

CO-1 Students will learn the fundamentals of microbiology, describe the facts and principles about microorganisms that apply to various fields, and explain how microorganisms are used as model systems to study basic biology, genetics, metabolism, and ecology.

CO-2 Students will explain and analyze the concepts, structures, nature, types of associations present among microbes and differentiate and classify them.

CO-3 Students will be able to assess the elements of a problem and develop and test a solution based on logic and the best possible information, analyze and interpret results and use mathematical and graphing skills and reasoning to solve problems in microbiology.

CO-4 Students will be able to understand and appreciate the value of cooperating and working effectively with peers and demonstrate a commitment to developing such skills and identifying and discussing the ethical issues and responsibilities of microbiology.

**Mapping of PO/CO**

**BBI023B: MICROBIOLOGY**

**Credit(s): 4**

**Unit-I**

  
 Dr. Shankar B. Badgujar

19

  
 Nicklin Learning kl

**Microbiology:** Introduction, Scope, History and Evolution of Microbiology

**Stains & Staining techniques:** Definition of auxochrome; Chromophores; Compounds for Staining, Aims and Theories of Staining, Smear-Preparation and Fixation, Simple staining-negative and monochrome staining, Differential staining- Gram staining; acid fast staining, endospore staining;; capsule staining; flagella staining

**Microbial Taxonomy:** Terminologies, Whittaker's Five-kingdom classification, three- domain classification, Binomial Nomenclature, Classification of microorganisms – numerical taxonomy, chemotaxonomy, molecular taxonomy; introduction to Bergy's manual

## Unit-II

**Microbial Diversity:** Morphology and cell structure of major groups of microorganisms e.g., Bacteria-Actinomycetes, Rickettsia, Archaeobacteria; Fungi, Algae, Protozoa and Unique features of viruses; Mycoplasma and Cell wall deficient bacteria

**Anatomy of Prokaryotic Cell:** Cell wall, Plasma Membrane, Cytoplasm, Nucleoid, plasmids, episomes, mesosomes, ribosomes, cell Inclusions, flagella and endoflagella, pili, fimbriae, glycocalyx, endospores and sporulation; Difference between Prokaryotic and Eukaryotic cells

**Microbial Associations:** Mutualism, Proto-co-operation, Syntrophism, Commensalism, Predation, Parasitism, Amensalism

## Unit-III

**Microbial growth:** Growth curve, Mathematical expression for Growth, Generation time, measurement of growth, continuous growth, synchronous growth and diauxic growth, environmental factors (physical and chemical) affecting growth.

**Cultivation and Identification of Microbes:** Media-types; Isolation methods for bacteria and fungi, Identification – morphological, biochemical, cultural characteristics, physiology, serology

**Preservation of Microorganisms:** objectives, necessities and methods of preservation, culture collection centre

## Unit-IV

**Nutritional Classification of Microbes:** Basis of classification and categorization

**Control of Growth of Microbes:** Introduction and related terminologies, Sterilization- physical method of disinfection and sterilization; radiation (mode of action, applications); Chemical agents-gases and liquid; Mechanical methods-filtration;

**Disinfection–** Characteristics of disinfectant, disinfectants, Methods of assessment of chemicaldisinfectant-phenol coefficient-definition and method of determination

  
Dr. Shambhant B. Badgujar

  
Medhistering

## Unit-V

**Viruses:** Structure of viruses, Prions and Viroids, cultivation and identification of viruses, Virus Replication Cycles, Mechanisms of Viral Entry and Spread of Infection, Bacteriophages – structure and replication, Animal viruses - HIV, Plant Viruses - TMV

### BBI024B: Microbiology Lab

Credit(s): 1

1. To perform the Simple staining
2. To perform the Gram staining
3. To perform the Endospore staining
4. To perform the Acid fast staining
5. To Prepare Broth for bacterial and fungal culture
6. To Prepare Nutrient Agar or Potato Dextrose Agar (PDA) or Sabouraud Dextrose Agar (SDA) media for bacterial and fungal culture
7. To isolate microflora from soil of Rajasthan and identify their shapes
8. To Culture microflora from Industries water of local area by serial dilution method spreading
9. Determination of bacterial cell size by micrometry.
10. Enumeration of microorganism- total & viable count.

**B.Sc. Semester-II**  
**Course – Metabolic Pathways**  
**Course Code – BBI026B**  
**Lectures: 4 Hrs/week**

<b>UNIT 1</b>	<b>Bioenergetics; General Concepts of Thermodynamics</b>
<b>UNIT 2</b>	<b>Carbohydrate Metabolism</b>
<b>UNIT 3</b>	<b>Lipid Metabolism</b>
<b>UNIT 4</b>	<b>Amino Acid Metabolism</b>
<b>UNIT 5</b>	<b>Nucleotide Metabolism</b>

**Course outcome**

- CO-1 Students will be able to demonstrate familiarity with the basics of metabolic pathways and metabolism of carbohydrates.  
CO-2 Students will be able to describe what happens in fatty acid oxidation and synthesis.  
CO-3 Students will be able to explain what happens during protein metabolism.  
CO-4 Students will be able to acquire skills to demonstrate the functioning and metabolism of nucleic acids.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	2
CO2	3	3	3	2	2	1	1
CO3	3	3	3	2	2	1	1
CO4	3	3	3	2	1	2	2

1 – LOW , 2- MEDIUM , 3-HIGH

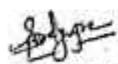

**BBI026B: Metabolic Pathways**

**Credit(s): 4**

**Unit-I**

**Bioenergetics; General concepts of Thermodynamics:** Laws of Thermodynamics, Enthalpy, Entropy, Free energy & Chemical Equilibria, High Energy Bonds & Compounds, ATP-ADP Cycle, Oxidation-reduction Reactions and Redox potential, chemosmotic theory for ATP Production, Metabolism: Introduction (Anabolism & catabolism),

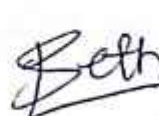

**Unit-II**

  
Dr. Shamikant B. Badgujar

 23

**Carbohydrate metabolism:** Glycolysis, Fermentation, Citric acid cycle, Oxidative Phosphorylation and ETS, Gluconeogenesis, Glycogenesis and Glycogenolysis, HMP shunt, Glyoxylate pathway.

### Unit-III

**Lipid metabolism:** Fatty acid degradation (beta, alpha, and omega degradation), degradation of odd chain fatty acids, Fatty acid synthesis, Regulation of fatty acid metabolism. Cholesterol Biosynthesis, Ketone Bodies formation and degradation

### Unit-IV

**Amino acid metabolism:** Transamination, deamination, oxidative deamination, Amino acid degradation & Biosynthesis, Urea cycle and its regulation.

### Unit-V

**Nucleotide metabolism:** Synthesis of purines & pyrimidines nucleotides, salvage pathway, nucleotide degradation, associated metabolic disorders. Lesch-Nayan Syndrome, SCID

**B.Sc. Semester-II**  
**Course-Genetics**  
**Course Code-BBI028B**  
**Lectures: 4 Hrs/week**

<b>UNIT 1</b>	<b>Mendelian Principles and factor hypothesis</b>
<b>UNIT 2</b>	<b>Linkage and crossing over, chromosome maps, genes and genetic code</b>
<b>UNIT 3</b>	<b>Sex determination, sex linked and extra chromosomal inheritance</b>
<b>UNIT 4</b>	<b>Heteroploidy, chromosomal aberrations and mutations</b>
<b>UNIT 5</b>	<b>Human and Population Genetics</b>

#### Course outcome

CO-1 Students will describe and explain genetics, Mendel's experimental design, principles, gene linkage, and the role of genetic mechanisms in evolution. They will be able to explain and evaluate the principles of genetics, gene mapping, sex determination, chromosomal anomalies, study pedigrees, evolutionary and quantitative genetics, etc.

CO-2 Students will acquire knowledge to design, execute, and analyze the results of genetic experiments, recognize the experimental rationale of genetic studies, and evaluate conclusions based on genetic data. They will gain insight into the mathematical, statistical, and computational basis of genetic analyses.

CO-3 Students will apply communication skills required in the discipline, including oral presentations; publish articles, and poster presentations.

CO-4 Students will learn teamwork and leadership skills, including group analysis of data, working together in the laboratory, joint compositions of written reports, substantive participation in research group meetings, etc.

  
Dr. Shankant B. Redguler

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1		2		1	
CO2	2		3	2	3	3	1
CO3	1	3			1	2	
CO4	1	1	2	1	2		3

1-LOW, 2-MEDIUM, 3-HIGH

**BBI028B: Genetics**

**Credit(s): 4**

#### **Unit-I**

Mendelian principles: Principle of segregation, monoclinal crosses, dominance, co dominance, lethal genes. Principle of independent assortment: dihybrid gene interactions, epistasis, multiple alleles. Interaction of Genes: Inter-allelic, Non-allelic interactions, Pleiotropic effect of genes

#### **Unit-II**

Linkage: linkage groups, history, arrangement of linked genes, complete and incomplete linkage; linkage and recombination in Neurospora. Crossing over: mechanism of crossing over, stages at which crossing over occurs, cytological basis of crossing over, frequency, types of crossing over Chromosome maps: chromosome mapping by two factor and three factor crosses, interference and coincidence. Genes: gene concept, molecular structure of gene, types of genes, functioning of gene. Genetic code: degeneracy and discovery of genetic code

#### **Unit-III**

Sex determination: Mechanism of sex determination: identification of sex chromosomes, chromosomal mechanism, genic balance theory of sex determination, hormonal and environmental factors in sex determination, Y chromosome and sex determination in mammals, Sex linked inheritance: discovery, sex linkage-drosophila, man, poultry and moths, types, sex limited and sex influenced genes. Extra-chromosomal inheritance: Extra chromosomal inheritance: Rules of extra nuclear inheritance, maternal effects, maternal inheritance, cytoplasmic inheritance, organelle heredity

#### **Unit-IV**

  
Dr. Shankar B. Redguler

26

Variation in chromosome number (Heteroploidy): euploidy and aneuploidy and other types of variations. Chromosomal Aberrations: change involving number of gene loci and arrangement of genes, Mutations: spontaneous and induced, substitution mutation, frame shift mutation, induced mutations in plants, animal and microbes for economic benefit of man

#### Unit-V

Human Genetics and Population Genetics: Human Karyotype, Pedigree analysis, chromosomal banding, turner syndrome, klinefelter syndrome, Down syndrome, patau syndrome, Edward syndrome, cat cry syndrome, barr body, Hardy-Weinberg frequencies

#### Text / Reference Books

1. Monroe W. Strickberger; Genetics, Macmillan international editions in science.
2. David Freifelder; Microbial Genetics, Jones and Barlett, 1987, The university of Michigan

#### BBI029B: Genetics Lab

Credit(s): 1

1. To study the Mendel's law of inheritance
2. To analyze various chromosomal abnormalities
3. To perform the Karyotyping of normal and abnormal human cells
4. To perform the Pedigree analysis
5. To determine the Problems related to pedigree analysis (2)
6. To determine the Problems related to linkage
7. To analyze Barr body using methylene blue
8. Pedigree charts of diseases in families

**B.Sc. Semester-II**  
**Course-Analytical Techniques**  
**Course Code-BBI030B**  
**Lectures: 4 Hrs/week**

<b>UNIT 1</b>	<b>Instruments, basic principle and usage</b>
<b>UNIT 2</b>	<b>Microscopy</b>
<b>UNIT 3</b>	<b>Basic principles of electrophoresis</b>
<b>UNIT 4</b>	<b>Chromatography</b>
<b>UNIT 5</b>	<b>Spectroscopic Techniques</b>

**Course outcome**

CO-1 Students will be able understand different analytical techniques for identification of biomolecules in Biotechnology

CO-2 Students will be able to describe and compare different types of chromatographic, electrophoresis and spectrometric techniques

CO-3 Students will be able to distinguish different separation techniques used for different molecules.

CO-4 Student will able to acquire skills to analyze the critical problems related to instruments used in biology

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7

CO4	3	2	3	2	2	0	1

**BBI030B: Analytical Techniques**

**Credit(s): 4**

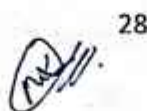

**Unit-I**

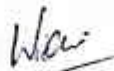

**Instruments, basic principle and usage:** pH meter, Measurement of pH: Principles of glass and reference electrodes, types of electrodes, calibration of pH meter, Handerson equation, biological buffer.

**Unit-II**

  
**Dr. Shankar B. Badgujar**

 28

**Microscopy:** Simple microscopy, Phase contrast microscopy and electron microscopy (TEM and SEM). Fluorescence microscopy, Sedimentation-Sedimentation velocity, preparative and analytical ultracentrifugation techniques

### Unit-III

**Basic principles of electrophoresis:** AGE and SDS-PAGE and their importance, Native-PAGE, Radioisotopic Techniques: Types of radioisotopes used in Biochemistry, units of radioactivity measurements, isotopes commonly used in biochemical studies –  $^{32}\text{P}$ ,  $^{35}\text{S}$ ,  $^{14}\text{C}$  and  $^3\text{H}$ ), application of isotopes, Autoradiography: Biological hazards of radiation and safety measures in handling radioisotopes; Biological applications

### Unit-IV

**Chromatography:** General principles and applications of – Adsorption chromatography, Ion-exchange chromatography, Thin-layer chromatography, Hydrophobic chromatography, Gas-liquid chromatography, HPLC, Affinity chromatography, Paper chromatography.

### Unit-V

**Spectroscopic Techniques:** Beer-Lambert law, light absorption and its transmittance, determination and application of extinction coefficient, application of visible and UV spectroscopic, and its application, IR spectroscopy and their applications

**Credit(s): 1**

1. To Calibrate the spectrophotometer
2. To perform Verification of Beer-Lambert Law
3. To calibrate pH meter without buffer solution
4. To prepare a solution of different Normality, molarity
5. To prepare primary and secondary standard solution
6. To convert secondary standard solution into primary standard solution
7. To determine the  $\lambda_{max}$  for DNA
8. To separate various molecule on the basis of their sedimentation coefficient
9. To separate Amino acid using paper chromatography
10. To separate Amino acid using thin layer chromatography
11. To separate the aliphatic and aromatic fraction of oil by column chromatography
12. To separate the DNA using agarose gel electrophoresis

Lectures: 4 Hrs/week

  
Dr. Shankar B. Badgojar

31

UNIT 1	Overview of Immune System
UNIT 2	Antigen and Antibody
UNIT 3	Antigen-Antibody Interaction and MHC
UNIT 4	Major Histocompatibility complex
UNIT 5	Vaccines

### Course outcome

CO-1 Students will demonstrate a basic concept of immunology at the cellular and molecular level, define central principles and concepts, outline, compare, contrast innate and adaptive immunity, and describe the different cell types and organs that make up the immune response.

CO-2 Students will illustrate various mechanisms that regulate immune responses and maintain tolerance; elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses. They will outline key events and cellular players in antigen presentation and how the nature of the antigen will shape resulting effector responses and be able to apply basic techniques for identifying antigen-antibody interactions.

CO-3 Students will understand the principles governing vaccination and the mechanisms of protection against infectious diseases and will be able to elucidate the reasons for immunization and aware of different vaccination.

CO-4 Students will be able to communicate effectively in both oral and written formats, using appropriate vocabulary for immunology, response mechanisms, regulation, and genetic basis; apply scientific principles in interpreting responses and data; and understand immunology's roles in disease protection.

non-self, Clonal nature of immune response; Hematopoiesis and differentiation; Cells and organs of the immune system

### Unit-II

**Antigen:** Immunogenicity v/s antigenicity, factors affecting immunogenicity, nature of immunogen, biological system, epitopes, haptens and antigenicity; Immunoglobulins: Structure of antibody, antibody mediated effector functions, antibody classes and biological activities; Monoclonal antibodies: Production and applications, antibody determinants isotype, idiotype and allotypes

### Unit-III

**Antigen-Antibody interactions:** types: precipitation and agglutination reaction, radioimmunoassay, ELISA, chemiluminescence, ELISPOT assay, western blot, immune precipitation, immune fluorescence, flow cytometry and fluorescence.

### Unit-IV

**Major histocompatibility complex:** General organization, MHC molecules: structure & genes, their mode of antigen presentation and interaction, cellular distribution of MHC, regulation of MHC expression and disease susceptibility. Complement system: Function, components, activation, regulation and deficiencies of complement.

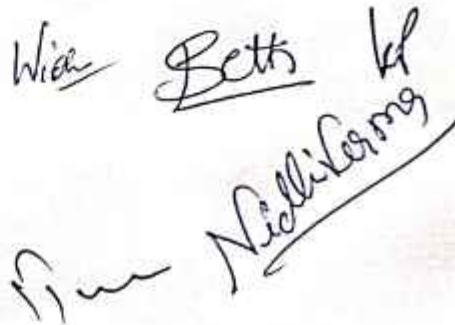

### Unit-V

**Vaccines:** Active and Passive Immunization Types of Vaccines – Inactivate Attenuated, Purified macromolecules and Recombinant-vector, DNA, Multivalent subunit Vaccines.

4. Sandy B. Primrose, Richard Twyman, Bob Old; Principles of Gene Manipulation: An Introduction to Genetic Engineering, 6<sup>th</sup> Edition, Wiley-Blackwell.

#### **BBI036B: Genetic Engineering Lab**

**Credit(s): 1**

1. To Isolate the genomic DNA from bacteria
2. To perform Isolation of plasmid from bacteria
3. To perform Agarose gel electrophoresis for DNA separation
4. To perform Restriction Digestion DNA/plasmid
5. To perform DNA isolation from plant by CTAB method
6. To perform Ligation
7. To estimate DNA by DPA method
8. To determine the molecular weight of DNA
9. To estimate the amount of RNA by Orcinol method
10. To isolate DNA from Onion cell

		A	Education and Ethics-2									
11	4		Open Elective II	3	0	0	3	3	0	0	3	
			Total	19	1	10	28	19		5	24	

**B.Sc. Semester- IV**  
**Subject- Molecular Biology**  
**BBI040B**  
**Lectures: 4Hrs/week**

UNIT 1	Nucleic Acids
UNIT 2	Transcription in prokaryotes and eukaryotes
UNIT 3	Translation in prokaryotes and eukaryotes
UNIT 4	Regulation of gene expression in prokaryotes
UNIT 5	Mutation

**Course outcome**

- CO-1 Students will be able to describe about structure of nucleic acid, replication process and mutation.
- CO-2 Students will be able to learn the transcription in prokaryotes and eukaryotes.
- CO-3 Students will be able to explain the translational process for prokaryotes and eukaryotes.
- CO-4 Students will be able to analyze the regulation of gene expression in living organisms.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	1	2	2
CO2	3	3	3	2	1	1	1
CO3	3	3	3	1	2	1	1
CO4	3	3	3	2	1	2	1

1 – LOW, 2- MEDIUM, 3-HIGH

  
Dr. Shamikant B. Badgojar

38

**Unit-I**

**Nucleic Acids:** as the genetic material, structure and aggregation of DNA and RNA, DNA double helix, different conformations of double helix, DNA super coiling, Denaturation and renaturation of DNA, C-value paradox, Cot value, chemical complexity; DNA replication: Mechanism, Enzymes and accessory proteins involved, DNA damage, DNA mutagenesis and DNA repair (SOS and excision repair); Homologous recombination, site specific recombination and transposons.

**Unit-II**

**Transcription in prokaryotes and eukaryotes:** General and specific transcription factors, Regulatory elements and mechanism of transcription regulation, Modifications of RNA; Genetic code: deciphering the genetic code, nature of the code.

**Unit-III**

**Translation in prokaryotes and eukaryotes:** machinery- tRNA, Ribosomes, mRNA, aminoacyl-tRNA synthases and aminoacylation of tRNA; Mechanisms of initiation, elongation and termination, Regulation of translation, post translational modifications of proteins, protein localization, protein degradation.

**Unit-IV**

**Regulation of gene expression in prokaryotes:** lac, arabinose and trp operons - induction, repression and attenuation mechanism.

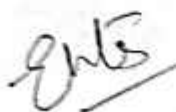

**Unit-V**

**Mutation:** Induced mutation, spontaneous mutation, frameshift mutation, point mutation, non sense mutations, site directed mutagenesis

#### BBI041B: Molecular Biology Lab

Credit(s): 1

1. To Isolate genomic DNA
2. To perform Gel electrophoresis
3. To perform SDS-PAGE
4. To perform Quantification of RNA
5. To perform Quantification of DNA
6. To perform transformation

#### Virtual Labs Link

S.No	Course Name	Source	Link
1.	Molecular Biology Virtual Lab I	Amrita Vishwa Vidyapeetham	<a href="http://mbvi-au.vlabs.ac.in/">http://mbvi-au.vlabs.ac.in/</a>

3.	Biomedical and Signal Processing Laboratory	COEP, Pune	<a href="https://bmspcoep.vlabs.ac.in/List%20of%20experiments.html?domain=Biotechnology">https://bmspcoep.vlabs.ac.in/List%20of%20experiments.html?domain=Biotechnology</a>

B.Sc. Semester- IV  
Subject- Plant Biotechnology  
BBI042B  
Lectures: 4Hrs/week

  
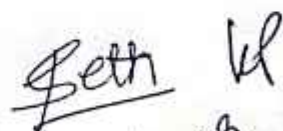

Dr. Shamkant B. Badgujar

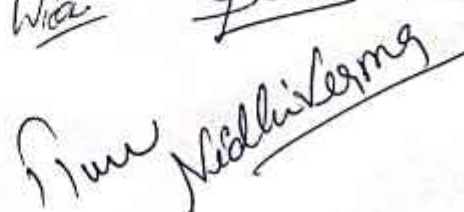

40

UNIT 1	History and Aseptic techniques
UNIT 2	Tissue culture media, Cell and Suspension culture
UNIT 3	Protoplast technology
UNIT 4	Genetic Transformations
UNIT 5	Soma-clonal variation and micro-propagation; Conservation

Course outcome

CO-1 Students will be able understand different plant tissue culture and sterilization techniques

CO-2 Students will be able to describe and compare different type's tissue culture media, cell and suspension cultures, genetic transformation and micro-propagation techniques

CO-3 Students will be able to distinguish different plant tissue culture techniques and able to raise callus

CO-4 Student will able to acquire skills to analyze the critical problems related to plant tissue culture

Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	2	1	2
CO2	3	2	3	2	2	1	1
CO3	3	3	3	2	2	2	2
CO4	3	3	3	1	3	1	2

1 – LOW , 2- MEDIUM , 3-HIGH

**BBI042B: Plant Biotechnology**

**Credit(s): 4**

**Unit-I**

**History:** Milestones in the history of plant tissue culture, Cellular totipotency: 'Explant' for plant tissue culture: Laboratory Requirements for plant tissue culture laboratory different work areas, equipments & instruments required, techniques, other requirements.

**Aseptic techniques:** Washing & preparation of glassware, packing & sterilization, media sterilization, surface sterilization, aseptic work station, precautions to maintain aseptic conditions;

  
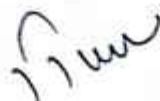

Dr. Shambhaji B. Bodgajkar

41

## 42

## Micro propagation of medicinal plants found in Rajasthan

### Unit-III

## Unit-IV

## Unit-V

DP Inner Midlinking

**BBI043A: Plant Biotechnology Lab****Credit(s): 1**

1. To Prepare stock solution for M.S. media
2. To prepare and inoculate node and inter node
3. To culture callus
4. To perform suspension culture
5. To prepare media and inoculate shoot tip
6. To prepare media and inoculate root tip
7. To prepare media and inoculate anther
8. To Prepare the synthetic seeds
9. To perform Bergmann's cell plating technique for single cell culture
10. To determine the Composition of various plant tissue culture media
11. To Prepare stock solution for various growth hormones
12. To Prepare M.S. media for seed inoculation
13. To Inoculate seed in M.S. media for micro-propagation
14. **Preparation of Herbarium sheet using medicinal plants found in Rajasthan**

**B.Sc. Semester- IV**  
**Subject- Bioprocess Engineering and Technology**  
**BBI044B**  
**Lectures: 4 Hrs/week**

<b>UNIT 1</b>	<b>Introduction to Bioprocessing techniques</b>
<b>UNIT 2</b>	<b>Microbial metabolism, selection and strain improvement</b>
<b>UNIT 3</b>	<b>Fermentation technology and upstream processing</b>
<b>UNIT 4</b>	<b>Downstream processing</b>
<b>UNIT 5</b>	<b>Enzyme technology</b>

**Course outcome**

CO-1 Students will use correct biological terms to describe and analyze phenomena/problems in bioprocesses, describe and explain the principles and processes involved in fermentation technology, investigate properties of microbes for product formation and their improvement.

CO-2 Students will analyze the characteristic of suitable media for product formation, formulation of media, selection of appropriate bioreactor models based upon

  
Dr. Shomkant B. Badgujar

43

bioproducts and cell lines, and other process criteria

CO-3 Students will be able to apply the concept in the field of industrial biotechnology and design a suitable scheme of bioproduct separations based upon the molecular characteristics of the product and other process criteria

CO-4 Students will be able to simplify the concepts and explain them through oral presentations

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3					1	
CO2	3		2		1	3	
CO3	3	2	2	2	3	1	
CO4	1	3					2

1-LOW, 2-MEDIUM, 3-HIGH

**BBI044B: Bioprocess Engineering and Technology**

**Credit(s): 4**

#### **Unit-I**

Introduction, Objectives and Scope; Range of bioprocess, Basic principle components of fermentation technology, Types of microbial culture-Batch, Fed batch and Continuous culture; Difference between Primary metabolite and secondary metabolites

#### **Unit-II**

**Industrial microorganisms:** selection of Microorganisms, industrial strains and strain improvement, strain stability, isolation and selection of microorganisms, production of stock culture.

#### **Unit-III**

**Fermentation technology:** definition, stages of fermentation, Inoculum development

**Fermentation Media:** formulation of medium, sterilization of medium,

**Fermentation System:** designing of bioreactors, Design of bioprocess vessels- Significance of Impeller, Baffles, Sparger; Introduction to oxygen requirement in bioprocess, mass transfer coefficient; factors affecting K<sub>La</sub>, Bioprocess measurement and control system with special reference to computer aided process control

**Downstream processes:** Cell harvesting, cell disruption, product recovery, Distillation, Finishing Steps

#### **Unit-IV**

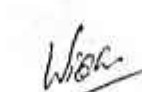

**Production of primary and secondary metabolites:** -penicillin, tetracycline, ethanol, citric acid, single cell protein, Baker's Yeast, Xanthan Gum, Vitamins B12, Pigments (Shikonin)

#### **Unit-V**

  
Dr. Shamkant B. Dadgar

44  

**Enzyme technology:** enzyme versus catalyst, microbial production of enzyme, mechanisms of enzyme action, extraction and purification of enzymes, storage of enzyme, immobilization of enzyme, industrial application of microbial enzyme and production of industrial enzymes-glucose Isomerase, cellulase and lipases

#### BBI045B: Fermentation Technology Lab

Credit(s): 1

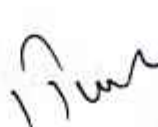

1. To perform Sauerkraut Production
2. To Prepare grape wine
3. To perform the Production of citric acid
4. To estimate the Production of citric acid by *Aspergillus niger*
5. To perform MBRT test
6. Primary screening for amylase producing potent microbial strain
7. To perform various biochemical tests (IMViC, Catalase, etc.)
8. Determination of bacterial growth by turbid metric method
9. Visit to a local Fermentation Laboratory

  
Dr. Shankar B. Badgoler

45

B.Sc Semester- V  
Subject- Proteomics and Genomics  
BBI047B  
Lectures: 4Hrs/week

## Course outcome

CO-1 Students will be able to understand the basics of Genomics

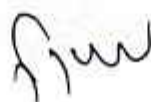

CO-2 Students will be able to illustrate different sequencing and mapping approach.

  
Dr. Shantika B. Badgoler

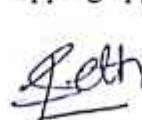

46

- CO-3 Students will be able to explain the methods used for Proteome analysis
- CO-4 Students will be able to describe application of genomics and proteomics

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

**BBI047B: Proteomics and Genomics**

**Credit(s): 4**

#### **Unit-I: Introduction to Genomics**

Introduction: Genome, Genomics, Omics and importance, General features, Organization and structure of genomes, Genome size, Sequence complexity. Gene identification; gene prediction rules and softwares, Genome databases; Annotation of genome. Genome diversity: taxonomy and significance of different model genomes.

#### **Unit- II: Genome Sequencing and mapping**

DNA sequencing methods – manual & automated, Next Generation Genome Sequencing Methods, Genome sequence assembly software, The Human genome project, HapMap Project, The 1000 genome project, and The ENCODE Project, Genetic and Physical Mapping, Molecular Markers.

#### **Unit-III: Introduction to Proteomics**

Introduction to Proteomics – The Proteome, Mining proteomes, Bridging Genomics and Proteomics. Proteomics and the new biology. Protein structural genomics, determining gene function by sequence comparison and through conserved protein structure Global expression profiling – Introduction, traditional approaches to expression profiling.

#### **Unit-IV: Analysis of Proteomes**

Analysis of proteomes - Two-dimensional polyacrylamide gel electrophoresis, Mass spectrometry based methods for protein identification, 2-DE gel electrophoresis coupled with mass spectrometry, Micro array techniques and advanced analytical techniques

#### **Unit V: Applications of Genomics and Proteomics analysis**

  
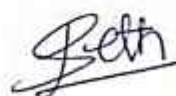

Dr. Shankar B. Badgujar

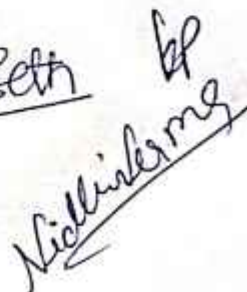

47

Analysis of Genomes – Human, Mouse, *Plasmodium falciparum*, *Saccharomyces cerevisiae*, *Mycobacterium tuberculosis*. Application of proteome analysis- drug development and toxicology, Pharmaceutical Applications, Proteomics in drug Discovery in human, phage antibodies as tools, Proteomics in plant genetics and breeding.

#### BBI048B: Bioinformatics Lab

Credit(s): 1

1. To retrieve the sequence of the Human keratin protein from GenBank database and to interpret the results.
2. To retrieve the structure of a protein and viewing it in RASMOL viewer.
3. To find the similarity between sequences using BLAST
4. To find the similarity between sequences using FASTA
5. To align more than two sequences and find out the similarity between those sequences
6. To perform Sequence analysis
7. Detection of Open Reading Frames using ORF Finder
8. Software for Protein localization.

1-Low, 2-Medium, 3-High

**UNIT I**

  
Dr. Shantikant B. Dadgar

50

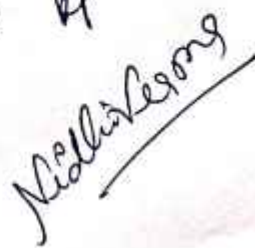

## INTRODUCTION TO INDUSTRIAL BIOPROCESS

Fermentation – Definition, Process basic steps. Organisms involved in fermentation, applications. Basic concepts of Upstream and Downstream processing in Bioprocess, Process flow sheet – block diagrams, pictorial representation.

## UNIT II

### PRODUCTION OF PRIMARY METABOLITES

Primary Metabolites- Production of commercially important primary metabolites like organic acids, amino acids and alcohols.

## UNIT III

### PRODUCTION OF SECONDARY METABOLITES

Secondary Metabolites- Production processes for various classes of secondary metabolites: Antibiotics, Vitamins and Steroids.

## UNIT IV

### PRODUCTION OF ENZYMES AND OTHER BIOPRODUCTS

Production of Industrial Enzymes, Bio-pesticides, Bio-fertilizers, Bio-preservatives, Biopolymers, Biodiesel. Cheese, Beer, SCP & Mushroom culture.

51

**Course Code: BBI101A**

**Course Name: Industry Biotechnology Lab**

1. Production of cheese
2. Production of wine
3. Mushroom cultivation

**Department Elective- 2A**

**Course Code: BBI102A**

**Course Name: Microbial Physiology**

**Lectures: 4 Hrs/week**

UNIT 1	Nutritional enzymes and bacterial genetics
UNIT 2	Energy Production and Metabolite Transport and Microbial metabolism
UNIT 3	Microbial nutrition and Photosynthesis and Inorganic Metabolism
UNIT 4	Nitrogen Metabolism
UNIT 5	Microbial Stress Responses and Host-parasite interactions

**Course outcome**

CO-1 Students will be able to describe microbial enzymes and bacterial genetics.

CO-2 Students will be able to identify and explain energy production and metabolite transport in microbes and understand microbial metabolism.

CO-3 Students will be able to describe microbial nutrition, understand the process of microbial photosynthesis and inorganic metabolism

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3			2		1	
CO2	2	1	2	1		2	3
CO3	1	2	3		2	2	

1-Low, 2-Medium, 3-High

**BBI102: Microbial Physiology**

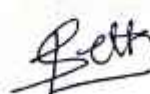

**Credit(s):4**

  
Dr. Shantant B. Badgekar

52

## Unit I

**Bacterial Genetics:** DNA exchange, Recombination, Mutagenesis and Repair-Transfer of Genetic Information in Prokaryotes, Plasmids-Plasmid Replication, Addiction Modules: Plasmid Maintenance by Host Killing: The *ccd* Genes; Conjugation-cis/trans complementation test, Conjugation and Pheromones in Enterococci, Conjugation, Cell-Cell Signaling, and Bacterial-Induced Tumors; Transformation-Gram-Positive and Gram-Negative Transformation, Transfection and Forced Competence; Transduction, Recombination-General Recombination, Genetics of Recombination, Restriction and Modification, Insertion Sequences and Transposable Elements, Mutagenesis, DNA Repair Systems

## Unit II

**Energy Production and Metabolite Transport:** Energy Production-Substrate-Level Phosphorylation, Oxidative Phosphorylation, Measurement of PMF, Electron Transport Systems, Anaerobic Respiration, Conversion of PMF to Energy, Structure of  $F_1F_0$  and the ATP Operon, Energy Yield, Generating ATP in Alkalophiles, Energetics of Chemolithotrophs, pH Homeostasis; Metabolite Transport-Facilitated Diffusion, Mechanosensitive Channels,

## Unit III

**Microbial Nutrition:** Nutritional categories of micro-organisms, Nutritional types (definition and example) - Photoautotrophs, Photoorganotrophs, Chemolithotrophs (ammonia, nitrite, sulfur, hydrogen, iron oxidizing bacteria); Chemoorganotrophs, Nutritional classification of microorganisms based on carbon, energy and electron sources, Chemolithotrophic metabolism, Physiological groups of aerobic and anaerobic chemolithotrophs. Hydrogen oxidizing bacteria and methanogens.

## Unit IV

**Nitrogen Metabolism:** Biological Nitrogen Fixation, The Nitrogen Fixation Process-Components of the Nitrogenase System; Symbiotic Nitrogen Fixation; Inorganic Nitrogen Metabolism; Assimilation of Inorganic Nitrogen

## Unit V

  
Dr. Shambhat B. Badgujar

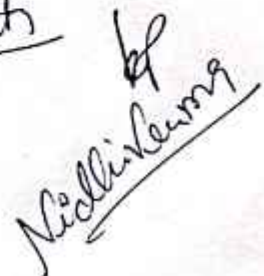

53

**Microbial Stress Responses:** -Osmotic Stress and Osmoregulation-High Osmolality, Low Osmolality, Osmotic Control of Gene Expression; Aerobic to Anaerobic Transitions-Formate Nitrate Regulation, Nitrate Response, ArcAB System; Oxidative Stress-Regulation of the Oxidative Stress Response; pH Stress and Acid Tolerance; Thermal Stress and the Heat Shock Response; Nutrient Stress and the Starvation—Stress Response, Starvation—Stress Response, Stringent Control; Extremophiles

**Course Code: BBI103A**

**Course Name: Practicals of Microbial Physiology**

1. To study and plot the growth curve of *E. coli* using turbidometric method and to calculate specific growth rate and generation time.
2. To study and plot the growth curve of *Aspergillus niger* by radial growth measurements.
3. To study the effect of pH on the growth of *E. coli*
4. To study the effect of temperature of *Aspergillus niger* by dry weight method.
5. Demonstration of the thermal death time and decimal reduction time of *E. coli*.

**Department Elective- 3A**

**Course Code: BBI104A**

**Course Name: Microbial genetics and r-DNA technology**

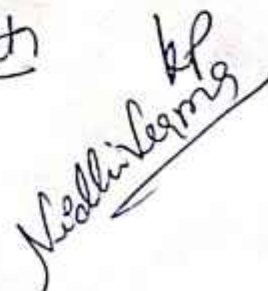

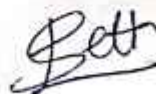

**Lectures: 4 Hrs/week**

#### Course Outcomes

CO-1 Students will improve the knowledge on genomic structure of microbe and various molecular tools used for genetic manipulation

Dr. Shamkant B. Badgujar

CO-2 Students will utilize the knowledge for improving the products and production process in industries.

CO-3 Students will identify appropriate resources required for a project while observing safety and laboratory hygiene regulations and practices.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1		2		1	
CO2		2	2	1	1	2	
CO3			2		3	2	2

1-Low, 2-Medium, 3-High

### UNIT I

Origin of Molecular Genetics-Structure of DNA-Mutations-Luria and Delbruck's Fluctuation Test-Spontaneous mutations-nonsense, missense, frame-shift mutations-Induced mutagenesis-Physical agents-UV,X-Rays-Chemical agents-NTG, Base Analogues etc., Reversion-AMES Test-DNA Replication-Messelson and Stahl's Experiment-Okazaki's fragment-DNA polymerases-DNA damage-SOS response-DNA repair.

### UNIT II

Gene transfer in bacteria-Transformation-discovery and its significance-competence and factors involved-joint transformation and its uses-Conjugation-F<sup>+</sup> and F<sup>-</sup> nature of E.coli Origin of Hfr and F' strains-Zygotic induction -Chromosome transfer by Hfr - circular nature of E.coli DNA - Use of Hfr strains in genetic mapping-Transduction -  $\lambda$  phage and specialized transduction -

### UNIT III

Elucidation of genetic code- Benzer, Khorana and Crick's contributions-Triplet nature of the Genetic code and Adaptor hypothesis-Wobble hypothesis- Bacterial translation, Suppression of nonsense, missense and frame-shift mutations-Intragenic and extragenic suppressions of mutations-modern aspects-structure and function relationship

### UNIT IV

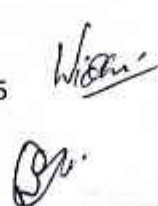

Birth of r-DNA technology- Agarose Gel electrophoresis and its principle-Restriction enzymes and their role in r-DNA technology-Restriction-modification system of E.coli-Types of restriction enzymes - Plasmid vectors as cloning vehicles-Vectors for protein over expression, protein secretion and controlled expression

### TEXT BOOKS

1. Principles of Gene Manipulation and Genomics-S.B.Primrose and R.M.Twyman, 2006.John Wiley & Sons Ltd.
2. Molecular Genetics: An introductory narrative, Second Edition - Gunther.S.Stent and Richard Calendar,2002. CBS Publishers and distributors.

  
Dr. Shankant B. Badgajkar

## REFERENCE BOOKS

1. A Short Course in Bacterial Genetics: A Laboratory Manual and Handbook for *Escherichia coli* and Related Bacteria- Jeffrey. H. Miller, 1992. CSHL Press.
2. Fundamental Bacterial Genetics - Nancy Trun and Janine Trempy, 2004. Blackwell publishing
3. From Genes to Genomes: Concepts and Applications of DNA Technology, Second Edition- Jeremy. W. Dale and Malcolm Von Schantz, 2007. John Wiley & Sons Ltd.

Course Code: BBI105A

Course Name: Microbial genetics Lab

1. Identification of food pathogen
2. Isolation of pathogen from patient
3. Haemolytic testing of bacteria
4. Differential test of Staphylococci through growth on agar plates (Mannitol agar, DNA agar plate and Coagulase test method)

Department Elective- 4A

Course Code: BBI106A

Course Name: Pharmaceutical Chemistry

Lectures: 4 Hrs/week

## Course Outcomes

- CO-1 Students will encode information on drug designing, drug discovery and drug metabolism.  
CO-2 Students will know the actual path of metabolism of drugs and drug discovery.  
CO-3 Students will gain information that will help the students to formulate novel drugs.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	2	2	1	1	
CO2	3	1	2	2			
CO3	3			1	1	1	

1-Low, 2-Medium, 3-High

## UNIT I

Introduction to Pharmaceuticals : Routes of drug administration, Pharmacokinetics: Absorption, Distribution, Metabolism- Oxidation, reduction, hydrolysis, conjugation and Elimination, absorption enhancement / solubility factor/ bioavailability; Pharmacodynamics; Assay systems and models (e.g., Knock-out Mice); Inter species scaling.

## UNIT II

  
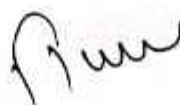

Dr. Shankar B. Badgujar

56

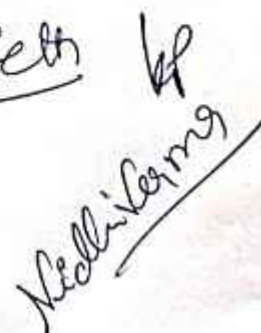

Drug discovery: Need for developing new drugs; Substances derived from bacteria, plants, insects, and animals; Sources of active principles; Combinatorial Synthesis: Chemistry, Biology, and Biotechnology.

### UNIT III

Drug designing: Procedure followed in drug design; Molecular modification of lead compounds and proteins; Prodrug and soft drugs; Physico-chemical parameters in drug design; QSAR; Active site determination of enzymes; Design of enzyme inhibitors; Protein molecular modeling by computer; Docking studies; Structure based drug designing using software.

### UNIT IV

Pharmaceutical products: Microbial products - Antibiotics (penicillin, streptomycin, tetracycline), vitamins, probiotics. Plant secondary metabolites -alkaloids, flavanoids, steroids, terpenoids. Animal vaccines. Clinical trials.

### TEXT BOOKS

1. Daan Crommelin, Robert D Sindelar, "Pharmaceutical Biotechnology", Tailor and Francis Publications, New York, 2002.
2. Remington's Pharmaceutical sciences, 18th edition, Mack publishing & Co., Easton, PA (20th Ed, 2000).

### REFERENCE

1. Heinrich Klefenz, "Industrial Pharmaceutical Biotechnology", WILEY-VCH Publication, Germany, 2002.
2. Jay P Rho, Stan G Louie, "Hand book of Pharmaceutical Biotechnology", Pharmaceutical products press, New York, 2003.
3. Lachman L Lieberman, HA, Kanig, J, "Theory and practice of industrial pharmacy", 3rd edition, Varghese publishing & Co, New Delhi, 1986.

Course Code: BBI107A

Course Name: Pharmaceutical Chemistry Lab

1. Identification of food pathogen
2. Isolation of pathogen from patient
3. Haemolytic testing of bacteria
4. Differential test of Staphylococci through growth on agar plates (Mannitol agar, DNA agar plate and Coagulase test method).

Department Elective- 5A

  
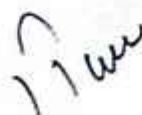

Dr. Shankar B. Badgaj

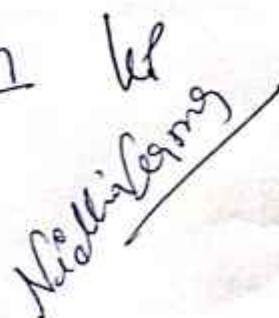

57

Course Code: BBI108A

Course Name: Bioprocess Engineering

Lectures: 4 Hrs/week

### Course Outcomes

CO-1 Students will discuss fermenter design and its types and kinetics involved in the fermentation processes to manipulate for improvement.

CO-2 Students will illustrate the application of bioprocess engineering for development of improvised products.

CO-3 Students will be able to transmit complex technical information related to bioprocess engineering in a clear and concise manner in writing to in a simple language for better understanding.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3		1	1			
CO2	2	2	2	1	1	2	2
CO3	1	3				1	

1-Low, 2-Medium, 3-High

### UNIT I

Types and design of bioreactor: Fermenter structure - Construction material, Basic components - Agitator, aerator, valves and steam traps, seals, stirrer glands. Measurement and control of parameters (on-line and off line sensors) - temperature, flow rate, pressure, pH, DO, gas analysis, computer control pathways. Fermenters - Air-lift, stirred tank, tower, fluidized bed, packed bed, pulsed, photo bioreactors

### UNIT II

Process kinetics: Kinetics - batch, fed-batch and continuous process; Sterilization methods - batch sterilization, continuous sterilization of medium and air. Solid state and submerged; aerobic and anaerobic fermentation. Inoculum development - Development of inocula for yeast, bacterial, mycelial and vegetative fungal processes. Immobilization - immobilization of cells and co-immobilization; Transport phenomena - Mass transfer, heat transfer, oxygen transfer.

### UNIT III

Downstream processing: Removal of microbial cells and solid matter, foam separation, precipitation, filtration, centrifugation, cell disruptions, liquid-liquid extraction, chromatography, membrane process, drying and crystallization. Quality analysis and product formulation -.

### UNIT IV

Application of transgenic plants for Stress tolerance: Herbicide resistance: phosphinothricin and glyphosate; Insect resistance: Bt genes and alpha amylase inhibitor. Disease resistance: chitinase

Dr. Shankant B. Deshpande

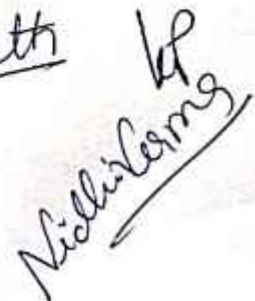

and 1,3-beta glucanase; Virus resistance: coat protein mediated, nucleocapsid gene; Nematode resistance; Abiotic stress: Drought, cold and salt;

### TEXT BOOKS

1. Fundamentals of Bioanalytical Techniques and Instrumentation, Ghosal and Srivastava, PHI Learning Pvt. Ltd., 2009.
2. Principles of Fermentation technology, Stanbury PF and Whitaker A. Pergamon Press, 1984.

Course Code: BBI109A

Course Name: Bioprocess Engineering Lab

1. Production of cheese
2. Production of wine
3. Mushroom cultivation
4. Colourant production

Department Elective- 6A

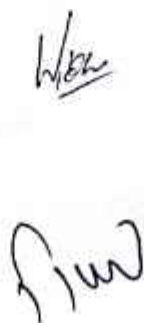

Course Code: BBI110A

  
Dr. Shankant B. Badgaj

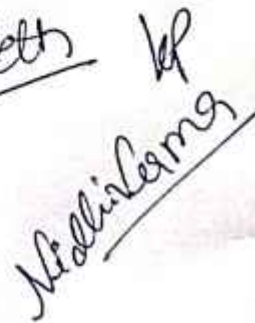

59

**Course Name: Enzyme technology and Biotransformation**  
**Lectures: 4 Hrs/week**

### Course Outcome

CO-1 Students will describe and discuss enzymes, mode of action, illustrate principles of catalysis, kinetics of enzymes and their regulation.

CO-2 Students will explain the methods of enzyme purification, immobilization of enzymes and discuss the use of enzymes in industry.

CO-3 Students will able to employ critical thinking and efficient problem solving skills how enzymes and their potential can be harnessed for development of enzymatic assays.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	1	2			
CO2	3	2		2		1	
CO3		1	3		1	2	1

1-Low, 2-Medium, 3-High

### Unit i

#### Introduction to enzymes

Classification of enzymes. Mechanisms of enzyme action; concept of active site and energetics of enzyme substrate complex formation; specificity of enzyme action; principles of catalysis – collision theory, transition state theory; role of entropy in catalysis.

### Unit ii

#### Kinetics of enzyme action

Kinetics of single substrate reactions; estimation of Michelis – Menten parameters, multisubstrate reactions- mechanisms and kinetics; turnover number; types of inhibition & models –substrate, product. Allosteric regulation of enzymes, Monod Changeux Wyman model, pH and temperature effect on enzymes & deactivation kinetics

### Unit iii

#### Enzyme Immobilization And Biosensors

Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, advantages and disadvantages, design of enzyme electrodes and their application as biosensors in industry, healthcare and environment.

### Unit iv

#### Purification And Characterization Of Enzymes From Natural Sources

Production and purification of crude enzyme extracts from plant, animal and microbial sources; methods of characterization of enzymes; development of enzymatic assays

  
Dr. Shankant B. Badgujar

## TEXT BOOKS

1. Trevor Palmer , Enzymes II ed Horwood Publishing Ltd
2. Faber K , Biotransformations in Organic Chemistry, IV edition , Springer

**Course Code: BBI111A**

**Course Name: Enzyme technology Lab**

1. Production of cheese
2. Production of wine
3. Mushroom cultivation
4. Colorant production
5. Identification of food pathogen

**Department Elective- 7A**

**Course Code: BBI112A**

**Course Name: Industrial Manufacturing**

**Lectures: 4 Hrs/week**

## Course Outcomes

CO-1 Students will discuss industrial structure how raw materials are collected, how R&D is done and quality is assured, certifications are done.

CO-2 Students will explain how process is designed and validation of the design is done.

CO-3 Students will able to employ critical thinking and efficient problem solving skills by studying cases.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2		2			
CO2	3		2		2	1	
CO3	2	1	3	2	1		1

1-Low, 2-Medium, 3-High

### Unit-I

  
Dr. Shantikant B. Badgekar

61

**Industrial Structure:** Administrative department, Raw material department – collection of raw material, types of raw material, problems in collection of raw material, preservatives used in raw material collections, R&D department, Quality control, Quality Assurance, Logistic, Supply chain management, Store & procurement department, Block diagram, Pictorial Representation.

## Unit-II

**Awareness of ISO system applicable for R&D department:** Awareness of ISO 13485:2016 and ISO 9001:2015, Different clauses – applicable for R&D system, planning, Design input (DIP), Design output (DOP), Method of analysis, Batch Manufacturing Record, Master Formula Record, Review, Risk analysis, Verification, Validation, Design Transfer, Design and Development File, Design closure. Studies of ISO certified company dealing with environment waste management in Rajasthan.

## Unit-III

**Case Study-I (Manufacturing of cord blood protein marker: AFP):** Alpha Feto Protein, Introduction, Biochemical properties, Functions, Applications, Laboratory setup for manufacturing of AFP, Raw material (RM), RM screening, DIP and DOP of AFP, Applicable method of manufacturing process, Yield profile

## Unit-IV

**Case Study-II (Manufacturing of Serum/Plasma protein: IgG-FC):** FC fragment of Human Immunoglobulin-G (IgG), Introduction, Biochemical properties, Functions, Applications, Laboratory setup for manufacturing of IgG and IgG-FC, Raw material (RM), RM screening, DIP and DOP of IgG-FC, Applicable method of manufacturing process, Yield profile.

**Course Code: BBI113A**

**Course Name: Industrial Manufacturing Lab**

1. Production of cheese
2. Production of wine
3. Mushroom cultivation
4. Colorant production
5. Identification of food pathogen

**Track B: Agricultural Biotechnology**

**Department Elective- 1B**

**Course Code: BBI114A**

**Course Name: Advances in Agriculture Biotechnology**

### Course outcome

- CO-1 Students will be able to understand the basics and important tools in agricultural biotechnology.
- CO-2 Students will be able to illustrate different gene transfer methods for plant.
- CO-3 Students will be able to explain different blotting techniques
- CO-4 Students will be able to describe different techniques used in agricultural biotechnology

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
-------	-----	-----	-----	-----	-----	-----	-----

  
Dr. Shantkant B. Bedekar

63

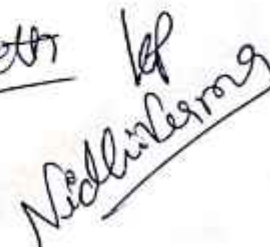

CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

### Unit 1

Introduction Definition, Classical vs modern biotechnology, Basic concepts and history of biotechnology, Different branches of biotechnology, Modern Biotechnology application in agriculture, Tools of Genetic Engineering: Cloning vehicles, Restriction enzymes, Modifying enzymes, DNA ligase, Polymerase etc. Cloning Vectors: Plasmids, Lambda phage, Phagemids, Cosmids, Artificial chromosomes (BACs, YACs), Shuttle vectors, virus based vectors,

### Unit 2

Methods of gene transfer: Transformation, transduction, Particle gun, Electroporation, liposome mediated, microinjection, Agro-bacterium mediated gene transfer, Preparation and application of molecular probes: DNA probes, RNA probes, Radioactive labeling, Non-radioactive labeling, use of molecular probes, DNA fingerprinting, Analysis and expression of cloned gene in host cells: Expression vectors

### Unit 3

Restriction enzyme analysis, Southern blotting, Northern blotting, Western blotting, In-situ hybridization, Colony and plaque hybridization, Factors affecting expression of cloned genes, Reporter genes, Fusion proteins, Gene libraries - cDNA synthesis, Genomic DNA libraries, Amplification of gene libraries, Identifying the products of cDNA clones, Isolation, Sequencing and synthesis of gene

### Unit 4

Different methods of gene isolation, Techniques of DNA sequencing, Artificial DNA synthesis, Polymerase Chain reaction (PCR): Basic principles, modifications, applications, Modifying Genes: Site-directed mutagenesis, Insertion & Deletion Mutagenesis.

Course Code: BBII15A

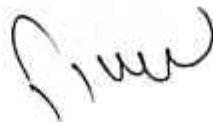

Course Name: Agriculture Biotechnology Lab

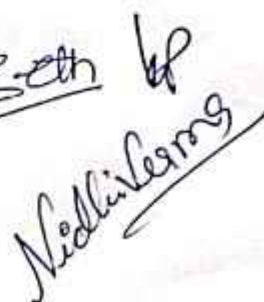

1. Isolation of DNA from Plant sample and bacteria
2. Isolation of RNA from plant sample
3. Restriction analysis of the plant DNA and bacterial DNA

  
Dr. Shankant B. Badgujar

4. Separation of DNA by Gel Electrophoresis methods
5. Application of Polymerase Chain reaction
6. Genetic transformation through Agro-bacterium

### Reference Books

1. Biotechnology Vol I and VII by Rehm HJ and Reed G 1997. Verlg Chemic Weinheim, USA.
2. Elements of Biotechnology by Gupta PK 1999. Rastogi Publi cation, Meerut, India.
3. Biotechnology by Singh BD. Kalyani publishers, New Delhi.
4. Introduction to Plant Biotechnology by H.S. Chawala, 2002, Oxford IBH

### Department Elective- 2B

Course Code: BBI116A

Course Name: Agriculture Microbiology

### Course outcome

- CO-1 Students will be able to understand the basics agricultural microbiology  
 CO-2 Students will be able to illustrate different type of metabolism in bacteria  
 CO-3 Students will be able to explain soil microflora useful for crops  
 CO-4 Students will be able to evaluate the uses of different types of biofertilizer

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

### Unit 1

History of Microbiology: Spontaneous generation theory, Role of microbes in fermentation, Germ theory of disease, Protection against infections, Applied areas of Microbiology

### Unit 2

Metabolism in bacteria: ATP generation, chemoautotrophy, photo autotrophy, respiration, fermentation. Bacteriophages: structure and properties of Bacterial viruses – Lytic and Lysogenic cycles: viroids, prions.

### Unit 3

65

  
Dr. Shankant B. Badgaj

Microbial groups in soil, microbial transformations of carbon, nitrogen, phosphorus and sulphur, Biological nitrogen fixation. Microflora of Rhizosphere and Phyllosphere microflora, microbes in composting. Microbiology of food: microbial spoilage and principles of food preservation.

#### Unit 4

Beneficial microorganisms in Agriculture: Biofertilizer (Bacterial Cyanobacterial and Fungal), microbial insecticides, Microbial agents for control of Plant diseases, Biodegradation, Biogas production, Biodegradable plastics, Plant – Microbe interactions.

**Course Code: BBI117A**

**Course Name: Agricultural Microbiology Lab**

- 1- Familiarization with instruments, materials, glassware etc. in a microbiology laboratory
- 2- Methods of Sterilization and Preparation of media
- 3- Plating methods for Isolation and Purification of bacteria
- 4- Morphological examination of bacteria by Simple and Differential staining
- 5- Different biochemical tests for identification of bacterial culture

#### Reference Books

1. Agricultural Microbiology. 1998. G. Rangaswani and D.J. Bagyaraj. Prentice Hall of India. , New Delhi.
2. An Introduction to Microbiology. 1996. P. Tauro, K.K. Kapoor and K.S. Yadav. Wiley Eastern Ltd. , New Delhi.
3. Microbiology, 1986. M. J. Pelczar, E.C.S. Chan and N.L. Krieg. Mc Graw Hill 5th Edition, New York, USA.
4. Soil microorganisms and plant growth. 1977. N. S. . Subbarao Oxford & IBH Publ. Co. , New Delhi.

**Department Elective- 3B**

**Course Code: BBI118A**

**Course Name: Molecular Plant Breeding**

#### Course outcome

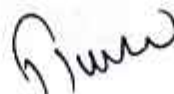

- CO-1 Students will be able to understand the basics of molecular plant breeding  
CO-2 Students will be able to illustrate different type of pollination in crops

  
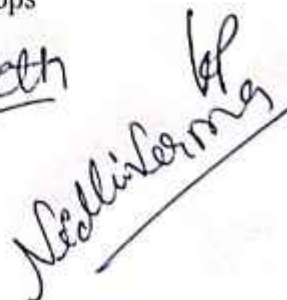

Dr. Shankar H. Dabguler

66

CO-3 Students will be able to explain Heterosis in crops  
 CO-4 Students will be able to evaluate different type of seed production

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

#### **Unit 1**

Historical milestones in plant breeding, Aims and objectives of plant breeding Significance of plant breeding in crop development.

#### **Unit 2**

Various methods of plant breeding in self- and cross-pollinated crops, acclimatization, selection, pure line theory, Reproductive systems of plants, Flora biology, flower parts, Self- and cross-pollinated crops. Genetic consequences and differences between self- and cross-pollinated crops

#### **Unit 3**

Clonal selection, population improvement program, Heterosis, Genetics and physiological basis. Male sterility Types of male sterility combining ability-general and specific, its exploitation. Interspecific/ Intergeneric hybridization, Heterosis inbreeding depression, Polyploidy its types

#### **Unit 4**

Mutation breeding Gene actions, heritability, genotype and environmental interactions, its importance in plant breeding, Introduction to seed production (Nucleus, breeder, foundation, certified), Maintenance of genetic purity during seed production, Molecular markers and their application

**Course Code: BBI119A**

**Course Name: Molecular Plant Breeding Lab**

- 1- Floral morphology of important crops
- 2- Emasculation-pollination techniques in self and cross pollinated crops
- 3- Pollen viability test through chemical tests
- 4- Hybridization study of male sterility and incompatibility in field

  
 Dr. Shankant B. Badgujar

67

**Reference books:**

5. Breeding Field Crops by Sleper and Poehlman 2007, Panima N. Delhi.

**Department Elective- 4B****Course Code: BBI120A****Course Name: Principles of Plant Physiology****Course outcome**

CO-1 Students will be able to understand the basics of different plant-water relations and nutrition

CO-2 Students will be able to discuss the Photosynthesis and their role in crop productivity

CO-3 Students will be able to explain different plant hormones

CO-4 Students will be able to evaluate different stress related resistant mechanism in plants

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

**Unit 1**

Definition, scope and introduction in agriculture, Osmosis, DPD, TP. Water absorption by plants; Ascent of sap. Transpiration-Mechanism, factors affecting it, Structure and function of stomata. Osmotic pressure, guttation. Plant Nutrition: Major and minor nutrients; their roles and deficiency symptom; Active and passive mineral uptake mechanisms.

**Unit 2**

Photosynthesis Structure and function of chloroplast; Light and dark reactions; Cyclic and non-cyclic electron transfer; C3, C4, Crassulacean acid metabolism and photorespiration.

  
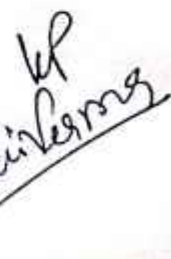

Dr. Shamkant B. Badgujar

68

### Unit 3

Respiration types; R.Q. Hormones: types and role in agriculture biotechnology. Growth phases, photoperiodism, and vernalization.

### Unit 4

Stress physiology (Drought, heat, frost and salinity); mechanism of resistance to above types. Physiological aspects and problems of cereals, pulses, oilseeds, cotton and sugarcane.

**Course Code: BBI121A**

**Course Name: Plant Physiology Lab**

- 1- Plasmolytic method of cell sap determination.
- 2- Effect of osmotic pressure on rate of imbibition
- 3- Determination of dry matter content in leaves, stem and roots
- 4- Determination of transpiration by photometric---and cobalt chloride paper method.
- 5- Study of deficiency symptoms of major and minor plant nutrients

### Reference Books:

1. A Text Book Plant Physiology by Verma V 1973 M.K publication house New Delhi
2. An Introduction to Plant Physiology of Field Crops by Shivraj A 1978 Oxford and I.B.H publishing Co-operative PVT Ltd , New Delhi
3. Plant Physiologists by Pande S.N and Sinha B.K 1978 Vikas publishing house New Delhi.
4. Practical Plant Physiology by Amar Singh 1982 Kalyani publisher New Delhi
5. Useful techniques for plant scientist by Dhopte A.N and Levra N 1989 Publication of forum of plant physiologist Akola
6. Plant Physiology by Salisbury F and C. Ross 1990, Prentice Hall of India New Del hi

**Department Elective- 5B**

**Course Code: BBI122A**

**Course Name: Biotechnology for Biotic and Abiotic Stress Tolerance**

### Course outcome

- CO-1 Students will be able to understand the different types of biotic and abiotic stress in plants  
CO-2 Students will be able to discuss the different types of proteins in plant stress response  
CO-3 Students will be able to explain different biotic stresses in plants  
CO-4 Students will be able to evaluate different abiotic stresses in plants

  
Dr. Shamkant B. Badgujar

69

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

#### **Unit 1**

Prospects & Perspective of Biotic & abiotic stress resistant plants, Genetics of host-pathogen interactions, Mechanism of plant resistance. Role of jasmonates and salicylic acid in systematic resistance induction on wounding.

#### **Unit 2**

Insect pest resistance – Structural/morphological changes; Protease and amylase inhibitors; polyphenol oxidases; peroxidases; lectins; chitinase; seed proteins; their limitations and significance in multi-gene pyramiding. Vertical and Horizontal resistance to pathogens, Hypersensitive host response (HRGP) and apoptosis in relation to plant defense.

#### **Unit 3**

Virulence- Avirulence in host-pathogens interaction. Race specific Resistance Gene Analogues (RGAs). Pathogenesis related proteins – groups with examples (Glucanases; chitinases; osmotin, chitin binding proteins; thaumatin like proteins; micro peptidal defensins; phytoalexins) and their role. Role of Phenylalanine ammonia lyase, callose synthases, detoxification for pathogen resistance.

#### **Unit 4**

Biochemical basis of abiotic stresses namely osmotic (drought, salinity), temperature, heavy metals, air and water pollutants, synthesis and functions of proline and glycine betaine in stress tolerance interaction between biotic and abiotic stresses; stress adaptation. Reactive oxygen species and biotic and abiotic stress, antioxidants, enzymes defense system. Role of calcium, nitric oxide and salicylic acid in plant development. Molecular strategies for imparting tolerance against biotic and abiotic stress.

Course Code: BBI123A

Course Name: Plant Stress Lab

1. Measurement of Relative Water Content (RWC) in plant tissues.

  
Dr. Shankant B. Badgujar

70 

2. Measurement of water potential by tissue volume/weight method.
3. Estimation of chlorophyll content in plant tissues.
4. Determination of osmotic potential by vapour pressure and freezing point depression.
5. Separation of photosynthetic pigments by chemical method.
6. Measurement of stomata density, stomata index and perimeter of stomata in different leaves.
7. Effect of osmotic concentration and temperature on imbibition and germination of seed.

#### Department Elective- 6B

Course Code: BBI124A

Course Name: Biodiversity Conservation

#### Course outcome

- CO-1 Students will be able to understand the basics of diversity and their importance for crops  
 CO-2 Students will be able to discuss the different types of Biodiversity centres of origin  
 CO-3 Students will be able to explain different factors for extinction of biodiversity  
 CO-4 Students will be able to evaluate various biodiversity conservation method

#### Mapping of PO/CO

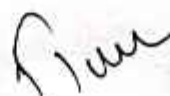

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2

  
 Dr. Shankant D. Dedguler

71

CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

### Unit 1

Definition, Historical and geographical causes of diversity, Types of diversity- Genetic, Species and population diversity. Distribution of diversity in life forms.

### Unit 2

Ecological diversity and stability. Biodiversity and centers of origins of plant. Hot spots in India. Principles of conservation biology. Biosphere concept, Genetical and evolutionary principles of conservation. Collection Maintenance and conservation of biodiversity.

### Unit 3

Assessing and documenting of vulnerability and extinction of biodiversity; red list categories as per IUCN (International Union for the Conservation of Nature and Natural resources): Extinct, Extinct in the wild, Critically Endangered, Endangered, Vulnerable, Lower risk, Data deficient and Non Evaluated.

### Unit 4

Bio- village concept: in situ and ex situ conservation. Community level Gene banks, Utilization of biodiversity. Global biodiversity system. Intellectual Property Rights and legal concerns of Bio-resources. Biodiversity and human welfare

**Course Code: BBI125A**

**Course Name: Biodiversity Conservation Lab**

1. Collection of ITK (Flora) Study of species composition in surrounding areas
2. Morphological description of plant parts
3. Collection of seeds of rare species of forest and medicinal plants
4. List of important medicinal plants used in healthcare

### Reference Books:

1. Biodiversity Utilization and conservation by Arunachalam, 2008, Avishkar, Jaipur
2. Biodiversity conservation and legal aspects by Kandya, 2007, Avishkar, Jaipur
3. Biodiversity conservation by Kumar M.S. 2008
4. Biodiversity conservation and systematics by P. Singh, 2007

  
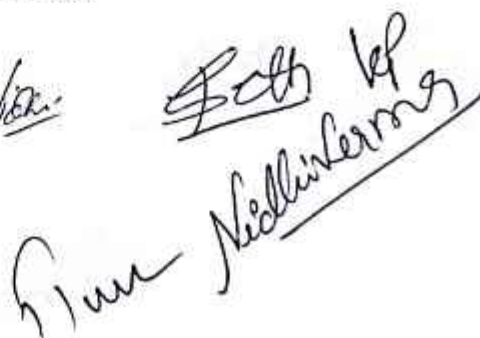

Dr. Shankar B. Badgujar

72

Department Elective- 7B

Course Code: BBI126A

Course Name: Techniques in Biochemistry and Molecular Biology

Course outcome

CO-1 Students will be able to understand the need for molecular techniques for research in biotechnology

CO-2 Students will be able to discuss the different centrifugation and chromatographic techniques

CO-3 Students will be able to explain the electrophoresis and blotting techniques

CO-4 Students will be able to evaluate various molecular biology techniques

Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

**Unit 1**

General principles of biochemical investigations. Units in biochemistry and molecular biology. Principle methods of separation of biomolecules.

**Unit 2**

Centrifugation techniques – Basic principles, analytical and preparative centrifugation, their applications. Spectrophotometry: UV-visible spectrophotometer, fluorimetry. Chromatographic techniques – Basic principles, types adsorption, partition, ion exchange, molecular sieve, affinity, GLC and HPLC and mass spectrometry, flow cytometry and its application in DNA estimation.

**Unit 3**

Electrophoresis: theory and different types – PAGE, SDS-PAGE, capillary electrophoresis, and IEF. Radioisotope techniques: Nature, detection and measurement of radioactivity. Molecular biology techniques – Southern hybridization, northern hybridization, western blotting, microarray technology, complementation techniques.

Dr. Shambhant B. Badgajer

#### Unit 4

Polymerase chain reaction (PCR); radioactive/ nonradioactive labeling, RFLP, AFLP, RAPD; RT-PCR and DNA sequencing.

Course Code: BBI127A

Course Name: Molecular Biology Lab

11. Extraction of DNA from seeds of cereal, legume and oilseed plant material
2. Concentration of the proteins using ammonium sulfate precipitation, dry sephadex, dialysis, ultra filtration, and organic polymers.
3. Separation of the proteins by native – and SDS - PAGE
4. Separation and identification of amino acids by paper chromatography.
5. Restriction digestion of DNA.
6. Agarose gel electrophoresis of DNA

#### Reference Books:

1. Techniques in Molecular Biology by Walker J.M. and W. Gastra. 1983. Croom Helm, London.
  2. A biologist's Guide to Principles and Techniques of Practical Biochemistry by Wilson K. and K.H. Goulding. 1992. 3<sup>rd</sup> edition, Cambridge University Press, Cambridge.
  3. Standard methods of biochemical analysis. 1999. By Thimmaiah, S. R. Kalyani Publishers, Ludhiana
  4. Methods in plant biochemistry and molecular biology. 1997. By Dashek, W. V. CRC Press, Boca Raton, New York
  5. Practical biochemistry – Principles and Techniques 2005. By Wilson, K. and Walker, J. Cambridge University Press, UK.
  6. Rob Reed, David Holmes, Jonathan., Practical Skills in Biomolecular Sciences., Weyers and Allan Jones. Addison Wesley Longman Ltd. 1998.
  7. Williams and Fleming, 1980. Spectroscopic Methods in Organic Chemistry
- Track C: Environmental Biotechnology

Department Elective- 1C

Course Code: BBI128A

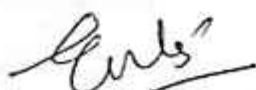

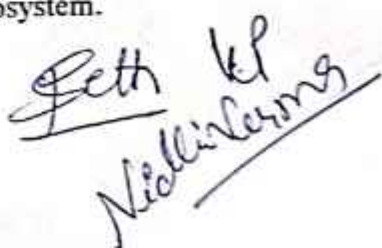

Course Name: Environmental Biology

#### Course Outcomes:

CO-1 Students will be able to understand ecology and ecosystem.

  
Dr. Shamkant B. Badgajkar

74

CO-2 Students will be able to describe and compare different Ecological pyramids and biogeochemical cycles.

CO-3 Students will be able to explain and distinguish different population ecology and population interactions- Mutualism, Parasitism

CO-4 Students will be able to acquire skills to analyze major earth ecosystem and ecological model.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	2
CO2	3	3	3	2	1	2	1
CO3	3	3	3	2	1	2	2
CO4	3	3	3	2	2	2	2

1 - LOW , 2- MEDIUM , 3-HIGH

### **Unit-i**

Definition, principles and scope of ecology, human ecology and human settlements, evolution, origin of life and specification, Ecosystem stability-cybernetics and ecosystem regulation, evolution of biosphere.

### **Unit - ii**

Ecosystem structure and functions, abiotic and biotic component, Energy flow, food chain, food web, Ecological Pyramids-types, biogeochemical cycles, ecological succession, Ecads and ecotypes.

### **Unit - iii**

Population ecology- density, natality, mortality, survivorship curves, age distribution, growth curves and models, r & k selection, population interactions- Mutualism, Parasitism, Predator-Prey relations, System Theory and Ecological Model.

### **Unit - iv**

Earth's major ecosystem - terrestrial and aquatic ecosystem, soil microorganism and their functions, coastal management with respect to Indian conditions, criteria employed for disposal of pollutants in marine ecosystem, coastal water system and man-made reservoirs, biology and ecology of reservoirs.

  
Dr. Sharmant B. Badgujar

75

**Course Code: BBI129A**

**Course Name: Environmental Biology Lab**

1. Study of all the biotic and abiotic components of any simple ecosystem- natural pond or terrestrial ecosystem or human modified ecosystem.
2. Determination of population density in a terrestrial community or hypothetical community by quad rate method and calculation of the Simpson's and Shannon- Weiner diversity index for the same community.
3. Principle of GPS (Global Positioning System).

**Reference Books**

1. Basic ecology - E. P. Odum
2. Ecology and field biology - R.L. Smith
3. Ecology - P.D. Sharma
4. Fundamentals of ecology -E.P. Odum
5. Principles of ecology – Rickleff

**Department Elective- 2C**

**Course Code: BBI130A**

**Course Name: Solid Waste Management**

**Course outcome**

CO-1 Students will be able to understand solid waste and its management methods.

CO-2 Students will be able to describe hazardous waste and its treatment.

CO-3 Students will be able to explain and distinguish different handling rules amendments for hazardous waste management.

CO-4 Students will be able to acquire skills to analyze treatment of various effluents.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	1	2	2
CO2	3	3	3	2	2	2	1
CO3	3	3	3	2	1	2	2
CO4	3	3	3	2	2	2	1

1 – LOW, 2- MEDIUM, 3-HIGH

  
Dr. Shemkant B. Badgujar

76

### Unit-1

Sources, generation, classification & composition of solid wastes. Solid waste management methods - Sanitary land filling, Recycling, Composting, Vermi composting, Incineration, energy recovery from organic waste.

### Unit - 2

Solid Waste Management Plan, Waste minimization technologies, Hazardous Waste Management, Sources & Classification, physicochemical properties, Hazardous Waste Control & Treatment.

### Unit - 3

Hospital Waste Management, Hazardous Waste Management & Handling rules, 1989 & 2000 (amendments), Microbiological management of hazardous waste and waste lands management in Jaipur.

### Unit- 4

Disaster Management, Fly ash generation & utilization, Primary, secondary & tertiary & advance treatment of various effluents.

#### References:

1. Solid Waste Management CPCB, New Delhi.
2. Ecotechnology for pollution control & environmental management - By R.K. Trivedi & Arvind Kr.
3. Basic Environmental Technology - J.A. Nathanson

Course Code: BB131A

Course Name: Solid Waste management Lab

- 1- To study the legal aspects of solid waste disposal
- 2- To study various techniques to minimization of paint waste
- 3- To study the solid waste management in dumping ground

Department Elective- 3C

Course Code: BBI32A

Course Name: Environmental Pollution

#### Course outcome

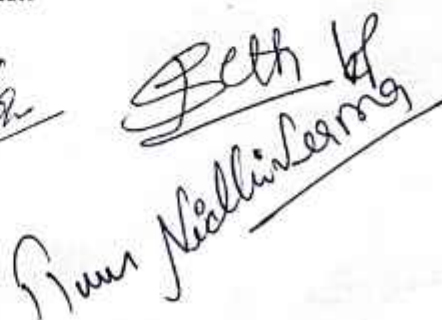

- CO-1 Students will be able to understand pollution, its sources and treatment.  
CO-2 Students will be able to describe hazardous waste and its treatment.  
CO-3 Students will be able to explain and distinguish

  
Dr. Shankar B. Badgujar

77

CO-4 Students will be able to acquire skills to analyze quality of air, water and soil treatment of various effluents.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	1	2	2
CO2	3	3	3	2	2	2	1
CO3	3	3	3	2	1	2	2
CO4	3	3	3	2	2	2	1

1 – LOW , 2- MEDIUM , 3-HIGH

**Unit - i**

Air pollution- natural and anthropogenic sources of pollution, primary and secondary pollutants, transport and diffusion of pollutants, gas laws governing the behaviour of pollutants in the atmosphere, Methods of monitoring and control of air pollution, SO<sub>2</sub>, NO<sub>2</sub>, CO, SPM.

**Unit - ii**

Water pollution - types sources and consequences of water pollution, physico-chemical and bacteriological sampling, Analysis of water quality, standards, sewage and wastewater treatment and recycling, water quality and standards.

**Unit - iii**

Soil pollution chemical and bacteriological sampling as analysis of soil quality, soil pollution control, industrial waste effluents and heavy metals and their interactions with soil components.

**Unit - iv**

Noise pollution - sources of noise pollution, measurement and indices. Marine pollution, sources of marine pollution and its control. Effects of pollutants on human beings, plants, animals and climate. Air quality standards and air pollution.

**Course Code: BBI133A**

**Course Name: Environmental Pollution Lab**

1. To determine Water holding capacity
2. To determine moisture content
3. Study the soil and their texture by sieve method.
4. To determine the pH of soil and water.
5. To estimate chloride in soil and water.

**References**

  
Dr. Shantant B. Badgojar

1. Air pollution and control - K.V.S.G. Murlikrishan
2. Industrial noise control - Bell & Bell
3. Environmental engineering -Peary
4. Introduction to environmental engineering and science - Gilbert Masters.

Department Elective- 4C

Course Code: BBI134A

Course Name: Environmental Microbiology

Course outcome

CO-1 Students will be able to understand microorganism and their sampling, culture and cultivation.

CO-2 Students will be able to describe genetically modified organism.

CO-3 Students will be able to explain and distinguish aerobic and anaerobic fermentation and different microbial bioreactors.

CO-4 Students will be able to acquire skills to analyze environmental problems & environmental monitoring through microorganism.

Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	1	2	2
CO2	3	3	3	2	1	2	1
CO3	3	3	3	2	2	2	2
CO4	3	3	3	1	2	2	1

1 – LOW , 2- MEDIUM , 3-HIGH

**Unit - 1**

Microbiology- organisms in nature & their importance, sampling, culture & cultivation of microorganisms, microbes in service of nature & mankind, batch culture & continuous culture of microbes for commercial use.

**Unit - 2**

Microbial Reactors, genetically modified microbes & their uses in Environmental management recycling & up gradation technologies, Production of products, energy from waste.

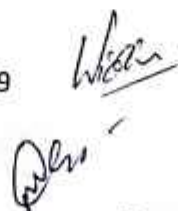

**Unit - 3**

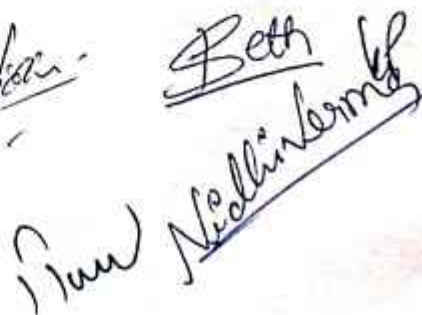

Biogas technology, plant design, construction, operation, biogas from organic wastes, water weeds, landfills, microbiology of anaerobic fermentation.

Dr. Shamkant B. Badgujar

#### Unit- 4

Biotransformation, bioconversion, bioremediation, phytoremediation technology, fermentation technology, development of stress tolerant plants, Environmental problems & Environmental monitoring through microorganism, microbiology of water, air and soil, microbes as pathological agent in plant, animal and man.

**Course Code: BBI135A**

**Course Name: Environmental Microbiology Lab**

1. To study the different bioreactors.
2. To study between aerobic and anaerobic fermentation.
3. To prepare potato dextrose media
4. Identification of soil microorganisms through microscope and staining

#### References:

1. Principles of microbiology - Pelzar
2. Microbial bio technology - A.N.
3. Glazer Microbial ecology - R.M.
4. Atlas Molecular biology - H.D. Kumar
5. Environmental bio Technology - Sayler & Fox

**Department Elective- 5C**

**Course Code: BBI136A**

**Course Name: Biodiversity**

#### Course outcome

CO-1 Students will be able to understand the term biodiversity and different flora and fauna in India.

CO-2 Students will be able to describe strategies for Biodiversity Conservation.

CO-3 Students will be able to explain and distinguish gene banks, tissue culture and artificial seed technology.

CO-4 Students will be able to acquire skills to analyze international convention and protocols for Biodiversity Conservation.

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	2	2	2
CO2	3	3	3	2	1	2	1
CO3	3	3	3	2	2	2	2

  
Dr. Shankant B. Badgujar

80

CO4	3	3	3	1	1	2	2
-----	---	---	---	---	---	---	---

1 - LOW, 2- MEDIUM, 3-HIGH

### Unit - I

Biodiversity - definition, hot spots of Biodiversity, strategies for Biodiversity Conservation, National Parks, Sanctuaries and Biosphere reserves, gene pool with respect to Rajasthan.

### Unit - 2

Aquatic common flora and fauna in India - phytoplankton, zooplankton and macrophytes, terrestrial common flora and fauna in India - forests, endangered and threatened species.

### Unit - 3

Strategies for Biodiversity Conservation, cryopreservation, gene banks, tissue culture and artificial seed technology, new seed development policy 1988, conservation of medicinal plants.

### Unit- 4

International conventions, treaties and protocols for Biodiversity Conservation, Biodiversity in the welfare of mankind, Species concept, Biological nomenclature theories of biological classification.

**Course Code: BBI137A**

**Course Name: Biodiversity Lab**

1. Study any five endangered/ threatened species- one from each class.
2. To study the effect of plant biodiversity on population and ecosystem process
3. To study different flora native to your region.
4. To study the ecosystem impacts on species adaptation

#### References:

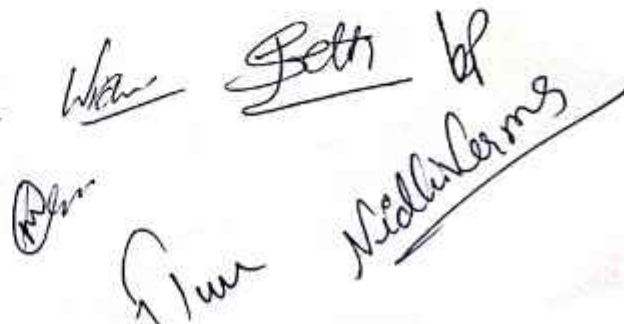

1. Global Biodiversity - W.R. L.IUCN
2. Ecology of natural resource - Ramade
3. Ecology - P.D. Sharma

**Department Elective- 6C**

  
Dr. Shankar B. Badgajar

81

Course Code: BBI138A

Course Name: Microbial and Industrial application

Course outcome

CO-1 Students will be able to understand microbial diversity and their classification.

CO-2 Students will be able to describe microbial growth and physiology.

CO-3 Students will be able to explain and distinguish host-Pathogen interactions and various microbial infections.

CO-4 Students will be able to acquire skills to analyze role of microorganisms in natural system and artificial system and protocols for Biodiversity Conservation.

Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	1	2	2
CO2	3	3	3	2	2	2	2
CO3	3	3	3	1	2	2	2
CO4	3	3	3	1	1	2	2

1 – LOW , 2- MEDIUM , 3-HIGH

**Unit I**

Microbial Diversity & Systematics Classical and modern methods and concepts; Domain and Kingdom concepts in classification of microorganisms; Criteria for classification; Classification of Bacteria according to Bergey's manual.

**Unit II**

Microbial Growth & Physiology Ultrastructure of Archaea (Methanococcus); Eubacteria (E.coli); Unicellular Eukaryotes (Yeast) and viruses (Bacterial, Plant, Animal and Tumor viruses); Microbial growth: Batch, fed-batch, continuous kinetics, synchronous growth, yield constants, methods of growth estimation, stringent response, death of a bacterial cell.

**Unit III**

Microbial Interactions and Infection Host-Pathogen interactions; Microbes infecting humans, veterinary animals and plants; Pathogenicity islands and their role in bacterial virulence Microbes and Environment Role of microorganisms in natural system and artificial system; Influence of Microbes on the Earth's Environment and Inhabitants.

**Unit IV**

Dr. Shambhant B. Badgaj

Industrial Applications Basic principles in bioprocess technology; Media Formulation; Sterilization; Thermal death kinetics; Batch and continuous sterilization systems; Primary and secondary metabolites; Extracellular enzymes; Biotechnologically important intracellular products; exopolymers.

**Course Code: BBI139A**

**Course Name: Industrial Microbial Lab**

1. Isolation of microbes from soil.
2. Isolation of microbes from water sample.
3. Serial dilution.
4. Gram staining.
5. To study fed batch culture and Continuous culture.

#### **References**

**Department Elective- 7C**

**Course Code: BBI140A**

**Course Name: Bioremediation**

#### **Course outcome**

CO-1 Students will be able to explain bioremediation and its types- in situ and ex situ.

CO-2 Students will be able to describe hazardous waste and its management.

CO-3 Students will be able to distinguish and explain phytoremediation and bioremediation and their techniques.

CO-4 Students will be able to acquire skills to analyze the techniques of bioremediation to remove the toxic elements from environment.

#### **Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	1	2	2
CO2	3	3	3	2	2	2	2
CO3	3	3	3	2	1	2	2
CO4	3	3	3	1	1	2	2

1 - LOW, 2- MEDIUM, 3-HIGH

  
Dr. Shambant B. Redgular

### Unit I

Bioremediation- I Introduction, constraints and priorities of Bioremediation, Biostimulation of Naturally occurring microbial activities, Bioaugmentation, in situ, ex situ, intrinsic & engineered bioremediation

### Unit II

Bioremediation – II Solid phase bioremediation - land farming, prepared beds, soil piles, Phytoremediation. Composting, Bioventing & Biosparging; Liquid phase bioremediation - suspended bioreactors, fixed biofilm reactors.

### Unit III

Hazardous Waste Management biotechnology application to hazardous waste management - examples of biotechnological applications to hazardous waste management- cyanide detoxification, detoxification of oxalate, urea etc., toxic organics, phenols. Case studies with respect to different Industries of Rajasthan.

### Unit IV

Concept of bioremediation (in-situ & ex-situ), Bioremediation of toxic metal ions biosorption and bioaccumulation principles. Concepts of phytoremediation. Microbial leaching of ore-direct and indirect mechanisms. Mining and metal. Use of microorganisms in augmentation of petroleum recovery. Biotechnology-with special reference to Copper and Iron.

**Course Code: BBI141A**

**Course Name: Bioremediation Lab**

1. Role of bacterial systems in decolourization of effluents.
2. Role of fungal systems in decolourization of effluents
3. Estimation of nitrates, carbonates and organic carbon in soil and water.
4. To determine Temporary Hardness.
5. To determine permanent hardness.

#### Track D: Biostatistics

Department Elective- 1D

Course Code: BBI142A

Course Name: Descriptive Statistics, Probability and Distributions

#### Course outcome

CO-1 Students will be able to exposed to concepts of statistical methods and statistical inference that would help them in understanding the importance of statistics

CO-2 Students will be able to describe and understand the concepts involved in data presentation, analysis and interpretation.

CO-3 Students will get the exposure to presentation of data, probability distributions, parameter estimation and test of significance, regression and multivariate analytical techniques

CO-4 Student will able to acquire skills to analyze the critical problems related to statistics, hands on experience in the analysis of their research data.

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	2
CO4	3	2	3	2	3	1	1

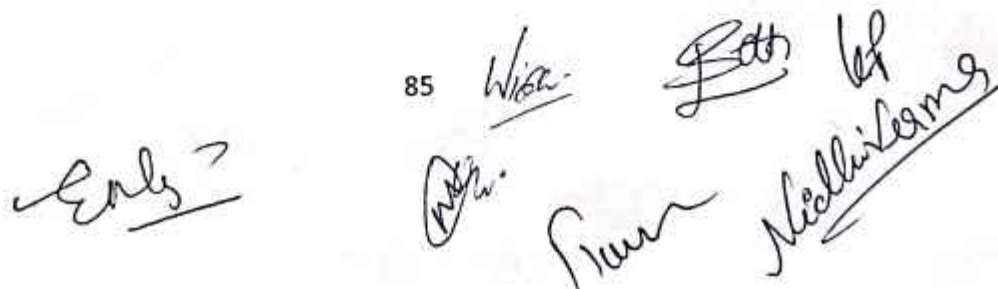

1-LOW, 2-MEDIUM, 3-HIGH

#### Unit 1

Elementary concepts in Statistics: Concepts of statistical population and sample from a population; qualitative and quantitative data; nominal, ordinal, ratio, interval data; cross sectional and time series data; discrete and continuous data.

  
Dr. Shankant B. Badgujar

85

Collection and scrutiny of data: Primary data; designing a questionnaire and a schedule; secondary data and sources of secondary data.

## Unit 2

Probability: Random Experiment; sample point; sample space; events; mutually exclusive and exhaustive events; frequency and classical definitions of probability. Axiomatic definition of probability; addition and multiplication theorems; conditional probability and independence; Bayes' theorem. Discrete and continuous random variables.

## Unit 3

Standard Univariate Distributions: Standard univariate discrete and continuous distributions- uniform; binomial; Poisson; geometric; negative binomial and hyper-geometric distributions. Uniform; exponential; normal; Laplace, gamma, beta, lognormal, logistic and Weibull distributions.(elementary properties and applications only)

## Unit 4

Sampling Distributions, Law of large numbers and Central Limit Theorem: Concepts of random sample and statistic; distribution of sample mean from a normal population; chi-square distribution; F and t statistics, distributions (no derivations) and their applications. Chi-square test.

Course Code: BBI143A

Course Name: Basics Biostatistics Lab

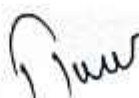

1- Introduction to graphical presentation data

  
Dr. Shankar B. Badgujar

86

- 2- Computations of Mean, Media and Mode.
- 3- Computation of Geometric Mean and Harmonic Mean
- 4- Computation of Mean Deviation.
- 5- Computation of Quartile deviation.
- 6- Computation of Variance.
- 7- Computation of Coefficient of Variation
- 8- To check the symmetry of the distribution by coefficient of Skewness.
- 9- To check the Shape of the distribution by coefficient of Kurtosis.

Department Elective- 2D

Course Code: BBI145A

Course Name: COMPUTER PROGRAMMING IN C++ AND SAS

#### Course Outcomes

CO1: Demonstrate the use of algorithms and flowcharts to plan the solution of a computing problem.

CO2: Describe the object-oriented programming approach in connection with C++

CO3: Apply the concepts of object-oriented programming

CO4: Use different data structures and create / manipulate basic data files and developing applications for real world problems.

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	2
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

#### Unit 1:

Fundamentals of Computer Programming.

#### Unit-2

  
Dr. Shambhant B. Badgekar

87

Operating Systems- Windows, Linux, Internet, algorithms, Flow charts, data types and variables, Operators, Input Output statements, Control statements:- if, if-else, nested if-else, goto and switch statements.

### Unit 3

Loops: for, while, do...while loops. Break, continue, exit ( ), Library functions. One dimensional, two-dimensional and multi-dimensional arrays.

### Unit 4

Functions, definition and declaration, Illustrative examples from statistics. Pointers and references.

Course Name: Computer Programming Lab

1. WAP to print Hello World in C++.
2. WAP to add two numbers.
3. WAP to check whether the number is even or odd.
4. WAP to find largest among three numbers.
5. WAP To find reverse of a number.
6. WAP to find entered number is palindrome or not.
7. WAP to find that entered year is leap year or not.
8. WAP to find sum of two matrices.
9. WAP to swap two numbers using functions.
10. WAP to find factorial of a number using functions

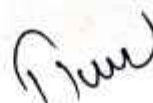

Department Elective- 3D

  
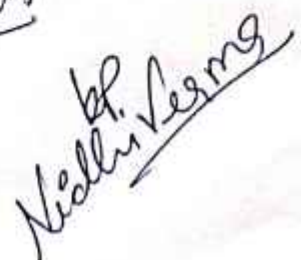

Dr. Shambhant R. Badgkar

88

Course Code: BBH147A

Course Name: STATISTICAL GENETICS AND ECOLOGY

**Course Outcomes**

CO1 Student will able to understand about the genetics

CO2: Student will able to correlate between genetics and statistics

CO3: Student will able to describe the ecology and evolution

CO4: Student will able to apply the concepts of genetics

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	0	2	0	0	1
CO2	3	3	3	2	1	0	1
CO3	3	2	1	2	3	0	1
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

**Unit 1**

Basic biological concepts in genetics, Mendel's law, Hardy Weinberg equilibrium, estimation of allele frequency (dominant/co-dominant cases), Approach to equilibrium for X-linked gene. The law of natural selection, mutation, genetic drift.

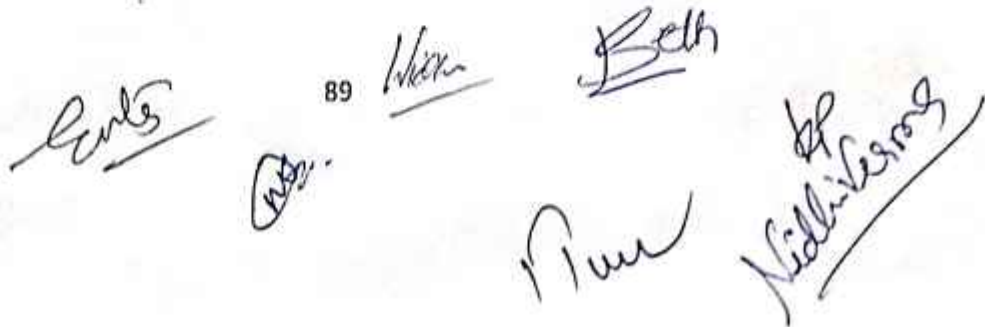

**Unit 2**

Non-random mating, inbreeding, phenotypic assortative mating. I, T, O matrices, identity by descent. Family data-estimation of segregation ratio under ascertainment bias, pedigree data : Elston - Stewart algorithm for calculation of likelihoods. Linkage, estimation of re-combination fraction, inheritance of quantitative traits.

**Unit 3**

Introduction to ecology and evolution, population dynamics: single species- Exponential, Logistic and Gompertz models, Leslie matrix model for age and stage Structured population, survivorship curves-Constant, monotone and bath tub shaped hazard rates.

  
Dr. Shankar D. Badgujar

## Unit 4

Two species: Lotka-Volterra equations, isoclines. Abundance estimation: Capture-recapture, Nearest Neighbor, line transect sampling, indirect methods. Ecological Diversity: Species abundance curve, indices of diversity (Simpson's index, Shannon-Wiener index). Game theory in ecology – Evolutionarily stable strategy, its properties, simple games such as Hawk-Dove game, Prisoner's dilemma, etc. Preservation of ecology and biodiversity.

### STATISTICAL GENETICAL LAB(BBI148A)

#### List of practical's

1. Introduction to Genetics, Probability, Mendelian genetics, chi-square and measurements
2. Cytogenetics and karyotyping, Chromosomal alterations and human disease
3. Mitosis and Meiosis, Sordaria recombination and genetic crosses
4. Monohybrid and dihybrid crosses in fruit fly (*Drosophila*)
5. Population genetics, Human blood type frequencies estimation
6. Simulating population genetic processes, Genetic drift, mutation, gene flow, natural selection

### Department Elective- 4D

Course Code: BBI149A

Course Name: Linear Algebra, Regression Techniques and Bioassays

### Course Outcomes

- CO1. To understand the concept of Linear algebra.  
CO-2. To analyze the concept of correlation and Regression.  
CO-3 To calculate and apply estimation of Regression  
CO4: To understand the concept of Linear Model and non-parametric tests

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
-------	-----	-----	-----	-----	-----	-----	-----

CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

### Unit 1

Linear Algebra: Set operations, vectors and matrices, matrix operations, determinants, inverse of a square matrix; linear independence, rank of a matrix, generalized inverse and applications, linear equations, characteristic roots and vectors, quadratic forms and nature of definiteness.

### Unit 2

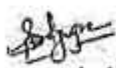

Analysis of Bivariate data: Scatter diagram, Principle of least squares; Karl Pearson's correlation coefficient; coefficient of determination; correlation ratio; rank correlation; partial and multiple correlations, Linear regression, Simple linear regression, multiple regression, fit of polynomials and use of orthogonal polynomials.

### Unit 3

Generalized linear models, analysis of binary and grouped data by using logistic models, large sample tests about parameters, goodness of fit, analysis of deviance, variable selection, introduction to Poisson regression, log-linear models, Random and mixed effect models, Nonparametric regression and generalized linear models.

### Unit 4

Bioassays: Types of biological assays, direct assays, ratio estimators, asymptotic distributions, regression approaches for estimating dose response relationships. Quantal responses, methods of estimation of parameters, dose allocation schemes, median dose, estimation of points on the quantal response function, Estimation of safe doses.

  
Dr. Shrikant B. Dadgar

2. Rossi R.J.(2010).Applied Biostatistics for Health Sciences, Wiley.

**Course Code: BBI150A****Course Name: Basics Algebra Lab**

1. Determinants - by row and column operations, by partitioning.
2. Inverses of a matrix - by row and column operations, by partitioning
3. Rank of a matrix
4. Solutions of matrix equations
5. Characteristic roots and vectors of a matrix.
6. Solve the problems of Linear Correlation and Regression.

**Department Elective- 5D****Course Code: BBI151A****Course Name: Controlled Clinical Trials and Operations Research****Course Outcome**

CO1 Student will able to understand about the medical practices and role of different regulatory bodies

CO2 Student will able to learn about the analysis and handling of data

CO3 Student will able to make the graphical presentation of statistical data

CO4 Student will able to acquire skills to analyze the critical problems related to statistics, hands on experience in the analysis of their research data

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	1	0	3	2

CO3	2	2	2	0	0	0	0
CO4	3	2	3	2	3	0	1

1-LOW, 2-MEDIUM, 3-HIGH

**Unit 1**

Introduction to clinical trials: the need and ethics of clinical trials, Drug Development Process, ICH GCP, Relevant FDA and EMEA guidelines (Industry, TA-,

  
Dr. Shankar B. Badgujar

92

phase-specific), data management, objectives and end points of clinical trials, bias and random errors in clinical studies, conduct of clinical trials, overview of phase I-IV trials, multi-center trials.

## Unit 2

Statistical Methods (Industry-, TA-, phase-specific), Defining objectives and end-points, Various study designs, Analysis data sets, Handling missing data, Handling multiplicity, Baseline and covariates, Sub-group analysis, Modeling treatment effects, Design of bio-equivalence trials, Understanding Protocol, Sample Size Determination, Inputs to Data Management Documents, Understanding Clinical Study Report, Randomization Methods, Statistical Analysis Plan, TLG Shells

## Unit 3

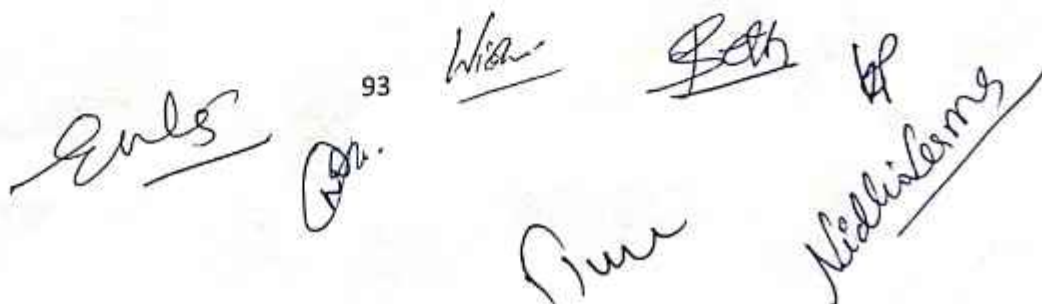

Analysis methods / models for continuous, categorical, binary, survival data, Repeated measures analysis, Quality of life data analysis, Interim analysis, Data Comprehension, Data Interpretation, Adaptive Trials, Meta Analysis.

## Unit 4

Introduction to Operations Research, linear programming problems (LPP), framing an LPP problem, graphical solution, feasible, basic feasible and optimal basic feasible solutions to an LPP, simplex method, dual of linear programming, transportation problems, assignment problems, simple numerical problems as illustration.

Course Code: BBI152A

Course Name: Clinical operations Lab

1. Mathematical formulation of L.P.P and solving the problem using graphical method,
2. Simplex technique and Charne's Big M method involving artificial variables.
3. Identifying Special cases by Graphical and Simplex method and interpretation
4. Degenerate solution
5. Unbounded solution
6. Alternate solution
7. Infeasible solution
8. Allocation problem using Assignment model.

Department Elective- 6D

Course Code: BBI153A

Course Name: Bioinformatics and Computational Biology

#### Course Outcomes

1. The student will be able to relate the biotechnology and informatics
2. The student will gain an understanding of bioinformatics databases, phylogenetic analysis and alignment
3. The student will able to distinguish different tools used in bioinformatics
4. Student will able to acquire skills to analyze the critical problems related bioinformatics

#### 5. Mapping of PO/CO

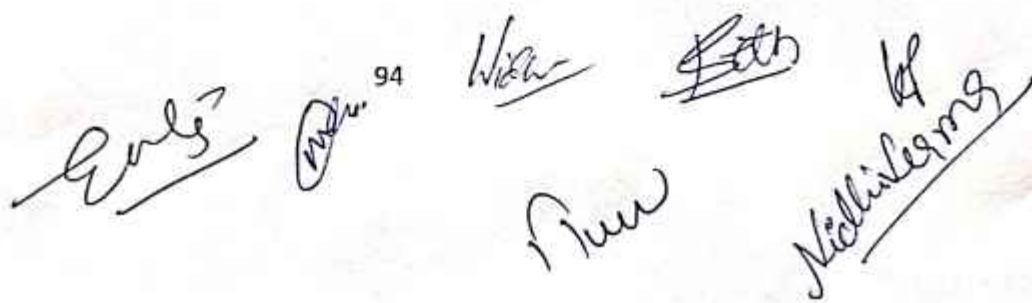

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	2	1	0	0	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	2	0	1
CO4	3	2	3	2	3	0	1

6. 1-LOW, 2-MEDIUM, 3-HIGH

#### Unit 1

Introduction to Bioinformatics: Bioinformatics Overview, Bioinformatics Concepts:- Functional Genomics, Comparative genomics, Structural biology, classification of protein structure, Medical information, Objectives of Bioinformatics.

  
Dr. Shambhat B. Badgujar

Applications, Challenges in Molecular biology, Careers in Bioinformatics, Major databases & tools, Bioinformatics in India.

## Unit 2

Genomics: Data Mining –ORF, Pubmed, Phylogenetic Analysis, MSA, Gen BANK, COG Cluster, OMIM, Gene Mapping, Sequence Assembly & Expression, Alignment of MS. Proteomics: Visualization & prediction of Protein Structure, Methods used in protein structure prediction, PROSITE, DNA Micro array (DNA chip).

## Unit 3

Tools in Bioinformatics: Web based Bioinformatics Applications, Desktop based softwares, Online Analysis Tools & Servers, PDB, SWISS-PROT, CATH, Annotation Systems-DAS, Homology Tools –BLAST, FASTA, Multiple Alignment-CLUSTALW, Molecular visualization software-Swisspdb viewer, Rasmol Gene Prediction Softwares- Genescan, Protein, Modelling software-SWISSMODEL.

## Unit 4

Computational Biology: Genetic Algorithms, HMMR, Dynamic Programming Algorithm. Local & Global Alignment Algorithm, Needleman- Wunsch Algorithm, Heuristic Algorithm like BLAST, FASTA-Multiple Segment Alignment Algorithm, Protein secondary structure prediction Algorithm.

Dr. Shankant B. Badgajkar

 95

 &  

1. To retrieve the sequence of the Human keratin protein from GenBank database and to interpret the results.
2. To retrieve the structure of a protein and viewing it in RASMOL viewer.
3. To find the similarity between sequences using BLAST
4. To find the similarity between sequences using FASTA
5. To align more than two sequences and find out the similarity between those sequences
6. To perform Sequence analysis

Department Elective- 7D

Course Code: BBI155A

Course Name: Design of Experiments and Quality Control

**Course Outcomes:**

CO-1: Student will able to understand the basic concept of ANOVA.

CO-2: Student will able to acquire the basic concepts of Experimental design and CRD

CO3: Student will able to differentiate between of RBD, LSD

CO4: Students will be able to distinguish SQC and control charts

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

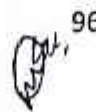

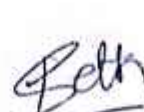

**Unit 1**

Introduction to design of experiments: estimable linear parametric functions and their estimation, Gauss-Markov Theorem (meaning and statement only), testing of linear hypotheses, Basic principles of experimental design, uniformity trials, analysis of variance, CRD, RBD, LSD (equal and unequal number of observations, missing observations).

**Unit 2**

Incomplete block designs, Balanced incomplete block designs (BIBD), group testing, PBIBD, hierarchical and nested designs. Split plot experiments, Analysis of Covariance.

  
Dr. Shamkant B. Badgujar

### Unit 3

General factorial experiments, factorial effects,  $2n$  and  $3n$  factorial experiments in randomized block, Yate's method, complete and partial confounding, simple problems

### Unit 4

Quality and related concepts, ISO Certification, six-sigma, Statistical process control, theory of control charts, Shewhart control charts for variables –  $\bar{x}$ , R, sigma charts, attribute control charts – p, np, c charts, modified control charts.

Course Code: BBI156A

Course Name: Experimental Design Lab

1. Computations with one way analysis
2. Computations with Two-way analysis
3. Computations with CRD
4. Computations with RBD
5. Computations with LSD
6. Computation of Variable Control Charts.
7. Computation for Mean and Range Control Charts.
8. Computation for p, np and c Control Charts.

Track E

Department Elective-1E

Course Code: BBI157A

Course Name: BASICS OF BIOINFORMATICS

  
Dr. Shamkant B. Badgujar

97

### Course Outcomes:

CO-1: Student will able to understand the basic concept of Bioinformatics.

CO-2: Student will able to acquire the basic concepts of biological databases and their file format.

CO3: Student will able to determine identity between the biological sequences by similarity alignments.

CO4: Students will be able to understand the gene expression of the organisms.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

### **Unit I**

What is Bioinformatics and its relation with molecular biology Examples of related tools (FASTA, BLAST, BLAT, RASMOL), databases (GENBANK, Pubmed, PDB) and software (RASMOL, Ligand Explorer), Data generation; Generation of large-scale molecular biology data. (Through Genome sequencing, Protein sequencing, Gel electrophoresis, NMR Spectroscopy, X-Ray Diffraction, and microarray). Applications of Bioinformatics.

### **Unit II**

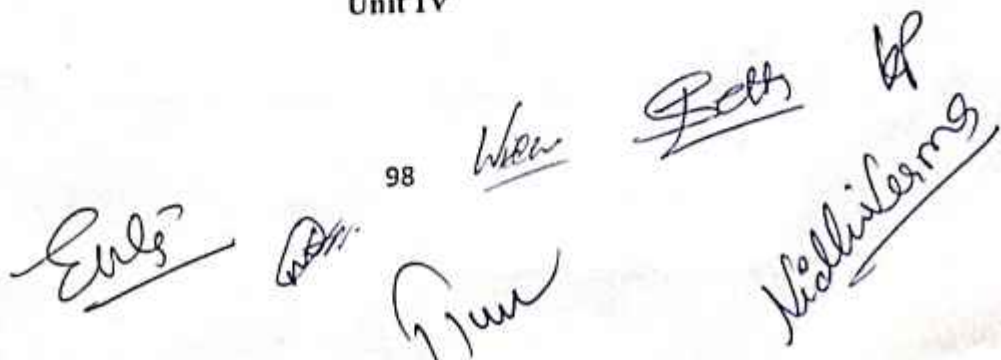

Biological Database and its Types, Introduction to data types and Source. Population and sample, Classification and Presentation of Data. Quality of data, private and public data sources. General Introduction of Biological Databases; Nucleic acid databases (NCBI, DDBJ, and EMBL). Protein databases (Primary, Composite, and Secondary). Specialized Genome databases: (SGD, TIGR, and ACeDB). Structure databases (CATH, SCOP, and PDBsum).

### **Unit III**

Data storage and retrieval and Interoperability, Flat files, relational, object-oriented databases and controlled vocabularies. File Format (Genbank, DDBJ, FASTA, PDB, SwissProt).

### **Unit IV**

  
Dr. Shambhant B. Dadojkar

Sequence Alignments and Visualization, Introduction to Sequences, alignments and Dynamic Programming, Local alignment and Global alignment (algorithm and example), Pairwise alignment (BLAST and FASTA Algorithm) and multiple sequence alignment (Clustal W algorithm). Methods for presenting large quantities of biological data: sequence viewers (Artemis, SeqVISTA), 3D structure viewers (Rasmol, SPDBv, Chime, Cn3D, PyMol), Anatomical visualization.

## Unit V

Gene Expression and Representation of patterns and relationship, General introduction to Gene expression in prokaryotes and eukaryotes, transcription factors binding sites. SNP, EST, STS. Introduction to Regular Expression, Hierarchies, and Graphical models (including Markov chain and Bayes notes). Genetic variability and connections to clinical data.

### References:

1. David W. Mount - Bioinformatics: Sequence and Genome Analysis, Cold Spring Harbor Laboratory, 2004.

**Course code: BBI158A**

**Course name: practical exercises on basics of bioinformatics**

1. To Characterize of a Known Gene.
2. To Find out open reading frames (ORF) through NCBI ORF finder.
3. To Identify a gene using BLAST program.
4. To Find the conserved Domains in Protein Sequences.
5. To find the sequence similarity between sequence by using nucleotide BLAST.
6. To find the sequence similarity between sequence by using protein BLAST.
7. To perform Sequence alignment through FASTA.
8. To perform multiple alignment with T-coffee.
9. To perform agarose gel electrophoresis.

**Department Elective -2E**

**Course Code: BBI159**

**Course Name: Structural Bioinformatics**

### Course Outcomes:

CO-1: Student will able to understand the basic concept of protein structures.

  
Dr. Shankant B. Badgojar

99

CO-2: Student will able to acquire the basic concepts of protein databases and their file format.  
 CO3: Student will able to determine homology between the biological sequences by similarity alignments.  
 CO4: Students will be able to understand the structural features of RNA of the organisms.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

### **Unit I**

Fundamentals of X-ray diffraction, NMR spectroscopy of macromolecules, Protein Structure: Primary, Secondary, Super Secondary, Domains, Tertiary, Quaternary, Ramachandran plot.

### **Unit II**

Protein secondary structure classification databases: HSSP, FSSP, CATH, SCOP, Protein secondary structure prediction methods: GOR, Chou-Fasman, PHD, PSI- PRED, J-Pred.

### **Unit III**

Protein Tertiary structure prediction methods: Homology Modeling, Fold Recognition, Ab- initio Method, Protein folding, Molecular Dynamics of Protein, Molecular Docking of Protein, Small molecule and Nucleotide, Concepts of Force Field

### **Unit IV**

Motif and Domain: Motif databases and analysis tools, Domain databases (CDD, SMART, ProDom) and Analysis tools. HMM (Hidden Markov Model): Introduction to HMM, its application in Sequence alignment and Structure prediction, HMM based Softwares (HMMER and HMMSTR)

### **Unit V**

  
 Dr. Shankant B. Badgajkar

 100

Structural features of RNA: Primary, Secondary, Tertiary. Introduction to RNA Secondary structure prediction, Methods for RNA Secondary structure prediction, Limitation of RNA Secondary structure prediction.

**References:**

1. David W. Mount - Bioinformatics: Sequence and Genome Analysis, Cold Spring Harbor Laboratory, 2004.

**Course code: BBI160A**

**Course name- Practical of structural bioinformatics**

1. To retrieve the protein sequences from NCBI database and to interpret the results.
2. To Study protein X-ray diffraction data by using Protein Structure Database.
3. To Find the conserved Domains in Protein Sequences.
4. To analyse the retrieve protein sequence for Ramachandran Plot by using PSVS.
5. To study structural features of RNA by using different RNA database and softwares.
6. To determine the motifs, present in your target proteins.
7. To perform homology alignment by using pdb-BLAST.
8. To analyse the secondary structural elements of the given target proteins.

**Department Elective-3E**

**Course Code: BBI161A**

**Course Name: Informatics in Omics and its application**

**Course Outcomes:**

CO-1: Student will able to understand the basic concept of genomics.

CO-2: Student will able to acquire the basic concepts of system biology and metagenomic.

CO3: Student will able to understand metabolic pathway database and drug designing.

CO4: Students will be able to understand the structural features of compound library.

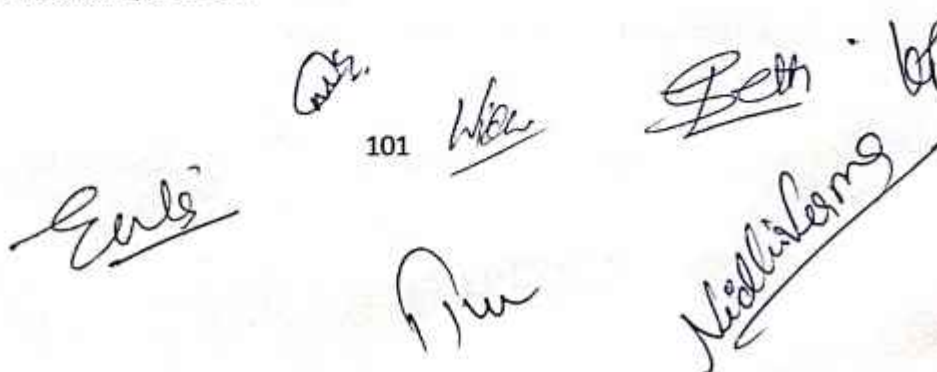

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

  
Dr. Shambhant B. Badgujar

101

### Unit I:

Genomics: Genome Annotation, Genome Assembly, Structural and Functional Genomics, Comparative Genomics, Microarray: technique, Design, Analysis, Drug target identification.

### Unit II

System biology: Introduction, Associated disciplines, Interactomics (PPI), Fluxomics, Biomics, Metagenomics: Introduction, metagenome, shotgun metagenomics (pyrosequencing). Tool's in metagenomics, MEGAN, MG- RAST, and SEED. Application: Gene survey, Environmental genomes, Microbial diversity.

### Unit III

Metabolic pathway database (KEGG pathway database), Concept of metabolome and metabolomics. Drug Discovery and design: Target identification, Target Validation, Lead Identification, lead optimization, preclinical Pharmacology & Taxology.

### Unit IV

Chemoinformatics: Cheminformatics tools for drug discovery. Chemical Structure Representation (SMILE & SMART). Chemical databases: CSD, ACD, WDI, ChemBank, hazardous chemical database, PUBCHEM.

### Unit V

Quantitative Structure Activity Relationship (2D & 3D). Combinatorial libraries & their design. High throughput screening, virtual screening, Lipinski's rule of five.

### Reference:

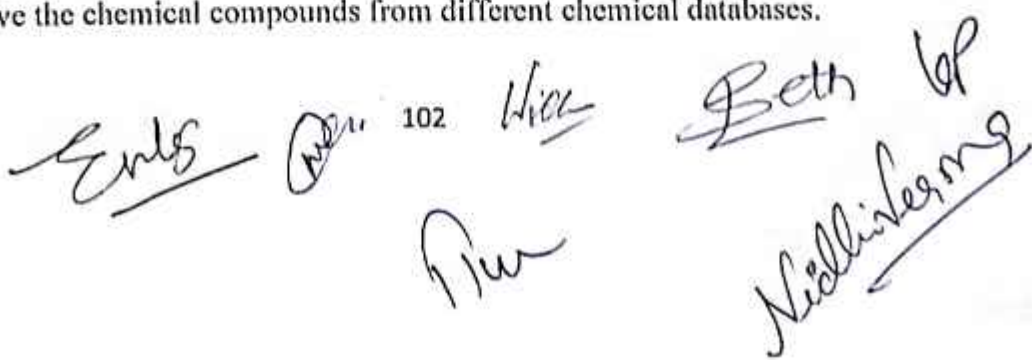

1. D. Baxivanis and Foulette - Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins, Wiley Indian Edition, 2001.
2. David W. Mount - Bioinformatics: Sequence and Genome Analysis, Cold Spring Harbor Laboratory, 2004.

Course Code: BBI162A

Course Name - Practical of omics and its application:

1. To study CADD (computer added drug designing) database.
2. To perform ADMET analysis of chemical compounds by using computational tools.
3. To study the installation of the softwares.
4. To retrieve the chemical compounds from different chemical databases.

  
Dr. Shankar H. Badgujar

 102

5. To study the Lipinski's rule of five with respect to chemical compounds.
6. To perform metagenomic analysis by using MG-RAST.
7. To perform string analysis for protein-protein interaction studies.
8. To retrieve the whole genome sequences from ncbi database and study the containing ORF regions in particular genome.
9. Find out the number of entries in SWISSPROT for Serine kinase in PIG.

**Department Elective - 4E**

**Course Code: BBI163A**

**Course Name: Molecular Modelling and molecular mechanics**

**Course Outcomes:**

CO-1: Student will able to understand the basic concept of molecular modelling.

CO-2: Student will able to acquire the basic concepts of biomolecules.

CO3: Student will able to understand the concept of molecular dynamic.

CO4: Students will be able to understand the structural features of compound library and drug designing.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

**Unit I**

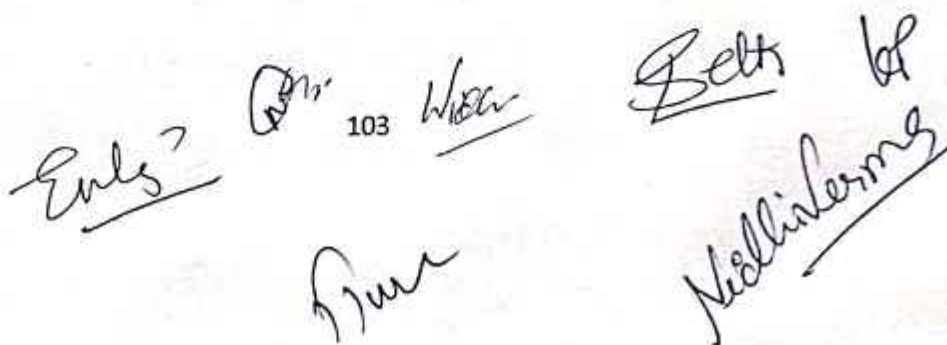

Molecular Modeling and Molecular Mechanics: Introduction to Molecular Modelling, Protein Secondary and Tertiary structure elements, Empirical Force Fields for Molecular Mechanics: bond stretching, angle bending, torsion, improper torsion, Lennard-Jones potential and van der waals interactions.

**Unit II**

Macromolecules: Study of self-organized assemblies, bio-molecules like peptides, proteins, membranes and ion channels through simulations. Concept of hydrophobic and hydrophilic interactions. Use of molecular modelling in drug design.

**Unit III**

  
Dr. Shankant B. Badgujar

 103

Molecular Dynamics and Monte Carlo simulation: Introduction – Using single Model – time steps – Multiple steps – Setting up MD – energy conservation in MD Simulation Examples – Monte Carlo – Random number generation – Difference in MD & MC.

#### Unit IV

Homology Modelling – steps to get a model, Refinement of the model, Comparative modeling of proteins – comparison of 3D structure – Homology – steps in homology modeling – tools – databases – side chain modeling – loop modeling.

#### Unit-V

Drug design: General approach to discovery of new drugs - lead discovery – lead modification – physiochemical principles of drug action – drug stereo chemistry –drug action - 3D database search – computer aided drug design – docking - molecular modeling in drug design – structure-based drug design – pharmacophores - QSAR.

#### TEXT BOOKS:

1. A. R. Leach - Molecular Modeling Principles and Application, 2nd edition, Longman Publications, 1996.

2. D. Baxivannis and Foulette - Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins, Wiley Indian Edition, 2001.

REFERENCE BOOK: 1. T K Attwood, D J parry-Smith, Introduction to Bioinformatics, Pearson Education, 1st Edition, 11th Reprint 2005.

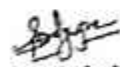

Course code: BBII64A

Course name: Molecular Modelling Lab

1. To install modeler for homology modelling
2. To compare the predicted model with homologous protein structure with respect to Ramachandran plot and Z-score.
3. To visualize the predicted homology model by the help of Pymol viewer.
4. To perform loop modelling of generated 3D model of target proteins.
5. To perform threading modelling by using different computational tools.
6. To install GROMACS a molecular dynamics platform.
7. To perform 3D-QSAR by using online 3D-QSAR tool.
8. To draw a chemical entity by using chemdraw.

Department Elective- 5E

Course Code: BBII65A

  
Dr. Shambhant B. Badgejar

Course Name: Genomics analysis

**Course Outcomes:**

- CO-1: Student will be able to understand the basic concept of genome sequencing.  
CO-2: Student will be able to acquire the basic concepts of bioinformatics databases.  
CO3: Student will be able to understand the concept of gene expression.  
CO4: Students will be able to understand the different types of genomics.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

**Unit I**

Large scale genome sequencing strategies, Genome assembly and annotation, Genome databases of Plants, animals and pathogens, Metagenomics, Gene networks: basic concepts, computational model such as Lambda receptor and lac operon, Prediction of genes, promoters, splice sites, regulatory regions: basic principles, application of methods to prokaryotic and eukaryotic genomes and interpretation of results.

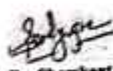

**Unit II**

Basic concepts on identification of disease genes, role of bioinformatics-OMIM database, reference genome sequence, integrated genomic maps, gene expression profiling; identification of SNPs, SNP database (DbSNP). Role of SNP in Pharmacogenomics, SNP arrays,

**Unit iii**

DNA microarray: database and basic tools, Gene Expression Omnibus (GEO), ArrayExpress, SAGE databases, DNA microarray: understanding of microarray data, normalizing microarray data, detecting differential gene expression, correlation of gene expression data to biological process and computational analysis tools (especially clustering approaches).

**Unit IV**

  
Dr. Shankar B. Badgujar

105  

Comparative genomics: Basic concepts and applications, BLAST2, MegaBlast algorithms, PipMaker, AVID, Vista, MUMmer, applications of suffix tree in comparative genomics, synteny and gene order comparisons, Comparative genomics databases: Clusters of Orthologous Groups (COGs)

### Unit V

Functional genomics: Application of sequence based and structure-based approaches to assignment of gene functions – e.g., sequence comparison, structure analysis (especially active sites, binding sites) and comparison, pattern identification, etc.

#### Reference:

1. D. Baxivanis and Foulette - Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins, Wiley Indian Edition, 2001.

Course code: BBI166A

Course name: Practical on Genomics analysis

1. To retrieve whole genome from genome database.
2. To perform FASTQC analysis with reference to given genomic sequences.
3. To perform metagenomic analysis by using MG-RAST.
4. To perform string analysis for protein-protein interaction studies.
5. To retrieve the whole genome sequences from ncbi database and study the containing ORF regions in particular genome.
6. Identify the Genes present if any in the given genomic sequence NC\_010456.
7. To study genome assembly and gene annotation tools.
8. To view human genome in ENTEZ map viewer.

Department Elective-6E

Course Code: BBI167A

Course Name: Advance in Bioinformatics

#### Course Outcomes:

CO-1: Student will able to understand the basic concept of SNPs.

CO-2: Student will able to acquire the basic concepts of proteomics.

CO3: Student will able to understand the concept of drug designing and drug development.

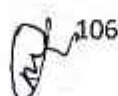

CO4: Students will be able to understand the vaccine design.

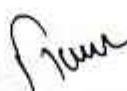

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7

CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

9. 1-LOW, 2-MEDIUM, 3-HIGH

### Unit I

Use of various derived databases in function assignment, use of SNPs for identification of genetic traits, Gene/Protein function prediction using Machine learning tools: supervised/unsupervised learning, Neural network, SVM etc

### Unit II

Proteomics Protein arrays: basic principles, Computational methods for identification of polypeptides from mass spectrometry, Protein arrays: bioinformatics-based tools for analysis of proteomics data (Tools available at ExPASy Proteomics server); databases (such as InterPro) and analysis tools Protein-protein interactions: databases such as STRINGS, DIP, PPI server and tools for analysis of protein-protein interactions,

### Unit III

Modeling biological systems, Systems biology – Use of computers in simulation of cellular subsystems, Metabolic networks, or network of metabolites and enzymes, Signal transduction networks, Gene, regulatory networks, Metabolic pathways: databases such as KEGG, EMP, MetaCyc, AraCyc Drug design Drug discovery process, Role of Bioinformatics in drug design, Target identification and validation and lead optimization, Different systems for representing chemical structure of small molecules like SMILES etc, Generation of 3D coordinates of small molecules,

### Unit IV

Structure-based drug design: Identification and Analysis of Binding sites and virtual screening, Ligand based drug design: Structure Activity Relationship – QSARs and QSPRs, QSAR Methodology, Pharmacophore mapping, In silico prediction ADMET properties for Drug Molecules

### Unit V

Vaccine design: Reverse vaccinology and immunoinformatic, Databases in Immunology, Principles of B-cell and T-cell epitope prediction.

  
Dr. Shambhat B. Redgejar

107  

Course code: BBI168A

Course name: Advance in Bioinformatics practical lab

1. Biological Databases with Reference to Expasy and NCBI.
2. To find out the SNP information of a given protein sequence by using predictsnp server.
3. To predict MHC and B-cell epitope regions in given protein sequences.
4. To perform ADMET analysis of chemical compounds.
5. To find out the QSAR (quantitative structural relationship) between the pharmacophores.
6. To perform in silico cloning by using snapgene.
7. To analysis the active sites in a given target proteins.
8. To study the metabolic networks by using string.

Department Elective- 7E

Course Code: BBI169A

Course Name: *In Silico* drug designing

Course Outcomes:

CO-1: Student will able to understand the basic concept of CADD.

CO-2: Student will able to acquire the basic concepts of QSAR.

CO3: Student will able to understand the concept of drug designing and drug development.

CO4: Students will be able to understand the Pharmacophore mapping.

Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

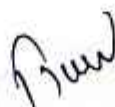

Unit I

Introduction to Computer Aided Drug Design (CADD) History, different technique sand applications  
Quantitative Structure Activity Relationships: Basics History and development of QSAR:  
Physicochemical parameters and methods to calculate physicochemical parameters: Hammett equation  
and electronic parameters (sigma), lipophilicity effects and parameters (log P, pi substituent constant),  
steric effects (Taft steric and MR parameters) Experimental and theoretical approaches for the  
determination of these physicochemical parameters.

  
Dr. Shankar B. Dasgupta

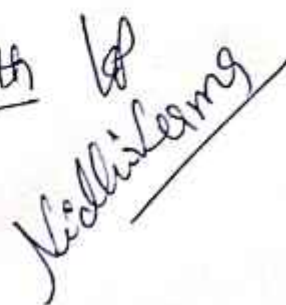

## Unit II

Quantitative Structure Activity Relationships: Applications Hansch analysis, Free Wilson analysis and relationship between them, Advantages and disadvantages; Deriving 2D-QSAR equations 3D-QSAR approaches and contour map analysis Statistical methods used in QSAR analysis and importance of statistical parameters.

## Unit III

Molecular Modeling and Docking: Molecular and Quantum Mechanics in drug design, Energy Minimization Methods: comparison between global minimum conformation and bioactive conformation, Molecular docking and drug receptor interactions: Rigid docking, flexible docking and extra-precision docking. Agents acting on enzymes such as DHFR, HMG-CoA reductase and HIV protease, choline esterase (AChE & BChE).

## Unit IV

Molecular Properties and Drug Design: Prediction and analysis of ADMET properties of new molecules and its importance in drug design. De novo drug design: Receptor/enzyme-interaction and its analysis, Receptor/enzyme cavity size prediction, predicting the functional components of cavities, Fragment based drug design. Homology modelling and generation of 3D-structure of protein.

## Unit V

Pharmacophore Mapping and Virtual Screening Concept of pharmacophore, pharmacophore mapping, identification of Pharmacophore features and Pharmacophore modeling; Conformational search used in pharmacophore mapping In Silico Drug Design and Virtual Screening Techniques Similarity based methods and Pharmacophore based screening, structure based In-silico virtual screening protocols.

Course code: BBI170A

Course name: practical on *In Silico* drug designing

1. To perform ADMET analysis of chemical compounds.
2. To find out the QSAR (quantitative structural relationship) between the pharmacophores.
3. To perform string analysis for protein-protein interaction studies.
4. To perform loop modelling of generated 3D model of target proteins.
5. To perform threading modelling by using different computational tools.
6. To install GROMACS a molecular dynamics platform.
7. To perform 3D-QSAR by using online 3D-QSAR tool.
8. To draw a chemical entity by using chemdraw.
9. To perform molecular docking and dynamics calculation by online servers.

Track -F

Department Elective- 1F

Course Code: BBI171A

Course Name: Nanoscience and Nanotechnology

### Course outcome

CO-1 Students will be able to understand the basics nanotechnology

CO-2 Students will be able to illustrate the historical aspects of nanomaterials uses, discoveries, and involvement of various scientists.

CO-3 Students will be able to explain the importance of physicochemical parameters of nanoparticles and their characterization.

CO-4 Students will be able to evaluate the uses of nanotechnology in all the area.

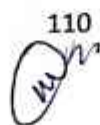

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

  
Dr. Shambhaji B. Badgujar

110  

### Unit 1

Basic nanotechnology: Nanotechnology definition, history of nanotechnology, application of nanotechnology, nanotechnology as modern technology, introduction to nanomaterials. unique properties of nanomaterials.

### Unit 2

Historical aspects of nanomaterials: uses since centuries, definition of nanomaterials, differences between bulk form of materials and nanomaterials, contribution of different scientists, Theory by *Richard Feynman* supporting the Era of nanotechnology, Role of *Eric drexler* in nanotechnology

### Unit 3

Synthesis of nanomaterials: 'Top down' vs. 'Bottom up' approaches, physicochemical properties of nanomaterials, Classifications and types of nanomaterials as nano particles and 1D, 2D, and, 3D nanomaterials.

### Unit 4

Understanding of physicochemical properties, (Size, shape, surface charge, hydrophobicity, hydrophilicity. role of surface functionalization on nanoparticles, Impact in toxicological studies, ways to overcome the toxicity of nanomaterials

Course Code: BBI 172A

Course Name: Practical of nanotechnology

- 6- Aqua-regia washing of glassware's for nanomaterial synthesis.
- 7- Nanomaterial synthesis AgNPs using amino acids.
- 8- Dialysis of synthesized nanoparticles.
- 9- Visual observation of nanoparticles, understanding of optical properties.

### Reference Books

1. Nanoscience in Medicine Vol. 1, Springer.
2. Text book of Nanoscience and Nanotechnology by B S Murty, P Shankar, Baldev Raj, B B Rath, James Murday, Springer
3. An Introduction to Nanoscience and Nanotechnology by Alain Nouailhat, Wiley.
4. Nanoscience volume 8 by Royal Society of Chemistry.

Department Elective- 2F

Course Code: BBII73A

Course Name: Nanotechnology in material science

### Course outcome

  
Dr. Shankant B. Badgujar

  111     
 

CO-1 Students will be able to understand the basics nanotechnology including the scientific discoveries, and different types of effects on the surface to volume.

CO-2 Students will be able to illustrate the classification of nanoparticles, synthesis approaches and properties of nanoparticles.

CO-3 Students will be able to explain the properties of nanomaterials.

CO-4 Students will be able to evaluate the including carbon based and metal oxide.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

#### **Unit 1**

Background to nanoscience and nanotechnology - scientific revolutions - nanosized effects surface to volume ratio- – atomic structure – molecules & phases – energy at the nanoscale molecular and atomic size -quantum effects- types of nanotechnology and nano machines.

#### **Unit 2**

Definition of a nano system - classification of nanocrystals - dimensionality and size dependent phenomena; Quantum dots, Nanowires and Nanotubes, 2D films; Nano & mesopores – top down and bottom up- Misnomers and misconception of Nanotechnology importance of the nanoscale materials and their devices -size dependent variation in mechanical, physical and chemical, magnetic, electronic transport, reactivity etc.

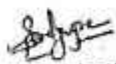

#### **Unit 3**

Nanostructured materials-metal-semiconductor-ceramics and composites- size dependent properties - uniqueness in these properties compared to bulk and microscopic solids- nanomaterials and nanostructures in nature- super hydrophobicity, self-cleaning - antifogging.

#### **Unit 4**

Recent special nanomaterials - Carbon based nanomaterials – CNT- graphene- core-shell structures- Micro and Mesopores Materials- Organic-Inorganic Hybrids- ZnO- Silicon --DNA- RNA- Nanoproducts.

5. Nanomaterials: An introduction to synthesis, properties and application, Dieter Vollath, WILEY-VCH, 2008

**Course Code: BBI 174A**

**Course Name: Synthesis and characterization of metallic nanoparticles**

- 1- Washing of glassware's for nanomaterial synthesis.
- 2- Synthesis of AgNPs nanoparticles using Plant extract.
- 3- Visual observation of nanoparticles, understanding of optical properties.
- 4- Characterization of synthesized using UV-visible, SEM, TEM techniques.
- 5- Biomedical application of synthesized nanoparticles-antimicrobial activity.

**Department Elective- 3F**

**Course Code: BBI175A**

**Course Name: Instruments in Nanotechnology**

### Course outcome

- CO-1 Students will be able to understand the risk associated toxicity due to nanoparticles.  
 CO-2 Students will be able to illustrate the toxicity of nanosized particles in biological membranes.  
 CO-3 Students will be able to explain the adverse impact of nanoparticles on the environment.  
 CO-4 Students will be able to evaluate the uses of nanotechnology in all the area.

*[Signature]*

*[Signature]*

*[Signature]*

### Unit 1

Principles, Overview of Instrumentation and Sample preparation, Experimental techniques adopted in: Scanning Electron Microscopy: SEM and FESEM -Transmission Electron Microscopy (TEM) – HRTEM- application for analysis of Nanomaterials.

### Unit 2

Scanning Tunnelling Microscopy (STM), Atomic Force Microscopy (AFM)-Non-contact contact- Tapping- conducting mode-.Near Field Scanning Optical Microscopy; Scanning capacitance Microscopy- Scanning Microwave Microscope- Magnetic Force Microscopes (MFM)- Chemical Force Microscope (CFM)- Applications for analysis of nanomaterials .

### Unit 3

Optical and Confocal microscopes- Use of polarized light microscopy – Phase contrast microscopy – Interference Microscopy – hot stage microscopy - surface morphology – Etch pit density and hardness measurements. -Confocal Microscopes - Confocal Raman – Application in Nanobiotechnology. Fluorescence Microscope

### Unit 4

Principle and Instrumentation of Thermogravimetry; Differential Thermal Analysis and Differential scanning calorimetry-Importance of thermal analysis for nanostructures. New Advances and challenges in biological and biomedical materials characterizations- Dynamic light scattering spectroscopy.

Course Code: BBI 176A

Course Name: Characterization of Pt nanoparticles

- 1- Washing of glassware's for nanomaterial synthesis.
- 2- Nanomaterial synthesis Pt nanoparticles using amino acids.
- 3- Surface modification of synthesized nanoparticles by using antibiotics.

  
Dr. Shankar B. Badger

- 4- Characterization of synthesized and surface modify nanoparticles using sophisticated instruments.
- 5- Estimation of antimicrobial and antioxidant activity of synthesized nanoparticles.

Department Elective- 4F

Course Code: BBI177A

Course Name: Toxicity in Nanotechnology

### Course outcome

CO-1 Students will be able to understand the risk associated toxicity due to nanoparticles.

CO-2 Students will be able to illustrate the toxicity of nanosized particles in biological membranes.

CO-3 Students will be able to explain the adverse impact of nanoparticles on the environment.

CO-4 Students will be able to evaluate the uses of nanotechnology in all the area.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

### Unit I

Introduction – Definition of terms-Toxicity-Hazards and hazard types-risk and assessment of risk.

### Unit II

Mechanism of Nano size particle toxicity-Passage through biological membranes-toxicokinetic

### Unit III

Nano pollution – Nanomaterials in environment-sources of pollution-transport through environment

### Unit IV

Different regulatory bodies associated with the control of nanoparticle toxicity.

  
Dr. Shankar R. Bodgajer

1. Washing of glassware's for nanomaterial synthesis.
2. Nanomaterial synthesis PtNPs using amino acids.
3. Surface modification of synthesized nanoparticles by using antibiotics.
4. Visual observation of nanoparticles, understanding of optical properties.
5. Characterization of synthesized and surface modify nanoparticles.
6. Estimation of antimicrobial and antioxidant activity of synthesized nanoparticles.

**Department Elective- 5F**

**Course Code: BBI179A**

**Course Name: Surface science in Nanotechnology**

## Course outcome

CO-1 Students will be able to understand the fundamentals of nanotechnology

CO-2 Students will be able to illustrate the size and shape dependent properties of nanomaterials

CO-3 Students will be able to explain the classification of nanomaterials

CO-4 Students will be able to evaluate the stabilization of nanomaterials

## Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

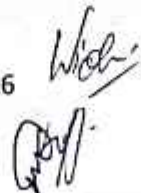

1-LOW, 2-MEDIUM, 3-HIGH

Unit I

  
Dr. Shambhaji B. Badgujar

116

History of Nanotechnology, Feynmann's vision on Nano Science & technology, bulk vs nanomaterials. Central importance of nanoscale morphology - small things making big differences, nanotechnology as nature's technology, clusters and magic numbers, nanoscale architecture. Recent developments, challenges and future prospects of nanomaterials.

## Unit 2

Size and shape dependent properties, Melting points and lattice constants, Surface Tension, density of states, Wettability - Specific Surface Area and Pore - Composite Structure - Mechanical properties, Optical properties: Surface plasmon resonance in metal nanoparticles and quantum size effect in Semiconductors, Electrical conductivity: Surface scattering, change of electronic structure, quantum transport, effect of microstructure, Magnetic properties: Ferroelectrics, dielectrics and superparamagnetism.

## Unit 3

Classification based on the dimensionality, Zero-dimensional nanostructures: metal, semiconductor and oxide nanoparticles. One-dimensional nanostructures: nanowires and nanorods, Two-dimensional nanostructures: Thin films, Three-dimensional nanomaterials, Special Nanomaterials: Carbon fullerenes and carbon nanotubes, micro and mesoporous materials, core-shell structures, organic-inorganic hybrids.

## Unit 4

Surface science for nanomaterials, surface energy, stabilization mechanisms, electrostatic - Nernst Equation, electric double layer, Debye-Huckel Screening strength. Interaction between nanoparticles - DLVO Theory, steric stabilization and electrosteric stabilization, nucleation and growth of nuclei, critical radius, homogenous and heterogeneous nucleation.

CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

Unit 1

  
Dr. Shumkant B. Badgajkar

Inert gas condensation, arc discharge, RF plasma, ion sputtering, laser ablation, laser pyrolysis, layer deposition ball milling, Spray pyrolysis, Microwave irradiation Gamma radiation, ion implantation, molecular beam epitaxy, Physical Vapour deposition, chemical vapour deposition method and Electrospinning

## Unit 2 Chemical Methods for synthesis of nanomaterials

Chemical methodologies, their advantages, nanoparticles, 1D-nanostructures-Nanowires, nanotubes and nanorods; 2D-nanostructures-thin films-Nanoparticles through homogeneous & heterogenous nucleation in solution, co-precipitation, chemical reduction, hydrothermal and solvothermal synthesis, template based synthesis, electrochemical synthesis, sonochemical synthesis, polyol method, sol-gel synthesis, micelles and microemulsion assisted synthesis, thermal decomposition, self-assembly methods and Langmuir Blodgett (LB) method.

## Unit 3 Biological Methods for synthesis of nanomaterials

Use of bacteria, fungi, actinomycetes and algae for nanoparticle synthesis, natural synthesis of magnetic nanoparticles using magnetotactic bacteria, viruses as components for the formation of nanostructured materials, role of plant derivatives in nanoparticle synthesis. Nanoparticle synthesis with the help of enzymes and biomolecules, nanomaterial synthesis from industrial or agricultural wastes

## Unit 4 Lithographic Techniques for fabrication of nanomaterials

Electron beam lithography, SEM based nanolithography, X-ray lithography, focused ion beam lithography, near field scanning optical microscopy, AFM lithography, dip pen lithography.

CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

#### Unit 1. Basics of biotechnology

Biology inspired concepts - biological networks – biological Neurons – the function of neuronal cell – biological neuronal cells on silicon modeling of neuronal cells by VLSI circuits – bioelectronics – molecular Processor – DNA analyzer as biochip – molecular electronics

#### Unit 2. Lipid and DNA Technology

Nano-biometrics - introduction – lipids as nano-bricks and mortar: self-assembled nanolayers – the bits that do think – proteins – three dimensional structures using a 20 amino acid – biological computing – A Protein based 3D optical memory using DNA to build nano cubes and hinges - DNA as smart glue – DNA as wire template – DNA computer.

#### Unit 3. Bio nanocomposites

Natural nano composites - introduction – natural nano composite materials – biologically synthesized nano structures – biologically derived synthetic nano composites – protein based nanostructure formation – biologically inspired nano composites. Nanotechnology in Agriculture (Fertilizers and pesticides).

#### Unit 4. Characterization methods for Nano biomaterials

Nanoanalytics - quantum dot biolabeling – nanoparticle molecular labels – analysis of biomolecular structure by AFM and molecular pulling-force spectroscopy– biofunctionalized nanoparticles for SERS and SPR.

CO2	M	L	L	M	L	L	L
CO3	H	M	M	L	M	M	M

L – LOW, M- MEDIUM, H-HIGH

Course- Open Elective-1 (Basics of Bioinformatics)

Credits-3

#### Unit I

Introduction to bioinformatics and data generation, Bioinformatics and its relation with molecular biology, Examples of related tools (FASTA, BLAST, BLAT, RASMOL), databases (GENBANK, Pubmed, PDB) and software (RASMOL, Ligand Explorer). Data generation; Generation of large scale molecular biology data. (Through Genome sequencing, Protein sequencing, Application of Bioinformatics.

#### Unit II

Biological Database and its Types Introduction to data types and Source. Population and sample, Classification and Presentation of Data. Quality of data, private and public data sources. General Introduction of Biological Databases; Nucleic acid databases (NCBI, DDBJ, and EMBL). Protein databases (Primary, Composite, and Secondary). Specialized Genome databases: (SGD, TIGR, and ACeDB). Structure databases (CATH, SCOP, and PDBsum)

#### Unit III

Sequence Alignments and Visualization Introduction to Sequences, alignments and Dynamic Programming; Local alignment and Global alignment (algorithm and example), Pairwise

  
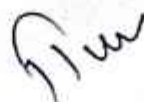

Dr. Shankar B. Redgejer

123

alignment (BLAST and FASTA Algorithm) and multiple sequence alignment (Clustal W algorithm).

- 4- Stephen Misener, Stephen A. Krawetz, Bioinformatics- Methods and Protocols, Humana Press, 2010

#### Open Elective- 2

Course Code: BBI037B

Course Name: Medical Biotechnology

UNIT 1	Gene therapy
UNIT 2	Stem cell culture technology
UNIT 3	Xenotransplantation
UNIT 4	Disease diagnosis techniques

#### Course outcome

CO-1 Students will be able to explain basic concepts of gene therapy. Describe the expression of cloned proteins in animal cells. Explain methods and various types of gene delivery models.

CO-2 Students will be able to explain the concept of stem cell culture technology and tissue engineering. Describe application of stem cell culture in modern medical science.

CO-3 Students will be able to explain xenotransplantation technique and production.

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	3	2	1	2

  
Dr. Shambhant B. Dabgar

124

CO2	3	3	3	2	3	3	2
CO3	3	3	3	1	1	2	1
CO4	3	3	3	2	2	2	2

1 – LOW, 2- MEDIUM, 3-HIGH

## BBI037B: Open Elective-2 (Medical Biotechnology)

Credit(s): 3

### Unit-I

Gene therapy-background, types of gene therapy (*ex vivo* & *in vivo*), choosing targets for gene therapy, vectors in gene therapy, retroviruses, adenoviruses, adeno-associated viruses, types of gene delivery, Weismann barrier (soma-to-germ line barrier), epigenetic inheritance, problems & ethics. Gene Delivery methods-Viral delivery (through Retroviral vectors, through Adenoviral vectors), Non-viral delivery,

### Unit-II

Stem cell culture technology- introduction to stem cell types of stem cells, application of stem cells in modern medical science. Tissue Engineering – Skin, Liver, Pancreas, therapeutic Ribozymes, synthetic drugs.

### Unit-III

Xenotransplantation – terminology, technology behind it, organ donors, social & ethical issues; Production of artificial tissues or organs; Cell Adhesion-based therapy- integrins, inflammation, cancer & metastasis; Drug designing, Drug delivery and targeting: conventional & new approaches to drug delivery.

### Unit-IV

Disease diagnosis technique; ELISA, RIA, RIEP, ODD, RID, FISH, GISH, IMMUNO FLUORESCENCE

### Text / Reference Book

1. R. Ananthanarayanan and C. K. JayaramPaniker; Text Box of Microbiology, Orient Longman.
2. Baron EJ, Peterson LR and Finegold SM Mosby; Bailey and Scott's Diagnostic Microbiology.
3. Roitt, I. M.; Essential immunology, 1995, Blackwell Scientific Publications Oxford.
4. W.E. Paul; Fundamental immunology, 1984, Raven Press, New York.
5. R.M. Coleman, M.F. Lombord and R.E. Sicarc; Fundamentals of immunology, 1992, 2nd Edition, C. Brown publishers.
6. D.M. Weir and J Steward; Immunology, 7<sup>th</sup> Edition, 1993.

  
Dr. Shankar B. Badgujar

125

7. Broude A.I.; Medical Microbiology and Infectious Diseases, W.B. Saunders & Co. Philadelphia.
8. Ian R. Tizzard ; An Introduction to Immunology, 4<sup>th</sup> Edition, Brooks/Cole.

Open Elective- 3

Course Code: BBI092

Course Name: Molecular Marker Technology

UNIT 1	Molecular Markers Types
UNIT 2	Mapping Population
UNIT 3	Application of Molecular marker in breeding

#### Course outcome

- CO-1 Students will be able to explain different types of molecular markers  
 CO-2 Students will be able to describe the usage of molecular marker in gene mapping  
 CO-3 Students will be able to explain application of molecular markers

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	1	1
CO2	3	3	3	1	2	2	2
CO3	3	3	3	2	1	2	3

1 – LOW, 2- MEDIUM, 3-HIGH

Course- Open Elective-3 (Molecular Marker Technology- BBI092)

Credits-3

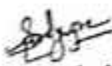

#### UNIT I

Types of molecular markers- RFLP; PCR based markers like RAPD, SCAR, SSR, STS, CAPS, AFLP, SNP and their variants

#### UNIT-II

Uses of molecular markers: Application as a genetic tool for genotyping and gene mapping; Mapping populations: F<sub>2</sub>, DH, RILs, NILs; Bulk segregant analysis; Linkage maps; Physical maps.

#### UNIT III

  
 Dr. Shrikant B. Badgajkar

126

Application of molecular markers: Assessing genetic diversity, variety protection; Marker assisted breeding for accelerated introgression of trait/transgene and quantitative traits; Human and animal health: Association with genetic-based diseases, Paternity determinations; Forensic studies.

#### Text / Reference Books

2. S. Srivastava and A. Narula. Plant Biotechnology and Molecular markers, Springer, 2005.
3. Robert J. Henry. Molecular Markers in Plants, John Wiley & Sons, 2012
4. B.D. Singh. Biotechnology- Expanding Horizons, Kalyani

#### Open Elective- 4

Course Code: BBI093

Course Name: Biotechnology and Business management

UNIT 1	Fundamental of Biotechnology and Genetic Engineering
UNIT 2	Drug discovery and Vaccine production
UNIT 3	Entrepreneurship and Commercialization

#### Course outcome

CO-1 Students will be able understand the overview Biotechnology and Genetic engineering process

CO-2 Students will be able to acquaint with various drug discovery processes

CO-3 Student will be able to explain the entrepreneurship process and commercialization of product

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	1	1	2
CO2	3	3	3	2	2	2	2
CO3	3	3	3	2	3	2	1

1-LOW, 2-MEDIUM, 3-HIGH

BBI093- Biotechnology and Business Management

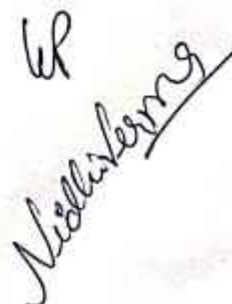

Credit- 3

  
Dr. Shambhu B. Badgaj

127

## Unit 1

Basics of Biotechnology technology in plants, animals and medical field; Industrial Fermentation technology- definition, stages of fermentation, designing of bioreactors, fermentation products, amino acids, alcohols, organic acids, polysaccharides, Biofuels.

Application of rDNA technology, Human genome project and its application, Gene therapy prospect and future, DNA vaccine, Transgenic plants, Current production of rDNA products

## Unit 2

Drug designing, Drug delivery and targeting: conventional & new approaches to drug delivery, Gene therapy- background, types of gene therapy (ex vivo & in vivo), choosing targets for gene therapy, vectors in gene therapy, retroviruses, adenoviruses, adeno-associated viruses, types of gene delivery.

## Unit 3

Worldwide market scenario of Biotechnology based business, Biobusiness prospective in India, Management process & organization, general analysis of Indian Biobusiness, Project formulation and selection based on size, Technological assessment, Technical report, feasibility and commercial viability of project

## Books/ References

- 1- A.L. Demain and N.A. Solomon, Manual of Industrial Microbiology and Biotechnology, 2008.
- 2- Craig Shimasaki, Biotechnology Entrepreneurship and Management, Academic Press.
- 3- Florentina Matei and Daniela Zirra, Introduction to Biotech Entrepreneurship: From Idea to Business, Springer
- 4- Benjamin E. Blass, Basic Principles of Drug Discovery and Development, Academic Press

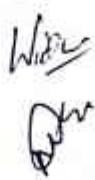

## Open Elective- 5

Course Code: BBI094

Course Name: Herbal Diet and Lifestyle

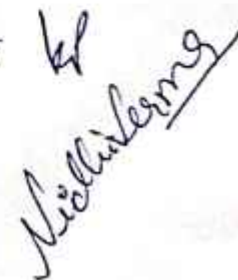

UNIT 1	Introduction to Traditional system of medicine
UNIT 2	Health and Medicine
UNIT 3	Life Style with Herbs

  
Dr. Shamkant B. Badgujar

### Course outcome

CO-1 Students will be able understand the overview Indian traditional medicine system

CO-2 Students will be able to acquaint with the relation with health and nutrition

CO-3 Student will be able to explain the importance of herbs in maintaining good life style

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	H	M	L	M	L	M	M
CO2	H	L	H	L	L	L	L
CO3	M	M	M	L	M	M	M

L-LOW, M-MEDIUM, H-HIGH

BBI094- Herbal Diet and Life Style

Credit- 3

### Unit 1

Introduction to Plants: Plants, India traditional system of medicine, classification, history, AYUSH and features, Indian Scenario, Global requirement and demand, Ayush industries in Rajasthan.

### Unit 2

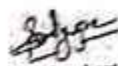

Usages and its application in human health: Health and Nutrition, Classification, benefits and uses, Yoga and Meditation, Food Habits values and supplements

### Unit 3

Life style with Herbs: Nutritional supplements, Fruits/food supplement, Importance of balanced nutrition and diet. Vocal for local

### Reference Books

129

**Course Name : Web Development**  
**Course Code DCA001A**

L (Hr.)	T (Hr.)	Pr (Hr.)	Credits
2	0	2	3

**Course Objectives:**

1. Students will be able to understand and be familiar with client server architecture.
2. Students will be able to understand and able to develop a web application using java technologies.
3. Students will be able to learn the skills and project-based experience needed for entry into web application.
4. Students will be able to learn the concepts of developing a dynamic webpage by the use of java script and CSS
5. Students will be able to learn the concept of XML, MySql and server side scripting.

**Syllabus**

**Unit -1**

HTML5 and CSS3 HTML5- Basic Tags, Tables, Forms, HTML5 Tags, HTML Graphics, HTML media, HTML Graphics, HTML APIs. CSS - Background, Borders, margin, Box model. Styling text, fonts, list, links, tables. CSS overflow, float, inline blocks, pseudoclasses, pseudoelements. CSS border images, rounded corners

**Unit-2**

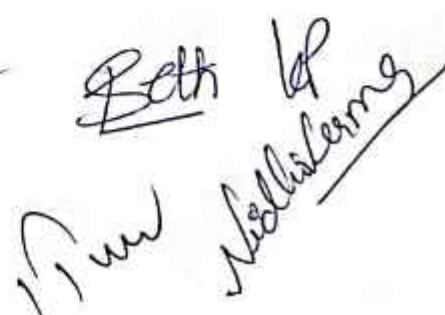

Java Script Client side scripting using java script, Introduction to java script, internal and external Java script files, variables, control statements, loops, Arrays, string handling, How to

  
Dr. Shankar D. Badgujar

130

write functions in JavaScript, inputting and outputting from form elements to JavaScript. DOM concept, creating html elements using java script. Drawing 2D shapes, handling events. Introduction to AJAX

### Unit-3

Building Single page applications with Angular JS Single page application – Introduction , two way data binding, MVC in angular JS, controllers, getting user inputs , loops , Client side routing – accessing URL data , various ways to provide data in angular JS.

### Unit -4

Server Side Programming Server side scripting, Difference between client side and server side scripting languages. Introduction to PHP, variables, control statements, loops, Arrays, string handling, PHP forms, Global variables in PHP, Regular expression and pattern matching, Database programming: inputting and outputting data from MySQL using PHP, insertion , deletion and updating data. State management in web applications, cookies, Application and session state.

### Unit-5

Introduction to Xml, usage of XML, XML tags, elements and attributes, attribute type, XML validation: DTD and XSD, XML DOM Case study:-Application Development using Laravel framework

Textbook/Reference:

- The Complete Reference, HTML and CSS by Thomas A Powell latest edition

### Course Outcomes (CO)

After the completion of the course the student will be able to:

CO1: To create a dynamic webpage by the use of java script and DHTML.

CO2: To create a well formed / valid XML document.

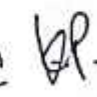

CO3: To connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.

CO4. To create a server side java application called JSP to catch form data sent from client and store it on database.

CO5. To write a server side java application called servlet to catch form data sent from client, process it and store it on database

  
Dr. Shankant B. Badgujar

  
Dr.

   
Nishikant

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2						
CO2	3						
CO3	2						
CO4	3						
CO5	2						

3 = Highly Related; 2 = Medium; 1 = Low

**Course Name : Web Development Lab**  
**Course Code DCA002A**

L (Hr.)	T (Hr.)	Pr (Hr.)	Credits
0	0	2	1

**Course Name: Project Management Lab**  
**Course Code (DCA003A)**

L (Hr.)	T (Hr.)	Pr (Hr.)	Credits
0	0	2	1

**Course Objective**

1. To learn to Create the project
2. To learn the Task Breakdown, and utilization of resources
3. To learn how to Assign resources, calculating costs

**Lab Exercise based on given topic**

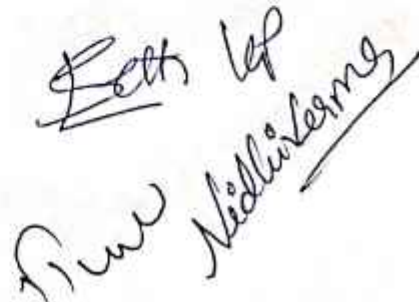

1. Introduction to Project Libre and Project Management
2. Overview of Project Libre
3. Introduction to Project Management terminology

  
 Dr. Shambant B. Badgujar

132

4. Tasks, Resources, and Costs
5. Installing Project Libre
6. Starting and Saving Projects
7. Navigation
8. Create a Project
9. Tasks
10. Resources
11. Cost
12. Calendars
13. WBS
14. RBS
15. Task Usage
16. Resource Usage
17. Baselines
18. Earned Value
19. Printing
20. Reporting

#### Course Outcome (CO)

After the completion of the course the student will be able to

CO1 Students will be able to identify basic concepts of Project Libre

CO2 Students will learn to describe the project, its cost etc.

CO3 Students will be able to create installing, creating a project.

CO4 Students will be able to identify task, and resource usages.

CO5 Students will be able to combine Project Libre tasks and will be efficiently use cost and effects.

**Course Name: Advanced Spread Sheet Lab**

**Course Code (DCA004A)**

L (Hr.)	T (Hr.)	Pr (Hr.)	Credits
0	0	2	1

  
Dr. Shamkant B. Badgujar

133

## Course Objective:

1. Students will be able to understand the basics of Excel.
2. Students will be able to understand the concepts of working with the functions of advanced excel.

## Syllabus

### Advanced Excel Course - Overview of the Basics of Excel

Customizing common options in Excel, Absolute and relative cells, Protecting and un-protecting worksheets and cells

### Advanced Excel Course - Working with Functions

Writing conditional expressions (using IF), Using logical functions (AND, OR, NOT), Using lookup and reference functions (VLOOKUP, HLOOKUP, MATCH, INDEX), Vlookup with Exact Match, Approximate Match, Nested Vlookup with Exact Match, Vlookup with Tables, Dynamic Ranges, Nested Vlookup with Exact Match, Using Vlookup to consolidate Data from Multiple Sheets

### Advanced Excel Course - Data Validations

Specifying a valid range of values for a cell, Specifying a list of valid values for a cell, Specifying custom validations based on formula for a cell

### Advanced Excel Course - Working with Templates

Designing the structure of a template, Using templates for standardization of worksheets

### Advanced Excel Course - Sorting and Filtering Data

Sorting tables, Using multiple-level sorting, Using custom sorting, Filtering data for selected view (AutoFilter), Using advanced filter options

### Advanced Excel Course - More Functions

Date and time functions, Text functions, Database functions, Power Functions (CountIf, CountIFS, SumIf, SumIFS)

### Advanced Excel Course - Formatting

Using auto formatting option for worksheets, Using conditional formatting option for rows, columns and cells

### Advanced Excel Course - Macros

Relative & Absolute Macros, Editing Macro's

### Advanced Excel Course - WhatIf Analysis

  
Dr. Shankant B. Badgujar

Goal Seek, Data Tables, Scenario Manager

### Advanced Excel Course - Charts

Using Charts, Formatting Charts, Using 3D Graphs, Using Bar and Line Chart together, Using Secondary Axis in Graphs, Sharing Charts with PowerPoint / MS Word, Dynamically, (Data Modified in Excel, Chart would automatically get updated)

### Advanced Excel Course - Working with Reports

Creating subtotals, Multiple-level subtotals, Creating Pivot tables, Formatting and customizing Pivot tables, Using advanced options of Pivot tables, Pivot charts, Consolidating data from multiple sheets and files using Pivot tables, Using external data sources, Using data consolidation feature to consolidate data, Show Value As ( % of Row, % of Column, Running Total, Compare with Specific Field), Viewing Subtotal under Pivot, Creating Slicers ( Version 2010 & Above), Designing the structure of a template, Print Titles Repeat Rows /Columns

### Analysis ToolPak

Use of the Analysis ToolPak to perform complex data analysis

### Course Outcome( CO's)

- CO1. Students will learn to use spreadsheet concepts and explore the Microsoft Office Excel environment.
- CO2. Students will apply the concepts of to create, open and view a workbook.
- CO 3. Students will Illustrate different advanced excel formatting.
- CO 4. Students will be apply date and time functions
- CO 5. Students will learn to describe basic uses of advanced excel functions

Course Name : Python programming

Course Code (DCA005A)

L (Hr.)	T (Hr.)	Pr (Hr.)	Credits
2	0	2	3

### Course Objectives:

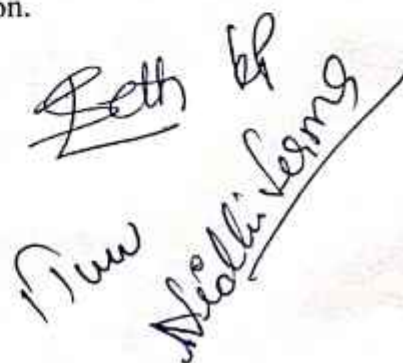

1. Student will be able to understand the basics concepts of Python.

  
Dr. Shamkant B. Badgojar

135

2. Student will be able to learn the concepts of programming by using loops and conditional blocks.
3. Student will be able to demonstrate the use of complex data types , dictionary and codes.
4. Student will be able to describe the concepts of database.
5. Student will be able to understand the basics of python programming and packages.

## Syllabus

### Unit 1

Introduction to Python: Python variables, Python basic Operators, Understanding python blocks. Python Data Types, Declaring and using Numeric data types: int, float etc.

### Unit 2

Python Program Flow Control Conditional blocks: if, else and else if, Simple for loops in python, For loop using ranges, string, list and dictionaries. Use of while loops in python, Loop manipulation using pass, continue, break and else. Programming using Python conditional and loop blocks.

### Unit 3

Python Complex data types: Using string data type and string operations, Defining list and list slicing, Use of Tuple data type. String, List and Dictionary, Manipulations Building blocks of python programs, string manipulation methods, List manipulation. Dictionary manipulation, Programming using string, list and dictionary in-built functions. Python Functions, Organizing python codes using functions.

### Unit 4

Python File Operations: Reading files, Writing files in python, Understanding read functions, read(), readline(), readlines(). Understanding write functions, write() and writelines() Manipulating file pointer using seek Programming, using file operations. Database Programming: Connecting to a database, Creating Tables, INSERT, UPDATE, DELETE and READ operations, Transaction Control, Disconnecting from a database, Exception Handling in Databases.

### Unit 5

Python packages: Simple programs using the built-in functions of packages matplotlib, numpy, pandas etc. GUI Programming: Tkinter introduction, Tkinter and Python Programming, Tk Widgets, Tkinter examples. Python programming with IDE.

## Text Book :

  
Dr. Shankant D. Badgujar

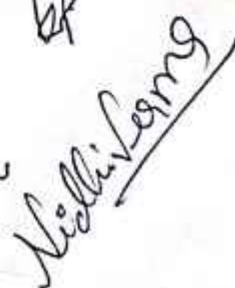

136

- Introduction to Computing and Problem Solving Using Python, E. Balagurusamy  
McGrawHill Publication

### Reference Books:

- Wesley J. Chun, "Core Python Applications Programming", 3rd Edition ,  
Pearson Education, 2016
- Charles Dierbach, "Introduction to Computer Science using Python",  
Wiley, 2015

Python", John Wiley, 2015
- Mark Lutz, "Learning Python", 5th edition, Orelly Publication, 2013,  
ISBN 978- 1449355739

### Course Outcomes (CO)

After the completion of the course the student will be able to:

CO1. To understand python variables, operators and data types

CO2. To apply python control structures

CO3. To use python complex data types

CO4. To apply Python files and databases

CO5. Student will apply python packages and GUI programming

**Course Name: Python programming Lab**  
**Course Code (DCA006A)**

L (Hr.)	T (Hr.)	Pr (Hr.)	Credits
0	0	2	1

### Course Objectives:

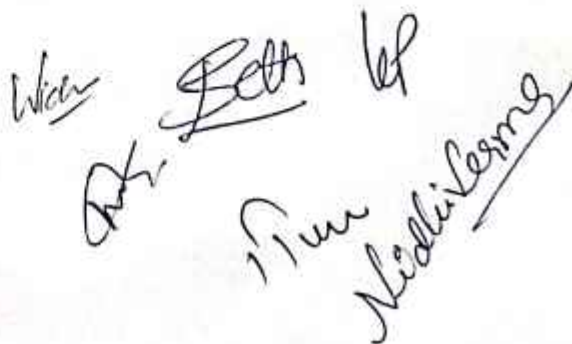

The purpose of this course is to enhance the practical knowledge based on prescribed theory course. The students will be able to enhance their analyzing and problem solving skills after implementation of all the given experiments.

### List of Experiment

1. Write a program to display data of different types using variables and literals constants.
2. Write a program to reassign values to a variable.
3. Write a program to read variables from the user.
4. Write a program to exhibit indentation errors.

  
Dr. Shantant B. Badgaonkar

5. Write a program to enter a number and display its hex and octal equivalent and its square root.
6. Write a program to read and print values of variables of different data types.
7. Write a program to calculate area of triangle using Heron's formula.
8. Write a program to calculate the distance between two points.
9. Write a program to perform addition, subtraction, division and multiplication on two floating point numbers.
10. Write a program to perform addition, subtraction, division and multiplication on two integer point numbers.
11. Write a program to calculate average of two numbers. Print their deviation.
12. Write a program to calculate the total amount of money in the piggy bank given the coins of Rs 10, 5, 2, 1.
13. Write a program to convert degrees Fahrenheit into degrees Celsius.
14. Write a program to count all the prime and composite numbers entered by the user.
15. Write a program to find the greatest number from 3 numbers.
16. Write a program to take input from the user and then check whether it is a number or a character.
17. Write a program to separate two values printed on the same line using a tab.
18. Write a program to calculate the sum and average of first 10 numbers.
19. Write a program to find whether the given number is an Armstrong number or not.
20. Write a program to enter a number and then calculate the sum of its digits.
21. Write a program to enter a binary number and convert it into decimal number.
22. Write a program to calculate GCD of 2 numbers.
23. Write a program to print the reverse of a number.
24. Write a program to print the multiplication table of n, where n is entered by the user.
25. Write a program using for loop to calculate the average of first n natural numbers.
26. Write a program using for loop to calculate factorial of a number.
27. Write a program to classified a given number as prime or composite.
28. Write a program to sum the series---  $1 + 1/2 + \dots + 1/n$ .
29. Write a program using while loop to read the numbers until -1 is encountered. Also count the numbers of prime numbers and composite numbers entered by the user.
30. Write a program to demonstrate the continue statement.
31. Write a program to write a function that displays a string repeatedly.
32. Write a program to demonstrate the mismatch between function parameters and arguments.
33. Write a program to demonstrate the use global statement.
34. Write a program to demonstrate name clash of local and global variable.
35. Write a program to demonstrate access of variables in inner and outer functions.
36. Write a program to demonstrate flow of control after the return statement.
37. Write a program to write another function which returns an integer to the caller.
38. Write a program that adds two numbers using the syntax of lambda functions.
39. Write a program to use a lambda function with an ordinary function.
40. Write a program to add two numbers using lambda function.

## PROGRAM OUTCOMES

**PO 1. Disciplinary Knowledge and Skills:** Good knowledge and understanding of major concepts, theoretical principles in Biotechnology and its allied fields. The knowledge about the experimental findings in Biotechnology and its different subfields like Biochemistry, Microbiology, Bio-techniques and Bioinformatics, Bioethics, IPR, Biosafety, Biostatistics, Genetic Engineering, animal biotechnology, environmental biotechnology, plant biotechnology, molecular biology, industrial biotechnology and immunology including detailed and recent update knowledge about the tools and techniques used in Biotechnology.

**PO 2. Skilled communicator:** Ability to transmit complex technical information relating all areas in Biotechnology in a clear and concise manner in writing and oral ability to present complex and technical concepts in a simple language for better understanding. Able to describe the Biotechnological applied solutions.

**PO 3. Critical thinker and problem solver:** Ability to employ critical thinking and efficient problem solving skills in all the basic and advanced areas of Biotechnology.

**PO 4. Sense of inquiry:** Capability for asking relevant/appropriate questions relating to the issues and problems in the field of Biotechnology, and planning, executing and reporting the results of a theoretical or experimental investigation.

**PO 5. Skilled project manager:** Capable of identifying/mobilizing appropriate resources required for a project, and manage a project through to completion, while observing responsible and ethical scientific conduct; and safety and laboratory hygiene regulations and practices. Also acquaint with the instruments used in Biotechnology field.

**PO 6. Ethical awareness / reasoning and Environmental Sustainability:** The graduate should be capable of demonstrating ability to think and analyze rationally with modern and scientific outlook and identify ethical issues related to one's work, avoid unethical behavior such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights, and adopting objectives, unbiased and truthful actions in all aspects of work. Understand the issues of environmental contexts and sustainable development.

**PO 7. Self-directed, Team player and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context social technological changes. Capable of working effectively in diverse teams in both classroom, laboratory, Biotechnology projects and workshop and in industry and field-based situations.

  
Dr. Shambhant B. Badgujar

## M. Sc BIOTECHNOLOGY

SEMESTER – I		
Code	Title of Course	Credits
MBI001A	BIOCHEMISTRY	4
MBI002A	MICROBIOLOGY	4
MBI003A	IMMUNOLOGY	4
MZO009B	MOLECULAR BIOLOGY AND BIOTECHNOLOGY	4
MBI005A	Laboratory Exercises of Biochemistry, Microbiology and Immunology	6
	<b>Total Credits</b>	<b>22</b>

**Course – Biochemistry**  
**Course Code – MBI001A**  
**Lectures: 4 Hrs/week**

### Course outcome

CO-1 Students will be able to describe the basics of biomolecules and carbohydrates

CO-2 Students will be able to illustrate basis of lipids and its metabolism

CO-3 Students will be able to recognize amino acid structures and illustrates the function and metabolism of proteins.

CO-4 Students will be able to describe nucleic acids, DNA, RNA and enzymes.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	3	2	2	2	2
CO2	3	2	3	1	2	2	1
CO3	3	2	2	1	2	2	2
CO4	2	3	3	2	2	1	2

1-LOW, 2-MEDIUM, 3-HIGH

### **MBI001A: BIOCHEMISTRY**

**Credit(s):4**

#### **Unit 1**

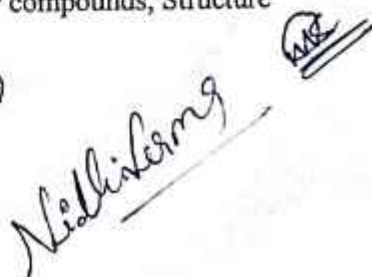

**Chemical foundation of biology:** pH, acids, bases, Buffers, Henderson and Hasselbach equation, pKa, pKb. Preparation of buffers. chemical bonding, properties of water, Gibbs free energy, High energy compounds, ATP Cycle, classification of high energy compounds, Structure of ATP, ATP Production, Chemoosmotic theory

  
Dr. Shamkant B. Badgujar

## Unit 2

**Carbohydrates:** Classification and properties of carbohydrates, mono (glucose, galactose and fructose) di (lactose, maltose, and sucrose), poly (starch, glycogen, cellulose). Physical and chemical properties of carbohydrates. Carbohydrate derivatives: mucins, glycoproteins, glycolipids, peptidoglycan. Mutarotation, Ozone formation etc. Role of carbohydrates in signaling, glycosylation of other biomolecules. Metabolism of carbohydrates, Glycolysis, TCA, Gluconeogenesis, Glycogenesis, Glycogenolysis, glyoxalate cycle and their regulations, anaerobic oxidation of glucose, alternative oxidation pathway of glucose (HMP, PPP pathway etc.)

## Unit 3

**Lipids:** Classification, Structure and biological function of fatty acids, triacylglycerols, phospholipids, steroids. Physico-chemical properties and analysis of fats and oils, Structure and functions of prostaglandins, thromboxanes, cholesterol, properties of oil and fats, acid value, iodine number, Saponification number, beta, alpha, and omega oxidation of fatty acids, cholesterol biosynthesis, fatty acids synthesis, oxidation of odd chain fatty acids, Ketone bodies production and degradation

## Unit 4

**Amino acids:** Classification; Structure and physicochemical properties; Peptides Peptide bonds, Proteins—Classification. Primary structure of proteins and its sequence determination

**Proteins:** Secondary (Ramachandran plot), tertiary and quaternary structural features of proteins; Primary structure, Bonds responsible for protein stability. Myoglobin, hemoglobin, fibrous proteins (collagen, keratins, silk fibroin), transamination, urea cycle, deamination oxidative and non-oxidative, regulation of urea cycle. Vitamins and Co-enzyme (biological and biochemical functions).

## Unit 5

**Nucleic Acids:** Structure of purines, pyrimidine, nucleosides, and nucleotides. Structure, properties and functions of nucleic acids (DNA, RNA), Different forms of DNA and RNA. Three dimensional structure of tRNA, De novo synthesis of purine and pyrimidine and its degradation. Salvage pathway.

**Enzymes-** Nomenclature, Holoenzyme, Apo enzyme, Co enzyme, Kinetics of Enzyme, Mechanism of their action, MM equation, Line Weaver Burk Plot, Inhibition of Enzyme, Reversible, Irreversible and Feed Back

### Suggested Readings

1. Textbook of Biochemistry. 1968 by West and Todd (MacMillan)
2. Principles of Biochemistry. 1993 by A.L. Lehninger, Nelson and Cox (C.B.S., India).
3. Principles of Biochemistry General Aspects. 1983 by Smith et al., (McGraw Hill)
4. Biochemistry (2nd edition) by Donald Voet and Judith Voet.
5. Biochemistry (4th edition) by L. Stryer (Free man).
6. Textbook of Biochemistry with Clinical Correlation (4th edition) by Thomas M. Devlin.
7. Biochemistry by Zubay.
8. Nucleic acid Biochemistry and Molecular Biology by Main Waring et al., (Blackwell).
9. Biochemistry, 2nd edition by Albert L. Lehninger. 1978. Kalyani Publishers, New Delhi.
10. Biochemical calculations, Irwin H. Segel, John Wiley and sons Inc
11. Organic Chemistry, DJ Cram and GS Hammond

**Course – Microbiology**  
**Course Code – MBI002A**  
**Lectures: 4 Hrs/week**

**MBI002A: MICROBIOLOGY**

**Credit(s): 4**

**Course outcome**

CO-1 Students will be able understand the difference between prokaryotic cell and eukaryotic cell and classification of bacterial cell.

CO-2 Students will be able to describe and identify different microbial genetic recombination- Transformation, transduction, conjugation and microbial growth curve.

CO-3 Students will be distinguish the different media and its preparation and will also understand different sterilization techniques.

CO-4 Students will able to acquire skills to analyze host-parasite relationships and microbial diseases.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	3	2	3	2	1	0	0
CO4	3	2	3	2	1	1	1

1-LOW, 2-MEDIUM, 3-HIGH

**MBI002A: MICROBIOLOGY**

**Credit(s): 4**

**Unit-1**

**Introduction to Microbiology:** Historical background & scope, Prokaryotic and Eukaryotic cell structures, Difference between prokaryotic and eukaryotic organisms.

**Classification of microorganism:** Classification of Bacteria: Basic principle and techniques used in bacterial classification. The five-kingdom concept of classification, archaeobacteria, eubacteria and eukaryotes; Morphology and fine structure of bacteria, General structure and features

**Unit-2**

**Microbial genetics recombination:** Transformation, transduction, conjugation, Nutritional requirements and nutritional classification of microorganisms: principle of microbial nutrition, Nitrogen fixation, Photosynthesis

**Microbial Growth:** The definition of growth, growth curve, bacterial generation time, Synchronous growth curve, Continuous culture; Growth as affected by environmental factors like temperature, acidity, alkalinity, water availability and oxygen, Different effects of physical and chemical factors on microbial growth.

  
Dr. Shamkant B. Badgujar

### Unit-3

**Methods in Microbiology:** Sterilization techniques- Physical and chemical methods; Preparation of culture media, Different types of media- simple, complex and defined, Pure culture techniques- isolation, cultivation, enumeration and preservation of microbes.

**Chemotherapeutic agents:** Antimicrobial agents; Sulfa drugs; Antibiotics - Penicillin and Cephalosporin; Classification of Antibiotics, Broad and narrow spectrum antibiotics; Antibiotics from prokaryotes; Antifungal and antiviral antibiotics, mode of action of antibiotics; Resistance to antibiotics, origin of drug resistance, mechanism of drug resistance, antimicrobial susceptibility test.

### Unit-4

**Host-Parasite Relationships:** Normal micro flora of skin, oral cavity, Gastrointestinal tract; Entry of pathogens into the host; colonization and factors predisposing to infections; types of toxins and their structure; Mode of actions; Virulence and Pathogenesis.

**Microbial Diseases:** Respiratory infections caused by bacteria and viruses; Tuberculosis; Sexually transmitted diseases including AIDS; Diseases transmitted by animals, insects and ticks, food and water borne diseases; Pathogenic fungi; Emerging and resurgent infectious diseases.

### Unit-5

**Viruses:** Discovery, General characteristics, Morphology, Classification and structure of plant, animal and bacterial viruses, Structure and morphology of bacteriophage, lytic and lysogenic cycle various Plant and Animal Virus

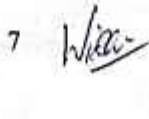

### Suggested Readings

1. Alcamo 's Fundamental of Microbiology, (2004); Pommerville et al.
2. Microbiology (2004); Tortora, F.
3. Foundation in Microbiology (1996); Talaro & Talora.
4. Food Microbiology (2004); Adam, M.R.
5. Principles of Microbiology (1994); Atlas, R.M.
6. Pharmaceuticals Microbiology (2003); Purohit & Saluja.
7. Brock Biology of Microbiology, Martinko, M.T & Parker, J.

**Course – Immunology**  
**Course Code – MBI003A**  
**Lectures: 4 Hrs/week**

**MBI003A: IMMUNOLOGY**

**Credit(s): 4**

**Course outcome**

CO-1 Students will demonstrate a basic concept of immunology at the cellular and molecular level, define central principles and concepts, outline, compare, contrast innate and adaptive immunity, and describe the different cell types and organs that make up the immune response.

CO-2 Students will illustrate various mechanisms that regulate immune responses and maintain tolerance; elucidate the genetic basis for immunological diversity and the generation of adaptive immune responses. They will outline key events and cellular players in antigen presentation and how the nature of the antigen will shape resulting effector responses and be able to apply basic techniques for identifying antigen-antibody interactions.

CO-3 Students will understand the principles governing vaccination and the mechanisms of protection against infectious diseases and will be able to elucidate the reasons for immunization and aware of different vaccination.

CO-4 Students will be able to communicate effectively in both oral and written formats, using appropriate vocabulary for immunology, response mechanisms, regulation, and genetic basis; apply scientific principles in interpreting responses and data; and understand immunology's roles in disease protection.

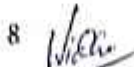

**Mapping of PO/CO**

CO4	3	3	3	2			

1-LOW,2-MEDIUM,3-HIGH

  
**Dr. Shamkant B. Badgujar**

8 

## Unit-1

**Introduction:** Scope of immunology, Types: Innate and acquired immunity. Features of immune response: Memory, Specificity and recognition of self and non-self, Clonal nature of immune response,

**Humoral and Cell mediated immune responses, Cells of the immune system:** Hematopoiesis and differentiation, B-lymphocytes, T-lymphocytes, mononuclear phagocytes, macrophages, dendritic cells, natural killer cells and lymphocyte activated killer cells, neutrophils, eosinophils, basophils, mast cells & dendritic cells, lymphocyte trafficking.

**Organs of the immune system:** Primary and secondary lymphoid organs: Thymus, Bone marrow, lymphatic system, lymph nodes, spleen, Mucosal Associated Lymphoid Tissue (MALT), Cutaneous-Associated Lymphoid Tissues.

## Unit-2

**Antigen:** Immunogenicity v/s antigenicity, factors affecting immunogenicity, nature of immunogen, biological system, epitopes, haptens and antigenicity, pattern recognition receptors, super antigens.

**Immunoglobulins:** Structure of antibody, function and synthesis, antibody mediated effectors functions, antibody classes and biological activities, antigenic determinants on Immunoglobulins, Immunoglobulins super families. Production and applications of monoclonal antibodies (by hybridoma technology).

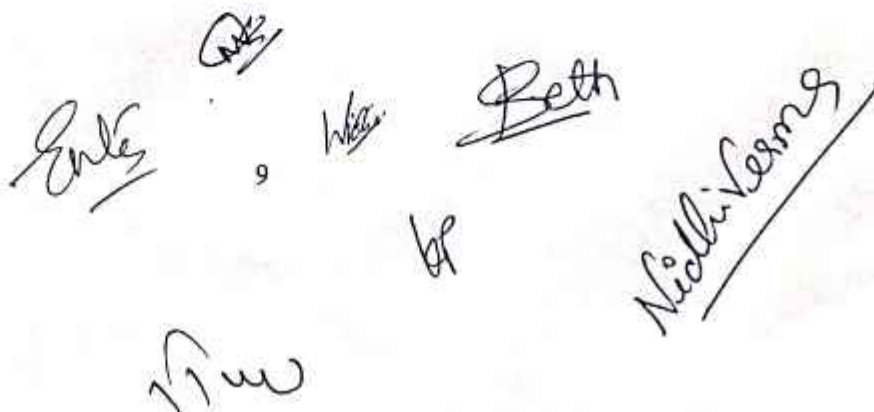

**Antigen-Antibody interactions:** Strength of interaction, cross reactivity, precipitate, reaction, agglutination reaction, radio immunoassay, Enzyme Linked Immunosorbent Assay, chemiluminescence, ELISPOT assay, western blot, immunoprecipitation, immunofluorescence, flow cytometry and fluorescence. Surface plasmon resonance and Epitope mapping

## Unit-3

**Major histocompatibility complex:** General organization, MHC molecules: structure & genes, their mode of antigen presentation and interaction, cellular distribution of MHC, regulation of MHC expression and disease susceptibility. Antigen Processing and Presentation: role of antigen presenting cells, endogenous antigens: cytosolic pathway; exogenous antigens: endocytic pathway. T-Cell receptor complex, T- Cell accessory membrane molecules, activation of T-cells, organization and arrangement of T-receptor genes B-cell receptor complex, activation and proliferation of B-cells, regulation of B- cell development.

**Cytokines:** Structure and functions, cytokine receptors, signal transductions mediated by cytokine receptors, cytokine regulation of immune responses, cytokine related diseases and therapeutic applications of cytokines.

**Complement system:** Function, components, activation, regulation and deficiencies of complement. Cytotoxic T-cell and their mechanism of action, NK cell and mechanism of target cell destruction. Antibody dependent cell mediated cytotoxicity. **Inflammation:** its mediator and

the process, cell-adhesion molecules and their role in inflammation, lymphocyte homing, tissue injury and immune response leading to an inflammatory reaction, role of anaphylatoxins, granulocyte in inflammatory process. Hypersensitivity reaction: Definition, IgE mediated hypersensitivity, mechanism of mast cell degranulation, mediators of type I reactions and consequences. Type II reactions, immune complex mediated hypersensitivity and delayed type hypersensitivity.

#### Unit-4

**Immune response to infectious diseases:** Bacteria, viruses and intracellular parasites. **Vaccines:** Active and Passive Immunization Types of Vaccines- Inactivate Attenuated, Purified macromolecules and Recombinant-vector, DNA, Synthetic peptide, Multivalent subunit Vaccines. **Immunodeficiency Syndrome:** Primary Immunodeficiency and Second ary Immunodeficiency and their diagnosis and therapeutic approaches. **Autoimmunity:** Organ specific diseases, systemic disease, mechanism of autoimmunity, treatment of autoimmune diseases.

#### Unit-5

**Transplantation immunology:** immunologic basis of graft rejection, immune suppression and immune tolerance. **Tumor immunology:** cancer definition, malignant transformation of cells, oncogenes and cancer induction, tumor antigens, tumor evasion of the immune system, cancer immunotherapy.

#### Suggested Readings

1. Molecular biology of the Cell, Alberts B., Bray D., Lewis J., Ralf M., Roberts K. and Watson J.D., Garland Publishing Inc. (2001).
2. Kuby Immunology, Goldsby R.A., Kindt Thomas J., Osburne B.A., WH Freeman & Company, (2000).
3. Immunology-Understanding the Immune System Elgert K.D, Wiley Liss, (1996).
4. Roitt's essential Immunology, Roitt I.M. and Delves P.J., Blackwell Science Ltd., (2001).
5. Immunology 6th Edition, Roitt I., Brostoff J. and Male D., Mosby Harcourt Publishers, (2001).
6. Immuno-biology, Janeway CA and Paul Travers 1994.
7. Immunological techniques, D.M. Weir, 1992.
8. Current Protocols in Immunology 3 Volumes, Wiley Publications 1994.
9. Monoclonal Antibodies: Principles and Practice, J. W. Goding, 1983. Academic Press
10. Hybridoma Technology in the Biosciences and medicine, T.A. Springer, 1985. Plenum Press NY.
11. Vaccines, New Approaches to immunization, F.Brown, R.M.Chanock, KA Lerner, 1986. Coldspring Harborlab.
12. Topley and Wilson principles of bacteriology, Virology and immunology, G. Wilson, A. Miles, M.T. Paker, 1984. Arnold, Heineman.
13. Basic and Clinical Immunology, D.P. Stities and J.D. Stobo
14. Immunology- A short Course, Eli Benamini, Richard Coico, Geoffrey Sunshine.
15. Immunology by Tizzard
16. Fundamentals of Immunology, William Paul.
17. Immunology by Abbas.

**Course – Molecular Biology**  
**Course Code – MZO009B**  
**Lectures: 4 Hrs/week**

**MZO009B: Molecular Biology and Biotechnology**

**Course outcome**

- CO-1 Students will be able to describe about structure of nucleic acid, replication process and mutation.
- CO-2 Students will be able to learn the transcription in prokaryotes and eukaryotes.
- CO-3 Students will be able to explain the translational process for prokaryotes and eukaryotes.
- CO-4 Students will be able to analyze the regulation of gene expression in living organisms.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	1	2	2
CO2	3	3	3	2	1	1	1
CO3	3	3	3	1	2	1	1
CO4	3	3	3	2	1	2	1

1 – LOW ,2- MEDIUM , 3-HIGH

**MZO009B: Molecular Biology and Biotechnology**

**Credit(s): 4**

**Unit I**

Nucleic acids –DNA & RNA, DNA replication: modes of replication, Prokaryotic and eukaryotic DNA replication, Mechanics of DNA replication, Enzymes and Accessory proteins involved in DNA replication, Models of DNA replication, Inhibitors of DNA replication, DNA repair mechanisms

**Unit II**

Transcription in prokaryotes and eukaryotes: Structural organisation and life span of mRNA; rRNA & tRNA, Mechanism of transcription in prokaryotes and eukaryotes. Post transcriptional modification of RNA- Capping, Polyadenylation , Splicing, RNA editing.

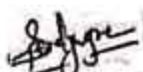

**Unit III**

Genetic code: Characteristics of genetic code, Start codons and stop codons, Degeneracy of the code: Wobble hypothesis

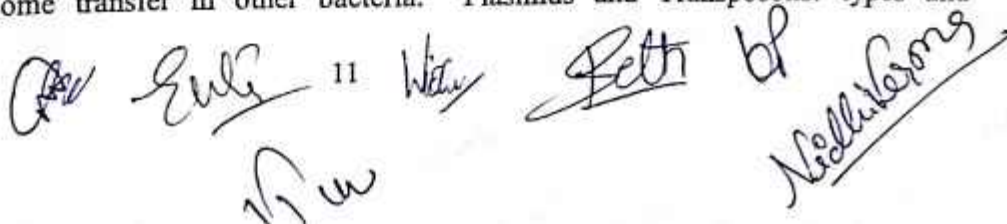

Translation in prokaryotes and eukaryotes: Aminoacylation of tRNA & initiation, elongation and termination of protein synthesis, Translational inhibitors, Post- translational modification of proteins: protein folding (role of chaperones) and biochemical modifications.

**Unit IV**

Bacterial genetics: Molecular mapping of genome, genetic and physical mapping. Gene transfer mechanisms-Transformation- molecular mechanism, mapping and other uses of transformation, Transduction- generalized transduction, co-transduction and specialized transduction. Bacterial conjugation, Chromosome transfer in other bacteria. Plasmids and Transposons: types and

Dr. Shamkant B. Badgujar

properties.

### Unit V

Molecular markers in genome analysis (RFLP, RAPD and AFLP). Transgenesis & Transgenic animals: Production, Applications, Animal Cloning. Stem cell: types and applications.

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Understand the structure of nucleic acid, replication process and DNA repair mechanism.

CO2 Analyze the mechanism of transcription in prokaryotes and eukaryotes.

CO3 Explain the translational process for prokaryotes and eukaryotes.

CO4 Understand about Bacterial genetics and Gene transfer mechanisms.

CO5 Understand the concept of Molecular markers in genome analysis, transgenesis and stem cells.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	0	2
CO2	3	0	3	1	0	0	2
CO3	3	0	3	1	0	0	2
CO4	3	0	3	1	0	0	2
CO5	3	0	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

### Suggested Readings

- Benjamin Lewin : Genes, Vol. VIII, Pearson Prentice Hall, Singapore
- Elliott, W. H and Elliott, D. C. : Advanced molecular Biology, Viva Books, New Delhi
- Freifelder, D. : Molecular Biology, Narosa Publishing House, New Delhi
- Russel, P. J. : Cell and Molecular Biology, Cengage learning
- Molecular Biology of the Gene. L.D Watson, N.H. Hopkins, J.W. Roberts, J.A. Steiz and AM Weiner The Benjamin/Cummings Pub. Co., Inc., California.
- De Robertis E.D.P. and De Robertis Jr, E.M.F., Cell and Molecular Biology. K. M. Varghese Cop. Bombay.

### MBI005A: Laboratory Exercises of Biochemistry, Microbiology and Immunology

Credit(s): 6

- To determine  $\lambda_{max}$  of Protein
- $\lambda_{max}$  of DNA
- Separation of Amino acids using paper chromatography
- Qualitative analysis of carbohydrates
- Qualitative analysis of Fats and Oil
- Qualitative analysis of Protein
- Preparation of Buffers
- Verification of Lambert and Beer law
- Calibration of Spectrometer
- Sterilization and preparation of media, Enumeration of bacteria and fungi from soil, water.

  
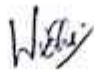

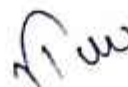

Dr. Shankar B. Badgujar

11. Environmental samples - soil, water and air. Techniques for pure culture - streaking, pour plate and spread plate.
12. Isolation and maintenance of organisms by plating, streaking and serial dilution method, slant and stab cultures, storage of microorganisms.
13. Preparation of Liquid and Solid media for growth of microorganisms.
14. Stains and staining techniques, simple staining, negative staining, acid fast, spore, endospore staining, capsule staining & differential staining Techniques.
15. Bacterial growth - Growth curve, factors affecting bacterial growth - pH, Temperature, Carbon and Nitrogen source and Salinity.
16. Measurement of bacteria population by turbidometry and serial dilution methods.
17. Biochemical tests for identification of bacteria.
18. Antimicrobial assay, phenol coefficient, agar plate sensitive method.
19. Cultivation and morphology of molds and yeast
20. Assay of antibiotics and demonstration of antibiotic resistance
21. Bacterial transformation.
22. One Step growth curve of coli phage.
23. Antimicrobial activity of certain plant extracts.
24. Effect of UV radiation on bacteria.
25. Cell counting and cell viability.
26. Blood cell analysis
27. Lymphocyte subset identification and enumeration
28. Separation of serum components by electrophoresis
29. Immunodiffusion
30. Radial immunodiffusion test
31. Immuno electrophoresis
32. ELISA
33. Differential WBC count.
34. The effect of hypertonic, hypotonic and isotonic environment on human RBC
35. Ouchterlony technique

SEMESTER – II		
MBI006A	BIOTECHNIQUES AND BIOINFORMATICS	4
MBI007A	BIOSAFETY, BIOETHICS AND IPR, BIOSTATISTICS	4
	Any one from the following:	
MBI008A	GENETIC ENGINEERING	4
MBI009A	BIOPROCESS ENGINEERING	
MBI019A	AGRICULTURAL MICROBIOLOGY	4
MBI020A	STRUCTURAL BIOINFOMATICS	
MBI010A	Laboratory Exercises of Genetic and Bioprocess Engineering	6
	Total Credits	22

Course – Bio-techniques and Bioinformatics  
 Course Code – MBI006A  
 Lectures: 4 Hrs/week

  
 Dr. Shamkant B. Badgujar

 13   

### Course outcome

CO-1 Students will be able understand different analytical techniques for identification of biomolecules in Biotechnology

CO-2 Students will be able to describe and compare different types of chromatographic, electrophoresis, centrifugation and spectrometric techniques

CO-3 Students will be able to distinguish different software, databases and types of networks. Student will also acquaint with bioinformatics tools for analyzing proteomics and genomics

CO-4 Student will able to acquire skills to analyze the critical problems related to instruments used in biology

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	2	2	2	0	1
CO2	3	2	2	1	3	0	1
CO3	3	1	2	2	2	0	2
CO4	3	2	3	2	2	0	1

### **MBI006A: BIOTECHNIQUES AND BIOINFORMATICS**

**Credit(s): 4**

#### **Unit-1**

**Laboratory instrumentation:** principle, components, assembly, working and applications of: Laminar clean air flow bench, autoclave, incubators, weighing balances, pH meter, water bath, hot air oven, colony counter and microtome. Laboratory safety measures.

**Basic knowledge of the principles and applications of Microscopy:** Simple microscopy, Phase contrast microscopy and electron microscopy (TEM and SEM). Sedimentation- Sedimentation velocity, preparative and analytical ultracentrifugation techniques

**Electrophoresis-** General principle, 2D gel electrophoresis, paper electrophoresis, SDS PAGE, application and types, Spectroscopic methods: Principle and applications of UV-visible, IR, X-ray, Red and Blue shift, basic structure of spectrophotometer, B bands and R bands, various transitions in compounds, vibrational spectroscopy, different types of vibrations

#### **Unit-2**

**Chromatography-** General principles and applications of – Adsorption chromatography, Ion-exchange chromatography, Thin-layer chromatography, Hydrophobic chromatography, Gas-liquid chromatography, HPLC, Affinity chromatography, Paper chromatography.

**Radioisotopic Techniques:** Types of radioisotopes used in Biochemistry, units of radioactivity measurements,

isotopes commonly used in biochemical studies –  $^{32}\text{P}$ ,  $^{35}\text{S}$ ,  $^{14}\text{C}$  and  $^3\text{H}$ ), application of isotopes, Autoradiography: Biological hazards of radiation and safety measures in handling radioisotopes; Biological applications

### Unit-3

**Centrifugation:** Basic principles; Mathematics & theory (RCF, Sedimentation coefficient etc); Types of centrifuge Microcentrifuge, High speed & Ultracentrifuges; Preparative centrifugation; Differential & density gradient centrifugation; Applications (Isolation of cell components); Analytical centrifugation; Determination of molecular weight by sedimentation velocity & sedimentation equilibrium methods.

### Unit-4

**Computer Architecture** Internal and External devices, computer software, operating system windows, Unix, Application software like word processor, spread sheet, Database, RDBMS. **Computer Network-** Advantages of network, types of network (LAN, WAN & MAN), Network protocols, Internet protocol (TCP, IP), and File transfer protocol (FTP), WWW, HTTP, HTML, VRL. **Concept of database management:** brief idea of data types, data structures, searching, sorting, designing a database, genomic, proteomic, and metabolic pathways databases.

### Unit-5

**Proteomics and Genomics:** Computer analysis of genetic sequences: general concepts of sequence analysis, identification of functional sequences, homology, brief idea of BLAST, ENTREZ, and PubMed. Basic issues and concepts, protein sequences and alignment, protein structure prediction. Bioinformatics tools in drug design

### *Suggested Readings*

1. Textbook of optics and atomic physics – P.P. Khandelwal (Himalaya Publishing House)
2. Nuclear physics an introduction – S.B. Patel (New Age International) Biophysics – Patabhi and Gautham (Narosa Publishing House)
3. Instrumentation measurements and analysis – Nakara, Choudhari (Tata Mc Graw Hill)
4. Handbook of analytical instruments – R.S. Khandpur (Tata Mc Graw Hill)
5. Perspectives of modern physics – Arthur Beiser (Mc Graw Hill)

6. Introduction to atomic spectra – H.E. White (Mc Graw Hill)
7. Molecular cell biology – Ladish, Berk, Matsudara, Kaiser, Krieger, Zipursky, Darnell (W.H. Freeman and Co.)
8. Biophysics - Cotrell (Eastern Economy Edition)
9. Clinical Biophysics –Principles and Techniques- P. Narayanan (Bhalani Pub., Mumbai)

**Course – Biosafety, Bioethics and IPR Biostatistics**  
**Course Code – MBI007A**  
**Lectures: 4 Hrs/week**

**MBI007A: BIOSAFETY, BIOETHICS AND IPR BIOSTATISTICS**

**Credit(s):**

**4**

**Course outcome**

- CO-1 Students will be able understand biosafety guidelines by DBT.
- CO-2 Students will be able to describe IPR and will be able to identify different forms of IPR system.
- CO-3 Students will be able to distinguish the mean, mode, median, correlation and regression in biostatistics.
- CO-4 Students will able to acquire skills to analyze the problems on probability and different models of data presentation.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	2	2	1	1	1
CO2	3	3	2	2	3	0	1
CO3	3	2	3	2	0	0	2
CO4	3	2	3	2	0	0	2

1-LOW, 2-MEDIUM, 3-HIGH

**MBI007A: BIOSAFETY, BIOETHICS AND IPR BIOSTATISTICS**

**Credit(s): 4**

**Unit-1**

**Biosafety-** definitions - DBT guidelines on biosafety in conducting research in biology/biotechnology - Regulations of Genetically modified Organisms in India- Biosafety regulation for transgenic plants and animals - labeling of GM foods

**Unit-2**

**IPR-** -Different forms of IPR - Benefits of IPR system; WTO - Definition, GATT - Definition -

  
**Dr. Shamkant B. Badgujar**

 16 May 2016

Objectives - Structural format of WTO - Economic Impact of WTO  
Bioethics - definition - Bioethics of IPR - ethical criteria in biotechnology

#### Unit-3

**Definitions and scope of Biostatistics:** Variable in biology, collection, classification and tabulation of data. Graphical and diagrammatic representation, histogram, frequency polygon, frequency curve; Importance and applications Tabulation and Classification of data, Frequency distribution and Graphical distribution of data Measure of Central tendencies Mean, Media, mode and their properties. Measures and Dispersion, Mean deviation, Variance, Standard deviation and Coefficient of Variation. Correlation and regression

#### Unit-4

**Elements of probability theory-** Probability distributions-binominal, Poisson and normal distribution, Correlation coefficient; Simple linear regression, Probit and logit analysis Hypothesis Testing Student T,  $r$  and Chi-square test; Probability and Distribution, Skweness and Kurtosis

#### Unit-5

Concepts and problems on probability, Binomial, Poisson, Normal Distribution and their Applications, Different Models of data presentation with special reference to biological samples.

#### Suggested Readings

1. Bernhard Palsson and Sangeeta N Bhatia, Tissue Engineering, 2nd Edition, Prentice Hall, 2004.
2. Pamela Greenwell, Michelle McCulley, Molecular Therapeutics: 21st century medicine, 1st Edition, Sringer, 2008.

**Course: GENETIC ENGINEERING**

**Course Code: MBI008A**

**Lectures: 4 Hrs/week**

#### Course outcome

CO-1 Students will be able to explain different tools and techniques involved in r-DNA technology.

CO-2 Students will be able to describe different vector and probe.

CO-3 Students will be able to explain different nucleic acid technology, mapping and molecular markers.

CO-4 Students will be able to acquire skills to understand application of genetic engineering techniques in basic and applied experimental biology.

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	2	2	2
CO2	3	3	3	2	1	2	1
CO3	3	3	3	1	2	2	2
CO4	3	3	3	2	1	2	1

1 - LOW, 2- MEDIUM, 3-HIGH

## MBI008A: GENETIC ENGINEERING

Credit(s) 4

### Unit-1

Concept and emergence of r-DNA technology, preparation and purification of total cell DNA, plasmid DNA and bacteriophage DNA; Basic techniques involved in rDNA technology: Enzymes involved in RDT (Klenow fragment, Taq DNA, Ribonucleases, Alkaline phosphatase, Nuclease, T4 DNA ligase) Restriction enzymes, Preparation of Desired Gene from genome, reverse transcription and gene machine. Generation of genomic and cDNA libraries; Methods of Ligation linkers, polylinker, adapter, Shot Gun cloning

### Unit-2

Vectors-Plasmids, cosmids,  $\lambda$ , phagemids, yeast artificial chromosomes. Introduction of DNA/RNA in bacteria, yeast, fungi and in other eukaryotic host systems; Selection and screening of recombinant clones: Direct and indirect methods. Probe preparation (radio labeling and non- radio labeling), Lac Z gene, Reporter Gene, Marker Gene

### Unit-3

Methods based on Nucleic acid homology (Southern, northern, western, southern- western, subtractive, colony and plaque hybridization, in situ chromosomal hybridization, chromosomal walk, etc.)

### Unit-4

Characterization of cloned DNA: Restriction mapping. DNA sequencing: Polymerase Chain Reaction and its variations. DNA fingerprinting, Molecular Markers (RAPD, SSR, VNR, RFLP, AFLP etc.)

### Unit-5

Expression of cloned DNA: Expression vectors. Modification of cloned DNA (Site directed mutagenesis) Secretion of cloned product; Applications of recombinant DNA technology: Transgenic animals. Transgenic plants; Pharmaceutical products and Health care products

### *Suggested Readings*

1. Recombinant DNA: Watson
2. Genetic engineering: Sandya Mitra
3. Principles of gene manipulation: Old & Primrose
4. Gene cloning: T. A. Brown
5. Molecular Bio logy Lab fax I & II: T. A. Brown

Course – Bioprocessing Engineering

Course Code – MBI009A

Lectures: 4 Hrs/week

## MBI009A: BIOPROCESSING ENGINEERING

Credit(s): 4

### Course outcome

CO-1 Students will use correct biological terms to describe and analyze phenomena/problems in bioprocesses, describe and explain the principles and processes involved in fermentation technology, investigate properties of microbes for product formation and their improvement.

CO-2 Students will analyze the characteristic of suitable media for product formation, formulation of media, selection of appropriate bioreactor models based upon bioproducts and cell lines, and other process criteria

CO-3 Students will be able to apply the concept in the field of industrial biotechnology and design a suitable scheme of bioproduct separations based upon the molecular characteristics of the product and other process criteria

CO-4 Students will be able to simplify the concepts and explain them through oral presentations

CO4	1	3					2

1-LOW,2-MEDIUM,3-HIGH

#### **MBI009A: BIOPROCESSING ENGINEERING**

**Credit(s): 4**

##### **Unit-1**

**Historical background-** Composition of food, Growth of microorganisms in food: Intrinsic and extrinsic factors. Characterization and Techniques of fermentation systems. Role of Fermentation; Biochemistry of Fermentation, Fermentation of Carbohydrates, Protein, Lipid Metabolism, Formation of flavour. Advanced continuous fermentation for anaerobic microorganisms, Fermentation process development of carbohydrate based therapeutics,

##### **Unit-2**

**Bioprocess development for Validation-** detoxification and decolorization, Fermentation process validation. Genetic manipulation of industrially important microorganisms: Methods of reproduction, recombination, strain modification, stabilization of transformants, autonomous replication. Production of foreign protein, Commercial production of plant proteins in microorganisms. Economics of fermented products

##### **Unit-3**

**Microorganisms involved in natural fermentation-** Microbial succession. Composition and nutrition of fermented products Traditional fermented foods: Bread, cocoa, coffee, tea, sauerkraut, cheese, butter, yoghurt, meat, fish, etc. Alcoholic beverages: Beer, wine and whisky. Value addition products: High fructose syrup, invert sugars etc. Edible fungus: Mushrooms. Bioreactors in food fermentation; Packaging of fermented food products Biosensors; Bio logical monitoring of foods, waste management and food processing; HACCP and hurdle technology. Protein engineering in food technology: methods, targets and applications in foods.

##### **Unit-4**

**Fermentation Technology-** The component parts of a fermentation process range of fermentation processes, chronological development of fermentation industry. Isolation, Preservation and strain improvement of industrially-important microorganisms. Fermentation media for industrial fermentation Design of Fermentor- Basic functions of a Fermentor for microbial culture, aseptic operation and containment, Aeration and Agitation, valves and steam traps; Types of fermentation, Types of fermentation vessels

### Unit-5

**Fermentation Processes-** Batch, fed-batch and continuous fermentations, Solid-state fermentations, Dual or multiple fermentations; Recovery and purification of fermentation products (down-stream processing) - Recovery of microbial cells, cell disruption. Chromatography, membrane processes, drying and crystallization ion. Fermentation Enzyme and cell immobilization and their industrial applications; Industrial Production of Antibiotics- Penicillin, Streptomycin, Tetracyclines Organic acids-Citric acid, Lactic acid, Acetic acid; Enzymes- Amylases, Proteases, lipases acids-Lysine, Glutamic acid. Beverages-Wine, Beer, alcohol Microbial leaching-Organisms involved in leaching, Chemistry of microbial leaching and commercial process. Mushroom cultivation

### Suggested Readings

1. Microbial Biotechnology – Glazer and Nikaido 1995
2. Biotechnology-A Text Book of Industrial Microbiology-Crueger and Crueger, 2000.
3. Principles of Fermentation Technology- Stanbury, Whitaker and Hall 1997.
4. Microbial Technology. Vol. I and II - Pepler and Perlman (Eds).
5. Prescott and Dunn's Industrial Microbiology – Reed (Ed).
6. Concepts in Biotechnology- Balasubramanian, Bryce, Dharmalingam, Green and Jayaraman
7. Industrial Microbiology- A.H. Patel.
8. Industrial Microbiology- Casida.

Department Elective- 1

Course Code: MBI019A

Course Name: Agriculture Microbiology

### Course outcome

- CO-1 Students will be able to understand the basics agricultural microbiology  
 CO-2 Students will be able to illustrate different type of metabolism in bacteria  
 CO-3 Students will be able to explain soil microflora useful for crops  
 CO-4 Students will be able to evaluate the uses of different types of biofertilizer

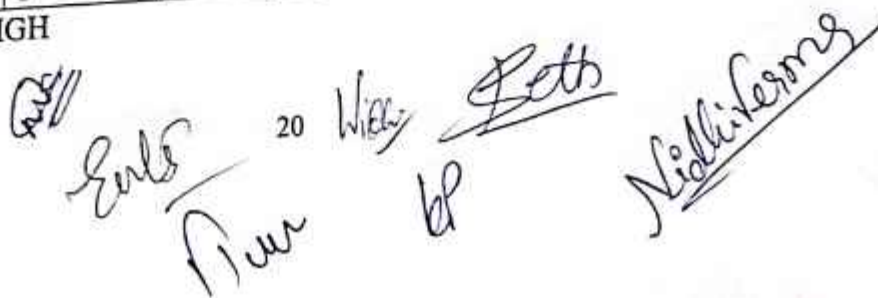

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

Unit 1

  
 Dr. Shamkant B. Badgujar

History of Microbiology: Spontaneous generation theory, Role of microbes in fermentation, Germ theory of disease, Protection against infections, Applied areas of Microbiology

## Unit 2

Metabolism in bacteria: ATP generation, chemoautotrophy, photo autotrophy, respiration, fermentation. Bacteriophages: structure and properties of Bacterial viruses – Lytic and Lysogenic cycles: viroids, prions.

## Unit 3

Microbial groups in soil, microbial transformations of carbon, nitrogen, phosphorus and sulphur, Biological nitrogen fixation. Microflora of Rhizosphere and Phyllosphere microflora, microbes in composting. Microbiology of food: microbial spoilage and principles of food preservation.

## Unit 4

Beneficial microorganisms in Agriculture: Biofertilizer (Bacterial Cyanobacterial and Fungal), microbial insecticides, Microbial agents for control of Plant diseases, Biodegradation, Biogas production, Biodegradable plastics, Plant – Microbe interactions.

## Unit 5

**Biodegradation of natural compounds:** (cellulose, hemicelluloses, lignin, chitin,). Biodegradation of xenobiotics in environment – Organisms involved in degradation of chlorinated hydrocarbons, substituted simple aromatic compounds, polyaromatic hydrocarbons, pesticides, synthetic polymers, detergents and hydrocarbons Bioremediation- *ex situ* and *in situ*. bioaccumulation, biomagnifications.

## Reference Books

1. Agricultural Microbiology. 1998. G. Rangaswani and D.J. Bagyaraj. Prentice Hall of India. , New Delhi.
2. An Introduction to Microbiology. 1996. P. Tauro, K.K. Kapoor and K.S. Yadav. Wiley Eastern Ltd. , New Delhi.
3. Microbiology, 1986. M. J. Pelczar, E.C.S. Chan and N.L. Krieg. Mc Graw Hill 5th Edition, New York, USA.
4. Soil microorganisms and plant growth. 1977. N. S. . Subbarao Oxford & IBH Publ. Co. , New Delhi.

## Department Elective- 2

Course Code: MBI020A

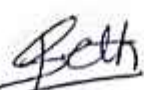

Course Name: Structural Bioinformatics

## Course Outcomes:

- CO-1: Student will be able to understand the basic concept of protein structures.  
CO-2: Student will be able to acquire the basic concepts of protein databases and their file format.  
CO3: Student will be able to determine homology between the biological sequences by similarity alignments.  
CO4: Students will be able to understand the structural features of RNA of the organisms.

Mapping of PO/CO

  
Dr. Shamkant B. Badgujar

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	0
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

## BBI159 Structural Bioinformatics

### Unit I

Fundamentals of X-ray diffraction, NMR spectroscopy of macromolecules, Protein Structure: Primary, Secondary, Super Secondary, Domains, Tertiary, Quaternary, Ramachandran plot.

### Unit II

Protein secondary structure classification databases: HSSP, FSSP, CATH, SCOP, Protein secondary structure prediction methods: GOR, Chou-Fasman, PHD, PSI-PRED, J-Pred.

### Unit III

Protein Tertiary structure prediction methods: Homology Modeling, Fold Recognition, Ab-initio Method, Protein folding, Molecular Dynamics of Protein, Molecular Docking of Protein, Small molecule and Nucleotide, Concepts of Force Field

### Unit IV

Motif and Domain: Motif databases and analysis tools, Domain databases (CDD, SMART, ProDom) and Analysis tools. HMM (Hidden Markov Model): Introduction to HMM, its application in Sequence alignment and Structure prediction, HMM based Softwares (HMMER and HMMSTR)

### Unit V

Structural features of RNA: Primary, Secondary, Tertiary. Introduction to RNA Secondary structure prediction, Methods for RNA Secondary structure prediction, Limitation of RNA Secondary structure prediction.

### References:

1. David W. Mount - Bioinformatics: Sequence and Genome Analysis, Cold Spring Harbor Laboratory, 2004.

## MBI010A: Laboratory Exercises of Genetic engineering and Bioprocess

### Engineering Credit(s): 6

1. Estimation of carbohydrate by Anthrone reagent

2. Estimation of Glycogen
3. Estimation of Protein by Lowry's, Barford and Biurette method
4. Saponification value of oil
5. Acid number of oil and fats
6. Iodine number
7. Estimation of DNA by DPA Method
8. Estimation of RNA by Orcinol Method
9. Restriction digestion
10. Ligation
11. Isolation of Bacterial DNA
12. Quantification of bacterial DNA using spectrophotometer
13. Isolation of RNA and quantification by a spectrophotometric method
14. Separation of plant protein by SDS PAGE and visualization
15. Demonstration of PCR technique
16. Isolation of genomic DNA from plant and bacteria
17. Isolation of plasmid
18. Agarose gel electrophoresis
19. Restriction Digestion DNA/plasmid
20. Isolation of RNA
21. Southern Blotting
22. Ligation
23. Conjugation
24. Transformation
25. PCR
26. Microbial analysis of food samples, methylene blue reduction test for milk.
27. Microbial production of food and beverages by fermentation-wine and yogurt
28. Isolation of industrially important microbes from the environment
29. Microbial Production of citric acid and antibiotics
30. Comparative studies of Ethanol production using different substrates
31. Production and assay of Alkaline Protease
32. Isolation of casein from milk
33. Microbial Production of antibiotics
34. Microbial Production of vitamin B12
35. Isolation of Ascorbic acid producing bacteria
36. Determination of TDP and TDT of microorganisms for design of a sterilizer
37. Microbial production of citric acid using *Aspergillus niger*.
38. Isolation and study of fungus responsible for food spoilage
39. Quality testing of milk by MBRT test
40. Determination of phosphates activity in butter, whey, milk powder
41. Microbiological analysis of food production
42. Analysis of mycotoxin in fungal contaminated food materials.

SEMESTER – III		
MBI011A	ENVIRONMENTAL BIOTECHNOLOGY	4
MBI012A	PLANT BIOTECHNOLOGY	4

	Any one from the following:	
MBI013A	IMMUNOTECHNOLOGY AND ANIMAL BIOTECHNOLOGY	4
MBI014A	RESEARCH METHODOLOGY	4
MBI021A	Biostatistics	
MBI022A	Nanoscience and Nanotechnology	
MBI015A	Environmental, Plants, Animals and Immunological Techniques Practicals	6
	<b>Total Credits</b>	<b>22</b>

**Course: ENVIRONMENTAL BIOTECHNOLOGY**

**Course Code: MBI011A**

**Lectures: 4 Hrs/week**

**Course Outcomes:**

- CO-1 Students will be able to understand air pollution and water pollution.  
CO-2 Students will be able to describe different methods of waste water treatments.  
CO-3 Students will be able to explain different xenobiotic compounds.  
CO-4 Students will be able to acquire skills to analyze biological monitoring of hazardous waste

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	2
CO2	3	3	3	2	1	2	1
CO3	3	3	3	2	1	2	2
CO4	3	3	3	2	2	2	2

1 – LOW , 2- MEDIUM , 3-HIGH

**MBI011A-ENVIRONMENTAL BIOTECHNOLOGY**

**Credit(s): 4**

**Unit-1**

Air pollution: definition of air pollution, Sources of air pollution, acid rain, global warming, air pollution control through biotechnology. Biofuels: plant derived fuels, biogas, landfill gas, bioethanol, biohydrogen; biogas production, methogenic bacteria,

**Unit-2**

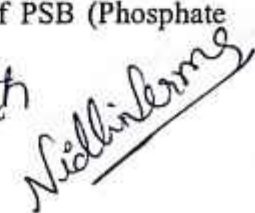

Water pollution and its control: Water as a scarce natural resource, Need for water management, Measurement of water pollution, Sources of water pollution. Solid Waste management, Composting, vermi composting and vermi culture. Microbial biofertilizers: types, sources, manufacture and significance. Green manuring, Mycorrhizae as fertilizers: Rhizobia and other symbiotic and non symbiotic nitrogen fixing microbes as biofertilizer. Application of microbes as biofertilizers. Significance and application of PSB (Phosphate

  
**Dr. Shamkant B. Badgujar**

 24  

Solubilizing Bacteria) and PGPR (Plant Growth Promoting Rhizobacteria). Waste Water Treatment, Biomining and Bioleaching,

### Unit-3

Microbiology of waste water treatments: Aerobic process: Activated sludge, Oxidation ditches, Trickling filters, towers, rotating discs, rotating drums, oxidation ponds. Anaerobic processes: Anaerobic digestion, Anaerobic filters, Up flow anaerobic sludge blanket reactors. Sewage and waste water treatment and solid waste management, BOD, COD. Biotechnological approaches to water conservation.

### Unit-4

Degradation of Xenobiotic Compounds in Environment: Microbiology of degradation of Xenobiotics in environment: Ecological considerations, decay behavior & derivative plasmids; Hydrocarbons, substituted hydrocarbons, oil pollution, surfactants, pesticides. Bioremediation ion: In-situ and ex-situ techniques, advantages and disadvantages of bioremediation ion, GEMs in environment, applications of genetically engineered microbes (GEM) in bioremediation.

### Unit-5

Phytoremediation: Types and its applications, phytoremediation of soil metals; Environmental monitoring: Bioindicators Integrated pest management- An ecological approach, Biosensors, Plant biomass, Biological monitoring of hazardous waste, Superbug, Modification of bacterial strength, Bioleaching, Microbial involvement in bioleaching, Removal of metals from water, Microbial enrichment of oil recovery, Oil recovery by injecting microbial products

### Suggested Readings

1. Carl, Branden and Tooze, John. Introduction to Protein Structure, Garland Publishing (Taylor and Francis Group). New York.
2. Yada, R.Y.; Jackman, R.L.; Smith, J.L. Protein Structure-Function Relationships Blakie Academic and Professional: London
3. Clark, R.J.H and Hester, R. E. Spectroscopy of Biological Systems, John Wiley and Sons, New York.
4. Nakai, S. and Modler, H.W. Food Proteins: Properties and Characterization, VCH Publishers, New York.
5. Waste water treatment for pollution control. 2<sup>nd</sup> Edition. Arceivala.
6. Environmental Microbiology. R. M. Maier, I. L. Pepper & G. P. Gerba
7. Comprehensive Biotechnology Vol.-4. Murray Moo Young.
8. Biotechnology. Rehm and Reid.
9. Wastewater Engineering-Treatment, Disposal and Reuse, Metcalf and Eddy. Inc. Tata McGraw Hill, New Delhi. 1991
10. Environmental Science (5th Edition) by WP Cunningham & BW Saigo., Mc Graw Hill. 1999.
11. Introduction to Biodeterioration, D Allsopp and K.J Seal, ELBS/Edward Arnold. Cambridge Univ Press. 2004.
12. Biotechnology for Wastewater Treatment. P Nicholas Cheremisinoff. Prentice Hall Of India. 2001
13. Biotechnological Methods of Pollution Control. S.A Abbasi and E.Ramaswami. Universities Press 1999.
14. Environmental Biotechnology, Concepts and Applications. Hans-Joachim Jordening and

Josef Winter. Winter-VCH. 2005

15. Bio logy of wastewater Treatment. N F Gray. Mc Graw Hill . 2004.

16. Fundamentals of ecology (5th Edition) by EP Odum and GW Barrett, Thomson Books/Cole, 2005.

17. An Introduction to Environmental Biotechnology by Milton Wain Wright. Kluwar Acad Publ. Group, Springer, 1999.

**Course: PLANT BIOTECHNOLOGY**

**Course Code: MBI012A**

**Lectures: 4 Hrs/week**

**Course outcome**

CO-1 Students will be able understand different plant tissue culture and sterilization techniques

CO-2 Students will be able to describe and compare different type's tissue culture media, cell and suspension cultures, genetic transformation and micro-propagation techniques

CO-3 Students will be able to distinguish different plant tissue culture techniques used for molecular farming and able to grow callus and understand the genetic engineering for crop manipulation

CO-4 Student will able to acquire skills to analyze the critical problems related to plant tissue culture

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	1	2	1	2
CO2	3	2	3	2	2	1	1
CO3	3	3	3	2	2	2	2
CO4	3	3	3	1	3	1	2

1 – LOW , 2- MEDIUM , 3-HIGH

**MBI012A: PLANT BIOTECHNOLOGY**

**Credit(s):4**

**Unit-1**

Concepts & basic techniques in tissue culture; Conventional breeding v/s tissue culture. Tissue culture media (composition & preparation), sterilization techniques, tissue culture as a technique to produce novel plants & hybrids, green home and Green house technology; Initiation and maintenance of callus and suspension cultures, single cell clones, nurse culture technique, differentiation, organogenesis & somatic embryogenesis, Production and application of artificial seeds.

**Unit-2**

Shoot tip culture for rapid clonal propagation & production of virus-free plants, stages of micropropagation, propagation by direct and indirect organogenesis, micro grafting, physiological nature/abnormalities of micro propagated plants. Transfer and establishment of whole plants in soil, in situ and ex situ rooting & difference; Changes during hardening of micropropagated plants

### Unit-3

Protoplast isolation, fusion & culture, somatic hybridization, selection of hybrid cells and regeneration of hybrid plants, symmetric and asymmetric hybrids, cybrids and role of protoplast culture and somatic hybridization in improvement of crop plants. Haploid production and its significance, anther, pollen culture, monoploid production through bulbosum method, Embryo culture/embryo rescue and ovary culture; Endosperm culture, production of triploids, Role of haploids, monoploids and triploids in agriculture

### Unit-4

Basic concepts and genetic engineering for increasing crop productivity by manipulation of Photosynthesis, Nitrogen fixation, Nutrient uptake efficiency, biotic Insects, fungi, bacteria, viruses, weeds, Abiotic stress-drought, flooding, salt and temperature and for quality improvement- Protein, lipids, carbohydrates, vitamins & mineral nutrients.

### Unit-5

Plants as bioreactor or Molecular farming- value added crops, edible vaccines, industrial enzymes, antibodies, medicines. Cell cultures for secondary metabolites production.

#### *Suggested Readings*

1. J Hammond, P Mc Garvey and V Yusibov (Eds): Plant Biotechnology. Springer Verlag, 2000
2. TJ Fu, G Singh and WR Curtis (Eds): Plant Cell and Tissue Culture for the Production of Food Ingredients. Kluwer Academic Press 1999
4. HS Chawla: Biotechnology in Crop Improvement. International Book Distributing Company 1998
5. RJ Henry: Practical Application of Plant Molecular Biology. Chapman and Hall 1997
6. PK Gupta: Elements of Biotechnology. Rastogi and Co. Meerut 1999.

Department of Biotechnology,  
M.Sc. Semester – III  
Course – Animal Biotechnology  
Course Code – MBI0013B  
Lectures: 4 Hrs/week

### **MBI013B: ANIMAL BIOTECHNOLOGY**

**Credit(s):4**

#### **Course outcome**

CO-1 Students will be able to understand the term animal tissue culture- its history and development, gene therapy and transgenic animals.

CO-2 Students will be able to describe cell lines, cell culture media its components and role of antibiotics in media.

CO-3 Students will be able to learn how to measure the cell number and parameters of growth- growth curves

CO-4 Students will be able to acquire skills to analyze the applications of gene therapy and genetic engineering in animal tissue culture.

  
Dr. Shamkant B. Badgujar

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	2	2	1	1	1
CO2	3	3	2	2	0	0	1
CO3	3	2	3	2	1	0	2
CO4	3	2	3	2	1	0	2

1-LOW, 2-MEDIUM, 3-HIGH

## **MBI013A: IMMUNOTECHNOLOGY AND ANIMAL BIOTECHNOLOGY**

### **Unit-1**

**Credit(s):4**

History and development of animal tissue culture; Equipment and materials (culture vessels, CO<sub>2</sub> incubator, inverted microscope, cell counters). Principles of sterile techniques; Sources of tissues, types of tissues-epithelial, muscle, connective, nerve and blood; Introduction to balanced salt solutions.

### **Unit-2**

Cell culture media-components of the medium, physical, chemical and metabolic functions of media; Role of serum and supplements, serum-free media, features and specifications of MEM, DMEM, RPMI and Ham's medium. Role of antibiotics in media; Primary culture-Mechanical and enzymatic mode of desegregation, establishment of primary culture; Subculture-passage number, split ratio, seeding efficiency, criteria for subculture; Cell lines-definite and continuous cell lines, characterization, authentication, maintenance and preservation of cell lines.

### **Unit-3**

Measurement of cell number- hemocytometer, coulter counter; Measurement of cell viability and cytotoxicity; Dye exclusion and inclusion tests, colonogenic assay, macro molecular estimation, MTT based assay. Measuring parameters of growth-growth curves, PDT, Plating efficiency and factors influencing growth.

### **Unit-4**

Gene therapy-ex vivo and in vivo gene therapy methods, applications; Application of animal cell culture - Vaccine production, specialized cell types. Concepts of tissue engineering - skin, liver, kidney, bladder and heart

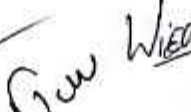

### **Unit-5**

Transgenic animals-retroviral, micro injection, and engineered embryonic stem cell method of transgenesis; Application of transgenic animal's biopharming, disease models, functional knockouts.

### **Suggested Readings**

1. Culture of Animal Cells, (3rd Edn) R Ian Fredhney. Wiley-Liss
2. Animal Cell Culture – Practical Approach, Ed. John RW. Masters, Oxford

  
Dr. Shankant B. Badguler

*Handwritten signatures and initials:*  
  
  
  
  

3. Cell Growth and Division: A Practical Approach Ed. R. Basega, IRL Press
4. Cell Culture Lab Fax. Eds. M Butler & M Dawson, Bios Scientific Publications, Ltd. Oxford
5. Animal Cell Culture Techniques Ed Martin Clynes, Springer
6. Methods in Cell Biology, Vol. 57, Animal Cell Culture Methods Ed. Jenni P Mather
7. David Bames. Academic Press
8. Animal Cell Technology, Principles and practices, 1987, Butter, M Oxford press
9. Animal Cell Biotechnology, 1990- Spier, RE and Griffith, JB Academic Press, London.

Course: **RESEARCH METHODOLOGY**

Course Code: MBI014A

Lectures: 4 Hrs/week

**MBI014A: RESEARCH METHODOLOGY**

**Credit(s): 4**

**Course outcome**

CO-1 Students will be able understand the basics of research objectives and methodology.

CO-2 Students will be able to describe research problem, hypothesis and its testing

CO-3 Students will be able to learn how to collect primary and secondary data, its organization

CO-4 Students will able to acquire skills to analyze the applications of data in different research work

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	2	2	1	1	1
CO2	3	3	2	2	0	0	1
CO3	3	2	3	2	1	0	2
CO4	3	2	3	2	1	0	2

1-LOW, 2-MEDIUM, 3-HIGH

**MBI014A: RESEARCH METHODOLOGY**

**Credit(s): 4**

**Unit-1**

Understanding Research: Introduction, definition and meaning of research, characteristics of research, objective of research, motivation in research, types of research, research approaches, significance of research, research methods versus methodology, research in decision making, role of research in various areas, limitations of research, what constitutes a good research.

**Unit-2**

Scientific Methods and Research: Scientific method, definitions of scientific method, characteristics of scientific method, basis of scientific method, scientific methods and

  
Dr. Shamkant B. Badgojar

scientific research, components of scientific approach, bias and prejudice in scientific research  
Formulating Research Problem and Hypothesis: Introduction, Research process/planning process, research problem-need for defining, pre-requisites for formulating research problem, selection of the research problem, points to ponder on research problem, units of analysis, time and space co-ordination, characteristics of interest, environmental conditions, technique involved in defining a problem, formulation of a research problem and hypothesis testing

### Unit-3

Hypothesis Testing: Introduction, Hypothesis: definition and meaning, role of hypothesis, source of hypothesis, kinds of hypothesis, characteristics of hypothesis, formulation of hypothesis, importance of hypothesis, difficulties in formulating hypothesis, means to overcome difficulties, testing of hypothesis, steps in testing hypothesis, flow diagram for hypothesis testing, measuring the power of a hypothesis test, statistical hypothesis/tests of significance, limitations of tests of significance

Testing of Hypothesis-I (Parametric or Standard Tests of Hypothesis): Tests of hypothesis, important parametric tests, hypothesis testing of means, hypothesis testing for differences between means, hypothesis testing for comparing two related samples, hypothesis testing of proportions, hypothesis testing for difference between proportions, hypothesis testing for comparing a variance to some hypothesized population variance, testing the equality of variances of two normal populations, hypothesis testing of correlation coefficients.

### Unit-4

Research Design: Introduction, Meaning and definition of research design, need for research design, relation between problem formulation and research design, factors affecting research design, advantages of research design, steps in research design, various types of research design, basic principles of experimental designs. Data Collection and Management: Introduction, Meaning and importance of data, Sources of data, choosing the method for data collection, methods of collection of primary data: definition and meaning, types, importance, advantages and disadvantages; methods of collection of secondary data, scrutiny of secondary data, merits and demerits of different methods of collection of primary data.

### Suggested Readings

1. S. C. Gupta. Fundamentals of Statistics. Himalaya Pub. House.
2. J. Medhi. Statistical Methods: An introductory text. New Age International (P) Ltd. Publishers.
3. P.S.S. Sudar Rao & J. Richard. An introduction to biostatistics. Prentice Hall of India. N. Delhi.

MBI021A	Biostatistics
---------	---------------

Department Elective

Course Code: MBI021A

Course Name: Biostatistics

### Course outcome

CO-1 Students will be able to exposed to concepts of statistical methods and statistical inference that would help them in understanding the importance of statistics

CO-2 Students will be able to describe and understand the concepts involved in data presentation, analysis and interpretation.

CO-3 Students will get the exposure to presentation of data, probability distributions, parameter estimation and test of significance, regression and multivariate analytical techniques

CO-4 Student will able to acquire skills to analyze the critical problems related to statistics, hands on experience in the analysis of their research data.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	2	0	1	1
CO2	3	3	2	1	1	0	1
CO3	2	2	3	2	1	0	2
CO4	3	2	3	2	3	1	1

1-LOW, 2-MEDIUM, 3-HIGH

### **Biostatistics (MBI021A)**

**UNIT 1.** Elementary concepts in Statistics: Concepts of statistical population and sample from a population; qualitative and quantitative data; nominal, ordinal, ratio, interval data; cross sectional and time series data; discrete and continuous data. Collection and scrutiny of data: Primary data; designing a questionnaire and a schedule; secondary data and sources of secondary data.

**UNIT 2.** Probability: Random Experiment; sample point; sample space; events; mutually exclusive and exhaustive events; frequency and classical definitions of probability. Axiomatic definition of probability; addition and multiplication theorems; conditional probability and independence; Bayes' theorem. Discrete and continuous random variables.

**UNIT 3.** Standard Univariate Distributions: Standard univariate discrete and continuous distributions- uniform; binomial; Poisson; geometric; negative binomial and

  
Dr. Shamkant B. Badgujar

31  

hyper-geometric distributions. Uniform; exponential; normal; Laplace, gamma, beta, lognormal, logistic and Weibull distributions. (elementary properties and applications only)

**UNIT 4.** Sampling Distributions, Law of large numbers and Central Limit Theorem: Concepts of random sample and statistic; distribution of sample mean from a normal population; chi-square distribution; F and t statistics, distributions (no derivations) and their applications. Chi-square test.

#### **MBI015A: Environmental, Plants, Animals and Immunological Techniques Practical** **Credit(s): 6**

1. Water quality analysis - MPN method
2. Determination of dissolved oxygen concentration of water sample
3. Determination of bio logical oxygen demand (BOD) of sewage sample
4. Determination of Chemical oxygen demand (COD) of sewage sample
5. Isolation of xenobiotic degrading bacteria by selective enrichment technique
6. Test for the degradation of aromatic hydrocarbons by bacteria
7. Detection of coliforms for determination of the purity of potable water
8. Estimation of nitrate in drinking water
9. Isolation of VAM from soil by wet sieving and decanting method
10. Isolation and cultivation of mushroom
11. Introduction to tissue culture laboratory
12. Preparation of M.S. media
13. Growth regulator concentration maintenance
14. Anther culture
15. Apical meristem culture
16. Leaf culture
17. Artificial seed preparation
18. Preparation of Media
19. Window making
20. Blood Analysis (RBC, WBC, Differential Staining of WBC, Hemoglobin estimation, Blood Grouping, Clotting Time)
21. Production of Ginger wine
22. Production of Grape wine
23. Citric acid production by *Aspergillus* and its estimation
24. Estimation of alcohol content

25. Saurkraut production
26. Production of antibiotic
27. Introduction to graphical presentation data
28. Computations of Mean, Media and Mode.
29. Computation of Geometric Mean and Harmonic Mean
30. Computation of Mean Deviation.
31. Computation of Quartile deviation.
32. Computation of Variance.
33. Computation of Coefficient of Variation
34. To check the symmetry of the distribution by coefficient of Skewness.
35. To check the Shape of the distribution by coefficient of Kurtosis.

### Department Elective

Course Code: MBI022A

Course Name: Nanoscience and NanoTechnology

### Course outcome

CO-1 Students will be able to understand the basics nanotechnology

CO-2 Students will be able to illustrate the historical aspects of nanomaterials uses, discoveries, and involvement of various scientists.

CO-3 Students will be able to explain the importance of physicochemical parameters of nanoparticles and their characterization.

CO-4 Students will be able to evaluate the uses of nanotechnology in all the area.

### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	2	2	2	1
CO2	3	3	3	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	1	2	2	2

1-LOW, 2-MEDIUM, 3-HIGH

### Nanoscience and Nanotechnology

#### Unit 1

Basic nanotechnology: definition of nanomaterials, differences between bulk form of materials and nanomaterials, unique properties of nanomaterials.

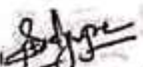

#### Unit 2

Historical aspects of nanomaterials: uses since centuries, contribution of different scientists, Classifications and types of nanomaterials as nano particles and 1D, 2D, and, 3D nanomaterials.

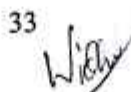

#### Unit 3

Synthesis of nanomaterials: 'Top down' vs. 'Bottom up' approaches, physicochemical properties of nanomaterials, understanding of physicochemical properties, (Size, shape, surface charge, hydrophobicity, hydrophilicity. Impact in toxicological studies,

#### Unit 4

  
Dr. Shankant B. Badgujar

33  

Nanomaterials characterization: UV-vis spectroscopy, TEM, SEM, FTIR, DLS, Zeta, XRD, Biomedical applications of nanoparticles.

SEMESTER -IV		
MBI016A	Review Writing	4
MBI017A	Dissertation	18
MBI018A	Seminar	2
	Total Credits	24
Total Credits of All Four Semesters		90

#### MBI016A Review Writing

Credit(s): 4

Student will compile the review of literature (at least a ten year data) on any topic related to the importance of Biotechnology and its applied fields. The review matter will be supported by the publication in indexed Journal of National/International repute and/or submission of manuscript.

#### MBI017A: Dissertation

Credit(s):18

Project: The students of M.Sc. Biotechnology should carry out a dissertation work for at least 16 weeks in a National Lab/Private industry/reputed lab/institute. Dissertation will be based upon research and actual bench work. It will begin from the end of III semester and will continue through the IV semester. Dissertation report will be submitted and evaluated at the end of IV semester and students should defend their work in front of a selected committee in their last semester.

#### MBI018A: Seminar

2

**JECRC University**  
**School of Sciences**  
**Minutes of Meeting**

The Board of Studies Meeting was conducted on 28 Dec 2022 in the chamber of Deans, School of Sciences at 2.30PM regarding the revisions in Syllabus and change in Course code and subject code for the session 2022-23.

Following members attended the meeting

1. Prof Widhi Dubey 

2. Prof Sonali Pandey 

3. Prof Ekta Menghani 

4. Prof K.P Sharma Professor & Head, Botany Deptt, University of Rajasthan, Jaipur   
The chairman, BOS welcomed the external expert and briefed about the agenda of the meeting.

Following revisions were made in the Scheme for the Session 2022-23.

1. The credits of the subjects in each semester was revised to 27, 21, 22,21, 21,21 and 21 in the I,II,III,IV,V and VI Semester respectively. The Course offers degree of B. Sc to the students after attaining total of 133 credits in three years.
2. The subject code was revised across all the Schools in JECRC University.
3. The Subject codes including theory and Lab was reframed and revised from BSB001A to BSB013A across all semesters with respect to the BBO001B to BBO013B code given in Previous Sessions.
4. There was addition of Web Development and Web development Lab , Project Management Lab, Advanced Spread Sheet Lab, Python Programming and Python Programming Lab for the inculcation of Computer related learning and enhanced upskills in students in First, Second, Third and Fourth Semester respectively.
5. There was addition of two new Subject viz Culture Education -I and II in the First and Second Semester respectively with a view to promote awareness about our Indian Culture and Personalities among the new generation of students.
6. An Addition of two subjects named Life Skills -I and II was added in the Semester III and IV for the Personality Development and Aptitude enhancement.
7. Focusing on the NEP2020 three open electives in the III and VI Semesters were offered to the students to upgrade their knowledge while offering the students with the subjects of their interest across the different schools.
8. In each semester the Department of Botany offers one theory and one Practical lab of 4 and 1 credits respectively, thus a sum total of 30 credits( 24 credits of Theory and 6 credits of Lab) is offered to the students pursuing B.Sc Pass Course Degree in School of Sciences.
9. The Scheme of Pass Course and Syllabus of the Botany Subjects was shared to the External Member and the suggestions given by them was incorporated in the Syllabus and final approval of them was received.
- 10 The meeting ended with Vote of Thanks to the chair.

**JECRC UNIVERSITY**  
**FACULTY OF SCIENCE**  
**SESSION 2022-2023**

Details of Scheme for B.Sc. (Passcourse) with various Courses and their credits with contact hours are given below:  
**Semester I**

### B.Sc. Pass Course PO

**PO1 Core competency:** The graduates are expected to know the fundamental concepts of Science and other subjects. These fundamental concepts would reflect the latest understanding of the subject and in allied subject areas. Students will learn to investigate, experiment, relate information and draw logical conclusions based on scientific reasoning.

**PO2 Disciplinary knowledge and skill:** To learn and apply the knowledge in understanding research and addressing practical problems and to apply various scientific methods to address different questions by formulating the hypothesis, data collection and critically analyze the data. The student will be inquisitive about processes and phenomena happening during experiments in laboratories and seeks answers through the research path..

**PO3 Skilled communicator:** Communicate effectively on various scientific issues with the society at large. They are expected to read and understand documents with in-depth analyses and logical arguments. Graduates are expected to be well-versed in speaking and communicating their idea.

**PO4 Critical thinker and problem solver:** Critical thinking and analytical reasoning and the scientific knowledge will help to develop scientific temper that will be more beneficial for the society. The student will be able to draw logical conclusions based on a group of observations, facts and rules.

**PO5 Team player:** The course curriculum has been designed to provide opportunity to act as team player by contributing in laboratory, field based work, project and industry.

**PO6 Moral and ethical awareness:** Graduates are expected to be responsible citizen of India and be aware of moral and ethical baseline of the country and the world.. Emphasis be given on academic and research ethics, including fair Benefit Sharing, Plagiarism, Scientific Misconduct and so on.

**PO7 Skilled project manager:** Graduates are expected to be familiar with decision making process and basic managerial skills to become a better leader by acquiring knowledge about project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

**PO8 Digitally literate:** The student will acquire knowledge in understanding and carrying out data analysis, use of library search tools, and use of software and related computational work. Students will acquire digital skills and integrate the fundamental concepts with modern tools.

*Carls* *Sa* *Wicki* *bl*

**PO9 Environment and Sustainability** Apply the knowledge of basic science and allied fields to protect environment and to prevent environmental degradation as science graduate, to stay firm on the value systems, of their culture, including their own for a healthy socio cultural environment.

**PO10 Lifelong learner:** Graduates will acquire the ability to engage independent and self-learning as well as to successfully pursue their career objectives in advanced education and in professional courses, through the use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability.

**Program Specific Outcome:**

PSO1: The ability to understand the nature and basic concept of origin of life, Cell biology Prokaryotes. Classification, evolution, life cycle and importance of Algae and Fungi. Bryophytes, Pteridophytes and Lichens.

PSO2: The ability to understand the mechanism of Genetics, Anatomy, Physiology and mechanism of Angiosperm Plants. Conventional and Non Conventional mode of plant breeding and their application in human welfare

PSO3: The ability to understand the classification, evolution life cycle and importance of Gymnosperms and taxonomy of Angiosperms.. Understand the issues of Environmental management and uses of plants and their parts in Economic Botany

PSO4: Perform Procedures as per laboratory standards on cell biology, Anatomy, Taxonomy and Ecology and anatomical study of Thallophytes, Bryophytes, Pteridophytes, Gymnosperms, Angiosperms.

## Semester-I

BSB001A	Cell Biology and Thallophytes	4-0-1 [5]
---------	-------------------------------	-----------

## Objective

- To learn about the basic concept of cell theory and cell types
- To understand fundamental concepts of Cell Biology.
- To understand the Classification, evolution, Life cycle and economic importance of Fungal members.
- To understand the Classification, evolution, Life cycle and economic importance of Algal members.

Unit -I	Cell theory, cell size and shape, eukaryotic cell components. Cell membrane and cell wall: the function of membrane, models of membrane structure, membrane protein and their function, cell wall, structure, origin & function.
Unit-II	Nucleus- nuclear envelop, structure of nuclear pore complex, chromatin structure, DNA packaging in eukaryotes, euchromatin, heterochromatin, nucleolus and ribosome structure, mitosis, meiosis.
Unit-III	Cell organelles: Mitochondria structure, composition, semiautonomous nature, symbiont hypothesis mitochondrial nature. Chloroplast- structure, composition, semiautonomous nature and chloroplast DNA. ER, Golgi body, lysosome. Peroxisome and glyoxisome: structure, role and function.
Unit -IV	Algae- General characteristics; Ecology and distribution, Range of thallus organization and reproduction; Basic criteria used in classification (Fritsch, and Smith), <i>Spirulina</i> cultivation (SCP) Important classes in relation to applied Phycology listed below Cyanophyceae- <i>Nostoc</i> Chlorophyceae- <i>Volvox</i> , <i>Chara</i> Xanthophyceae - <i>Vaucheria</i>

*Enli*

*San Wani* *16*

	Phaeophyceae- <i>Ectocarpus</i> Rhodophyceae – <i>Polysiphonia</i>
Unit -V	Fungi- General characteristics; Ecology and distribution; Range of thallus organization; Cell structure; Wall composition; Nutrition; Growth; Reproduction and spores; Heterokaryosis and parasexuality; Basic criteria used in classification. Mushroom cultivation. Life cycle of <i>Sclerospora</i> , <i>Aspergillus</i> , <i>Claviceps</i> , <i>Ustilago</i> and <i>Alternaria</i> .

#### Course Outcome (CO):

At the end of this course students will have:

**CO1:** An Understanding of cell theory & Compare the structure and function of cell and its types. Identify the concept that explains chemical composition and structure of cell wall and models of cell membrane.

**CO2:** An ability to analyze structure, function and importance of Nucleus, structures and chemical properties and Function of DNA and RNA through various historic experiments, Role of mitosis and meiosis in living organisms.

**CO3:** An ability to understand the origin, structure and development of double membrane and single membraned cell organelles.

**CO4:** An ability to understand the basic criteria used in classification, General characteristics, Ecology, distribution, Range of thallus organization and reproduction in different classes of algal members.

**CO5:** An ability to understand the basic criteria used in classification, General characteristics, thallus organization and reproduction in different classes of Fungal members. To Identify true fungi and demonstrate the principles and application of plant pathology. To Demonstrate skills in laboratory, field and work related to cytology, mycology and phycology.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

6. V.B. Rastogi – Cell Biology. Rastogi Publications.
7. Gilbert. M. Smith Cryptogamic Botany Vol I and II, 11nd Ed. Tata McGraw Hill Publishing Company Ltd. N.Delhi. 1985.
8. Ghemawat M.S., Kapoor, J.N. and Narayan H.S. : A text Book of Algae. Ramesh Book Depot. Jaipur 1976.
9. Kumar. H.D. Introductory Phycology. Affiliated East-West Press Ltd., Newyork 1988.
10. Singh V., Pande P.C. and Jain D.K. A Text BBook of Botany Rastogi and Co. Merrut, 2001.
11. Alexopolous, C.J. and Mims : Introductory Mycology, John Wiley and Sons, New York, 2000.
12. Dube, H.C. Fungi, Rastogi Publication, Merrut, 1989.
13. Sharma O.P. Fungi Today and Tomorrow Publication, 2000.

#### BSB002A: Practical Lab of Algae, Fungi and Basics of Cell Biology

1. To identify various parts of Dissecting and Compound microscope and to understand its functioning
2. To identify the different morphological forms of bacteria viz. Cocci, Bacilli under the compound microscope.
3. To prepare epidermal peel prepration of onion leaf and study internal structure of cell.
4. To draw electron microphotographs of eukaryotic cell with its various internal cell organelles.
5. To prepare and identify different stages of mitosis in root tips of onion.
6. To prepare and identify different stages of Meiosis in Onion flower bud.

*gms*

*San Hishi*

7. To prepare and identify suitable temporary slides of the algal cyanobacteria and chlorophyceae viz. *Nostoc* and *Volvox*.
8. To prepare and identify suitable temporary slides of the algal member *Vaucheria*, *Ectocarpus* and *Polysiphonia*.
9. To prepare and identify suitable temporary slides of the fungal member *Sclerospora* and *Aspergillus*.
10. To prepare and identify suitable temporary slides of vegetative, asexual and sexual stages of *Ustilago* and *Alternaria*.
11. Demonstration of Mushroom cultivation.
12. Demonstration of SCP Cultivation.

## Semester-II

BSB 003A	Bryophyta, Pteridophyta and Lichens	4-0-1 [5]
----------	-------------------------------------	-----------

### Objective

- To learn about general characteristic features, origin, life cycle and classification of Bryophyta.
- To understand fundamental concepts of pteridophyta, classification, life cycle and evolutionary details with the help of representative members of pteridophytes.
- To understand the distribution, classification and reproduction of lichens and Mycorrhiza.

Unit-I	Bryophyta: general characters, origin, affinities and classification & Economic Importance of Bryophyta. Life cycle of <i>Marchantia</i> , <i>Anthoceros</i> , <i>Sphagnum</i> & <i>Funaria</i>
Unit-II	General character of pteridophyta, classification by Smith and Sporne, Stear system in pteridophyta, Alteration of generation. Distribution, Structure and life history of <i>Rhynia</i> and <i>Psilotum</i> .
Unit -III	Distribution, Structure and life history of <i>Lycopodium</i> and <i>Equisetum</i>
Unit-IV	Distribution, Structure and life history of

*Handwritten signatures and initials:*  
 [Signature] [Signature] [Initials]

	<i>Selaginella</i> and <i>Marsilea</i> .
Unit-V	Lichens- distribution, nature of association of phycobiont and mycobiont, classification of lichens, structure reproduction & economic importance, Mycorrhiza – General account and its significance

### Course Outcome (CO):

At the end of this course students will have:

- CO1:** An critical Understanding of general characters, origin, classification and the life cycle of primitive and advanced Bryophytes.
- CO2:** An Understanding of general characters, origin, classification and stelar system of pteridophytes
- CO3:** Ability to understand the distribution, structure life history of some primitive and advanced members of pteridophyte
- CO4:** An understanding of distribution, nature of association and classification of lichens and understanding of General characteristics of Mycorrhizae.
- CO5:** Demonstrate an understanding & develop proficiencies in the experimental techniques and methods of identification of of Bryophytes, Pteridophytes, Mycorrhiza & Lichens

6. Sporne. K.R. Morphology of Pteridophytes B.I. Publication Pvt. Mumbai (2002).
7. Vashishta P.C. Pteridophyta. S. Chand and Co. New Delhi

**BSB 004A: Practical Lab of Cryptogams and Lichen**

1. To examine external morphology of vegetative and reproductive parts of *Marchantia*.
2. To prepare hand cut sections of vegetative and reproductive parts of *Marchantia*.
3. To observe external morphology under dissecting microscope of *Anthoceros* and *Sphagnum*.
4. To prepare hand cut sections of vegetative and reproductive parts of *Anthoceros* and *Sphagnum*.
5. To study and prepare hand cut sections of vegetative and reproductive parts of *Fumaria*.
6. To identify various morphological forms (Crustose, Foliose and Fruticose) of lichens and comment upon their economic importance to mankind.
7. To examine external morphology of vegetative and reproductive parts of *Psilotum*.
8. To examine external morphology of vegetative and reproductive parts of *Lycopodium* and *Equisetum*.
9. To prepare hand cut and double stained sections of vegetative and reproductive parts of *Lycopodium* and *Equisetum*.

*Gul*

*San* *Wani* *W*

10. To examine & prepare hand cut double stained sections of vegetative and reproductive parts of *Salvinella*
11. To examine & prepare hand cut double stained sections of vegetative and reproductive parts of *Marsilea*.
12. Isolation & Identification of Ectomycorrhiza from the plant roots.

### Semester-III

BSB005A	Genetics and Plant Breeding	4-0-1 [5]
---------	-----------------------------	-----------

#### Objective

- To understand the general terminologies and laws of Genetics.
- To understand Cytoplasmic Inheritance & Multiple Allelism, Sex determination and Sex Linked inheritance in human, *Drosophila* and plants.
- To learn mechanism and role of Linkage and Crossing over, polyploidy.
- An understanding of Conventional and Non conventional mode of Plant Breeding, concept of rDNA Technology and Plant tissue culture

UNIT 1	Mendel work, (Terminologies, Laws of inheritance, Modified Mendelian Ratios, Cytoplasmic Inheritance & Multiple allelism.
UNIT 2	Sex determination in human, <i>Drosophila</i> and plants, Sex linked inheritance. Linkage: concept & history, complete & incomplete linkage, Bridges experiment, Crossing over : concept and significance.
UNIT 3	Numerical chromosomal changes, euploidy, polyploidy and aneuploidy
UNIT 4	Structural chromosomal changes : deletions, duplications, inversions and translocations Types of mutations, effects of physical and chemical mutagens.
UNIT 5	Introduction and objectives of plant breeding, general methods of plant breeding, Conventional and non conventional methods of plant breeding, hybrid vigour, inbreeding depression. Introduction to the concept of Recombinant DNA Technology & Plant tissue culture

#### Course Outcome (CO):

*Enb*      *San Nidhi*      *WP*

11. Bhojwani, S.S & Bhatnagar S.P (2011) The Embryology of Angiosperms Vikas Publication House Pvt. Ltd. New Delhi, 5th Edition

**BSB006A: Practical Lab on basics of Plant Breeding and Genetics**

1. To prepare note and understand the terminologies proposed by Mendel.
2. To solve numerical problems based on Mendel's Law of Inheritance (Monohybrid and Dihybrid Crosses).
3. To analyse numerical problems based upon modified Mendelian Laws through Punnett square method.
4. To perform the numericals based on sex determination in Drosophila & Humans
5. To comment upon the types of cloning vectors used in genetic engineering.
6. To comment upon the types of enzymes used in rDNA technology.
7. To prepare temporary slide and comment upon Bar Body.
8. To perform emasculation of anther in a bisexual cross pollinated flower.

*Ents* *See* *Wishi* *KP*

9. To perform various methods of vegetative propagation found in plants.
10. Familiarization of basic equipment in tissue culture, composition of MS media.
11. Demonstration of *in vitro* sterilization and inoculation methods using leaf & nodal explants of dicot plant.

### Semester-IV

BSB 007A	Morphology, Anatomy and Plant Physiology	4-0-1 [5]
----------	--	-----------

#### Objective

- To learn about types of tissues and their organization in stem root and leaf.
- To understand the concept of stelar evolution and basic body plan, modular type of growth in Seed bearing plants.
- To understand fundamental concepts of shoot and root system and theories related to them.
- To understand the morphology, anatomy & embryology of seeds and vegetative propagation methods in seed bearing plants.
- To learn about and understanding the physiology of plant water relationship.
- Understanding the physiology of Mineral Nutrition in plants.
- Understanding the role of growth regulators and light in plants.
- Understanding the physiology of Photosynthesis in plants.

Unit-I	Different types of tissues, their organization into root, stem and leaf (monocot & dicot), Concept of stele and its evolution, meristematic, simple and complex secretory tissue. Basic Body plan of flowering plants, modular type of growth, diversity of plant forms: annual, biennials and perennials.
Unit-II	Shoot and root system: shoot and root apical meristem and its histological organization, vascularisation of primary shoot and root in monocot and dicots, monopodial and sympodial growth. Morphology and anatomy of seed (monocot and dicot), significance of seed. Microsporogenesis, Megasporeogenesis, Double fertilization & triple fusion.

*Ans* *San* *Wohi* *lp*

Unit-III	Plant water relationship: Significance of water, water potential, water absorption and transport, transpiration, mechanism of opening and closing to stomata. Mineral Nutrition: Essential elements, micro and macro nutrients, soil factors affecting their availability, Physiological basis of deficiency, symptoms, ion uptake. Transport of inorganic and organic component, transport pathway Xylem and Phloem.
Unit-IV	Role of physical factors in growth of plants: Response to light, photomorphogenesis, Role of growth regulators: Auxin, Gibberelins, Cytokinins, ABA, Ethylene
Unit-V	Photosynthesis: Brief history, pigments, mechanism of light, absorption and energy transfer PSI and PSII e-transport, ATP synthesis C3, C4 and CAM photorespiration.

### Course Outcome (CO):

At the end of this course students will have:

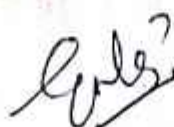

**CO1:** An Understanding of Plant tissue system their composition of different parts of plants and relationships and organization in plants, to understand the modular and basic body plan of plants.

**CO2:** Develop an conceptual understanding of concepts and fundamentals of plant anatomy to examine the internal anatomy and embryology of plant systems and organs. Develop critical understanding on the evolution of concept of organization of shoot and root apex.

**CO3:** Ability to understand the mechanism and physiology of water relations and mineral nutrition in higher plants with respect to various physiological processes. And chemical deficiency symptoms in plants.

**CO4:** An understanding of role of physical factors and light in plant growth and mode of action of growth regulators in plants. Able to understand the mechanism of Photosynthesis in plants

**CO5:** Apply practical skills in science courses with the understanding of general laboratory practices to study plant tissues and understand various vital physiological activities in plants and also able to explore various research issues and their solutions

**BSB008A: Practical Lab on Fundamentals of, Anatomy, Morphology and Plant Physiology**

1. To use any commonly occurring dicotyledonous plant as a model to understand the basic body plan and modular type of growth.
2. To prepare hand cut section and stained preparation of L.S. of shoot tip.
3. To understand the difference between Monopodial and Sympodial types of branching.
4. To prepare transverse hand cut sections of monocot and dicot stem and root of sunflower, nerium, and maize for anatomical study.
5. To perform hand cut sections of monocot and dicot stem and roots having secondary growth in sunflower, nerium and maize.
6. To Examine structure of monocot and dicot seed.
7. Specimen study for modifications of plant parts for vegetative reproduction.
8. To study the permeability of plasma membrane using different concentration of solvent.
9. To separate chlorophyll pigment by solvent method.

*Ends* *San* *Wich* *el*

10. To study the apical growth of plant by Are Auxanometer.
11. To study photosynthesis by inverted funnel method and Moll's half leaf method.
12. To study the demonstration of stomatal transpiration by four leaf method.
13. To demonstrate the phenomenon of osmosis by potato osmometer.
14. To calculate % germinated pollen in given medium
15. Demonstration of Hydroponics System.
- 16 Plant Adaptation Hydrophyte & Xerophytes.

## Semester-V

BSB 009A	Gymnosperm, Angiosperm and Paleobotany	4-0-1 [5]
----------	--	-----------

### Objective

- To learn about classification and characteristic features of gymnosperms.
- To understand the distribution, morphology, reproduction and life cycle of important representative members of Gymnosperm.
- To understand the origin, evolution and examples of primitive Angiosperm.
- To learn about the principles of taxonomy, classification and binomial system of nomenclature.
- Understanding the identification criteria of important angiospermic families in the surroundings.
- Understanding the detail of paleobotany including fossil types, formation of fossils, applied aspect of paleobotany and important members of fossil plants.

Unit-I	Classification and characteristic features of different groups of Gymnosperm. Distribution, morphology, vegetative and reproductive parts, anatomy and life cycle of <i>Cycas</i> .
Unit-II	Distribution, Morphology of vegetative and reproductive parts, anatomy, reproduction and life cycle of <i>Pinus</i> and <i>Ephedra</i> , Economic Importance of Gymnosperm.
Unit-III	Angiosperm – origin and evolution. Some examples of primitive angiosperm.

*Ante* *San* *Wishu* *kl*

	Introduction, Principles of taxonomy, units of classification, Concept of Genus and species, Binomial nomenclature, ICBN, Botanical gardens and Herbaria.
Unit-IV	Classification of angiosperm Linnaeus, Bentham and Hooker's system, Engler and Prantle system of classification. Diversity of flowering plants as illustrated by members of the families, Brassicaceae, Malvaceae, Fabaceae, Solanaceae, Apocynaceae, Asclepiadaceae, Euphorbiaceae, Liliaceae and Poaceae, Asteraceae.
Unit-V	Fossilization, types of fossils, technique to study fossils, geological time scale, Applied aspect of PaleoBotany (use in coal and petroleum exploration). Fossil Pteridophyta - <i>Lepidodendron</i> , <i>Calamites</i> Fossil Gymnosperms - <i>Williamsonia</i>

#### Course Outcome (CO):

At the end of this course students will have:

- CO1: An Understanding of general characters, distribution, morphology, reproduction and life cycle of important representative members of Gymnosperm. and classification of Gymnosperms.
- CO2: To understand the evolution of Angiosperm. Classify Plant systematics and recognize the importance of herbarium and Virtual herbarium Evaluate the Important herbaria and botanical gardens
- CO3: Interpret the rules of ICBN in botanical nomenclature principles of taxonomy and interpret terms and concepts related to Phylogenetic Systematics
- CO4: Generalize the characters of the families according to Bentham & Hooker's system of classification Able to identify and recognize the important angiospermic families in the surroundings.
- CO4: An understanding of, classification and binomial system of nomenclature.
- CO5: Able to predict the mechanism of evolution in Plant groups understand the branch of paleobotany and important representative members of Paleobotany.

## BSB010A: Practical Lab on Spermatophytes and PaleoBotany

1. To understand terminology used for the plant description and their identification.
2. To study Key for the identification of angiospermic plant families.
3. To perform description of some important angiospermic plant families:  
 Brassicaceae – *Brassica campestris*  
 Malvaceae – *Hibiscus rosasinensis*, *Abutilon*  
 Fabaceae – *Pisum sativum*, *Cassia*, *Acacia*  
 Solanaceae – *Datura*, *Withania*  
 Apocynaceae – *Vincetoxicum*, *Thevetia*  
 Asclepeideaceae – *Calotropis*  
 Euphorbiaceae – *Euphorbia*, *Ricinus*  
 Liliaceae – *Onion*, *Asphodelus*  
 Poaceae – *Triticum*  
 Esteraceae – *Helianthus*, *Tridax*
4. To study the external morphology of vegetative and reproductive parts of *Cycas*.
5. To prepare suitable double stained preparation of T.S of root, stem, rachis, leaflet and microsporophyll of *Cycas* and assign them to their respective systematic position.
6. To study the external morphology of vegetative and reproductive parts of *Pinus*.

*Cur* *San* *Wani* *kl*

7. To prepare suitable double stained preparation of T.S of root, stem and foliage leaf of *Pinus*.
8. To study reproductive structure (Male cone and Female cone) of *Pinus* and identify and assign them to their respective systematic position.
9. To study the external morphology of vegetative and reproductive parts of *Ephedra*.
10. To prepare suitable double stained preparation of T.S of stem (node and internode) of *Ephedra*.
11. To study reproductive structure (Male Strobilus and Female strobilus) of *Ephedra* and identify and assign them to their respective systematic position.
12. To Study types of fossils. Fossil Pteridophyta – *Leplodendron*, *Calamites*. Fossil Gymnosperms – *Williamsonia*.
13. To prepare a properly dried and pressed specimen of any wild plants with herbarium label (Submitted in record book)

### Semester-VI

BSB012A	Environmental Management and Economic Botany	4-0-1 [5]
---------	--	-----------

### Objective

- To learn about basic concept of ecology and interrelationship of living and nonliving components of the environment.
- To understand the concept of ecosystem, Biosphere and biomes of the world.
- To understand fundamental concepts of Biogeochemical cycles, population and community ecology.
- To understand the Biodiversity and conservation strategies for wild life management. plants.
- To learn about and understanding of economic importance of cultivated plants for food, oils, beverages and fibres.
- Understanding the importance of Medicinal plants of Rajasthan.
- Understanding the wood, rubber and sugar yielding plants for the human welfare.

Unit-I	Introduction to Ecology, Community and Ecosystem Inter-relationships between living world and environment, Biosphere, biomes, ecosystem and its components (abiotic and biotic) Bioenergetics.
--------	--

*Enk* *San Wisk* *kp*

Unit-II	Biogeochemical cycles, Hydrologic cycle. Concept of habitat and niche. Population and Community Ecology (Part Population attributes, density, natality, mortality, age ratio, sex ratio, dispersal and dispersion of population, exponential and logistic growth, life history strategies, population interactions).
Unit-III	Biodiversity and regional conservation strategies success stories with reference to India and sustainable utilization. Principles of wildlife management, wildlife sanctuaries, parks and biosphere reserves in India, endangered and threatened species of plants and animals in India, germplasm banks.
Unit-IV	Basic concept of center of origin of cultivated plants. Food plants – rice, wheat, maize, potato and sugarcane. Vegetable oils: coconut, groundnut and mustard. Spices: General account with an emphasize on those plants cultivated in Rajasthan (cumin, capsicum, coriander) Beverages: tea and coffee. Fibers: cotton and jute.
Unit-V	Medicinal plants: General account with an emphasize on those cultivated in Rajasthan (senna, isabgol, safed musli). Wood: General account of sources of firewood, timber and bamboos; Rubber. Legumes or pulses, starch or sugar yielding plants. EthnoBotany: a general account.

### Course Outcome (CO):

At the end of this course students will have:

**CO1:** Able to understand the meaning of Ecology, Community and Ecosystem as well and their role in existence of Biosphere and biomes of the world

**CO2:** An Understanding of biogeochemical cycle, factors affecting population and community ecology and their interrelationship to the society.

**CO3:** strategies and importance of wild life protection by humans and their need for the survival of living beings.

**CO4:** Understand core concepts of Economic Botany and relate with environment, Develop a basic knowledge of taxonomic diversity and important families of useful

*Enl3* *San* *Wicki* *kl*

Plants and their products in human use.

CO5: Develop critical understanding on economically important plants for medicines and beverages and to appreciate the diversity of plants and the plant products in human

H = Highly Related; M = Medium L = Low

#### Text Books:

1. P.D. Sharma. Ecology and utilization of plants. Rastogi publication.
2. Odum E P., and Barrett G.W., Fundamentals of Ecology. Thomson Asia Pvt. Ltd.
3. Rajagopalan R. Environmental Studies Oxford University Press.
4. P.D. Sharma. Ecology and utilization of plants. Rastogi Publication.
5. S.L. Kochar., Economic Botany in Tropics. McMillan Publishing House.
6. B.P. Pandey Economic Botany in Tropics.
7. Sambhamurthy. Economy Botany.

#### **BSB013A: Practical Exercises based on Plant Ecology and Economic Botany**

1. To study plant communities by quadrat methods so as to determine percentage frequency and density of plant species.
2. To determine chloride, carbonate, organic matter in given sample.
3. To find out the porosity of grassland and wood land soil sample.
4. To determine the moisture content of grassland soil.
5. To study morphological adaptation of hydrophytes & Xerophytes.
6. To measure water holding capacity of soil.
7. To study the basic concept of center of origin of cultivated plants proposed by Vavilov.

*Enli* *Sar* *Wicki* *lp*

8. To study the common name, botanical name, family, part used and economic importance of plants used as cereals (rice, wheat, maize).
9. To study the common name, botanical name, family, part used and economic importance of sugar yielding plants (potato and sugarcane).
10. To study the common name, botanical name, family, part used and economic importance of Vegetable oils yielding plants (coconut, groundnut and mustard).
11. To study the common name, botanical name, family, part used and economic importance of fiber yielding plants (cotton and jute) and types of wood.
12. To study the common name, botanical name, family, part used and economic importance of plants used as spices and beverages (tea and coffee).
13. To study general account with an emphasize on medicinal plants cultivated in Rajasthan (senna, isabgol, safed musli).
14. To check the adulteration in the commonly available spices, edible oil, Milk and Ghee.
15. Visit to any herbal garden in near vicinity.

Minutes of Meeting

A meeting of Board of Studies of Chemistry was conducted on 29 May 2020 at 5.30 pm on Zoom app during work from home.

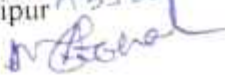

The agenda of meeting was to **Revise the syllabi of UG and PG courses in Chemistry.**

**Members BOS**

Prof. Sonu Pareek  
Prof. K.N. Prasad  
Prof. S.K. Sharma  
Prof. Sapna Sharma  
Dr. Swapna Santra  
Dr. Saurabh Dave  
Dr. Nidhi Bansal

Chairperson   
Member   
Member   
Member   
Member   
Member 

**External Members:**

1. Prof. Pahup Singh, Ex-Professor & Head, University of Rajasthan, Jaipur 
2. Prof. M.P. Dhobal, Ex-Professor University of Rajasthan, Jaipur 

The recommendations of the members are as follows-

1. The suggestions to revise the syllabus of B.Sc. Chemistry Major, M.Sc. Chemistry, which were proposed by the BOS members were discussed.
2. On the basis of the suggestions and feedback given by faculty and students, revisions in syllabus of all the courses was reviewed, relevance of revisions was also discussed in detail.
3. The syllabus of B.Sc. (Minor Chemistry) was approved without any change.
4. A minor revision was approved in paper BCE007B of B.Sc. II Semester by adding few new topics and by removing few common topics.
5. On the basis of the suggestions of faculty and other stake holders, minor revisions were proposed in M.Sc. Chemistry syllabus of paper MCE001C, MCE009B and MCE10B, all the changes were approved by BOS.

At the end of meeting chairperson expressed gratitude to external members and thanked all the members of Board of Studies.

**P96: Environment and Sustainability** Understand the issues of environmental contexts and sustainable development

Fig. 17. Self-directed and life-long learning: Arguing the ability to engage in independent and life-long learning in the broadest context sociotechnological changes

**Program Specific Outcome (PSO)**

(SK3) The ability to demonstrate knowledge and understanding of essential facts, concepts, principles and theories relating to the subject areas identified (learning skills)

(S6) The ability to recognise and analyse problems and plan strategies for their solution (problem solving skills)

(S23 Skills in the evaluation, interpretation and synthesis of chemical information and skills in the practical application of theory and skills in communicating scientific material and arguments) (interpretation skills)

## SEMESTER – I

## BCE 001A: Hydrocarbons, Reaction Mechanisms and Stereochemistry

**Course Outcomes(CO):** At the end of this course student will be able to understand-CO1: the structure and bonding involved in hydrocarbon. CO2: the reaction mechanism of various organic reactions CO3: the stereochemistry of hydrocarbons.CO4: the nomenclature of alkanes and cycloalkanes, their properties, method of formation and reactions they generally undergo. CO5 the nomenclature of Alkenes, Cycloalkenes, Dienes and alkynes,their properties, method of formation and reactions they generally undergo.

## Unit-1

## Structure and Bonding

Bond lengths and bond angles, bond energy, localized and delocalized chemical bond, hybridization, vander waals interactions, inclusion compounds, clathrates, charge transfer complexes, resonance, hyperconjugation, aromaticity, inductive and field effects, hydrogen bonding.

## Unit-II

## Mechanism of Organic Reactions

Curved arrow notation, drawing electron movements with arrows, half headed and double headed arrow, homolytic and heterolytic bond breaking. Types of reagents, electrophiles and nucleophiles. Types of organic reactions, Energy considerations. Reactive intermediates- carbocations, carbanions, free radicals, carbenes, arynes and nitrenes (With examples). Assigning formal charges on intermediates and other ionic species.

### Unit-III

## Stereochemistry of Organic Compounds

Concept of isomerism, types of isomerism. Optical isomerism: elements of symmetry, molecular chirality enantiomers, stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres, diastereomers, threo and erythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and

absolute configuration: sequence rules, D&L and R&S systems of nomenclature. Geometrical isomerism: determination of configuration of geometrical isomers, E&Z systems of nomenclature, geometric isomerism in oximes and alicyclic compounds. Conformational isomerism: conformational analysis of ethane and n-butane, conformations of cyclohexane, axial and equatorial bond, conformation of mono substituted cyclohexane derivatives. Newmann projection and sawhorse formulae. Difference between configuration and conformation.

#### Unit-IV

##### Alkanes and Cycloalkanes

II PAC nomenclature of branched and unbranched alkanes, the alkyl group, classification of carbon atoms in alkanes, Isomerism in alkanes, sources, methods of formation (with special reference to Wurtz reaction, Kolbe reaction, Corey-House reaction and decarboxylation of carboxylic acids). Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes, orientation, reactivity and selectivity. Cycloalkanes nomenclature, methods of formation, chemical reactions, Baeyer's strain theory and its limitations. Ring strains in small rings (cyclopropane and cyclobutane), theory of strainless rings. The case of cyclopropane ring; banana bonds.

#### Unit-V

##### Alkenes, Cycloalkenes, Dienes and Alkynes

Nomenclature of alkenes, methods of formation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halide, regioselectivity in alcohol dehydration The Saytzeff rule, Hofmann's elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes-mechanisms involved in hydrogenation, electrophilic and free radical additions, Markownikof's rule, hydroboration-oxidation, oxymercuration-reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with  $\text{KMnO}_4$ . Polymerization of alkenes. Substitution at the allylic and vinylic-positions of alkenes. Industrial applications of ethylene and propene. Methods of formation, conformation and chemical reactions of cycloalkenes. Nomenclature and classification of dienes: isolated, conjugated and cumulated dienes. Structure of allenes and butadiene, methods of formation, polymerization. Chemical reactions-1,2- and 1,4- additions, Diels-alder reaction. Nomenclature, structure and bonding in alkynes. Methods of formation. Chemical reactions of alkynes, acidity of alkynes.

#### Books Suggested :

1. A Text Book of Organic Chemistry : K. S. Tiwari, S. N. Mehrotra and N. K. Vishnoi
2. Modern Principles of Organic Chemistry : M. K. Jain and S. C. Sharma
3. A Text Book of Organic Chemistry: (Vol. I & II) O. P. Agarwal
4. A Text Book of Organic Chemistry : B. S. Bahl and Arun Bahl
5. A Text Book of Organic Chemistry : P. L. Soni
6. Organic Chemistry : (Vol. I, II & III) S. M. Mukherji, S. P. Singh and R. P. Kapoor, Wiley Eastern Ltd. (New Age International)
7. Organic Chemistry : Morrison & Boyd, Prentice Hall

**BCE 002A: Element and Functional Group Detection (Practicals)**

1. To purify the impure sample of organic compounds by sublimation .
2. To separate the mixture (1 solid+1 liquid) by distillation .
3. To detect the elements (N and S) from the given organic compound.
4. To detect the element (halogen) from the given organic compound.
5. To purify the impure sample of organic compound by crystallization and decolourised the compound by charcoal.
6. To detect the functional group (alcoholic and phenolic) from the given organic compound.
7. To detect the functional group (Carboxylic) from the given organic compound.
8. To detect the functional group ( Ester) from the given organic compound.
9. To detect the functional group (Carbonyl) from the given organic compound.
10. To detect the functional group (Amine and Aniline) from the given organic compound.
11. To detect the functional group (Carbohydrate And Nitro) from the given organic compound.
12. To detect the functional group (Amide) from the given organic compound

**BCE 003A: Chemistry of s and p-block elements****Course outcome**

On completion of the course, B.Sc. student will be able to understand:

**CO-1** about the atomic structure, Quantum numbers and electronic configuration of elements based on respective rules. **CO-2** the periodic properties like Atomic and ionic radii, ionization energy, ionization potential and electron negativity and their determinations and applications. **CO-3** different types of bonding like ionic bonding, covalent bonding, metallic bonding and hydrogen bonding and also molecular geometry based on VBT, VSEPR and MOT to know structure of different molecules and ions. **CO-4** s-block Elements of alkali metals and Alkaline earth metals and their industrial & biological applications. **CO-5** p- block Elements and their different compounds having the applications at industrial and biological applications.

**Unit-I**

**Atomic Structure** : Defects in Bohr Model, Idea of de Broglie matter waves. Heisenberg's uncertainty principle. Schrodinger wave equation, wave functions and their significance. Atomic orbitals. Quantum numbers. Aufbau Principle, Hund's multiplicity rule and Pauli's exclusion principles. Variation of orbital energies with atomic number and energy level diagram, electronic configuration of elements, effective nuclear charge and shielding; radial and angular wave functions and distribution curves, shape of s, p, d orbitals and their characteristics.

**Unit-II**

**Periodic Properties** : Atomic and ionic radii, ionization energy, electrode potential (use of redox potential-reaction feasibility), electron affinity and electronegativity – definition, methods of determination or evaluation, trends in periodic table and applications in predicting and explaining the chemical behavior, electronic configuration.

Handwritten signatures and initials at the bottom of the page, including "21", "Devi", "Pranav", "Pranav", "Pranav", and "Pranav".

**BCE 004B: Mixture Analysis (Practicals)**

**Prerequisites:** Theoretical basis of qualitative analysis; Systematic analysis of Acidic and Basic radicals (including interfering radicals). Chemical reactions involved. Common-ion effect, solubility product & their applications. Oxidizing and reducing agents and buffers used in analysis.

1. To identify carbonate, Sulphite, Sulphide of dilute  $H_2SO_4$  group.
2. To identify Nitrite and Acetate of dilute  $H_2SO_4$  group.
3. To identify Chloride, Bromide and Iodide of concentrated  $H_2SO_4$  group.
4. To identify Nitrate and Oxalate of concentrated  $H_2SO_4$  group.
5. To identify acidic radicals not identified with dilute or concentrated  $H_2SO_4$  group.
6. To analyze basic radicals of group I and II.
7. To analyze basic radicals of group III and IV.
8. To analyze basic radicals of group V, VI and VII.
9. To calibrate pipettes.
10. To calibrate burettes.
11. To prepare standard solution and dilution - 0.1 M to .001 M solution.
12. To standardize a secondary standard solution

**SEMESTER –II****BCE005A: Thermodynamics, Electrochemistry and Chemical Kinetics**

**Course Outcome:** After the completion of this course student will be able to-

CO-1 understand the principles of liquid state. CO-2 analyze the basic knowledge of solid state.

CO-3 describe the basic concept of kinetic theory of gaseous state. CO-4 think critically on different terms and process of thermodynamics. CO-5 understand practical aspects of different theories of electrochemistry and chemical kinetics

**Unit-I**

**Solid State :** Crystal structure of NaCl, KCl, Graphite, and Diamond. Types of crystals (molecular, covalent, metallic, ionic). Imperfections in crystals : point defect, Schottky defect, Frankel defect, metal excess defect (colour centre), line defect (dislocations), edge and screw dislocations. Imperfection due to transient atomic displacement. Indexes.

**Unit-II**

**Liquid State :** Surface tension of liquids, capillary action, surface tension and temperature, interfacial tension, surface active agents, the Parachor and chemical constitution (atomic and structural parachors). Viscosity of liquids, experimental determination of viscosity coefficient, its variation with temperature. Intermolecular forces of liquids. Liquid Crystals and thermography.

2/-

Dr. *[Signature]*

Dr. *[Signature]*

Dr. *[Signature]*

Dr. *[Signature]*

Dr. *[Signature]*

Dr. *[Signature]*

**Unit-III**

**Gaseous State** : Kinetic theory of gases, ideal gas laws and kinetic theory. Collision in a gas-mean free path, collision diameter, collision number. Behaviour of real gases - the van der Waal's equation, brief mention of other equations of state. Critical phenomena - critical constants of a gas and their determination, continuity of state, the Vander Waals equation and critical state. Principle of corresponding states, liquefaction of gases.

**Unit-IV**

**Thermodynamics** : Introduction of different terms and processes in thermodynamics : [Systems (isolated, closed, open) and surroundings, macroscopic properties (extensive and intensive), kinds of processes], First Law of thermodynamics and internal energy, state and state functions (exact and inexact differential), path dependence of work and heat. Enthalpy, heat changes at constant volume and constant pressure, heat capacities ( $C_v$ ,  $C_p$ ) and relation between them for ideal gases. Joule-Thomson effect, Joule-Thomson coefficient in ideal and real (van der Waal) gases, inversion temperature, Variation of heat of reaction with temperature (Kirchhoff's equation).

**Unit-V**

**Electrochemistry** : Arrhenius theory of electrolytic dissociation, classification of electrolytes; buffer solutions. Migration of ions : transference number and its determination (Hittorf and Moving Boundary methods). Conductance of solutions- equivalent, molecular and specific conductance, ionic conductance, relationship between ionic conductance and ionic mobility, Kohlrausch law and its applications.

**Chemical Kinetics** : Introduction, order and molecularity of a chemical reactions, integrated rate equations for zeroth, first, second and third order reactions, effect of temperature on reaction rates (Arrhenius equation), collision theory and transition state theory (derivation thermodynamically), deviations from collision theory.

**Books Recommended**

1. "Physical Chemistry", P. C. Rakshit, 5th Edition (1988), 4th Reprint (1997), Sarat Book House, Calcutta.
2. "Principles of Physical Chemistry", B. R. Puri, L. R. Sharma, and M. S. Pathania, 37th Edition (1998), Shoban Lal Nagin Chand & Co., Jalandhar.
3. "Physical Chemistry", K. J. Laidler and J. M. Meiser, 3rd Edition
4. Text Book of Physical Chemistry by Samuel Glasstone

**BCE 006A: Mixture Analysis and Kinetic Studies (Practicals)**

1. To prepare standard 0.1 N NaOH solution using 0.1 N Oxalic acid as primary standard solution.
2. To determine strength of unknown  $\text{CH}_3\text{COOH}$  using 0.1 N NaOH as intermediate solution.

21- 

3. To determine the percentage composition of a given mixture (non interacting system) by viscosity method.
4. To determine the percentage composition of a given mixture (non interacting system) by surface tension method.
5. To determine the partition coefficient of Iodine between water and carbon tetrachloride (or chloroform, carbon disulphide etc) at room temperature.
6. To determine the specific reaction rate of the hydrolysis of methyl or ethyl acetate catalysed by HCl at room temperature.
7. To determine the specific reaction rate of the hydrolysis of methyl or ethyl acetate catalysed by  $H_2SO_4$  at room temperature and compare the relative strength of acids.
8. To determine the specific reaction rate of the hydrolysis of methyl or ethyl acetate catalysed by HCl at  $40^\circ C$ ,  $45^\circ C$  and  $50^\circ C$  and calculate energy of activation graphically as well as employing the rate constant relationship with energy of activation.
9. To prepare colloidal solution of arsenious sulphide.
10. To study the reaction rate of decomposition of iodide by  $H_2O_2$  Kinetically.
11. To study the hydrolysis of methyl acetate catalysed by HCl solution and equinormal solution of urea hydrochloride and determines the degree of hydrolysis of the salt.
12. To determine the relative strength of acids ( $HCl, H_2SO_4$ ) during hydrolysis of an ester.

## BCE007C: Industrial Chemistry

On completion of the course, B.Sc. student will be able to understand: **CO-1** about the various types, theories and mechanism of corrosion and various prevention methods. **CO-2** about the various types of lubricants and its mechanism with various types of properties of lubricants. **CO-3** about the various types of fuel, its calorific values and its determination along-with carbonization process and synthetic fuel with manufacturing process. **CO-4** about various types of dyes and its classification and types. **CO-5**, about composition and manufacturing of cement, glass and ceramics and also principles and applications of green chemistry.

### Unit-I

**Water and its Treatment :** Types of impurities in Water, Hardness of Water, Disadvantages of Hard Water, Temporary and Permanent hardness. Units and inter conversions of Units. Estimation of hardness by EDTA Methods.. Methods of Treatment of Water for Domestic Purposes - Sedimentation, Coagulation, Filtration, Disinfection, Sterilization, Chlorination. Break point chlorination, Ozonization. Brief introduction of softening processes.

### Unit-II

#### Corrosion

Definition, Examples, Types of Corrosion: Theories of Corrosion and Mechanism - Dry Corrosion, (Direct Chemical attack), Wet Corrosion, (Electro Chemical Theory) .Principles of Corrosion, Galvanic Series, Galvanic Corrosion, Concentration Cell Corrosion, Mechanism of Wet Corrosion. Factors Influencing Corrosion. Control of Corrosion; Modification of Design, Cathodic Protection, Sacrificial anodic and Impressed Current cathodic protection. Protective Coatings; Metallic coating and non metallic coating.

*[Signature]*  
*[Signature]*  
*[Signature]*  
*[Signature]*

**Unit-III****Lubricants and Cement**

Lubricants, Types of lubricants oils, greases and solid lubricants, Synthetic lubricants, Functions and Mechanism of lubricants, Properties of lubricants- Saponification and Iodine value, Cloud and Pour point, Flash and Fire point, Aniline Point and Viscosity.

**Cement:** Types of cement, composition, manufacturing process, setting and hardening of cement

**Unit-IV****Fuel**

Classification of Fuels, Calorific value, Gross and Net calorific values (SI units), Determination of calorific value of a solid and liquid fuel, Carbonization, Petroleum, Cracking- fluidized catalytic cracking, Reforming of petrol, Knocking, Octane number, Cetane number, prevention of knocking, anti-knocking agents, Synthetic petrol, Bergius process and Fischer Tropsch process.

**Unit-V****Green Chemistry**

Introduction, Significance and principles, Industrial applications of green chemistry; R4M4 (Reduce, Reuse, Recycle, Redesign; Multipurpose, Multidimensional, Multitasking, Multi-tracking;) model with special reference of survimeter, econoburette; Safer Technique for Sustainable development. Concept of molecular and atomic economy & its use in green chemistry.

**REFERENCE BOOKS:**

1. B.K. Sharma, "Industrial Chemistry", Krishna Prakasam Media (P) Ltd., Meerut, 2001.
2. A text book of Engineering Chemistry by Jain & Jain, Dhanpat Rai Publishing Company, New Delhi (15 Edition) (2006).
3. Chemistry of Engineering Materials by C.P. Murthy, C.V. Agarwal and A. Naidu BS Publication Hyd. 2007.
4. Engineering Chemistry by J C Kuriacose and J. Rajaram, Tata McGraw-Hill Co, New Delhi (2004)
5. Organic Chemistry by Morrison & Boyd, Prentice Hall.

**BCE008B: Lubricants Testing and Analysis (Practicals)**

1. To determine the hardness of Water by complexometric method.
2. To determine the hardness of Water by HCl method.
3. To determine the amount of free chlorine in given water sample.
4. Determination of Total residual Chlorine in water sample.
5. To standardize pH by buffer solution and determine pH of different given water samples.
6. Determination of Viscosity of a given lubricant by Redwood Viscometer No.1.
7. Determination of Flash and Fire Points of a given lubricant by Pensky Martin Apparatus.
8. Determination of Cloud and Pour Points of a given lubricant.

Handwritten signatures and initials are present at the bottom of the page, including "384", "Denu", "Sih", "De", and "Sonal".

9. To determine moisture, volatile and ash content in a given coal sample by proximate analysis.
10. To determine the calorific value of Solid Fuel by Bomb's Calorimeter.
11. To measure dissolved oxygen in water.
12. To measure Total Solid in sewage.

## SEMESTER -III

### BCF009B: Alcohols, Aldehydes and Ketones

On completion of the course, B.Sc. student will be able to understand:

**CO-1** The preparations, reactions and properties of Arenes, their use as solvent and important synthetic reagents. Student will also learn about the aromaticity and aromatic character.

**CO-2** The preparations, reactions and properties of alkyl and aryl halides and their derivatives and various reactions of synthetic applications like  $SN^1/SN^2/SN^3$  etc.

**CO-3** The synthesis and reaction of alcohols and their synthetic and industrial applications. Student will also learn about their use as solvent and important synthetic reagents.

**CO-4** The synthesis and reaction of phenols and their synthetic and industrial applications. Student will also learn about their use as solvent and important synthetic reagents.

**CO-5** The synthesis and reaction of Carbonyl compounds (aldehydes and ketones) along with industrial applications of various condensation and polymerization reactions.

#### Unit-I

**Arenes & Aromaticity:** Nomenclature of benzene derivatives. The aryl group, aromatic nucleus and side chain structure of benzene, molecular formula and Kekule structure, stability. Aromaticity: Huckle's rule, aromatic ions.

Aromatic electrophilic substitution-general pattern of the mechanism, role of  $\sigma$  and  $\pi$  complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction, energy profile diagrams. Activating & deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives. Birch reduction.

#### Unit-II

**Alkyl & Aryl Halides:** Nomenclature of alkyl halides, methods of preparation, chemical reactions. Mechanism of nucleophilic substitution reactions of alkyl halides,  $SN^2$  and  $SN^1$  reactions with energy profile diagrams. Polyhalogen compounds, chloroform, carbon tetrachloride. Methods of formation of aryl halides, nuclear and side chain reactions. The addition-elimination and the elimination-addition mechanism of nucleophilic aromatic substitution reactions. Relative reactivities of alkyl, allyl, vinyl and aryl halides. Synthesis and use of D.D.T. and B.H.C.

#### Unit-III

**Alcohols:** Classification and nomenclature. Monohydric alcohols - Nomenclature, Method of formation by Reduction of aldehydes, Ketones, Carboxylic acids and esters, Hydrogen bonding. Acidic nature. Reactions of alcohols. Dihydric Alcohols - Nomenclature, methods of formation, Chemical reaction of vicinal glycols. Oxidative-Cleavage [ $Pb(OAc)_4$  and  $HIO_4$ ] and pinacol-

pinacolone rearrangement Trihydric Alcohols - Nomenclature and methods of formation, chemical reactions of glycerol.

#### Unit-IV

**Phenols** :Nomenclature, Structure and bonding, Preparation of Phenols, Physical properties and acidic character, Comparative acidic strengths of alcohols and phenols, Resonance stabilization of phenoxide ion, Reactions of phenols: electrophilic aromatic substitution, acylation and carboxylation Mechanism of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch Reaction, Lederer-Manasse reaction and Reimer-Tiemann Reaction.

#### Unit-V

**Aldehydes And Ketones** :Nomenclature and structure of the carbonyl group, Synthesis of aldehydes and ketones with particular reference to the synthesis of aldehydes from acid chlorides, synthesis of aldehydes and ketones using 1,3-Dithianes, synthesis of ketones from nitriles and from carboxylic acids, Physical properties, Mechanism of Nucleophilic additions to carbonyl, Aldol, Perkin and Knoevenagel condensations, Condensation with ammonia and its derivatives, Wittig reaction, Mannich reaction, Use of acetals as protecting group, Oxidation of aldehydes, Baeyer-Villiger oxidation of ketone, Cannizzaro's reaction, MPV, Clemmensen, Wolff-Kishner,  $\text{LiAlH}_4$  reductions.

#### Books Suggested :

1. A Text Book of Organic Chemistry : K. S. Tiwari, S. N. Mehrotra and N. K. Vishnoi
2. Modern Principles of Organic Chemistry : M. K. Jain & S. C. Sharma
3. A Text Book of Organic Chemistry: (Vol. I & II) O. P. Agarwal
4. A Text Book of Organic Chemistry : B. S. Bahl and Arun Bahl
5. Organic Chemistry by Morrison & Boyd, Prentice Hall
6. A Text Book of Organic Chemistry : P. L. Soni
7. Organic Chemistry: (Vol. I, II & III) S. M. Mukherji, S. P. Singh and R. P. Kapoor

#### BCE 039A: Organic analysis and Preparation

1. To identify an organic compound through the functional group analysis, determine its M.P and prepare its suitable derivative.
2. To identify an organic compound number 1 through the functional group analysis, determine its M.P and prepare its suitable derivative.
3. To identify an organic compound number 2 through the functional group analysis, determine its M.P and prepare its suitable derivative.
4. To identify an organic compound number 3 through the functional group analysis, determine its M.P and prepare its suitable derivative.
5. To identify an organic compound number 4 through the functional group analysis, determine its M.P and prepare its suitable derivative.
6. To identify an organic compound number 5 through the functional group analysis, determine its M.P and prepare its suitable derivative.
7. To identify an organic compound number 6 through the functional group analysis, determine its M.P and prepare its suitable derivative.

Handwritten signatures and initials are present at the bottom of the page, including "29", "BCE", "Arun", "Mishra", "Pc", and "Pamand".

pinacolone rearrangement Trihydric Alcohols - Nomenclature and methods of formation, chemical reactions of glycerol.

#### Unit-IV

**Phenols** :Nomenclature, Structure and bonding, Preparation of Phenols, Physical properties and acidic character, Comparative acidic strengths of alcohols and phenols, Resonance stabilization of phenoxide ion, Reactions of phenols: electrophilic aromatic substitution, acylation and carboxylation, Mechanism of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch Reaction, Lederer-Mannich reaction and Reimer-Tiemann Reaction.

#### Unit-V

**Aldehydes And Ketones** :Nomenclature and structure of the carbonyl group, Synthesis of aldehydes and ketones with particular reference to the synthesis of aldehydes from acid chlorides, synthesis of aldehydes and ketones using 1,3-Dithianes, synthesis of ketones from nitriles and from carboxylic acids, Physical properties, Mechanism of Nucleophilic additions to carbonyl, Aldol, Perkin and Knoevenagel condensations, Condensation with ammonia and its derivatives, Wittig reaction, Mannich reaction, Use of acetals as protecting group, Oxidation of aldehydes, Baeyer-Villiger oxidation of ketone, Cannizzaro's reaction, MPV, Clemmensen, Wolff-Kishner,  $\text{LiAlH}_4$  reductions.

#### Books Suggested :

1. A Text Book of Organic Chemistry : K. S. Tiwari, S. N. Mehrotra and N. K. Vishnoi
2. Modern Principles of Organic Chemistry : M. K. Jain & S. C. Sharma
3. A Text Book of Organic Chemistry: (Vol. I & II) O. P. Agarwal
4. A Text Book of Organic Chemistry : B. S. Bahl and Arun Bahl
5. Organic Chemistry by Morrison & Boyd, Prentice Hall
6. A Text Book of Organic Chemistry : P. L. Soni
7. Organic Chemistry: (Vol. I, II & III) S. M. Mukherji, S. P. Singh and R. P. Kapoor

#### BCE 039A: Organic analysis and Preparation

1. To identify an organic compound through the functional group analysis, determine its M.P and prepare its suitable derivative.
2. To identify an organic compound number 1 through the functional group analysis, determine its M.P and prepare its suitable derivative.
3. To identify an organic compound number 2 through the functional group analysis, determine its M.P and prepare its suitable derivative.
4. To identify an organic compound number 3 through the functional group analysis, determine its M.P and prepare its suitable derivative.
5. To identify an organic compound number 4 through the functional group analysis, determine its M.P and prepare its suitable derivative.
6. To identify an organic compound number 5 through the functional group analysis, determine its M.P and prepare its suitable derivative.
7. To identify an organic compound number 6 through the functional group analysis, determine its M.P and prepare its suitable derivative.

29/   
    

8. To identify an organic compound number 7 through the functional group analysis, determine its M.P and prepare its suitable derivative
9. To identify an organic compound number 8 through the functional group analysis, determine its M.P and prepare its suitable derivative
10. To identify an organic compound number 9 through the functional group analysis, determine its M.P and prepare its suitable derivative

## BCE 011B: Non-aqueous Solvents and Transition Metals

**Course outcome:** On completion of this course student will be able to: CO-1 Students will be able to explain the unique characteristics of different types of acid and base. CO-2 Students will be able to analyze the chemical reaction in different non-aqueous solvents and advantages, limitations of various solvents CO-3 Students will be able to explain the trends in atomic and physical properties of group 15, 16, 17 & 18 elements CO-4 Students will be able to identify common organic ligands used to construct coordination complexes, and learn how certain ligands interact with transition metal ions CO-5 Students will be able to understand practical aspects of separation of different lanthanides

### Unit-I

**Acids and Bases:** Acid and base, pH and hydrolysis of salts, Arrhenius, Brønsted-Lowry, Lux flood, Solvent System and Lewis concepts of acids and bases. Factors affecting strengths of Lewis acids and bases.

### Unit-II

**Non-aqueous Solvents:** Physical properties of a solvent for functioning as an effective reaction medium. Types of solvents and their general characteristics. Reactions in liquid ammonia and liquid sulfur dioxide.

### Unit-III

**Chemistry of P-block elements (Groups 15, 16, 17 and 18) :** Group trend in periodic properties, hydrides, oxides, oxyacids and halides. Structures of oxides and oxyacids of nitrogen, phosphorus, sulphur, selenium, tellurium and halogens. Chemistry of cyclophosphazenes and tetrasulphur tetranitride. Basic properties of iodine, structure and bonding of interhalogens and polyhalides, compounds of xenon.

### Unit-IV

**Transition Metals:** Characteristic properties of 3d elements – ionic radii, oxidation states, complexation tendency, magnetic behaviour and electronic spectral properties. Spectrophotometric estimation of metal ions.

### Unit-V

**Lanthanides & Actinides :** Comparative study of lanthanide elements with respect to electronic configuration, atomic and ionic radii, oxidation state and complex formation. Lanthanide contraction. Occurrence and principles of separation of lanthanides. Actinides: electronic configuration, atomic and ionic radii, oxidation state, Magnetic and spectral properties.

2/1 -   
    

**Books Recommended**

1. "Concise Inorganic Chemistry", J. D. Lee, 5th Edition (1996), Chapman & Hall, London.
2. "Modern Inorganic Chemistry", R. C. Aggarwal, 1st Edition (1987), Kitab Mahal, Allahabad.
3. "Basic Inorganic Chemistry", F. A. Cotton, G. Wilkinson, and Paul L. Gaus, 3rd Edition (1995), John Wiley & Sons, New York.

**BCE 012B: Titrimetric Analysis (Practicals)**

1. To determine alkali content in antacid tablet using HCl.
2. To estimate copper using thiosulphate.
3. To determine acetic acid in commercial vinegar using NaOH solution.
4. To prepare Tetraammine copper (II) sulphate.
5. To prepare Ni-DMG complex.
6. To determine the amount of Na and K in a given sample by Flame Photometer.
7. Analysis of the mixture number 1 containing three acidic and three basic radicals.
8. Analysis of the mixture number 2 containing three acidic and three basic radicals.
9. Analysis of the mixture number 3 containing three acidic and three basic radicals.
10. Analysis of the mixture number 4 containing three acidic and three basic radicals.
11. Analysis of the mixture number 5 containing three acidic and three basic radicals.
12. Analysis of the mixture number 6 containing three acidic and three basic radicals.

**SEMESTER –IV****BCE 013B: Phase Equilibria and Surface Chemistry**

**Course Outcome:** On completion of this course student will be able to- CO-1 understand the principles of laws of thermodynamics. CO-2 analyze the basic knowledge of phase equilibrium. CO-3 describe the basic principles and concept of electrochemical cell. CO-4 think critically on different terms and process of surface chemistry. CO-5 understand Schrodinger wave equation and its importance

**Unit-I**

**Thermodynamics :** Second law of thermodynamics and spontaneous processes, Carnot Cycles, entropy, entropy changes in reversible and irreversible processes and of universe, physical concept of entropy, entropy changes of an ideal gas in different processes, entropy of an ideal gas. Third Law of thermodynamics. The concept of residual entropy. Applications of Third Law. Free energy and its concept, Gibbs and Helmholtz free energies and their relationship, variation of free energy with temperature and pressure. Maxwell's relations, Gibbs-Helmholtz equations, its application for the determination of  $\Delta G$ ,  $\Delta H$ ,  $\Delta S$  of a reversible cell reaction. Thermodynamics of phase transition, Clapeyron-Clausius equation and its applications.

Handwritten signatures and initials at the bottom of the page, including "397", "V. K. Patel", "De", "Daw", "P", "S. K. Mishra", and "Raman".

**Unit-II**

**Phase Equilibria** : Phase rule, phase, component, degree of freedom, thermodynamic derivation of phase rule, phase diagrams of one component systems (water and sulfur), two component systems (phenol-water, lead-silver, tin-magnesium).

**Unit-III**

**Electrochemical Cells** : Galvanic cells, reversible and irreversible cells, cell emf and its measurement, Reactions in reversible cells, free energy and emf of reversible cell, Single electrode potential (Nernst equation), its measurement and sign convention, Standard electrode potential, Emf of reversible cell from electrode potentials, Types of reversible electrode, reference electrodes, Applications of emf measurements/determination of ionic activities, pH, potentiometric titrations (acid-base, redox, precipitation type reactions), equilibrium constant, Basic Idea of Concentration cells with and without transference, Liquid junction potential and its elimination.

**Unit-IV**

**Surface and Colloids Chemistry** : Adsorption, absorption and sorption, Freundlich isotherm, its demerits and Langmuir Adsorption isotherm, Multi layer adsorption-BET equation (no derivation) and its application to surface area measurement, Sols (reversible and irreversible), emulsions and emulsifiers, association colloids (micelles), gels, Applications of colloids.

**Unit-V****Elementary quantum Mechanics**

Black-body, radiation, Planck's radiation law, photoelectric effect, heat capacity of solids, Compton effect, De-Broglie hypothesis, Heisenberg's uncertainty principle, Sinusoidal wave equation, Hamiltonian operator, Schrodinger wave equation and its importance, physical interpretation of the wave function, postulates of quantum mechanics, particle in a one dimensional box.

**Books Recommended**

1. "Physical Chemistry", **P. C. Rakshit**, 5th Edition (1985), 4th Reprint (1997), Sarat Book House, Calcutta.
2. "Principles of Physical Chemistry", **B. R. Puri, L. R. Sharma, and M. S. Pathania**, 37th Edition (1998), Shoban Lal Nagin Chand & Co., Jalandhar.
3. "Physical Chemistry", **K. J. Laidler and J. M. Meiser**, 3rd Edition, Houghton Mifflin Comp., New York, International Edition (1999).
4. An Introduction of Electrochemistry by S. Glasstone
5. D A McQuarrie, Introduction to Quantum Chemistry
6. Introduction to Quantum Mechanics by Pauling and Wilson
7. Quantum Mechanics by Griffiths.

2/ -   
 3/ -   
 4/ -   
 5/ -   
 6/ -   
 7/ - 

**BCE 014A: Acid-Base Analysis (Practicals)**

1. To determine the solubility of benzoic acid at different temperatures and to determine  $\Delta H$  of the dissolution process.
2. To determine the water equivalent of the thermos flask or calorimeter.
3. To determine the enthalpy of neutralization or heat of neutralization for a strong acid and strong base.
4. To determine heat of neutralization of a weak acid say acetic acid and to calculate its heat of ionization or enthalpy of ionization.
5. To determine heat of neutralization of a weak base say  $\text{NH}_4\text{OH}$  and to calculate its heat of ionization or enthalpy of ionization.
6. To determine the strength of given acid pH metrically. For this you are provided with standard  $\text{NaOH}$  solution.
7. To draw the solubility curve of phenol-water system and to determine critical solution temperature of the system and the composition of phenol-water system at C.S.T.
8. To determine the C.S.T of phenol-water system in presence of 1%  $\text{NaCl}$  solution and 1% succinic acid solution.
9. To determine the dissociation constant of a weak acid conductometrically and verify Ostwald's dilution law.
10. To determine the transition temperature of the given substance by thermometric method ( $\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$ )
11. To determine enthalpy of solution of solid  $\text{CaCl}_2$  and calculate lattice energy of  $\text{CaCl}_2$ .
12. To determine the heat of reaction involving precipitation of a salt say  $\text{BaSO}_4$ .

**BCE015B: Analytical Chemistry**

**Course outcome:** On completion of the course, B.Sc. student will be able to understand:

**CO-1** about the various types of error with curves and methods of minimizing errors with significant figures and computation rules. **CO-2** about the Properties and formation of precipitates, contamination and methods of removing impurities in precipitates. **CO-3** about the theoretical and practical aspects of various analytical reagents and their applications. **CO-4** about the solvent extraction systems, distribution laws and Craig concept also with Radioanalytical Methods and their applications. **CO-5** about classification of chromatographic methods and applications and Elementary idea of HPLC, GC, TGA, DTA.

**Unit-I**

**Statistical Evaluation :** Determinate and Indeterminate errors. Normal error curve. Accuracy and Precision, relative and standard deviation. Methods for minimizing errors. Criteria for rejection of an observation. Significant figures and computation rules.

**Unit-II**

**Precipitation:** Desirable properties of gravimetric precipitates. Formation of gravimetric precipitates. Conditions for quantitative precipitation. Contamination in precipitates. Methods for

2/-   
 397    
 12  

removing impurities in precipitates. Organic precipitants (oxime, dithiozone,  $\alpha$ -nitroso-( $\beta$ -naphthol, cupferron, dimethyl glyoxime) in chemical analysis.

### Unit-III

**Analytical Reagents** : Principles of qualitative and quantitative analysis; acid-base, oxidation-reduction and complexometric titrations using EDTA; Karl Fischer reagent and periodate in chemical analysis. precipitation reactions; use of indicators; use of organic reagents in inorganic analysis.

### Unit-IV

**Solvent Extraction** : Distribution law, solvent extraction, equilibrium constant from distribution coefficient ( $K_1 + I_2 = KI_3$ ). Craig concept of counter-current distribution, Important solvent extraction systems.

**Radioanalytical Methods** : Elementary theory, isotope dilution and Neutron activation methods and applications, applications of isotopes.

### Unit-V

**Chromatography** : Classification of chromatographic methods, general principle and application of adsorption, partition, ion-exchange, thin layer, column and paper chromatography. Elementary idea of HPLC, GC, GSC. TGA & DTA analysis.

### Books Recommended

1. "Modern Methods of Chemical Analysis", R. L. Peacock, L. D. Shields, T. Cairns, and I. C. McWilliam, 2nd Edition (1976), John Wiley, New York.
2. "Basic Concepts of Analytical Chemistry", S. M. Khopkar, 2nd Edition (1998), New Age International Publications, New Delhi.
3. "Environmental Chemistry", A. K. De, 3rd Edition (1994), Wiley Eastern, New Delhi.
4. "Instrumental Methods of Analysis", H. H. Willard, L. L. Merritt, and J. A. Dean, 6th Edition (1986), CBS Publishers & Distributors, Shahdara, Delhi.
5. "Analytical Chemistry", G. D. Christian, 4th Edition (1986), John Wiley & Sons, New York.
6. "Principles and Methods of Chemical Analysis", H. F. Walton, 2nd Edition (1966), Prentice Hall, New Delhi.

### BCE 040A: Estimations, Calibrations and Chromatographic analysis

#### (Practicals)

1. Calibration of weights and calculation of errors in it.
2. Prepare a standard solution of  $Na_2CO_3$  and standardize the given solution of  $HCl/H_2SO_4$
3. Prepare a standard solution of sodium oxalate and standardize given solution of  $KMnO_4$
4. Determine percentage purity of commercial sample of  $NaOH$
5. Prepare a standard solution of  $K_2Cr_2O_7$  and standardize given solution of  $Na_2S_2O_3$
6. Estimation of Barium as  $BaSO_4$  gravimetrically

Handwritten signatures and initials are present at the bottom of the page, including "21-", "Dan", "S. K. De", "R. L. Peacock", "H. H. Willard", "G. D. Christian", and "H. F. Walton".

7. Preparation of 0.1 N solution of  $\text{HCl}$  /  $\text{HNO}_3$  using density and percentage by weight and their standardization by using  $\text{Na}_2\text{SO}_3$
8. Prepare a calibration curve using  $\text{KMnO}_4$  and determine concentration in unknown given sample solution.
9. Prepare a calibration curve using  $\text{K}_2\text{Cr}_2\text{O}_7$  and determine concentration in unknown given sample solution.
10. Preparation of 0.05 N  $\text{H}_2\text{SO}_4$  using density and weight percentage and its standardization.
11. To separate the mixture of Methyl Orange and Methylene Blue by using cyclohexane and ethyl acetate (8.5:1.5) as solvent system by TLC.
12. To separate the mixture of Aldehyde and Ketones by TLC.
13. To separate the pigments from spinach leaves by column Chromatography.
14. Preparation and separation of 2,4-dinitro Phenylhydrazones of acetone, 2-butanone using toluene and petroleum ether (40:60).
15. To separate the mixture of D,L-alanine, glycine and L-leucine using n-butanol : acetic acid : water (4:1:5). Spray reagent- Ninhydrin.
16. To separate monosaccharides - a mixture of D-galactose and D-fructose using n-butanol : acetone : water (4:1:5). Spray reagent - aniline hydrogen phthalate

## SEMESTER -V

### BCE 019A: Coordination Compounds and Organometallic Chemistry

**Course outcome:** Students will be able to-

CO-1 identify common organic ligands used to construct coordination complexes, and learn how certain ligands interact with transition metal. CO-2 explain the formation of different types of bonds, predict the geometry of simple molecules, explain the different types of hybridisation and draw shapes of simple covalent molecules. CO-3 relate electronic configurations to the basic magnetic properties of coordination complexes, Calculate the "spin-only" magnetic moment of simple coordination complexes. CO-4 understand practical aspects of separation of different lanthanides. CO-5 understand the classification, properties and applications of organometallic compounds, study the methods of preparation, properties, structure and bonding of metal carbonyls and metal clusters and understand the role of metals in biological systems.

#### Unit-I

**Coordination Compounds :** Werner's theory, nomenclature, chelates, stereo-chemistry of coordination numbers 4, 5 and 6. Various types of isomerism in coordination complexes. Important applications of coordination compounds. Theories of metal-ligand bonding in transition metal complexes- Sidgwick effective atomic number concept, valence bond theory of coordination compounds.

*[Handwritten signatures and initials]*

**Unit-II**

**Theories of Metal-Ligand bonding :** Limitations of valence bond theory; Crystal-field theory and crystal-field splitting in octahedral and tetrahedral complexes; factors affecting the crystal-field parameters.

**Unit-III**

**Magnetic Properties of Transition Metal Complexes :** Types of magnetic behaviour, methods of determining magnetic susceptibility, L-S and J-J coupling, orbital contribution to magnetic moments. Correlation of magnetic moment data and stereochemistry of Co(II) and Ni(II) complexes; anomalous magnetic moments.

**Unit-IV**

**Chemistry of f-block Elements :** Comparative study of lanthanide elements with respect to electronic configuration, atomic and ionic radii, oxidation states and complex formation; occurrence and principles of separation. General features and chemistry of actinides, principles of separation of Np, Pu and Am from U. Trans-Uranium elements.

**Unit-V**

**Organometallic Chemistry :** Definition, nomenclature and classification of organometallic compounds. Preparation, properties, bonding and applications of alkyl and aryls of Li, Al, Hg, Sn, Ti. A brief account of metal-ethylenic complexes and homogeneous hydrogenation. Essential and trace element in biological process, oxygen transport with reference to haemoglobin, biological role of alkali metals.

**Books Recommended**

1. "Concise Inorganic Chemistry", J. D. Lee, 5th Edition (1996), Chapman & Hall, London.
2. "Modern Inorganic Chemistry", R. C. Aggarwal, 1st Edition (1987), Kitab Mahal, Allahabad.
3. "Basic Inorganic Chemistry", F. A. Cotton, G. Wilkinson, and Paul L. Gaus, 3rd Edition (1995), John Wiley & Sons, New York.
4. "Inorganic Chemistry", A. G. Sharpe, 3rd International Student Edition (1999), ELBS / Longman, U.K.
5. "Inorganic Chemistry", D. F. Shriver and P. W. Atkins, 3rd Edition (1999), ELBS, London.

**BCE 020A: Inorganic Preparations and Estimation of Metal ions (Practicals)**

1. To prepare cis-potassium-dioxalatodiaquachromate (III).
2. To prepare trans-potassium-dioxalatodiaquachromate (III).
3. To prepare sodium trioxalatoferrate (III).
4. To estimate Ni as Ni-DMG in given solution.
5. To estimate Cu as CuSCN in given solution.

Handwritten signatures and initials are present below the list of practicals, including "Dawn", "De", "Sach", "Poonam", and others.

**Raman Spectra**

Basic principal, Instrumentation, Application of Raman spectra, Comparison of IR and Raman Spectra

**Unit-IV**

**Nuclear Magnetic Resonance:** Principle, Magnetic and non magnetic nuclei, absorption of radio frequency, Equivalent and non equivalent protons, chemical shifts, shielding and De-shielding effects, anisotropic effect, relative strength of signals, spin-spin coupling, long range coupling, coupling constant, applications to simple structural problems, Phenomenon of Chemical Exchange.

**Unit-V****Rotational Spectroscopy**

Diatomic molecules, energy levels of a rigid rotor (semi-classical principles), selection rules, spectral intensity, distribution using population distribution (Maxwell-Boltzmann distribution), determination of bond length; qualitative description of non-rigid rotor, isotope effect.

**Reference Books**

1. Spectrometric Identification of Organic Compounds: Robert M. Silverstein, Francis X. Webster, David Kiemle Wiley; 7<sup>th</sup> Edition.
2. Applications of spectroscopic techniques in Organic Chemistry: P.S. Kalsi, New Age International; 6th Edition.
3. Elementary Organic Spectroscopy; Principles And Chemical Applications: Y. R. Sharma, S. Chand & Co Pvt Ltd.
4. Fundamentals of Molecular Spectroscopy: C. M. Banwell and E. McCash, Tata McGraw Hill, 4<sup>th</sup> Edition.
5. Organic spectroscopy by William Kemp

**BCE 037B: Spectroscopic Determination of Compounds(Practicals)** All experiments will be based on problem solving technology by interpreting various types of spectrographs and subsequent discussion. The list of compounds may vary by keeping representation of each category of organic and inorganic compounds.

1. To identify the following functional group in the given compounds by IR spectroscopy: – OH, –NH<sub>2</sub> –NO<sub>2</sub> –COOH; Hydrogen Bonding (Intermolecular and Intramolecular)
2. To Identify the compound by U.V Spectroscopy containing:  $\pi$  –Bonding;  $\pi$  –Conjugation; Aromaticity
3. Elucidate the structure of given unknown organic compound by NMR spectroscopy.
4. To calculate the molecular mass of unknown organic molecules.
5. To draw spectral absorption curve for given substance (K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>) using spectrophotometer and determine the wavelength for maximum absorption.

2/-

*[Handwritten signatures and initials]*

- To draw spectral absorption curve for given substance ( $\text{KMnO}_4$ ) using spectrophotometer and determine the wavelength for maximum absorption.
- To determine the concentration of unknown solution by verifying Lambert Beer's Law for  $\text{K}_2\text{Cr}_2\text{O}_7$ .
- To determine the concentration of unknown solution by verifying Lambert Beer's Law for  $\text{KMnO}_4$ .
- To determine the percentage of two optically active substances say sucrose and tartaric acid in given solution polarimetrically.
- To determine the specific rotation of a given optically active compound (cane sugar).
- To determine the specific rotation of a given optically active compound tartaric acid.
- To determine the molecular weight of non volatile substance glucose using water as solvent by cryoscopic method.

## SEMESTER-VI

### BCE 017B Acid Derivatives and Heterocyclic Chemistry

**Course outcome:** On completion of the course, B.Sc. student will be able to understand:

**CO-1** The preparations, reactions and properties of Ethers and Epoxides, their use as solvent and important synthetic reagents.

**CO-2** The preparations, reactions and properties of carboxylic acid and its derivatives and various reactions of synthetic applications.

**CO-3** The synthesis and reaction of Nitrogen containing compounds and their synthetic and industrial applications.

**CO-4** The synthesis and reaction of 5, 6 member and condensed heterocyclic systems along with their industrial and medicinal applications.

**CO-5** The types of Carbohydrates and sugars, their occurrence, structure, configuration and properties. Student will also get the knowledge of the role of these bio-molecules in biological system and day to day life. Student will also learn to analyse adulteration of food and its prevention.

#### Unit-I

**Ethers and Epoxides :** Nomenclature of ethers and methods of formation, physical properties. Chemical reaction, cleavage and autoxidation, Ziesel's method of synthesis of epoxides. Acid and Base catalyzed ring opening, Reactions of Grignard and organolithium reagents with epoxides.

#### Unit-II

**Carboxylic Acids :** Nomenclature structure and bonding, Physical properties, Acidic nature of carboxylic acids, Effect of substituents on acid Strength, preparation of carboxylic acids. Reactions of carboxylic acids, Hell-Volhard Zelinsky reaction.

**Carboxylic Acid Derivatives :** Structure and nomenclature of acid chlorides, esters, amides and acid-anhydrides. Relative stability and reactivity of acid derivatives. physical properties, Inter conversion of acid derivatives by nucleophilic acyl substitution. preparation of carboxylic acid derivatives, chemical reactions, mechanism of esterification and hydrolysis (Acidic and Basic)

#### Unit-III

**Organic Compounds of Nitrogen :** Preparation of nitro alkanes and nitro arenes. Chemical Reactions of Nitro alkanes. Mechanism of nucleophilic substitution in nitro arenes and their

21-24  
 [Signatures]

reduction in acidic, neutral and alkaline media. Reactivity, Structure and nomenclature of amines. Stereochemistry of amines. Separation of a mixture of primary, secondary and tertiary amines. Amine salts as phase transfer catalysts. Gabriel-Phthalimide reaction, Hofmann bromamide Reaction. Reactions of amines. Electrophilic Aromatic substitution in arylamines. Reactions of amines with nitrous acid. Synthetic transformations of aryl-diazonium salts, azo coupling.

#### Unit-IV

**Heterocyclic Compounds :** Introduction: Molecular orbital picture and aromatic characteristics of pyrrole, furan, thiophene and pyridine. Methods of synthesis and chemical reactions, with particular emphasis on the mechanism of electrophilic substitution. Mechanism of nucleophilic substitution reactions in pyridine derivatives. Comparison of basicity of pyridine, piperidine and pyrrole. Introduction to condensed five and six-membered heterocycles. Preparation and reactions of indole, quinoline and isoquinoline. Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline.

#### Unit-V

**Carbohydrates :** Classification and nomenclature of monosaccharides, mechanism of osazone formation, interconversion of glucose and fructose, chain lengthening and chain shortening of aldoses. Configuration of monosaccharides. Erythro and threo diastereomers. Conversion of glucose into mannose. Formation of glycosides, ethers and esters. Determination of ring size of monosaccharides. Cyclic structure of D(+) glucose.

#### Books Suggested :

1. Organic Chemistry, Morrison and Boyd, Prentice Hall.
2. Organic Chemistry, L.G. Wade Jr. Prentice Hall.
3. Fundamentals of Organic Chemistry, Solomons, John Wiley.
4. Organic Chemistry Vol. I, II, III S.M. Mukerji, S.P. Singh and R.P. Kapoor, Wiley Eastern Ltd. (New Age International)
5. Organic Chemistry, F.A. Carey, McGraw Hill, Inc.
6. Introduction to Organic Chemistry, Streitwieser, Heathcock and Kosover. Macmillan.31
7. Organic Chemistry (Vol. I & II) : S. M. Mukherji, S. P. Singh and R. P. Kapoor, Wiley Eastern Ltd.
8. A Text Book of Organic Chemistry (Vol. I & II) : K. S. Tiwari, S. N. Mehrotra & N. K. Vishnoi
9. Organic Chemistry : M. K. Jain and S. Sharma
10. A Text Book of Organic Chemistry (Vol. I & II) : O. P. Agarwal
11. A Text Book of Organic Chemistry : R. K. Bansal
12. Organic Chemistry (Vol. I & II) : I. L. Finar
13. Organic Reaction and Their Mechanisms : P. S. Kalsi
14. Introduction of Petrochemicals : Sukumar Maiti.
15. Organic Chemistry : P. L. Soni
16. A Text Book of Organic Chemistry: V. K. Ahluwalia and Maduri Foyal, Narosa Publishing House Pvt. Ltd.

#### BCE 018B: Organic Preparations and Mixture Separation (Practicals)

24-  

1. To separate and identify the organic mixture containing two solid components using water and prepare their suitable derivatives.
2. To separate and identify the organic mixture containing two solid components using water and prepare their suitable derivatives.
3. To separate and identify the organic mixture containing two solid components using hot water and prepare their suitable derivatives.
4. To separate and identify the organic mixture containing two solid components using NaOH and prepare their suitable derivatives.
5. To separate and identify the organic mixture containing two solid components using NaOH and prepare their suitable derivatives.
6. To separate and identify the organic mixture containing two solid components using  $\text{NaHCO}_3$  and prepare their suitable derivatives.
7. To separate and identify the organic mixture containing two solid components using  $\text{NaHCO}_3$  and prepare their suitable derivatives.
8. (a) To prepare acetanilide from aniline (Acetylation).  
(b) To prepare phenylbenzoate from phenol (Benzoylation).
9. To prepare Iodoform from ethanol and acetone. (Aliphatic Electrophilic Substitution ).
10. To prepare m-dinitro benzene from nitro benzene .
11. To prepare p-nitro acetanilide from acetanilide.
12. To prepare Benzoic acid from toluene.

**BCE 022B: Photochemistry and Nuclear Chemistry**

**Course Outcome:** On completion of this course student will be able to-

CO-1 understand the kinetics of unimolecular and bimolecular reactions.

CO-2 analyze the basic knowledge of laws of photochemistry.

CO-3 describe the basic principles of laws of thermodynamics and colligative properties.

CO-4 think critically on different terms of electrochemistry of strong and weak electrolytes.

CO-5 understand practical aspects and applications of nuclear chemistry.

## Unit-I

**Chemical Kinetics:** Heterogeneous catalysis (surface reactions): Kinetics of unimolecular reactions- inhibition and activation energy. Bimolecular surface reactions - reactions between a gas molecule and an adsorbed molecule, reaction between two adsorbed molecules. Nature of surface, concept of active centres. Kinetics of enzymatic reactions: Michaelis-Menten's equation, significance of Michaelis constant, effect of temperature and pH in enzyme catalyzed reactions.

## Unit-II

**Photochemistry:** Law of photochemical equivalence, quantum efficiency, reasons for low and high quantum efficiency. Jablonski diagram depicting various processes occurring in the excited state, qualitative description of fluorescence, phosphorescence, non-radiative processes (internal conversion, intersystem crossing), quantum yield, photosensitized Reactions.

*[Handwritten signatures and initials]*

Kinetics of thermal and photochemical reactions ( $\text{H}_2 + \text{Br}_2 = 2\text{HBr}$ ,  $\text{H}_2 + \text{Cl}_2 = 2\text{HCl}$ ,  $2\text{HI} = \text{H}_2 + \text{I}_2$ ), photostationary state, Chemical actinometers (ferri-oxalate, uranyl oxalate).

### Unit-III

**Thermodynamics of Solutions :** Partial molal quantities, chemical potential, the Gibbs-Duhem equation, fugacity, activity and activity coefficient (concept and physical significance), reference and standard states, Variation of fugacity with temperature and pressure, Lewis-Randall rule, thermodynamic functions of mixing ( $\Delta G_{\text{mix}}$ ,  $\Delta S_{\text{mix}}$ ,  $\Delta V_{\text{mix}}$ ,  $\Delta H_{\text{mix}}$ ), ideal solutions and their characteristic properties, Duhem-Margules equation and its application, Henry and Raoult's law. Thermodynamics of colligative properties : Freezing point depression, elevation of boiling point, osmotic pressure, Van't Hoff equation. Measurement of osmotic pressure and determination of molecular weight of macromolecules.

### Unit-IV

**Electrochemistry :** Theory of strong electrolytes :- Qualitative idea of Debye-Huckel theory of ion-ion interactions, Debye-Huckel limiting law for activity coefficient of ions in electrolyte solution (derivation not required), its modification for concentrated solutions. Debye-Huckel-Onsager (D-H-O) theory of electrolytic conductance : qualitative idea of electrophoretic and relaxation effects, D-H-O equation for conductance of electrolyte solutions.

### Unit-V

**Nuclear Chemistry :** Isotopes, their separation and applications. Nuclear forces, nuclear binding energy, stability of nucleus, energy changes in nuclear reactions, nuclear fission and fusion. Uses of nuclear radiations (radiation, sterilization, radiation energy for chemical synthesis). Radio isotopes as a source of electricity.

### Books Recommended

1. "Physical Chemistry", **P. C. Rakshit**, 5th Edition (1988), 4th Reprint (1997), Surat Book House, Calcutta.
2. "Physical Chemistry", **K. J. Laidler and J. M. Meiser**, 3rd Edition (International Edition, 1999), Houghton Mifflin Co., New York.
3. "Physical Chemistry", **I. N. Levine**, 4th Edition (International Edition, 1995), Mc Graw-Hill Inc., New York.
4. "Essentials of Nuclear Chemistry" **H. J. Arnikar**, 4th Edition (1995), New Age International (p) Ltd., Wiley Eastern Ltd., New Delhi.
5. *Physical Chemistry*, IIIrd Year, P.D. Sharma and P.S. Verma, Ramesh Book Depot

### BCE 023A: Conductometric Analysis (Practicals)

1. To determine the strength of the given acid (HCl) conductometrically using standard alkali solution.
2. To determine the strength of the given acid ( $\text{CH}_3\text{COOH}$ ) conductometrically using standard alkali solution.
3. To determine the solubility and solubility product of a sparingly soluble salt conductometrically.

Handwritten signatures and initials are present at the bottom of the page, including "24", "B", "D", "S", "A", "P", and "R".

4. To determine the dissociation constant of a weak acid conductometrically and verify Ostwald's dilution law.
5. To draw spectral absorption curve for given substance ( $K_2Cr_2O_7$  or  $KMnO_4$ ) using spectrophotometer and determine the wavelength for maximum absorption for each of them. Also verify the Lambert-Beer's Law and determine the concentration of unknown solution.
6. To investigate the adsorption of oxalic acid from aqueous solution by activated charcoal and examine validity of Freundlich and Langmuir adsorption isotherm.
7. To determine the specific rotation of a given optically active compound.
8. To determine the equivalent conductance of a strong electrolyte KCl or NaCl at several concentrations and verify the applicability of Debye Huckel Onsager equation.
9. To determine the equivalent conductance of a strong electrolyte HCl at several concentrations and verify the applicability of Debye Huckel Onsager equation.
10. To study saponification of ethyl acetate conductometrically.
11. To determine conductometrically the concentration of KCl and KI in a given solution.
12. To determine the concentration of salt of a weak acid and strong base like sodium acetate conductometrically.

## BCE038A: Project

[illegible]

**Department of Chemistry**  
**JECRC University**  
**B.Sc. (Major Chemistry) 2020-21**  
**Mapping of CO-PO - PSO**

Semester-I

**BCE 001A Hydrocarbons, Reaction Mechanisms and Stereochemistry**

S.No.	
UNIT 1	Structure and Bonding
UNIT 2	Mechanism of Organic Reactions
UNIT 3	Stereochemistry of Organic Compounds
UNIT 4	Alkanes and Cycloalkanes
UNIT 5	Alkenes, Cycloalkenes, Dienes and alkynes

**Course Outcomes(CO)**

CO1: Understanding the structure and bonding involved in hydrocarbon.

CO2: Understanding the reaction mechanism of various organic reactions

CO3: Understanding the stereochemistry of hydrocarbons.

CO4: Understanding the nomenclature of alkanes and cycloalkanes, their properties, method of formation and reactions they generally undergo.

CO5: Understanding the nomenclature of Alkenes, Cycloalkenes, Dienes and alkynes, their properties, method of formation and reactions they generally undergo.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES and PROGRAM SPECIFIC OUTCOME**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

**BCE 003A: Chemistry of s and p-block elements**

UNIT 1 Atomic Structure	UNIT 2 Periodic Properties
UNIT 3 Chemical Bonding	UNIT 4 s-Block Elements
UNIT 5 p-Block Elements	

**Course outcome**

On completion of the course, B.Sc. student will be able to understand:

CO-1 about the atomic structure, Quantum numbers and electronic configuration of elements based on respective rules.

CO-2 the periodic properties like Atomic and ionic radii, ionization energy, ionization potential and electron negativity and their determinations and applications.

CO-3 different types of bonding like ionic bonding, covalent bonding, metallic bonding and hydrogen bonding and also molecular geometry based on VBT, VSEPR and MOT to know structure of different molecules and ions.

CO-4 s- block Elements of alkali metals and Alkaline earth metals and their industrial & biological applications

CO-5 p- block Elements and their different compounds having the applications at industrial and biological applications.

#### Semester-II

##### BCE 005A: Thermodynamics, Electrochemistry and Chemical Kinetics

UNIT 1	Solid State
UNIT 2	Liquid State
UNIT 3	Gaseous State
UNIT 4	Thermodynamics
UNIT 5	Electrochemistry

#### Course Outcome

CO-1 Students will be able to understand the principles of solid state.

CO-2 Students will be able to analyze the basic knowledge of liquid state.

CO-3 Students will be able to describe the basic concept of kinetic theory of gaseous state.

CO-4 Students will be able to think critically on different terms and process of thermodynamics.

CO-5 Students will be able to understand practical aspects of different theories of electrochemistry and chemical kinetics.

##### BCE 007C: Industrial Chemistry

UNIT 1 Water & its Treatment
UNIT 2 Corrosion
UNIT 3 Lubricants & Cement
UNIT 4 Fuel
UNIT 5 Green Chemistry

#### Course outcome

On completion of the course, B.Sc. student will be able to understand:

CO-1 about water related problems, their methods of analysis and different methods of treatment.

CO-2 about the various types, theories and mechanism of corrosion and various prevention methods

CO-3 about the various types of lubricants and its mechanism with various types of properties of lubricants and manufacturing process of cement.

CO-4 about the various types of fuel, its calorific values and its determination along-with carbonization process and synthetic fuel with manufacturing process.

CO-5, about principles and applications of green chemistry.

### BCE 009B: Alcohols, Aldehydes and Ketones

UNIT 1	Arenes & Aromaticity
UNIT 2	Alkyl & Aryl Halides
UNIT 3	Alcohols
UNIT 4	Phenols
UNIT 5	Aldehydes and Ketones

## Course outcome

On completion of the course, B.Sc. student will be able to understand:

- CO-1 The preparations, reactions and properties of Arenes, their use as solvent and important synthetic reagents. Student will also learn about the aromaticity and aromatic character.
- CO-2 The preparations, reactions and properties of alkyl and aryl halides and their derivatives and various reactions of synthetic applications like  $SN^1$ ,  $SN^2$ ,  $SN^i$  etc.
- CO-3 The synthesis and reaction of alcohols and their synthetic and industrial applications. Student will also learn about their use as solvent and important synthetic reagents.
- CO-4 The synthesis and reaction of phenols and their synthetic and industrial applications. Student will also learn about their use as solvent and important synthetic reagents.
- CO-5 The synthesis and reaction of Carbonyl compounds (aldehydes and ketones) along with industrial applications of various condensation and polymerization reactions.

UNIT 2	Precipitation
UNIT 3	Analytical Reagents
UNIT 4	Solvent Extraction Radioanalytical Methods
UNIT 5	Chromatography

**Course Outcome**

On completion of the course, B.Sc. student will be able to understand:

CO-1 about the various types of error with curves and methods of minimizing errors with significant figure and computation rules.

CO-2 about the Properties and formation of precipitates, contamination and methods of removing impurities in precipitates.

CO-3 about the theoretical and practical aspects of various analytical reagents and their applications.

CO-4 about the solvent extraction systems, distribution laws and Craig concept also with Radioanalytical Methods and their applications.

CO-5 about classification of chromatographic methods and applications and Elementary idea of HPLC, GC, TGA, DTA

**Mapping of COs and POs**

CO\PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

CO4	M	M	M	M	H	H	M	H	H	M
CO5	H	M	M	M	H	H	H	H	H	M

**SEMESTER-V****BCE 019A Coordination Compounds and Organometallic Chemistry**

UNIT 1 Coordination Compounds
UNIT 2 Theories of Metal-Ligand bonding
UNIT 3 Magnetic Properties of Transition Metal Complexes
UNIT 4 Chemistry of f-block Elements
UNIT 5 Organometallic Chemistry

**Course outcome**

CO-1 Students will be able to identify common organic ligands used to construct coordination complexes, and learn how certain ligands interact with transition metal.

CO-2 Students will be able to explain the formation of different types of bonds, predict the geometry of simple molecules, explain the different types of hybridisation and draw shapes of

*Handwritten signatures and marks at the bottom of the page.*

simple covalent molecules

CO-3 Students will be able to relate electronic configurations to the basic magnetic properties of coordination complexes, Calculate the "spin-only" magnetic moment of simple coordination complexes.

CO-4 Students will be able to understand practical aspects of separation of different lanthanides and actinides

CO-5 Students will be able to understand the classification, properties and applications of organometallic compounds, study the methods of preparation, properties, structure and bonding of metal carbonyls and metal clusters and understand the role of metals in biological systems.

#### Mapping of CO-PO/PSO

CO5	H	H	M	M	H	M	M	H	H	M

#### BCE 024B: Spectroscopy

UNIT 1	Atomic Spectroscopy
UNIT 2	Ultraviolet and Visible Spectrophotometry
UNIT 3	Infrared Spectroscopy, Raman Spectra
UNIT 4	Nuclear Magnetic Resonance
UNIT 5	Rotational Spectroscopy

#### Course outcome

On completion of the course, B.Sc. student will be able to understand:

CO-1 Principles of Atomic Spectroscopy, AAS, FAS etc and their instrumentation and applications in various fields like in checking of contamination of water by heavy metals and toxic substances.

CO-2 Common terms in spectroscopy. Principles of UV and Visible spectroscopy, its applications in structure determination and working method of Instrument.

CO-3 Principles of IR spectroscopy, its applications in structure determination, instrumentation, finger print region and functional group region and their role in determination of structure of organic compounds. Principle of Raman spectra, Raman and Rayleigh lines

CO-4 Principles of NMR Spectroscopy, instrumentation and applications. Student will also learn about the use of NMR technique in medical sciences.

CO-5 Energy levels of a rigid rotor (semi-classical principles), selection rules, spectral intensity, distribution using population distribution (Maxwell-Boltzmann distribution)

#### Mapping of PO/CO

CO/ PO	PO1	PO 2	PO3	PO 4	PO5	PO6	PO 7	PSO1	PSO2	PSO3

UNIT-1	Ethers and Epoxides
UNIT-2	Carboxylic Acids and Carboxylic Acid Derivatives
UNIT-3	Organic Compounds of Nitrogen
UNIT-4	Heterocyclic Compounds
UNIT-5	Carbohydrates

**Course outcome**

On completion of the course, B.Sc. student will be able to understand:

CO-1 The preparations, reactions and properties of Ethers and Epoxides, their use as solvent and important synthetic reagents.

CO-2 The preparations, reactions and properties of carboxylic acid and its derivatives and various reactions of synthetic applications.

CO-3 The synthesis and reaction of Nitrogen containing compounds and their synthetic and industrial applications.

CO-4 The synthesis and reaction of 5, 6 member and condensed heterocyclic systems along with their industrial and medicinal applications.

CO-5 The types of Carbohydrates and sugars, their occurrence, structure, configuration and properties. Student will also get the knowledge of the role of these bio-molecules in biological system and day to day life. Student will also learn to analyse adulteration of food and its prevention.

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

CO5	H	L	M	M	H	H	M	H	H	H

**BCE 022B: Photochemistry and Nuclear Chemistry**

UNIT 1	Chemical Kinetics
UNIT 2	Photochemistry
UNIT 3	Thermodynamics of Solutions
UNIT 4	Electrochemistry
UNIT 5	Nuclear Chemistry

**Course Outcome**

CO-1 Students will be able to understand the kinetics of unimolecular and bimolecular reactions.

CO-2 Students will be able to analyze the basic knowledge of laws of photochemistry.

CO-3 Students will be able to describe the basic principles of laws of thermodynamics and colligative properties.

CO-4 Students will be able to think critically on different terms of electrochemistry of strong and weak electrolytes.

CO-5 Students will be able to understand practical aspects and applications of nuclear chemistry.

**Mapping of COs and POs**

### BCE 038A: Project

Students will be able to

CO-1 search and identify the relevant problems or topics of research in the field of Chemistry

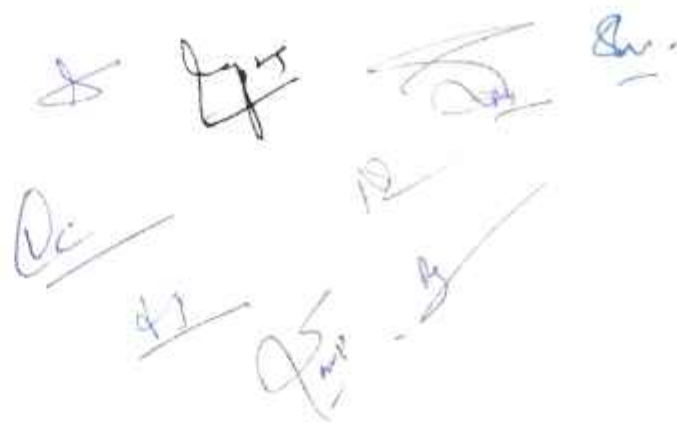

CO-2 understand the mechanism and process of data collection, review and analysis.

CO-3 correlate and analyze a current topic for innovation and for the benefits of society at large.

CO-4 understand the ethics of research, plagiarism, copyrights etc.

CO-5 develop an insight for choosing the field of specialization during higher studies.

*[Signature]*

**PO10 Lifelong learner:** Graduates will acquire the ability to engage in independent and self-learning as well as to successfully pursue their career objectives in advanced education and in professional courses, through the use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability.

## SEMESTER – I

### MCH 001A: Compounds of Different Elements

After the completion of the course, student will be able to understand the:

CO-1: Basics of stereochemistry and bonding in different compounds and reactions. CO-2 The knowledge of metal- ligand bonding in complexes. CO-3 Preparation, structure, bonding, reactions and applications of Hydrogen, Alkali and Alkaline Earth Metals. CO-4 Preparation, structure and bonding of compounds of Carbon and Silicon group elements. CO-5 Types of nuclear reactions

#### Unit-I

##### Stereochemistry and Bonding in Main group compounds

VSEPR Theory, Walsh diagram. Hybridization including energetic of hybridization, Bent's rule,  $d\pi-p\pi$  bond. Some simple reactions of covalently bonded molecules (i) Atomic inversion (ii) Bery pseudo rotation (iii) Nucleophilic displacement (iv) Free radical mechanism

#### Unit-II

##### Metal-Ligand bonding

Valence Bond Theory (VBT), Crystal field theory (CFT) for octahedral, trigonal bipyramidal, square pyramidal, tetrahedral and square planar complexes. Crystal field stabilization energy (CFSE), Factor affecting the crystal field parameters, weak and strong field complexes, spectrochemical series, John-Teller effect. Thermodynamic and related aspects of crystal fields - ionic radii, heats of ligation, lattice energy, site preference energy. Merits and limitations of CFT. Molecular orbital theory of octahedral, tetrahedral and square planar complexes.  $\pi$  bonding in bonding in octahedral complexes.

#### Unit-III

##### Hydrogen, Alkali and Alkaline Earth Metals

Classification of hydrides; e-deficient, e-precise & e-rich hydrides. Applications of crown ethers in extraction of alkali and alkaline earth metals.

##### Boron compounds

Preparation, structure, bonding, reactions and applications of boranes, carboranes, metalloboranes, metallocarboranes, borazines.

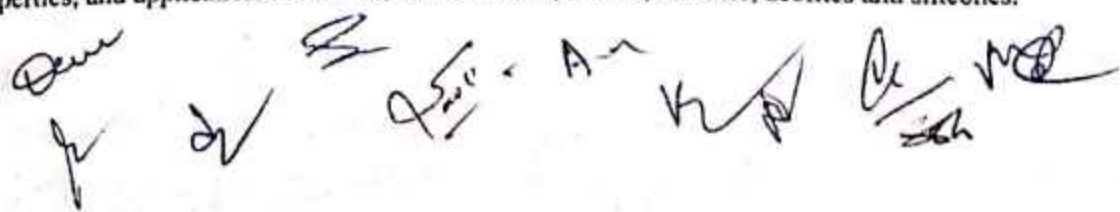

##### Noble gases

Isolation and properties. Preparation and structure of noble gas compounds

#### Unit-IV

##### Compounds of Carbon and Silicon

Fullerenes and their compounds, Intercalation compounds of graphite, Synthesis, structure, properties, and applications. Carbides, fluorocarbons, silanes, silicates, zeolites and silicones.

## Compounds of Nitrogen, Oxygen and Halogen group elements Compounds of Nitrogen , Oxygen and Halogen group elements

Nitrogen activation. Oxidation states of nitrogen and their interconversion. BN, PN and SN Synthesis, properties, bonding, and applications of interhalogens, pseudohalogens, polyhalides, oxyacids and oxoanions of halogens.

### Unit-V

**Nuclear Chemistry:** Types of radioactive decay, units of radioactivity, Nuclear reaction – evaporation, spallation, fragmentation, transfer reactions (Buckshot hypothesis), nuclear fission; Theory of nuclear fission, fission fragments, their mass and charge distribution, fission energy, compound nucleus theory for nuclear reaction, Photonuclear reaction and nuclear fusion (thermonuclear reaction), nuclear reactors Interaction of radiation with matter. Counters – Geiger counter, scintillation counter, proportional counter, semi conductor detector. Analytical applications (neutron activation analysis and isotope dilution analysis)

**Self Study:** Sub-nucleons, classification of nuclides, nuclear stability, binding energy, nuclear radius, nuclear models – liquid drop model, shell model. Applications of radio isotopes as tracers: chemical investigations (structure determinations, reaction mechanism, isotope exchange reactions), age determination, medical, agricultural and industrial applications.

### Suggested Books & References

1. Advanced Inorganic Chemistry, Cotton F.A. and Wilkinson G, John Wiley.
2. Inorganic Chemistry, Huhey J.E., Harper & Row.
3. Chemistry of the Elements, Greenwood N.N. and Earnshaw A., Pergamon
4. Inorganic Chemistry: A unified Approach, Porterfiels W. W., Elsevier
5. Inorganic Chemistry, Sharpe Alan G., Pearson Education Ltd.
6. Inorganic Chemistry, Shriver D.F., Atkins, P.W. and Langford C.H., Oxford University Press, 1998
7. Inorganic Chemistry, Miessler G. L. and Tarr D. A., Pearson Publications
8. Inorganic Chemistry, Wulfsberg, G, University Science Books, Viva Books.

### MCH 002A: Reaction Mechanism: Structure and Reactivity

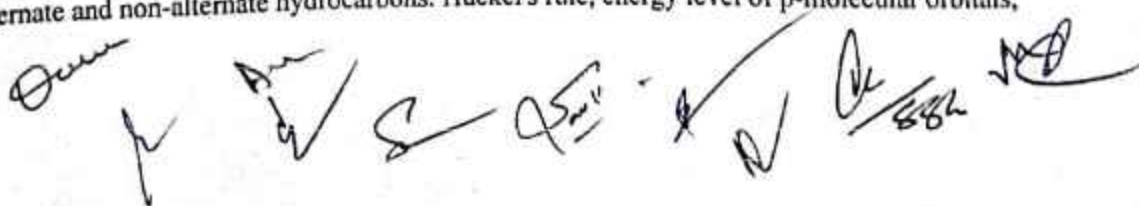

**Course Outcomes:** On the completion of this course student will be able to-

- CO1: Understand the nature of different types of bonding associated with organic molecules.  
CO2: Understand the different stereo isomers of a particular organic molecule, will be able to identify the chiral centre present in a molecule and will be able to communicate the different optical isomers with universal notation. CO3: Understand the reaction mechanism and the impact of structure on reactivity.  
CO4: Understand the aliphatic nucleophilic substitution and its mechanism. CO5: Understand the photochemical reactions.

### Unit-I

#### Nature of Bonding in Organic Molecules

Delocalized chemical bonding-conjugation, cross conjugation, resonance hyperconjugation, bonding in fullerenes, tautomerism. Aromaticity in benzenoid and non-benzenoid compounds, alternate and non-alternate hydrocarbons. Huckel's rule, energy level of p-molecular orbitals,

annulenes, anti-aromaticity, homo-aromaticity, PMO approach. Bonds weaker than covalent bond, addition compounds, crown ether complexes and cryptands, inclusion compounds, catenanes and rotaxanes.

## Unit-II

### Stereochemistry

Conformational analysis of cycloalkanes, decalines, effect of conformation on reactivity, conformation of sugars, strain due to unavoidable crowding. Elements of symmetry, chirality, molecules with more than one chiral center, threo and erythro isomers, methods of resolution, optical purity, enantiotopic and diastereotopic atoms, groups and faces, stereospecific and stereoselective synthesis, asymmetric synthesis. Optical activity in the absence of chiral carbon (biphenyls, allenes and spirane chirality due to helical shape). Stereochemistry of the compounds containing nitrogen, sulphur and phosphorus.

## Unit-III

### Reaction Mechanism : Structure and Reactivity

Type of mechanisms, types of reactions, thermodynamic and kinetic requirements, kinetic and thermodynamic control, Hammond's postulate, Curtin-Hammett principle. Potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects. Generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes and nitrenes. Effect of structure on reactivity, resonance and field effects, steric effect, quantitative treatment. The Hammett equation and linear free energy relationship, substituent and reaction constants, Taft equation.

## Unit-IV

### Aliphatic Nucleophilic Substitution

The  $SN_1$ ,  $SN_2$ ,  $SN_i$  and SET mechanism. The neighbouring group participation mechanism, neighbouring group participation by p and s bonds, anchimeric assistance. Classical and nonclassical carbocations, phenonium ions, norbornyl systems, common carbocation rearrangements.

### Allylic Nucleophilic Substitution

Nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Phase transfer catalysis and ultrasound, ambident nucleophile,

## Unit-V

**Photochemistry:** Photochemical reaction, principle, types of excitations, Jablonskii diagram, energy dissipation, fate of excited molecule, energy transfer, quantum yield, photochemistry of dienes and carbonyl compounds, Photo-Fries rearrangement, photochemistry of vision.

### Suggested Books & References:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
4. Structure and Mechanism in Organic Chemistry, C.K. Ingold, Cornell University Press.

8. Reaction Mechanism in Organic Chemistry, S.M. Mukherji and S.P. Singh, Macmillan.
9. Pericyclic Reactions, S.M. Mukherji, Macmillan, India
10. Stereochemistry of Organic Compounds, D.Nasipuri, New Age International.
11. Stereochemistry of Organic Compounds, P.S. Kalsi, New Age International.

### MCH 003A: Quantum Chemistry and Electro Chemistry

**Course Outcome:** On completion of this course student will be able to-

- CO-1 understand the postulates of quantum mechanics and derivation of Schrodinger wave equation.
- CO-2 apply and analyze the basic knowledge of various adsorption isotherms.
- CO-3 describe the basic concept of surfactants and their applications.
- CO-4 think critically on electrified double layer and different models.
- CO-5 understand practical aspects of polarography

#### Unit-I

##### Introduction to Exact Quantum Mechanical Results

The Schrodinger equation and the postulates of quantum mechanics. Operators, Hamiltonian and Hermitian operator, Discussion of solutions of the Schrodinger equation to some model system viz., particle in a box, quantization of energy levels, degeneracy, zero point energy and justification for Heisenberg uncertainty principle, the harmonic oscillator, the rigid rotor, the hydrogen atom.

##### Approximate Methods

The variation theorem, linear variation principle. Perturbation theory (First order and nondegenerate). Applications of variation method and perturbation theory to the Helium atom.

#### Unit-II

Molecular Orbital Theory, LCAO Concept, Extension of MO theory to homonuclear and heteronuclear diatomic molecules, Qualitative MO theory and its applications to  $AH_2$  type molecule, Huckel theory of conjugate systems, bond order and charge density calculations. Applications to ethylene, butadiene, cyclobutadiene, benzene, allyl system and cyclopropenyl system. Introduction to extended Huckel theory.

#### Unit-III

##### Surface Chemistry

Surface tension, capillary action, pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, estimation of surface area (BET equation), Surface films on liquids (Electro-kinetic phenomenon).

##### Micelles

Surface active agents, classification of surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants,

*[Handwritten signatures and initials are present at the bottom of the page, including "Dum", "Am", "S", "D", "De", "SSh", and a large signature "J. B. K. S."]*

counter ion binding to micelles, thermodynamics of micellization-phase separation and mass action models, solubilization, micro emulsion, reverse micelles.

#### Unit-IV

##### Electrochemistry

Electrochemistry of solutions. Debye-Huckel-Onsager treatment and its extension, ion solvent interactions. Thermodynamics of electrified interface equations. Derivation of electrocapillarity, Lippmann equations (surface excess), methods of determination. Structure of electrified interfaces. Gouy-Chapman, Stern, Grahm Devanathan-Mottwatts, Tobin, Bockris, Devanathan model.

#### Unit-V

##### Overpotential

Introduction, types of overpotential, theories, exchange current density, introduction of Butler Volmer equation, Tafel plot. Semiconductor interfaces-theory of double layer at semiconductor, electrolyte solution interfaces, Effect of light at semiconductor solution interface. Polarography theory, Ilkovic equation; half wave potential and its significance.

##### Suggested Books & References:

1. Physical Chemistry, P.W. Atkins, ELBS.
2. Introduction to Quantum Chemistry, A.K. Chandra, Tata Mc Graw Hill.
3. Quantum Chemistry, Ira N. Levine, Prentice Hall.
4. Coulson's Valence, R. Mc Weeny, ELBS.
5. Chemical Kinetics. K.J. Laidler, McGraw-Hill.
6. Kinetics and Mechanism of Chemical Transformation J. Rajaraman and J. Kuriacose, Mc Millan.
7. Micelles, Theoretical and Applied Aspects, V. Moraoi, Plenum.
8. Modern Electrochemistry Vol. I and Vol II J.O.M. Bockris and A.K.N. Reddy, Plenum.
9. Introduction to Polymer Science, V.R. Gowarikar, N.V. Vishwanathan and J. Sridhar, Wiley Eastern.

#### MCH 004A: Mathematics and Computers for Chemists

Course Objectives: This course has the following objectives:

CO1 To teach students the addition and multiplication; inverse, adjoint and transpose of matrices, special matrices and their properties. Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. eigenvalues and eigenvectors, diagonalization, determinants.

CO2 To expose students to the Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima, Integral calculus, basic rules for integration.

CO3 To expose students basics of First-order and first degree differential equations and their applications. Second order differential equation and their solutions.

CO4 To teach students 'Introduction to computers, Basic structure and functioning of computer with a PC as illustrative example. Memory I/O devices. Secondary storage Computer languages. Operating systems.

CO5 To teach students Computer Programming in C, History of "C", operators and expression, input & output operation, decision making and branching looping, arrays, function, structures and unions.

*Handwritten signatures and initials:*  
Dm, K, Ar, J, S, Al, R, 88h, JCB

## Unit-I

### Matrix Algebra.

Addition and multiplication; inverse, adjoint and transpose of matrices, special matrices (Symmetric, skew-symmetric, Hermitian, Skey-Harmitian, unit, diagonal, unitary etc.) and their properties. Matrix equations: Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. Introduction to vector spaces, matrix eigenvalues and digenvetors, diagonalization, determinants (examples from Juckel theory).

## Unit-II

### Differential Calculus

Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima (examples related to maximally populated rotational energy levels, Bohr's radius and most probable velocity from Maxwell's distribution etc.).

Integral calculus, basic rules for integration, integration by parts, partial fractions and substitution. Reduction formulae, applications of integral calculus.

Functions of several variables, partial differentiation, co-ordinate transformations (e.g. cartesian to spherical polar).

## Unit-III

### Elementary Differential equations

First-order and first degree differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, secular equilibria, quantum chemistry etc. second order differential equation and their solutions.

## Unit-IV

### Introduction to computers

Basic structure and functioning of computer with a PC as illustrative example. Memory I/O devices. Secondary storage Computer languages. Operating systems Introduction to UNIX and WINDOWS. Principles of programming Alogrithms and flow-charts.

## Unit-V

### Computer Programming in C

History of "C" constants, variables and data types, operators and expression, input & output operation, decision making and branching looping, arrays, function, structures and unions, Program with data preferably from physical chemistry Laboratory. Introduction of working of LOTUS/EXCEL/FOXPRO/MOPAC and word processing softwares.

### Suggested Books & References:

1. The chemistry Mathematics Book, E.Steiner, Oxford University Press.
2. Mathematifs for chemistry, Doggett and Suiclific, Logman.
3. Mathematical for Physical chemistry : F. Daniels, Mc. Graw Hill.
4. Chemical Mathematics D.M. Hirst, Longman.
5. Applied Mathematics for Physical Chemistery, J.R. Barante, Prenice Hall.
6. Basic Matchematics for Chemists, Tebbutt, Wiley
7. Fundamentals of Computer : V. Rajaraman (Prentice Hall)
8. Computers in Chemistry : K.V. Raman (Tata Mc Graw Hill)
9. Computer Programming in FORTRAN IV-V Rajaraman (Prentice Hall)

*Handwritten signatures and initials:*  
Dane, Am, AS, S, K, R, P, 58h

## Inorganic Chemistry

1. To identify acidic radicals of dilute  $\text{H}_2\text{SO}_4$  group.
2. To identify acidic radicals of concentrated  $\text{H}_2\text{SO}_4$  group.
3. To identify acidic radicals not identify with dilute or concentrated  $\text{H}_2\text{SO}_4$  group.
4. To analyze basic radicals of group I and II.
5. To analyze basic radicals of group III and IV.
6. To analyze basic radicals of group V, VI and VII.
7. To analyze less common metal ions : Ti, MO, W, Ti, Zr, Th, V, U
8. Analysis of the mixture number 1 containing four acidic and four basic radicals.
9. Analysis of the mixture number 2 containing four acidic and four basic radicals.
10. Analysis of the mixture number 3 containing four acidic and four basic radicals.
11. Analysis of the mixture number 4 containing four acidic and four basic radicals.
12. Qualitative Analysis: Separation and determination of two metal ions Cu-Ni involving volumetric and gravimetric methods.
13. Qualitative Analysis: Separation and determination of two metal ions Ni-Zn involving volumetric and gravimetric methods.
14. Qualitative Analysis: Separation and determination of two metal ions Cu-Fe etc. involving volumetric and gravimetric methods.

### Organic Chemistry

1. To separate and identify the organic mixture containing two solid components using water and prepare their suitable derivatives.
2. To separate and identify the organic mixture containing two solid components using hot water and prepare their suitable derivatives.
3. To separate and identify the organic mixture containing two solid components using NaOH and prepare their suitable derivatives.
4. To separate and identify the organic mixture containing two solid components using  $\text{NaHCO}_3$  and prepare their suitable derivatives.
5. To separate and identify the organic mixture number 1 containing one solid and one liquid components and prepare their suitable derivatives.
6. To separate the mixture of Methyl Orange and Methylene Blue by using cyclohexane and ethyl acetate (8.5:1.5) as solvent system.
7. Preparation and separation of 2,4-dinitro Phenylhydrazone of acetone, 2-butanone using toluene and petroleum ether (40:60).
8. Preparation and separation of 2,4-dinitro Phenylhydrazone of hexane-2-one and hexane-3-one using toluene and petroleum ether (40:60).
9. To separate the mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent - Ninhydrin.
10. To separate the mixture of D,L-alanine, glycine and L-leucine using n-butanol : acetic acid : water (4:1:5). Spray reagent - Ninhydrin.
11. To separate monosaccharides - a mixture of D-galactose and D-fructose using n-butanol : acetone : water (4:1:5). Spray reagent - aniline hydrogen phthalate.
12. Determination of DO, COD and BOD of water sample.

12. Determination of DO, COD and BOD of water sample.

## Physical Chemistry

1. Calibration of volumetric apparatus, burette, pipette and standard flask.
2. To investigate the adsorption of oxalic acid from aqueous solution by activated charcoal, and examine the validity of Freundlich and Langmuir adsorption isotherm.
3. To investigate the adsorption of acetic acid from aqueous solution by activated charcoal, and examine the validity of Freundlich and Langmuir adsorption isotherm.
4. Determination of congruent composition and temperature of a binary system (e.g. diphenylamine-benzophenone system).
5. Determination of glass transition temperature of given salt (e.g.,  $\text{CaCl}_2$ ) conductometrically.
6. To construct the phase diagram for three component system (e.g. chloroform-acetic acid-water).
7. To construct the phase diagram for three component system (e.g. alcohol-benzene-water).
8. To determine CST of phenol and water in presence of 1.0% NaCl, 0.5% naphthalene, 1% succinic acid.
9. Determination of the velocity constant, order of the reaction and energy of activation for saponification of ethyl acetate by sodium hydroxide conductometrically.
10. Determination of solubility and solubility product of sparingly soluble salts e.g.  $\text{PbSO}_4$ ,  $\text{BaSO}_4$ ) conductometrically.
11. Determination of the strength of strong and weak acid in a given mixture conductometrically.
12. To study of the effect of solvent on the conductance of  $\text{AgNO}_3$ /acetic acid and to determine the degree of dissociation and equilibrium constant in different solvents and in their mixtures (DMSO, DMF, dioxane, acetone, water) and to test the validity of Debye-Huckel-Onsager theory.
13. Determination of the activity coefficient of zinc ions in the solution of 0.002 M zinc sulphate using Debye Huckel's limiting law.

### **Books Suggested**

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly. Prentice Hall.
3. Experiments and Techniques in Organic Chemistry, D.P. Pasto, C. Johnson and M. Miller, Prentice Hall.
4. Macroscale and Microscale Organic Experiments, K.L. Williamson, D.C. Heath.
5. Systematic Qualitative Organic Analysis, H. Middleton, Adward Arnold.
6. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
7. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley.
8. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
9. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
10. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

*Handwritten signatures and initials:*  
A large checkmark on the left.  
A signature "Am" in the center.  
A signature "De" on the right.  
A signature "S.S.G." on the far right.  
A large signature "M. Behera" at the bottom right.

## SEMESTER II

### MCH 006A: Chemistry of Transition Metals

**Course Outcome:** After the completion of the course, student will be able to understand:

CO1: metal-ligand bonding through different theories and metal-ligand equilibria in solution and their relative stability.

CO2 electronic spectra and calculation of different parameters.

CO3 energy profile and reaction mechanism of transition metal complexes and different types of reactions like substitution, redox etc. and related theories.

CO4 Symmetry, symmetry elements, orthogonality theorem and group theory of molecules.

CO5 to apply the knowledge of group theory on different molecules and systems..

#### Unit-I

##### Metal ligand Equilibria in solution

Stepwise and overall formation constants and their interaction, trends in stepwise constants.

Factors affecting stability of metal complexes with reference to the nature of metal ion and ligand chelate effect and its thermodynamic origin. Determination of binary formation constant by pHmetry and spectrophotometry.

#### Unit-II

##### Electronic spectra of transition metal complexes

Types of electronic transition, selection rules for d-d transitions. Spectroscopic ground states, correlation. Orgel and Tanabe-Sugano diagrams for transition metal complexes. Calculation of Racah parameters. Charge transfer spectra.

#### Unit-III

##### Reaction mechanism of transition metal complexes

Energy profile of a reaction, reactivity of metal complex, inert and labile complexes, kinetics of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reactions, reactions without metal ligand bond cleavage.

**Substitution reactions** in square planar complexes, the trans effect, mechanism of the substitution reaction. Redox reaction, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions.

#### Unit-IV

##### Symmetry and Group Theory

Symmetry elements and symmetry operations, definition of group and subgroup, conjugacy relation and classes, product of symmetry operations, relation between symmetry elements and symmetry operations, orders of a finite group and its subgroup, point group symmetry, Schoenflies symbols, representations of groups by reducible and irreducible representations and relation between them (representation for the  $C_n$ ,  $C_{nv}$ ,  $D_{nh}$  etc. groups to be worked out explicitly), character of a representation, the great orthogonality theorem (without proof) and its importance, character tables of  $C_{2v}$  and  $C_{3v}$  and their use.

#### UNIT V

##### Applications of Group Theory in Chemistry

Formation of hybrid orbitals; sigma bonding in linear structure ( $\text{BeCl}_2$ ), trigonal planar ( $\text{BF}_3$ ), tetrahedral ( $\text{CH}_4$ ), square pyramid ( $\text{BrF}_5$ ) and square planar ( $\text{XeF}_4$ ), octahedral and square planar complexes,  $\pi$  bonding in complex compounds: square planar molecule and tetrahedral molecule. Molecules with delocalized- $\pi$  orbitals, cyclopropenyl system, cyclobutenyl system, cyclopentadienyl system and benzene.

#### MCH 007A: Reaction mechanism: Addition, Elimination and Pericyclic Reactions

**Course Outcome:** After the completion of the course, student will be able to understand:

CO-1: different aromatic nucleophilic substitution and free radical reactions. CO-2 aliphatic and aromatic electrophilic substitution reactions. CO-3 mechanistic and stereochemical aspects of addition to C-C multiple bonds. CO-4 mechanism of C-hetero multiple bonds and elimination reactions. CO-5 symmetry, types and rearrangement of pericyclic reactions.

#### Unit - I

##### Aromatic Nucleophilic Substitution

The  $\text{S}_{\text{N}}\text{Ar}$   $\text{S}_{\text{N}}1$ , benzyne and  $\text{S}_{\text{N}}1$  mechanism, Reactivity effect of substrate structure, leaving group and attacking nucleophile. The Von Richter, Sommelet-Hauser, and Smiles rearrangements.

##### Free Radical Reactions

Types of free radical reactions, free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Reactivity for aliphatic and aromatic substrates at a bridgehead. Reactivity in the attacking radicals. The effect of solvents on reactivity. Allylic halogenation (NBS), oxidation of aldehydes to carboxylic acids, auto-oxidation, coupling of alkynes and arylation of aromatic compounds by diazonium salts, Sandmeyer reaction. Free radical rearrangement. Hunsdiecker reaction

#### Unit - II

*[Handwritten signatures and initials are present in this section, including 'Sam', 'dr', 'AS', 'Am', 'De', 'sch', and a large signature 'JMD' at the top right.]*

### Aliphatic Electrophilic Substitution

Bimolecular mechanisms  $SE_2$  and  $SE_1$ , The  $SE_1$  mechanism, electrophilic substitution accompanied by double bond shifts. Effect of substrates, leaving groups and the solvent polarity on the reactivity.

### Aromatic Electrophilic Substitution

The arenium ion mechanism, orientation and reactivity, energy profile diagrams. The ortho/para ratio, ipso attack, orientation in other ring systems. Quantitative treatment of reactivity in substrates and electrophiles. Diazonium coupling, Vilsmeier reaction, Gatterman-Koch reaction

### Unit - III

#### Addition to Carbon-Carbon Multiple Bonds :

Mechanistic and stereochemical aspects of addition reactions involving electrophiles, nucleophiles and free radicals, regio- and chemoselectivity, orientation and reactivity. Addition to cyclopropane ring. Hydrogenation of double and triple bonds, hydrogenation of aromatic rings. Hydroboration, Michael reaction, Sharpless asymmetric epoxidation.

### Unit-IV

#### Addition to Carbon-Hetero Multiple bonds

Mechanism of metal hydride reduction of saturated and unsaturated carbonyl compounds, acid esters and nitriles. Addition of Grignard reagents, Organozinc and Organolithium reagents to carbonyl and unsaturated carbonyl compounds. Wittig reaction. Mechanism of condensation reactions involving enolates-Aldol, Knoevenagel, Claisen, Mannich, Benzoin, Perkin and Stobbe reactions. Hydrolysis of esters and amides, ammonolysis of esters.

#### Elimination Reactions

The  $E_2$ ,  $E_1$  and  $E_1cB$  mechanisms and their spectrum. Orientation of the double bond. Reactivity-effects of substrate structures, attacking base, the leaving group and the medium. Mechanism and orientation in pyrolytic elimination.

### Unit-V

#### Pericyclic Reactions

Molecular orbital symmetry, Frontier orbitals of ethylene, 1,3-butadiene, 1,3,5-hexatriene and allyl system. Classification of pericyclic reactions. Woodward-Hoffmann correlation diagrams. FMO and PMO approach. Electrocyclic reactions-conrotatory and disrotatory motions,  $4n$ ,  $4n+2$  and allyl systems. Cycloadditions-antarafacial and suprafacial additions,  $4n$  and  $4n+2$  systems,  $2+2$  addition of ketenes, 1,3 dipolar cycloadditions and cheletropic reactions. Sigmatropic rearrangements-suprafacial and antarafacial shifts of H, sigmatropic involving carbon moieties, 3,3- and 5,5 sigmatropic rearrangements. Claisen, Cope and aza-Cope rearrangements. Fluxional tautomerism. Ene reaction.

Stereochemistry of Organic Compounds, P.S. Kalsi, New Age International.

### **MCH 008A: Thermodynamics and Chemical Kinetics**

**Course outcomes:** After the completion of the course, student will be able to understand the:

CO-1: concepts of classical thermodynamics.

CO-2 criteria for statistical and non equilibrium thermodynamics.

CO-3 translation, rotational, vibrational and electronic partition functions and molar quantities.

CO-4 rate laws, collision theory of reaction rates, Arrhenius equation and the activated complex theory.

CO-5 kinetics of enzyme catalyzed reactions, fast and unimolecular reactions.

#### **Unit I**

##### **Classical Thermodynamics**

Concepts of laws of thermodynamics, free energy, chemical potential and entropies. Partial molar free energy, partial molar volume and partial molar heat content and their significance. Determinations of these quantities. Concept of fugacity and determination of fugacity, activity, activity coefficient, determination of activity and activity coefficients.

#### **Unit II**

##### **Statistical Thermodynamics and Non equilibrium thermodynamics**

Concept of distribution, thermodynamic probability and most probable distribution. Ensemble averaging, postulates of ensemble averaging. Canonical, grand canonical and microcanonical ensembles, corresponding, distribution laws (using Lagrange's method of undetermined multipliers). Thermodynamic criteria for non equilibrium states, entropy production and entropy flow, transformation of generalized fluxes and forces, non equilibrium stationary states, phenomenological equations, Onsager's reciprocity relations.

#### **Unit III**

##### **Partition Functions**

Partition functions-translation, rotational, vibrational and electronic partition functions, Fermi-Dirac Statistics, Maxwell distribution law and applications to metal. Bose-Einstein statistics distribution Law and application to helium, Partition molar quantities in term of thermodynamic functions.

#### **Unit IV**

##### **Chemical Dynamics-I**

Methods of determining rate laws, collision theory of reaction rates, steric factor, activated complex theory, Arrhenius equation and the activated complex theory; ionic reactions, kinetic salt effects, steady state kinetics, kinetic and thermodynamic control of reactions, Dynamic chain reaction (hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane), photochemical reaction (hydrogen-bromine and hydrogen-chlorine reactions), Oscillatory reactions: Belousov-Zhabotinsky reaction.

#### **Unit V**

##### **Chemical Dynamics-II**

Kinetics of enzyme catalyzed reactions, general features for fast reactions, study of fast reactions by flow method, relaxation method, flash photolysis and the nuclear magnetic resonance method,

*Dem* *An* *Q.5* *2* *De* *68* *W. B. Bhal*

dynamics of unimolecular reactions (Lindemann Hinshelwood, Rice-Ramsperger and Kassel theories and Marcus (RRKM) theories for unimolecular reactions).

#### **Suggested Books & References:**

1. Physical Chemistry, P.W. Atkins, ELBS.
2. Introduction to Quantum Chemistry, A.K. Chandra, Tata Mc Graw Hill.
3. Quantum Chemistry, Ira N. Levine, Prentice Hall.
4. Coulson's Valence, R. Mc Ween y, ELBS.
5. Chemical Kinetics, K.J. Laidler, McGraw-Hill.
6. Kinetics and Mechanism of Chemical Transformation J.Rajaraman and J. Kuriacose, Mc Millan.
7. Micelles, Theoretical and Applied Aspects, V. MORAoi, Plenum.
8. Modern Electrochemistry Vol. I and Vol II J.O.M. Bockris and A.K.N. Reddy, Plenum.
9. Introduction to Polymer Science, V.R. Gowarikar, N.V. Vishwanathan and J. Sridhar, Wiley Eastern.

#### **MCII 009A: Spectroscopic Techniques**

**Course Outcomes:** After the completion of the course, student will be able to-

CO1 Understand the common terms and principles in spectroscopy. Principles of UV spectroscopy, its applications in structure determination and working method of Instrument. CO2 Understand the Principles IR spectroscopy and Raman spectroscopy, their applications in structure determination and working method of Instrument. CO3 Understand the principles of Rotational spectroscopy, ESR spectroscopy, their applications in structure determination and working method of Instrument. CO4 Understand the basic principle Principles of NMR Spectroscopy, instrumentation and applications. Student will also learn about the use of NMR technique in medical sciences. CO5 Understand the basic principles of Photoelectron spectroscopy, Electron microscopy and their applications in structure determination and working method of Instrument. Student will also learn about chromatographic techniques.

##### **Unit-I**

##### **Basic Elements of Spectroscopy**

Uncertainty relation and natural line width, natural line broadening, doppler line broadening, pressure broadening, saturation broadening, removal of line broadening. signal-to-noise ratio, resolving power, intensity of spectral lines – transition probability, population of states, path length of sample. General components of an absorption experiment in various regions, dispersing elements, basic elements of practical spectroscopy, Born-Oppenheimer approximation: derivations, Fourier Transform methods (IR and NMR)

##### **Ultraviolet and Visible spectroscopy**

Various electronic transitions (185-800 nm) Beer-Lambert law, effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes, Fiesher -Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic compounds. Steric effect in biphenyls.

##### **Unit-II**

##### **Infrared Spectroscopy**

Instrumentation and Sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether's, phenols and amines, and carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl

*[Handwritten signatures and initials]*

compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and Fermi resonance.

### Raman Spectroscopy

Principle, Stokes-Antistokes lines, Raman effect, applications, Coherent Antistokes Raman Spectroscopy CARS (an elementary idea), Raman spectroscopy particularly for the study of active sites of metalloproteins

### Unit-III

**Rotational Spectroscopy.** Classification of molecules, linear triatomic molecule, intensities, energy levels and rotational spectra of symmetric top molecules, Stark effect, nuclear and electron spin interaction, effect of external field, applications.

### Electron Spin Resonance Spectroscopy

Some basic elements of ESR spectroscopy, relaxation processes: spin-lattice relaxation, spin-spin relaxation and exchange interaction. Zero field splitting and Kramer's degeneracy, 'g' value and factors affecting ESR lines.

### Unit-IV

**Nuclear Magnetic Resonance Spectroscopy** General introduction and definition, chemical shift, spin-spin interaction, shielding mechanism of measurement, chemical shift values and correlation for protons bonded to carbon and other nuclei, chemical exchange, effect of deuteration, complex spin-spin interaction between two, three, four and five nuclei (first order spectra). NMR shift reagents, solvent effects, Nuclear Overhauser effect (NOE). Introduction of Mass Spectrometry, NQR Spectroscopy, Introduction of Mössbauer spectroscopy.

### Unit-V

#### Photoelectron Spectroscopy

Basic principle, ionization process, Koopman's theorem, photoelectron spectra of simple molecules, ESCA and its applications, Auger electron spectroscopy (basic idea), spectra of transition metal complexes, charge transfer spectra.

#### Electron Microscopy

Basic principles of Electron Microscopy: SEM, TEM and their applications in structural analysis

#### Suggested Books & References:

## INORGANIC CHEMISTRY

### A. Chromatography Separation of cations and anions by

1. Paper Chromatography.
2. Chromatography : Ion exchange.

### B. Chromatographic Separations

3. Cadmium and zinc
4. Zinc and magnesium.
5. Thin-layer chromatography-separation of nickel, manganese, cobalt and zinc.  
Determination of Rf values.
6. Separation and identification of the sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of Rf values.

### C. Preparations(Any 6x)

Preparation of selected inorganic compounds and their studies by I.R. electronic spectra, Mossbauer, U.V.R. and magnetic susceptibility measurements. Handling of air and moisture sensitive compounds.

1. VO(acac)<sub>2</sub>
2. TiO (C<sub>9</sub>H<sub>8</sub>NO)<sub>2</sub>H<sub>2</sub>O
3. cis-K<sub>2</sub>[Cr(C<sub>2</sub>O<sub>4</sub>)<sub>2</sub>(H<sub>2</sub>O)<sub>2</sub>]
4. Na[Cr(NH<sub>3</sub>)<sub>2</sub>(SCN)<sub>4</sub>]
5. Ni(acac)<sub>2</sub>
6. K<sub>3</sub>[Fe(C<sub>2</sub>O<sub>4</sub>)<sub>3</sub>]
7. Prussian Blue, Turnbull's Blue.
8. [Co(NH<sub>3</sub>)<sub>6</sub>] [Co(NO<sub>2</sub>)<sub>6</sub>]
9. cis-[Co(Trien) (NO<sub>2</sub>)<sub>2</sub>] Cl.H<sub>2</sub>O
10. Hg[Co(SCN)<sub>4</sub>]
11. [Co(Py)<sub>2</sub>Cl<sub>2</sub>]
12. [Ni(NH<sub>3</sub>)<sub>6</sub>]Cl<sub>2</sub>
13. Ni(dmg)<sub>2</sub>
14. [Cu(NH<sub>3</sub>)<sub>4</sub>]SO<sub>4</sub>H<sub>2</sub>O

## ORGANIC CHEMISTRY

### Organic Synthesis

1. Acetylation : Acetylation of cholesterol and separation of cholesteryl acetate by column chromatography.
2. Oxidation : Adipic acid by chromic acid oxidation of cyclohexanol
3. Grignard reaction : Synthesis of triphenylmethanol from benzoic acid
4. Aldol condensation : Dibenzal acetone from benzaldehyde.
5. Sandmeyer reaction : p-Chlorotoluene from p-toluidine.
6. Acetoacetic ester Condensation : Synthesis of ethyl-n-butylacetoacetate by A.E.E. condensation.
7. Cannizzaro reaction : 4-Chlorobenzaldehyde as substrate.
8. Friedel Crafts reaction : n-Benzoyl propionic acid from succinic anhydride and benzene.
9. Aromatic electrophilic substitutions : Synthesis of p-nitroaniline and p-bromoaniline.
10. Estimation of amines/phenols using bromate bromide solution/or acetylation method.

*[Handwritten signatures and initials]*

11. Determination of the percentage or number of hydroxyl groups in an organic compound by acetylation method
12. Determination of Iodine and Saponification values of an oil sample.

### PHYSICAL CHEMISTRY

1. Determination of the effect of (a) Change of temperature (b) Change of concentration of reactant and catalyst and (c) Ionic strength of the media on the velocity constant of hydrolysis of an ester/ionic reaction.
2. Determination of the velocity constant of hydrolysis of an ester/ionic reaction in miscellar media.
3. Determination of the velocity constant for the oxidation of iodide ions by hydrogen peroxide study the kinetics as an iodine clock reactions.
4. Flowing clock reactions (Ref: Experiments in Physical Chemistry by Sherrinford)
5. Determination of the primary salt effect on the kinetics of ionic reaction and testing of the Bronsted relationship (iodide ion is oxidised by persulphate ion).
6. To determine the relative strength of the acids by studying the hydrolysis of an ester (at room and at any higher temperature)
7. Determine the energy of activation for the hydrolysis of an ester.
8. Determination of molecular weight of non-volatile and electrolyte/electrolytes by cryoscopic method and to determine the activity coefficient of an electrolyte.
9. Determination of the degree of dissociation of weak electrolyte and to study the deviation from ideal behaviour that occurs with a strong electrolyte.
10. Determination of strengths of halides in a mixture potentiometrically.
11. Determination of the strength of strong and weak acids in a given mixture using a potentiometer/pH meter.
12. Determination of temperature dependence of EMF of a cell.
13. Determination of the formation constant of silver-ammonia complex and stoichiometry of the complex potentiometrically.
14. Determination of rate constant for hydrolysis/inversion of sugar using a polarimeter.

### Books Suggested

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.M. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly, Prentice Hall.
3. Experiments and Techniques in Organic Chemistry, D.P. Pasto, C. Johnson and M. Miller, Prentice Hall.
4. Macroscale and Microscale Organic Experiments, K.L. Williamson, D.C. Heath.
5. Systematic Qualitative Organic Analysis, H. Middleton, Edward Arnold.
6. Handbook of Organic Analysis-qualitative and Quantitative, H. Clark, Edward Arnold.
7. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley.
8. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
9. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
10. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

## Semester III

### MCH 011A: Green Chemistry

**Course Outcomes:** After the completion of the course, student will be able to-

- CO1 Understand the twelve principles of green chemistry with their explanations and examples.
- CO2 Understand the Prevention of waste /byproducts, Prevention/Minimization of hazardous/toxic products.& designing safer chemicals - different basic approaches, Designing biodegradable products.
- CO3 Understand the Introduction of microwave induced organic and inorganic synthesis; microwave activation equipment ;time and energy benefits;limitations;
- CO4 Understand the use Ionic liquids as green solvents, Electrochemical synthesis.
- CO5 Understand Oxidation-reduction reagents and catalysts; multifunctional reagents; Combinatorial green chemistry, solventless reactions, Noncovalent derivatization.Biomass conversion, emission control. Biocatalysis.

#### Unit-I

##### INTRODUCTION ,PRINCIPLE AND CONCEPTS OF GREEN CHEMISTRY:

What is green chemistry?Need for green chemistry;inception and evolution of green chemistry;twelve principles of green chemistry with their explanations and examples; designing a green synthesis using these principles ;green chemistry in day to day life.

#### Unit II

**Basic principles of Green Chemistry and their illustrations with examples.**

- (i) Prevention of waste/byproducts.
- (ii) Maximum Incorporation of the materials used in the process into the final product (Atom Economy): Green metrics
- (iii) Prevention/Minimization of hazardous/toxic products.
- (iv) Designing safer chemicals - different basic approaches
- (v) Selection of appropriate auxiliary substances (solvents, separation agents etc)
- (vi) Energy requirements for reactions—use of microwave, ultrasonic energy
- (vii) Selection of starting materials—use of renewable starting materials.
- (viii) Avoidance of unnecessary derivatization—careful use of blocking/protection groups.
- (ix) Use of catalytic reagents (wherever possible) in preference to stoichiometric reagents.
- (x) Designing biodegradable products.
- (xi) Prevention of chemical accidents.
- (xii) Strengthening/development of analytical techniques to prevent and minimize the generation of hazardous substances in chemical processes. Development of accurate and reliable sensors and monitors for real time in process monitoring.

#### Unit-III

**Application of non conventional energy sources :Microwave induced and ultrasound assisted green synthesis.**

Introduction of microwave induced organic and inorganic synthesis; microwave activation – equipment ;time and energy benefits;limitations;

- (a) Synthesis of nitrogen-oxygen /sulphur donor ligands and their coordination complexes ;synthetic organic transformations under microwaves.
- (b) Reactions in organic solvents –esterifications ;Fries rearrangement;Diels alder reaction and decarboxylation.

*[Handwritten signatures and initials are present at the bottom of the page, including "Devi", "An", "h", "J. S.", "A", "De", "S.B.", and "M. B. Bhal"]*

(a) Solvent free reactions (solid state reactions); decylylation; deprotection; saponification of ester; alkylation of reactive methylene compounds; synthesis of nitriles from aldehydes; heterocyclic synthesis -  $\beta$ -lactams, pyrrole, quinoline, Ultrasound assisted green synthesis; introduction; instrumentation; physical aspects; oxidation; reduction; addition, substitution reactions and synthesis of chromenes.

#### Unit-IV

**Environmentally benign solutions to organic solvents (focus on water and ionic liquids).**

(a) Ionic liquids as green solvents - Introduction; properties and types of ionic liquids; synthetic applications - Diels-Alder reaction; epoxidation; Heck reaction; preparation of pharmaceutical compounds; enzyme catalysed synthesis.

(b) Aqueous phase reactions - Introduction; Pseudo organic solvent

(1) Application in oxidation of nitro; aromatic and carbonyl compounds; reduction of carbon-carbon multiple bond, Benzoin condensation; Michael reaction; Claisen rearrangement; Knoevenagel reaction.

(2) Electrochemical synthesis - Introduction, synthesis of sebacic acid, adiponitrile  
Introduction on role of fluorine solvents and supercritical carbon dioxide in green chemistry.

#### Unit-V

**Hazard assessment and mitigation in chemical industry**

**Future trends in Green Chemistry:** Oxidation-reduction reagents and catalysts; Biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; Noncovalent derivatization. Biomass conversion, emission control. Biocatalysis

#### Suggested Books References:

1. Organic synthesis in water, Paul A. Grieco Blackie.
2. Green Chemistry, theory and practice, Paul T. Anastas and John C. Warner.
3. New Trends in Green Chemistry, V.K. Ahluwalia and M. Kidwai.
4. Green Chemistry For Sustainability, Sanjay K. Sharma and A. Mudhoo, CRC Taylor & Francis, USA
5. Organic synthesis: Special techniques, V.K. Ahluwalia and Renu Aggarwal.
6. A Handbook of Applied Biopolymer Technology, Sanjay K. Sharma and A. Mudhoo, RSC Publishing, UK
7. Lancaster, M. Green chemistry; An Introductory Text; the Royal Society of Chemistry: Cambridge, UK, 2002.
8. Green Corrosion Chemistry & Engineering, Sanjay K. Sharma, Wiley Publications, UK
9. Chem, Rev. 2007, 107, 2167-2820 (special issue on green chemistry).

**Specialization: Inorganic Chemistry**

## MCH 012A: Inorganic Elective 1: PHOTOINORGANIC CHEMISTRY AND X-RAY DIFFRACTION

**Course outcome:** After the completion of the course, student will be able to-

- CO1 understand basics of photochemistry including various excitations and energy dissipation.
- CO2 articulate the photochemical kinetics for radiative processes and deactivation of molecules by quenching.
- CO3 understand the different photochemical reactions viz. reduction, oxidation, substitution at ground and excited level.
- CO4 understand the mechanisms of electron relay, water photolysis, nitrogen fixation and CO<sub>2</sub> reduction.
- CO5 understand the applications of XRD, methods of structural analysis of crystal, diffraction pattern etc.

### Unit-I

#### Basics of Photochemistry

Absorption, excitation, photochemical laws, quantum yield, electronically excited states-life times-measurements of the times. Flash photolysis, Energy dissipation by radiative and non-radiative processes, absorption spectra, Frank-Condon principle, photochemical stages-primary and secondary processes.

### Unit-II

#### Properties of Excited States

Structure, dipole moment, acid-base strengths, reactivity. Photochemical kinetics-calculation of rates of radiative processes, bimolecular deactivation-quenching.

#### Excited States of Metal Complexes

Excited states of metal complexes; Comparison with organic compounds, electronically excited states of metal complexes, charge transfer spectra.

### Unit-III

#### Ligand Field Photochemistry

Photosubstitution, photooxidation and photoreduction, lability and selectivity, zero vibrational levels of ground state and excited state.

### Unit-IV

#### Metal Complex Sensitizers

Metal complex sensitizer, electron relay, metal colloid systems, water photolysis, nitrogen fixation and carbon dioxide reduction.

### Unit-V

#### X-RAY DIFFRACTION

Bragg condition, Miller indices, Laue Method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals, index reflections, identification of unit cells from systematic absences in diffraction pattern, Structure of simple lattices and X-ray intensities, structure factor and its relation to intensity and electron density, phase problem. Description of the procedure for an X-ray structure analysis, absolute configuration of molecules.

#### Suggested Books References:

1. Concepts of Inorganic Photochemistry, A.W. Adamson and P.D. Fleischauer, Wiley.
2. Inorganic Photochemistry, J.Chem. Educ. vol. 60 No. 10, 1983.
3. Progress in Inorganic Chemistry, Vol. 30ed. S.J. Lippard, Wiley.

*[Handwritten signatures and initials are present at the bottom of the page.]*

4. Coordination Chem. Revs. 1981, vol. 39, 121, 1231, 1975, 14, 321; 1990 97, 313.
5. Photochemistry of Coordination Compounds, V. Balzani and V. Carassiti, Academic Press.
6. Elements in Inorganic Photochemistry, G.J. Ferraudi, Wiley.

### **MCH 013A: Inorganic Elective II: BIOINORGANIC CHEMISTRY**

**Course outcome:** On completion of this course student will be able to-

CO-1 analyze the structure and function of metal ion containing biomolecules.

CO2 explain principle and mechanism of various cycles involved in energy production and structure and functions of DNA, RNA.

CO3 explain Haem proteins and oxygen uptake structure and function of haemoglobin's, myoglobin, haemocyanins and hemerythrin, model synthetic complexes of iron, cobalt and copper.

CO4 explain Metal deficiency and disease, toxic effects of metals, metals used for diagnosis and chemotherapy. Biological and Chemical nitrogen fixation.

CO5

#### **Unit-I**

##### **Metal Ions in Biological Systems**

Bulk and trace metals with special reference to Na, K, Mg, Ca, Fe, Cu, Zn, Co, and  $K^+/Na^+$  pump.

##### **Metal Storage and Transport**

Ferritin transferrin, and siderophores.

#### **Unit-II**

##### **Bioenergetics and ATP Cycle.**

DNA polymerisation, glucose storage, metal complexes in transmission of energy; chlorophyll's, photosystem I and photosystem II in cleavage of water.

##### **DNA and RNA**

Metal complexes of polynucleotide, nucleosides and nucleic acids (DNA and RNA)

Template temperature stability of DNA.

#### **Unit-III**

##### **Transport and Storage of Dioxygen**

Haem proteins and oxygen uptake structure and function of haemoglobin's, myoglobin, haemocyanins and hemerythrin, model synthetic complexes of iron, cobalt and copper.

#### **Unit-IV**

##### **Metals in Medicine**

Metal deficiency and disease, (Iron, Zinc, Copper) toxic effects of metals, metals used for diagnosis and chemotherapy with particular reference the anticancer drugs.

##### **Nitrogen fixation**

Nitrogen in biosphere, nitrogen cycle, nitrification role microorganism, nitrogen fixation in soils. Biological nitrogen fixation, and its mechanism, nitrogenase, Chemical nitrogen fixation

#### **Unit-V**

Origin of supramolecular chemistry - "Chemistry beyond the molecules". Concepts and terminology of supramolecular chemistry. Nature and types of supramolecular interactions

(Hydrogen bonding, van der Waal interactions,  $\pi$ -stacking, C-H... $\pi$  interactions etc.). Molecular recognition- Information and complementarity. Different types of receptors with special reference of Crown ethers, cryptates and Calix[4]arene. Molecular self-assembly formation and examples. Supramolecular chemistry of life, application of supramolecular chemistry in drug design. Application in material science-molecular machines.

#### MCH014A :Inorganic Elective III: ORGANOTRANSITION METAL CHEMISTRY-I

**Course outcome:** After the completion of course students will be able to learn about the CO1- types, routes of synthesis, stability and decomposition pathways organo-copper in organic synthesis. CO2- Compounds of Transition Metal-Carbon Multiple Bonds alkylidenes, alkylidynes and their synthesis. CO-3 Compounds of low valent carbenes and carbynes-synthesis CO-4 Transition metal p-Complexes with unsaturated organic molecules, alkenes, alkynes, allyl complexes. CO-5 Transition metal p-Complexes with unsaturated organic molecules, diene, dienyl, arene and trienyl complexes,

#### Unit-I

##### Alkyls and Aryls of Transition Metals

Types, routes of synthesis, stability and decomposition pathways organocopper in organic synthesis.

#### Unit-II

##### Compounds of Transition Metal

Carbon Multiple Bonds alkylidenes, alkylidynes, synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reactions on the ligands, role in organic synthesis.

#### Unit-III

##### Compounds of low valent carbenes and carbynes

Synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reactions on the ligands, role in organic synthesis.

#### Unit-IV

##### Transition Metal $\pi$ -Complexes I

*[Handwritten signatures and marks are present in this section, including 'Daw', 'S', 'R', 'De', 'SS', and 'M. Patel']*

Transition metal  $\pi$ -Complexes with unsaturated organic molecules, alkenes, alkynes, allyl, complexes, preparation, properties, nature of bonding and structural features. Important reactions relating to nucleophilic and electrophilic attack on ligands and to organic synthesis.

#### Unit-V

##### Transition Metal $\pi$ -Complexes II

Transition metal  $\pi$ -Complexes with unsaturated organic molecules, diene, dienyl, arene and trienyl complexes, preparation, properties, nature of bonding and structural features. Important reactions relating to nucleophilic and electrophilic attack on ligands and to organic synthesis

##### Suggested Books References:

1. Principles and Application of Organotransition Metal Chemistry, J.P. Collman, L.S. Hegsdus, J.R. Norton and R.G. Finke, University Science Books.
2. The Organometallic Chemistry of the Transition Metals, R.H. Crabtree. John Wiley.
3. Metallo-organic Chemistry, A.J. Pearson, Wiley.
4. Organometallic Chemistry, R.C. Mehrotra and A. Singh New Age International

#### MCH 015A: Spectrophotometric Analysis (Practical)

##### Preparation (Any Six)

Preparation of selected inorganic compounds and their study by IR, electronic spectra, Mossbauer, ESR and magnetic susceptibility measurements. Handling of air and moisture sensitive compounds involving vacuum lines. Selection can be made from the following :

1. Sodium amide.
2. Synthesis and thermal analysis of group II metal oxalate hydrate.
3. Atomic absorption analysis of Mg and Ca.
4. Preparation of Tin (IV) iodide, Tin (IV) chloride and Tin (II) iodide.
5. Preparation of ammonium hexachlorostannate  $(\text{NH}_4)_2 \text{SnCl}_6$  ammonium hexachlorophosphate  $(\text{NH}_4)_2 \text{PbCl}_6$ .
6. Hexa-bis (4,nitrophenoxy) cyclotriphosphazene.
7. Synthesis of trichlorodiphenylantimony (V) hydrate.
8. Sodium tetrathionate  $\text{Na}_2\text{S}_4\text{O}_6$ .
9. Synthesis of metal acetylacetonate .
10. Bromination of Cr (acac) $_3$ .
11. Magnetic moment of Cu (acac) $_2 \cdot 2\text{H}_2\text{O}$ .
12. Cis and Trans  $[\text{Co}(\text{en})_2\text{Cl}_2]^+$ .
13. Separation of optical isomer of cis- $[\text{Co}(\text{en})_2\text{Cl}_2]$ .
14. Ion exchange separation of oxidation state of vanadium.
15. Preparation and use of Ferrocene.
16. Preparation of copper glycine complex-cis and trans bis (glycinato Copper (II)
17. Preparation of phosphine  $\text{Ph}_3\text{P}$  and its transition metal complexes.
18. Preparation of  $[\text{Co}(\text{phenanthroline-5,6 quinone})]$ .

##### Spectrophotometric Determinations

1. Manganese/Chromium/Vanadium in steel sample.
2. Nickel/molybdenum/tungsten/vanadium/uranium by extractive spectrophotometric method.
3. Fluoride/nitrite/phosphate.
4. Zirconium-alizarin Red-S complex : Mole-ratio method.

*[Handwritten signatures and marks are present below the list of determinations.]*

5. Copper-Ethylene diamine complex : Slope-ratio method.
6. Iron-phenanthroline complex : Job's method of continuous variations.

## Specialization: Organic Chemistry

### MCH 016A: Organic Elective I: ORGANIC SYNTHESIS

**Course Outcome:** After the completion of course, student will be able to

- CO1:- Understand the nature of different oxidation process.  
 CO2:- Understand the various steps involved in the reduction process of organic molecules.  
 CO3:- Understand the specific reaction mechanism in the process of hydrogenolysis.  
 CO4:- Understand the basic principle involved in various rearrangement processes.  
 CO5:- Understand the various steps involved in different rearrangement reactions.

#### Unit-I

##### Oxidation

Introduction, Different oxidative processes. Hydrocarbons-alkenes, aromatic rings, saturated C-H groups (activated and unactivated) Alcohols, diols, aldehyde's, ketones, ketals and carboxylic acids. Amines, hydrazines, and sulphides. Oxidations with ruthenium tetroxide, iodobenzene diacetate and thallium. (III) Nitrate.

#### Unit-II

##### Reduction-I

Introduction, Different reductive processes. Alkanes, alkenes, alkynes, and aromatic rings. Carbonyl compounds-aldehydes, ketones, acids and their derivatives. Epoxides.

#### Unit-III

##### Reduction-II

Introduction, Different reductive processes, Nitro, nitroso, azo and oxime groups. Epoxide, Nitro, Nitroso, azo and oxime groups. Hydrogenolysis.

#### Unit-IV

##### Rearrangements - I

General mechanistic considerations-nature of migration, migratory aptitude, memory effects. A detailed study of the following rearrangements. Pinacol-pinacolone, Wagner-Meerwein.

#### Unit-V

##### Rearrangements - II

Demjanov, Benzil-Benzilic acid. Favorskii, Arndt-Eister synthesis, Neber, Beckmann, Hotmann Curtius, Schmidt, Baeyer-Villiger, Shapiro reaction. Schmidt, Baeyer-Villiger. Shapiro reaction

#### Suggested Books References:

1. Modern Synthetic Reactions. H.O. House, W.A. Benjamin.
2. Some Modern Methods of Organic Synthesis, w. Carruthers, Cambridge Univ. Press.
3. Advanced Organic Chemistry, Reactions Mechanisms and Structure, J. March, John Wiley.
4. Principles of Organic synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.

*[Handwritten signatures and initials are present at the bottom of the page, including "Dem", "An", "Fav", "SR", "De", and "MD".]*

5. Advanced Organic Chemistry Part B.F.A. Carey and R.J. Sundberg Plenum Press.
6. Rodd's Chemistry of Carbon Compounds. Ed. S. Coffey, Elsevier.

## MCH 017A: Organic Elective II: Heterocyclic Chemistry

**Course Outcome:** After the completion of syllabus, student will be able to learn the

- CO-1 Nomenclature patterns of heterocyclic compounds, aromaticity and chemical behaviour
- CO-2 Nature, confirmation and stability of non aromatic heterocycles
- CO-3 Synthesis and reaction of small ring (3,4,5) membered heterocycles.
- CO-4 The synthesis and reaction of benofused and meso-ionic heterocycles.
- CO-5 The synthesis and reaction of six membered with one heteroatom and more than one heteroatom

### Unit-I

#### Nomenclature of Heterocycles

Replacement and systematic nomenclature (Hantzsch-Widman system) for monocyclic fused and bridged heterocycles.

#### Aromatic Heterocycles

General chemical behaviour of aromatic heterocycles, classification (structural type), criteria of aromaticity (bond lengths, ring current and chemical shifts in  $^1\text{H}$  NMR-spectra. Empirical resonance energy, delocalization energy and Dewar resonance energy, diamagnetic susceptibility exaltations). Heteroaromatic reactivity and tautomerism in aromatic heterocycles.

### Unit-II

#### Non-aromatic Heterocycles

Strain-bond angle and torsional strains and their consequences in small ring heterocycles. Conformation of six-membered heterocycles with reference to molecular geometry, barrier to ring inversion, pyramidal inversion and 1,3-diaxial interaction. Stereo-electronic effects anomeric and related effects, Attractive interactions-hydrogen bonding and intermolecular nucleophilic electrophilic interactions. Heterocyclic Synthesis. Principles of heterocyclic synthesis involving cyclization reactions and cycloaddition reactions.

### Unit-III

#### Small Ring Heterocycles

Three-membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes, thiranes, azetidines, oxetanes and thietanes.

### Unit-IV

**Benzo-Fused Five-Membered Heterocycles and Meso Ionic** Synthesis and reactions including medicinal applications of benzopyrroles, benzofurans and benzothiophenes Meso-ionic heterocycles: classification, chemistry of some important meso-ionic heterocycles of type-A and B and their applications. Sydnones.

### UNIT-V

**Six Membered Heterocycles with one heteroatom:** synthesis and reactions of pyrilium salts and pyrones and their comparison with pyridinium and thiopyrylium salts and pyridones; synthesis and reactions of quinolinium and benzopyrylium salts, coumarins and chromones.

**With two or more heteroatoms:** synthesis and reactions of diazines, triazines, tetrazines and thiazines. Some important macroheterocycles.

*[Handwritten signatures and marks at the bottom of the page]*

### Suggested Books References:

1. Heterocyclic Chemistry Vol. 1-3, R.R. Gupta, M. Kumar and V. Gupta, Springer Verlag.
2. The Chemistry of Heterocycles, T. Eleber and S. Hauptmann, Thieme.
3. Heterocyclic chemistry J.A. Joule, K. Mills and G.F. Smith, Chapman and Hall.
4. Heterocyclic Chemistry, T.L. Gilchrist, Longman Scientific Technical.
5. Contemporary Heterocyclic Chemistry, G.R. Newkome and W.W. Paudler, Wiley-Interscience.
6. An Introduction to the Heterocyclic Compounds, R.M. Acheson, John Wiley.
7. Comprehensive Heterocyclic Chemistry, A.R. Katritzky and C.W. Rees, eds. Pergamon Press.
8. I.L. Finar Organic Chemistry vol 2 (3rd ed.) Longmans Green & Co.
9. Organic Chemistry by Morrison & Boyd.

### MCH 018A: Organic Elective III: NATURAL PRODUCTS-I

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

**CO-1** Physical properties, chemical properties, synthesis and uses of terpenoids. It found in various citrus fruits and herbs and is known to have antioxidant properties and is also used in various household products such as detergents and soaps.

**CO-2** Classification, nomenclature, isolation and uses of carotenoids. The health benefits of carotenoids generally derive from their vitamin A activity in the body. These benefits include support for the skin, immune system, heart and eyes.

**CO-3** Students gain specific knowledge necessary for understanding the structure, isolation and physiological action of alkaloids, their structures, functions, as well as their possible use in human.

**CO-4** The general properties of the alkaloids, importance of these compounds to humans. Synthesis and biosynthesis of these natural products are also discussed.

**CO-5** Nomenclature, basic skeleton, isolation, structure determination and health benefits of steroids.

#### Unit - I

##### Terpenoids

Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene and biogenic isoprene rules. Structure and synthesis of the following representative molecules: Citral, Geraniol,  $\alpha$ -Terpineol, Zingiberene, Santonin, abietic acid, biogenesis of terpenes.

#### Unit-II

##### Carotenoids

Introduction, nomenclature, occurrence, isolation, general methods of structure determination, structure and synthesis of  $\beta$ -Carotene, Vitamin-A, Capsorubin, Kuhn-Roth methyl side-chain determination.

#### Unit-III Alkaloids-I

Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation (Hofmann's exhaustive, Emde and Von Braun's method), classification based on nitrogen heterocyclic ring, structure and synthesis of D-ephedrin, Coniine.

#### Unit-IV

##### Alkaloids-II

Structure, stereochemistry, synthesis and biosynthesis of the following: Nicotine, Atropine, Cocaine, Quinine and Morphine.

#### Unit-V

##### Steroids

### Suggested Books References:

- MCH 019A: Multi-step Synthesis (Practical)**

Separation, purification and identification of the components of a mixture of three organic compounds (three solids or two liquids and one solid or two solids and one liquid), using TLC for checking the purity of the separated compounds, chemical analysis, IR, PMR and Mass spectral data.

The exercise should illustrate the use of organic reagents and may involve purification of the products by chromatographic techniques.

- ## Paper Chromatography

## Spectroscopy

**Spectroscopy**  
Identification of organic compounds by the analysis of their spectral data (UV, IR, PMR,  $C^{13}$ NMR & MS) Spectrophotometric (UV/VIS) Estimations -

- ### 1. Amino acids

Scanned by CamScanner

2. Proteins
3. Carbohydrates
4. Cholesterol
5. Ascorbic acid
6. Aspirin
7. Caffeine

#### Books Suggested

1. Inorganic Experiments, J. Derek Woolings, VCH.
2. Microscale Inorganic Chemistry, Z. Szafran, R.M. Pike and M.M. Singh, Wiley.
3. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrand.
4. The systematic Identification of Organic Compounds, R.L. Shriner and D.Y. curlin.

### Specialization: Physical Chemistry

#### MCH 020A: PHYSICAL ELECTIVE I: ELECTROANALYTICAL TECHNIQUES

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

- CO-1 Introductory idea of analytical methods and laboratory operations.
- CO-2 Errors and evaluation of statistical data and methods of reporting analytical data
- CO-3 Conductometric titrations and measurements.
- CO-4 Potentiometric methods, pH determination by instruments and its applications
- CO-5 principle and applications of colorimetry

#### Unit I

##### Introduction

Role of analytical chemistry Classification of analytical methods classical and instrumental. Types of instrumental analysis. Selecting an analytical method. Neatness and cleanliness. laboratory operations and practices. Analytical balance. Techniques of weighing, errors. Volumetric glassware cleaning and calibration of glassware. Cleaning and Calibration of glassware. Sample preparation-dissolution and decompositions.

#### Unit II

##### Errors and Evaluation (Statistical Analysis)

Definition of terms in mean and median. Precision-standard deviation, relative standard deviation. Accuracy-absolute error, relative error. Types of error in experimental data determinate (systematic), indeterminate (or random) and gross. Sources of error and the effects upon the analytical results. Methods for reporting analytical data. Statistical evaluation of data-indeterminate errors. The uses of statistics.

#### Unit III

##### Conductometry

Important laws, definitions, relations, effect of dilution on conductivity, measurement of conductivity, types of conductometric titrations, its applications and limitations.

#### Unit IV

##### Potentiometry

Principle instrumentation, types of potentiometric titrations and its applications, pH measurements, determination of pH, ion selective electrodes, instrumentation and its applications

#### Unit V

##### Coulometry

Introduction, principle, experimental details of coulometry at constant current and constant potential, titrational applications.

*[Handwritten signatures and initials are present at the bottom of the page, including "Daw", "h", "S", "M", "C", and "SS".]*

### Suggested Books References:

1. Principles of Instrumental analysis D.A. Skoog and J.L. Loary, W.B. Saunders.
2. Principles of Instrumental Analysis D.A. Skoog W.B. Saunders.
3. Handbook of Instrumental Techniques for Analytical Chemistry, F. Settle, Prentice Hall

### MCH 021A: PHYSICAL ELECTIVE II : ELECTROCHEMISTRY-I

**Course outcome:** On completion of the course, student will be able to understand about the

- CO-1 Electrochemical batteries
- CO-2 role of electrochemical reactions in biological processes.
- CO-3 details of the process of corrosion.
- CO-4 corrosion inhibition methods
- CO-5 Kinetics of electrode process

#### Unit I

##### Electrochemical Energy Storage

Properties of Electrochemical energy storers : Measure of battery performance, Charging and discharging of a battery, Storage Density, Energy Density. Classical Batteries : (i) Lead Acid (ii) Nickel-Cadmium, (iii) Zinc manganese dioxide. Modern Batteries : (i) Zinc-Air (ii) Nickel-Metal Hydride, (iii) Lithium Battery, Future Electricity storers : Storage in (i) Hydrogen, (ii) Alkali Metals, (iii) Non aqueous solutions.

#### Unit II

##### Bioelectrochemistry

Membrane Potentials, Simplistic theory, Modern theory, Electrical conductance in biological organism: Electronic, Protonic electrochemical mechanism of nervous systems, enzymes as electrodes.

#### Unit III

##### Corrosion and Stability of Metals :

Civilization and Surface mechanism of the corrosion of the metals; Thermodynamics and the stability of metals, Potential -pH (or Pourbaix) Diagrams; uses and abuses, Corrosion current and corrosion potential -Evans diagrams. Measurement of corrosion rate : (i) Weight Loss method, (ii) Electrochemical Method.

#### Unit IV

##### Inhibiting Corrosion

Cathodic and Anodic Protection. (i) Inhibition by addition of substrates to the electrolyte environment, (ii) by changing the corroding method from external source, anodic Protection, Organic inhibitors, The fuller Story Green inhibitors.

##### Passivation

Structure of Passivation films, Mechanism of Passivation, Spontaneous Passivation Nature's method for stabilizing surfaces.

#### Unit V

##### Kinetic of Electrode Process :

Essentials of Electrode reaction. Current Density, Overpotential, Tafel Equation, Butler Volmer equation. Standard rate constant ( $K_0$ ) and Transfer coefficient ( $\alpha$ ), Exchange Current.

##### Irreversible Electrode processes

*[Handwritten signatures and marks]*

Criteria of irreversibility, informatino from irreversible wave. Methods of determining kinetic parameters for quasi-rversible and irreversible waves, Koutecky's methods, Meits Israel Method, Gellings method

#### Suggested Books References:

1. Modern Electrochemistry Vol. I, Ila, Vol. IIB J'OM Bockris and A.K.N. Reddy, Plenum Publication, New York.
2. Polarographic Techniques by L. Meites, Interscience.
3. "Fuel Cells : Thjeir electrochemistry". McGraw Hill Book Company, New York.
4. Modern Polarographic Methods by A.M. Bond, Marcell Dekker.
5. Polarography and allied techniques by K. Zutshi, New age International publicatin. New Delhi.
6. "Electroanalytical Chemistry by Basil H. Vessor & Galen W. ; Wiley Interscience.
7. Electroanalytical Chemistry by Basil H. Vessor & alen w. ; Wiley Interscience.
8. Topics in pure and Applied Chemistry, Ed. S. K. Rangrajan, SAEST Publication, Karaikudi (India)

### MCH 022A: PHYSICAL - ELECTIVE III :CHEMICAL KINETICS I

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

CO-1 kinetics of oscillatory reactions

CO-2 Kinetics of enzyme inhibition reactions

CO-3 Adsorption-desorption kinetics and importance of Industrial catalysts

CO-4 statistical mechanics and transition state theory, applications in calculation of the second order rare constant for reactions.

CO-5 mechanism of metal ion catalysis

#### Unit I

##### Oscillatory Reactions

Autocatalysis and oscilatory reactions, Kinetics and mechanism of Belousov-Zhabotinski (B-Z) reactions.

#### Unit II

##### Enzymes and Inhibitions

Kinetics of one enzymes-Two substrate systems and their experimental characteristics, Kinetics of enzyme inhibited reactions, Enzyme inhibitions and their experimetnal characteristics.

#### Unit III

##### Dynamics of Gas-surface Reactions

Adsorption/desorption kinetics and transition state theory. Dissociative adsorption and precursor state. Mechanism of Langmur's adsorption of the oxidation of carbon monoxide to carbon dioxide. True and apparent activation energies. Industrial importance of heterogeneous catalysis.

#### Unit IV

##### Transition State

A brief aspect of statistical mechanics and transition state theory. Application in calculation of the second order rare constant for reactions with collision for (1) atom + atom, (2) atom + molecule (linear), (3) atom + non linear molecule, (4) linear and linear molecule, (5) linear molecule + non linear molecule reactions. Static solvent effects and thermodynamics formulations. Adiabatic electron transfer reactions, energy surfaces.

#### Unit V

### Metal ion catalysis

Kinetics and mechanism of following reaction-

- (a) i. When reaction rate is independent of one of the reactants in presence of metal ion catalyst.
  - ii. When reaction rate is retarded of one of the products in the presence of metal ion catalyst.
  - iii. When metal ion catalysis indicates an intermediate complex.
- (b) (i). Cyclodextrines and their mode of catalysis, a case study.

### Suggested Books References:

1. Progress in Inorganic Chemistry, Vol. 30 1967.
2. R. Lumry and R.W. Raymond, Electron Transfer Reactions, Interscience.
3. N.L. Bender, Mechanism of Homogeneous Catalysis from protein to protein, Wiley.
4. A.G. Sykes, Kinetics of Inorganic reactions, Pergamon.
5. S.W. Benson, Mechanism of Inorganic Reactions, Academic Press.
6. Physical Chemistry Vol. 2, Ed. Prof Ya Grashinov, Mir publisher.
7. Basolo and Pearson, Inorganic Reaction Mechanisms, Wiley.
8. H. Taube, Electron Transfer Reactions, Oxford Press.

### MCH 023A: Thermodynamical Studies (Practical)

1. Determination of partial molar volume of solute (e.g. KCl) and solvent in a binary mixture.
2. Determination of the temperature dependence of the solubility of a compound in two solvents having similar intramolecular interactions (benzoic acid in water and in DMSO water mixture and calculate the partial molar heat of solution.
3. Determination of Pka of an indicator (e.g. methyl red) in (a) aqueous and (b) micellar media.
4. Determination of stoichiometry and stability constant of Ferricisothiocyanate complex ion in solution.
5. Determination of rate constant of alkaline bleaching of Malachite green and effect of ionic strength on the rate of reaction.
6. Verify Beer's law for solution of  $\text{KMnO}_4$  and determine concentration of given aqueous solution of unknown concentration of this salt.
7. Determine the solubility and solubility product of a sparingly soluble salt conductometrically.
8. Determine the dissociation constant of a weak acid conductometrically and verify Ostwald's dilution law.
9. Study the hydrolysis of methyl acetate catalysed by HCl solution and equinormal solution of urea hydrochloride and determines the degree of hydrolysis of the salt.
10. Study saponification of ethyl acetate conductometrically.
11. Oscillatory reaction(demonstration) and note down the time for damping of oscillation.
12. Study the reaction rate of decomposition of  $\text{H}_2\text{O}_2$  Kinetically in presence of iodide in acid solution.

### Books Suggested

- i. Inorganic Experiments, J. Derek Woolings, VCH.
- ii. Microscale Inorganic Chemistry, Z. Szafran, R.M. Pike and M.M. Singh, Wiley.
- iii. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrand.
- iv. The systematic Identification of Organic Compounds, R.L. Shriner and D.Y. Curtin.

*[Handwritten signatures and initials are present at the bottom of the page.]*

## Semester IV

### Specialization: Inorganic Chemistry

#### MCH 024A: Inorganic Elective I: ORGANOTRANSITION METAL CHEMISTRY-II

**Course outcome:** After the completion of course

- CO-1 Students will be able to understand the transition metal compounds with bonds to hydrogen.
- CO-2 Students will be able to apply and analyze the basic knowledge of stoichiometric reactions for catalysis.
- CO-3 Students will be able to describe the basic concept of catalytic reactions involving carbon monoxide.
- CO-4 Students will be able to explain reactions involving activation of C-H bond.
- CO-5 Students will be able to understand fluxional Organometallic Compounds and their properties.

##### Unit-I

##### Transition metal compounds with bonds to hydrogen

Transition metal compounds with bonds to hydrogen.

##### Unit-II

##### Homogeneous Catalysis

Stoichiometric reactions for catalysis, homogeneous catalytic hydrogenation, Zeigler-Natta polymerization of olefins,

##### Unit-III

##### Reactions of CO

Catalytic reactions involving carbon monoxide such as hydrocarbonylation of olefins (oxoreaction), explanation reactions,

##### Unit-IV

##### Activation of C-H bond

Reactions involving activation of C-H bond

##### Unit-V

##### Fluxional Organometallic Compounds

Flexionality and dynamic equilibrium in compounds such as  $\eta^2$  olefine,  $\eta^3$ -allyl and dieny complexes.

##### Suggested Books References:

1. Principles and Application of Organotransition Metal Chemistry, J.P. Collman, L.S. Hegsdus, J.R. Norton and R.G. Finke, University Science Books.
2. The Organometallic Chemistry of the Transition Metals, R.H. Crabtree. John Wiley.
3. Metallo-organic Chemistry, A.J. Pearson, Wiley.
4. Organometallic Chemistry, R.C. Mehrotra and A. Singh New Age International.

#### MCH 025A: Inorganic Elective II: INORGANIC POLYMERS

**Course Outcome:** After the completion of this course

- CO-1 Students will be able to understand the basic concept of polymers.
- CO-2 Students will be able to explain basic knowledge of polymer characterization and poly dispersion concept.
- CO-3 Students will be able to describe the structure, properties and applications of polymers based on boron.
- CO-4 Students will be able to explain the structure, properties and applications of polymers based on silicon.
- CO-5 Students will be able to explain the structure, properties and applications of polymers based on phosphorous.

*[Handwritten signatures and marks]*

## Unit-I

### Basics

Importance of polymers. Basic concepts : Monomers, repeat units, degree of polymerization  
Linear, branched and network polymers. Classification of polymers. Polymerization :  
condensation, addition/radical chain-ionic and co-ordination and copolymerization.  
Polymerization conditions and polymer reactions. Polymerization in homogeneous and  
heterogeneous systems.

## Unit-II

### Polymer Characterization

Polydispersion-average molecular weight concept. Number, weight and viscosity average  
molecular weights. Polydispersity and molecular weight distribution.

## Unit-III

### Polymers of Boron

Structure, Properties and Applications of Polymers based on boron-borazines, boranes and  
carboranes.

## Unit-IV

### Polymers of silicon

Structure, Properties and Applications of Polymers based on Silicon, silicone's polymetalloxanes  
and polymetallosiloxanes, silazanes.

## Unit-V

### Polymers of Phosphorous and sulphur

Structure, Properties and Application of-

- i. Polymers based on Phosphorous-Phosphazenes, Polyphosphates
- ii. Polymers based on Sulphur -Tetrasulphur tetranitride and related compounds.

### Suggested Books References:

1. Inorganic Chemistry, J.E. Huheey, Harper Row.
2. Developments in Inorganic polymer Chemistry, M.F. Lappert and G.J. Leigh.
3. Inorganic polymers- N.H. Ray.
4. Inorganic polymers, Graham and Stone.
5. Inorganic Rings and Cages : D.A. Armitage.
6. Textbook of Polymers Science, F.W. Billmeyer Jr. Wiley.
7. Contemporary Polymer Chemistry, H.R. Allcock and F.W. Lambe, Prentice Hall

## MCH 026A: Inorganic Elective III: MINERAL BASED INDUSTRIAL CHEMISTRY

Course Outcome: After the completion of this course:

- CO-1 Students will be able to understand general principles applied in studying an industry and manufacture of iron, steels etc.  
CO-2 Students will be able to explain classification of cement and manufacture of portland cement.  
CO-3 Students will be able to describe the classification of ceramics and basic raw materials.  
CO-4 Students will be able to explain the solid industrial poisons and their classification.  
CO-5 Students will be able to explain the liquid and gaseous industrial poisons and their classification.

*[Handwritten signatures and initials are present at the bottom of the page, including "S", "D", "A", "S", "N", "C", and "S"]*

### Unit-I

### INDUSTRIAL CHEMISTRY

Ferrous and non-ferrous industries-quality, control methods, general principles applied in studying an industry - manufacture of iron, steels metallurgy of gold and silver.

### Unit-II

### CEMENT

Classification of cement, manufacture of Portland cement - setting and hardening of cement, chemical constitution of Portland cement and their characteristics - special cement and their characteristics - special cements and their uses.  
Cermics

### Unit-III

### Ceramics

Classification of ceramics, basic raw materials-application of colours to pottery porcelain and china ware-manufacture, glass-raw materials, manufacture of special glass-optical, borosilicate, flint and coloured glass.

### Unit-IV

**Main group elements and their compounds:** Allotropy, synthesis, structure and bonding, industrial importance of the compounds.

### Unit-V

**Classification of pollutants :** Their sources, Sewage water treatment, waste water treatment - domestic and industrial.

### Suggested Books References:

1. Chemical Process Industries; N.D. Shreeve.
2. Applied Chemistry for Engineer; Diamont.
3. Chemistry of engineering materials; Jain & Jain
4. Engineering chemistry; B.K. Sharma.

### MCH 027A: Flame Photometric and Flame Photometric Determination (Practical)

#### Flame Photometric Determinations

1. Sodium.
2. Potassium
3. Sodium and potassium when present together
4. Lithium
5. Calcium
6. Barium
7. strontium.
8. Cadmium
9. Magnesium in tap water.

#### Quantitative determinations of a two component mixture

One Volumetrically and one gravimetrically

1.  $\text{Cu}^{+2}$ ,  $\text{Ni}^{+2}$

#### Quantitative determinations of a three component mixture :

One Volumetrically and two gravimetrically

1. Cu+2, Ni+2, Zn+2
2. Cu+2, Ni+2, Ng+2

## Specialization: Organic Chemistry

### MCH 028A: Organic Elective I: Disconnection Approach

**Course Outcome:** On completion of the course, M.Sc. student will be able to understand:

- CO-1 Synthons and synthetic equivalents, disconnection approach, chemo selectivity, Order of Reactions etc.
- CO-2 Principle of protection of alcohol, amine, carbonyl and carboxyl groups, Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis.
- CO-3 Diels-Alder Reaction, 1,3-difunctionalised compounds,  $\alpha,\beta$ -unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation.
- CO-4 Retrosynthesis of Saturated heterocycles, synthesis of 3,4,5 and 6 membered rings, aromatic heterocycles in organic synthesis. General strategy and stereoselectivity, Cyclisation and insertion reaction rearrangement in synthesis,
- CO-5 Retrosynthesis in Photocycloaddition and use of ketenes, Pericyclic rearrangement and special methods, carbonyl condensation, Diels -Alder reaction and reduction of aromatic compounds as a tool for retrosynthetic analysis.

#### Unit-I

##### Disconnection Approach

An introduction to synthons and synthetic equivalents. Disconnection approach, functional group inter-conversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, Chemoselectivity, reversal of polarity, cyclisation reaction, amine synthesis.

#### Unit-II

##### Protecting Groups

Principle of protection of alcohol, amine, carbonyl and carboxyl groups.

#### One Group C-C Disconnections

Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis.

#### Unit-III

##### Two Group C-C Disconnections

Diels-Alder Reaction, 1,3-difunctionalised compounds,  $\alpha,\beta$ -unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation.

#### Unit-IV

##### Ring Synthesis-I

Saturated heterocycles, synthesis of 3,4,5 and 6 membered rings, aromatic heterocycles in organic synthesis. General strategy and stereoselectivity, Cyclisation and insertion reaction, rearrangement in synthesis,

#### Unit-V

##### Ring Synthesis-II

*[Handwritten signatures and marks are present in this section, including a large 'A' and several checkmarks.]*

Photocycloaddition and use of ketenes, Pericyclic rearrangement and special methods, carbonyl condensation, Diels-Alder reaction and reduction of aromatic compounds.

### Suggested Books References:

1. Designing Organic Synthesis, S. Warren. Wiley.
2. Organic Synthesis-Concept, Methods and Starting Materials, J. Fuhrhop.
3. Some Modern Methods of Organic Synthesis. W. Carruthers, Cambridge Univ. Press.
4. Modern Synthetic Reactions H.O. House, W.A Benjamin.
5. Advanced Organic Chemistry : Reactions, Mechanisms and Structure, J. March. Wiley.
6. Principles, of Organic Chemistry Part B. F.a. Carey and R.J. Sundberg, Plenum Press.

## Organic Elective-II: MCH029A Advanced Organic Spectroscopy

**Course Outcomes:** After the completion of the course, student will be able to-

- CO1 Understand the advanced Proton magnetic resonance spectroscopy, complex splitting patterns etc.
- CO2 Understand the Principles  $^{13}\text{C}$  spectroscopy, their applications in structure determination and working method of Instrument and two dimensional spectroscopy, 2DNMR inadequate - COSY, NOESY, HETCOR.
- CO3 Understand the mass spectrometry in detail.
- CO4 Understand the UV spectra of heterocyclic, azulenes and acetylinic compounds, optical rotation, optical rotatory dispersion (ORD), circular dichroism (CD), octant rule and axial halo ketone rule.
- CO5 apply the knowledge of various spectroscopic techniques in structure identification of organic compounds.

### UNIT-I

#### Proton magnetic resonance spectroscopy

Nuclear properties, Pulse techniques, Fourier Transform technique and its advantages, complex splitting patterns ( $\text{AX}$ ,  $\text{AB}$ ,  $\text{AB}_x$ ,  $\text{AM}_x$ ,  $\text{ABC}$ ,  $\text{AM}_3$ ,  $\text{A}_2\text{X}_2$ ,  $\text{A}_2\text{X}_3$ ), coupling constant [geminal, vicinal, long range (allylic, homoallylic), coupling through space].

Hindered rotation, Karplus equation and curve variation of coupling constant with dihedral angle, simplification of complex spectra: nuclear magnetic double resonance, contact shift reagents, variable temperature dynamic NMR spectroscopy.

Effect of quadrupolar nuclei (10B) on the  $^1\text{H}$  NMR spectra, Satellite spectra -examples for different spin systems -Systems with chemical exchange -study of fluxional behavior of molecules.

A brief introduction of compounds carrying NMR active nuclei like  $\text{N}^{15}$ ,  $\text{F}^{19}$ ,  $\text{P}^{31}$ .

### UNIT- II

$^{13}\text{C}$  NMR spectroscopy  $^{13}\text{C}$  NMR spectroscopy: Basic principles Carbon- 13 NMR spectroscopy, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon). Two dimension NMR spectroscopy.

proton ( $^1\text{H}$ ) coupled  $^{13}\text{C}$  NMR spectrum, off-resonance and noise decoupled  $^{13}\text{C}$  NMR spectrum, DEPT . 2DNMR inadequate - COSY, NOESY, HETCOR.

### Unit-III

#### Mass Spectrometry

Introduction, ionization methods EI, CI, FD and FAB, Fragmentation: basic fragmentation types and rules, factors affecting fragmentation, ion analysis, ion abundance, Mass spectral

*[Handwritten signatures and marks at the bottom of the page]*

fragmentation of organic compounds (hydrocarbons, alcohols, ethers, ketones, aldehydes, carboxylic acids, amines, nitriles, nitro and halogenated compounds), common functional groups, molecular ion peak, meta stable peak. Mc-Lafferty rearrangement. Nitrogen rule, HRMS.

#### Unit-IV

##### UV-Visible spectroscopy and ORD

Determination of configuration of E/Z isomer, steric effect, UV spectra of heterocyclic, azulenes and acetylenic compounds, optical rotation, optical rotatory dispersion (ORD), circular dichroism (CD), octant rule and axial halo ketone rule.

#### Unit-V

##### Structure Elucidation of complex organic molecules

Structure elucidation of organic compounds by combined applications of UV, IR, NMR and mass spectrometry

##### Suggested Books References:

1. Spectrometric Identification of Organic Compounds; Sixth Edition; R.M. Silverstein and F.X. Webster; John Wiley and Sons, 2002.
2. Organic Spectroscopy; Third Edition; W. Kemp; Palgrave Publisher Ltd., New York, 2004.
3. Spectroscopic Methods in Organic Chemistry; Sixth Edition; D. H. Williams and I. Fleming; Tata McGraw Hill Publishing Company Ltd, New Delhi, 2002.
4. Spectral Analysis of Organic Compounds; Second Edition; C.J. Creswell and M.M. Campbell; Burgess Publishing Company, Great Britain, 1972.

### MCH 030A: Organic Elective III: NATURAL PRODUCTS-II

#### Course Outcome: After the completion of this course

- CO-1 Students will be able to understand primary function of pigments in plants and general methods of structure determination.
- CO-2 Students will be able to describe biosynthesis of plant pigments and gain knowledge about Acetate pathway and Shikimic acid pathway.
- CO-3 Students will be able to describe the Structure, synthesis and binding of Haemoglobin and Structure, synthesis of light absorbing pigment Chlorophyll.
- CO-4 Students will be able to explain isolation, nomenclature, classification, biogenesis and physiological effects of Prostaglandins.
- CO-5 Students will be able to understand synthesis and structure elucidation of Pyrethroids and Rotenones. Student will also be able to understand the concepts of medicinal chemistry.

#### Unit-I

##### Plant Pigments-I

Occurrence, nomenclature and general methods of structure determination, structure and synthesis of cyanidin chloride, pelargonidin chloride, delphinidin and hirsutidin chlorides.

## Unit-II

### Plant Pigments-II

Occurrence, nomenclature, structure and synthesis of flavonol (3-hydroxy flavone), quercetin, isoflavone, daidzein, butin and aureusin, butein, Aureusin, Biosynthesis of flavonoids.

## Unit-III

### Prophyrins

Haemoglobin, degradation products of haemoglobin and synthesis of haemin, porphyrins, spectral properties, structure elucidation and synthesis of Chlorophyll.

## Unit-IV

### prostaglandin

Occurrence, nomenclature, classification, biogenesis and physiological effects. Synthesis of PGE<sub>2</sub> and PGF<sub>2a</sub>.

## Unit-V

### Pyrethroids and Rotenones

Synthesis and reactions of Pyrethroids and Rotenones. (For structure elucidation, emphasis is to be placed on the use of spectral parameters wherever possible).

### Medicinal Chemistry:

Drugs and their Classification, Drug-target interactions, Therapeutic action of a new important class of drugs (antacids, antihistamines), neurologically active drugs, (tranquilizers, analgesics), antimicrobials (antibiotics, antiseptics & disinfectants), anticancer drugs; Taxol, Artemisinin antifertility drugs, artificial sweetening agents (sucralose, rotenoid) and food preservatives. New development in Drug research. Drug designing.

### Suggested Books References:

1. Natural Products : Chemistry and Biological Significance, J. Mann, R.S. Davidson, J.B. Hobbs, D.V. Banthorpe and J.B. Harborne, Longman, Essex.
2. Organic Chemistry : Vol. 2 I.L. Finar, ELBS
3. Stereoselective Synthesis : A Practical Approach, M. Norgard, VCH.
4. Rodd's Chemistry of Carbon Compounds, Ed. S. Coffey, Elsevier.
5. Chemistry, Biological and Pharmacological Properties of Medicinal Plants from the Americas, Ed. Kurt Hostettmann, M.P. Gupta and A. Marston. Harwood Academic Publishers.
6. Introduction to Flavonoids, B.A. Bohm. Harwood Academic Publishers.
7. New Trends in Natural Product chemistry, Ata-ur-Rahman and M.L. Choudhary, Harwood Academic Publishers.

### MCH 031A: Chromatography and Spectroscopy (Practical)

#### Thin Layer Chromatography

1. To separate the mixture of Methyl Orange and Methylene Blue by using cyclohexane and ethyl acetate (8.5:1.5) as solvent system.
2. To Prepare and separate 2,4-dinitro Phenylhydrazone of acetone, 2-butanone, hexane-2-one and hexane-3-one using toluene and petroleum ether (40:60).

#### Paper Chromatography

3. To separate the mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent - Ninhydrin.

*[Handwritten signatures and initials are present at the bottom of the page.]*

4. To separate the mixture of D,L-alanine, glycine and L-leucine using n-butanol : acetic acid : water (4:1:5). Spray reagent- Ninhydrin.
5. To separate monosaccharides - a mixture of D -galactose and D-fructose using n-butanol : acetone: water (4:1:5). Spray reagent -aniline hydrogen phthalate.
6. To Separate and identify sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of Rf values.

### Spectroscopy

Identification of organic compounds by the analysis of their spectral data (UV, IR, PMR, CMR & MS) Spectrophotometric (UV/VIS) Estimations-

- i. Amino acids
- ii. Proteins
- iii. Carbohydrates
- iv. Cholesterol
- v. Ascorbic acid
- vi. Aspirin
- vii. Caffeine

### Specialization: Physical Chemistry

#### MCH 032A: PHYSICAL ELECTIVE I: CHEMICAL ANALYSIS

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand Food analysis, use of HPLC and TLC in food adulteration etc

CO-2 Students will be able to analyse soil characteristics and quality

CO-3 Students will be able to perform the analysis of solid, liquid and gaseous fuels.

CO-4 Students will be able to perform the analysis of water, various parameters and impurities present in water. CO-5 Students will be able to understand clinical analysis and drug analysis by various physical methods.

#### Unit I

##### Food analysis

Moisture, ash, crude protein, fat crude fibre, carbohydrates, calcium, potassium, sodium and phosphate. Food adulteration-common adulterants in food, contamination of food stuffs. Microscopic examination of foods for adulterants. Pesticide analysis in food products. Extraction and purification of sample. HPLC. Gas chromatography for organophosphates. Thin-layer chromatography for identification of chlorinated pesticides in food products.

#### Unit II

##### Analysis of soil

Analysis of Soil, moisture pH total nitrogen, phosphorus, silica, lime, manesia, manganese, sulphur and alkali salts.

#### Unit III

##### Analysis of Fuel

Fuel analysis : liquid and gas. Ultimate and proximate analysis-heating values-grading of coal. Liquid fuels-flash point, aniline point, octane number and carbon residue. Gaseous fuels-produced gas and water gas-calorific value

*[Handwritten signatures and initials]*

#### Unit IV

##### Analysis of Water

Objectives of analysis-parameter for analysis-colour, turbidity, total solids, conductivity, acidity, alkalinity, hardness, chloride, sulphate, fluoride, silica, phosphates and different forms of nitrogen, Heavy metal pollution-public health significance of cadmium, chromium, copper, lead, zinc, manganese, mercury and arsenic.

#### Unit V

##### Clinical Chemistry

Composition of blood-collection and preservation of samples. Clinical analysis. Serum electrolytes, blood glucose, blood urea nitrogen, uric acid, albumin, globulins, barbiturates, acid and alkaline phosphates. Immuno assay : principles of radio immunoassay (RIA) and applications. The blood gas analysis trace elements in the body.

##### Drug analysis

Narcotics and dangerous drug. Classification of drugs. Screening by gas and thin-layer chromatography and spectrophotometric measurements.

#### Suggested Books References:

1. Analytical Chemistry, G.D. Christian, J.Wiley.
2. Fundamentals of analytical Chemistry. D.A. Skoog, D.M. West and F.J. Hooler, W.B. Saunders.
3. Analytical Chemistry-Principles. J.H. Kennedy. W.B. Saunders.
4. Analytical Chemistry-Principles and Techniques. L.G. Hargis. Prentice Hall.
5. Principles of Instrumental analysis D.A. Skoog and J.L. Loary, W.B. Saunders.
6. Principles of Instrumental Analysis D.A. Skoog W.B. Saunders.
7. Quantitative Analysis, R.A. Day, Jr. and A.L. Underwood, Prentice Hall.
8. Environmental Solution, S.M. Khopkar, Wiley Eastern.
9. Basic Concepts of Analysis Chemistry, S.M. Khopkar, Wiley Eastern.
10. Handbook of Instrumental Techniques for Analytical Chemistry, Settle, Prentice Hall.

#### MCH 033A : PHYSICAL ELECTIVE II: ELECTRO CHEMISTRY-II

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand the formation and working of fuel cells

CO-2 Students will be able to understand the electrocatalysis in simple redox reactions and biological systems. CO-3 Students will be able to understand the principles and applications of

voltametry. CO-4 Students will be able to understand the types of electro organic reaction and their applications in sewage water treatment. CO-5 Students will be able to understand controlled current techniques.

#### Unit I

##### Fuel cell

Electrochemical Generators (Fuel Cells) : Hydrogen oxygen cells, Hydrogen Air cell, Hydrocarbon air cell, Alkaline fuel cell, Phosphoric acid fuel cell, direct NaOH fuel cells, applications of fuel cells.

#### Unit II

##### Electrocatalysis

Chemical catalysts and Electrochemical catalysts with special reference to porphyrins, oxides of rare earths. Electrocatalysis in simple redox reactions, in reaction involving adsorbed species. Influence of various parameters.

### Unit III

#### Voltammetry

General principle and applications, linear sweep voltammetry (LSV), cyclic voltammetry (CV), square wave voltammetry, stripping voltammetry, cathodic and anodic adsorptive stripping voltammetry (CAAdSV and AAAdSV).

### Unit IV

#### Electro-organic synthesis

Types of electro organic reaction, constant current and constant potential electrolysis, cell design, effect of variable, nature of medium, nature of electrode materials, over voltage, effect of redox couple, application of sewage waste water treatment.

### Unit V

#### Controlled Current Techniques

Introduction, general theory, Sand equation, programmed current chronopotentiometry, Quasireversible waves, reversal techniques, galvanostatic double pulse method.

#### Suggested Books & References:

1. Electrochemical methods by Allen J. Bard and Larry R. Faulkner, John Wiley. Pub.
2. Electrochemistry by Carl H. Hamann, Andrew Hammett and Wolfgang Vielstich.
3. Modern Polarographic Methods by H. Vossler & Galen W. Wiley Interscience.
4. Topics in pure and applied chemistry Ed. S.K. Rangrajan SAEST Pub., Karaikudi, (India).
5. Techniques of electro-organic synthesis Part I, II & III by N.L. Weinberg John Wiley Pub.

### MCH 034A: PHYSICAL ELECTIVE III : CHEMICAL KINETICS-II

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand the kinetics and mechanism of micelle catalyzed reactions

CO-2 Students will be able to understand the radiation chemistry and photochemistry. Kinetics and mechanism of photochemical and photosensitized reactions, electron transfer reactions.

CO-3 Students will be able to understand the kinetics and mechanism of induced reactions.

CO-4 Students will be able to understand the electron transfer reactions in metal complexes.

CO-5 Students will be able to understand bridged outer-sphere electron transfer mechanism, Nucleophilic and electrophilic catalyst and their mode of action.

### Unit I

#### Micelles catalysis and inhibition

Kinetics and mechanism of micelle catalyzed reactions (1st order and second order) Various type of micelle catalyzed reactions. Micelle inhibited reactions.

#### Kinetics and Mechanism of Substitution Reaction

Classification of ligand substitution mechanism. Anation and base catalyzed kinetics of anation reactions. Aquation and acid catalyzed kinetics of aquation reactions (octahedral complexes).

*[Handwritten signatures and initials are present at the bottom of the page.]*

## Unit II

### Radiation Chemistry

Radiation chemistry and photochemistry. Radiation chemistry of water and aqueous solutions. Hydrogen atom and hydroxyl radical-oxidizing and reducing conditions. Kinetics and mechanism of photochemical and photosensitized reactions (One example in each case). Stern-Volmer equation and its application. Hole-concept in the presence of semiconductor type photocatalysts. Kinetics and mechanism of electron transfer reaction in the presence of visible light. Kinetics of exchange reactions (Mathematical analysis)

## Unit III

### Induced Phenomenon

Induced reactions concept and their characteristics, Induction factor, Mechanism of (i) Fe (II) induced oxidation of iodine by Cr(VI) in weak acid medium, (ii) As (III) induced oxidation of Mn(II) by chromate in acid solutions. Kinetics and mechanism of induced reactions in metal complexes (octahedral complexes of Cobalt (III) only)-basic concepts.

## Unit IV

### Electron Transfer Reaction in Metal Complexes

Kinetics and mechanism of 1:1, 1:2, 1:3 metal substrate complexes as intermediate, Henry Taubes classical reaction, its kinetics and mechanism, Inner-sphere and outer sphere, electron transfer reactinos and mechanism. Various types of inner sphere bridges, adjacent and remote attack. Linkage isomerism. Chemical and resonance mechanism.

## Unit V

Marcus-Cross relation in outtersphere reactions (no mathematical derivation). Its application in reactions :

Bridged outer-sphere electron transfer mechanism, Nucleophilic and electrophilic catalyst and their mode of action.

### Suggested Books References:

1. Progress in Inorganic Chemistry, Vol. 30 1967.
2. R. Lumry and R.W. Raymond, Electron Transter Reactions, Interscience.
3. N.L. Bender, Mechanism of Homogeneous Catalysis from protein to protein, Wiley.
4. A.G. Sykes, Kinetics of Inorganic reactins, Pergamon.
5. S.W. Benson, Mechanism of Inorganic Reactions, Academic Press.
6. Physical Chemistry Vol. 2, Ed. Prof Ya Grasimov, Mir publisher.
7. Basolo and pearson, Inorganic Reactino Mechaims, Wiley.
8. H. Taube, Electron Transfer Reactions, Oxford Press

### MCH 035A : Polarography and Chemical Kinetics (Practical)

1. Identification and estimation of metal ions such as  $\text{Cd}^{+2}$ ,  $\text{Pb}^{+2}$ ,  $\text{Zn}^{+2}$ , polarographically.
2. Study of a metal ligand complex polarographically (using Lingane's Method).
3. Determination of rate constant and formation constant of an intermediate complex in the reaction of Ce(IV) and Hypophosphorous acid at ambient temperature.
4. Determination of energy and enthalpy of activation in the reaction of  $\text{KMnO}_4$  and benzyl alcohol in acid medium.

*[Handwritten signatures and initials are present at the bottom of the page.]*

5. Determination of energy of activation of and entropy of activation from a single kinetic run.
6. Kinetics of an enzyme catalyzed reaction
7. To determine the hardness of Water by complexometric method and by HCl method.
8. To determine the amount of free chlorine in given water sample.
9. Determination of Total residual Chlorine and amount of Fluoride ion in given water samples.
10. Determination of Viscosity of a given lubricant by Redwood Viscometer No.1.
11. Determination of Flash and Fire Points of a given lubricant by Pensky Martin Apparatus.
12. Determination of Cloud and Pour Points of a given lubricant.
13. To determine moisture, volatile and ash content in a given coal sample by proximate analysis.
14. To determine the calorific value of Solid Fuel by Bomb's Calorimeter.

#### Books Suggested

1. Inorganic Experiments, J. Derek Woolings, VCH.
2. Microscale Inorganic Chemistry, Z. Szafran, R.M. Pike and M.M. Singh, Wiley.
3. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrand.
4. The systematic Identification of Organic Compounds, R.L. Shriner and D.Y. Curtin.

## Semester-I

### BSC001A: Periodic Properties, Mechanism of Organic Reactions and States of Matter

**Course Outcome** At the end of this course students will be able to:

- CO1: Evaluate the periodic properties like atomic and ionic radii, ionization energy, electron affinity and electronegativity and their applications.
- CO2: Understand the common themes running through ionic and metallic descriptions of chemical bonding.
- CO-3: Analyze and formulate mechanisms of different organic reaction including addition, Substitution, elimination and rearrangement reactions.
- CO-4 Understand various types of State of matters, imperfections in crystals and crystal structures and various properties of liquid and gaseous state and their determinations

**Mapping of PO/CO**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO1	2	2	2	1	1	1			1	2	1	2	1
CO2	1	2	2	1	2	2	1			1	2	2	1
CO3	2	1	2		2	2		1		2	1	2	2
CO4	1	2	1	1	2	2				2	1	2	2
	1-LOW	2-MEDIUM	3-HIGH										

**Unit-I Periodic Properties :** Atomic and ionic radii, ionization energy, electrode potential (use of redox potential-reaction feasibility), electron affinity and electronegativity – definition, methods of determination or evaluation, trends in periodic table and applications in predicting and explaining the chemical behavior, electronic configuration.

**MIT : Principle of chemical science (fall 2008)**

### Unit-II Chemical Bonding- I

- Ionic Bond** – Types of ionic solids, radius ratio effect and coordination number, limitations of radius ratio, lattice defects, lattice energy and Born-Haber cycle, solvation energy and solubility of ionic solids, polarizing power and polarizability, Fajan's rules.
- Metallic Bond** : Free electron, valence bond and band theories, Weak Interactions; Hydrogen Bond – experimental evidence, van der Waal's forces.

### Unit III: Structure, Bonding & Mechanism of Organic Reactions

- Hyperconjugation, aromaticity, inductive and field effects, hydrogen bonding. Types of organic reactions, Energy considerations.

*Handwritten signatures and initials:* Dan, Am, Zr, P, JCB, Bsh, R, Q, g, h.

- (ii) Types, structure, relative stability, and reactivity of Carbocations, Carbanions, free radicals, carbenes, arynes and nitrenes (with examples). Assigning formal charges on intermediates and other ionic species. Methods of determination of reaction mechanism; product analysis, intermediates, isotope effects. Kinetic and stereochemical studies.

**Unit-IV Solid State:** Types of crystals (molecular, covalent, metallic, ionic). Imperfections in crystals: point defect, Schottky defect, Frankel defect, metal excess defect (colour centre), line defect (dislocations), edge and screw dislocations, Crystal structure of NaCl, KCl, Graphite, and Diamond. Band theory of solids.

MIT- Band theory of solids

**UNIT-V Liquid State:** Surface tension of liquids, capillary action, surface tension and temperature, interfacial tension, surface active agents, Viscosity of liquids, experimental determination of viscosity coefficient, its variation with temperature, Intermolecular forces of liquids.

MIT- Band theory of solids, surface tension

#### **Suggested Books**

1. Concise Inorganic Chemistry by J.D. Lee
2. Inorganic Chemistry Principles of Structure and Reactivity-Huheey James, E. Keiter Ellen, A. Pearson, Edu. Delhi.
3. Stereochemistry of organic compounds-P.S. Kalsi, New age International
4. Organic chemistry Reaction and Reagents-O.P. Agarwal, Krishna Prakashan Meerut
5. Advanced Organic Chemistry by Bahl & Bahl, S. Chand Publications.
6. Organic Chemistry by Morrison Boyd, Pearson Publications.
7. Advanced Organic Chemistry by Bahl & Bahl, S. Chand Publications.
8. Advanced Organic chemistry-Jagdamba Singh and LDS Yadav
10. Advanced Physical chemistry -Gurdeep Raj, Goel Publication
11. Essentials of physical Chemistry-Puri, Sharma, Pathania

**BSC002A : Acid -Base Titrations and Radical identification (Practicals)**

#### **INORGANIC CHEMISTRY**

1. To analyse acidic radicals of concentrated  $\text{H}_2\text{SO}_4$  group.
2. To analyse acidic radicals of concentrated  $\text{H}_2\text{SO}_4$  group.
3. To analyse sulphate radical.
4. To analyse interfering radicals  $\text{BO}_3^{3-}$ ,  $\text{PO}_4^{3-}$ ,  $\text{C}_2\text{O}_4^{2-}$ ,  $\text{F}^-$

#### **ORGANIC CHEMISTRY**

1. To purify the impure sample of organic compounds by sublimation.
2. To separate the mixture (1 solid + 1 liquid) by distillation.

*[Handwritten signatures and marks]*

- To detect the elements (N and S) from the given organic compound.
- To detect the element (halogen) from the given organic compound.
- To purify the impure sample of organic compound by crystallization and decolourised the compound by charcoal.

### PHYSICAL CHEMISTRY

- To prepare standard 0.1 N NaOH solution using 0.1 N oxalic acid as primary standard solution.
- To determine strength of unknown  $\text{CH}_3\text{COOH}$  using 0.1 N NaOH as intermediate solution.
- To determine the percentage composition of a given mixture (non interacting system) by viscosity method.
- To determine the percentage composition of a given mixture (non interacting system) by surface tension method
- To determine the partition coefficient of Iodine between water and carbon tetrachloride (or chloroform, carbon disulphide etc) at room temperature.

## Semester-II

### BSC003A Chemical Bonding and Hydrocarbons

#### Course Outcome

At the end of this course students will be able to:

- CO1: Analyze the structure and bonding in molecules / ions and predict the structure of molecules / ions via valence bond theory, valence shell electron pair repulsion and molecular orbital theory and its applications
- CO2: Understand the common themes running through ionic and metallic descriptions of chemical bonding.
- CO-3: understand physical properties and apply chemical properties of various hydrocarbons viz. alkanes, alkenes and cycloalkanes in different sectors.
- CO-4 Understand basic knowledge of various types properties of gaseous state and their determinations

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO1	2	3	2	3	2		1		2	3	2	2	1
CO2	1	2	1	2	2	1	1		1	1	2	1	2
CO3	2	2		1	2	1		2		2	2	2	1
CO4	2	3	1	2	2	1		1	2	2	2	1	2

1 - LOW 2- MEDIUM 3-HIGH

### Unit - I Chemical Bonding II:

Shape of s,p,d orbitals and their characteristics, Valence bond theory and its limitations, directional characteristics of covalent bond, various types of hybridizations and shapes of simple inorganic molecules and ions such as  $\text{NH}_3$ ,  $\text{H}_3\text{O}^+$ ,  $\text{SF}_4$ ,  $\text{ClF}_3$ ,  $\text{ICl}_2^-$  and  $\text{H}_2\text{O}$  by valence shell electron pair

repulsion (VSEPR) theory and Molecular Orbital Theory, bonding, nonbonding and antibonding molecular orbitals, linear combination of atomic orbitals (LCAO). Applications of MO theory.

### Unit-II s-Block Elements :

Tendencies of alkali and alkaline-earth metals, hydration energies, solvation and complexation, Hydride (classification, general methods of preparation and salient features), principle of metallurgical extraction, Chemistry of Li and Be, their anomalous behaviour and diagonal relationships, alkyls and aryls and their role in biology.

### Unit III: Alkanes & Cycloalkanes

Isomerism in alkanes, methods of formation (with special reference to Wurtz reaction, Kolbe reaction, Corey-House reaction, and decarboxylation of carboxylic acids). Physical properties and chemical reaction of alkanes. Mechanism of free radical halogenations of alkanes, orientation, reactivity and selectivity.

Introduction and nomenclature of cycloalkanes, Baeyer's strain theory and its limitations, Ring strains in small rings (cyclopropane and cyclobutane), theory of strainless rings. The case of cyclopropane ring; banana bonds.

### Unit IV: Alkenes

Nomenclature of alkenes, methods of formation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkyl halide, regioselectivity in alcohol dehydration The Saytzeff rule, Hofmann's elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes-mechanisms involved in hydrogenation, electrophilic and free radical additions, Markovnikov's rule, hydroboration-oxidation, oxymercuration-reduction. Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with  $\text{KMnO}_4$ . Polymerization of alkenes. Substitution at the allylic and vinylic-positions of alkenes. Industrial applications of ethylene and propene.

**Unit V: Gaseous State:** Kinetic theory of gases, transport coefficients. Collision in a gas- mean free path, collision diameter and its dynamics, collision number and effusion. Behaviour of real gases -Van der Waal's equation, Critical phenomena - critical constants of a gas and their determination, continuity of state, critical state, Principle of corresponding states, liquefaction of gases.

MIT- Kinetic theory of gases, transport coefficients, collision diameter and its dynamics, collision number and effusion.

### Suggested Books

1. Concise Inorganic Chemistry by J.D. Lee

2. Inorganic Chemistry Principles of Structure and Reactivity-Huheey James, E. Keiter Ellen, A. Pearson, Edu. Delhi.
3. Stereochemistry of organic compounds-P.S. Kalsi, New age International
4. Organic chemistry Reaction and Reagents-O.P. Agarwal, Krishna Prakashan Meerut
5. Advanced Organic Chemistry by Bahl & Bahl, S. Chand Publications.
6. Organic Chemistry by Morrison Boyd, Pearson Publications.
7. Advanced Organic Chemistry by Bahl & Bahl, S. Chand Publications.
8. Advanced Organic chemistry-Jagdamba singh and LDS Yadav
10. Advanced Physical chemistry -Gurdeep Raj, Goel Publication
11. Essentials of physical Chemistry-Puri, Sharma, Pathania

### BSC004A: Mixture Analysis and Functional Group identification (Practicals)

#### INORGANIC CHEMISTRY

1. To analyse mixture containing three acidic and three basic radicals (Group I, II and VII).
2. To analyse mixture containing three acidic and three basic radicals (Group II, III and VII).
3. To analyse mixture containing three acidic and three basic radicals (Group IV, VI and VII).
4. To analyse mixture containing three acidic and three basic radicals (Group I, II and V).
5. To analyse mixture containing three acidic and three basic radicals including  $\text{BO}_3^{3-}$  as the interfering radical.
6. To analyse mixture containing three acidic and three basic radicals including  $\text{PO}_4^{3-}$  as the interfering radical.
7. To analyse mixture containing three acidic and three basic radicals including  $\text{C}_2\text{O}_4^{2-}$  or  $\text{F}^-$  the interfering radical.
8. To analyse mixture containing three acidic and three basic radicals. Mixture contains combination of acidic radicals. (Chloride in presence of Bromide or Iodide).
9. To analyse mixture containing three acidic and three basic radicals. Mixture contains combination of acidic radicals. (Oxalate in presence of Carbonate)

#### ORGANIC CHEMISTRY

1. To detect the functional group (alcoholic and phenolic) from the given organic compound.
2. To detect the functional group (Carboxylic and ester) from the given organic compound.
3. To detect the functional group (Carbonyl and Amide) from the given organic compound.
4. To detect the functional group (Amine and Aniline) from the given organic compound.
5. To detect the functional group (Carbohydrate And Nitro) from the given organic compound.

#### PHYSICAL CHEMISTRY

1. To determine the specific reaction rate of the hydrolysis of methyl or ethyl acetate catalysed by HCl at room temperature.
2. To determine the specific reaction rate of the hydrolysis of methyl or ethyl acetate catalysed by  $\text{H}_2\text{SO}_4$  at room temperature and compare the relative strength of acids.
3. To determine the specific reaction rate of the hydrolysis of methyl or ethyl acetate catalysed by HCl at higher temperature ( $40^\circ\text{C}$ ) and also determine energy of activation for the reaction.
4. To study the effect of acid strength on the hydrolysis of ester.
5. To prepare colloidal solution of arsenious sulphide.

### Semester-III

#### BSC005A: Stereochemistry and solutions

##### Course Outcome

At the end of this course students will be able to:

- CO1: Understand the salient features of p-block Elements (Group 13 and 14) and their different compounds having the industrial and biological applications.
- CO-2: understand physical properties and apply chemical properties of various hydrocarbons viz. alkynes and dienes in different sectors.
- CO-3: develop a sound understanding of the fundamental concepts of stereochemistry.
- CO-4 Understand basic knowledge of ideal and non ideal solutions and their properties and different types of colligative properties of dilute solution.

##### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO-8	PO-9	PO-10	PS O-1	PSO-2	PSO-3
CO1	1	3	2	3	2	1		2	2	2	2	3	1
CO2	2	2	2	1	2	2	1	1	2		2	2	1
CO3	3	2	2	1	3	1		1		2	2	2	2
CO4	2	2	2	2	1	1	1	2	2	1	2	2	2

1 - LOW 2- MEDIUM 3-HIGH

##### Unit-I p-Block Elements :

Comparative study (group-wise) of group 13 & 14 elements with respect to periodic properties. Compounds such as hydrides, halides, oxides and oxyacids; diagonal relationship; preparation, properties, bonding and structure of diborane, borazine and alkali metal borohydrides. Preparation, properties and technical applications of carbides and fluorocarbons. Silicones and structural principles of Silicates, Borazines, Phosphonitridehydrides

##### Unit II: Alkynes and Dienes

Nomenclature, structure and bonding in alkynes. Methods of preparation. Chemical reactions of alkynes, acidity of alkynes. Mechanisms of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reduction, oxidation and polymerization.

*Handwritten signatures and initials:*  
Daw, An, AS, JMB, S, d, M, B, R, Q, 862

**Nomenclature and classification of dienes:** isolated, conjugated and cumulated dienes. Structure of allenes and butadiene, methods of formation, polymerization. Chemical reactions-1,2- and 1,4-additions, Diels-alder reaction

### Unit III: Stereochemistry

Concept of isomerism, types of isomerism. Optical isomerism: elements of symmetry, molecular chirality enantiomers. stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres, diastereomers, threo and erythro diastereomers. meso compounds, resolution of enantiomers, inversion, retention and racemization. Relative and absolute configuration: sequence rules, D & L and R & S systems of nomenclature. Determination of configuration of geometrical isomers, E & Z systems of nomenclature, geometric isomerism in oximes and alicyclic compounds.

**Unit IV: Solutions:** Liquid-liquid - ideal solutions, Raoult's law. Ideally dilute solutions, Henry's law. Non-ideal solutions. Vapour pressure - composition and vapour pressure- temperature curves; Azeotropes-HCl-H<sub>2</sub>O, ethanol-water systems and fractional distillation. Partially miscible liquids-phenol-water, trimethylamine-water, nicotine-water systems. Effect of impurity on consolute temperature. Immiscible liquids and steam distillation. Nernst distribution law. Calculation of the partition coefficient. Applications of distribution law.

### Unit V: Dilute solutions:

Colligative properties. relative lowering of vapour pressure, its relation to molecular weight of non-volatile solute. Elevation of boiling point and depression of freezing point. Derivation of relation between molecular weight and elevation in boiling point and depression in freezing point. Experimental methods of determination. Osmosis, osmotic pressure, experimental determination. Abnormal Colligative properties- Van't Hoff factor.

**MIT- Osmosis, osmotic pressure, Abnormal Colligative properties- Van't Hoff factor.**

#### Suggested Books

1. Concise Inorganic Chemistry by J.D. Lee
2. Inorganic Chemistry Principles of Structure and Reactivity-Huheey James, E. Keiter Ellen, A. Pearson, Edu. Delhi.
3. Stereochemistry of organic compounds-P.S. Kalsi, New age International
4. Organic chemistry Reaction and Reagents-O.P. Agarwal, Krishna Prakashan Meerut
5. Advanced Organic Chemistry by Bahl & Bahl, S. Chand Publications.
6. Organic Chemistry by Morrison Boyd, Pearson Publications.
7. Advanced Organic Chemistry by Bahl & Bahl, S. Chand Publications.

*[Handwritten signatures and initials]*

8. Advanced Organic chemistry-Jagdamba singh and LDS Yadav  
10. Advanced Physical chemistry -Gurdeep Raj, Goel Publication  
11. Essentials of physical Chemistry-Puri, Sharma, Pathania

### BSC006A Chromatographic Analysis and Calibrations (Practicals)

#### INORGANIC CHEMISTRY

1. To calibrate fractional weights, pipettes and burettes.
2. To prepare standard solution and dilution -0.1 M to .001M solution.
3. To estimate hardness of water by EDTA.
4. To measure dissolved oxygen in water.
5. To measure Total Solid in sewage.
6. To measure chloride in water.

#### ORGANIC CHEMISTRY

##### Thin Layer Chromatography

1. To separate the mixture of Methyl Orange and Methylene Blue by using cyclohexane and ethyl acetate(8.5:1.5) as solvent system.
2. Preparation and separation of 2,4-dinitro Phenylhydrazone of acetone, 2-butanone, hexane-2-one and hexane-3-one using toluene and petroleum ether(40:60).
3. Paper Chromatography
4. To separate the mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent -Ninhydrin.
5. To separate the mixture of D,L-alanine, glycine and L-leucine using n-butanol : acetic acid :water (4:1:5). Spray reagent- Ninhydrin.
6. To separate monosaccharides -a mixture of D -galactose and D-fructose using n-butanol : acetone: water (4:1:5). Spray reagent -aniline hydrogen phthalate.

#### PHYSICAL CHEMISTRY

1. To determine the solubility of benzoic acid at different temperatures and to determine  $\Delta H$  of the dissolution process.
2. To determine the water equivalent of the thermos flask or calorimeter.
3. To determine the enthalpy of neutralization or heat of neutralization for a strong acid and strong base.
4. To determine heat of neutralization of a weak acid say acetic acid and hence calculate its heat of ionization or enthalpy of ionization.
5. To determine heat of neutralization of a weak base say  $\text{NH}_4\text{OH}$  and hence calculate its heat of ionization or enthalpy of ionization.

Handwritten signatures and initials are present at the bottom of the page, including "Duan", "Am", "J", "S", "V", "Q", and "SSh".

## Semester-IV

### BSC007A: Transition & inner transition metals, aromaticity and thermodynamics

#### Course Outcome

At the end of this course students will be able to:

- CO-1: Understand the vast world of transition and inner transition elements with their basket of unique properties
- CO-2 understand the carbohydrates, their occurrence, structure, configuration, properties and also get the knowledge of the role of these bio-molecules in biological system and day to day life.
- CO-3: Interpret the concept of aromaticity, properties and the chemical reactions of aromatic compounds.
- CO-4 Understand basic knowledge of various process of thermodynamics and their properties

#### Mapping of PO/CO

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO1	2	3	2	3	2	2	2	2	2	2	3	2	2
CO2	3	2	2	2	3	2	1	2	3	1	2	3	1
CO3	2	2	1	1	3	1	1	1	1		1	2	2
CO4	2	3	2	2	1	2		1	2	1	2	1	1

1 - LOW 2 - MEDIUM 3 - HIGH

#### Unit-I Transition Metals:

Characteristic properties of 3d elements – ionic radii, oxidation states, complexation tendency, magnetic behaviour and electronic spectral properties. Spectrophotometric estimation of metal ions.

#### Unit-II Lanthanides & Actinides:

Comparative study of lanthanide elements with respect to electronic configuration, atomic and ionic radii, oxidation state and complex formation. Lanthanide contraction. Occurrence and principles of separation of lanthanides. Actinides: electronic configuration, atomic and ionic radii, oxidation state, Magnetic and spectral properties

#### Unit III: Carbohydrates

Classification and nomenclature of monosaccharides, mechanism of osazone formation, interconversion of glucose and fructose, chain lengthening and chain shortening of aldoses. Configuration of monosaccharides. Erythro and threo diastereomers. Conversion of glucose into

*Handwritten signatures and initials:*  
Dum, An, S, M, B, K, S

mannose. Formation of glycosides, ethers and esters. Determination of ring size of monosaccharides. Cyclic structure of D (+) glucose.

#### Unit IV: Arenes & Aromaticity

Nomenclature of benzene derivatives. The aryl group, aromatic nucleus and side chain structure of benzene, molecular formula and Kekule structure, stability.

Huckle's rule, aromatic ions, Aromatic electrophilic substitution-general pattern of the mechanism, role of  $\sigma$  and  $\pi$  complexes. Mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction, energy profile diagrams. Activating & deactivating substituents, orientation and ortho/para ratio. Side chain reactions of benzene derivatives. Birch reduction

#### Unit-V Thermodynamics-I:

Introduction of different terms and processes in thermodynamics : Systems (isolated, closed, open) and surroundings, macroscopic properties (extensive and intensive), kinds of processes, work, heat and First Law of thermodynamics, state and state functions (exact and inexact differential), path dependence of work and heat. Enthalpy, heat changes at constant volume and constant pressure, heat capacities ( $C_v$ ,  $C_p$ ) and relation between them for ideal gases.

MIT- First Law of thermodynamics, work and heat. Enthalpy.

#### Suggested Books

1. Concise Inorganic Chemistry 5<sup>ed</sup> - J. D. Lee
2. Advanced Inorganic chemistry-S. K Agarwal, Keemtilal
3. Organic Chemistry by Morrison & Boyd
3. Advanced Organic chemistry-Jagdamba singh and LDS Yadav
4. Reaction mechanism in Organic chemistry -S M Mukherji and S P Singh, Macmillan
5. Chemical thermodynamics-R. P. Rastogi and R.R Mishra
6. Advanced Physical chemistry -Gurdeep Raj, Goel Publication
7. Chemical thermodynamics-R. C. Srivastava, S. K. Saha and Abhay K. Jain

**BSC008A: Volumetric Analysis, Identification of Organic Compounds and Conductometric Analysis (Practicals)**

#### INORGANIC CHEMISTRY

##### Volumetric Analysis

1. To determine alkali content in anta acid tablet using HCl.
2. To estimate copper using thiosulphate.
3. To determine acetic acid in commercial vinegar using NaOH solution.

##### Synthesis

4. To prepare Tetraammine copper (II) sulphate.
5. To prepare Ni-DMG complex.

#### ORGANIC CHEMISTRY

The Universal Declaration of Human Rights directs the member nations to create such conditions under which the ideals of free human beings, enjoying civil and political freedom from fear and want, can be achieved. The Constitution of India, through its various articles, strives to ensure security and safety of citizens in accordance with the principles of Universal Declaration of Human Rights. However, crime is a violation of these principles. In a country like India, where majority of population is uneducated, social set up is heterogeneous, public police relations are not very cordial, poverty is rampant and unemployment widespread, it is not surprising that crime rate is increasing exponentially.

If we have to create conditions conducive to harmonious development, we must mitigate the crime rate. This can best be achieved by relying on the support of forensic science system. Unfortunately, in our country, forensic science is not viewed as a core investigative skill in crime detection. In majority of serious crime cases, hi-tech measures are being adopted by perpetrators of crime. The counter measures have to be more sophisticated to surpass them. This calls for strengthening the foundations of forensic science at national level. It is with this aim that we wish to initiate a B.Sc. (Hons) Course in Forensic Science.

**Course Objectives**

1. To emphasize the importance of scientific methods in crime detection.
2. To disseminate information on the advancements in the field of forensic science.
3. To highlight the importance of forensic science for perseverance of the society.
4. To review the steps necessary for achieving highest excellence in forensic science.
5. To generate talented human resource, commensurating with latest requirements of forensic science.
6. To provide a platform for students and forensic scientists to exchange views, chalk out collaborative programs and work in a holistic manner for the advancement of forensic science.

**JECRC UNIVERSITY**  
**SCHOOL OF SCIENCES**  
**DEPARTMENT OF FORENSIC SCIENCE**  
**B.SC. (HONS) FORENSIC SCIENCE**

**Program Educational Objective (PEO's):**

- PEO1: To provide the basic knowledge and principles of Forensic Science.  
PEO2: To develop problem-solving skills in a stepwise manner.  
PEO3: To inculcate diverse skills and abilities involved in various fields of Forensic Science.  
PEO4: To develop laboratory skills.  
PEO5: To develop conceptual understanding of Criminal Justice System and Legal System.  
PEO6: To produce ethical and skillful graduates articulating the professional standards.

**Program Outcome (PO's)**

A graduate of the B.Sc. (Hons) in Forensic Science Program will:

- PO1: Apply the knowledge of basic and applied sciences, engineering, social sciences and arts to various forensic problems. **(Basic and Discipline specific knowledge)**  
PO2: Identify and analyze forensic problems using standard methods based on scientific approach. **(Problem Analysis)**  
PO3: Understand, select, and apply appropriate techniques, resources, and modern scientific techniques with an understanding of its merits and limitations. **(Modern tool usage)**  
PO4: Apply ethical principles and commit to professional ethics and responsibilities and norms in the forensic practices. **(Ethics)**  
PO5: Speak, read, write and listen clearly in person and through electronic media in English and one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology. **(Effective Communication)**  
PO6: Understand and analyze the impact of forensic solutions to the society and criminal justice setup. **(Forensic practices for society and criminal Justice setup)**  
PO7: Function effectively as an individual, and as a member or leader in diverse teams, and in a multidisciplinary setting. **(Individual and team work)**

**Program Specific Outcomes (PSO's)**

- In pursuit of the general objective of producing these self-reliant young Forensic Scientists and contributing to scientific knowledge, the following are the **Program Specific Outcome** of the B.Sc. (Hons) in Forensic Science degree Programme:  
PSO1: Understand the concepts of basic and applied sciences including psychology and their applications in forensics  
PSO2: Analyze the sample in field and laboratory test of crime exhibits with the latest norms and standards  
PSO3: Analyze the different crime scenario and make decision regarding analysis of crime exhibits  
PSO4: Evaluate various results and present them in the court of law on requirements

#### SEMESTER-I

L	T	P	C
4	-	1	5

#### BFO051A: BASIC FORENSIC SCIENCE

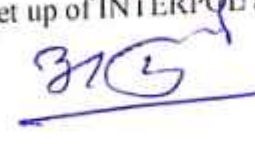

CREDIT(S)-4

##### Unit I - History and Development of Forensic Science

Functions of forensic science. Historical perspective of forensic science. Definitions and concepts in forensic science. Scope of forensic science. Need of forensic science. Basic principles of forensic science. Branches of forensic science.

##### Unit II - Organizational Set Up

Hierarchical set up and the role and functions of Central Forensic Science Laboratories, State Forensic Science Laboratories, Government Examiners of Questioned Documents, Fingerprint Bureaus, National Crime Records Bureau, CID, CBI. Forensic science in international perspectives, including set up of INTERPOL and FBI.

**Unit III - Police and Forensic science**  
Police & Detective Training Schools, Bureau of Police Research & Development, Directorate of Forensic Science and Mobile Crime Laboratories, Police Academies. Police dogs. Services of crime laboratories. Basic services and optional services.

**Unit IV - Physical Evidences**  
Definition, Types of Evidences, physical evidences and their importance in criminal investigation. Collection and preservation of physical evidences: Toxicological Evidences, Biological Evidences, Petroleum products, trace items, Entomological Evidences, Dental Evidences, bones, Fingerprints, Questioned Document, Diatoms, Tool Marks.

**Unit V - Crime Scene Investigation and Management**  
Types and classification of Crime Scene, Crime Scene Management, Initial response, Securing the scene of crime, Various crime scene search methods, Various methods of preservation of crime scene: Photography, Sketching, Videography, Voice Recording, Notes taking. Collection methods and labelling, packing and forwarding of evidences, documentation and chain of custody, Role of First Responding Officer and Investigating officer. Duties of forensic scientists. Code of conduct for forensic scientists. Qualifications of forensic scientists. Report writing

**Course Outcomes:** After studying this course the students will know

- CO1 The fundamental principles and functions of forensic science, its development and progress over the time  
CO2 The working of the forensic establishments in India and abroad.  
CO3 The role of police in the investigation  
CO4 The physical evidences & their methodology of collection & preservation  
CO5 Crime scene investigation and management

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4
CO1	H	L	L	L	-	L	L	L	M	M	L
CO2	L	L	L	L	-	L	L	L	M	H	L
CO3	M	L	L	H	-	M	L	L	H	H	H
CO4	H	H	H	M	-	L	M	L	H	H	H
CO5	L	L	L	L	-	M	L	L	L	L	L

**Suggested Readings (Latest Editions)**

1. Crime Scene Management - A Forensic Approach by Dr. M. S. Rao and Dr. B. P. Maithil
2. Sharma, B.R., Forensic Science in Criminal Investigation & Trials, Universal Publishing Co., New Delhi, 2003
3. Nanda B.B and Tewari, R.k. Forensic Science in India- A vision for the Twenty First Century, Select publisher, N. Delhi, 2001.
4. James, SH and Nordby, J.J., Forensic Science- An Introduction to Scientific and investigative Techniques, CRC Press, USA (2003)

5. Saferstein; Criminalistics- An Introduction of Forensic Science, Prentice Hall Inc, USA, 2007.
6. Sharma, B.R. (1974) Forensic Science in Criminal Investigation and Trials, Central Law Agency, Allahabad, 1974.
7. Forensic Science in Crime Investigation by B.S. Nabar
8. Houck, M.M. & Siegel, J.A; Fundamentals of Forensic Science, Academic Press, London, 2006.

#### **BFO052A: BASIC FORENSIC SCIENCE LAB**

**CREDIT-1**

1. To study the annual reports of National Crime Records Bureau and depict the data of different type of crime cases with the help of smart art/templates.
2. To process a mock indoor crime scene
3. To perform the sketching of indoor crime scene
4. Collection, Packing, Labelling & Forwarding of the Following Physical evidences: (A) Biological Fluids (B) Soil/Dust (C) Wet Exhibits (D) Hair/Fibre (E) Glass material (F) Liquids (G) Pharmaceutical products/Drugs of Abuse (H) Botanical Material (I) Shell Case / Cartridge / Bullet /Pellets, (J) Charred Documents etc.
5. To process a mock outdoor crime scene.
6. To perform the sketching of outdoor crime scene
7. Preservation of dental evidences
8. To perform the photography of bite marks
9. To perform the photography of fingerprints
10. To perform the photography of questioned document.

#### **BFO053A: BASIC FORENSIC CHEMISTRY**

**CREDITS-4**

##### **Unit I - Periodic Properties (Chemistry of S & P – block elements)**

S Block Elements: Properties, Electronic configuration, Atomic and ionic radii, Ionization potential, oxidation states, Magnetic properties, etc.

P Block Elements: Properties, Electronic configuration, Atomic and ionic radii, Ionization potential, Variable oxidation states, Magnetic properties, Complex formation, etc.

##### **Unit II –Petroleum Products & Narcotic Drugs**

Petroleum Products - Definition, classification, distillation and fractionation of petroleum. Commercial uses of different petroleum fractions, adulteration of petroleum products.

Narcotic Drugs - Introduction, drug effects, drug hazards, tolerance and dependence of drugs, Problems of drug addiction. Identification of a drug addict, drug addicts and crimes, Classification of Narcotics and other drugs. Introduction to NDPS act.

##### **Unit III – Forensic Chemistry**

Food adulteration- Definition of food and food adulteration, food additives and food adulterants, Prevention of Food Adulteration Act, Detection of common adulterants used in food products by physical and chemical methods.

Dyes, Paints, Pesticides and Insecticides- Nature, classification, composition, uses and significance in forensic science.

##### **Unit IV – Physical Chemistry**

Free volume of liquid and density measurement, physical properties of liquid, Vapor pressure, surface tension surfactants, viscosity, molar refraction, optical activity, structure of liquid, Applications of surface tension, viscosity and refractive index. Solutions: Method of exploring concentration of solutions, binary liquids, distillation, fractional distillations, vacuum distillations.

*[Handwritten signatures and initials: A, BKG, Ai, Wides]*

**Unit V – Analytical Chemistry**  
 Gravimetric Analysis-Principle, theory and types of Gravimetric analysis, properties of precipitates and precipitating agents, application of gravimetric methods  
 Volumetric Analysis- Principle, theory and types of volumetric analysis, Acid-base, complexometric, redox and precipitation titrations, applications of volumetric analysis  
 Chromatography: Principle, theory, stationary phases, mobile phases, retardation factor and applications of Paper Chromatography, Column chromatography, TLC, HPLC, etc.

**Course Outcomes:** After the completion of this course, students will be able to understand-  
 CO1 Physical and chemical behavior of elements, trends in properties and formation of different complexes.

CO2 Natural occurrence and synthesis of heterocyclic compounds, their properties, importance in formation of commercial products like dyes, drugs, paints etc.

CO3 Importance and functioning of biological system in body, cycle of oxygen, role of Iron and other metals in human body cycles.

CO4 Properties of liquids and solutions

CO5 Introductory idea and applications of various analytical methods in chemical analysis and analysis of trace elements.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4
CO1	H	M	M	-	-	L	L	M	M	M	L
CO2	H	M	M	-	-	L	L	M	H	H	M
CO3	H	L	L	-	-	L	L	M	L	L	L
CO4	H	L	L	-	-	L	L	M	M	M	L
CO5	H	M	H	-	-	L	L	M	H	H	H

#### Suggested readings: (Latest Editions)

1. Principles of Physical Chemistry and Puri, Sharma and Pathania, Vishal Publishing Company, 46th Edition 2013
2. Organic Chemistry by Moris and Boyed, Pearson Publishing, 7th edition 2011.
3. Text book of organic chemistry by Arun Bahl and B. S. Bahl, S. Chand Publishing, 2016
4. "A New Concise Inorganic Chemistry", J. D. Lee, 5th Edition (1996), Chapman & Hall, London
5. B.K. Sharma, "Industrial Chemistry", Krishna Prakasam Media (P) Ltd., Meerut, 2001.
6. "Modern Methods of Chemical Analysis", R. L. Pecsok, L. D. Shields, T. Cairns, and I. C. McWilliam, 2nd Edition (1976), John Wiley, New York.
7. "Basic Concepts of Analytical Chemistry", S. M. Khopkar, 2nd Edition (1998), New Age International Publications, New Delhi.

#### BFO054A: BASIC FORENSIC CHEMISTRY LAB

1. Introduction to Chemistry laboratory apparatus and instruments.
2. Standardization of given liquid by primary standard.

CREDIT-1

3. To determine surface tension of the given liquid by using stalagmometer.
4. To determine relative viscosity of given organic liquids by viscometer (Four liquids)
5. Determination of functional groups
6. Analysis of acid and basic radicals.
7. Detection of elements.
8. Separation of mixture of dyes by TLC
9. Separation of mixture of two organic compounds by Column chromatography
10. Analysis of adulteration in food stuff.

**CREDITS-4**

## **BFO055A: BASIC FORENSIC BIOLOGY**

### **Unit I – Crime Scene and Biological Evidences**

Crime scene investigation with respect to biological and serological evidences, Recognition of Biological Evidence, Collection of Biological Evidence, Marking Evidence, Packaging and Transportation, Laboratory analysis, comparison, and expert testimony for biological evidences.

### **Unit II – Cell Biology and Basic Biochemistry**

Cell theory and cell as the basic unit of life, structure of prokaryotic and eukaryotic cells; cell organelles – Endoplasmic reticulum, Golgi complex, Mitochondria, Chloroplast and Lysosomes. Amino Acids, Carbohydrates and Lipids- Definition, biological and forensic importance, classification and their properties.

### **Unit III – Basics of Genetics**

Mendel's laws of inheritance, mitochondrial inheritance. Genetic material: Griffith's experiment, Avery, McCleod and McCarty, Hershey and Chase experiment, RNA as genetic material; experimental proof. Structure of DNA: X-ray crystallography, Chargaff's rule, Watson-Crick's double helical model of DNA, types of DNA. Types of RNA.

### **Unit IV – Botanical Evidences**

Identification and examination of botanical evidences - pollen, seeds, leaves, flowers, fruits and wood. Forensic examination of botanical evidences. Diatoms and their forensic significance.

### **Unit V – Forensic Entomology**

Introduction & History of forensic entomology, Identification of insects, insect growth and life cycle, Dipterans Larval Development, Successional Colonization of Body, Determination of displacement and disturbance of the body, Presence and Position of wounds, Determination of Time elapsed since death, Collection and preservation of insects, Challenges encountered in Entomology, Entomotoxicology – Definition and concept.

**Course Outcomes** -On completion of the course, students are able to:

- CO1 Understand the crime scene management of biological evidences
- CO2 Understand the basis of life through cell biology and biochemistry
- CO3 Know basic of genetics by studying the concept of DNA and RNA
- CO4 Deal with the botanical evidence in the investigation
- CO5 Understand the field of forensic entomology and forensically important insects

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PRC  
OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	H	L	L	-	-	L	L	H	M	M
CO2	H	M	H	-	-	L	L	H	M	M
CO3	H	M	M	-	-	L	L	H	H	H
CO4	H	M	L	-	-	L	L	H	H	H
CO5	H	L	L	-	-	L	L	H	M	L

**Suggested books (Latest Editions)**

1. Cell Biology, Genetics, Molecular Biology, Evolution & Ecology: Evolution and Ecology Verma P.S. (Author), Agarwal V.K. (Author)
2. L. Stryer, Biochemistry, 3rd Edition, W.H. Freeman and Company, New York (1988).
3. R.K. Murray, D.K. Granner, P.A. Mayes and V.W. Rodwell, Harper's Biochemistry APPLETON & Lange, Norwalk (1993).
4. S. Chowdhuri, Forensic Biology, BPRD, New Delhi (1971).
5. R. Saferstein, Forensic Science Handbook, Vol. III, Prentice Hall, New Jersey (1993).
6. G.T. Duncan and M.I. Tracey, Serology and DNA typing in, Introduction to Forensic Science 2nd Edition, W.G. Eckert (Ed.), CRC Press, Boca Raton (1997)
7. Forensic entomology: an introduction By Dorothy E. Gennard Wiley

**BFO056A: BASIC FORENSIC BIOLOGY LAB**

**CREDIT-I**

1. Introduction to instrument and Glassware of the laboratory
2. To acquaint yourself with the calibration of laboratory equipment.
3. To become aware with the laboratory safety practices
4. Hands on practice upon optical microscope- compound & dissecting
5. Microscopic examination of cell organelles
6. Crime scene investigation of different biological evidences
7. Microscopic examination of different pollen grains.
8. Identification of different types of leaves
9. Collection and preservation of forensically important insects
10. DNA extraction from detergents.

## SEMESTER-II

L	T	P	C
4	-	1	5

### BFO057A: FORENSIC ANTHROPOLOGY

CREDITS- 4

#### Unit I - Introduction to Forensic Anthropology

Introduction to the field, historical perspective, Scope of forensic anthropology, significance in forensic investigation.

#### Unit II – Osteology

Osteology: structure, characteristics, types and function of bone, human skeleton-axial and appendicular with reference to skull, pelvis and long bones, centers of ossification, pre-natal and post-natal ossification, types of sutures.

#### Unit III - Personal Identification

Somatoscopy – observation of hair on head, forehead, eyes, root of nose, nasal bridge, nasal tip, chin, Darwin's tubercle, ear lobes, supra-orbital ridges, physiognomic ear breadth, circumference of head. Scar marks and occupational marks.

*(Signature)*

*(Signature)*

*(Signature)*

*(Signature)*

Somatometry – measurements of head, face, nose, cheek, ear, hand and foot, body weight, height.  
Indices - cephalic index, nasal index, cranial index, upper facial index.

#### Unit IV – Facial Reconstruction

Portrait Parle/ Bertillon system. Facial superimposition techniques. Cranio facial superimposition techniques – photographic super imposition, Video superimposition, Roentgenogram superimposition. Use of somatoscopic and craniometric methods in reconstruction. Importance of tissue depth in facial reconstruction. Determination of age, sex, stature from skeletal material.

#### Unit V – Exhumation

Exhumation- Definition, objectives, identification methods, examination. Exhumation procedure. India; Medico-legal importance. Case studies, legal procedure and legal aspects.

**Course Outcomes-** After studying this course students will

CO1 Have familiarity with the field of forensic anthropology

CO2 Know the significance of forensic anthropology in investigation process

CO3 Have through understanding of personal identification through somatoscopy and somatometry

CO4 Have understanding of facial reconstruction techniques

CO5 Have understanding of exhumation.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4
CO1	H	L	L	-	-	L	-	L	L	L	L
CO2	H	L	L	-	-	L	-	L	L	L	L
CO3	H	M	M	-	-	L	-	H	M	M	M
CO4	H	M	H	-	-	L	-	H	H	H	H
CO5	H	M	L	-	-	L	-	H	L	L	L

#### Suggested Readings: (Latest Editions)

1. M.Y. Iscan and S.R. Loth, The scope of forensic anthropology in, Introduction to Forensic Sciences, 2 nd Ed., W.G. Eckert (Ed.), CRC Press, Boca Raton (1997).
2. D. Ubelaker and H. Scammell, Bones, M. Evans & Co., New York (2000).
3. S. Rhine, Bone Voyage: A Journey in Forensic Anthropology, University of Mexico Press Mexico (1998)
4. Linda I. Klepinger: fundamentals of forensic anthropology, a John Wiley & Sons, Inc., publication
5. DFS Manuals of Forensic Science

#### BFO058A: FORENSIC ANTHROPOLOGY LAB

1. Determination of age from skull sutures.
2. To determine age from skull and teeth.

CREDIT-1

3. To determine of sex from skull.
4. To determine sex from pelvis.
5. To study identification and description of bones and their measurements.
6. To investigate the differences between animal and human bones.
7. To perform somatometric measurements on living subjects.
8. To carry out craniometric measurements of human skull.
9. To estimate stature from long bone length.
10. To conduct portrait parley.

## **BFO059A: FORENSIC DERMATOGLYPHICS**

**CREDITS: 4**

### **Unit I – Introduction to Fingerprints**

Fingerprints as evidence: Its recognition, Collection and Preservation, History and Development of fingerprints, Structure of friction skin, Formation of ridges, Fingerprints patterns, Pattern Areas, Composition of Sweat, forensic importance.

### **Unit II – Basics of Fingerprints**

Types of Fingerprints, Patterns of Fingerprints, and Characteristics of Fingerprints (Ridge Counting, Ridge Tracing, and Minutiae). Lifting & preservation of Fingerprint from various surfaces. Pores – Location & function; Poroscopy and Edgescopy & its Significance.

### **Unit III - Fingerprint Recording**

Methods of taking fingerprint from living person: Rolled & Plain. Methods of taking fingerprint from dead person in various conditions like: in case of setting-in of rigor mortis, drowning, burning and shrinking of phalanges.

### **Unit IV - Fingerprint Classification Systems**

Classification of Fingerprint: Ten-digit classification system (Primary, Secondary, Sub-secondary, Final Classification); Single digit classification, Battley single digit system; Automated Fingerprint System.

### **Unit V - Fingerprint Development Methods**

Various methods of development of latent fingerprints: Physical methods (powder, magna brush and iodine development). Chemical methods (Silver nitrate, Ninhydrin & Cynoacrylate development).

**Course Outcomes -** After studying this course students will

- CO1 Have familiarity with fingerprint science
- CO2 Have conceptual understanding of fingerprint types, patterns and examination parameters
- CO3 Know about fingerprint recording procedure
- CO4 Be able to classify fingerprints using various classification systems
- CO5 Be able to develop fingerprints by physical, chemical and fuming methods.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM  
OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
						L	-	H	L	L
CO1	H	L	L	-	-	M	-	H	H	H
CO2	H	M	M	-	-	L	-	H	L	L
CO3	H	L	M	-	-	L	-	H	L	L
CO4	H	L	L	-	-	L	-	H	H	H
CO5	H	H	H	-	-	L	-	H	H	H

**Suggested Readings: (Latest Editions)**

1. Bridges, B.C; Criminal Investigation, Practical Fingerprinting, Thumb Impression, Handwriting expert Testimony, Opinion Evidence., Univ. Book Agency, Allhabad, 2000
2. Mehta, M.K; Identification of Thumb impression & cross examination of Fingerprints, 3. N.M. Tripathi Pub. Bombay, 1980.
4. Chatterjee, S.K; Speculation in Fingerprint Identification, Jantralekha printing Works, Kolkata 1981.
5. Cowger James F; Friction Ridge Skin- Comparison & Identification of Fingerprints, CRC Press NY, 1993
6. Cossidy, M.J; Footwear Identification, Royal Canadian, Mounted Police, 1980.
7. Iannavelli, A.V; Ear Identification, Forensic Identification Series, Paramount, 1989.
8. Henry, C.L. & Ganesslen, R.E; Advances in Fingerprint Technology, CRC Press, London, 1991.
9. Jain, A.K., Flynn, P. & Ross A.A., Handbook of Biometrics, Springer, New York 2008
10. Lee and Gaenslen's, Advances in Fingerprint Technology, 3rd Edition, R.S. Ramotowski (Ed. CRC Press, Boca Raton (2013).

**BFO060A: FORENSIC DERMATOGLYPHICS LAB**

**CREDIT-1**

1. Recording of 10 digits fingerprints (Plain and rolled prints).
2. Identification of fingerprint pattern in latent and patent fingerprint.
3. Development of latent prints using fuming method.
4. Development of latent prints from various surfaces using powder method.
5. Lifting and preservation of fingerprints from various surfaces.
6. To perform ridge counting and ridge tracing.
7. To identify the minutiae in the fingerprint.
8. Comparison of fingerprints for matching.
9. Development of fingerprint using chemical method
10. Fingerprint report writing.

**BFO061A: FORENSIC PHYSICS**

**CREDITS: 4**

**Unit I - Properties of Materials**

Elastic Properties of Materials: Hooke's Law; Young's modulus; Shear modulus; Modulus of rigidity; Strength of materials. Laws of electromagnetic induction. Electric motors. Alternating current. Electrical and magnetic properties of materials.

## Unit II – Nuclear Radiations

Properties, origin, mechanism of production, applications in forensic science. Radioactivity: Natural radioactivity; Alpha decay; Beta decay; Gamma decay. Nuclear hazards. Nuclear fission. Nuclear fusion. Nuclear reactors. Ultrasonic waves, X-rays, Nuclear radiations.

## Unit III - Forensic Glass Examination

Glass: Composition of Glass, Comparison of Glass Fragments, Measuring and Comparing Density and Refractive Index of Glass, Classification of Glass Samples, Glass Fractures. Collection, packaging, preservation of glass exhibit.

## Unit IV – Optics and LASER

Fermat's Principle, Laws of Reflection and Refraction, Electromagnetic Nature of Light, Temporal Coherence, Spatial Coherence, Coherence length, Coherence time and Spectral Purity.

LASER: Introduction, Properties, Einstein Relation and Threshold Conditions for Laser action, Types of Lasers: Ruby LASER. He-Ne LASER. Carbon Dioxide LASER. Semi-conductor (Diode) LASER. Industrial Applications of LASER.

## Unit V - Introduction to Speaker Identification and Tape Authentication

Voice Production Theory-Vocal Anatomy, Speech Signal Processing & Pattern Recognition- Basic Factors of Sound in Speech, Acoustic Characteristics of Speech Signal, Fourier Analysis, Frequency & Time Domain Representation of Speech Signal, Analogue to Digital Signal and Conversion, Fast Fourier Transform, Quantization, Digitization and Speech Enhancement, Analysis of Audio-Video Signal for Authenticity.

**Course Outcomes-** After studying this course the students will have –

CO1 Understanding of properties of materials

CO2 Thorough knowledge of various radiations

CO3 Understanding of forensic glass examination and students will have an idea how glass can play a crucial role in forensic investigation

CO4 Thorough understanding of different lasers and their action mechanisms

CO5 Conceptual knowledge of speaker identification and tape authentication and its relevance as well as importance in investigations.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4
CO1	H	L	L	-	-	L	L	H	M	M	M
CO2	H	M	H	-	-	L	L	H	M	M	L
CO3	H	M	M	-	-	L	L	H	H	H	H
CO4	H	L	M	-	-	L	L	H	L	L	L
CO5	H	M	H	-	-	M	L	H	H	H	H

**Suggested Readings: (Latest Editions)**  
 1. D. K. Bhattacharya and A. Bhaskaran: Engineering Physics, Oxford University Press.  
 2. A. K. Ghatak and Thyagrajan, Fiber Optics, Oxford University Press.

3. S. O. Pillai, Solid State Physics, Wiley Eastern
4. Arthur Beiser, Perspectives in Modern Physics, McGraw Hill International.
5. Lasers: Theory and Application; Thyagrajan
6. Introduction to Lasers; Avadhanulu, Hemne
7. Text Book of sound; Khanna, Bedi
8. Fundamental of Acoustics; Kinsler
9. Basic Acoustics; D. E. Hall
10. The Physics of Speech; D. B. Fry
11. Applied Speech and Audio Processing; Ian McLoughlin
12. Fundamentals of Speech Recognition
13. Forensic Science: An Introduction to Scientific and Investigative Techniques 3rd ed. By Stuart James

CREDIT-1

### **BFO062A: FORENSIC PHYSICS LAB**

#### **Experiments on Mechanics and Optics**

1. To determine the Young's Modulus.
2. To determine the Height of a Building using a Sextant.

#### **Experiments on Electronics**

3. To test a Diode and Transistor using (a) a Multimeter and (b) a CRO.
4. To measure (a) Voltage, (b) Frequency and (c) Phase Difference using a CRO.
5. To study Diode/Zener Diode characteristics.
6. To study Transistor characteristics.

#### **Experiments on Optics and Laser**

7. To measure Numerical Aperture of an Optical Fiber.
8. To determine the Coherent Length and Coherent Time of LASER using Semiconductor
9. To determine the profile of He-Ne LASER beam.
10. To determine the Wavelength and the Angular Spread of a He-Ne Laser.
11. To acquaint with the Logic Gates and verify their truth tables.

#### **Experiments on Atomic and Nuclear Physics**

12. To understand the random characteristic of radioactivity using GM counter.

#### **Speech Identification and Tape Authentication**

13. Understanding the analysis of audio recordings with the help of suitable software.

#### **Forensic Examination of Glass**

14. To compare glass samples by refractive index method.

### **BFO091A: FORENSIC MEDICINE AND PATHOLOGY**

#### **Unit 1: Introduction**

Introduction to Forensic Medicine, Medico-legal investigation and its objectives

CREDITS: 4

#### **Unit 2: Post Mortem Changes**

Classification, Biochemical changes, Algor Mortis, Livor Mortis, Rigor Mortis, Late Changes  
 Decomposition, Skeletonization, Time since death.

(12/20)

3/5

Wice

### Unit 3: Forensic Thanatology

Determination and cause of death, Manner of Death, Exhumation, Modern techniques for estimation of time since death.

### Unit 4: Asphyxial Deaths

Classification of Asphyxial deaths, Mechanical Asphyxia- Hanging, Strangulation, Traumatic Asphyxia, Drowning, Post mortem appearances

### Unit 5: Forensic Entomology

Species of Forensic Importance and their life cycle, Estimation of time since death, Cause of death, Identification of crime of scene.

**Course Outcomes-** After studying this course student will

CO1 Be introduced with the field of Forensic Medicine

CO2 Be aware of the post mortem changes

CO3 Understand forensic Thanatology

CO4 Understand the classification of asphyxial deaths

CO5 Understand the estimation of time since death with the aid of forensically important insects

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome			
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3	PSO4
CO1	H	L	L	L	-	L	-	H	L	L	L

CO3	H	M	L	-	-	M	-	H	H	H	H
CO4	H	M	L	L	-	M	-	H	H	H	H
CO5	H	M	L	L	-	M	-	H	H	H	H

### BFO092A- FORENSIC MEDICINE AND PATHOLOGY

CREDIT 1

1. To visit the autopsy centre for the study of cause of death. ✓
2. To study the different biochemical changes after death virtually. ✓
3. To collect and preserve the forensically important insects. ✓
4. To analyze the time since death with the help of insects. ✓
5. To study the life cycle of insects. ✓
6. To identify the type of insect with the help of microscopes. ✓
7. To identify the type of drowning- ante/ post. ✓
8. To cite a drowning case. ✓
9. To identify the type of crime scene with the help of insects. ✓

		Total	18	3	2	18	3	1	22	
Swayam Course			Student can opt any course from Swayam Portal in addition to the above course structure.							

### Semester VI (Note):

In 6th semester student have a choice either he can go for offered courses or he may avail Internship in some reputed Institute / Industry or In House Dissertation.

### Total Credit

Semester	1	2	3	4	5	6	Total
Credit	27	23	27	25	24	22	148

Note: The 12th Core Course is arranged as Labs i.e. 12 (a), 12 (b),12 (c),12 (d) and 12 (e).

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

Student can choose any subject of his/her choice from “Swayam Portal” for knowledge enhancement and to earn extra credits apart from the course.

## Program Educational Objectives (PEOs)

The <b>B. Sc. Mathematics</b> program describe accomplishments that graduates are expected to attain within five to seven years after graduation	
PEO1	To acquire knowledge in functional areas of Mathematics and apply in all the fields of learning.
PEO2	To employ mathematical ideas encompassing logical reasoning, analytical, numerical ability, theoretical skills to model real-world problems and solve them.
PEO3	Develop critical thinking, creative thinking, self confidence for eventual success in career effectively and also to develop their ability to collaborate both intellectually and creatively in diverse contexts.
PEO4	Rewarding careers in Education, Industry, Banks, MNCs and pursue higher studies.

## Program Outcome(PO's)

Upon completion of B.Sc. (Hons.) Mathematics programme, students will be able to acquire the following attributes.

### PO1: Disciplinary knowledge

Capability of demonstrating comprehensive knowledge of mathematics and understanding of one or more disciplines which form a part of an undergraduate programme of study.

### PO2: Communications skills

- Ability to communicate various concepts of mathematics effectively using examples and their geometrical visualizations.
- Ability to use mathematics as a precise language of communication in other branches of human knowledge.
- Ability to communicate long standing unsolved problems in mathematics.
- Ability to show the importance of mathematics as precursor to various scientific developments since the beginning of the civilization.
- Ability to explain the development of mathematics in the civilizational context and its role as queen of all sciences.

### PO3: Critical thinking and analytical reasoning

- Ability to employ critical thinking in understanding the concepts in every area of mathematics.
- Ability to analyze the results and apply them in various problems appearing in different branches of mathematics.

### PO4: Problem solving

- Capability to solve problems in computer graphics using concepts of linear algebra.
- Capability to solve various models using techniques of differential equations.

*Fig 4 98* *P. Kumar* *nigam* *J. S. J.* *S. S. S.* *Shrestha* *J. S. J.*

- (iii) Ability to solve linear system of equations, linear programming problems and network flow problems.
- (iv) Ability to provide new solutions using the domain knowledge of mathematics acquired during this programme.

**PO5: Research-related skills**

- (i) Capability for inquiring about appropriate questions relating to the concepts in various fields of mathematics.
- (ii) To know about the advances in various branches of mathematics.

**PO6: Information/digital literacy**

- (i) Capability to use appropriate software's to solve system of equations and differential equations.
- (ii) Capability to understand and apply the programming concepts of C++ to mathematical investigations and problem solving.

**PO7: Self-directed learning**

Ability to work independently and do in-depth study of various notions of mathematics.

**PO8: Moral and ethical awareness/reasoning**

Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adopting objective, unbiased and truthful actions in all aspects.

**PO9: Lifelong learning**

Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning.

**PO10: Professional and Employability Skills**

- (i) Completion of this programme will also enable the learners to join the teaching profession.
- (ii) The programme will also help students to enhance their employability for government jobs, jobs in banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

## Semester-I

BMA021C	Calculus	L-T-P:4-1-0
---------	----------	-------------

### Course Objective:

- To increase the student's appreciation of the basic role played by mathematics in Basic
- Sciences.
- To find curvature, radius of curvature, Centre of curvature and Chord of curvature.
- Use Calculus to compute quantities like Points of inflexion, Asymptotes.
- To develop the concepts of Partial differentiation, Chain rule of partial differentiation.
- Total Differentiation and applications of it as maxima and minima of two variables.
- To trace curves in Cartesian, parametric and polar co-ordinates

### Unit-I

Real numbers, Sequences of real numbers, Convergence of sequences and series, Bounded and monotonic sequences; Definite integral as a limit of sum, Integration of irrational algebraic functions and transcendental functions, Reduction formulae, Definite integrals.

### Unit-II

Definition of limit of a real valued function, Limit at infinity and infinite limits;  $\delta$ - $\epsilon$  Continuity of a real valued function, Properties of continuous functions, Intermediate value theorem, Geometrical interpretation of continuity, Types of discontinuity; Uniform continuity.

### Unit-III

Differentiability of a real valued function, Geometrical interpretation of differentiability, Relation between differentiability and continuity, Differentiability and monotonicity, Chain rule of differentiation; Darboux's theorem, Rolle's theorem, Lagrange's mean value theorem, Cauchy's mean value theorem, Geometrical interpretation of mean value theorems; Successive differentiation, Leibnitz's theorem.

### Unit-IV

Maclaurin's and Taylor's theorems for expansion of a function in an infinite series, Taylor's theorem in finite form with Lagrange, Cauchy and Roche-Schlomilch forms of remainder; Maxima and minima.

### Unit-V

Curvature; Asymptotes of general algebraic curves, Parallel asymptotes, Asymptotes parallel to axes; Symmetry, Concavity and convexity, Points of inflection, Tangents at origin, Multiple points, Position and nature of double points; Tracing of Cartesian, polar and parametric curves.

5. George B. Thomas Jr., Joel Hass, Christopher Heil & Maurice D. Weir (2018), Thomas' Calculus (14th edition), Pearson Education.

**Course Learning Outcomes:** This course will enable the students to:

- CO1 Assimilate the notions of limit of a sequence and convergence of a series of real numbers.
- CO2 Calculate the limit and examine the continuity of a function at a point.
- CO3 Understand the consequences of various mean value theorems for differentiable functions.
- CO4 Understand the Maclaurin's and Taylor's theorems for expansion of a function in an infinite series.
- CO5 Understand the concepts of concavity and convexity, Points of inflexion, Asymptotes and tracing of curves in Cartesian, parametric and polar co-ordinates.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BMA041A	Algebra and Geometry	L-T-P:4-1-0
---------	----------------------	-------------

#### Course Objective:

- To understand the basic theory of algebra geometry.
- To understand the roots and the coefficients of polynomial equations.
- To understand relations, matrices and applications to computer graphics

#### Unit-I

Elementary theorems on the roots of an equations including Cardan's method, The remainder and factor theorems, Synthetic division, Factored form of a polynomial, The Fundamental theorem of algebra, Relations between the roots and the coefficients of polynomial equations, Imaginary roots, Integral and rational roots; Polar representation of complex numbers, The  $n$ th roots of unity, De Moivre's theorem for integer and rational indices and its applications.

#### Unit-II

Relations, Equivalence relations, Equivalence classes; Functions, Composition of functions, Inverse of a function; Finite, countable and uncountable sets; The division algorithm, Divisibility and the Euclidean algorithm, The fundamental theorem of arithmetic, Modular arithmetic and basic properties of congruences; Principles of mathematical induction and well ordering.

#### Unit-III

Systems of linear equations, Row reduction and echelon forms, Linear independence, The rank of a matrix and applications; Introduction to linear transformations, The matrix of a linear transformation, Matrix operations, Determinants, The inverse of a matrix, Characterizations of invertible matrices; Applications to Computer Graphics; Eigenvalues and eigenvectors, characteristic equation and the Cayley-Hamilton theorem.

#### Unit-IV

Spheres: Different forms, Intersection of two spheres, Orthogonal intersection, Tangents and normal, Radical plane, Radical line, Coaxial system of spheres, Pole, Polar and Conjugacy. Space curves, Algebraic curves, Ruled surfaces, Some standard surfaces.

#### Unit-V

Classification of quadric surfaces, Cone, Cylinder, Central conicoids, Tangent plane, Normal, Polar planes, and Polar lines.

#### Course Learning Outcomes:

This course will enable the students to:

- CO1 Understand the importance of roots of real and complex polynomials and learn various methods of obtaining roots.
- CO2 Understand the Relations, Equivalence relations, Equivalence classes, Functions, Composition of functions, Inverse of a function, De Moivre's theorem.
- CO3 Understand the Systems of linear equations, Linear independence, the rank of a matrix, Eigen values and Eigen vectors and Cayley-Hamilton theorem.
- CO4 Understand the Spheres, Intersection of two spheres, Orthogonal intersection, Tangents and normal, Algebraic curves, Ruled surfaces and Some standard surfaces.
- CO5 Understand the classification of quadric surfaces, Cone, Cylinder, Central conicoids, Tangent plane, Normal, Polar planes, and Polar lines.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome

BMA042A	Probability and Statistics	L-T-P:4-1-0
---------	----------------------------	-------------

### Course objective:

- To apply the rules of probability (addition, conditional, multiplication) and terms of probability (mutually exclusive, independent and dependent).
- To use probability distribution for discrete random variables to make prediction about the probability of certain events.
- Focus on correlation and regression techniques, the two powerful tools in statistics.
- To use convergence in probability WLLN and CLT.

### Unit-I

Basic notions of probability, Conditional probability and independence, Baye's theorem; Random variables - Discrete and continuous, Cumulative distribution function, Probability mass/density functions; Transformations, Mathematical expectation, Moments, Moment generating function, Characteristic function.

### Unit-II

Discrete distributions Uniform, Bernoulli, Binomial, Negative binomial, Geometric and Poisson; Continuous distributions: Uniform, Gamma, Exponential, Chi-square, Beta and normal; Normal approximation to the binomial distribution.

### Unit-III

Joint cumulative distribution function and its properties, Joint probability density function, Marginal distributions, Expectation of function of two random variables, Joint moment generating function, Conditional distributions and expectations.

### Unit-IV

**Principal of Least Square:** Fitting of Straight line, second degree parabola, Power curve and Exponential Curve.

**Correlation:** Correlation, Scatter Diagram, Karl Pearson's Coefficient of Correlation and its properties. Spearman's Rank Correlation Coefficient.

**Regression:** Fitting of Regression Lines, Regression Coefficients with properties.

### Unit-V

**Basic Concepts:** Sampling distribution, Sampling Distribution of sum of Binomial, Poisson and mean of Normal Distribution. Standard Error: Meaning and role of Central Limit Theorem for identically independently distributed (i.i.d) random variables.

**Convergence in Probability:** Weak Law of Large Numbers and its applications, Convergence in Distribution, De-Moivre Laplace limit theorem, Statement of Central Limit Theorem (i.i.d. case) & its applications. Chebyshev's Inequality.

*Fig 4 98* *P. Kumar* *mjani* *J. S. J.* *S. S. S.* *Shrestha* *J. S. J.*

5. A. M. Yaglom and I. M. Yaglom (1983). Probability and Information. D. Reidel Publishing Company. Distributed by Hindustan Publishing Corporation (India) Delhi.

**Course Learning Outcomes:**

This course will enable the students to:

- CO1 Understanding basic concepts about probability and Random variable.
  - CO2 Learn about the discrete and continuous probability distributions.
  - CO3 Understand distributions in the study of the joint behavior of two random variables.
  - CO4 Establish a formulation helping to predict one variable in terms of the other that is, correlation and linear regression. Also understand about fitting of curves.
  - CO5 Understand central limit theorem, which establish the remarkable fact that the empirical frequencies of so many natural populations, exhibit a bell shaped curve.
- Understanding the various Laws of large numbers.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

## Semester-II

BMA043B	Group Theory	L-T-P:4-1-0
---------	--------------	-------------

### **Course Objective:**

- Recall and use the definitions and properties of cosets and subgroups.
- Derive the existence of groups of a specified small order.
- Recall and apply Sylow's Theorems to determine the structure of certain groups of small order.

### **Unit-I**

Symmetries of a square, definition and examples of groups including dihedral, elementary properties of groups, Subgroups and examples of subgroups.

### **Unit-II**

Cyclic groups, Properties of cyclic groups, Lagrange's theorem, Euler phi function, Euler's theorem, Fermat's little theorem, cycle notation for permutations, properties of permutations, even and odd permutations, alternating groups, Cayley's theorem and its applications.

### **Unit-III**

Properties of cosets, normal subgroups, simple groups, factor groups, Cauchy's theorem for finite abelian groups, centralizer, normalizer, Center of a group, Product of two subgroups.

### **Unit-IV**

Group homomorphisms, Properties of homomorphisms, Group isomorphisms, properties of isomorphisms, First, second and third isomorphism theorems for groups.

### **Unit-V**

Introduction to Rings: examples and properties, Integral Domains, Division Rings, Fields and its Characteristics, Subrings, Ideals, Quotient Ring.

### **References:**

### **Course Learning Outcomes:**

*Fig 4 98* *Pawan* *nigam* *Shruti* *Shruti* *Shruti* *Shruti*

The course will enable the students to:

- CO1 Link the fundamental concepts of groups and symmetries of geometrical objects.
- CO2 The student will be able to understand the theory of cyclic group and permutation group.
- CO3 Understand the concepts of Normal Subgroups.
- CO4 Learn the concept of Group homomorphisms and isomorphism.
- CO5 Learn about the concept of Ring, Integral Domain and Field.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	H	M	M	H	M	M	H	H	M	M
CO2	H	M	M	M	L	L	H	H	M	M

4. George B. Thomas Jr., Joel Hass, Christopher Heil & Maurice D. Weir (2018). Thomas' Calculus (14th edition). Pearson Education.

**Course Learning Outcomes:**

This course will enable the students to:

- CO1 Learn conceptual variations while advancing from one variable to several variables in calculus. Apply multivariable calculus in optimization problems.
- CO2 Learn the concept of partial differentiation and Euler theorem.
- CO3 Inter-relationship amongst the line integral, double and triple integral formulations.
- CO4 Applications of multivariable calculus tools in physics, economics, optimization, and understanding the architecture of curves and surfaces in plane and space etc
- CO5 Realize importance of Green, Gauss and Stokes' theorems in other branches of mathematics.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

BMA006D	Real Analysis	L-T-P:4-1-0
---------	---------------	-------------

**Course objectives:**

- To understand the basic theory of real number, Cantor set and Cantor function.
- To develop an understanding of sequence and infinite series.
- To understand Riemann integrals and improper integrals.

**Unit-I**

Algebraic and order properties of  $\mathbb{R}$ , Absolute value of a real number; Bounded above and bounded below sets, Supremum and infimum of a nonempty subset of  $\mathbb{R}$ , The completeness property of  $\mathbb{R}$ , Archimedean property, Density of rational numbers in  $\mathbb{R}$ , Definition and types of intervals, Nested intervals property; Neighborhood of a point in  $\mathbb{R}$ , Open, closed and perfect sets in  $\mathbb{R}$ , Connected subsets of  $\mathbb{R}$ , Cantor set and Cantor function.

**Unit-II**

Convergent sequence, Limit of a sequence, Bounded sequence, Limit theorems, Monotone Weierstrass theorem for sequences, Monotone convergence theorem, Subsequences, Bolzano sequences, Limit superior and limit inferior of a sequence of real numbers, Cauchy sequence, Cauchy's convergence criterion.

**Unit-III**

Infinite Series Convergence and divergence of infinite series of positive real numbers, Necessary condition for convergence, Cauchy criterion for convergence; Tests for convergence of positive term series; Basic comparison test, Limit comparison test, D'Alembert's ratio test, Cauchy's nth root test, Integral test; Alternating series, Leibniz test, Absolute and conditional convergence, Rearrangement of series and Riemann's theorem

**Unit-IV**

Riemann integral, Integrability of continuous and monotonic functions, Fundamental theorem of integral calculus, First mean value theorem, Bonnet and Weierstrass forms of second mean value theorems.

**Unit-V**

Pointwise and uniform convergence of sequence and series of functions, Weierstrass's M-test, Dirichlet test and Abel's test for uniform convergence, Uniform convergence and continuity, Uniform convergence and differentiability, Improper integrals, Dirichlet test and Abel's test for improper integrals.

*Fig 4 98* *Pram* *nigam* *J. S. S.* *Seena* *Shrestha* *Dr. J. S. S.*

**References:**

3. K. A. Ross (2013). Elementary Analysis: The Theory of Calculus (2nd edition). Springer.

**Course Learning Outcomes:**

This course will enable the students to:

- CO1 Understand many properties of the real line  $\mathbb{R}$  and learn to define sequence in terms of functions from  $\mathbb{R}$  to a subset of  $\mathbb{R}$ .
- CO2 Cauchy and monotonic sequences and to calculate their limit superior, limit inferior, and the limit of a bounded sequence.
- CO3 Recognize bounded, convergent and divergent sequence. Tests for convergence of positive term series
- CO4 Learn some of the properties of Riemann integrable functions, and the applications of the fundamental theorems of integration.
- CO5 Apply various tests for convergence for uniform convergence of sequence and series of functions.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BMA045A	SCILAB-I	L-T-P:0-0-1
---------	----------	-------------

Students are required to familiarize themselves with software SCILAB, for numerical computation on the following topics:

1. Introduction of SCILAB.
2. Commands for managing a session, Input and output commands.
3. Some primary mathematical function (Arithmetic function, trigonometric function, logarithm and exponent function).
4. Commonly used operators and special characters.
5. Vector, matrix and array commands.
6. Construction of a vector with operations on vectors.
7. Matrix representation
8. Some operations on matrix.
9. Special matrices and element operations on matrix.
10. Eigen values and Eigen vectors.
11. Plotting commands.
12. Create 2D graph and customize line, Plot multiple graphs.
13. Scaling and coloring and Line styles in 2D graphs.
14. Add title axis labels and legend to graph.
15. 3D graph plotting, Scaling and coloring and line styles in 3D graphs. Add title axis labels and legend to graph.

#### ESSENTIAL READINGS:

## Semester-III

BMA007D	Numerical Analysis	L-T-P:4-1-0
---------	--------------------	-------------

### Course objective :

- Numerical methods, based upon sound computational mathematics, are the basic algorithms underpinning computer predictions in modern systems science.
- Such methods include techniques for simple optimisation, interpolation from the known to the unknown, linear algebra underlying systems of equations, Integrals, ordinary differential equations to simulate systems, and stochastic simulation under random influences.

### Unit-I

Round-off error and computer arithmetic, Local and global truncation errors, Algorithms and convergence; Bisection method, False position method, Fixed point iteration method, Newton's method and secant method for solving equations.

### Unit-II

Partial and scaled partial pivoting, Lower and upper triangular (LU) decomposition of a Jacobi, -matrix and its applications, Thomas method for tridiagonal systems; Gauss Seidel and successive over-relaxation (SOR) methods. -Gauss

### Unit-III

Piecewise linear interpolation, Cubic spline Newton forward and backward difference-interpolation, Finite difference operators, Gregory interpolations.

### Unit-IV

First order and higher order approximation for first derivative, Approximation for second derivative; Numerical integration: Trapezoidal rule, Simpson's rules and error analysis, Stoer extrapolation methods, Richardson extrapolation. -Bulirsch

### Unit-V

Kutta methods, Higher order one step method, Multi-step method-Euler's method, Runge Finite difference method, Shooting method, Real life examples: Google search engine, 1D and 2D simulations, Weather forecasting.

5. Robert J. Schilling & Sandra L. Harris (1999). Applied Numerical Methods for Engineers Using MATLAB and C. Thomson-Brooks/Cole.

**Course Learning Outcomes:**

This course will enable the students to:

- CO1 Obtain numerical solutions of algebraic and transcendental equations.
- CO2 Find numerical solutions of system of linear equations and check the accuracy of the solutions.
- CO3 Learn about various interpolating and extrapolating methods.
- CO4 Learn the concepts of Numerical Differentiation and Integration.
- CO5 Solve initial and boundary value problems in differential equations using numerical methods. Apply various numerical methods in real life problems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

CO4	H	M	L	M	L	M	M	H	M	M
CO5	H	H	M	M	L	L	L	M	L	H

H = Highly Related; M = Medium L = Low

*Fig 4 98* *P. Kumar* *nigam* *J. S. S. S.* *S. S. S.* *Shrestha* *J. S. S. S.*

BMA014C	Complex Analysis	L-T-P:4-1-0
---------	------------------	-------------

**Course objective:**

- To understand the basic theory of stereographic projection.
- To understand linear transformation, contours, line integrals, Cauchy-Goursat theorem (without proof), Cauchy integral formula.
- To develop an understanding of Convergence of sequences and series, Residues, the residue theorem, the principle part of a function, poles, evaluation of improper real integrals, improper integrals.

**Unit-I**

Complex numbers and their representation, algebra of complex numbers; Complex plane, Open set, Domain and region in complex plane; Stereographic projection and Riemann sphere; Complex functions and their limits including limit at infinity, Continuity, Linear fractional transformations and their geometrical properties. Riemann Equations

**Unit-II**

Harmonic-Differentiability of a complex valued function, Cauchy functions, necessary and sufficient conditions for differentiability, Analytic functions; Analyticity and zeros of exponential, trigonometric and logarithmic functions; Branch cut and branch of multi-valued functions.

**Unit-III**

Line integral, Path independence, Complex integration, Green's theorem, Anti-derivative Goursat theorem, Cauchy integral formula, Cauchy's inequality, Derivative-theorem, Cauchy of analytic function, Liouville's theorem, Fundamental theorem of algebra, Maximum modulus theorem and its consequences.

**Unit-IV**

Sequences, series and their convergence, Taylor series and Laurent series of analytic functions, Power series, Radius of convergence, Integration and differentiation of power series, Absolute and uniform convergence of power series.

**Unit-V**

Meromorphic functions, Zeros and poles of meromorphic functions, Nature of singularities, Picard's theorem, Residues, Cauchy's residue theorem, Argument principle, Rouché's theorem, Jordan's lemma, Evaluation of proper and improper integrals.

*Fig 4 98* *Pram* *nigam* *JTS* *Seenu* *Shrestha* *Dr. J. K. Singh*

**Course Learning Outcomes:**

This course will enable the students to:

Visualize complex numbers as points of  $\mathbb{R}^3$  and stereographic projection of complex plane on the Riemann sphere.

CO1 Understand the significance of differentiability and analyticity of complex functions Riemann equations.-leading to the Cauchy Goursat theorem and Cauchy integral formula in evaluation

CO2 Learn the concepts of analytic function and their properties.

CO3 Apply Liouville's theorem in fundamental theorem of algebra.

CO4 Understand the convergence, term by term integration and differentiation of a power series.

CO5 Learn Taylor and Laurent series expansions of analytic functions, classify the nature of singularity, poles and residues and application of Cauchy Residue theorem.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	H	M	M	H	L	M	H	H	M	M
CO2	H	M	L	M	L	L	H	H	M	M
CO3	H	L	L	H	L	L	H	M	H	M
CO4	H	M	M	M	L	M	M	H	M	M
CO5	H	H	M	M	L	L	L	M	L	H

H = Highly Related; M = Medium L = Low

BMA011D	Linear Algebra	L-T-P:4-1-0
---------	----------------	-------------

**Course objective:**

- To understand the basic theory of linear algebra.
- To understand the basic theory of vector space.
- To understand linear transformation and dual space.
- To develop an understanding of Cauchy-Schwarz inequality, orthogonal vectors, Orthonormal basis, Bessel's inequality.

**Unit-I**

Definition and examples, Subspace, Linear span, Quotient space and direct sum of subspaces, Linearly independent and dependent sets, Bases and dimension.

**Unit-II**

Definition and examples, Algebra of linear transformations, Matrix of a linear transformation, Change of coordinates, Rank and nullity of a linear transformation and rank-nullity theorem.

**Unit-III**

Isomorphism of vector spaces, Isomorphism theorems, Dual and second dual of a vector space, Transpose of a linear transformation, Eigen vectors and eigen values of a linear Hamilton theorem, Minimal-transformation, Characteristic polynomial and Cayley polynomial.

**Unit-IV**

Schmidt orthogonalisation, Diagonalisation of symmetric matrices.–Schwarz inequality, Gram–Inner product spaces and orthogonality, Cauchy

**Unit-V**

Adjoint of a linear operator; Hermitian, unitary and normal linear transformations; Jordan canonical form, Triangular form, Trace and transpose, Invariant subspaces.

*Fig 98* *Pram* *nigam* *J. S. B.* *Saur* *Shrestha* *Dr. J. K. Bhatnagar*

**Course Learning Outcomes:**

This course will enable the students to:

Understand the concepts of vector spaces, subspaces, bases, dimension and their properties.

CO1 To understand vector space and linear dependent and independent of vectors. Relate matrices and linear transformations.

CO2 Compute eigen values and eigen vectors of linear transformations.

CO3 Learn properties of inner product spaces and determine orthogonality in inner product spaces.

CO4 Realise importance of adjoint of a linear transformation and its canonical form.

CO5 Concepts about Unitary and normal linear transformations.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BMA046A	SCILAB-II	L-T-P:0-0-1
---------	-----------	-------------

Students are required to familiarize themselves with software SCILAB, for Numerical Computation on the following topics:

1. Scripts files and functions files.
2. Creating and running scripts file.
3. Creating function-file
4. Use of in-build function files.
5. Programme for addition/Subtraction of numbers.
6. Programme for multiplication of numbers.
7. Programme for addition of squares of (even/odd) numbers.
8. Solution of Linear programming problems in SCILAB.
9. Ordinary differentiation
10. Integration.
11. Programme for differentiation and partial differentiation.
12. Programme for integration.
13. Programme for numerical integration.
14. Plotting in Programming.
15. Programme for numerical solution of ordinary differential equation.

## Semester-IV

BMA092A	Ordinary Differential Equations	L-T-P:4-1-0
---------	---------------------------------	-------------

### Course objectives:

- To understand the concepts relating to the order and linearity of ODEs and PDEs, analytic and computational solution methods for ODEs.
- To teach students the real-world applications of ODEs.
- To teach students the series solution of ordinary differential equations.

### Unit-I

Degree and order of a differential equation. Formation of differential equations, Equations of the first order and first degree-Equations variables separable, Homogeneous equations and equations reducible to homogeneous form. Linear equations and equations reducible to linear form. Exact differential equations and equations can be made exact.

### Unit-II

Linear differential equations of higher order with constant coefficients, Complimentary functions and Particular integrals.

### Unit-III

Linear differential equations of higher order with variable coefficients, Cauchy's Homogeneous linear differential equations, Exact differential equations, One part of CF is known, Normal form, Solution by transformation of the equation by changing the independent variable, Method of variation of parameters.

### Unit-IV

Orthogonal trajectories, First order but higher degree differential equations solvable for x, y and p, Clairaut's form, Simultaneous differential equations. Applications to differential equations.

### Unit-V

Series solution at ordinary and regular singular point: Power Series solution at ordinary points, Frobenius series solution at regular singular points.

### References:

7. I. N. Snedon, Elements of Partial Differential Equations, TMH, 2001.

**Course Learning Outcomes:**

The course will enable the students to:

- CO1 Understand the genesis and application of ordinary differential equations. Learn various techniques of getting exact solutions of solvable first order ordinary differential equations.
- CO2 Learn various techniques of getting exact solutions of solvable linear differential equations of higher order.
- CO3 Apply a range of techniques to solve second order ordinary differential equations with variable coefficient.
- CO4 Model physical phenomena using ordinary differential equations such as the electric circuit, simple harmonic motion etc.
- CO5 Power series method for higher order linear equations, especially in cases when there is no method available to solve such equations.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BMA005C	MATLAB-I	L-T-P:0-0-1
---------	----------	-------------

Students are required to familiarize themselves with software MATLAB, for numerical computation on the following topics:

1. Introduction of MATLAB.
2. Commands for managing a session, Input and output commands.
3. Some primary mathematical function (Arithmetic function, trigonometric function, logarithm and exponent function).
4. Commonly used operators and special characters.
5. Vector, matrix and array commands.
6. Construction of a vector with operations on vectors.
7. Matrix representation and some operations on matrix.
8. Special matrices
9. element operations on matrix.
10. Some statistical function.

## Semester-V

BMA091A	Mathematical Programming	L-T-P:4-1-0
---------	-----------------------------	-------------

### Course objectives:

- To understand the basic concept of LPP.
- To understand Simplex and Revised Simplex algorithm.
- To understand ing Duality theory, Dual simplex method.

### Unit-I

Convexity and Basic Feasible Solutions Formulation, Canonical and standard forms, Graphical method; Convex and polyhedral sets, Hyperplanes, Extreme points; Basic solutions, Basic Feasible Solutions, Reduction of feasible solution to basic feasible solution, Correspondence between basic feasible solutions and extreme points, LPP Formulation.

### Unit-II

Optimality criterion, Improving a basic feasible solution, Graphical method for LPP, Unboundedness, Unique and alternate optimal solutions; Simplex algorithm and its tableau format.

### Unit-III

Artificial variables, Two-phase method, Big-M method. Formulation of the dual problem, Duality theorems, Complimentary slackness theorem, Economic interpretation of the dual, Dual-simplex method.

### Unit-IV

Definition and formulation, Methods of finding initial basic feasible solutions: Northwest-corner rule, Least- cost method, Vogel approximation method; Algorithm for obtaining optimal solution. Assignment Problem: Mathematical formulation and Hungarian method.

### Unit-V

Sequencing Problems: Introduction – Basic Assumptions – Sequencing n Jobs on 2 Machines – Sequencing n Jobs on 3 machines – Sequencing 2 Jobs on n Machines.

#### Course Learning Outcomes:

This course will enable the students to:

- CO1 Analyze and solve linear programming models of real life situations, and illustrate the concept of convex set and extreme points.
- CO2 Understand the theory of the Simplex method. Provide graphical solutions of linear programming problems with two variables.
- CO3 Understand the concepts of artificial variable and duality.
- CO4 Learn about the applications to transportation, assignment problem.
- CO5 Understand problems related to machine sequencing.

BMA093A	Partial Differential Equations	Credits: 5: 4+1
---------	--------------------------------	-----------------

## OBJECTIVE:

- To understand concept of linear and non-linear partial differential equations.
- To understand homogeneous and non homogeneous partial differential equations and their characteristic equations.
- To familiar with application of partial differential equations.

### Unit-I

Order and degree of Partial differential equations (PDE), Concept of linear and non-linear partial differential equations, Partial differential equations of the first order, Lagrange's method, Some special type of equation which can be solved easily by methods other than the general method, non-linear PDE in  $p$  and  $q$ , Charpit's general method of solution.

### Unit-II

Homogeneous and non homogeneous linear partial differential equations with constant coefficients.

### Unit-III

Cauchy's Initial value problem for Linear first order and second order Partial Differential Equations, Characteristic equation.

### Unit-IV

Classification of linear partial differential equations of second order, Reduction to canonical or normal form.

### Unit-V

Partial Differential Equation (PDE), Method of separation of variables; Boundary and initial value problems, one dimensional diffusion equation; one-dimensional wave equation, two-dimensional Laplace equation.

6. I. N. Sneddon, Elements of Partial Differential Equations, McGraw-Hill, 1988.

## Course Learning Outcomes:

This course will enable the students to:

- CO1 The student will able to answer about concept of linear and non-linear partial differential equations.
- CO2 The student will able to solve homogeneous and non homogeneous partial differential equations.
- CO3 The student will able to solve characteristic equations and can draw characteristic curves.
- CO4 The student will able to reduce partial differential equations into canonical form.
- CO5 The student will able to solve Heat, Wave and Laplace equations.

**Course Objective:**

- Understand all of the concepts related to basics of programming with C.
- Understand all of the concepts of Looping in C.
- Learn the concepts of Pointers in C.

**Unit-I**

Basics of Computer Architecture: processor, Memory, Input& Output devices. Application Software & System software: Compilers, interpreters, High level and low level languages, Introduction to structured approach to programming, Flow chart Algorithms, Pseudo code (bubblesort, linear search - algorithms and pseudo code)

**Unit-II**

Basic structure of C program: Character set, Tokens, Identifiers in C, Variables and Data Types, Constants, Console IO Operations, printf and scanf. Operators and Expressions: Expressions and Arithmetic Operators, Relational and Logical Operators, Conditional operator, size of operator, Assignment operators and Bitwise Operators, Operators Precedence, Control Flow Statements: If Statement, Switch Statement, Unconditional Branching using goto statement, While Loop, Do While Loop, For Loop, Break and Continue statements.(Simple programs covering control flow)

**Unit-III**

Arrays Declaration and Initialization, 1-Dimensional Array, 2-Dimensional Array String processing: In built String handling functions (strlen, strcpy, strcat and strcmp, puts, gets), Linear search program, bubble sort program, simple programs covering arrays and strings.

**Unit-IV**

Introduction to modular programming, writing functions, formal parameters, actual parameters Pass by Value, Recursion, Arrays as Function Parameters structure, union, Storage Classes, Scope and life time of variables, simple programs using functions.

**Unit-V**

Basics of Pointer: declaring pointers, accessing data though pointers, NULL pointer, array access using pointers, pass by reference effect File Operations: open, close, read, write, append Sequential access and random access to files: In built file handling functions (rewind(), fseek(), ftell(), feof(), fread(), fwrite()), simple programs covering pointers and files.

**Course Outcomes**

- CO1. Analyze a computational problem and develop an algorithm/flowchart to find its solution.
- CO2. Develop readable\* C programs with branching and looping statements, which uses Arithmetic, Logical, Relational or Bitwise operators.
- CO3. Write readable C programs with arrays, structure or union for storing the data to be processed
- CO4. Divide a given computational problem into a number of modules and develop a readable multi-function C program by using recursion if required, to find the solution to the computational problem
- CO5. Write readable C programs which use pointers for array processing and parameter passing

## LIST OF LAB EXPERIMENTS

1. Familiarization of Hardware Components of a Computer
2. Familiarization of Linux environment – How to do Programming in C with Linux
3. Familiarization of console I/O and operators in C
  - i) Display "Hello World"
  - ii) Read two numbers, add them and display their sum
  - iii) Read the radius of a circle, calculate its area and display it
  - iv) Evaluate the arithmetic expression  $((a - b / c * d + e) * (f + g))$  and display its solution.  
Read the values of the variables from the user through console.
4. Read 3 integer values and find the largest among them.
5. Read a Natural Number and check whether the number is prime or not
6. Read a Natural Number and check whether the number is Armstrong or not
7. Read n integers, store them in an array and find their sum and average
8. Read n integers, store them in an array and search for an element in the array using an algorithm for Linear Search
9. Read n integers, store them in an array and sort the elements in the array using Bubble Sort algorithm
10. Read a string (word), store it in an array and check whether it is a palindrome word or not.
11. Read two strings (each one ending with a \$ symbol), store them in arrays and concatenate them without using library functions.
12. Read a string (ending with a \$ symbol), store it in an array and count the number of vowels, consonants and spaces in it.
13. Read two input each representing the distances between two points in the Euclidean space, store these in structure variables and add the two distance values.
14. Using structure, read and print data of n employees (Name, Employee Id and Salary)
15. Declare a union containing 5 string variables (Name, House Name, City Name, State and Pincode) each with a length of C\_SIZE (user defined constant). Then, read and display the address of a person using a variable of the union.
16. Find the factorial of a given Natural Number n using recursive and non recursive functions.
17. Read a string (word), store it in an array and obtain its reverse by using a user defined function.
18. Write a menu driven program for performing matrix addition, multiplication and finding the transpose. Use functions to (i) read a matrix, (ii) find the sum of two matrices, (iii) find the product of two matrices, (i) find the transpose of a matrix and (v) display a matrix.
19. Do the following using pointers
  - i) add two numbers
  - ii) swap two numbers using a user defined function
20. Input and Print the elements of an array using pointers
21. Compute sum of the elements stored in an array using pointers and user defined function.
22. Create a file and perform the following
  - i) Write data to the file
  - ii) Read the data in a given file & display the file content on console
  - iii) Append new data and display on console

23. Open a text input file and count number of characters, words and lines in it, and store the results in an output file.

BMA050A	Discrete Mathematics	L-T-P:4-1-0
---------	----------------------	-------------

### Course Objective:

- Learn about partially ordered sets, lattices and their types.
- Understand Boolean algebra and Boolean functions, logic gates, switching circuits and their applications.
- Solve real-life problems using finite-state and Turing machines.
- Assimilate various graph theoretic concepts and familiarize with their applications.

### Unit-I: Partially Ordered Sets

Definitions, examples and basic properties of partially ordered sets (poset), Order isomorphism, Hasse diagrams, Dual of a poset, Duality principle, Maximal and minimal elements, Least upper bound and greatest upper bound, Building new poset, Maps between posets.

### Unit-II: Lattices

Lattices as posets, Lattices as algebraic structures, Sublattices, Products and homomorphisms; Definitions, examples and properties of modular and distributive lattices; Complemented, relatively complemented and sectionally complemented lattices.

### Unit-III: Boolean Algebras and Switching Circuits

Boolean algebras, De Morgan's laws, Boolean homomorphism, Representation theorem; Boolean polynomials, Boolean polynomial functions, Disjunctive and conjunctive normal McCluskey method, Karnaugh-forms, Minimal forms of Boolean polynomials, Quine diagrams, Switching circuits and applications.

### Unit-IV: Finite-State and Turing Machines

Finite-state machines with outputs, and with no output; Deterministic and no deterministic finite-state automaton; Turing machines: Definition, examples, and computations.

### Unit-V: Graphs

Definition, examples and basic properties of graphs, Königsberg bridge problem; Subgraphs, Pseudographs, Complete graphs, Bipartite graphs, Isomorphism of graphs, Paths and circuits, Eulerian circuits, Hamiltonian cycles, Adjacency matrix, Weighted graph, Travelling salesman problem, Shortest path and Dijkstra's algorithm.

### Course Outcomes:

This course will enable the students to:

- CO1. Students will understand basic properties of partially ordered sets (poset), Order isomorphism, Hasse diagrams.

*Fig 4 98* *Pram* *nigam* *J. S. J.* *Seenu* *Shristi* *Jaspreet*

- CO2. Students will understand the Lattices as posets and Complemented, relatively complemented and sectionally complemented lattices.
- CO3. Study of Boolean Algebras and Switching Circuits.
- CO4. Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems .
- CO5. Students will understand the language of graphs and trees.

BMA051A	Combinatorial Analysis	L-T-P:4-1-0
---------	------------------------	-------------

**Course Objective:**

- To understand pigeonhole principle, elementary counting, binomial theorem, permutations and generating functions.
- To learn Eulerian walks, Isomorphism, Hamiltonian cycles, Trees and bipartite graphs.
- To understand chromatic polynomials, planar graphs and Ramsey theory.

**Unit-I:**

Pigeonhole Principle, Induction, Elementary Counting, Binomial Theorem, Compositions, Integer Partitions, Integer, Set Partitions.

**Unit-II:**

Permutations, Cycle Type, Stirling Numbers of the First Kind, The Sieve, Generating Functions, Catalan Numbers, Partitions, Exponential Generating Functions.

**Unit-III:**

Vertex Degree, Eulerian Walks, Isomorphism, Hamiltonian Cycles, Tournaments, Trees, Counting Trees, Minimum Weight Spanning Trees, Matrix-Tree Theorem.

**Unit-IV:**

Bipartite Graphs, Matchings in Bipartite Graphs, Midterm Latin Rectangles, Konig-Egervary Theorem, Matchings in Bipartite Graphs, Chromatic Polynomials.

**Unit-V:**

Planar Graphs, Polyhedra, Coloring Maps, Ramsey Theory, A Probabilistic Proof.

**References:**

**Course Outcomes:**

CO1:- Understand the Pigeonhole Principle, Binomial Theorem and Set Partitions.

CO2:- Understand the Permutations, Stirling Numbers of the First Kind, Generating Functions, Catalan Numbers.

CO3:- Understand the Eulerian Walks, Isomorphism, Hamiltonian Cycles, Trees.

CO4:- Understand the Bipartite Graphs, Chromatic Polynomials.

CO5:- Understand the Planar Graphs, Polyhedra, Coloring Maps, Ramsey Theory.

BMA052A	Finite element analysis of solid and fluids	L-T-P:4-1-0
---------	---	-------------

#### Course Objective:

- To understand basic Concepts of finite element analysis, virtual work, stiffness matrix of isoperimetric elements.
- To learn analysis of solids/structures and fluids.
- To learn non-linear finite element analysis of solids and structures, heat transfer analysis and solution of dynamic equilibrium equations.

#### Unit-I

Introduction, Basic Concepts of Finite Element Analysis, Introduction to Elasticity, Steps in Finite Element Analysis, Virtual Work and Variational Principle, Galerkin Method, Finite Element Method: Displacement Approach, Stiffness Matrix and Boundary Conditions.

#### Unit-II

Natural Coordinates, Triangular Elements, Rectangular Elements, Lagrange and Serendipity Elements, Solid Elements, Isoparametric Formulation, Stiffness Matrix of Isoparametric Elements, Numerical Integration: One Dimensional, Numerical Integration: Two and Three Dimensional

#### Unit-III

The finite element analysis process, Analysis of solids/structures and fluids, the principle of virtual work, The finite element formulation, Finite element solution process.

#### Unit-IV

Non-linear finite element analysis of solids and structures, Heat transfer analysis, Finite element analysis of heat transfer and incompressible fluid flow, Physical explanation of Gauss elimination.

#### Unit-V

Solution of dynamic equilibrium equations, Modeling for dynamic analysis and solution, Wave propagation response, Solution of the generalized eigen value problem.

<b>BMA053A</b>	<b>Mathematical Finance</b>	<b>L-T-P:4-1-0</b>
----------------	-----------------------------	--------------------

#### **Course Objectives:**

- To develop skills to formulate mathematical problems based on the financial industry.
- To carry out relevant mathematical and financial analysis, develop and implement appropriate tools to present and interpret model results.
- To understand Stochastic Analysis techniques and methods in data analysis

#### **Unit-I: Basic Theory of Interest and Fixed-Income**

Securities Principal and interest: simple, compound and continuous; Present and future value of cash flow streams; Net present value, Internal rates of return and their comparison; Inflation, Annuities; Bonds, Bond prices and yields, Macaulay duration and modified duration.

#### **Unit-II: Term Structure of Interest Rates**

Bonds and Derivatives Spot rates, forward rates and explanations of term structure; Running present value, Floatingrate bonds, Immunization, Convexity; Putable and callable bonds; Exchange-traded markets and over-the-counter markets; Derivatives: Forward contracts, Future contracts, Options, Types of traders, Hedging, Speculation, Arbitrage.

#### **Unit-III: Mechanics of Options Markets**

No-arbitrage principle, Short selling, Forward price for an investment asset; Types of options: Call and put options, Option positions, Underlying assets, Factors affecting option prices, Upper and lower bounds for option prices, Put-call parity, Effect of dividends. Scholes Model

#### **Unit-IV: Stochastic Analysis of Stock Prices and Black-Scholes model**

Binomial option pricing model, Risk neutral valuation: European and American options on assets following binomial tree model; Lognormal property of stock prices, Distribution of rate of return, Expected return, Volatility, Estimating volatility from historical data, Extension of risk-neutral valuation to assets following geometric Brownian motion, Scholes formula for European options. –Black

#### **Unit-V: Hedging Parameters Trading Strategies and Swaps**

Hedging parameters: Delta, gamma, theta, rho and vega; Trading strategies involving options, Swaps, Mechanics of interest rate swaps, Comparative advantage argument, Valuation of interest rate swaps, Currency swaps, Valuation of currency swaps.

#### **References:**

2. David G. Luenberger (2013). Investment Science (2nd edition). Oxford University Press.
3. Sheldon M. Ross (2011). An Elementary Introduction to Mathematical Finance (3rd edition). Cambridge University Press.

#### **Course Outcomes:**

This course will enable the students to:

- CO1. Created interest yielding investments using the concepts of Net Present Value, and Internal Rate of Return.
- CO2. To understand Term Structure of Interest Rates and Types of traders, Hedging, speculation, Arbitrage.
- CO3. Study of Types of options: Call and put options, Option positions, Underlying assets,

*Signature of Professor* *Signature of Assistant Professor* *Signature of Assistant Professor* *Signature of Assistant Professor* *Signature of Assistant Professor*

Factors affecting option prices, Upper and lower bounds for option prices.

CO4. Appreciate pricing and hedging of options, interest rate swaps and no-arbitrage pricing concepts. Learn stochastic analysis, Ito's formula, Ito integral and the Black-Scholes model.

CO5. Study and use Hedging parameters, trading strategies and currency swaps.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BMA054A	Fuzzy and Computational Mathematics	L-T-P:4-1-0
---------	-------------------------------------	-------------

#### Course Objective:

1. Provide an emphasis on the differences and similarities between fuzzy sets and classical sets theories.
2. The main objective of this course is to establish thorough background knowledge on evolutionary algorithms in graduate students and enable them to pursue individual research in solving real world optimization problems.

#### Unit-I

Basic Definitions – Basic set theoretic operations for Fuzzy sets – Extensions: Types of Fuzzy sets – algebraic operations - Extension Principle: operation for type 2 fuzzy sets – algebraic operations with fuzzy numbers – special extended operations – Extended operations for LR-representation of fuzzy sets.

#### Unit-II

Fuzzy relations and fuzzy sets – Composition of Fuzzy relations – Min-max composition and its properties – Fuzzy graphs – Special fuzzy relation - Possibility Theory – Possibility of fuzzy events – Possibility Vs Probability.

#### Unit-III

An overview – Multivalued logic – Fuzzy propositions – Fuzzy quantifiers – Linguistic hedges – Inference from conditional fuzzy propositions – Approximate reasoning: An overview of fuzzy expert system – Fuzzy implications and their selection – Multi-conditional approximate reasoning – The role of fuzzy relation equation.

#### Unit-IV

An overview – Fuzzy rule base, Fuzzy inference engine, Fuzzification, De-fuzzification and the various De-fuzzification methods (the centre of area, the centre of maxima and the mean of maxima methods) – Fuzzy controllers: An example – Fuzzy systems and Neural Networks – Automata – Dynamical Systems.

#### Unit-V

Individual decision making – Multiperson decision making – Multicriteria decision making – Multi stage decision making – Fuzzy ranking methods – Fuzzy linear programming – Applications in Civil Engineering, Mechanical Engineering, Industrial Engineering and Medicine.

*Fig 4 98* *Pram* *nigam* *J. K. S.* *S. S. S.* *Shrestha* *J. K. S.*

**Course Outcomes:**

This course will enable the students to:

- CO1 Understand Fuzzy sets Fuzzy relations and Fuzzy Graphs.
- CO2 Understand Fuzzy Logic, Classical logic, Fuzzy Systems, and Decision making in Fuzzy environment
- CO3 Be able to distinguish between the crisp set and fuzzy set concepts through the learned differences between the crisp set characteristic function and the fuzzy set membership function.
- CO4 Be able to draw a parallelism between crisp set operations and fuzzy set operations through the use of characteristic and membership functions respectively.
- CO5 Become aware of the use of fuzzy inference systems in the design of intelligent or humanistic systems.

<b>BMA055A</b>	<b>Network Optimization</b>	<b>L-T-P:4-1-0</b>
----------------	-----------------------------	--------------------

**Course Objective:**

- To understand about network models and shortest paths.
- To learn basic algorithms for the maximum flow problem and minimum cost flow.
- To learn applications of network flows, Lagrangian relaxation and multi-commodity flows.

**Unit-I**

Introduction to network models, Computational complexity and data structures, Graph search algorithms, Transformations and flow decomposition.

**Unit-II**

Shortest paths: label setting algorithms, The radix heap algorithm, label correcting algorithms, Algorithm analysis.

**Unit-III**

Basic algorithms for the maximum flow problem, combinatorial applications of maximum flows, Preflow push algorithms, Minimum cost flow: basic algorithms, Minimum cost flow: polynomial time algorithms.

**Unit-IV**

Applications of network flows; Linear programming review, The network simplex algorithm, NP-completeness.

**Unit-V**

Lagrangian relaxation 1, Lagrangian relaxation 2, Multicommodity flows 1, Multicommodity flows 2.

**References:**

<b>BMA056A</b>	<b>Introduction to Simulation Modeling &amp; Analysis</b>	<b>L-T-P:4-1-0</b>
----------------	---	--------------------

**Course objectives:**

- To understand the types of models.
- To understand the general principles and Concepts in discrete - event simulation, event scheduling.
- To understand the Random Variate Generation.

**Unit – I**

Introduction to Simulation: Simulation, Advantages, Disadvantages, Areas of application, System environment, components of a system, Model of a system, types of models, steps in a simulation study. Simulation Examples: Simulation of Queuing systems, Simulation of Inventory System, Other simulation examples.

**Unit – II**

General Principles: Concepts in discrete - event simulation, event scheduling/ Time advance algorithm, simulation using event scheduling. Random Numbers: Properties, Generations methods, Tests for Random number- Frequency test, Runs test, Autocorrelation test.

**Unit – III**

Random Variate Generation: Inverse Transform Technique- Exponential, Uniform, Weibull, Triangular distributions, Direct transformation for Normal and log normal Distributions, convolution methods- Erlang distribution, Acceptance Rejection Technique Optimization Via Simulation: Meaning, difficulty, Robust Heuristics, Random Search.

**Unit – IV**

Introduction, Diophantine Equations, Divisibility, GCD, Euclidean Algorithm, Primes, Binomial Coefficients, Congruences, Fermat, Euler, Wilson, Linear Congruences, Linear Congruences, Chinese Remainder Theorem, Algorithms.

**Unit – V**

Output Analysis – Types of Simulations with Respect to Output Analysis, Stochastic Nature of output data, Measures of Performance and their estimation, Output analysis of terminating simulation, Output analysis of steady state simulations.

**Course Outcomes:**

This course will enable the students to:

**CO1:** Understand the basics of simulation modeling and replicating the practical situations in organizations

**CO2:** Generate random numbers and random variates using different techniques.

*Fig 98* *Pram* *nigam* *JPS* *Saur* *Shrestha* *Jas*

**CO3:** Develop simulation model using heuristic methods.

**CO4:** Analysis of Simulation models using input analyzer, and output analyzer

**CO5:** Explain Verification and Validation of simulation model.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BMA057A	Introduction to Algorithms	L-T-P:4-1-0
---------	----------------------------	-------------

#### Course Objectives:

- To understand algorithmic thinking and models of computation.
- To learn hashing with chaining, table doubling, topological sorting and single-source shortest paths problem.
- To learn dynamic programming and computational complexity.

#### Unit I:

Algorithmic thinking, peak finding, models of computation, Python cost model, document distance, sorting and Trees, insertion sort, merge sort, heaps and heap sort, binary search trees, BST sort, AVL trees, AVL sort, counting sort, radix sort, lower bounds for sorting and searching.

#### Unit II:

Hashing with chaining, table doubling, Karp-Rabin, open addressing, cryptographic hashing, integer arithmetic, Karatsuba multiplication, square roots, Newton's method

#### Unit III:

Breadth-first search (BFS), depth-first search (DFS), topological sorting, single-source shortest paths problem, Dijkstra, Bellman-Ford, Speeding up Dijkstra

#### Unit IV:

Dynamic Programming: Memoization, subproblems, guessing, bottom-up; Fibonacci, shortest paths, Parent pointers; text justification, perfect-information blackjack, string subproblems, psuedopolynomial time; parenthesization, edit distance, knapsack, two kinds of guessing; piano/guitar fingering, Tetris training, Super Mario Bros.

#### Unit V:

Advanced topics: Computational complexity, Algorithms research topics.

#### References:

1. Cormen, Thomas, Charles Leiserson, Ronald Rivest, and Clifford Stein. *Introduction to Algorithms*. 3rd ed. MIT Press, 2009. ISBN: 9780262033848.

3. Cormen, Leiserson, Rivest, and Stein, *Introduction to Algorithms, 3rd Edition* (CLRS).

#### Course Outcomes:

- CO1:- Understand algorithmic thinking and models of computation.  
CO2:- Understand hashing with chaining, table doubling and integer arithmetic.  
CO3:- Understand breadth-first search (BFS), depth-first search (DFS), topological sorting and single-source shortest paths problem.  
CO4:- Understand dynamic programming.  
CO5:- Understand the computational complexity.

BMA058A	Matrix methods in data analysis signal processing and Machine learning	L-T-P:4-1-0
---------	--	-------------

#### Course Objectives:

- To learn about multiplying and factoring matrices, eigen values, eigen vectors, four ways to solve least squares problems and randomized matrix multiplication.
- To learn about derivatives of inverse and singular values, saddle points, maxmin principle and minimizing a function step by step.
- To learn about gradient descent, linear programming and two-person games, stochastic gradient descent.
- To learn structure of neural nets for deep learning.

#### Unit-I:

The column space of  $A$  contains all vectors  $Ax$ , multiplying and factoring matrices, orthonormal columns in  $Q$  give  $QQ' = I$ , eigen values and Eigen vectors, positive definite and semi-definite matrices, singular value decomposition (SVD)

#### Unit-II:

Eckart-Young: the closest rank  $k$  matrix to  $A$  norms of vectors and matrices, four ways to solve least squares problems, survey of difficulties with  $Ax = b$ , minimizing  $\|x\|$  subject to  $Ax = b$ , computing eigen values and singular values, randomized matrix multiplication, low rank changes in  $A$  and its inverse.

#### Unit-III:

Matrices  $A(t)$  Depending on  $t$ , derivative  $= dA/dt$ , derivatives of inverse and singular values, rapidly decreasing singular values, counting parameters in SVD, LU, QR, Saddle Points, maxmin principle, definitions and Inequalities, minimizing a function step by step.

#### Unit-IV:

Gradient descent: downhill to a minimum, accelerating gradient descent (Use Momentum), linear programming and two-person games, stochastic gradient descent.

#### Unit-V:

Structure of neural nets for deep learning, back propagation: Find Partial Derivatives, completing a rank-one matrix, circulants, eigen vectors of circulant matrices: fourier matrix, image net is a convolutional neural network (CNN), the convolution rule, neural nets and the Learning Function.

4. Christopher M. Bishop, *Pattern Recognition and Machine Learning*, 2006.
5. T. Hastie, R. Tibshirani, and J. Friedman, *The Elements of Statistical Learning: Data Mining, Inference, and Prediction*, 2001.

#### Course Outcomes:

CO1:- Understand the multiplying and factoring matrices, eigen values, eigen vectors.

CO2:- Understand four ways to solve least squares problems and randomized matrix multiplication.

*Fig 98* *Pram* *nigam* *JTS* *Saur* *Shrestha* *Joshi*

CO3:- Understand derivatives of inverse and singular values, saddle points, maxmin principle and minimizing a function step by step.

CO4:- Understand gradient descent, linear programming and two-person games, stochastic gradient descent.

CO5:- Understand learn structure of neural nets for deep learning.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

H = Highly Related; M = Medium L = Low

*Page 98* *Praveen* *nijam* *Dr. J. S. S. S.* *Seenu* *Dr. S. S. S.* *Dr. S. S. S.*

**Course Objective:**

- Understand all of the concepts integer linear programming and bounded variable.
- Understand all of the concepts queuing and game theory.
- Apply your understanding of the concepts of sequencing theory.

**Unit I**

Revised Simplex Method, Bounded Variable linear programming problem. Introduction to linear integer programming, Branch and Bound Technique, Gomory's Cutting Plane Algorithm for pure and mixed linear integer programming problem.

**Unit II**

Queueing Systems: General concepts of a queueing system, measures of performance, arrival and service processes, single and multiple server models, channels in parallel and in series with limited and unlimited queues, Little's formula, Queues with finite waiting room, Queues with impatient customer (Balking and reneging), Markovian queues- M/M/1 with finite and infinite waiting space, M/M/C, Birth and death queueing systems.

**Unit III**

Concepts of Game problem. Two- person zero-sum game. Pure and Mixed strategies. Saddle point and its existence. Fundamental Theorem of Rectangular games. Concept of Dominance. Dominance and Graphical method of solving Rectangular games. Relationship between rectangular game and Linear Programming Problem. Solving rectangular game by Simplex method.

**Unit IV**

Project Scheduling: PERT and CPM with known activity times. Critical Path Analysis, Various types of floats. Probability considerations in PERT. Updating of PERT charts. Project crashing. Formulation of CPM as a linear programming problem. Resource leveling and resource scheduling.

**Unit V**

Sequencing problem: Introduction to Sequencing problem. Flow shop problem: Processing  $n$  jobs through 2, 3 and  $m$  machines. General  $n/m$  job-shop problem.

**Course Outcomes:**

This course will enable the students to:

CO1:- To understand the Basic concepts of revised simplex method and integer programming.

CO2:-Understanding the basics concepts of queuing theory.

CO3:- Understanding the basics concepts of game theory.

CO4:-Understanding the project management technique.

CO5:-Understanding the concepts of sequencing.

BMA060A	Applied Statistical Methods	L-T-P:4-1-0
---------	-----------------------------	-------------

#### Course objectives:

- Understand how variance can be used to define a statistic that measures the linear relationship between variables
- Use technology for developing concepts and analyzing data.
- Introduction to index number and volume relatives, link and chain relative.

#### Unit-I

Introduction & definition of time series, its different components, illustrations, additive and multiplicative models, determinations of trend, free hand curve, semi average methods, moving averages, methods of least squares, analysis of seasonal ratio to trend, link relative methods.

#### Unit-II

Index number – its definition, application of index number, price relative and quantity or volume relatives, link and chain relative, problem involved in computation of index number, use of averages, simple aggregative and weighted average method. Laspeyre's, Paasche's and Fisher's index number, time and factor reversal tests of index numbers, consumer price index.

#### Unit- III

Sources of demographic data – census, register, ad-hoc survey, hospital records, demographic profiles of Indian Censuses. Measurement of mortality, crude death rates, age specific death rates, infant mortality rates, death rate by cause

#### Unit-IV

Measurement of fertility crude birth rate, general fertility rate, age-specific birth rate, total fertility rate, gross reproduction rate, net reproduction rate, standardized death rates, age pyramid of sex composition, other measures of fertility. Logistic curve fitting and its use in population projection. Complete life table, its main features and construction.

#### Unit-V

Demand and supply, law of demand and supply. Elasticity of demand: Price, Income and Cross elasticity. Engel's curve and Engel's law, Pareto's law of income.

#### Course Outcomes:

This course will enable the students to:

**CO1:** Understand time series and analysis of seasonal ratio to trend, link relative methods.

**CO2:** Study and use Index number.

**CO3:** Learn demographic methods

**CO4:** Learn logistic curve fitting and its use in population projection and age specific birth rate.

**CO5:** Understand statistical quality control.

BMA061A	Theory of Numbers	L-T-P:4-1-0
---------	-------------------	-------------

#### Course Objectives:

- Identify and apply various properties of and relating to the integers including the Well-Ordering Principle, primes, unique factorization, The Euclidean algorithm.
- Understand the concept of congruence and use various results related to congruence's including the Chinese Remainder Theorem.
- To Understand Fermat's Theorem

#### UNIT I:

Divisibility theory in the integers: early number theory, the division algorithm, the greatest common divisor, the Euclidean Algorithm, Diophantine equation  $ax+by=c$ , Primes and their Distributions, The Fundamental theorem of Arithmetic, the Sieve of Eratosthenes, The Goldbach Conjecture, Primes and factorization.

#### UNIT II:

Theory of Congruences, Modular arithmetic, Carl Friedrich Gauss, Basic Properties of Congruences, Binary and Decimal Representations of Integers, Linear Congruences and the Chinese remainder theorem.

#### UNIT III:

Fermat's Theorem: Pierre de Fermat, Fermat's little Theorem and Pseudoprimes, Wilson's Theorem, The Fermat-Kraitchik Factorization Method, Quadratic law of reciprocity, application. Arithmetical functions. Mobius inversion formula.

#### UNIT IV:

Euler's Generalization of Fermat's Theorem, Leonhard Euler, Euler Phi function, Euler's Theorem, Some Properties of the Phi-function, The Diophantine equations  $x^2 + y^2 = z^2$ ,  $x^4 + y^4 = z^4$ . Farey sequences.

#### UNIT V:

Primitive roots and indices :Primitive roots of unity, the Order of an Integer Modulo  $n$ , Primitive Roots for Primes, Composite Numbers Having Primitive Roots, The Theory of Indices, Numbers of special forms (perfect numbers, mersenne primes and amicable numbers, Fermat numbers).

BMA062A	DATA SCIENCE USING R PROGRAMMING	L-T-P:4-0-0
---------	----------------------------------	-------------

#### Course objectives:

- Learn Fundamentals of R.
- Covers how to use different function sin R, how to read data
- Into R, accessing packages, writing R functions, debugging, and organizing data using R functions.
- Cover the Basics of statistical data analysis with examples.
- The whole syllabus will give an idea to collect, compile and visualize data using statistical functions.

#### UNIT I:

**Introduction to R:** What is R? – Why R? – Advantages of R over Other Programming Languages - R Studio: R command Prompt, R script file, comments – Handling Packages in R: Installing a R Package, Few commands to get started: installed. Packages(), package Description(), help(), find. package(), library() - Input and Output – Entering Data from keyboard– Printing fewer digits or more digits–Special Values functions :NA, Inf and -inf.

#### UNIT II:

R Data Types: Vectors, Lists, Matrices, Arrays, Factors, Data Frame – R - Variables: Variable assignment, Data types of Variable, Finding Variables (), Deleting Variables – R Operators: Arithmetic Operators, Relational Operators, Logical Operator, Assignment Operators, Miscellaneous Operators-R Decision Making: if statement, if – else statement, if– else if statement, switch statement – R Loops: repeat loop, while loop, for loop – Loop control statement: break statement, next statement.

#### UNIT III:

**R-Function** : function definition, Built in functions: mean(), paste(), sum(), min(), max(), seq(), user-defined function, calling a function, calling a function without an argument, calling a function with argument values - **R-Strings** – Manipulating Text in Data: substr(), strsplit(), paste(), grep(), to upper(), to lower() - **R Vectors** – Sequence vector, rep function, vector access, vector names, vector math, vector recycling, vector element sorting-**R List**-Creating a List, List Tags and Values, Add/Delete Element to or from a List, Size of List, Merging Lists, Converting List to Vector - **R Matrices** – Accessing Elements of a Matrix, Matrix Computations: Addition, subtraction, Multiplication and Division- **R Arrays**: Naming Columns and Rows, Accessing Array Elements, Manipulating Array Elements, Calculation Across Array Elements - **R Factors** –creating factors, generating factor levels gl().

#### UNIT IV:

**Data Frames** –Create Data Frame, Data Frame Access, Understanding Data in Data Frames: dim(), nrow(), ncol(), str(), Summary(), names(), head(), tail(), edit() functions - Extract Datafrom Data Frame, **Expand Data Frame**: Add Column, Add Row - Joining columns and rowsin a Data frame rbind() and cbind() – Merging Data frames merge() – Melting and Casting data melt(), cast().

**Loading and handling Data in R:** Getting and Setting the Working Directory – getwd(), setwd(), dir() - **R-CSV Files**- Input as a CSV file, Reading a CSV File, Analyzing the CSV File: summary(), min(), max(), range(), mean(), median(), apply() - Writing into a CSV File – **R-Excel File**– Reading the Excel file.

*Page 98* *Praveen* *nijam* *JTS* *Saurav* *Shrestha* *Dr. J. K. K. K.*

## UNIT V:

**Descriptive Statistics: Data Range, Frequencies, Mode, Mean and Median:** Mean Applying Trim Option, Applying NA Option, Median- Mode- **Standard Deviation- Correlation-Spotting Problems in Data with Visualization:** visually Checking Distributions for a single Variable- **R –Pie Charts:** Pie Chart title and Colors- Slice Percentages and Chart Legend, 3D Pie Chart – **R Histograms** – Density Plot - **R – Bar Charts:** Bar Chart Labels, Title and Colors.

### Course outcome:

CO1:-Understand the basics of Fundamental of R.

CO2:-Understands the loading, retrieval techniques of data.

CO3:-Understand how data is analyzed and visualized using statistic functions.

CO4:-Understand the basic of create data frame and expend data frame like Add Column, Add Row, Joining columns and rows.

CO5:- Understand and the basic concept of Descriptive Statistics: Data Range, Frequencies, Mode, Mean and Median

BMA063A	DATA SCIENCE USING R PROGRAMMING LAB	L-T-P:0-0-1
---------	---	-------------

#### PART A

1. Write a program to check whether a year (integer) entered by the user is a leap year or not?
2. Write a program to find the sum of natural numbers without formula using the if-else statement and the while loop.
3. Write a program that prints the grades of the students according to the marks obtained. The grading of the marks should be as follows.

Marks	Grades
800-1000	A+
700 – 800	A
500 – 700	B+
400-500	B
150 – 400	C
Less than 150	D

4. Write an R program to make a simple calculator that can add, subtract, multiply and divide using switch cases and functions.
5. Write a set of instructions to create the following matrix using vectors and rbind () function. Rename the rows to Lang1, Lang2 & Lang3 respectively and use the function to access any one elements using row names.

MatrixOfTechnology	Rows	Columns			
		1	2	3	4
	1	C#	Java	Cobol	.Net
	2	JavaScript	NodeJs	R	Azure
	3	Power BI	ASP.Net	Unity	Block Chain

6. Write a program to perform searching within a list (1 to 50). If the number is found in the list, print that the search is successful otherwise print that the number is not in the list.
7. Create a list and data frame that stores the marks of any three subjects for 10 students. Find out the total marks, average, maximum marks and minimum marks of every subject.
8. Write the steps to import data from Excel to CSV files and apply data viewer functions likerm(), dim(), head(), tail(), sorting, filtering, searching to view few set of rows.

#### PART B

1. Write a program to create two 3X3 matrices A and B and perform the following operations
  - a) Transpose of the matrix
  - b) addition
  - c) subtraction
2. Write a program to create a list containing strings, numbers, vectors and logical values and do the following manipulations over the list.
  - a. Access the first element in the list

- b. Give the names to the elements in the list
  - c. Add element at some position in the list
  - d. Remove the element
  - e. Print the fourth element
  - f. Update the third element
3. Write a program to create a Data Frame with following details and do the following operations."

Item Code	Item Category	Item Price
1001	Electronics	700
1002	Desktop Supplies	300
1003	Office Supplies	350
1004	USB	400
1005	CD Drive	800

- a. Subset the Data frame and display the details of only those items whose price is greater than or equal to 350.
  - b. Subset the Data frame and display only the items where the category is either "Office Supplies" or "Desktop Supplies"
  - c. Create another Data Frame called "item-details" with three different fields item Code, Item Qty on Hand and Item Reorder Lvl and merge the two frames.
4. Let us use the built-in dataset air quality which has Daily air quality measurements in New York, May to September 1973. Create a histogram by using appropriate arguments for the following statements.
- a. Assigning names, using the air quality dataset.
  - b. Change colors of the Histogram
  - c. Remove Axis and Add labels to Histogram
  - d. Change Axis limit so far Histogram
  - e. Create a Histogram with density and Add Density curve to the histogram
5. Design a data frame in R for storing about 20 employee details. Create a CSV file named "input.csv" that defines all the required information about the employee such as id, name, salary, start date, dept. Import into R and do the following analysis.
- a. Find the total number rows & columns
  - b. Find the maximum salary
  - c. Retrieve the details of the employee with maximum salary
  - d. Retrieve all the employees working in the IT Department
  - e. Retrieve the employees in the IT Department whose salary is greater than 20000 and write these details into another file "output.csv".
6. Create a data set or table ["Smart Phone"] in an excel sheet that stores the mobile information [price, company name, model, Sale Percent] of five different companies. Store at least 20rows. Write the scripts and find out the output for the following information.
- a. Maximum price of the mobile of each company
  - b. Minimum price of mobile of each company
  - c. Average price of mobile of each company
  - d. Total Price of mobile of each company
7. The Tooth Growth data are from a study which examined the growth of teeth in guinea pigs (n=10) in response to three dose levels of Vitamin C (0.5, 1, and 2 mg), which was administered using two delivery methods (orange juice or ascorbic acid). Data from the Tooth Growth Study is available as an R dataset and information about this study can be found by using R help.

Page 98

Praveen

nigam

J. S. S.

Seema

Shruti

Dr. J. S. S.

- a. How many rows are there is Tooth Growth?
  - b. What is the mean and standard deviation of Tooth length
  - c. Which treatment is the best in terms of tooth growth? Derive the findings based on correlation between Dosage and Length for both supplements.
8. Using the built in dataset mtcars which is a popular dataset consisting of the design and fuel consumption patterns of 32 different automobiles. The data was extracted from the 1974 Motor Trend US magazine, and comprises fuel consumption and 10 aspects of automobile design and performance for 32 automobiles (1973-74 models).

**Format**

A data frame with 32 observations on 11 variables

[1] mpg Miles/(US)gallon, [2] cyl Number of cylinders

[3] disp Displacement (cu.in.), [4] hp Gross horsepower

[5] drat Rear axle ratio, [6] wt Weight (lb/1000)

[7] qsec 1/4 mile time, [8] vs V/S, [9] am Transmission (0=automatic, 1=manual), [10] gear Number of forward gears, [11] carb Number of carburetors

Answer the following using the functions from stats package.

- a. What is the total number of observations and variables in the dataset?
- b. Plot three distributions for each variable and determine whether continuous variables are normally distributed or not. If not, what is their skewness?
- c. What is the average difference of gross horse power (hp) between automobiles with 3 and 4 number of cylinders (cyl)? Also determine the difference in their standard deviations.
- d. Which pair of variables has the highest Pearson correlation?

BMA064A	Python Programming	L-T-P:4-0-0
---------	--------------------	-------------

#### Course Objective:

- Understand all of the concepts relating Python programming.
- Understand all of the concepts data types and operator.
- Apply your understanding of the concepts of functions in Python.

#### Unit I

Conceptual introduction: topics in computer science, algorithms; modern computer systems: hardware architecture, data representation in computers, software and operating system; Installing Python; basic syntax, interactive shell, editing, saving, and running a script.

#### Unit II

The concept of data types; variables, assignments; immutable variables; numerical types; arithmetic operators and expressions; comments in the program; understanding error messages; Conditions, boolean logic, logical operators; ranges; Control statements: if-else, loops (for, while); short-circuit (lazy) evaluation. Strings and text files; manipulating files and directories, os and sys modules.

#### Unit III

text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated). String manipulations: subscript operator, indexing, slicing a string; strings and number system: converting strings to numbers and vice versa. Binary, octal, hexadecimal numbers

#### Unit IV

Lists, tuples, and dictionaries; basic list operators, replacing, inserting, removing an element; searching and sorting lists; dictionary literals, adding and removing keys, accessing and replacing values; traversing dictionaries.

#### Unit V

Design with functions: hiding redundancy, complexity; arguments and return values; formal vs actual arguments, named arguments. Recursive functions. Testing, Debugging, Exceptions, Assertions. Classes and OOP: classes, objects, attributes and methods; defining classes; design with classes, data modeling; persistent storage of objects

#### References:

1. Guttag, John. Introduction to Computation and Programming Using Python: With Application to Understanding Data Second Edition. MIT Press, 2016. ISBN: 9780262529624.

#### Course Outcomes:

This course will enable the students to:

- CO1:- To understand the Basic requirement of Python  
CO2:-Understanding the basics concepts of data types.  
CO3:- Understanding the basics concepts of text files.

*Fig 4 98* *Pramod* *nijam* *Prasanth* *Shruti* *Dr. J. Karan*

CO4:-Understanding the operators, sorting and searching method .

CO5:- Understanding the concepts of Testing, Debugging.

BMA065A	Python Programming Lab	L-T-P:0-0-1
---------	------------------------	-------------

1. Installing Python environments
2. Using Python Interpreter to do basic operations like arithmetic computations.
3. Working with variables of different data types and using them in expressions.
4. Building stand alone Python scripts
5. Implementing logic requiring conditional expressions and looping
6. Working with strings using inbuilt functionalities of the data type
7. Working with Python inbuilt data types like Lists, Tuples and Dictionaries
8. Working with modularity: Implementing functions and designing logic in a modular fashion
9. Implement unit testing measures assertions and exception handling
10. Use Python to model object oriented programming principles using various use cases.

BMA066A	Database Management Systems	L-T-P:4-0-0
---------	-----------------------------	-------------

### Course Objectives

- To impart the fundamentals of Relational Database Management Systems.
- To emphasize the significance of Database Design and Normalization.
- To familiarize the concepts of Transaction Processing, Concurrency Control, Query Processing and Optimization.

### Unit – I

Introduction – Database- Database management system- Characteristics of the database approach- Role of Database administrators- Role of Database Designers- End Users Categories of data models- Schemas- Instances- - DBMS Architecture and Data Independence – The Three schema architecture- DBMS Languages and Interfaces Classifications of Database Management Systems.

### Unit – II

Data Modelling Using Entity-Relationship Model -Using High Level Conceptual Data Models for Database Design- Example Database applications. Entity types- Entity Sets Attributes and Keys. Relationships- Relationship types- Roles and Structural constraints. Weak Entity Types and Drawing E- R Diagrams

### Unit – III

Database Design-Functional dependencies and Normalization for Relational Databases - Normalization concepts- first- second- third normal forms.

### Unit – IV

SQL data definition and data types- specifying constraints in SQL- schema change statements- Basic queries- INSERT- DELETE and UPDATE statements in SQL- Views – Concept of a view in SQL.

### Unit - V

Transaction Processing Concepts and Concurrency Control Techniques -Transaction and System concepts – Desirable properties of Transactions – Schedules and Recoverability. Lock-Based Protocols – Locks- Granting of Locks- and Two phase locking protocol.

*Fig 4 98* *P. Kumar* *mjani* *J. K. S.* *S. S. S.* *Shrestha* *J. K. S.*

**Course Outcomes:**

This course will enable the students to:

- CO1 Analyze Database design methodology. Acquire knowledge in fundamentals of Data Base Management System.
- CO2 Analyze the difference between traditional file system and DBMS.
- CO3 Handle with different Data Base languages. Draw various data models for Data Base and Write queries mathematically.
- CO4 Design data base and normalize data and Understand how query are being processed and executed.
- CO5 Deal with online transactions and control Concurrency. Understand types of Data Base failures and Recovery.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

### Software Lab based on Database Management Systems

**Note:** My Access/My SQL may be used.

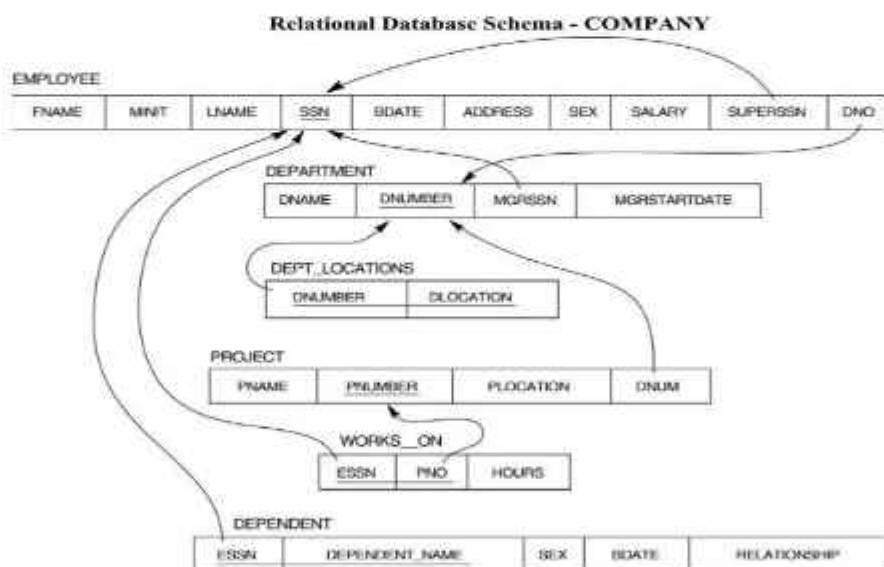

The following concepts must be introduced to the students:

DDL Commands

- Create table, alter table, drop table

DML Commands

- Select, update, delete, insert statements
- Condition specification using Boolean and comparison operators (and, or, not, =, <, >, <=, >=)
- Arithmetic operators and aggregate functions (Count, sum, avg, Min, Max)
- Multiple table queries (join on different and same tables)
- Nested select statements
- Set manipulation using (any, in, contains, all, not in, not contains, exists, not exists, union, intersect, minus, etc.)
- Categorization using group by.....having
- Arranging using order by

#### Questions to be performed on above schema

1. Create tables with relevant foreign key constraints
2. Populate the tables with data
3. Perform the following queries on the database :
  1. Display all the details of all employees working in the company.

Fig 4.98

Praveen

nigam

Praveen

Praveen

Praveen

Praveen

2. Display ssn, lname, fname, address of employees who work in department no 7.
3. Retrieve the birthdate and address of the employee whose name is 'Franklin T. Wong'
4. Retrieve the name and salary of every employee
5. Retrieve all distinct salary values
6. Retrieve all employee names whose address is in 'Bellaire'
7. Retrieve all employees who were born during the 1950s
8. Retrieve all employees in department 5 whose salary is between 50,000 and 60,000(inclusive)
9. Retrieve the names of all employees who do not have supervisors
10. Retrieve SSN and department name for all employees
11. Retrieve the name and address of all employees who work for the 'Research' department
12. For every project located in 'Stafford', list the project number, the controlling department number, and the department manager's last name, address, and birth date.
13. For each employee, retrieve the employee's name, and the name of his or her immediate supervisor.
14. Retrieve all combinations of Employee Name and Department Name
15. Make a list of all project numbers for projects that involve an employee whose last name is 'Narayan' either as a worker or as a manager of the department that controls the project.
16. Increase the salary of all employees working on the 'ProductX' project by 15%.
17. Retrieve employee name and increased salary of these employees.
18. Retrieve a list of employees and the project name each works in, ordered by the employee's department, and within each department ordered alphabetically by employee first name.
19. Select the names of employees whose salary does not match with salary of any employee in department 10.
20. Retrieve the name of each employee who has a dependent with the same first name and same sex as the employee.
21. Retrieve the employee numbers of all employees who work on project located in Bellaire, Houston, or Stafford.
22. Find the sum of the salaries of all employees, the maximum salary, the minimum salary, and the average salary. Display with proper headings.
23. Find the sum of the salaries and number of employees of all employees of the 'Marketing' department, as well as the maximum salary, the minimum salary, and the average salary in this department.

Page 68

Praveen

nigam

JP

Seema

Shristi

Dr. J. Narayan

24. Select the names of employees whose salary is greater than the average salary of all employees in department 10.
25. For each department, retrieve the department number, the number of employees in The department, and their average salary. For each project, retrieve the project number, the project name, and the number of employees who work on that project.
26. Change the location and controlling department number for all projects having more than 5 employees to 'Bellaire' and 6 respectively.
27. For each department having more than 10 employees, retrieve the department no, no of employees drawing more than 40,000 as salary.
28. Insert a record in Project table which violates referential integrity constraint with respect to Department number. Now remove the violation by making necessary insertion in the Department table.
29. Delete all dependents of employee whose ssn is '123456789'.
30. Delete an employee from Employee table with ssn = '12345' (make sure that this employee has some dependents, is working on some project, is a manager of some department and is supervising some employees). Check and display the cascading effect on Dependent and Works on table. In Department table MGRSSN should be set to default value and in Employee table SUPERSSN should be set to NULL.
31. Perform a query using alter command to drop/add field and a constraint in Employee table.

BMA068A	Regression Analysis	L-T-P:4-0-0
---------	---------------------	-------------

### Course Objective:

- Understand all of the concepts related to Regression analysis.
- Understand all of the concepts linear and polynomial regression models.
- Apply your understanding of the concepts of ANOVA.

### Unit I

Simple Linear Regression: Linear Regression Model, Least square estimation of the parameters, Hypothesis Testing on the slope and intercept, Interval estimation in Simple linear Regression, Prediction of New Observations and Coefficient of Determination.

### Unit II

Multiple Linear Regression: Multiple Linear Regression Models, Estimation of the Model Parameters, Hypothesis testing in Multiple Linear Regression, Confidence Interval on the Regression and Prediction of New observations.

### Unit III

Generalized linear models - Logistic regression Models, Poisson regression - hypothesis testing on model parameter. Model Adequacy Checking: Introduction, Residual Analysis, Detection, treatment of Outliers and Lack of fit of the Regression Model.

### Unit IV

Polynomial regression models – polynomial models in one variable – Polynomial models in two or more variables – variable selection and model building – computational techniques for variable selection.

### Unit V

Introduction to analysis of variance- one way and two way ANOVA – Analysis of variance in Regression: Response surface designs – Introduction to response surface methodology, Method of steepest ascent, Analysis of second order response surface, experimental design for fitting response surfaces.

### Suggested Books

1. Douglas C. Montgomery and Elizabeth A. Peck and G. Geoffrey Vining, "Introduction to Linear Regression Analysis", 3rd Edition, John Wiley & Sons, Inc
2. Douglas C. Montgomery, "Design and analysis of Experiments", 8th edition, John Wiley & Sons, Inc
3. Ravichandran, J. "Probability and Statistics for engineers", First Reprint Edition, Wiley India, 2012.

*Fig 98* *Praveen* *nigam* *Shruti* *Shruti* *Shruti* *Shruti*

**Course Outcomes:**

This course will enable the students to:

CO1:- To understand the Basic concepts of Linear Regression.

CO2:- Understanding the basics concepts of Multiple Regression.

CO3:- Understanding the basics concepts of Generalized Linear Model.

CO4:- Understanding of Polynomial Regression Model.

CO5: Understanding the Concept of ANOVA and experimental design.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

BMA069A	Statistics Lab with R	L-T-P:0-0-1
---------	-----------------------	-------------

#### Getting Used to R:

1. Describing Data.
2. Viewing and Manipulating Data.
3. Plotting Data.
4. Reading in Your Own Data
5. Estimating a Linear Relationship.
6. Scrutinizing the Residuals
7. Simple Linear Regression.
8. Multiple Regression.
9. Tests for Linear Hypothesis.
10. Bias in regression estimates.
11. Lack of fit.
12. Orthogonal Polynomials.
13. Analysis of Variance of a one-way classified data.
14. Analysis of Variance of a two-way classified data with one observation per cell.

#### *Suggested Books*

1. Maria Dolores Ugarte , Ana F. Militino , Alan T. Arnholt "Probability and Statistics with R" 2nd Edition on, CRC Press, 2016.
2. P. Dalgaard. Introductory Statistics with R, 2nd Edition. (Springer 2008)
3. Michael Akritas, " Probability & Statistics with R for Engineers and Scientists", 2nd Edition on, CRC Press, 2016.

<b>BMA070A</b>	<b>Data Analysis using Spreadsheet</b>	<b>L-T-P:4-0-0</b>
----------------	--	--------------------

**Course objectives:**

- Introduction to the Data filtering capabilities of Excel, the construction of Pivot Tables to organize data and introduction to charts in Excel.
- Describe and explain various concepts of using spreadsheets and concepts of data analysis
- Use spreadsheets to perform data analysis

**Unit I**

**Introduction to Excel**

About Excel & Microsoft, Uses of Excel, Excel software, Spreadsheet window pane, Title Bar, Menu Bar, Standard Toolbar, Formatting Toolbar, the Ribbon, File Tab and Backstage View, Formula Bar, Workbook Window, Status Bar, Task Pane, Workbook & sheets

**Unit II**

**Columns & Rows**

Selecting Columns & Rows, Changing Column Width & Row Height, Autofitting Columns &

Rows, Hiding/Unhiding Columns & Rows, Inserting & Deleting Columns & Rows, Cell, Address of a cell, Components of a cell – Format, value, formula, Use of paste and paste special

**Functionality Using Ranges**

Using Ranges, Selecting Ranges, Entering Information Into a Range, Using AutoFill

**Unit III**

**Creating Formulas**

Using Formulas, Formula Functions – Sum, Average, if, Count, max, min, Proper, Upper, Lower, Using AutoSum,

**Advance Formulas:** Concatenate, Vlookup, Hlookup, Match, Countif, Text, Trim

**Unit IV**

**Spreadsheet Charts**

Creating Charts, Different types of chart, Formatting Chart Objects, Changing the Chart Type,

Showing and Hiding the Legend, Showing and Hiding the Data Table

**Data Analysis:**

Sorting, Filter, Text to Column, Data Validation

**PivotTables**

Creating PivotTables, Manipulating a PivotTable, Using the PivotTable Toolbar, Changing Data

Field, Properties, Displaying a PivotChart, Setting PivotTable Options, . Adding Subtotals to PivotTables

*Fig 4 98* *Pawan* *nigam* *JTS* *Saurav* *Shrestha* *Dr. J. K. Singh*

## Unit V

### Spreadsheet Tools

Moving between Spreadsheets, Selecting Multiple Spreadsheets, Inserting and Deleting Spreadsheets Renaming Spreadsheets, Splitting the Screen, Freezing Panes, Copying and Pasting

Data between Spreadsheets, Hiding , Protecting worksheets

### Making Macros

Recording Macros, Running Macros, Deleting Macros

#### Course outcomes:-

CO1:- Introduction to Excel formatting and tools.

CO2:- Introduction to operations on columns & rows.

CO3:- Introduction to functionality using ranges.

CO4:- Introduction to formula functions in excel.

CO5:- Introduction to Spreadsheet Tools.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

BMA071A	Data Analysis using Spreadsheet Lab	L-T-P:0-0-1
---------	-------------------------------------	-------------

#### Data Analysis using Spreadsheet Lab

1. Introduction to Excel formatting and tools
2. Operations on Columns & Rows
3. Functionality Using Ranges
4. Formula Functions in excel
5. Use of Advance Formulas
6. Spreadsheet Charts
7. Data Analysis using Sorting, Filter, Text to Column, Data Validation
8. Operation related to PivotTables
9. Spreadsheet Tools
10. Working with Macros

BMA072A	Integral Transforms and Fourier Analysis	L-T-P:4-1-0
---------	--	-------------

**Course Objective:**

- Students will learn theoretical concepts and uses of various Integral Transforms.
- Understand the importance of Laplace, Mellin and Fourier transform
- To solve several technical problems using Laplace Mellin and Fourier transform.

**Unit-I**

Laplace transform, Linearity, Existence theorem, Laplace transforms of derivatives and integrals, Shifting theorems, Change of scale property, Laplace transforms of periodic functions, Dirac's delta function.

**Unit-II**

Differentiation and integration of transforms, Convolution theorem, Integral equations, Inverse Laplace transform, Lerch's theorem, Linearity property of inverse Laplace transform, Translations theorems of inverse Laplace transform, Inverse transform of derivatives, Applications of Laplace transform in obtaining solutions of ordinary differential equations and integral equations.

**Unit-III**

Fourier and inverse Fourier transforms, Fourier sine and cosine transforms, Inverse Fourier sine and cosine transforms, Linearity property, Change of scale property, Shifting property, Modulation theorem, Relation between Fourier and Laplace transforms.

**Unit-IV**

Solution of integral equation by Fourier sine and cosine transforms, Convolution theorem for Fourier transform, Parseval's identity for Fourier transform, Plancherel's theorem, Fourier transform of derivatives, Applications of infinite Fourier transforms to boundary value problems, Finite Fourier transform, Inversion formula for finite Fourier transforms.

**Unit-V**

Fourier cosine and sine series, Fourier series, Differentiation and integration of Fourier series, Absolute and uniform convergence of Fourier series, Bessel's inequality, The complex form of Fourier series.

**References:**

1. James Ward Brown & Ruel V. Churchill (2011). Fourier Series and Boundary Value Problems. McGraw-Hill Education.

4. Walter Rudin (2017). Fourier Analysis on Groups. Dover Publications.
5. A. Zygmund (2002). Trigonometric Series (3rd edition). Cambridge University Press.

**Course Outcomes:**

This course will enable the students to:

- CO1 Know about piecewise continuous functions, Dirac delta function, Laplace transforms and its properties.
- CO2 Solve ordinary differential equations using Laplace transforms.

*Fig 4 98* *Pram* *nigam* *J. S. J.* *S. S. S.* *Shrestha* *J. S. J.*

- CO3 Familiarise with Fourier transforms of functions belonging to  $L^2(\mathbb{R})$  class, relation between Laplace and Fourier transforms.
- CO4 Explain Parseval's identity, Plancherel's theorem and applications of Fourier transforms to boundary value problems.
- CO5 Learn Fourier series, Bessel's inequality, term by term differentiation and integration of Fourier series. Apply the concepts of the course in real life problems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

BMA073A	Wavelets and Applications	L-T-P:4-1-0
---------	---------------------------	-------------

### Course Objectives

- To design wavelets and understanding different types of wavelet
- To analyze the conditions to be satisfied for scaling and wavelet function to be a wavelet
- To understand the analysis, design and applications of different types of signals

### Unit-I

Basic concepts of signals and systems, Frequency spectrum of signals; Classification of signals: Discrete time signals and continuous time signals, periodic and non-periodic signals; Classification of systems: Linear, nonlinear, time-variant, time-invariant, stable and unstable systems.

### Unit-II

Time-Frequency Analysis Orthogonal functions, Orthonormal functions, Function spaces, Orthogonal basis functions, Haar scaling function, Haar spaces: Haar space  $V_n$ , general Haar space  $V_n$ ; Haar wavelet, Haar wavelet spaces: Haar wavelet space  $W_n$ , general Haar wavelet space  $W_n$ ; Decomposition and reconstruction, Time-frequency analysis, Orthogonal and orthonormal bases.

### Unit-III

Discrete Fourier transform of a digital signal, Complex form of a Fourier series, Inverse discrete Fourier transform, Window Fourier transform, Short time Fourier transform, Admissibility condition for a wavelet, Classes of wavelets: Haar, Morlet, Mexican hat, Meyer and Daubechies wavelets; Wavelets with compact support.

### Unit-IV

Stationary and non-stationary signals, Haar transform, 1-level Haar transform, Multi-level Haar transform, Conservation and compaction of energy, multi resolution analysis, Decomposition and reconstruction of signals using discrete wavelet transform (DWT).

### Unit-V

Wavelet series expansion using Haar and other wavelets, Applications in signal compression, Analysis and classification of audio signals using DWT, Signal de-noising: Image and ECG signals.

7. James S. Walker (2008). A Primer on Wavelets and Their Scientific Applications (2nd edition). Chapman & Hall/CRC, Taylor & Francis.

#### Course Outcomes:

This course will enable the students to:

CO1 Know basic concepts of signals and systems.

CO2 Understand the concept of Haar spaces.

CO3 Learn Fourier transform and wavelet transform of digital signals.

CO4 Learn the concepts of Discrete Wavelet Transforms.

CO5 Apply wavelets in signal processing and image processing.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

BMA074A	Mathematical Logic	L-T-P:4-1-0
---------	--------------------	-------------

#### Course Objectives:

- To introduce important aspects of propositional logic, first order predicate logic, computability and its extensions
- To understand the familiarity with the basic concepts and methods of logic, set theory, and recursion.
- This course lays the foundation for more advanced studies in logic and mathematics.

#### Unit-I

First-order languages, Terms of language, Formulas of language, First order theory.

#### Unit-II

Languages Structures of first order languages, Truth in a structure, Model of a theory, Embeddings and isomorphism.

#### Unit-III

Syntax of propositional logic, Semantics of propositional logic, Compactness theorem for propositional logic, Proof in propositional logic, Meta theorem in propositional logic, Post tautology theorem.

#### Unit-IV

Proof in first-order logic, Meta theorems in first-order logic, Some meta theorem in arithmetic, Consistency and completeness.

#### Unit-V

Completeness theorem, Interpretation in a theory, Extension by definitions, Compactness theorem and applications, Complete theories, Applications in algebra.

#### References:

3. Elliott Mendelson (2015). Introduction to Mathematical Logic (6th edition). Chapman & Hall/CRC.
4. Shashi Mohan Srivastava (2013). A Course on Mathematical Logic (2nd edition). Springer.

#### Course Outcomes:

This course will enable the students to:

- CO1 Learn the syntax of first-order logic
- CO2 Understand semantics of first-order languages.
- CO3 Understand the propositional logic and their properties.

*Fig 4 98* *Pram* *nijam* *JS* *Seena* *Shristi* *Dr. J. Karapinar*

CO4 Learn basic theorems like compactness theorem, meta theorem and post-tautology theorem.

CO5 Assimilate the concept of completeness interpretations and their applications with special emphasis on applications in algebra.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	L	M	L	M	H	M	L	M	H	H
CO2	M	M	L	M	M	L	M		M	M
CO3	M	M	L	L	H	M	L	L	H	H
CO4	M	L	M	M	M	M			H	H
CO5	M	L	L	M	M		M		M	M

BMA075A	Operating Systems	L-T-P:4-0-0
---------	-------------------	-------------

### Course Objectives

- The objective of the course is to provide basic knowledge of computer operating system structures and functioning.
- The course familiarizes the student with basic knowledge of computer operating systems.

### Unit – I

Operating System Objectives and functions-The Evolution of Operating Systems-Serial Processing-Simple batch Systems-Multi Programmed batch Systems-Time Sharing Systems.

### Unit – II

Definition of Process-Process States-Process Control Block-Operations on Process-Process Communication-Communication in Client-server System- Basic concepts of threads - Concurrency-Principles of Concurrency-Mutual exclusion - Semaphores – Messages – Deadlock - Deadlock Prevention - Deadlock detection - deadlock avoidance

### Unit – III

Memory Management-Address binding-Logical Vs Physical address space-Dynamic Loading-Dynamic Linking and Shared Libraries-Overlays-Swapping-Contiguous Memory allocation- Paging-Segmentation-Virtual memory-Demand paging-Page replacement Thrashing.

### Unit – IV

CPU Scheduling - Scheduling Criteria-Scheduling algorithms – FCFS, SJF, Priority, RR, Multilevel, Feedback Queue - Process synchronization-The Critical Section Problem Synchronization Hardware-Classical Problems of synchronization, File and Database System-File System-Functions of organization-Allocation and Free space management.

### Unit – V

Modern Operating Systems-Architecture and Features, Case Studies-Linux –Windows network OS - Windows XP (Design principles and components only). Shell introduction and Shell Scripting

### REFERENCES:

*Fig 4 98* *P. Kumar* *mjau* *J. S. S.* *S. S. S.* *Shrestha* *J. S. S.*

**Course Outcomes:**

This course will enable the students to:

- CO1 Understand the difference between different types of modern operating systems, virtual machines and their structure of implementation and applications.
- CO2 Understand the difference between process & thread, issues of scheduling of user level processes / threads and their issues & use of locks, semaphores, monitors for synchronizing multiprogramming with multithreaded systems and implement them in multithreaded programs.
- CO3 Gain knowledge about the concepts of deadlock in operating systems and how they can be managed / avoided and implement them in multiprogramming system.
- CO4 Demonstrate the design and management concepts along with issues and challenges of main memory, virtual memory and file system.
- CO5 Understand the types of I/O management, disk scheduling, protection and security problems faced by operating systems and how to minimize these problems.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	M	M	L	L	H	M	L		H	H
CO2	M	M	L	L	H	M	L		H	H

BMA076A	Operating Systems Lab	L-T-P:0-0-1
---------	-----------------------	-------------

### Software Lab based on Operating Systems

Note: Following exercises can be performed using Linux or Unix

1. Usage of following commands: ls, pwd, tty, cat, who, who am I, rm, mkdir, rmdir, touch, cd.
2. Usage of following commands: cal, cat(append), cat(concatenate), mv, cp, man, date.
3. Usage of following commands: chmod, grep, tput (clear, highlight), bc.
4. Write a shell script to check if the number entered at the command line is prime or not.
5. Write a shell script to modify "cal" command to display calendars of the specified months.
6. Write a shell script to modify "cal" command to display calendars of the specified range of months.
7. Write a shell script to accept a login name. If not a valid login name display message -  
"Entered login name is invalid".
8. Write a shell script to display date in the mm/dd/yy format.
9. Write a shell script to display on the screen sorted output of "who" command along with  
the total number of users.
10. Write a shell script to display the multiplication table any number.
11. Write a shell script to compare two files and if found equal asks the user to delete the duplicate file.
12. Write a shell script to find the sum of digits of a given number.
13. Write a shell script to merge the contents of three files, sort the contents and then display  
them page by page.
14. Write a shell script to find the LCD (least common divisor) of two numbers.
15. Write a shell script to perform the tasks of basic calculator.
16. Write a shell script to find the power of a given number.
17. Write a shell script to find the factorial of a given number.
18. Write a shell script to check whether the number is Armstrong or not.
19. Write a shell script to check whether the file have all the permissions or not.
20. Program to show the pyramid of special character "\*".

BMA077A	Data Structures And Algorithms	L-T-P:4-0-0
---------	--------------------------------	-------------

### Course Objectives

- To understand the various algorithm design and analysis techniques
- To learn linear data structures – lists, stacks, and queues
- To learn different sorting and searching algorithms
- To understand Tree and Graph data structures

### Unit – I

Introduction: Basic Design and Analysis techniques of Algorithms, Correctness of Algorithm. Algorithm Design Techniques: Iterative techniques, Divide and Conquer, Dynamic Programming, Greedy Algorithms.

### Unit – II

Sorting Techniques: Elementary sorting techniques-Bubble Sort, Insertion Sort, Merge Sort, Advanced Sorting techniques-Heap Sort, Quick Sort, Sorting in Linear Time-Bucket Sort, Radix Sort and Count Sort Searching Techniques: Linear and Binary search.

### Unit – III

Complexity Analysis: Medians & Order Statistics. Data Structures: Arrays Single and Multi-dimensional Arrays, Sparse Matrices, Stacks, Implementing stack using array and linked list, Prefix, Infix and Postfix expressions, Utility and conversion of these expressions from one to another, Queues Array and Linked representation of Queue, De-queue, Priority Queues.

### Unit – IV

Linked Lists Singly, Doubly and Circular Lists, representation of Stack and Queue as Linked Lists. Recursion. Developing Recursive Definition of Simple Problems and their implementation; Advantages and Limitations of Recursion.

### Unit – V

Introduction to Tree as a data structure; Binary Trees, Binary Search Tree, (Creation, and Traversals of Binary Search Trees)

**Course Outcomes:**

This course will enable the students to:

- CO1 Student will be able to choose appropriate data structure as applied to specified problem definition. Student will be able to handle operations like searching, insertion, deletion, traversing mechanism etc. on various data structures.
- CO2 Students will be able to apply concepts learned in various domains like DBMS, compiler construction etc.
- CO3 Students will be able to use linear and non-linear data structures like stacks , queues , linked list
- CO4 Students will be able to represent Stack and Queue as Linked Lists.
- CO5 Students can analyze Tree as a data structure with their properties.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	M	L	M	M	H	M	L	M	M	H
CO2	L	M	L	M	H	H		M	M	H
CO3	M	L	L	M	M	H	L	M	M	M
CO4	M	L	L	M	H	H	L	M	M	H
CO5	M	L	L	M	H	H	L	M	M	H

BMA078A	Data Structures And Algorithms Lab	L-T-P:0-0-1
---------	------------------------------------	-------------

**Software Lab based on Analysis of Algorithms:**

1. Implement Insertion Sort (The program should report the number of comparisons)
2. Implement Merge Sort (The program should report the number of comparisons)
3. Implement Heap Sort (The program should report the number of comparisons)
4. Implement Randomized Quick sort (The program should report the number of comparisons)
5. Implement Radix Sort.
6. Implement Searching Techniques
7. Implementation of Recursive function.
8. Array and Linked list implementation of Stack and Queue.
9. Implementation of Single, Double and circular Linked List
10. Creation and traversal of Binary Search Tree.

BMA079A	Internet Technologies	L-T-P:4-1-0
---------	-----------------------	-------------

### Course Objectives

- To build web applications using ASP and client side script technologies use with Microsoft's IIS.
- To build XML applications with DTD and style sheets that span multiple domains ranging from finance to vector graphics to genealogy for use with legacy browsers..

### Unit – I

World Wide Web – Web browsers – Markup Languages –Style Sheet technologies –client side, server side - HTML – Headings –Links -images- Lists- Tables- Forms- Frames

### Unit – II

Cascading style sheets-Inline styles-Embedded style sheets-Linking External style sheets Positioning elements- Dynamic HTML – Object model and collections, Event model, Filters and Transitions.

### Unit – III

JAVASCRIPT-Introduction – Simple program-Decision making - Equality and Relational operators – Control statements – Functions – Programmer defined functions, JavaScript global functions, Recursion – Arrays – References and Reference parameters, Passing arrays to functions, Multidimensional arrays – Objects – Object types.

### Unit – IV

XML-Introduction- Structuring data-XML namespaces-Document Type Definitions (DTDs) and Schema-W3C XML schema documents-XML vocabularies-Document Object Model (DOM), DOM methods- Simple API for XML (SAX)-Extensible Style sheet Language (XSL)-Simple Object Access Protocol (SOAP).

### Unit - V

PHP-Introduction-String processing and regular expressions-Viewing Client/Server environment variables-Form processing and Business logic-Verifying a username and password-connecting to a database

*Fig 4 98* *Pawan* *nigam* *Shrestha* *Shrestha* *Shrestha* *Shrestha*

**Course Outcomes:**

This course will enable the students to:

- CO1 Understand, analyze and apply the role of languages like HTML, DHTML, CSS, XML, Java script, VBScript, ASP, PHP and protocols in the workings of the web and web applications
- CO2 Analyze a web project and identify its elements and attributes in comparison to traditional projects.
- CO3 Understand, analyze and create web pages using HTML, DHTML and Cascading Styles sheets.
- CO4 Understand, analyze and build dynamic web pages using JavaScript and VBScript (client side programming).
- CO5 Understand, analyze and build interactive web applications.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	M	M	L	M	H	M	L	M	H	H
CO2	M	M	L	M	H	M	L	M	M	H
CO3	M	M	L	M	H	H	L	M	M	H
CO4	M	H	L	L	H	H	L	M	M	H

BMA080A	Correlation & Regression	L-T-P:4-0-0
---------	--------------------------	-------------

### Course Objective:

- To understand the Basic requirement of Correlation & Regression.
- To describe methods of PLS.
- To develop an understanding of Attributes Techniques.

### Unit-I

**Principal of Least Square:** Fitting of Straight line, second degree parabola, Power curve and Exponential Curve.

**Correlation and Regression:** Correlation, Scatter Diagram, Karl Pearson's Coefficient of Correlation and its properties. Spearman's Rank Correlation Coefficient. Regression-Fitting of Regression Lines, Regression Coefficients with properties.

### Unit-II

Multiple and partial correlation, intra class correlation and correlation ratio. Problem of correlated errors: autocorrelation, Analysis of collinear data, detection and correction of multicollinearity.

### Unit-III

Linear regression analysis, regression coefficient and properties. Multiple and partial regression, examine the multiple regression equation, concept of weighted least square, regression equation on grouped data, various methods of selecting the best regression equation.

### Unit-IV:

Linear estimation, Gauss- Markoff's theorem. Estimable functions, error and estimate space, normal equation and least square estimators, estimation of error variance, estimation with correlated observations, properties of least square estimators, generalized inverse of matrix and solution of normal equations, variance and covariance of least square estimators.

### Unit-V:

**Theory of Attributes:** Classes and class frequencies, order of class frequencies, Ultimate class frequency, Consistency of data (up to order 3). Independence of attributes, contingency table, Association of attributes, Measures of association.

#### Course Outcomes:

This course will enable the students to:

- CO1:- To understand the concept of correlation.
- CO2:- To Understand the concept of Multiple Correlation.
- CO-3 To understand the concept of estimation of Regression.
- CO-4 To understand the concept of Linear Model.
- CO5: To understand the concept of Attributes.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

BMA081A	Statistics Lab -I	L-T-P:0-0-1
---------	-------------------	-------------

#### List of programs

- Computations of Correlation for Linear Data
- Computations of Rank Correlation.
- Computations of Principal of Least Square for Straight line and Second-degree Curve.
- Fit a Regression Equation for Linear Data.
- Computations of Class frequency for Attributes and test the Independence of Attributes.

BMA082A	Industrial Statistics & Sampling Distribution	L-T-P:4-0-0
---------	---	-------------

### Course Objectives:

- To understand the Basic requirement of statistics to society
- To describe methods of Testing.
- To understand the Basic requirement of SQC.

### Unit-I

#### Statistical Quality Control -I

Concept of SQC, process control. Causes of variation in quality, Shewhartz Control Charts technique of rational sub groups, control limits, Natural tolerance limits, Specification limits, summary of out of control criteria.

### Unit-II

#### Statistical Quality Control -II

Control Charts for Variables: Construction of Mean, Range and Standard Deviation Charts. Concept of defects and defectives. Control chart for attributes: Construction of np-chart, p-chart, and c-chart.

### Unit-III

#### Chi-square Distribution

Definition, Derivation, Moments, Moment Generating Function, Cumulant Generating Function. Limiting and Additive property of Chi-square variates. Distribution of ratio of chi-square variates

#### Applications of Chi-square

Chi-square test for testing normal population variance, Test for goodness of fit, Contingency table and Test for independence of attributes, Yates correction for 2x2 contingency table conditions of Chi-square.

### Unit-IV:

#### t-Distribution

Definition of Student's-t and Fisher's-t statistics and derivation of their distributions. Limiting property of t-distribution. Applications: Testing of single mean, Difference of two means, paired t-test and sample correlation coefficient.

### Unit-V:

#### F-Distribution

Definition of Snedecor's F-distribution and its derivation. Applications- Testing of equality of two variance. Fisher's transformation and its uses. Relationship between 't', 'F' and chi-square statistics.

6. Rohatgi, V.K.(1967): An Introduction to Probability Theory and Statistics, John Wiley And Sons.
7. Snedecor, G.W. and Cochran, W.G. (1967): Statistical Methods, Iowa State University Press.

**Course Outcomes:**

This course will enable the students to:

CO1:- Understanding the basics concepts SQC.

CO2:- Understanding the Concept of Control Charts.

CO3:- Understanding the applications of Chi-square -distribution.

CO4:- Understanding the various methods to T-distribution.

CO5:- Understanding the various methods to F-distribution

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	M	M	L	M	L	L	M	M	H	H
CO2	H	H	L	H	L	H	H	H	H	H
CO3	M	H	L	H	L	H	H	H	H	H

H = Highly Related; M = Medium L = Low

Fig 4.98     

BMA084A	Applied Statistics	L-T-P: 4-1-0
---------	--------------------	--------------

### Course Objective:

- To understand the Basic requirement of statistics to society
- To describe methods of Demography
- To develop an understanding of index numbers

### Unit-I

#### Vital Statistics - I

Meaning, definition and utility. Sources of demographic data- census, registration. Indices of mortality. Measurement of mortality, crude death rate and standardization death rates. Indices of fertility, Measurement of fertility – crude birth rate, general fertility rate. Age- specific fertility rate, total fertility rate. Gross and Net Reproduction Rates.

### Unit-II

#### Vital Statistics - II

Stationary and stable population, concept and determination of the rate of increase in a stable population. Life table: Construction of life table from graduated rates of mortality and evaluation of probabilities of survival and death from a life table.

### Unit-III

#### Demand Analysis

Demand and supply, law of demand and supply. Elasticity of demand: Price, Income and Cross elasticity. Engel's curve and Engel's law, Pareto's law of income.

### Unit-IV:

#### Index Number – I

Meaning and uses of index numbers, problem in the construction of index numbers, price relatives, quantity and value relatives. Fixed base and chain base index numbers, use of averages. Weighted and unweighted index numbers- Laspeyers, Paasche's, Marshall-Edgeworth and Fisher's ideal index numbers, Dorbish, Kelly's fixed base index numbers.

### Unit-V:

#### Index Number – II

Test for index numbers. Base shifting, splicing and deflating. Consumer Price Index numbers, Construction of cost of living index and Whole-sale price index.

6. Goon A.M., Gupta M.K. and Das Gupta B. (1986): Fundamentals of Statistics, Vol. II, World Press, Calcutta.

**Course Outcomes:**

This course will enable the students to:

CO1:- To understand the basic concept of Vital Statistics.

CO2:- To understand the concept of Life Table.

CO-3 : To understand the concept of Demand analysis.

CO-4 : To understand the basic concept of Index numbers.

CO5:- To understand the concept of Cost of living Index number.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	H	H	M	M	L	H	H	H	H	H

BMA085A	Statistical Inference & Sampling	L-T-P :4-1-0
---------	----------------------------------	--------------

#### Course Objective:

- To develop an understanding of estimation
- To develop an understanding of sampling Techniques.
- To develop an understanding of Testing.

#### Unit-I

**Basic Concepts:** Sampling distribution, Sampling Distribution of sum of Binomial, Poisson and mean of Normal Distribution. Standard Error: Meaning and role of Central Limit Theorem for identically independently distributed (i.i.d) random variables.

#### Unit-II

##### Statistical Hypothesis and test of significance I

Definition, Simple and Composite hypotheses. Null and Alternative Hypotheses, two Types of errors in sampling, critical region, level of significance critical and p-values, procedure and testing of hypothesis.

#### Unit-III

**Statistical Hypothesis II:** one tailed and two tailed test, Power and size of the test, and critical region Neyman Pearson Lemma and its application for finding BCR. **Estimation:** Parametric space, sample space, point estimation. Requirements of good estimator: Consistency, unbiasedness, efficiency, sufficiency.

**Minimum variance unbiased (MVU) estimators.** Cramer-Rao inequality. Minimum Variance Bound (MVB) estimator, Rao-Blackwell theorem, Lehmann-Scheffe theorem.

#### Unit-IV:

**Sample Surveys:** Concepts of Population and sample. Complete enumeration vs sampling. Need for sampling. Principal and organizational aspects in the conduct of a sample survey. Sampling and Non sampling errors.

#### Unit-V:

**Basic sampling methods:** Simple random sampling with or without replacement for the estimation of mean, total, proportion. Determination of sample size. Probability proportional to size sampling (with replacement).

**Stratified random sampling:** Different allocations. Proportion and Optimum allocation.

#### Course Outcomes:

This course will enable the students to:

CO1:-To understand the Basic requirement of Hypothesis

CO2:- Understanding the applications of Estimation and various methods to MVUE

CO3:-To understand the Basic concepts of sample survey and Basic sampling method

CO4:- Understanding the basics concepts of Stratified random sampling.

CO5:- To understand the basic sampling method.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

BMA086A	ANOVA & DOE	L-T-P :4-0-0
---------	-------------	--------------

#### Course Objective:

- To understand the Basic Concept of Time Series.
- To describe methods of ANOVA
- To develop an understanding of Design of Experiment.

#### Unit-I

**Analysis of variance:** One-way and two-way classified data for fixed effects models. Analysis of Covariance: One-way and two-way classified data with one concomitant variable.

#### Unit-II

**Experimental designs:** Role, historical perspective, terminology, experimental error, basic principles, uniformity trials, fertility contour maps, choice of size and shape of plots and blocks.

**Basic designs:** Completely Randomized Design (CRD).

#### Unit-III

**Randomized Block Design (RBD), Latin Square Design (LSD)** – layout, model and statistical analysis, relative efficiency, analysis with missing observations.

#### Unit-IV:

**Time Series:** Introduction, decomposition of a time series, different components with illustrations. Measurement of trend-Graphical Method, Method of Semi-averages, Method of fitting curves. Method of Moving Averages. Measurement of seasonal variation- Method of Simple Averages, Ratio to Trend Method, Ratio to Moving Average Method and Link Relative Method. Measurement of cyclical variation residual method.

#### Unit-V:

**Non Parametric Tests:** Definition merits and limitations, Sign test for univariate and bivariate distributions, Run test and Median test for small and large samples.

BMA088A	Stochastic Process & Queuing Theory	L-T-P: 4-1-0
---------	-------------------------------------	--------------

#### Course Objective:

- To understand the Basic concept of Stochastic Process.
- To describe methods of Markov Chain & Poisson Process.
- To develop an understanding of Queuing Theory.

#### Unit-I

Probability Distributions: Generating functions, Bivariate probability generating function. Stochastic Process: Introduction, Stationary Process.

#### Unit-II

Markov Chains: Definition of Markov Chain, transition probability matrix, order of Markov chain, Markov chain as graphs, higher transition probabilities.

#### Unit-III

Generalization of independent Bernoulli trials, classification of states and chains, stability of Markov system, graph theoretic approach.

#### Unit-IV:

Poisson Process: postulates of Poisson process, properties of Poisson process, inter-arrival time, pure birth process, Yule Furry process, birth and death process, pure death process.

#### Unit-V:

Queuing System: General concept, steady state distribution, queuing model, M/M/1 with finite and infinite system capacity, waiting time distribution (without proof). Gambler's Ruin Problem: Classical ruin problem, expected duration of the game.

5. Feller, William (1968): Introduction to probability Theory and Its Applications, Vol I, 3<sup>rd</sup> Edition, Wiley International.

#### Course Outcomes:

This course will enable the students to:

- CO1:- To understand the Basic of Stochastic Process.  
CO2:- Understanding the basics concepts of Markov Chain.  
CO3:- Understanding the applications of Stochastic Process.  
CO4:- Understanding the concept of Queuing Theory.  
CO5:-.. Understanding the various Models in Queuing Theory.

BMA089A	Multivariate Analysis	L-T-P: 4-1-0
---------	-----------------------	--------------

#### Course Objective:

- To understand the Basic concept Bivariate Distributions.
- To describe methods Multivariate Normal Distribution.
- To develop an understanding of Sequential Analysis.

#### Unit-I

Bivariate Normal Distribution (BVN): p.d.f. of BVN, properties of BVN, marginal and conditional p.d.f. of BVN. Multivariate Data: Random Vector: Probability mass/density functions, Distribution function, Mean vector & Dispersion matrix, Marginal & Conditional distributions.

#### Unit-II

Multivariate Normal distribution and its properties. Sampling distribution for mean vector and variance- covariance matrix. Multiple and partial correlation coefficient and their properties. Introduction to Discriminant Analysis, Principal Components Analysis and Factor Analysis.

#### Unit-III

Sequential Analysis: Sequential probability ratio test (SPRT) for simple vs simple hypotheses. Fundamental relations among  $\alpha$ ,  $\beta$ , A and B, determination of A and B in practice.

#### Unit-IV:

Wald's fundamental identity and the derivation of operating characteristics (OC) and average sample number (ASN) functions, examples based on normal, Poisson, binomial and exponential distributions.

#### Unit-V:

Hotelling- $T^2$  and its properties and applications, Mahanalobis  $D^2$ . Wishart distributions and its properties. Asymptotic distribution of Z-tanh (r). Multivariate central limit theorem.

#### Course Outcomes:

This course will enable the students to:

1. CO1:- To understand the Basic concepts of Bivariate Normal Distribution.
2. CO2:- To Understanding the basics concept of Multinomial Normal Distribution.
3. CO3:- Understanding the basics concepts of Sequential Analysis
4. CO4:- Understanding the basics concept of Non-Parametric Methods.
5. CO5:- Understanding the basic concept of Hotelling- $T^2$  and its properties and applications.

**JECRC<sup>TM</sup>**  
**UNIVERSITY**  
BUILD YOUR WORLD

**Department of Mathematics**  
**Course Structure and Syllabi**  
**B.Sc. Mathematics (Pass Course)**  
**Session 2022-25**

### **Program Outcome(PO's)**

Upon completion of B.Sc. (Pass Course) Mathematics programme, students will be able to acquire the following attributes.

#### **PO1: Disciplinary knowledge**

Capability of demonstrating comprehensive knowledge of mathematics and understanding of one or more disciplines which form a part of an undergraduate programme of study.

#### **PO2: Communications skills**

- (i) Ability to communicate various concepts of mathematics effectively using examples and their geometrical visualizations.
- (ii) Ability to use mathematics as a precise language of communication in other branches of human knowledge.
- (iii) Ability to communicate long standing unsolved problems in mathematics.
- (iv) Ability to show the importance of mathematics as precursor to various scientific developments since the beginning of the civilization.
- (v) Ability to explain the development of mathematics in the civilizational context and its role as queen of all sciences.

#### **PO3: Critical thinking and analytical reasoning**

- (i) Ability to employ critical thinking in understanding the concepts in every area of mathematics.
- (ii) Ability to analyze the results and apply them in various problems appearing in different branches of mathematics.

#### **PO4: Problem solving**

- (i) Capability to solve problems in computer graphics using concepts of linear algebra.
- (ii) Capability to solve various models using techniques of differential equations.
- (iii) Ability to solve linear system of equations, linear programming problems and network flow problems.
- (iv) Ability to provide new solutions using the domain knowledge of mathematics acquired during this programme.

#### **PO5: Research-related skills**

- (i) Capability for inquiring about appropriate questions relating to the concepts in various fields

Prof. Dr. J. S. J. J.

Dr. J. S. J. J.

Dr. J. S. J. J.

Dr. J. S. J. J.

(ii) To know about the advances in various branches of mathematics.

**PO6: Information/digital literacy**

(i) Capability to use appropriate softwares to solve system of equations and differential equations.

(ii) Capability to understand and apply the programming concepts of C++ to mathematical investigations and problem solving.

**PO7:Self-directed learning**

Ability to work independently and do in-depth study of various notions of mathematics.

**PO8: Moral and ethical awareness/reasoning**

Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adopting objective, unbiased and truthful actions in all aspects.

**PO9: Lifelong learning**

Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning.

**PO10: Professional and Employability Skills**

(i) Completion of this programme will also enable the learners to join the teaching profession.

(ii) The programme will also help students to enhance their employability for government jobs, jobs in banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

A row of seven handwritten signatures in black ink, likely representing faculty members or officials involved in the program.

## Semester-I

BMA021C	Calculus	L-T-P:4-1-0
---------	----------	-------------

### Course Objective:

- To increase the student's appreciation of the basic role played by mathematics in Basic Sciences.
- To find curvature, radius of curvature, Centre of curvature and Chord of curvature.
- Use Calculus to compute quantities like Points of inflexion, Asymptotes.
- To develop the concepts of Partial differentiation, Chain rule of partial differentiation.
- Total Differentiation and applications of it as maxima and minima of two variables.
- To trace curves in Cartesian, parametric and polar co-ordinates

### Unit-I

Real numbers, Sequences of real numbers, Convergence of sequences and series, Bounded and monotonic sequences; Definite integral as a limit of sum, Integration of irrational algebraic functions and transcendental functions, Reduction formulae, Definite integrals.

### Unit-II

Definition of limit of a real valued function, Limit at infinity and infinite limits;  $\delta$ - $\epsilon$  Continuity of a real valued function, Properties of continuous functions, Intermediate value theorem, Geometrical interpretation of continuity, Types of discontinuity; Uniform continuity.

### Unit-III

Differentiability of a real valued function, Geometrical interpretation of differentiability; Relation between differentiability and continuity, Differentiability and monotonicity, Chain rule of differentiation; Darboux's theorem, Rolle's theorem, Lagrange's mean value theorem, Cauchy's mean value theorem, Geometrical interpretation of mean value theorems; Successive differentiation, Leibnitz's theorem.

### Unit-IV

Maclaurin's and Taylor's theorems for expansion of a function in an infinite series, Taylor's theorem in finite form with Lagrange, Cauchy and Roche-Schlomilch forms of remainder; Maxima and minima.

### Unit-V

Curvature, Asymptotes of general algebraic curves, Parallel asymptotes, Asymptotes parallel to axes; Symmetry, Concavity and convexity, Points of inflection, Tangents at origin, Multiple points, Position and nature of double points; Tracing of Cartesian, polar and parametric curves.

### References:

5. George B. Thomas Jr., Joel Hass, Christopher Heil & Maurice D. Weir (2018), Thomas' Calculus (14th edition), Pearson Education.

**Course Learning Outcomes:** This course will enable the students to:

- CO1 Assimilate the notions of limit of a sequence and convergence of a series of real numbers.
- CO2 Calculate the limit and examine the continuity of a function at a point.
- CO3 Understand the consequences of various mean value theorems for differentiable functions.
- CO4 Understand the Maclaurin's and Taylor's theorems for expansion of a function in an infinite series.
- CO5 Understand the concepts of concavity and convexity, Points of inflexion, Asymptotes and tracing of curves in Cartesian, parametric and polar co-ordinates.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Semester-II

<b>BMA043B</b>	<b>Group Theory</b>	<b>L-T-P:4-1-0</b>
----------------	---------------------	--------------------

### **Course Objective:**

- Recall and use the definitions and properties of cosets and subgroups.
- Derive the existence of groups of a specified small order.
- Recall and apply Sylow's Theorems to determine the structure of certain groups of small order.

### **Unit-I**

Symmetries of a square, definition and examples of groups including dihedral, elementary properties of groups, Subgroups and examples of subgroups.

### **Unit-II**

Cyclic groups, Properties of cyclic groups, Lagrange's theorem, Euler phi function, Euler's theorem, Fermat's little theorem, cycle notation for permutations, properties of permutations, even and odd permutations, alternating groups, Cayley's theorem and its applications.

### **Unit-III**

Properties of cosets, normal subgroups, simple groups, factor groups, Cauchy's theorem for finite abelian groups; centralizer, normalizer, Center of a group, Product of two subgroups.

### **Unit-IV**

Group homomorphisms, Properties of homomorphisms, Group isomorphisms, properties of isomorphisms, First, second and third isomorphism theorems for groups.

### **Unit-V**

Introduction to Rings: examples and properties, Integral Domains, Division Rings, Fields and its Characteristics, Subrings, Ideals, Quotient Ring.

### **References:**

7. I.S. Luthar & I.B.S. Passi (2013). Algebra: Volume 1: Groups. Narosa.

**Course Learning Outcomes:**

The course will enable the students to:

- CO1 Link the fundamental concepts of groups and symmetries of geometrical objects.
- CO2 The student will be able to understand the theory of cyclic group and permutation group.
- CO3 Understand the concepts of Normal Subgroups.
- CO4 Learn the concept of Group homomorphisms and isomorphism.
- CO5 Learn about the concept of Ring, Integral Domain and Field.

### Semester-III

BMA007D	Numerical Analysis	L-T-P:4-1-0
---------	--------------------	-------------

#### Course objective :

- Numerical methods, based upon sound computational mathematics, are the basic algorithms underpinning computer predictions in modern systems science.
- Such methods include techniques for simple optimisation, interpolation from the known to the unknown, linear algebra underlying systems of equations, Integrals, ordinary differential equations to simulate systems, and stochastic simulation under random influences.

#### Unit-I

Round-off error and computer arithmetic, Local and global truncation errors, Algorithms and convergence; Bisection method, False position method, Fixed point iteration method, Newton's method and secant method for solving equations.

#### Unit-II

Partial and scaled partial pivoting, Lower and upper triangular (LU) decomposition of a Jacobi, -matrix and its applications, Thomas method for tridiagonal systems; Gauss Seidel and successive over-relaxation (SOR) methods. -Gauss

#### Unit-III

Piecewise linear interpolation, Cubic spline Newton forward and backward difference- interpolation, Finite difference operators, Gregory interpolations.

#### Unit-IV

First order and higher order approximation for first derivative, Approximation for second derivative; Numerical integration: Trapezoidal rule, Simpson's rules and error analysis, Storer extrapolation methods, Richardson extrapolation. -Bulirsch

#### Unit-V

Kutta methods, Higher order one step method, Multi-step method-Euler's method, Runge Finite difference method, Shooting method, Real life examples: Google search engine, 1D and 2D simulations, Weather forecasting.

5. Robert J. Schilling & Sandra L. Harris (1999). Applied Numerical Methods for Engineers Using MATLAB and C. Thomson-Brooks/Cole.

**Course Learning Outcomes:**

This course will enable the students to:

- CO1 Obtain numerical solutions of algebraic and transcendental equations.
  - CO2 Find numerical solutions of system of linear equations and check the accuracy of the solutions.
  - CO3 Learn about various interpolating and extrapolating methods.
  - CO4 Learn the concepts of Numerical Differentiation and Integration.
  - CO5 Solve initial and boundary value problems in differential equations using numerical methods.
- Apply various numerical methods in real life problems.

## Semester IV

BMA0992A	Ordinary Differential Equations	L-T-P:4-1-0
----------	---------------------------------	-------------

### Course objectives:

- To understand the concepts relating to the order and linearity of ODEs and PDEs, analytic and computational solution methods for ODEs.
- To teach students the real-world applications of ODEs.
- To teach students the series solution of ordinary differential equations.

### Unit-I

Degree and order of a differential equation. Formation of differential equations, Equations of the first order and first degree-Equations variables separable, Homogeneous equations and equations reducible to homogeneous form. Linear equations and equations reducible to linear form. Exact differential equations and equations can be made exact.

### Unit-II

Linear differential equations of higher order with constant coefficients, Complimentary functions and Particular integrals.

### Unit-III

Linear differential equations of higher order with variable coefficients, Cauchy's Homogeneous linear differential equations, Exact differential equations, One part of CF is known, Normal form, Solution by transformation of the equation by changing the independent variable, Method of variation of parameters.

### Unit-IV

Orthogonal trajectories, First order but higher degree differential equations solvable for x, y and p, Clairaut's form, Simultaneous differential equations. Applications to differential equations.

### Unit-V

Series solution at ordinary and regular singular point: Power Series solution at ordinary points, Frobenius series solution at regular singular points.

### References:

1. M. D. Raisinghania, Ordinary and Partial Differential Equations, S. Chand & Co., 2003.
2. M. Ray, A Text Book on Differential Equations, Students and Friends Co., Agra, 1998.

6. Frank Ayres, Theory and Problems of Differential Equations, TMH, 2002.

7. I. N. Snedon, Elements of Partial Differential Equations, TMH, 2001.

### Course Learning Outcomes:

The course will enable the students to:

- CO1 Understand the genesis and application of ordinary differential equations. Learn various techniques of getting exact solutions of solvable first order ordinary differential equations.
- CO2 Learn various techniques of getting exact solutions of solvable linear differential equations of higher order.
- CO3 Apply a range of techniques to solve second order ordinary differential equations with variable coefficient.
- CO4 Model physical phenomena using ordinary differential equations such as the electric circuit, simple harmonic motion etc.
- CO5 Power series method for higher order linear equations, especially in cases when there is no method available to solve such equations.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

CO5	H	H	M	M	L	L	L	M	M	H

H = Highly Related; M = Medium L = Low

*[Handwritten signatures]*

Semester V

BMA091A	Mathematical Programming	L-T-P:4-1-0
---------	--------------------------	-------------

**Course objectives:**

- To understand the basic concept of LPP.
- To understand Simplex and Revised Simplex algorithm.
- To understanding Duality theory, Dual simplex method.

**Unit-I**

Convexity and Basic Feasible Solutions Formulation, Canonical and standard forms, Graphical method; Convex and polyhedral sets, Hyperplanes, Extreme points; Basic solutions, Basic Feasible Solutions, Reduction of feasible solution to basic feasible solution, Correspondence between basic feasible solutions and extreme points, LPP Formulation.

**Unit-II**

Optimality criterion, Improving a basic feasible solution, Graphical method for LPP, Unboundedness, Unique and alternate optimal solutions; Simplex algorithm and its tableau format.

**Unit-III**

Artificial variables, Two-phase method, Big-M method. Formulation of the dual problem, Duality theorems, Complimentary slackness theorem, Economic interpretation of the dual, Dual-simplex method.

**Unit-IV**

Definition and formulation, Methods of finding initial basic feasible solutions: Northwest-corner rule, Least- cost method, Vogel approximation method; Algorithm for obtaining optimal solution. Assignment Problem: Mathematical formulation and Hungarian method.

**Unit-V**

Sequencing Problems: Introduction – Basic Assumptions – Sequencing n Jobs on 2 Machines – Sequencing n Jobs on 3 machines – Sequencing 2 Jobs on n Machines.

6. A. S. Gupta (2004). Calculus of Variations with Applications. PHI Learning

**Course Learning Outcomes:**

This course will enable the students to:

- CO1 Analyze and solve linear programming models of real life situations., and illustrate the concept of convex set and extreme points.
- CO2 Understand the theory of the simplex method. Provide graphical solutions of linear programming problems with two variables.
- CO3 Understand the concepts of artificial variable and duality.
- CO4 Learn about the applications to transportation, assignment problem.
- CO5 Understand problems related to machine sequencing.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome

## Semester VI

BSM001A	Real and Complex Analysis	L-T-P:4-1-0
---------	---------------------------	-------------

### OBJECTIVE:

- To understand the basic theory of sequence and series.
- To understand Riemann integrals and improper integrals.
- To develop an understanding of complex analysis.

### Unit I

Riemann Integral, Integrability of continuous and monotonic functions, Fundamental theorems of integral calculus, Mean Value theorems of integral calculus.

### Unit II

Improper integrals and their convergence. Comparison test, Abel's and Dirichlet's test, Integral as a function of a parameter and its applications.

### Unit III

Sequences, Theorems on limits of sequences, Monotone convergence theorem, Cauchy's convergence criterion. Infinite series, series of non-negative terms. Comparison test, Ratio test, Rabbe's, logarithmic, De Morgan and Bertrand's tests. Alternating series, Leibnitz's theorem.

### Unit IV

Complex Analysis: Analytic functions, Harmonic functions, Elementary functions. Mapping by elementary functions, Mobius transformations, Conformal mappings.

### Unit V

Complex integration, Singularity, poles and residue, contour integration.

### References

### Course Outcomes:

CO1: Understanding the basic concepts of sequences.

CO2: Understanding the basics concepts of Infinite series.

CO3: Understanding the various fundamental aspects of Riemann Integrals.

CO4: Understanding the basics concepts of improper integrals and their convergence.

CO5: Developing the ability to understand the analytic functions, mapping by elementary functions and complex integration.

## Statistics

### Objectives of the Course

This course is designed to provide the science student an intense foundational introduction to the fundamental concepts in Statistics. The course continues the introduction to the student started in Statistics to many branches of sciences and concentrates on pertinent and concrete examples and applications. After completing the course, the student should be able to work basic problem and word problems in Applied and Pure Statistics.

It is imperative to know the importance and scope of the discipline, to inculcate interest in statistics to impart knowledge of science as the basic objective of Education, to develop a scientific attitude to make students open minded, to develop an ability to work on their own and to make them fit for the society, to expose themselves to the diversity amongst life forms, to develop skill in practical analysis along with collection and interpretation of statistical materials and data, to develop an ability for the application of the acquired knowledge in the fields of statistics so as to make our country self-reliant and self-sufficient and to make them able to appreciate and apply ethical principles to statistical research and studies. The science/ mathematics/ engineering/ business student should have mastered and demonstrated the following quantitative skills after completing Statistics

Page 68

Dhruv  
Jaspreet

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy. Student can choose following subjects from “Swayam Portal” for fulfilment of their credits in the semester (depending upon the availability of the course on Swayam Portal).

Semester	Course Name
I	Descriptive Statistics with R software
II	Advanced Probability Theory
III	Regression Analysis
IV	Probabilistic Methods in PDE
V	Applied Multivariate Analysis
VI	Applied Multivariate Statistical Modelling

Page 68 *Praveen* *nigam* *Shiksha* *Seema* *Shiksha* *Shiksha*

### **Program Outcome(PO's)**

Upon completion of B.Sc. (Hons.) Mathematics programme, students will be able to acquire the following attributes.

#### **PO1: Disciplinary knowledge**

Capability of demonstrating comprehensive knowledge of mathematics and understanding of one or more disciplines which form a part of an undergraduate programme of study.

#### **PO2: Communications skills**

- (i) Ability to communicate various concepts of mathematics effectively using examples and their geometrical visualizations.
- (ii) Ability to use mathematics as a precise language of communication in other branches of human knowledge.
- (iii) Ability to communicate long standing unsolved problems in mathematics.
- (iv) Ability to show the importance of mathematics as precursor to various scientific developments since the beginning of the civilization.
- (v) Ability to explain the development of mathematics in the civilizational context and its role as queen of all sciences.

#### **PO3: Critical thinking and analytical reasoning**

- (i) Ability to employ critical thinking in understanding the concepts in every area of mathematics.
- (ii) Ability to analyze the results and apply them in various problems appearing in different branches of mathematics.

#### **PO4: Problem solving**

- (i) Capability to solve problems in computer graphics using concepts of linear algebra.
- (ii) Capability to solve various models using techniques of differential equations.
- (iii) Ability to solve linear system of equations, linear programming problems and network flow problems.
- (iv) Ability to provide new solutions using the domain knowledge of mathematics acquired during this programme.

#### **PO5: Research-related skills**

- (i) Capability for inquiring about appropriate questions relating to the concepts in various fields of mathematics.

*Fig 4 98* *Pramit* *nijam* *J. S. J.* *Saurav* *Shrestha* *Jaspreet*

- (ii) To know about the advances in various branches of mathematics.

**PO6: Information/digital literacy**

- (i) Capability to use appropriate softwares to solve system of equations and differential equations.
- (ii) Capability to understand and apply the programming concepts of C++ to mathematical investigations and problem solving.

**PO7: Self-directed learning**

Ability to work independently and do in-depth study of various notions of mathematics.

**PO8: Moral and ethical awareness/reasoning**

Ability to identify unethical behavior such as fabrication, falsification or misrepresentation of data and adopting objective, unbiased and truthful actions in all aspects.

**PO9: Lifelong learning**

Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning.

**PO10: Professional and Employability Skills**

- (i) Completion of this programme will also enable the learners to join the teaching profession.
- (ii) The programme will also help students to enhance their employability for government jobs, jobs in banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

**Semester- 1**

<b>BSS001A</b>	<b>Basic Statistics</b>	<b>L-T-P:4-0-0</b>
----------------	-------------------------	--------------------

**OBJECTIVE:**

- To understand the Basic requirement of statistics to society
- To describe methods of Presentation of data
- To develop an understanding of Dispersion and Attributes.

<b>UNIT 1</b>	<p>Meaning of Statistics. Importance of Statistics. Scope of Statistics: In Industry, Biological Sciences, Medical Sciences, Economics, Social Sciences, Management Sciences, Agriculture, Insurance, Information technology, Education and Psychology. Limitations. Types of data : Collection of primary and secondary data.</p> <p><b>Organization of data :</b> Qualitative and Quantitative classification, discrete and continuous classification, Geographical and Chronological classification. Construction of frequency tables, frequency distribution for continuous and discrete data, cumulative frequency distributions (inclusive and exclusive methods). Graphical presentation of data: Histogram, Frequency Polygon, Frequency curve, Pie Chart and Ogives</p>
<b>UNIT 2</b>	<p><b>Measures of central tendency:</b> Statistical averages, characteristics of a good statistical average. Arithmetic Mean (A.M.), Mode and Median: Definition, effect of change of origin and scale. Formulae (for ungrouped and grouped data), merits and demerits. Empirical relation between mean, median and mode (without proof) merits and demerits.</p> <p><b>Measure of Dispersion-</b> Definition, different measures of Dispersion, simple properties, merits and demerits. Coefficient of variation.</p>
<b>UNIT 3</b>	<p><b>Skewness, Kurtosis and moments :</b> Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution. Bowley's coefficient of skewness: Bowley's coefficient of skewness, Karl Pearson's coefficient of skewness. Measures of skewness Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions. Measures of kurtosis based on moments (<math>\beta_2, \gamma_2</math>). Raw moments (<math>m'_r</math>) for ungrouped and grouped data. Central moments (<math>m_r</math>) for ungrouped and grouped data.</p>
<b>UNIT 4</b>	<p><b>Principal of Least Square:</b> Fitting of Straight line, second degree parabola, Power curve and Exponential Curve.</p> <p><b>Correlation and Regression:</b> Correlation, Scatter Diagram, Karl Pearson's Coefficient of Correlation and its properties. Spearman's Rank Correlation Coefficient. Regression-Fitting of Regression Lines, Regression Coefficients with properties.</p>
<b>UNIT 5</b>	<p><b>Theory of Attributes:</b> Classes and class frequencies, order of class frequencies, Ultimate class frequency, Consistency of data (up to order 3). Independence of attributes, contingency table, Association of attributes, Measures of association.</p>

**Text Books:**

S.P. Gupta : Statistical Methods, Sultan Chand & Sons. First edition.

**Reference Books:**

1. Goon A.M., Gupta M.K., Dasgupta B. Fundamentals of Statistics, Volume I, The World Press Private Limited, Calcutta. Fifth edition.

3. Spiegel, M.R.: Theory and Problems of Statistics, Schaum's Publishing Series. Tata McGraw-Hill. First edition.
4. Welling, Khandeparkar, Pawar, Naralkar : Descriptive Statistics : Manan Prakashan
5. S.P. Gupta: Statistical Methods, Sultan Chand & Sons. First edition.
6. Prem . S. Mann (2007). Introductory Statistics (6th edition) John Wiley & Sons.
7. Allan Bluman (2009) Introductory Statistics. A step by step approach (7th edition). McGraw-Hill

**Course Outcomes**

CO1:-Understanding the basics about the data and frequency data.

CO2:-Understanding the basic concepts of measures of central tendency and measures of dispersion

CO3:-Understanding the various techniques to calculate skewness kurtosis and moments.

CO4:- Understanding the basic concepts about Linear Estimation.

CO5:- Understanding the basic concepts of Attributes.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

BSS002A	Statistics Practical- I	L-T-P:0-0-1
---------	-------------------------	-------------

#### OBJECTIVE:

- To understand the Basic requirement of statistics to society
- To describe methods of Presentation of data
- To develop an understanding of Dispersion

#### List of programs

- Introduction to graphical presentation data
- Computations of Mean, Media and Mode.
- Computation of Geometric Mean and Harmonic Mean
- Computation of Mean Deviation.
- Computation of Quartile deviation.
- Computation of Variance.
- Computation of Coefficient of Variation.
- To check the symmetry of the distribution by coefficient of Skewness.
- To check the Shape of the distribution by coefficient of Kurtosis.
- Evaluate the Raw and Central Moments of the distribution.
- Solving system of moments and Attributes.
- Solve the problems of Linear Correlation and Regression.

## Semester II

BSS003A	Probability & Random Variables	L-T-P:4-1-0
---------	--------------------------------	-------------

### OBJECTIVE:

- To understand the Basic requirement of Correlation
  - To describe methods of Transformation.
- To develop an understanding of probability distribution

<b>UNIT 1</b>	<b>Probability:</b> Random experiment, trial, sample point and sample space, events, operations of events, concepts of equally likely, mutually exclusive and exhaustive events. <b>Definition of probability:</b> Classical, relative frequency and axiomatic approaches. Discrete probability space, properties of probability under set theoretic approach. Independence of events, Conditional probability, total and compound probability theorems, Baye's theorem and its applications.
<b>UNIT 2</b>	<b>Random variables</b> – discrete and continuous, probability mass function (pmf) and probability density function (pdf), Cumulative distribution function (cdf). Joint, Marginal and Conditional probability distributions. Independence of two variable, definition and application of Jacobian transformation for one and two variables
<b>UNIT 3</b>	<b>Mathematical Expectation:</b> Expectation of a random variable and its simple properties. Addition and Multiplication theorems of Expectations. Variance and covariance and their properties. Moment generating function, characteristic function, Cumulants, Cumulants generating functions and their properties. Chebyshev's Inequality. Law of Large numbers and Central limit Theoram.
<b>UNIT 4</b>	<b>Univariate Probability Distributions:</b> Uniform, Binomial, Poisson, Hypergeometric, Geometric and Negative Binomial with simple properties and applications. Fitting of Binomial and Poisson distribution. Normal and Poisson distributions as limiting case of binomial distribution
<b>UNIT 5</b>	<b>Continuous probability distributions:</b> Normal, Exponential, Rayleigh, Gamma, Beta distributions (First kind and Second kind), Distributions with simple properties and applications.

H = Highly Related; M = Medium L = Low

*[Handwritten signatures]*

### Semester III

<b>BMA085A</b>	<b>Statistical Inference &amp; Sampling</b>	<b>L-T-P:4-1-0</b>
----------------	---	--------------------

#### OBJECTIVE:

- To develop an understanding of estimation
- To develop an understanding of sampling Techniques.
- To develop an understanding of Testing.

<b>UNIT 1</b>	<b>Basic Concepts:</b> Sampling distribution, Sampling Distribution of sum of Binomial, Poisson and mean of Normal Distribution. Standard Error. Meaning and role of Central Limit Theorem for identically independently distributed (i.i.d) random variables.
<b>UNIT 2</b>	<b>Statistical Hypothesis and test of significance I</b> Definition, Simple and Composite hypotheses. Null and Alternative Hypotheses, two Types of errors in sampling, critical region, level of significance critical and p-values, procedure and testing of hypothesis.
<b>UNIT 3</b>	<b>Statistical Hypothesis II:</b> one tailed and two tailed test, Power and size of the test, and critical region Neyman Pearson Lemma and its application for finding BCR. <b>Estimation:</b> Parametric space, sample space, point estimation. Requirements of good estimator: Consistency, unbiasedness, efficiency, sufficiency. <b>Minimum variance unbiased (MVU)</b> estimators. Cramer-Rao inequality. Minimum Variance Bound (MVB) estimator, Rao-Blackwell theorem, Lehmann-Scheffe theorem.
<b>UNIT 4</b>	<b>Sample Surveys:</b> Concepts of Population and sample. Complete enumeration vs sampling. Need for sampling. Principal and organizational aspects in the conduct of a sample survey. Sampling and Non sampling errors.
<b>UNIT 5</b>	<b>Basic sampling methods:</b> Simple random sampling with or without replacement for the estimation of mean, total, proportion. Determination of sample size. Probability proportional to size sampling (with replacement). <b>Stratified random sampling:</b> Different allocations. Proportion and Optimum allocation.

### Course Outcomes

This course will enable the students to:

CO1:-To understand the Basic requirement of Hypothesis

CO2:- To understand the Basics of Inference.

CO3:- Understanding the applications of Estimation and various methods to MVUE

CO4:- To understand the Basic concepts of sample survey and Basic sampling method

CO5:- Understanding the basics concepts of Stratified random sampling.

# Semester IV

<b>BMA082A</b>	<b>Industrial Statistics &amp; Sampling Distributions</b>	<b>L-T-P:4-0-0</b>
----------------	---	--------------------

## OBJECTIVE:

- To understand the Basic requirement of statistics to society
- To describe methods of Testing.
- To understand the Basic requirement of SQC.

<b>UNIT 1</b>	<b>Statistical Quality Control -I</b> Concept of SQC, process control. Causes of variation in quality, Shewhartz Control Charts technique of rational sub groups, control limits, Natural tolerance limits, Specification limits, summary of out of control criteria.
<b>UNIT 2</b>	<b>Statistical Quality Control -II</b> Control Charts for Variables: Construction of Mean, Range and Standard Deviation Charts. Concept of defects and defectives. Control chart for attributes: Construction of np-chart, p-chart, and c-chart.
<b>UNIT 3</b>	<b>Chi-square Distribution</b> Definition, Derivation, Moments, Moment Generating Function, Cumulant Generating Function. Limiting and Additive property of Chi-square variates. Distribution of ratio of chi-square variates <b>Applications of Chi-square</b> Chi-square test for testing normal population variance, Test for goodness of fit, Contingency table and Test for independence of attributes, Yates correction for 2x2 contingency table conditions of Chi-square.
<b>UNIT 4</b>	<b>t-Distribution</b> Definition of Student's-t and Fisher's-t statistics and derivation of their distributions. Limiting property of t-distribution. Applications: Testing of single mean, Difference of two means, paired t-test and sample correlation coefficient.
<b>UNIT 5</b>	<b>F-Distribution</b> Definition of Snedecor's F-distribution and its derivation. Applications- Testing of equality of two variance. Fisher's transformation and its uses. Relationship between 't', 'F' and chi-square statistics.

  7. Snedecor, G.W. and Cochran, W.G. (1967): Statistical Methods, Iowa State University Press.

**Course Learning Outcomes:**

This course will enable the students to:

- CO1:- Understanding the basics concepts SQC.  
 CO2:- Understanding the Concept of Control Charts.  
 CO3: Understanding the applications of Chi-square -distribution.  
 CO4:- Understanding the various methods to T-distribution.  
 CO5:- Understanding the various methods to F-distribution

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

BSS004A	Statistics Practical- II	L-T-P:0-0-1
---------	--------------------------	-------------

#### OBJECTIVE:

- To understand the Basic requirement of statistics to society
- To describe methods of Testing.
- To understand the Basic requirement of SQC.

#### List of programs

- Computation of Variable Control Charts.
- Computation for Mean and Range Control Charts.
- Computation for p, np and cControl Charts.
- To test the hypothesis for Testing Single Mean Problem by t test.
- To test the hypothesis for Testing Two Mean Problem by t test.
- To test the hypothesis for Testing Significance of Correlation Coefficient by t test.
- To test the hypothesis for testing Single Variance by Chi-Square test.
- To test the hypothesis for testing Goodness of fit by Chi-Square test.
- To test the hypothesis for testing Independence of Attributes. by Chi-Square.
- To test the hypothesis for testing Two Variance by F test.

**Semester V**

<b>BMA084A</b>	<b>Applied Statistics</b>	<b>L-T-P:4-1-0</b>
----------------	---------------------------	--------------------

**OBJECTIVE:**

- To understand the Basic requirement of statistics to society
- To describe methods of Demography
- To develop an understanding of index numbers

<b>UNIT 1</b>	<b>Vital Statistics – I</b> Meaning, definition and utility. Sources of demographic data- census, registration. Indices of mortality. Measurement of mortality, crude death rate and standardization death rates. Indices of fertility, Measurement of fertility – crude birth rate, general fertility rate. Age- specific fertility rate, total fertility rate. Gross and Net Reproduction Rates.
<b>UNIT 2</b>	<b>Vital Statistics – II</b> Stationary and stable population, concept and determination of the rate of increase in a stable population. Life table: Construction of life table from graduated rates of mortality and evaluation of probabilities of survival and death from a life table.
<b>UNIT 3</b>	<b>Demand Analysis</b> Demand and supply, law of demand and supply. Elasticity of demand: Price, Income and Cross elasticity. Engel's curve and Engel's law, Pareto's law of income.
<b>UNIT 4</b>	<b>Index Number – I</b> Meaning and uses of index numbers, problem in the construction of index numbers, price relatives, quantity and value relatives. Fixed base and chain base index numbers, use of averages. Weighted and unweighted index numbers- Laspeyers, Paasche's, Marshall-Edgeworth and Fisher's ideal index numbers, Dorbish , Kelly's fixed base index numbers.
<b>UNIT 5</b>	<b>Index Number – II</b> Test for index numbers. Base shifting, splicing and deflating. Consumer Price Index numbers, Construction of cost of living index and Whole-sale price index.

**Text Books:**

Gupta, S.C. and Kapoor, Fundamentals of Applied Statistics, S Chand & Company, New Delhi.

**Reference Books:**

1. Srivastava O.S. (1983) : A Text Book of Demography, Vikas Publishing House, new Delhi.
2. Benjamin B. (1959): Health and Vital Statistics, Allen and Unwin.
3. Croxton, F.E., Cowden, D.J. and Klein, S. (1982): Applied General Statistics, 3rd Edn. Prentice Hall of India (P) Ltd.

4. Mukhopadhyay, P. (1994) :Applied Statistics, new Central Book Agency Pvt. Ltd., Calcutta.
5. Goon A.M., Gupta M.K. and Das Gupta B. (1986): Fundamentals of Statistics, Vol. II, World Press, Calcutta.

### Course Outcomes

CO1:- To understand the basic concept of Vital Statistics.

CO2:- To understand the concept of Life Table.

CO-3 : To understand the concept of Demand analysis.

CO-4 : To understand the basic concept of Index numbers.

CO5:- To understand the concept of Cost of living Index number.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

## Semester VI

<b>BMA086A</b>	<b>ANOVA &amp; DOE</b>	<b>L-T-P:4-0-0</b>
----------------	------------------------	--------------------

### OBJECTIVE:

- To understand the Basic Concept of Time Series.
- To describe methods of ANOVA
- To develop an understanding of Design of Experiment.

<b>UNIT 1</b>	<b>Analysis of variance:</b> One-way and two-way classified data for fixed effects models. <b>Analysis of Covariance:</b> One-way and two-way classified data with one concomitant variable.
<b>UNIT 2</b>	<b>Experimental designs:</b> Role, historical perspective, terminology, experimental error, basic principles, uniformity trials, fertility contour maps, choice of size and shape of plots and blocks. <b>Basic designs:</b> Completely Randomized Design (CRD).
<b>UNIT 3</b>	<b>Randomized Block Design (RBD), Latin Square Design (LSD)</b> – layout, model and statistical analysis, relative efficiency, analysis with missing observations.
<b>UNIT 4</b>	<b>Time Series:</b> Introduction, decomposition of a time series, different components with illustrations. Measurement of trend-Graphical Method, Method of Semi-averages, Method of fitting curves. Method of Moving Averages. Measurement of seasonal variation- Method of Simple Averages, Ratio to Trend Method, Ratio to Moving Average Method and Link Relative Method. Measurement of cyclical variation residual method.
<b>UNIT 5</b>	<b>Non Parametric Tests:</b> Definition merits and limitations, Sign test for univariate and bivariate distributions, Run test and Median test for small and large samples.

### Text Books:

Gupta, S.C. and Kapoor, V.K.: Fundamentals of Applied Statistics, S Chand & Company, New Delhi

### Reference Books:

## Semester II

	Subject	Paper Type	Subject Code	L	T	P	Credits (Total 24)
Theory	Algebra-II	C	MMA006A	3	1	0	4
	Functional Analysis-I	C	MMA007B	3	1	0	4
	Integral Transforms	ID	MMA019B	3	1	0	4
	Calculus of Variation and Special Function	C	MMA009A	3	1	0	4
	Theory of Optimization	C	MMA010B	3	1	0	4
	Seminar	S	MMA028A				2
Practical	Scilab II	S	MMA032A			4	2

### Semester III

	Subject	Paper Type	Subject Code	L	T	P	Credits (Total 24)
Theory	Differential Equations	S	MMA011B	3	1	0	4
	Functional Analysis-II	C	MMA012B	3	1	0	4
	Numerical Analysis	C	MMA013A	3	1	0	4
ELECTIVES (Any two of the following)							
Theory	Mathematical Modeling	ID	MMA014A	3	1	0	4
	Operations Research	C	MMA015B	3	1	0	4
	Discrete Mathematics	ID	MMA016A	3	1	0	4
	Fluid Dynamics	S	MMA017B	3	1	0	4
	Integral Equations	S	MMA018A	3	1	0	4
	Stochastic Processes & Queuing Theory	S	MMA036A	3	1	0	4
	Probability & Measure Theory	ID	MST002A	3	1	4	4
Practical	Latex LAB	S	MMA033A			4	2
	Numerical analysis LAB II	S	MMA034A			4	2

## Semester IV

	Subject	Paper Type	Subject Code	L	T	P	Credits (Total 28)
Theory	Analytic Dynamics	ID	MMA008C	3	1	0	4
<b>ELECTIVE (Any three of the following)*</b>							
Theory	Fractional Calculus	S	MMA020B	3	1	0	4
	Hydrodynamics	S	MMA021A	3	1	0	4
	Numerical Solution of Partial Differential Equations	S	MMA022A	3	1	0	4
	Number Theory and Cryptography	S	MMA023A	3	1	0	4
	Fuzzy Sets and Applications	S	MMA024A	3	1	0	4
	Advanced Graph Theory	S	MMA025A	3	1	0	4
	Sampling Distribution & Testing of Hypothesis	S	MMA026B	3	1	0	4
	Non-linear Dynamical Systems	S	MMA027A	3	1	0	4
	Major Project (Dissertation)	C	MMA029A				8
Practical	Latex beamer LAB	S	MMA035A			4	2

G-General

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity and quality. The objective of this effort is to take the best teaching learning resources to all, including the most disadvantaged. SWAYAM seeks to bridge the digital divide for students who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

Student can choose following subjects from “Swayam Portal” for fulfillment of their credits in the semester (depending upon the availability of the course on Swayam Portal).

1. Operation Research
2. Functional Analysis

*Fig 4.68* *Praveen* *nigam* *Shruti* *Shruti* *Shruti* *Shruti* *Shruti*

**Note:**

1. The maximum number of students taking an elective shall be 35(preferably).
2. The electives will be offered to the students through counselling in the department based on the marks obtained in the first two semesters.

**Break-up of practical mark allotment (of 35 marks)**

Practical Record: 5 marks

Actual practicals: 20 marks

Question bank answers: 5 marks

(Spiral bound book with the answers in the candidates own handwriting) Viva: 5 marks

**Break-up of internal assessment marks for theory (of 20 marks)**

Attendance: 5 marks

Assignment: 15 marks

**Break-up of internal assessment marks for practical (of 15 marks)**

Preparatory practical exam or two internal tests: 15 marks

**Break-up of project work mark allotment (of 70 marks)**

Project Report : 10 marks

Actual project : 40 marks

Question bank answers : 10marks

(Hard bound book)

Viva : 10 marks

## Objectives

Our Master of Science program is a versatile degree that provides students with the optimal balance between a defined sequence of study and flexible course options.

Mathematics is one of the most enduring fields of study, and is essential in an expanding number of disciplines and professions. Our unique program will help you combine your knowledge of mathematics and solve problems in the physical and biological sciences, engineering, information technology, economics, and business. You will learn study essential topics in calculus, linear algebra and differential equations that can be applied directly to build applications in coding and cryptology, mathematical physics, mathematical biology, bioinformatics and finance.

The M.Sc. course in Mathematics aims at developing mathematical ability in students with acute and abstract reasoning. The course will enable students to cultivate a mathematician's habit of thought and reasoning and will enlighten students with mathematical ideas relevant for oneself and for the course itself.

*Page 98* *Praveen* *nijam* *J. J. S.* *Seenu* *Shristi* *Joshi* *Karapant*

## MISSION AND VISION OF THE NEW SYLLABUS IN MATHEMATICS

### Mission

- Improve retention of mathematical concepts in the student.
- To develop a spirit of inquiry in the student.
- To improve the perspective of students on mathematics as per modern requirement.
- To initiate students to enjoy mathematics, pose and solve meaningful problems, to use abstraction to perceive relationships and structure and to understand the basic structure of mathematics.
- To enable the teacher to demonstrate, explain and reinforce abstract mathematical ideas by using concrete objects, models, charts, graphs, pictures, posters with the help of software tools on a computer.
- To make the learning process student-friendly by having a shift in focus in mathematical teaching, especially in the mathematical learning environment.
- Exploit techno-savvy nature in the student to overcome math-phobia.
- To setup a mathematics laboratory in every college in order to help students in the exploration of mathematical concepts through activities and experimentation.
- To orient students towards relating Mathematics to applications.

### Vision

- To remedy Math phobia through authentic learning based on hands-on experience with computers.
- To foster experimental, problem-oriented and discovery learning of mathematics.
- To prove that the activity-center mathematics laboratory places the student in a problem solving situation and then through self-exploration and discovery habituates the student into providing a solution to the problem based on his or her experience, needs, and interests.
- To provide greater scope for individual participation in the process of learning and becoming autonomous learners.
- To provide scope for greater involvement of both the mind and the hand which facilitates cognition.
- To ultimately see that the learning of mathematics becomes more alive, vibrant, relevant and meaningful; a program that paves the way to seek and understand the world around them. A possible by-product of such an exercise is that math-phobia can be gradually reduced amongst students.
- To help the student build interest and confidence in learning the subject.

*Fig 4 98* *P. Kumar* *mishra* *J. K. Singh* *S. Kumar* *Sharma* *J. K. Singh*

### Program Educational Objectives (PEOs)

The M. Sc Mathematics curriculum is dedicated to prepare students for productive careers after 3-5 years of graduation.	
<b>PEO1:</b>	To train students to develop their positive attitude, skills in modern industry or teaching, and to become a multi facet personality shining in any chosen field.
<b>PEO2:</b>	To prepare them to pursue higher studies and conduct research.
<b>PEO3:</b>	Promote the culture of interdisciplinary research among all disciplines and applied mathematics.
<b>PEO4:</b>	Students will become effective collaborators and innovators, leading or participating in efforts to address social, technical and business challenges.

### Program Specific Outcome: M.Sc. Mathematics program:

PSO1: The Post graduates will become successful professionals by demonstrating logical and analytical thinking abilities (Professional Skills).

PSO2: The Post graduates will work and communicate effectively in inter-disciplinary environment, either independently or in a team, and demonstrate leadership qualities (Problem-Solving Skills).

PSO3: The Post graduates will engage in life-long learning and professional development through self-study, continuing education or professional and doctoral level studies (Successful Career and Entrepreneurship).

### Program Outcome(PO's)

Upon completion of the M.Sc. Mathematics program, students will be able to:

- PO1. Solve complex problems by critical understanding, analysis and synthesis.
- PO2. Demonstrate engagement with current research and developments in the subject.
- PO3. Evaluate hypotheses, theories, methods and evidence within their proper contexts.
- PO4. Select, interpret and critically evaluate information from a range of sources that include books, scientific reports, journals, case studies and the internet.
- PO5. Provide a systematic understanding of the concepts and theories of mathematics and their application in the real world to an advanced level, and enhance career prospects in a huge array offields.
- PO6. Demonstrate a range of appropriate general skills including ITcompetency.
- PO7. Critically interpret data, write reports and apply the basics of rules ofevidence.

## SEMESTER- I

MMA001A	Algebra-1	3-1-0 [4]
---------	-----------	-----------

### OBJECTIVE:

- To understand the advanced group theory.
- To understand field extension for metric tensors, Sylow's theorems and Galois theory.
- To develop an understanding of advanced areas in algebra.

UNIT 1	Conjugate element, Normalizer, The class equation, Cauchy's theorem for finite abelian group, Sylow $p$ -subgroups.
UNIT 2	Direct product of groups. Structure theorem for finitely generated abelian groups.
UNIT 3	Normal and subnormal series. Composition series, Maximal subgroups, Jordan-Holder theorem. Solvable groups. Insolvability of $S_n$ for $n \geq 5$ .
UNIT 4	Extension fields. Finite, algebraic, and transcendental extensions, Splitting fields. Simple and normal extensions.
UNIT 5	Perfect fields, Primitive elements, Algebraically closed fields. Automorphisms of extensions. Galois extensions, Fundamental theorem of Galois theory, Galois group over the rationales.

### Suggested Readings

1. N. Herstein, Topics in Algebra, Wiley Eastern, 1975.
2. P. B. Bhattacharya, S. K. Jain and S. R. Nagpal, Basic Abstract Algebra (2nd Edition), Cambridge University Press, Indian Edition 1977.
3. Ramji Lal, Algebra, Vol.1, Shail Publications, Allahabad 2001.
4. Vivek Sahai and Vikas Bist, Algebra, Narosa Publishing House 1999.
5. D. S. Malik, J. N. Mordeson, and M. K. Sen, Fundamentals of Abstract Algebra, McGraw-Hill International Edition, 1997.

### Course Outcomes

- CO1:- Understanding the basic concept of Conjugate element, Normalizer, the class equation, Cauchy's theorem for finite abelian group, Sylow  $p$ -subgroups.
- CO2:- Understanding the Structure theorem for finitely generated abelian groups.
- CO3:- Understanding the basic concepts of normal, subnormal series and solvable groups.
- CO4:- Understanding the basic concept of extension of fields.
- CO5:- Developing the ability to understand Galois extensions, Fundamental theorem of Galois theory, Galois group over the rationales.

*Fig 4 98* *P. B. Bhattacharya* *mjani* *J. N. Mordeson* *Sen* *Shail* *J. N. Mordeson*

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

<i>Course Outcome</i>	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	H		L					L	L	H
CO2	M		L		L			L	L	H
CO3	H	L	M	L	H			M	L	M
CO4	M	L	M	L	H	L	L	M	L	M
CO5	H	H	M	M	L	L	L	M	L	M

H = Highly Related; M = Medium; L = Low

Fig 4.98 *Praveen* *nijam* *Praveen* *Praveen* *Praveen*

MMA002B	Advanced Analysis	3-1-0 [4]
---------	-------------------	-----------

**OBJECTIVE:**

- To introduce students to Basic concept of Real Analysis.
- To focus on basic mathematical concepts in measurable functions.
- To focus on theoretical and mathematical concepts in Lebesgue integral and summable functions.
- To develop an understanding of real analysis.

UNIT 1	Functions of several variables, Derivative of functions in an open subset of $\mathbb{R}^n$ into $\mathbb{R}^m$ as a linear transformation, Chain rule, Partial derivatives
UNIT 2	Algebra and algebras of sets, Algebras generated by a class of subsets, Borel sets, Lebesgue measure of sets of real numbers, Measurability and Measure of a set, Existence of Non-measurable sets.
UNIT 3	Measurable functions, Realization of non-negative measurable function as limit of an increasing sequence of simple functions, Structure of measurable functions, Convergence in measure, Egoroff's theorem.
UNIT 4	Weierstrass's theorem on the approximation of continuous function by polynomials, Lebesgue integral of bounded measurable functions, Lebesgue theorem on the passage to the limit under the integral sign for bounded measurable functions.
UNIT 5	Summable functions, Space of square summable functions, Fourier series and coefficients, Parseval's identity, Riesz-Fisher Theorem.

**Text Books:**

1. Walter Rudin, Principle of Mathematical Analysis (3rd edition) McGraw-Hill Kogakusha, International Student Edition, 1976.

**Reference Books:**

1. H. L., Royden, Real Analysis, 4th Edition, Macmillan, 1993.
2. E. Hewitt and K. Stromberg, Real and Abstract Analysis, Springer, 1969

**Course Outcomes:**

- CO1:- Understanding the basics concepts of Derivative of functions.  
CO2:- Understanding the basics concepts of Lebesgue measure.  
CO3:- Understanding the basics concepts of Measurable functions.  
CO4:- Understanding the fundamental concept of Lebesgue integral.  
CO5:- Developing the ability to understand summable functions.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

MMA003A	Topology	3-1-0 [4]
---------	----------	-----------

#### OBJECTIVE:

- To explain how to distinguish spaces by means of simple topological invariants compactness, connectedness and the fundamental group.
- To explain how to construct spaces by gluing and to prove that in certain cases that the result is homeomorphic to a standard space.
- To construct simple examples of spaces with given properties e.g. compact but not connected or connected but not pathconnected.

<b>Unit 1</b>	Topological Space; Definition and examples of topological spaces. Closed sets. Closure. Dense sets. Neighborhood, interior, exterior, and boundary. Accumulation points and derived sets. Bases and sub-bases. Subspaces and relative topology.
<b>Unit 2</b>	Continuous functions and homeomorphism. First and second countable space. Lindelof spaces. Alternative methods of defining a topology in terms of Kuratowski closure operator and neighborhood systems.
<b>Unit 3</b>	Separable spaces. The separation axioms $T_0, T_1, T_2, T_3, T_4$ ; their characterizations and basic properties. Urysohn's lemma. Tietze extension theorem.
<b>Unit 4</b>	Compactness. Basic properties of compactness. Compactness and finite intersection property. Sequential, countable, and B-W compactness. Local compactness. One-point compactification. Connected spaces and their basic properties. Connectedness of the real line.
<b>Unit 5</b>	Components. Locally connected spaces. Tychonoff product topology in terms of standard sub-base and its characterizations. Product topology and separation axioms, connectedness, and compactness (incl. the Tychonoff's theorem), product spaces. Nets and filters, their convergence, and interrelation. Hausdorffness and compactness in terms of net/filter convergence.

#### Suggested Readings

1. J. L. Kelley, General Topology, Van Nostrand, 1955.
2. K. D. Joshi, Introduction to General Topology, Wiley Eastern, 1983.

3. James R. Munkres, Topology, 2nd Edition, Pearson International, 2000.
4. J. Dugundji, Topology, Prentice-Hall of India, 1966.
5. George F. Simmons, Introduction to Topology and Modern Analysis, McGraw-Hill, 1963.
6. N. Bourbaki, General Topology, Part I, Addison-Wesley, 1966.
7. S. Willard, General Topology, Addison-Wesley, 1970.
8. S.W. Davis Topology, Tata McGraw Hill, 2006.

### Course Outcomes

CO1:- Understanding the Topological spaces and their properties.

CO2:- Understanding the basics concepts of First and second countable space over different spaces.

CO3:- Understanding the basics concepts of Separable spaces.

CO4:- Understanding the compact spaces and connected spaces and their basic properties

CO5:- Developing the ability to understand Nets and filters and their convergence

MMA004A	Riemannian Geometry and Tensor Analysis	3-1-0 [4]
---------	---	-----------

#### OBJECTIVE:

- To understand the Transformation rules from Cartesian coordinates to curvilinear coordinates.
- To describe methods for metric tensors, Cristoffel symbols, curl, divergence, gradient of tensors calculations.
- To develop an understanding of Riemannian geometry.

UNIT 1	Geodesics, Differential equation of a geodesic, Single differential equation of a geodesic, Geodesic on a surface of revolution, Geodesic curvature and torsion, Gauss-Bonnet Theorem.
UNIT 2	Tensor Analysis– Coordinates, vectors, Tensors, Transformation of coordinates, Kronecker delta. Contra-variant and Covariant tensors, Symmetric tensors, Fundamental operations with tensors, Quotient law of tensors, Relative tensor.
UNIT 3	Riemannian space. Metric tensor, Indicator, Associate tensors, Length of a curve, Magnitude of a vector, unit vector, Null vector, Angle between two non-null vectors, Permutation symbols and Permutation tensors.
UNIT 4	Christoffel symbols and their properties, Covariant differentiation of tensors. Ricci's theorem, Intrinsic derivative, Geodesics, Differential equation of geodesic, Geodesic coordinates, Field of parallel vectors.
UNIT 5	Reimann-Christoffel tensor and its properties. Co-variant curvature tensor, Einstein space. Bianchi's identity. Einstein tensor, Flat space, Isotropic point, Schur's theorem.

#### Suggested Readings

1. R. S. Mishra, A Course in Tensors with Applications to Riemanian Geometry, Pothishala, Allahabad, 1965.
2. Y. Matsushima, Differentiable Manifolds, Marcel Dekker, 1972.
3. B. B. Sinha, An Introduction to Modern Differential Geometry, KalyaniPrakashan, New Delhi, 1982.
4. Y. Talpiert, Differential Geometry with applications to Mechanics and Physics, Marcel DekkarInc. 2001.
5. N.J. Hicks, Notes on Differential Geometry, D. Van Nostrand Inc., 1965.
6. Bansal, J.L. and Sharma, P.R., Differential Geometry: Jaipur Publishing House (2004).
7. Bansal, J.L., Tensor Analysis, Jaipur Publishing House, (2004).

#### Course Outcomes

- CO1:-Understanding the difference between Cartesian coordinates and curvilinear coordinates.
- CO2:-Understanding the basics concepts of Tensors and its components.
- CO3:- Understanding the basics concepts of Riemann space metric.
- CO4:-Understanding the various techniques to calculate Christoffel symbols, Covariant differentiation oftensors.
- CO5:-Developing the ability to understand Einstein space, Bianchi's identity.

MMA005B	Complex Analysis	3-1-0 [4]
---------	------------------	-----------

### OBJECTIVE:

- To understand the concept of analytic functions, varieties of operations, analyses and problems that may arise within the context of a complex variable
- To study power series and the useful techniques for evaluating contour integrals based on the 'calculus of residues'
- To understand the complex mapping with their applications.

UNIT 1	<b>Analytic functions:</b> Introduction, Cauchy Riemann's equations, Complex Integration, Cauchy–Goursat Theorem, Proof of the Theorem, Simply Connected Domains, Multiply Connected Domains, Cauchy Integral Formula, An Extension of the Cauchy Integral Formula, Some Consequences of the Extension, Liouville's Theorem and the Fundamental Theorem of Algebra, Maximum Modulus Principle.
UNIT 2	<b>Series:</b> Convergence of Sequences, Convergence of Series, Taylor Series, Proof of Taylor's Theorem, Laurent Series, Proof of Laurent's Theorem, Absolute and Uniform Convergence of Power Series <b>Residues and Poles:</b> Isolated Singular Points, Residues, Cauchy's Residue Theorem, Residue at Infinity, The Three Types of Isolated Singular Points, Residues at Poles, Zeros of Analytic Functions, Zeros and Poles, Behavior of Functions Near Isolated Singular Points.
UNIT 3	<b>Application of Residues:</b> Evaluation of Improper Integrals, Improper Integrals from Fourier Analysis, Jordan's Lemma, Indented Paths, Definite Integrals Involving Sines and Cosines, Argument Principle, Rouché's Theorem.
UNIT 4	<b>Mapping by Elementary Functions:</b> Linear Transformations, Linear Fractional Transformations, Mappings of the Upper Half Plane, Riemann Surfaces <b>Conformal Mapping, Applications of Conformal Mapping:</b> Steady Temperatures, Steady Temperatures in a Half Plane, Temperatures in a Quadrant, Electrostatic Potential, Potential in a Cylindrical Space, The Bilinear or Fractional Transformation, The Schwarz–Christoffel Transformation.
UNIT 5	Analytic continuation, Schwarz's Reflection Principle, Infinite Products, Absolute, Conditional and Uniform Convergence of Infinite Products, Some Important Theorems on Infinite Products, Weierstrass' Theorem for Infinite Products, Some Special Infinite Products, Schwarz Lemma, open mapping theorem, univalent and multivalent functions.

### Suggested Readings

1. Brown and Churchill, Complex Variables and Applications, McGraw-Hill Education; 9 edition, 2013.
2. Schaum's Outline of Complex Variables, 2ed (Schaum's Outlines) 2nd Edition.
3. E. C. Titchmarsh, The Theory of Functions, Oxford University Press, 1990.
4. J. B. Conway, Functions of One Complex Variable, Narosa Publishing House, 1980.
5. E. T. Copson, Complex Variables, Oxford University Press, 1998.
6. L. V. Ahlfors, Complex Analysis, McGraw-Hill, 1977.
7. D. Sarason, Complex Function Theory, Hindustan Book Agency, Delhi, 1994.
8. I. Graham and G. Kohr, Geometric function theory in one and higher dimensions, Marcel Dekker, Inc., New York.

Page 68 *Praveen* *mishra* *Shrestha* *Shrestha*

### Course Outcomes:

Upon successful completion of this course, the student will be able to:

- CO1 Understand the significance of Cauchy-Riemann equations for analytic function. Differentiability for complex functions and be familiar with the Cauchy-Riemann equations. Will able to evaluate integrals along a path in the complex plane.
- CO2 Able to compute the Taylor and Laurent expansions of simple complex functions. Determine the nature of the singularities and calculating residues.
- CO3 Will able to solve improper integrals of various types.
- CO4 Understand the concept of complex mapping
- CO5 Able to identify analytic continuation with their related problems

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

MMA030A	Scilab I	0-0-4 [2]
---------	----------	-----------

#### OBJECTIVE:

- This course can be used by students in Mathematics as an introduction to the fundamental ideas of SCILAB PACKAGE and as a foundation for the development of more advanced concepts in SCILAB.
- Study of this course promotes the development of basic programming skills in SCILAB and some basic introduction of MAXIMA software.

#### List of programs

1. Introduction to Scilab and commands connected with matrices.
2. Computations with matrices.
3. Solving system of equation and explain consistence.
4. Find the values of some standard trigonometric functions in radians as well as in degree.
5. Create polynomials of different degrees and hence find its real roots.
6. Find  $\sum_{n=1}^{500} n$  using looping structure.
7. Display Fibonacci series using Scilab program.
8. Display non-Fibonacci series using Scilab program.
9. Introduction to Maxima and matrices computations.
10. Commands for derivatives and  $n^{\text{th}}$  derivatives.
11. Scilab and Maxima commands for plotting functions.

#### TEXT BOOKS/OPEN SOURCE MATERIALS

1. <http://maxima.sourceforge.net/docs/intromax/intromax.pdf>
2. [www.scilab.org](http://www.scilab.org).
3. [Wxmaxima.sourceforge.net](http://Wxmaxima.sourceforge.net)

#### Course Outcomes (COs):

Upon successful completion of this subject students should be able to:

- CO1: Understand the main features and importance of the SCI LAB mathematical programming environment
- CO2: Apply working knowledge of SCI LAB package to simulate and solve matrices, system of equations, trigonometric functions, Fibonacci series and applications.
- CO3: Solve, simulate and analyze various matrices.
- CO4: Solve, simulate and analyze various system of equations.
- CO5: Solve, simulate and analyze trigonometric functions, Fibonacci series.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

MMA031A	Numerical Analysis I	0-0-4 [2]
---------	----------------------	-----------

### OBJECTIVE:

- This course can be used by students in Mathematics as an introduction to the fundamental ideas of numerical analysis on SCILABPACKAGE.

### List of programs:

1. Introduction to Scilab – 2 weeks
2. Fixed Point iterative method
3. Newton-Raphson's method
4. Ramanujan's method
5. Gauss Elimination method
6. Gauss-Seidel iterative method
7. Thomas Algorithm
8. Lagrange Interpolation method
9. Cubic Spline Interpolation method
10. Rational function approximation of Pade Numerical integration over rectangular region
11. Gaussian Quadrature method
12. Gauss-Chebyshev method

## SEMESTER - II

MMA006A	Algebra-II	3-1-0 [4]
---------	------------	-----------

### OBJECTIVE:

- To understand the advanced modulus theory.
- To understand advanced ring theory and Canonical forms.
- To develop an understanding of advanced areas in algebra.

<b>UNIT 1</b>	Modules, submodules, Quotient Modules, Isomorphism theorems.
<b>UNIT 2</b>	Cyclic modules, simple modules and semisimple modules and rings Schur's lemma. Free modules.
<b>UNIT 3</b>	Noetherian and Artinian modules and rings.
<b>UNIT 4</b>	Hilbert basis theorem. Solution of polynomial equations by radicals. Insolvability of the general equation of degree $\geq 5$ by radicals. Finite fields.
<b>UNIT 5</b>	Canonical forms: Similarity of linear transformations. Invariant subspaces. Reduction to triangular forms. Nilpotent transformations. Index of nilpotency. Invariants of a nilpotent transformation. The primary decomposition theorem. Jordan blocks and Jordan form.

### Suggested Readings

1. N. Herstein, Topics in Algebra, Wiley Eastern, 1975.
2. P. B. Bhattacharya, S. K. Jain and S. R. Nagpaul, Basic Abstract Algebra (2nd Edition), Cambridge University Press, 1997.
3. K. Hoffman and R. Kunze, Linear Algebra, 2nd Edition, Prentice Hall of India, 1971.
4. D. S. Malik, J. N. Mordeson, and M. K. Sen, Fundamentals of Abstract Algebra, McGraw- Hill International Edition, 1997.
5. Vivek Sahai and Vikas Bist, Algebra, Narosa Publishing House, 1999.
6. Ramji Lal, Fundamentals in Abstract Algebra, Chakra Prakashan, Allahabad, 1985.
7. J.S. Golan, Modules & the Structures of Rings, Marcel Dekker Inc.

### Course Outcomes

- CO1:- Understanding the basic concept of Modules, submodules, Quotient Modules, Isomorphism theorems.
- CO2:- Understanding the cyclic modules, simple modules and semisimple modules, rings, Schur's lemma and free modules.
- CO3:- Understanding the basics concepts of Noetherian, Artinian modules and rings.
- CO4:- Understanding the basic theory of Hilbert basis theorem and solution of polynomial equations.
- CO5:- Developing the ability to understand the Canonical form, Jordan blocks, Jordan form and transformations.

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome

MMA007B	Functional Analysis- I	3-1-0 [4]
---------	------------------------	-----------

**OBJECTIVE:**

- To introduce students to Basic concept of metric spaces.
- To develop an understanding of normed linear spaces and linear transformations.
- To develop an understanding few important applications of normed linear spaces analysis to other branches of both pure and applied mathematics.

UNIT 1	Metric Space, Subspace of a metric space, Product space, Continuous mappings, Sequence in a metric space, Convergence, Cauchy sequence. Complete metric space, Examples of Complete & Incomplete metric spaces.
UNIT 2	Banach contraction theorem and applications. Baire's category theorem, Ascoli-Arzelà theorem, compact sets, compact spaces and connected metric spaces. Separable metric space with examples.
UNIT 3	Normed linear spaces. Quotient space of normed linear spaces and its completeness. Banach spaces and examples. Bounded linear transformations. Normed linear space of bounded linear transformations
UNIT 4	Equivalent norms. Basic properties of finite dimensional normed linear spaces and compactness. Reisz Lemma. Multilinear mapping. Open mapping theorem. Closed graph theorem. Uniform boundness theorem.
UNIT 5	Continuous linear functionals. Hahn-Banach theorem and its consequences. Embedding and Reflexivity of normed spaces. Dual spaces with examples. Inner product spaces.

**Text Books:**

1. Erwin Kreyszig, Introductory Functional Analysis with Applications, John Wiley and Sons (Asia). Pvt. Ltd. 2006.
2. George Bachman and Lawrence Narici, Functional Analysis, Dover, 2000.

**Reference Books:**

1. John B. Conway. A course in Functional Analysis, second edition, Springer-Verlag. 2006.
2. Martin Schechter, Principles of Functional Analysis, second edition. AMS Bookstore, 2002.
3. V.S. Sunder. Functional Analysis: Spectral Theory, Birkhauser Texts, Basel. 1997.

**Course Outcomes:**

- CO1:- Understanding the basic concept of Metric Space, Subspace of a metric space, Convergence.  
CO2:- Understanding the compact sets, compact spaces and connected metric spaces  
CO3:- Understanding the Normed linear spaces  
CO4:- Understanding the Reisz Lemma. Multilinear mapping. Open mapping theorem. Closed graph theorem. Uniform boundness theorem.  
CO5:- Understanding the Continuous linear functionals. Hahn-Banach theorem and its consequences, Dual spaces with examples.

MMA019B	Integral Transforms	3-1-0 [4]
---------	---------------------	-----------

#### OBJECTIVE:

- Students will learn theoretical concepts and uses of various Integral Transforms.
- Understand the importance of Laplace, Mellin and Fourier transform
- To solve several technical problems using Laplace Mellin and Fourier transform.

Unit 1	Laplace transform– Definition and its properties. Rules of manipulation. Laplace transform of derivatives and integrals.
Unit 2	Properties of inverse Laplace transform. Convolution theorem and applications of Laplace transform.
Unit 3	Fourier transform – Definition and properties of Fourier sine, cosine and complex transforms. Convolution theorem. Inversion theorems. Fourier transform of derivatives.
Unit 4	Mellin transform– Definition and elementary properties. Mellin transform of derivatives and integrals. Inversion theorem. Convolution theorem.
Unit 5	Complex inversion formula. Infinite Hankel transform– Definition and elementary properties. Hankel transform of derivatives. Inversion theorem. Parseval Theorem.

#### Suggested Readings

1. Lokenath Debnath, Dambaru Bhatta, INTEGRAL TRANSFORMS AND THEIR APPLICATIONS, 2E (English) 2 2nd Edition, Taylor & Francis India, 2006.
2. Mohammad Ahmad, A. N. Srivastava, Integral Transforms and Fourier Series, Narosa Book Distributors Pvt Ltd, 2012.
3. Pandey R K, INTEGRAL TRANSFORM AND ITS APPLICATION (English) 01 Edition, Anmol Publications, 2007.

#### Course Outcomes

Upon successful completion of this course, the student will be able to:

- CO1 Find Laplace transforms using table and properties. Will able to solve linear differential equations and systems of equations with input functions, such as: continuous, piecewise continuous, unit step, impulse and periodic.
- CO2 Students will solve inverse Laplace transforms using table and properties. Solve certain types integral, and integro-differential equations Solve certain classes of linear partial differential equations.
- CO3: Find Fourier transforms. Can able to solve certain types of PDE.
- CO4: Able to find Mellin transforms.
- CO5: Understand Hankel transform with it's definition and properties.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

MMA009A	Calculus of Variation and Special Function	3-1-0 [4]
---------	--	-----------

#### OBJECTIVE:

- To understand the basic variational problem and Euler's equation
- To determine types of DEs, which may be solved by application of special functions.
- To analyze properties of special functions by their integral representations and symmetries.
- To classify differential equations by their singularities

UNIT 1	Calculus of variation – Functionals, Variation of a functional and its properties, Variation problems with fixed boundaries, Euler's equation, Extremals, Functional dependent on several unknown functions and their first order derivatives. Functionals dependent on higher order derivatives, Functionals dependent on the function of more than one independent variable. Variational problems in parametric form.
UNIT 2	Gamma Function, Beta Function, Reimann-Zeta function, Gauss hypergeometric function and its properties, Series solution of Gauss hypergeometric equation. Integral representation, Linear and quadratic transformation formulas, Contiguous function relations, Differentiation formulae.
UNIT 3	Linear relation between the solutions of Gauss hypergeometric equation, Kummer's confluent hypergeometric function and its properties, Integral representation, Kummer's first transformation and
UNIT 4	Series solution of Legendre's equation, Legendre polynomials and functions $P_n(x)$ and $Q_n(x)$ . Properties of $P_n(x)$ and $Q_n(x)$ . Bessel functions $J_n(x)$ .
UNIT 5	Hermite polynomials $H_n(x)$ , Laguerre and Associated Laguerre polynomials.

#### Suggested Readings

1. A.S. Gupta, Calculus of Variation, Prentice Hall of India Pvt. Ltd, 2002.
2. I.M. Gelfand and S. V. Francis, Calculus of Variation, Prentice Hall, New Jersey.
3. E.D. Rainville, Special Functions, Macmillan & Co. New York (1960).
4. W.N. Labeledev, Special Functions and their Applications. Dover, (1972).

#### Course Outcomes

Upon successful completion of this course, the student will be able to:

- CO1 Students will be able to formulate variational problems and analyze them to deduce key properties of system behavior.
- CO2 Will able to identify Gauss hypergeometric function with it's solution and integral representation
- CO3 Derive the properties of Gauss hypergeometric function (such as recursion relations, derivative relationships, and orthogonality conditions) etc.
- CO4 Understand Bessel's and Legendre's equation with it's solution and various properties.
- CO5 Understand Hermite's polynomial and Laguerre's equation with it's solution and various properties

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

MMA010B	Theory of Optimization	3-1-0 [4]
---------	------------------------	-----------

#### OBJECTIVE:

This course is designed to introduce basic optimization techniques in order to get best results from a set of several possible solutions of different problems viz.

- Linear programming problems,
- Transportation problem,
- Assignment problem and unconstrained and
- Constrained problems etc.
- The major focus will be on formulation of real world phenomena from its physical considerations and implementation of optimization algorithms for solving these problems.

UNIT 1	Formulation of linear programming problem (LPP) -graphical method, Basic Feasible Solution, Extreme Points, Convex set, Convex linear combination, optimal solution of LPP using Simplex, BigM and two-phase methods, Exceptional cases in LPP i.e., Infeasible, unbounded, alternate and degenerate solutions.
UNIT 2	General Primal-Dual pair, Formulating a dual problem, Weak and strong duality theorems, Complementary slackness theorem, Dual simplex method, Economic interpretation of primal-Dual problems. Sensitivity analysis: change in right hand side of constraints, change in the objective function and coefficient matrix addition and deletion of constraint and variables.
UNIT 3	Initial basic Feasible solution of transportation problem, Balanced and unbalanced transportation problems, Optimal solutions of transportation problem using U-V /MODI methods
UNIT 4	Assignment problems; Mathematical formulation of assignment problem, typical assignment problem, the traveling salesman problem, Test for optimality, degeneracy, Integer Programming Problem: Introduction, Types of Integer Programming Problems, Gomory's All-IPP Method, All IPP Algorithm, Branch and Bound Technique
UNIT 5	Concept of convexity and concavity, Maxima and minima of convex functions, Single and multivariate unconstrained problems, constrained programming problems, Kuhn-Tucker conditions for constrained programming problems.

#### Suggested Readings

**Course Outcomes:**

At the end of the course, the students will be able to

- CO1 Apply the knowledge of basic optimization techniques in order to get best possible results from a set of several possible solution of different problems viz. linear programming problems, transportation problem, assignment problem and unconstrained and constrained problems etc.
- CO2 Formulate an optimization problem from its physical consideration.
- CO3 Select and implement an appropriate optimization technique keeping in mind its limitations in order to solve a particular optimization problem.
- CO4 Understand theoretical foundation and implementation of similar type optimization techniques available in the scientific literature.
- CO5 Continue to acquire knowledge and skills of optimization techniques that are appropriate to professional activities.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

MMA032A	Scilab II	0-0-4 [2]
---------	-----------	-----------

### OBJECTIVE:

- This course can be used by students in Mathematics as an introduction to the fundamental ideas of advance numerical analysis on SCILAB PACKAGE and Plot graphs using SCILAB.

### List of Program:

1. Milne Predictor Corrector Method
2. Adam Moulton Predictor Corrector Method
3. Runge-Kutta-Fehlberg method
4. Finite difference method for BVP(ODE)
5. Finite difference method for Laplace/Poisson equations
6. Initial Boundary Value Problem using Explicit Finite Difference Method
7. Schmidt Method
8. Crank-Nicolson method
9. Crank Nicolson Scheme for Diffusion Equation
10. Shooting method for BVPs ODE.
11. Explicit Finite difference method for 1-d wave equation
12. Galerkin Finite Element Methods for ODE BVPs

### TEXT BOOKS

1. M.K. Jain: Numerical solution of differential equations, Wiley Eastern(1979), Second Edition.
2. C.F. Gerald and P.O. Wheatley: Applied Numerical Methods, Low- priced edition, Pearson Education Asia (2002), Sixth Edition.
3. D.V. Griffiths and I.M. Smith, Numerical Methods for Engineers, Blackwell Scientific publications(1991).

### REFERENCE BOOKS

1. S.C. Chapra, and P.C. Raymond: Numerical Methods for Engineers, Tata McGraw Hill, New Delhi(2000).
2. R.L. Burden, and J. Douglas Faires: Numerical Analysis, P.W.S. Kent Publishing Company, Boston (1989), Fourth edition.
3. S.S. Sastry: Introductory methods of Numerical analysis, Prentice- Hall of India, New Delhi(1998).
4. M.K. Jain, S.R.K. Iyengar and R.K. Jain: Numerical methods for scientific and Engineering computation, Wiley Eastern(1993)

### Course Outcomes (COs):

Upon successful completion of this subject students should be able to:

- CO1: Understand the main features and importance of the SCI LAB mathematical programming environment.
- CO2: Apply working knowledge of SCI LAB package to simulate and solve ordinary differential equations.
- CO3: Solution of ODE: Milne Predictor Corrector Method, Adam Moulton Predictor Corrector Method and Runge-Kutta-Fehlberg method (Using SCI Lab).
- CO4: Solution of ODE: Finite difference method for Laplace/Poisson equations, Initial Boundary Value Problem using Explicit Finite Difference Method (Using SCI Lab).
- CO5: Solution of 1-D wave equation and BVPs ODE: Shooting method, Explicit Finite difference method and Galerkin Finite Element Methods (Using SCI Lab).

### Semester –III

MMA011B	Differential Equations	3-1-0 [4]
---------	------------------------	-----------

#### OBJECTIVE:

- To develop an understanding of Non-linear ordinary differential equations of particular forms.
- To develop an understanding the series solution, radius of convergence and method of differentiation.
- To develop an understanding of Partial differential equations of second order with variable co-efficient.
- To develop an understanding of linear homogeneous boundary value problems.
- To develop an understanding of Non-homogeneous boundary value problems.

UNIT 1	Non-linear ordinary differential equations of particular forms. Riccati's equation –General solution and the solution when one, two or three particular solutions are known. Total Differential equations. Forms and solutions, necessary and sufficient condition, Geometrical Meaning Equation containing three and four variables, total differential equations of second degree.
UNIT 2	Series Solution: Radius of convergence, method of differentiation, Cauchy-Euler equation, Solution near a regular singular point (Method of Forbenius) for different cases, Particular integral and the point at infinity.
UNIT 3	Partial differential equations of second order with variable coefficients- Monge's method. Classification of linear partial differential equation of second order, Canonical forms, Cauchy's problem of first order partial differential equation.
UNIT 4	Linear homogeneous boundary value problem, Eigen values and eigen functions, Sturm-Liouville boundary value problems, orthogonality of eigen functions, Lagrange's identity, properties of eigen functions, important theorems of Sturm Liouville system, Periodic functions.
UNIT 5	Non-homogeneous boundary value problems, Non-homogeneous Sturm-Liouville boundary value problems (method of eigen function expansion). Method of separation of variables, Laplace, wave and diffusion equations. Green's Functions: Non-homogeneous Sturm-Liouville boundary value problem (method of Green's function), Procedure of constructing the Green's function and solution of boundary value problem, properties of Green's function, Inhomogeneous boundary conditions, Dirac delta function, Bilinear formula for Green's function, Modified Green's function.

7. D.A. Murray, Introductory Course on Differential Equations, Orient Longman, 1902.
8. A.R.Forsyth, A Treatise on Differential Equations, Macmillan & Co. Ltd., London, 1956.

**Course Outcomes:** At the end of the course, the student should be able to:

- CO1:- Develop an understanding of Non-linear ordinary differential equations of particular forms.  
 CO2:- Develop an understanding the series solution, radius of convergence and method of differentiation.  
 CO3:- Develop an understanding of Partial differential equations of second order with variable co-efficient.  
 CO4:- Develop an understanding of linear homogeneous boundary value problems.  
 CO5:-Develop an understanding of Non-homogeneous boundary value problems.

MMA012B	Functional Analysis-II	3-1-0 [4]
---------	------------------------	-----------

**OBJECTIVE:**

- To introduce students to Basic concept of Hilbert space and its properties.
- To develop an understanding of Orthonormal sets and Hilbert space.
- To develop an understanding few important applications of Differential calculus in Banach Space and Integral Calculus in Banach Space.

UNIT 1	Hilbert space and its properties. Cauchy-Schwartz inequality, Orthogonality and Functionals in Hilbert Spaces, Pythagorean theorem, Projection theorem, Separable Hilbert spaces and Examples.
UNIT 2	Orthonormal sets, Bessel's inequality, Existence of orthonormal bases by Gram-schmidt orthogonalization process. Complete orthonormal sets, Parseval's identity, Structure of a Hilbert space, Riesz representation theorem, Reflexivity of Hilbert spaces.
UNIT 3	Adjoint of an operator on a Hilbert space. Self-adjoint, Positive, Normal and Unitary operators and their properties. Projection on a Hilbert space. Invariance. Reducibility. Orthogonal projections. Eigen values and eigen vectors of an operator. Spectrum of an operator Spectral theorem.
UNIT 4	Differential calculus in Banach Space, Differentiability of Mappings between Banach Space, Derivatives of a Composite Map, Directional Derivative, Mean Value Theorem and its Applications, Partial Derivatives, Projection and Canonical Mappings, Derivative Matrix, Continuously differential Maps, Higher Derivatives, Taylor's Formula, Implicit and Inverse Function Theorems.
UNIT 5	Integral Calculus in Banach Space, Fundamental Theorem of Calculus, Mean Value Theorem, Ordinary Differential Equations in a Banach, k-Lipschitz Mapping, Existence and Uniqueness Theorems for Approximate Solutions.

**Text Books:**

1. Erwin Kreyszig, Introductory Functional Analysis with Applications, John Wiley and Sons (Asia). Pvt. Ltd., 2006.
2. George Bachman and Lawrence Narici, Functional Analysis, Dover, 2000.

**Reference Books:**

1. John B. Conway, A course in Functional Analysis, second edition, Springer-Verlag, 2006.
2. Martin Schechter, Principles of Functional Analysis, second edition, AMS Bookstore, 2002.
3. V.S. Sunder, Functional Analysis. Spectral Theory, Birkhauser Texts, Basel, 1997.

**Course Outcomes:**

- CO1:- Understanding the basic concept of Hilbert space and its properties, Cauchy-Schwartz inequality.
- CO2:- Understanding the Orthonormal sets and its applications.
- CO3:- Understanding the Adjoint of an operator on a Hilbert space, Eigen values and eigen vectors of an operator, Spectrum of an operator Spectral theorem.
- CO4:- Understanding the Differential calculus in Banach Space, Differentiability of Mappings between Banach Space.
- CO5:- Understanding the Integral Calculus in Banach Space, Fundamental Theorem of Calculus, Mean Value Theorem, Ordinary Differential Equations in a Banach, k-Lipschitz Mapping, Existence and Uniqueness theorems for approximate solutions.

MMA013A	Numerical Analysis	3-1-0 [4]
---------	--------------------	-----------

#### OBJECTIVE:

- This course helps students to have an in-depth knowledge of various advanced methods in numerical analysis.
- This includes solution of algebraic and transcendental equations, finite element method and ordinary and partial differential equations.

<b>Unit 1</b>	Numerical solutions of integral equations using Newton- Cotes, Lagrange's linear interpolation and Chebyshev polynomial.
<b>Unit 2</b>	Matrix Computations: System of linear equations, Conditioning of Matrices, Matrix inversion method, Matrix factorization, Tridiagonal systems.
<b>Unit 3</b>	Numerical solutions of system of simultaneous first order differential equations and second order initial value problems (IVP) by Euler and Runge-Kutta (IV order) explicit methods.
<b>Unit 4</b>	Numerical solutions of second order boundary value problems (BVP) of first, second and third types by shooting method and finite difference methods.
<b>Unit 5</b>	Finite Element method: Introduction, Methods of approximation: Rayleigh-Ritz Method, Galerkin Method and its application for solution of ordinary BVP.

#### Suggested Readings

1. M. K. Jain, S. R. K. Iyenger and R. K. Jain, Numerical Methods for Scientific and Engineering Computations, New Age Publications, 2003.
2. M. K. Jain, Numerical Solution of Differential Equations, 2nd edition, Wiley-Eastern.
3. S. S. Sastry, Introductory Methods of Numerical Analysis, 2008.
4. S. Gupta, Text Book on Calculus of Variation, Prentice-Hall of India, 2002.

#### Course Outcomes

- CO1:- Understanding the difference between Cartesian coordinates and curvilinear coordinates.
- CO2:- Understanding the basics concepts of Tensors and its components.
- CO3:- Understanding the basics concepts of Riemann space metric.
- CO4:- Understanding the various techniques to calculate Christoffel symbols, covariant differentiation of tensors.
- CO5:- Developing the ability to understand Einstein space, Bianchi's identity.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

**ELECTIVE (Any two of the following)**

MMA014A	Mathematical Modeling	3-1-0 [4]
---------	-----------------------	-----------

**OBJECTIVE:**

- To develop an understanding of Mathematical Modeling.
- To develop an understanding of linear growth and decay models, nonlinear growth and decay models, Compartment models.
- To develop an understanding of Basic theory of linear difference equations with constant coefficients.
- To develop an understanding through linear programming, linear programming models in forest management, Transportation and assignment models.

<b>Unit 1</b>	Simple situations requiring mathematical modeling, techniques of mathematical modeling, Classifications, Characteristics and limitations of mathematical models, Some simple illustrations.
<b>Unit 2</b>	Mathematical modeling through differential equations, linear growth and decay models, Nonlinear growth and decay models, Compartment models, Mathematical modeling in dynamics through ordinary differential equations of first order.
<b>Unit 3</b>	Mathematical models through difference equations, some simple models, Basic theory of linear difference equations with constant coefficients, Mathematical modeling through difference equations in economic and finance, Mathematical modeling through difference equations in population dynamic and genetics.
<b>Unit 4</b>	Situations that can be modeled through graphs. Mathematical models in terms of Directed graphs, Mathematical models in terms of signed graphs, Mathematical models in terms of weighted digraphs.
<b>Unit 5</b>	Mathematical modeling through linear programming, Linear programming models in forest management. Transportation and assignment models.

**Suggested Readings**

1. J. N. Kapur, Mathematical Modeling, Wiley Eastern, 2002
2. D. N. Burghes, Mathematical Modeling in the Social Management and Life Science, Ellie Herwood and John Wiley, 2000.
3. Edward A. Bender, An Introduction to Mathematical Modeling, Dover publication, 2000.
4. J. N. Kapur, Mathematical Modelling (English) 1st Edition, New Age International Publishers Ltd.-New Delhi, 1998.

**Course Outcomes**

- CO1:- Understanding the Simple situations requiring mathematical modeling, techniques of mathematical modeling, Classifications, Characteristics and limitations of mathematical models.
- CO2:- Understanding the Mathematical modeling through differential equations, linear growth and decay models, Non-linear growth and decay models, Compartment models, Mathematical modeling in dynamics through ordinary differential equations of first order.
- CO3:- Understanding the Mathematical models through difference equations, some simple models, Basic theory of linear difference equations with constant coefficients, Mathematical modeling through difference equations in economic and finance, Mathematical modeling through difference equations in population dynamic and genetics.
- CO4:- Understanding the Situations that can be modeled through graphs. Mathematical models in terms of Directed graphs, Mathematical models in terms of signed graphs, Mathematical models in terms of weighted digraphs.
- CO5:- Understanding the Mathematical modeling through linear programming, Linear programming models in forest management. Transportation and assignment models.

MMA015B	Operations Research	3-1-0 [4]
---------	---------------------	-----------

#### OBJECTIVE:

- To understand the queueing theory.
- To describe methods for solving multi-objective programming methods.
- To develop an understanding of linear fractional and goal programming.
- To develop an understanding of Game theory.
- To understand the solving Methods for Network problems and project management.

Unit 1	Introduction to Queues and Queueing Theory, Characteristics of queueing systems, Birth-Death Process, Basic Queueing Theory (M/M/-/- Type Queues.
Unit 2	Basic Concept of Multi Objective and Multi Level Optimization. Integer Programming Mixed Integer Programming.
Unit 3	Linear Fractional Programming. Goal Programming. Sensitivity Analysis.
Unit 4	Game Theory: Introduction, Competitive Situations, Characteristics of Competitive Games, Maximin – Minimax Principle, Dominance.
Unit 5	Network Problems: Dijkstra's Algorithm, maximum flow problem and minimum spanning tree. Network Scheduling by PERT/CPM.

#### Suggested Readings

1. F. S. Hiller and G. J. Lieberman, Introduction to Operations Research (6th Edition), McGraw-Hill International Edition, 1995.
2. G. Hadley, Nonlinear and Dynamic Programming, Addison Wesley, 1998.
3. H. A. Taha, Operations Research – An Introduction, Macmillan, 2002
4. Kanti Swarup, P. K. Gupta and Man Mohan, Operations Research, Sultan Chand & Sons, New Delhi, 2004.
5. S. S. Rao, Optimization Theory and Applications, Wiley Eastern, 1998
6. N. S. Kambo, Mathematical Programming Techniques, Affiliated East-West Press Pvt. Ltd., New Delhi, 2004.

#### Course Outcomes

CO1:- Understanding the basics concepts of queueing theory.

CO1:- Understanding the multi-objective programming methods.

CO3:- Understanding the basics concepts of linear fractional and goal programming.

CO4:- Understanding the various techniques to game theory.

CO5:- Developing the ability to understand network problems and project management.

MMA016A	Discrete Mathematics	3-1-0 [4]
---------	----------------------	-----------

#### OBJECTIVE:

- Students will learn core ideas in graph theory, advance graph theory and trees.
- Understand the importance of the discrete mathematical topics for applied science.
- To construct mathematical models for several technical problems using theory of Computation.

<b>Unit 1</b>	Graph Theory: Definition of a graph, applications, Incidence and degree, Matrix representations of graph. Isolated and pendant vertices, Null graph, Isomorphism, Subgraphs, Walks, Paths and circuits, connected graphs, disconnected graphs, and components.
<b>Unit 2</b>	Graph Theory: Bipartite graphs. Planar graphs and their properties. Euler and Hamiltonian graph. Euler's formula for connected planar graphs. Dijkstra's algorithm Warshal's algorithm.
<b>Unit 3</b>	Trees: Trees and its properties, minimally connected graph, Pendant vertices in a tree, distance and centers in a tree, rooted and binary tree. Levels in binary tree, height of a tree, Spanning trees, rank and nullity. Minimal spanning trees, Kruskal's Algorithms, Directed trees, Search trees, Traversals
<b>Unit 4</b>	Theory of Computation: Finite automata, Deterministic and non-deterministic finite automata, Moore and Mealy machines. Regular expressions. Grammars and Languages, Derivations, Language generated by a grammar. Regular Language and regular grammar. Regular and Context free grammar, Context sensitive grammars and Languages. Pumping Lemma, Kleene's theorem.
<b>Unit 5</b>	as language acceptors. Universal Turing machines. Turing machine halting problem. Turing Machines: Basic definitions. Turing machines

#### Suggested Readings

1. F. Harary, Graph Theory, Narosa, 2002.
2. Narsingh Deo, Graph Theory with Applications to Engineering and Computer Science, Prentice-Hall of India, 2003
3. W. T. Tutte, Graph Theory, Cambridge University Press, 2001
4. J. E. Hopcroft, R. Motwani, and J. D. Ullman, Introduction to Automata, Languages, and Computation (2nd edition), Pearson Edition, 2001.
5. P. Linz, An Introduction to Formal Languages and Automata, 3rd Edition, 1998.

#### Course Outcomes:

Upon successful completion of this course, the student will be able to:

- CO1 Students will understand the language of graphs and trees.
- CO2 Students will understand the use of graphs as models.
- CO3 Students will understand various types of trees and methods for traversing trees.
- CO4 Apply the knowledge and skills obtained to investigate and solve a variety of discrete mathematical problems
- CO5 Communicate both technical and non-technical information in a range of forms (written, oral, electronic, graphic). Make effective use of appropriate technology. Reflect on your own learning and that of peers.

IMA017B	Fluid Dynamics	3-1-0 [4]
---------	----------------	-----------

#### OBJECTIVE:

- To teach students fundamental of fluid dynamics.
- To teach student's flow between parallel flat plates and flow between cylinders.
- To teach students Navier-Stokes equations of motion and its applications.
- To teach students Momentum integral theorems with applications.
- To teach students viscosity and non-dimensional parameters.

Unit 1	The concept of a fluid. Forces act on a fluid. Lagrangian and Eulerian equation of motion. Boundary surface. Stream lines. Path lines and streak lines. Velocity potential. Irrotational and rotational motions. Vortex lines.
Unit 2	Flow between parallel flat plates: Couette and plane Poiseuille flows. Flow through a pipe: Hagen Poiseuille flow, flow between two co-axially cylinders and two concentric rotating cylinders.
Unit 3	Navier-Stokes equation of motion. Complex velocity potential. Sources, sinks, doublets and their images. Conformal mapping, Milne-Thomson circle theorem. Theorem of Blasius
Unit 4	Boundary layer displacement and momentum thicknesses. Momentum integral theorems with applications. Effect of pressure gradient on the boundary layer development. Separation of boundary layer flow.
Unit 5	Viscosity. Analysis of stress and rate of strain. Stoke's law of friction. Thermal conductivity and generalized law of heat conduction. Non dimensional parameters and their physical importance.

#### Suggested Readings

1. F. Charlton, A Text Book of Fluid Dynamics, CBC, 1985.
2. S. W. Yuan, Foundations of Fluid Mechanics, Prentice-Hall, 1976.
3. Bansal, J.L., Viscous Fluid Dynamics, Oxford & IBH Publishing Co Pvt Ltd, 1997.
4. Klaus Gersten H Jr Oertel H Schlichting Hermann Schlichting Hermann Schlichting K Gersten, Boundary-Layer Theory 0008 Edition (English), Springer, 2000.

**Course Outcomes:** On completion of the course the student shall be able to:

1. Understand the fundamentals of Lagrangian and Eulerian equation of motion
2. Understand the niceties of different types of flows.
3. Understand the basics of Navier-Stokes equation of motion.
4. Understand the importance of Momentum integral theorems.
5. Understand can convert a dimensional equation to non- dimensional equation.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

MMA018A	Integral Equations	3-1-0 [4]
---------	--------------------	-----------

#### OBJECTIVE:

- To understand the modeling of problems as integral equations.
- To understand existence of the solutions of integral equations.
- To develop an understanding of advanced areas in integral equations.

Unit 1	Classification of integral equations of Volterra and Fredholm types. Conversion of initial and boundary value problem into integral equation. Conversion of integral equations into differential equations
Unit 2	Volterra and Fredholm integral Fredholm integral equations: Degenerate kernels, Method of successive approximation.
Unit 3	Resolvent kernels and Neumann series method for solution of integral equations
Unit 4	Integral equation with symmetric kernels. Use of Laplace and Fourier Transform to solve integral equations.
Unit 5	Definition of a boundary value problem for an ordinary differential equation of the second order and its reduction to a Fredholm integral equation of the second kind; Dirac Delta Function; Green Function for ordinary differential initial and boundary value problem.

#### Suggested Readings

1. Abdul J. Jerry, Introduction to Integral Equations with applications, Marcel Dekkar Inc. NY, 1990.
2. L.G. Chambers, Integral Equations: A short Course, Int. Text Book Company Ltd. 1976.
3. R. P. Kanwal, Linear Integral Equations, Springer Science & Business Media, 07-Nov-2012 Harry Hochsdedt, Integral Equations, John Wiley and Sons, 1973.

#### Course Outcomes

- CO1:- Understanding the basic concept of integral equations.  
CO2:- Understanding the theory of Volterra integral equations and their numerical solutions.  
CO3:- Understanding the basics concepts of Greens function for Fredholm Integral equations.  
CO4:- Understanding the basic theory of Fredholm integral equations and their solutions.  
CO5:- Developing the ability to understand the existence of the solutions of integral equations.

MMA036A	Stochastic Processes & Queuing Theory	3-1-0 [4]
---------	---------------------------------------	-----------

#### OBJECTIVE:

- To develop the Basic concepts of discrete and continuous random variables and probability distributions.
- Understanding the Joint distributions, Conditional distribution and law of large numbers.
- To develop the basics of Stochastic Process with Markov chain and Markov Process.
- Making students familiar with Queuing Theory and it's different models.

Unit 1	<b>Random Variables:</b> Introduction, Distribution and density functions, Discrete and continuous random variables, Bernoulli, Binominal, Poisson, (Gaussian), Exponential, Rayleigh, Uniform distributions. Functions of one random variable: distribution, mean, variance, moments and characteristics functions.
Unit 2	<b>Multiple Random Variables:</b> Distributions, Two functions of two random variables, Joint moments, Joint characteristics functions, Conditional distributions, conditional expected values, statistical independence. Multiple random variables: multiple functions of multiple random variables, jointly Gaussian random variables, sums of random variable, Multivariate normal distribution, Distribution of quadratic forms. Transforms and generating functions, laws of large numbers, Central limit theorem.
Unit 3	<b>Stochastic Processes:</b> Definitions, Random process concept, Introduction to Stochastic Processes (SPs): Definition and examples of SPs, classification of random processes according to state space and parameter space, types of SPs, elementary problems. Stationary Processes: Weakly stationary and strongly stationary processes, moving average and auto regressive processes. Power spectrum of stochastic processes, Gaussian and White processes, Properties of power spectral density.
Unit 4	Discrete-time Markov Chains (DTMCs): Definition and examples of MCs, transition probability matrix, Chapman-Kolmogorov equations; calculation of n-step transition probabilities, limiting probabilities, classification of states, ergodicity, transient Markov Chain, Markov Analysis.
Unit 5	<b>Queuing Theory:</b> Pure birth, pure death and birth-death processes. Mathematical models for M/M/1, M/M/N, M/M/S and M/M/S/N queues. Discrete Parameter Markov chains: M/G/1 Queuing model, Discrete parameter birth-death process.

#### Recommended Books:

2. Mendenhall – Introduction to probability and statistics, Cengage learning 2012
3. Probability Theory and Stochastic Processes for Engineers, Bhat, Pearson 2011
4. Probability and Random Processes with Application to Signal Processing, 3/e, Stark, Pearson 2002
5. Stochastic Processes, J. Medhi 3rd Edition, New Age International 2009.
6. Stochastic Process, S. M. Ross, 2<sup>nd</sup> Wiley, 1996.
7. Random Processes: Filtering, Estimation and Detection, Ludeman, Wiley 2002
8. An Introduction to Probability Theory & Its App., Feller, Wiley 1969
8. R. Nelson, Probability, Stochastic Processes, and Queueing Theory: The Mathematics of Computer Performance Modelling, Springer-Verlag, 1995.
9. E. Gelenbe, and G. Pujolle, Introduction to Queueing Networks, 2nd Edition, John Wiley, 1998.
10. R.B. Cooper, Introduction to Queueing Theory, 2nd Edition, North-Holland, 1981.
11. Probability, Statistics And Random Processes, Veerarajan.

### Course Outcomes

Upon successful completion of this course, the student will be able to:

- CO1 Understand the Basic concept of a random variable and probability distributions.
- CO2 Understanding the basics concepts of Joint distributions, Conditional distribution and law of large numbers.
- CO3 Understand the Properties of random processes and Stochastic Process.
- CO4 Understand the concept of Markov Chain and Transition Probabilities.
- CO5 Understand the concept of Queuing Theory.

MST002A	Probability & Measure Theory	3-1-0 [4]
---------	------------------------------	-----------

**Objectives:**

1. To Explain the foundation of probability theory, random variable.
2. To Explain probability distribution, mathematical expectation, etc. which forms the basis of basic statistics.
3. To exposed about the law of large numbers

UNIT 1	General probability space, various definition of probability, combinations of events, additive and multiplicative law of probability, conditional probability, Bayes' theorem and its application.
UNIT 2	Random variables: discrete and continuous random variables, p.m.f., p.d.f. and c.d.f., illustrations and properties of random variables, univariate transformations with illustrations. Two dimensional random variables: discrete and continuous type, joint, marginal and conditional p.m.f, p.d.f., and c.d.f., independence of variables, bivariate transformations with illustrations.
UNIT 3	Mathematical Expectation and Generating Functions: Expectation of single and bivariate random variables and its properties. Moments and Cumulants, moment generating function, cumulant generating function and characteristic function. Uniqueness and inversion theorems (without proof) along with applications. Conditional expectations.
UNIT 4	Classes of sets, fields, $\sigma$ -fields, minimal $\sigma$ -field, Borel $\sigma$ -field in $\mathbb{R}^K$ , sequence of sets, limsup and liminf of a sequence of sets. Measure, Probability measure, properties of a measure, Caratheodory extension theorem (statement only), Lebesgue and Lebesgue-Stieltjes measures on $\mathbb{R}^K$
UNIT 5	Limit laws: convergence in probability, almost sure convergence, convergence in mean square and convergence in distribution and their inter relations, Chebyshev's inequality, W.L.L.N., S.L.L.N. and their applications, De-Moivre Laplace theorem, Central Limit Theorem (C.L.T.) for i.i.d. variates, applications of C.L.T. and Liapunov Theorem (without proof)

**Suggested Readings:**

6. Billingsley, P. (1986): *Probability and Measure*, John Wiley Publications.
7. Dudley, R.M. (1989): *Real Analysis and Probability*, Worlds Worth & Books.
8. Tucket H.G. (1967): *A Graduate Course in Probability*, Academic Press.
9. Basu, A.K. (1999): *Measure Theory and Probability*, PHI.

Page 98     

**Course Outcomes**

CO1:-Understanding the concept of Probability.

CO2:-Understanding the concept of Mathematical Expectations and MGF.

CO3:-Understanding the concept of Random Variable.

CO4:-Understanding the concept of Sigma Field.

CO5:-Understanding the basic concept of Law of Convergence in Probability.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome

7. Draw a figure using Latexcommands.

### TEXT BOOKS / OPEN SOURCE MATERIALS

1. Bruce E Shapiro : Introducing Latex, California State University, Northridge, 2009.
2. Tobias Oetiker, Hubert Partl, Irene Hyna and Elisabeth Schlegl : The Not So Short Introduction to Latex, Version 4.20,2006.

### Course Outcomes (COs):

**Upon successful completion of this subject students should be able to:**

- CO1: Understand the main features and importance of the LaTeXuser interface of LaTeX, Understand how LaTeX differs from a word processor, format text in various ways and learn how to use LaTeX to format mathematical equations.
- CO2: Typing of text in LaTeX
- CO3: Typing of text including roman letters, alphabets, special symbols and mathematical symbols in LaTeX.
- CO4: Display of equations in LaTeX.
- CO5: Creating a table and drawing a figure in LaTeX.

MMA034A	Numerical Analysis LAB II	0-0-4 [2]
---------	---------------------------	-----------

#### OBJECTIVE:

- This course can be used by students in Mathematics as an introduction to the fundamental ideas of advance numerical analysis on SCILAB PACKAGE and Plot graphs using SCILAB.

#### List of Program:

1. Plots 2-D
2. plots 3-D
3. Euler's Method
4. Modified Euler's Method
5. Runge-Kutta 2<sup>nd</sup> Order method
6. Runge-Kutta 4<sup>th</sup> Order method
7. Adam's Predictor-corrector method
8. Trapezoidal rule
9. Simpson's 1/3 rule
10. Simpson's 3/8 rule
11. Double integration using Trapezium rule
12. Double integration using Simpson's rule
13. L-U factorization method

#### TEXT BOOKS

1. M.K. Jain: Numerical solution of differential equations, Wiley Eastern (1979), Second Edition.
2. C.F. Gerald and P.O. Wheatley: Applied Numerical Methods, Low- priced edition, Pearson Education Asia (2002), Sixth Edition.
3. D.V. Griffiths and I.M. Smith, Numerical Methods for Engineers, Blackwell Scientific publications (1991).

#### REFERENCE BOOKS

2. S.C. Chapra, and P.C. Raymond: Numerical Methods for Engineers, Tata McGraw Hill, New Delhi (2000).
3. R.L. Burden, and J. Douglas Faires: Numerical Analysis, P.W.S. Kent Publishing Company, Boston (1989), Fourth edition.
4. S.S. Sastry : Introductory methods of Numerical analysis, Prentice- Hall of India, New Delhi (1998).
5. M.K. Jain, S.R.K. Iyengar and R.K. Jain: Numerical methods for scientific and Engineering computation, Wiley Eastern (1993)

#### Course Outcomes (COs):

Upon successful completion of this subject students should be able to:

- CO1: This course can be used by students in Mathematics as an introduction to the fundamental ideas of advance numerical analysis on SCILAB PACKAGE and Plot graphs using SCILAB.
- CO2: Plots 2-D and 3-D graphs (Using SCI LAB).
- CO3: Solution of ODE: Euler's Method, Modified Euler's Method, Runge-Kutta 2<sup>nd</sup> Order method, Runge-Kutta 4<sup>th</sup> Order method and Adam's Predictor-corrector method (Using SCI LAB).
- CO4: Numerical integration: Trapezoidal rule, Simpson's 1/3 rule, Simpson's 3/8 rule, Double integration using Trapezium rule and Double integration using Simpson's rule (Using SCI LAB).
- CO5: L-U factorization method (Using SCI LAB).

## SEMESTER – IV

MMA008C	Analytic Dynamics	3-1-0 [4]
---------	-------------------	-----------

### OBJECTIVE:

- The mathematical framework plays a role in the formulation of modern quantum and relativity theories.
- Topics studied the kinematics of dynamics of systems of particles.
- Topics studied Lagrangian and Hamiltonian dynamics and rigid body dynamics.
- The emphasis is both on the formal development of the theory and also use of theory in solving actual physical problems.

<b>Unit 1</b>	D'Alembert's principle, General equations of motion of a rigid body, Motion of centre of inertia and motion relative to centre of inertia, Motion about a fixed axis: Finite forces moment of effective forces about a fixed axis of rotation, Angular momentum, Kinetic energy of a rotating body about a fixed line, Equation of motion of the body about the axis of rotation, Principle of conservation of energy.
<b>Unit 2</b>	Motion of a rigid body in two dimensions: Equations of motion in two dimensions, Kinetic energy of a rigid body, Moment of momentum, Rolling and sliding friction, Rolling of a sphere on a rough inclined plane, Sliding of a rod, Sliding and rolling of a sphere on an inclined plane, Sliding and rolling of a sphere on a fixed sphere, Equations of motion of a rigid body under impulsive forces, Impact of a rotating elastic sphere on a fixed horizontal rough plane, Change in kinetic energy due to the action of impulse.
<b>Unit 3</b>	Motion in three dimensions with reference to Euler's dynamical and geometrical equations, Motion under no forces, Motion under impulsive forces, Conservation of momentum (linear and angular) and energy for finite as well as impulsive forces.
<b>Unit 4</b>	Lagrange's equations for holonomous dynamical system, Energy equation for conservative field, Small oscillations, Motion under impulsive forces, Motion of a top.
<b>Unit 5</b>	Hamilton's equations of motion, Hamilton's principle and principle of least action.

### Suggested Readings:

1. N. C. Rana and P.S. Joag, Classical Mechanics, Tata McGraw-Hill, 1991.
2. J. L. Synge and B. A. Griffith, Principles of Mechanics, McGraw-Hill, 1991.
3. L. N. Hand and J. D. Finch, Analytical Mechanics, Cambridge University Press, 1998.
4. Naveen Kumar Generalized Motion of Rigid Body, Narosa, 2004.
5. S.L. Loney - An Elementary Treatise on the Dynamics of a Particle and of Rigid Bodies, Kalyani Publishers, New Delhi, 2004.
6. Bansal, J.L., Dynamics of a Rigid Body, Jaipur Publishing Co., 2004
7. M.D. Raishinghamia, Dynamics, S.Chand & Co. New Delhi, 2016.
8. M.Ray and H.S. Sharma, Text Book on Dynamics of Rigid Body, Student's friend & Company, 1960.

### Course Outcomes:

- CO1:- Understanding the Fundamental laws of mechanics.  
 CO2:- Understanding the basics concepts of D'Alembert's principle.  
 CO3:- Understanding the basics concepts of Euler's dynamical equation of motion.  
 CO4:- Understanding the Lagrange's equation of motion.  
 CO5:- Developing the ability to understand Hamilton's principle and principle of least action.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

**ELECTIVE (Any Three of the following )**

<b>MMA020B</b>	<b>Fractional Calculus</b>	<b>3-1-0 [4]</b>
----------------	----------------------------	------------------

**OBJECTIVE:**

- To introduce students to Basic concept of fractional calculus.
- To develop an understanding of fractional derivatives and integral.
- To develop an understanding few important application fractional derivative to other branches of both pure and applied mathematics.

<b>UNIT 1</b>	Special functions of fractional calculus: Gamma function, Beta functions, Mittag-Leffler function, Wright function.
<b>UNIT 2</b>	Fractional derivatives and integrals: Grunwald-Letnikov fractional derivatives, Riemann-Liouville fractional derivatives, geometric and physical interpretation of fractional integration and differentiation, sequential fractional derivatives, properties of fractional derivatives.
<b>UNIT 3</b>	Laplace, Fourier and Mellin transforms of fractional derivatives. Linear fractional differential equations: Equation of a general form, existence and uniqueness theorem as a method of solution, dependence of a solution on initial conditions.
<b>UNIT 4</b>	Laplace transform method, standard fractional differential equations, sequential fractional differential equations, fractional Green's function.
<b>UNIT 5</b>	Some methods for solving fractional order equations: Mellin transform, power series, Bebenko's symbolic calculus method, orthogonal polynomials, numerical evaluation of fractional derivatives, approximation of fractional derivatives.

**Texts/References:**

1. Basic Theory of Fractional Differential Equations, Y. Zhou, World Scientific, 2014.
2. Fractional Differential Equations, I. Podlubny, Academic Press, 1998.
3. The Fractional Calculus: Theory and Applications of Differentiation and Integration to Arbitrary Order, K.B. Oldham and J. Spanier, Dover Publications, 2006.
4. An Introduction to the Fractional Calculus and Fractional Differential Equations, K.S. Miller and B. Ross, Wiley-Interscience, 1993.

**Course Outcomes:**

- CO1:- Understanding the basic concept of fractional calculus.
- CO2:- Understanding the fractional derivatives and integrals Grunwald-Letnikov fractional derivatives, Riemann-Liouville fractional derivatives.
- CO3:- Understanding the Laplace, Fourier and Mellin transforms of fractional derivatives. Linear fractional differential equations.
- CO4:- Understanding the Laplace transform method, standard fractional differential equations, Green's function.
- CO5:- Understanding the Mellin transform, power series, Bebenko's symbolic calculus method, orthogonal polynomials, numerical evaluation of fractional derivatives.

MMA022A	Numerical Solution of Partial Differential Equations	3-1-0 [4]
---------	--	-----------

**Objectives:** This course has the following objectives:

- To teach students the Numerical solutions of parabolic PDE in one space: two and three levels explicit and implicit difference schemes.
- To expose students to the Numerical solution of parabolic PDE of second order in two space dimension: implicit methods.
- To expose student's basics of Nonlinear initial BVP. Difference schemes for parabolic PDE in spherical and cylindrical coordinate systems in one dimension. Numerical solution of hyperbolic PDE in one and two space dimension.
- To teach students „Difference schemes for first order equations. Numerical solutions of elliptic equations, approximations of Laplace and biharmonic operators.
- To teach students Finite element method: Linear, triangular elements and rectangular elements.

<b>Unit 1</b>	Numerical solutions of parabolic PDE in one space: two and three levels explicit and implicit difference schemes. Convergence and stability analysis.
<b>Unit 2</b>	Numerical solution of parabolic PDE of second order in two space dimension: implicit methods, alternating direction implicit (ADI) methods.
<b>Unit 3</b>	Nonlinear initial BVP. Difference schemes for parabolic PDE in spherical and cylindrical coordinate systems in one dimension. Numerical solution of hyperbolic PDE in one and two space dimension: explicit and implicit schemes. ADI methods.
<b>Unit 4</b>	Difference schemes for first order equations. Numerical solutions of elliptic equations, approximations of Laplace and biharmonic operators. Solutions of Dirichlet, Neuman and mixed type problems.
<b>Unit 5</b>	Finite element method: Linear, triangular elements and rectangular elements.

#### Suggested Readings

1. M. K. Jain, S. R. K. Iyenger and R. K. Jain, Computational Methods for Partial Differential Equations, Wiley Eastern, 1994.
2. M. K. Jain, Numerical Solution of Differential Equations, 2nd edition, Wiley Eastern.
3. S. S. Sastry, Introductory Methods of Numerical Analysis, Prentice-Hall of India, 2002.
4. D. V. Griffiths and I. M. Smith, Numerical Methods of Engineers, Oxford University Press, 1993.
5. C. F. General and P. O. Wheatley Applied Numerical Analysis, Addison- Wesley, 1998.

**Course Outcomes:** On completion of the course the student shall be able to:

1. Understand the fundamentals of the Numerical solutions of parabolic PDE in one space: two and three levels explicit and implicit difference schemes.
2. Understand the niceties of Numerical solution of parabolic PDE of second order in two space dimension: implicit methods.
3. Understand the basics of Nonlinear initial BVP. Difference schemes for parabolic PDE in spherical and cylindrical coordinate systems in one dimension. Numerical solution of hyperbolic PDE in one and two space dimension.
4. Understand the importance of Difference schemes for first order equations. Numerical solutions of elliptic equations, approximations of Laplace and biharmonic operators.
5. Understand and get ready to apply Finite element method: Linear, triangular elements and rectangular elements.

MMA023A	Number Theory and Cryptography	3-1-0 [4]
---------	--------------------------------	-----------

#### OBJECTIVE:

- This course is concerned with the basics of analytical number theory.
- Topics such as divisibility, congruence's, quadratic residues and functions of number theory are covered in this course.
- One of the applications of the said concepts are also included. Cryptography is the science of encrypting and decrypting any information.
- This is one of the finest applications of Number Theory. As a piece of information is expressed through symbols, representing it in a way that only the intended party would know it is the best part of encryption and decryption.
- As the world is flooded with information, generation, transfer and acquisition of it is very important. Students with basic background in Number Theory can take up this course.

Unit 1	Number Theory: Introduction, Time estimates for doing arithmetic, Divisibility and Euclidean algorithm, Congruencies, Some applications to factoring.
Unit 2	Finite Fields and quadratic residues: Finite Fields, Quadratic Residues and Reciprocity.
Unit 3	Cryptography: Some simple crypto Systems, Enciphering matrices, Public Key: The Idea of Public key Cryptography.
Unit 4	RSA, Discrete log, Knapsack, Zero-knowledge protocols and Oblivious Transfer.
Unit 5	Pseudo Primes, Rho Method, Fermat factorization and Factor bases.

#### Suggested Readings

1. Neal Koblitz, A Course in Number Theory and cryptography: A Graduate Text, Springer (Second Ed).
2. David M. Burton, Elementary Number Theory, Wm. C. Brown Publishers, Dubuque, Iowa 1989.
3. K. Ireland, and M. Rosen, A Classical Introduction to Modern Number Theory, GTM Vol. 84, Springer-Verlag, 1972.
4. G.A. Jones, and J.M. Jones, Elementary Number Theory, Springer-Verlag, 1998.
5. W. Sierpinski, Elementary Theory of Numbers, North-Holland, Ireland, 1988.

#### Course Outcomes (CO's)

- CO1: Solve problems in elementary number theory and apply elementary number theory to cryptography.
- CO2: Be able to compute a group of units directly. Compute Euler's function  $\phi$ , be able to use a formula for  $\phi$  to study relations between numbers  $n$  and  $\phi(n)$ .
- CO3: Be able to understand the operations with congruences, linear and non-linear congruence equations (with relatively small moduli)
- CO4: Student's will understand and be able to use the founding theorems: Lagrange theorem, Fermat's little theorem, Wilson's theorem, concept of a pseudo prime.
- CO5: Understand the basics of RSA security and be able to break the simplest instances.

MMA024A	Fuzzy Sets and Applications	3-1-0 [4]
---------	-----------------------------	-----------

**Objective:**

- To develop an understanding of Fuzzy Sets and Applications.
- To develop an understanding of Operations on fuzzy sets, Convex fuzzy sets.
- To develop an understanding of Basic theory of Fuzzy Maths.

<b>Unit 1</b>	Basic Concepts of Fuzzy Sets and Fuzzy Logic: Motivation. Fuzzy sets and their representations. Membership functions and their designing.
<b>Unit 2</b>	Types of Fuzzy sets. Operations on fuzzy sets. Convex fuzzy sets. Alpha-level cuts. Geometric interpretation of fuzzy sets. Linguistic variables. Possibility measure and distribution.
<b>Unit 3</b>	Fuzzy rules. Fuzzy Relations and Fuzzy Arithmetic: Composition of fuzzy relations. Fuzzy numbers. Arithmetic operations on fuzzy numbers. Fuzzy reasoning.
<b>Unit 4</b>	Fuzzy mapping rules and fuzzy implication rules. Fuzzy rule-based models for function approximation. Types of fuzzy rule-based models (the Mamdani, TSK, and standard additive models). Fuzzy Implications and Approximate Reasoning. Fuzzy Logic and Probability Theory: Possibility versus probability. Probability of a fuzzy event. Baye's theorem for fuzzy events. Probabilistic interpretation of fuzzy sets. Fuzzy measure.
<b>Unit 5</b>	Decision making in Fuzzy environment: Fuzzy Decisions, Fuzzy Linear programming, Fuzzy Multi criteria analysis, Multi objective decision making. Fuzzy databases and queries: Introduction, Fuzzy relational databases, Fuzzy queries in crisp databases.

**Suggested readings**

1. J. Yen and R. Langari: Fuzzy Logic: Intelligence, Control, and Information, Pearson Education, 2003.
2. G. J. Klir and B. Yuan: Fuzzy Sets and Fuzzy Logic: Theory and Applications, Prentice-Hall of India, 1997.
3. H.J. Zimmermann, Fuzzy Set theory and its Applications, Kluwer Academic Publ, 2001.

**Course Outcomes**

CO1: -Understanding the Basic Concepts of Fuzzy Sets and Fuzzy Logic: Motivation. Fuzzy sets and their representations. Membership functions and their designing.

CO2: -Understanding the Types of Fuzzy sets. Operations on fuzzy sets. Convex fuzzy sets. Alpha-level cuts. Geometric interpretation of fuzzy sets. Linguistic variables. Possibility measure and distribution.

CO3: - Understanding the Fuzzy rules. Fuzzy Relations and Fuzzy Arithmetic: Composition of fuzzy relations. Fuzzy numbers. Arithmetic operations on fuzzy numbers. Fuzzy reasoning.

CO4: -Understanding the Fuzzy mapping rules and fuzzy implication rules. Fuzzy rule-based models for function approximation. Types of fuzzy rule-based models (the Mamdani, TSK, and standard additive models). Fuzzy Implications and Approximate Reasoning. Fuzzy Logic and Probability Theory : Possibility versus probability. Probability of a fuzzy event. Baye's theorem for fuzzy events. Probabilistic interpretation of fuzzy sets. Fuzzy measure.

*Fig 4 98* *Pram* *nigam* *JTS* *Saur* *Shrestha* *Dr. J. K. Jaiswal*

CO5: - Understanding the Decision making in Fuzzy environment: Fuzzy Decisions, Fuzzy Linear programming, Fuzzy Multi criteria analysis, Multi objective decision making, Fuzzy databases and queries: Introduction, Fuzzy relational databases, Fuzzy queries in crisp databases.

MMA025A	Advanced Graph Theory	3-1-0 [4]
---------	-----------------------	-----------

#### OBJECTIVE:

- To develop an understanding of basic concepts of Graph Theory.
- To develop an understanding of Advanced Graph Theory.

<b>Unit 1</b>	Trees: Spanning trees and enumeration. Matching: Matching and Maximum Matching, Hall's Matching condition, Minimax Theorems.
<b>Unit 2</b>	Independent Sets and Covers. Dominating Sets. Connectivity: Connectivities of graphs, Cut-sets, Edge Connectivity and Vertex Connectivity.
<b>Unit 3</b>	Menger's Theorem. Network Flow problem, maximum network flows, flow augmenting paths.
<b>Unit 4</b>	Ford-Fulkerson Theorem. Coloring of graphs: Chromatic number and chromatic polynomial of graphs, Brook's Theorem.
<b>Unit 5</b>	Four Color Theorem. Planarity: Planar Graphs, Testing of Planarity, Kuratowski Theorem for Planar graphs, Random Graphs.

#### Suggested Readings

1. D.B.West, Graph Theory, Pearson Publ.2002.
2. F.Harary, Graph Theory. Narosa Publ. ND,2000.
3. R. Diestel, Graph Theory, Springer,2000.

#### Course Outcomes

CO1:-Understanding the trees: Spanning trees and enumeration. Matching: Matching and Maximum Matching, Hall's Matching condition, Minimax Theorems.

CO2:-Understanding the Independent Sets and Covers. Dominating sets. Connectivity: Connectivities of graphs, Cut-sets, Edge connectivity and Vertex Connectivity.

CO3:- Understanding the Menger's Theorem. Network Flow problem, maximum network flows, flow augmenting paths.

CO4:-Understanding the Ford-Fulkerson Theorem. Coloring of graphs: Chromatic number and chromatic polynomial of graphs, Brook's Theorem.

CO5:- Understanding the Four Color Theorem. Planarity: Planar Graphs, Testing of Planarity, Kuratowski Theorem for Planar graphs, Random Graphs.

MMA026B	Sampling Distribution & Testing of Hypothesis	3-1-0 [4]
---------	---	-----------

#### OBJECTIVE:

- To describe methods of Sampling distribution
- To develop an understanding of Chi-square, t and F-Distribution in statistics
- To describe methods of Experimental design
- To develop and understand non parametric test

<b>Unit 1</b>	<b>Basic Concepts:</b> Theory of sampling, population and estimation Statistical inference, testing of hypothesis. <b>Statistical Hypothesis and test of significance I</b> Definition, Simple and Composite hypotheses. Null and Alternative Hypotheses, two Types of errors in sampling, critical region, level of significance critical and p-values, procedure and testing of hypothesis.
<b>Unit 2</b>	<b>Sampling Distribution:</b> Chi Square ( $X^2$ ) Distribution and Its Properties, Chi - Square Test, Application of Chi -Square Distribution: Chi-Square Test for Population Variance, Chi-square Test of Goodness of Fit, Independence of Attributes, T- Distribution & Its Properties, And Applications: Testing of single mean, Difference of two means, paired t-test and sample correlation coefficient. <b>F-Distribution:</b> Definition of Snedecor's F-distribution. Application- Testing of equality of two variance.
<b>Unit 3</b>	<b>Analysis of variance:</b> One-way and two-way classified data for fixed effects models.
<b>Unit 4</b>	<b>Experimental designs:</b> Role, historical perspective, terminology, experimental error, basic principles, uniformity trials, fertility contour maps, choice of size and shape of plots and blocks. <b>Basic designs:</b> Completely Randomized Design (CRD), Randomized Block Design (RBD), Latin Square Design (LSD) – layout, model and statistical analysis, relative efficiency, analysis with missing observations.
<b>Unit 5</b>	<b>Non Parametric Tests:</b> Definition merits and limitations, Sign test for univariate and bivariate distributions, Run test and Median test for small and large samples.

8. Goon, A.M., Gupta, M.K. and Dasgupta, B. (2005): Fundamentals of Statistics. Vol. II, 8th Edn World Press, Kolkata.
9. Kempthorne, O. (1965): The Design and Analysis of Experiments. John Wiley.
10. Montgomery, D. C. (2008): Design and Analysis of Experiments, John Wiley.

**Course Outcomes**

CO1:- To understand the Basic requirement of Hypothesis

CO2:- To test hypothesis and methodology such as sampling, goodness-of-fit testing, Independence of attributes and mean is testing.

CO3:- To understand about the Analysis of Variance techniques.

CO4:- To understand the Basic concepts of Experimental design and CRD and Understanding the basics concepts of RBD and LSD.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

MMA027A	Linear Dynamical Systems	3-1-0 [4]
---------	--------------------------	-----------

#### OBJECTIVE:

- The classification of fixed points of autonomous systems, attractors and repellers, natural boundaries, case study: population growth.
- Topics studied the autonomous second order systems, constant coefficient equations, phase curves and fixed points, classification of fixed points of linear systems, analyzing non-linear systems.
- Topics studied Discrete Systems – examples of discrete systems, some terminology, linear discrete systems.
- The emphasis is both on the Bifurcations in one-dimensional flows – introduction, saddle-node bifurcation, trans critical bifurcation.
- Topics studied Bifurcation in two-dimensional flows – saddle-node, trans critical, and Pitchfork bifurcations, Hopf bifurcation.

Unit 1	First order continuous autonomous systems – some terminology, classification of fixed points of autonomous systems, attractors and repellers, natural boundaries, case study: population growth.
Unit 2	Second order continuous autonomous systems – autonomous second order systems, constant coefficient equations, phase curves and fixed points, classification of fixed points of linear systems, analyzing non-linear systems, case studies: lead absorption in the body, interacting species.
Unit 3	Discrete Systems – examples of discrete systems, some terminology, linear discrete systems, non-linear discrete systems, quadratic maps.
Unit 4	Bifurcations in one-dimensional flows – introduction, saddle-node bifurcation, trans critical bifurcation, Pitchfork bifurcation.
Unit 5	Bifurcation in two-dimensional flows – saddle-node, trans critical, and Pitchfork bifurcations, Hopf bifurcation.

#### Suggested Readings

1. Introduction to Applied Non-Linear Dynamical systems and Chaos (Vol-2) – S. Wiggins, TAM, Springer-Verlag, New York, 1990.
2. Differential Equations, Dynamical Systems and an Introduction to Chaos – M.W. Hirsch, S. Smale, and R.L. Devaney, Elsevier (2004).
3. Introduction to Non-Linear Systems – J. Berry and Arnold, Great Britain 1996.
4. Non Linear Dynamics and Chaos – S. H. Strogatz, Addison- Wesley Publishing Company, USA, 1994.

#### Course Outcomes:

- CO1:- Understanding the classification of fixed points of autonomous systems.
- CO2:- Understanding the basics concepts of autonomous second order systems, constant coefficient equations, phase curves and fixed points.
- CO3:- Understanding the basics concepts of some terminology, linear discrete systems, non-linear discrete systems.
- CO4:- Understanding the Bifurcations in one-dimensional flows.
- CO5:- Developing the ability to understand Bifurcation in two-dimensional flows.

MMA035A	LATEX BEAMER LAB	0-0-4 [2]
---------	------------------	-----------

#### OBJECTIVE:

1. Understand, how to deals with tables, graphs in latex. Know beamer in latex, typographical settings in latex for scientific article.
2. Create a frame environment with title "Latex Beamer presentation" and include author name, Institute, current date and footnote.
3. Make a frame title as "What is Beamer?" and include the definition of Beamer in different blocks.
4. Display the following texts 10 times "This is an example for Latex Beamer". For each display change the font size (decreasing order), font style, text color and otherproperties.
5. Make a frame title as "Equations". In different blocks type theequations

$$y = ax^2 + bx + c, \text{ call it as (1) and } x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}, \dots\dots\dots (2).$$

Then cross refer eqn. (2) at some other point

6. Create a file and Import the file into latex beamer. Make frame title as " Importing files". Use doc, jpg, pdf and other file formats inthese.
7. Make a frame title as "Tables" and create atable.

Hydrogen Line	Spectral order		
	First	Second	Third
Red	657	656.7	656.3
Blue	487.3	486.7	486.1
Violet	433.5	434.3	0*

8. Create a frame environment. Try to use different back ground pictures.
9. Insert few pictures in single page (frame) and give the frame title as "Graph".
10. Create references using bibliography environment. Name the frame as "References". Use California or Harvard bibliographic system.
11. Make a frame title as "Table of Contents" and list out the following one by one using pause command  
(1) Introduction (2) Equations (3) Importing files  
  
(4) Tables (5) Graph and (6) References.
12. Make a beamer presentation. Use a suitable title for thepresentation.

#### TEXT BOOKS / OPEN SOURCE MATERIALS

1. Charles T .Batts: A Beamer Tutorial in Beamer.  
(<http://www.ctan.org/tex-archive/macros/latex/contrib/beamer/doc/>)
2. <http://latex-beamer.sourceforge.net>.

*Fig 4 98 Beamer nizam JTSI Seema Shristi Jyoti Karapant*

**Course Outcomes (COs):**

Upon successful completion of this subject students should be able to:

CO1: Understand the how to deals with tables, graphs in latex. Know beamer in latex, typographical settings in latex for scientific article.

CO2: Apply working knowledge of SCI LAB package to simulate and solve matrices, system of equations, trigonometric functions, Fibonacci series and applications.

CO3: Solve, simulate and analyze various matrices.

CO4: Solve, simulate and analyze various system of equations.

CO5: Solve, simulate and analyze trigonometric functions, Fibonacci series.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

DMA019A	Fundamentals of Probability and Statistics	L-T-P:3-0-0
---------	--	-------------

**Course objective:-**

- To define the Sample spaces and events
- To calculate probabilities using Conditional probability, Rule of total probability and Bayes' theorem.
- To explain the concept of a random variable and the probability distributions.

**Unit I**

Sample spaces and events; probability axioms and properties; counting techniques; conditional probability and Bayes' rule; independence.

**Unit II**

Defining random variables (Discrete and continuous); probability distributions; expected values of random variables and of functions of random variables

**Unit III**

Commonly used discrete and continuous distributions (Uniform, Binomial, Normal, Poisson and Exponential random variables) and their properties.

**Unit IV**

Principal of Least Square, Fitting of Straight line, second degree parabola, Power curve and Exponential Curve.

**Unit V**

Correlation, Scatter Diagram, Karl Pearson's Coefficient of Correlation and its properties. Spearman's Rank Correlation Coefficient. Regression- Fitting of Regression Lines, Regression Coefficients with properties.

**References:**

1. Goon Gupta and Das Gupta: Fundamentals of Statistics, Vol. 1, The World Press Pvt. Ltd., Kolkata.
2. Gupta and Kapoor : Fundamentals of Mathematical Statistics, Sultan Chand and Sons, New Delhi.
3. Gupta and Kapoor : Fundamentals of Applied Statistics, Sultan Chand and Sons, New Delhi.
4. Sheldon Ross, An Elementary Introduction to Mathematical Finance, 2nd Ed., Cambridge University Press, USA, 2003.

*Fig 4 98* *Pram* *nigam* *JS* *Saur* *Shrest* *Dr. J. K. Kapur*

**Course outcome:**

**CO1:-** To express the concepts of factorial and the basic principal of counting.

**CO2:-** To explain the concept of a random event.

**CO3:-** To Solve the problems about Uniform, Binomial, Normal, Poisson and Exponential random variables

**CO4:-** To define Fitting of Straight line, second degree parabola, Power curve and Exponential Curve.

**CO5:-** To understand the Correlation, Scatter diagram, Regression Lines, Regression Coefficients with properties.

<b>DMA018A</b>	<b>Professional Skills (Mathematical Aptitude)</b>	<b>L-T-P:3-0-0</b>
----------------	--	--------------------

**Course objective:-**

- To define Decimal Fractions and problems on numbers
- To calculate simple interest
- To understand Surds and Indices

**Unit-I**

Number System, H.C.F. and L.C.M. of Numbers, Decimal Fractions.

**Unit-II**

Simplification, Square Roots and Cube Roots, Average, Problems on Numbers.

**Unit-III**

Problems on Ages, Surds and Indices, Logarithms, Percentage.

**Unit-IV**

Profit and Loss, Time and Work, Time and Distance, Ratio and Proportion, Partnership.

**Unit-V**

Simple Interest, Compound Interest.

**Course outcome:-**

**CO1:-** To understand H.C.F. and L.C.M. of Numbers.

**CO2:-** To solve the square roots and cube roots.

**CO3:-** To understand Problems on Ages.

**CO4:-** To calculate Time and Distance, Ratio and Proportion.

**CO5:-** To understand Simple Interest, Compound Interest.

**References:**

DMA003A	Basic Mathematics	L-T-P:3-0-0
---------	-------------------	-------------

**Course objective:-**

- To explain and apply basic mathematics.
- To solve system of linear equation by use of matrix.
- To describe and concept of Arithmetic Progression, Geometric Progression, Harmonic Progression .Derivation of the nth term and sum of the first n terms.

**Unit I**

Exponents; Polynomials; Linear Equations – slopes, intercepts & slope-intercept form.

**Unit II**

Solving the Equations- Linear and Quadratic; Solving the system of Equations -Elimination and Substitution methods (Up to 3variables).

**Unit III**

Types of Matrices, Operations on Matrices; Matrix expression of a system of linear equations; Adjoint and Inverse of Matrix; Solving linear equations with an inverse matrix.

**Unit IV**

Calculation of determinants (up to third-order determinants); Minors and cofactors; Properties of determinants; Solving linear equations by determinants-Cramer's rule.

**Unit V**

Motivation for studying Arithmetic Progression, Geometric Progression, Harmonic Progression .Derivation of the nth term and sum of the first n terms .

**References**

1. Mathematics: A Complete Introduction: The Easy Way to Learn Maths (Teach Yourself),Hugh Neill

**Course outcomes:-**

**CO1:-** To solve the linear equation.

**CO2:-** To solve the system of equation by Elimination and Substitution methods.

**CO3:-** To define types of matrices and solving linear of equation.

**CO4:-** To calculate of determinates.

**CO5:-** Motivation for studying Arithmetic Progression.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

DMA004A	Quantitative Mathematics	L-T-P:3-0-0
---------	--------------------------	-------------

**Course objectives:-**

- To introduction OR; Scope, Techniques, Characteristics and Limitations of Operation Research
- To understand of general structure
- To be able to perform statistical analysis.

**Unit-I**

Introduction to OR; Scope, Techniques, Characteristics and Limitations of Operation Research; Methodology and Models in OR (only theory). Application of LPP in Management, Advantages of LPP (only theory) Formulation of LPP, Solution of LPP by Graphical method: Infeasible and Unbounded Solution, Formulation of Dual of a LPP.

**Unit-II**

General Structure; Various methods for finding initial solution: Maximization and Minimization problems North West Corner Method, Least Cost Method, Vogel's Approximation Method; Finding Optimal Solution: Modified Distribution method; Variations: Unbalanced Transportation Problem, Theoretical concept of Degeneracy only; Assignment problems; General Structure; Finding Optimal Solution; Maximization problem, Restrictions on Assignments, Alternate Optimal solutions.

**Unit-III**

Terminology; Networking Concepts; Rules for drawing network diagram; CPM Computations: CPM Terminology, Finding critical path - Different Floats; PERT Computations: Computation of earliest and latest allowable times, Probability of meeting the scheduled dates; difference between PERT and CPM.

**Unit-IV**

Terminology; Two person zero sum game; Solution to games: Saddle point, dominance rule, Value of the game, mixed strategy, Graphical method of solving a game – (2 x n) and (m x 2) games.

**Unit-V**

**Introduction to Statistics:** Basic concepts, Statistics in business.

**Descriptive Statistics:** Measure of Central Tendency Mean, Median, Mode, Percentiles, Quartiles.

**Descriptive Statistics:** Measures of Variation Range, Inter-quartile range, Mean Absolute Deviation, Variance and Standard deviation

<b>DMA005A</b>	<b>Commercial Mathematics</b>	<b>L-T-P:3-0-0</b>
----------------	-------------------------------	--------------------

Course objectives:-

- To understand the basic concepts of Mathematics.
- To understand of Computations involving percentage.
- To concept of banking.

#### Unit I

Ratio and Proportion. Review of ratio and proportion. Application of direct and inverse proportion (variation).

#### Unit II

Percentage and its Applications Concept of percentage. Conversion of percents to a decimal ( fraction ) and vice - versa. Computations involving percentage. Applications of percentage to (i) profit and loss (ii) simple interest (iii) discount (rebate) (iv) sales tax (v) commission in transaction (vi) instalment buying

**Unit III:** Compound Interest Compound interest and its application to rate of growth and depreciation. (conversion periods not more than 4 )

#### Unit IV

Concept of Banking. Types of accounts: (a) Saving (b) Fixed/term deposit Calculation of interest in saving account and on fixed deposit with not more than 4 conversion periods.

#### Unit V

Basic principles: Comparison, arbitrage and risk aversion, Interest (simple and compound, discrete and continuous), time value of money, inflation, net present value, internal rate of return (calculation by bisection and Newton-Raphson methods)

#### References

1. Sheldon Ross, An Elementary Introduction to Mathematical Finance, 2nd Ed., Cambridge University Press, USA, 2003.

#### Course outcomes:-

**CO1:-** To understand the application of direct and indirect of variation.

**CO2:-** To solve the simple interest simple discount etc.

**CO3:-** To define the compound interest and its application.

**CO4:-** To understand the concept of banking and types of account.

**CO5:-** To calculate the internal rate of return by bisection method and Newton-Rapshon method.

DMA006A	Optimization Techniques	L-T-P:3-0-0
---------	-------------------------	-------------

**Course objectives:-**

- To understand the theory of optimization methods and algorithms developed for solving various types of optimization problems.
- An ability to apply knowledge of mathematics and science.

**Unit I**

Introduction, History of Optimization, Optimization Problem, Classification, Formulation, Convex sets; Introduction, Structure and Formulation of Linear Programming Problem. Examples of LP Model Formulation (Production, Marketing, Finance etc.). Graphical Solution methods of LP Problem.

**Unit II**

Standard Form of an LP Problem. Simplex Algorithm. Duality in Linear Programming.

**Unit III**

Mathematical Model. Methods for finding initial solution. Test for optimality.

**Unit IV**

Basic concepts of Game Theory. Classification and Description of Games. Pay-off matrix, saddle point solutions, Mixed strategy, Dominated Strategies

**Unit V**

Basic concepts of integer and mixed integer programming, Gomory's and branch and bound method for solving integer and mixed integer programming.

**References**

1. KantiSwaroop, P.K. Gupta and Man Mohan, Operations Research, Sultan Chand & Sons, New Delhi, 1998.

DMA008A	Fuzzy Mathematics	L-T-P:3-0-0
---------	-------------------	-------------

**Course objectives:**

- This course introduces students to the basic concepts of modeling in systems using fuzzy sets.
- The concepts of fuzzy sets are introduced and their role in applications of semantic interpreters, control systems and reasoning systems.

**Unit- I**

Basic concepts of fuzzy set, t-norm, t-conorms, membership function,  $\alpha$ -cut, Algebra of fuzzy sets, distance between fuzzy sets, fuzzy relation.

**Unit- II**

Fuzzy numbers, Arithmetic operations of fuzzy numbers, Extension principle, Interval arithmetic, Defuzzification

**Unit- III**

Fuzzy valued functions, fuzzy equations, fuzzy inequalities, system of fuzzy linear equations, maximum and minimum of fuzzy functions.

**Unit- IV**

Classical Logic – Multi-valued Logics – Fuzzy Propositions – Fuzzy Quantifiers – Linguistic hedges – Inference from conditional Fuzzy proposition.

**Unit- V**

Fuzzy sets in Decision making, Optimization in Fuzzy environment, Fuzzy set application in image processing.

**References**

1. George J.Klir and Bu Yuan, Fuzzy sets and Fuzzy logic Theory and applications, Prentice Hall of India, New Delhi.
2. Didier Buboiss and Henri Prade, Fuzzy sets and systems, Academic Press.
3. James J Buckley, Esfandiar Eslami, An Introduction to Fuzzy logic and Fuzzy sets (Springer).
4. H.J.Zimmerman, Fuzzy set theory and application (Allied Publication in Association with KLUWER)

**Course Outcomes:**

By the end of the course, student will be able to:

CO1 :-To define the basic concept of fuzzy set

CO2:- Understand basic knowledge of the fuzzy sets, operations and their properties.

CO3:- Understand the fundamental concepts of Fuzzy functions and Fuzzy logic

CO4:- To understand the Classical Logic – Multi-valued Logics etc.

CO5:- Apply the concepts of Fuzzy sets in image processing, Pattern reorganization and Decision making.

DMA009A	Probability Theory for Engineers	L-T-P:3-0-0
---------	----------------------------------	-------------

**Course objective:**

- To apply the rules of probability (addition, conditional, multiplication) and terms of probability (mutually exclusive, independent and dependent).
- To use probability distribution for discrete random variables to make prediction about the probability of certain events.
- Focus on correlation and regression techniques, the two powerful tools in statistics.

**Unit-I**

Basic notions of probability, Conditional probability and independence, Baye's theorem. Random variables - Discrete and continuous, Cumulative distribution function, Probability mass/density functions; Mathematical expectation, Moments.

**Unit-II**

Discrete distributions: Uniform, Binomial, Negative binomial, Poisson distribution. Continuous distributions: Gamma, Exponential, Normal approximation to the binomial distribution.

**Unit-III**

Joint cumulative distribution function and its properties, Joint probability density function, Marginal distributions, Expectation of function of two random variables, Joint moment generating function, Conditional distributions and expectations.

**Unit-IV**

**Principal of Least Square:** Fitting of Straight line, second degree parabola, Power curve and Exponential Curve.

**Correlation and Regression:** Correlation, Scatter Diagram, Karl Pearson's Coefficient of Correlation and its properties, Spearman's Rank Correlation Coefficient. Regression- Fitting of Regression Lines, Regression Coefficients with properties.

**Unit-V**

**Statistical Hypothesis and test of significance**

Definition, Simple and Composite hypotheses. Null and Alternative Hypotheses, two Types of errors in sampling, critical region, level of significance critical and p-values, procedure and testing of hypothesis

*Fig 4 98* *Pg 100* *mjani* *10/10/17* *Seena* *10/10/17* *10/10/17*

**Course Outcomes:**

This course will enable the students to:

CO1 Understanding basic concepts about probability and Random variable.

CO2 Learn about the discrete and continuous probability distributions.

CO3 Understand distributions in the study of the joint behaviour of two random variables.

CO4 Establish a formulation helping to predict one variable in terms of the other that is, correlation and linear regression. Also understand about fitting of curves.

CO5:- To understand Statistical Hypothesis and test of significance.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

BUILD YOUR WORLD

**School of Science**  
**Course Structure and Syllabus**  
**B. Sc. Microbiology**  
**Academic Programme**  
**2022-2025**

Dr. P. S. Singh

Rashmi

**Programme Outcome:** After completion of degree course the student will be acquainted with sufficient knowledge in Microbiology. The degree program combines the teaching of core principles with hands-on laboratory experience, preparing students for exciting careers in industry and academia.

The course also provides a wide range of opportunities in *industries, pharmaceutical companies, Health care services* and *teaching* after graduating the course.

**The student outcomes are:**

1. To familiarize students with fundamental concept of basic techniques and their applications in applied sciences.
2. It is expected that the knowledge gained through this course will make student competent to meet the challenges of academic and professional courses.
3. To train the student in various aspects related to applied microbiology and medical microbiology.
4. An ability to apply profound understanding of basic to applied microbiology.
4. An ability to design and perform experiments, as well as to analyze and interpret data.
5. An ability to communicate effectively with reference to speaking, reading, writing and listening clearly in person through electronic media in English and Hindi and able to get acquainted with the people, ideas books media and technology.
6. A recognition of the need for, and an ability to engage in life-long learning.
7. A knowledge of contemporary and burning issues.

#### **B.Sc. Microbiology Program Educational Objective (PEO's):**

A Graduate of the Microbiology should:

##### **PEO-I**

Students will develop themselves as effective professionals by the knowledge gained with attention to team work, effective communication, critical thinking and problem solving skills.

##### **PEO-II**

Students will develop professional skills that prepare them for self employment as well as to qualify competitive examination and life-long learning in advanced areas of Microbiology and applied fields.

##### **PEO-III**

Students will demonstrate their ability to adapt to a rapidly changing environment by having learned and applied new skills and new technologies.

##### **PEO-IV**

Students will be provided with an educational foundation that prepares them for excellence, leadership roles along diverse career paths with encouragement to professional ethics and active participation needed for a successful career.

### Program Outcome

A candidate who is conferred an UG (Hons) degree i.e. B.Sc. (Hons) degree in microbiology needs to have acquired/developed following competencies during the programme of the study:

- PO1. Acquired knowledge and understanding of the microbiology concepts as applicable to diverse areas such as medical, industrial, environment, genetics, agriculture, food and others
- PO2. Demonstrate key practical skills/competencies in working with microbes for study and use in the laboratory as well as outside, including the use of good microbiological practices.
- PO3. Competent enough to use microbiology knowledge and skills to analyze problems involving microbes, articulate these with peers/ team members/ other stake holders, and undertake remedial measures/ studies etc.
- PO4. Developed a broader perspective of the discipline of Microbiology to enable him/her to identify challenging societal problems and plan his professional career to develop innovative solutions for such problems.
- PO5. Acknowledges health safety environment (HSE) and ethical issues in handling chemicals and biological materials; understands the environmental impacts associated with the activity; performs risk assessments and is familiar with safety instructions in his/her subject area.
- PO6. Can communicate scientific results to the general public and experts by writing well structured reports and— contributions for scientific publications and by oral presentations
- PO7. To demonstrate knowledge to understand the culture, essential facts, concepts, principles and theories relating to the subject areas identified and to recognize, analyze problems and plan strategies for their solution.

#### Course outcome (CO)

On completion of the course, students are able to:

CO1-Understand the general principle, working and applications of laboratory instruments.

CO2-Understand the basic principle, working and applications of centrifugation and electrophoresis technique.

CO3-Understand the basic of autoradiography, biological hazards of radiation and safety measures in handling radioisotopes

CO4- Understand the Microbial techniques used in microbial lab and cultivation of microbes in lab.

CO5-Understand the culture techniques and general staining techniques used for bacteria, fungi and algae.

### Unit-I

General lab Instruments: principle, working and applications of pH meter, Autoclave, laminar air flow, calorimeter, spectrophotometer, centrifuge, water bath, vortex mixer, oven, incubator and colony counter. Microscopy: light microscopy, phase contrast, Fluorescence microscopy and electron microscopy.

### Unit -II

Centrifugation: types, working, principle and applications; Electrophoresis: types, working, principle and applications.

### Unit – III

Radioisotopic Techniques: Types of radioisotopes used in Biochemistry, units of radioactivity measurements, isotopes commonly used in biochemical studies –  $^{32}\text{P}$ ,  $^{35}\text{S}$ ,  $^{14}\text{C}$  and  $^3\text{H}$ ).

### Unit IV

Chromatography: types, working, principle and applications; Spectroscopic Techniques: Beer-Lambert law, light absorption and its transmittance, application of visible and UV spectroscopic techniques

### Unit V

Autoradiography. Biological hazards of radiation and safety measures in handling radioisotopes. Biological applications of radioisotopes.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	3	2	1	1	1
CO2	2	3	3	3	3	3	3
CO3	1	1	2	3	2	2	0
CO4	3	2	3	1	1	0	0
CO5	3	3	2	0	3	0	1

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Khandelwal P.P., Textbook of optics and atomic physics, 2015, Himalaya Publishing House
2. Patel S.B., Nuclear physics an introduction, 2<sup>nd</sup> edition, 2011, New Age International
3. Pattabhi and Gautha, Biophysics, 2<sup>nd</sup> edition, 2009, Narosa Publishing House
4. Nakara and Choudhary, Instrumentation measurements and analysis, 3<sup>rd</sup> Edition, 2010, Tata Mc Graw Hill
5. Khandpur R.S., Handbook of analytical instruments, 3<sup>rd</sup> Edition, 2015, Tata Mc Graw Hill

*[Handwritten signatures and marks at the bottom of the page]*

6. Beiser A, Perspectives of modern physics, 1969, Mc Graw Hill
7. White H.E., Introduction to atomic spectra, 2005, Mc Graw Hill
8. Lodish, Berk, Matsudara, Kaiser, Krieger, Zipursky, Darnell, Molecular cell biology, 8<sup>th</sup> edition 2016, W.H. Freeman and Co.

#### Physicochemical Techniques Lab (BMI002C)

- 1) Demonstration of laboratory rules, basic requirements in a microbiological laboratory and safety measures.
- 2) Demonstration of the components, use and care of bright field microscope.
- 3) Determination of size of a given microorganism using micrometry.
- 4) Demonstration of the pH meter and determination of pH of a given sample.
- 5) Demonstration of centrifuge for the given sample.
- 6) Demonstration of electrophoresis/ PAGE.
- 7) Separation of chlorophyll a and b using paper chromatography.
- 8) Separation of amino acids using TLC.
- 9) Verification of Beer – Lamberts' Law.
- 10) Preparation of standard curve of proteins by spectroscopy.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI003C	Microbial Diversity	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1- Understand the history of microbiology and classification of microorganism.  
 CO2- Analyze the structural organization of bacterial system.  
 CO3- Understand the cellular structure, biosynthesis and function of bacterial system.  
 CO4- Evaluate the structures of algae, fungi and protozoan.  
 CO5- Apply the sterilization, isolation and staining techniques to the microbial culture.

#### Unit-I

History of Microbiology – Overview, Biogenesis and abiogenesis, golden age of microbiology and development in the field of medical microbiology, immunology, environmental microbiology, contributions of Robert Hooke, Antonie von Leeuwenhoek, Redi, Spallanzani, Needham, Pasteur, Tyndal, Joseph Lister, Robert Koch (Germ Theory), Edward Jenner and Alexander Flemming, Martinus Beijerinck, Scope of Microbiology, aim and principles of classification, systematics and taxonomy, conventional, molecular and recent approaches to polyphasic bacterial taxonomy.

#### Unit -II

Whittaker's five kingdom classification, Carl Woese three domain classification, Bacterial

*Rashmi*  
*R*  
*Seetha*  
*[Signature]*  
*[Signature]*

morphology and subcellular structures; Slime layer, Capsule, Cell wall, cell membrane, Ribosome, inclusion bodies - inorganic, organic; Exospores & Cysts: types & structure. Plasmids and episomes.

### Unit -III

Bacterial Chromosome (Fundamental differences with eukaryotic chromosome). Bacterial cell wall biosynthesis and structure. Differences between eubacteria and archaebacteria.

### Unit -IV

Brief description of salient features, classification of Algae, Fungi and Protozoa: General characteristics, vegetative and reproductive structure of Protozoa: *Giardia*, *Entamoeba* and *Plasmodium*, *Trichomonas*, *monocystes*

### Unit -V

Methods of studying microorganism; Staining techniques: simple staining, Gram staining, negative staining and acid-fast staining. Sterilization techniques (physical & chemical sterilization). Culture media & conditions for microbial growth. Pure culture isolation: Streaking, serial dilution and plating methods; cultivation, maintenance and preservation of pure cultures.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	0	3	1	3	0
CO2	2	3	1	0	0	1	2
CO3	2	2	1	0	0	1	1
CO4	3	1	3	1	1	2	2
CO5	3	3	2	2	2	2	2

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Stanier RY, Ingraham JL, Wheelis ML, and Painter PR, General Microbiology, 5<sup>th</sup> edition, 2005, McMillan.
2. Atlas, Principles of Microbiology, 2<sup>nd</sup> ed., 1997, McGraw-Hill
3. Alexopoulos CJ, Mims CW, and Blackwell M, Introductory Mycology. 4<sup>th</sup> edition, 1996, John and Sons, Inc.
4. Cappucino J and Sherman N., Microbiology: A Laboratory Manual. 9<sup>th</sup> edition, 2010, Pearson Education limited.
5. Kumar HD., Introductory Phycology, 2<sup>nd</sup> edition, 1990, Affiliated East Western Press.
6. Madigan MT, Martinko JM and Parker J., Brock Biology of Microorganisms. 12<sup>th</sup> edition, 2009, Pearson/Benjamin Cummings.
7. Pelczar MJ, Chan ECS and Krieg NR., Microbiology. 5<sup>th</sup> edition, 1993, McGraw Hill Book Company.
8. Tortora GJ, Funke BR, and Case CL., Microbiology: An Introduction, 9<sup>th</sup> edition, 2008,

Pearson Education.

**Microbial Diversity Lab (BMI004C)**

- 1) Preparation of bacterial smear.
- 2) Simple staining of bacteria and fungi.
- 3) Identification of common morphological forms of bacteria.
- 4) Identification of Cyanobacteria (blue-green algae).
- 5) Identification of some common fungi (*Aspergillus*, *Penicillium*, *Mucor* and *Rhizopus*).
- 6) Identification of common algae.
- 7) Demonstration and explanation of different types of viruses.
- 8) Gram staining.
- 9) Microscopic examination of free-living protozoa of a pond.
- 10) Hanging drop technique demonstrating motility of Bacteria.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI070A	Cell and Molecular Biology	4	1	4	2	5

**Course outcome (CO)**

On completion of the course, students are able to:

CO1- Understand the cell structural organization and function of cell organelles.

CO2- Understand the structure of DNA and its component.

CO3- Understand the cell cycle and its regulation along with extracellular control of cell growth and apoptosis.

CO4- Understand the transcription in prokaryotes and its regulation.

CO5- Understand the concept of split genes, concept of introns and exons and processing of rRNA.

**Unit I**

Concepts of cell- Prokaryotic & Eukaryotic cells. Cell organization of Prokaryotic cells with special reference to Bacteria. Eukaryotic cells - cell wall & plasma membrane; structure & function of cell organelles and inclusions. Episome, Mesosome, Flagella and Fimbriae.

**Unit II**

Experimental evidences for nucleic acid as genetic material. Structure of DNA; Models of DNA replication. Enzymes, proteins and other factors involved in DNA replication. Mechanism of DNA replication in prokaryotes & eukaryotes Super helicity in DNA, linking number, topological properties.

### Unit III

Cell cycle: Eukaryotic Cell Cycle, Regulation of Cell cycle progression, Events of Mitotic Phase, Meiosis and Fertilization. Cell cycle and Programmed cell death- Control system, intracellular control of cell cycle events, Apoptosis, extracellular control of cell growth and apoptosis.

### Unit IV

Transcription: Definition, difference from replication, promoter - concept and strength of promoter RNA Polymerase and the transcription unit. Transcription in Eukaryotes: RNA polymerases, general Transcription factors. Translational machinery, Charging of tRNA, aminoacyl tRNA synthetases, Mechanisms of initiation, elongation and termination of polypeptides in both prokaryotes and eukaryotes, Fidelity of translation, Inhibitors of protein synthesis in prokaryotes and eukaryote

### Unit V

Split genes, concept of introns and exons, RNA splicing, spliceosome machinery, concept of alternative splicing, Polyadenylation and capping, Processing of rRNA, RNA interference: si RNA, miRNA and its significance.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	0	1	0	0	1
CO2	1	2	0	1	0	0	1
CO3	3	3	1	0	1	2	0
CO4	2	2	2	0	0	2	1
CO5	2	3	2	0	0	2	1

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Karp, G., Cell and Molecular Biology: Concepts and Experiments, 6<sup>th</sup> Edition, 2010, John Wiley & Sons. Inc.
2. De Robertis, E.D.P. and De Robertis, E.M.F. Cell and Molecular Biology, 8<sup>th</sup> Edition, 2006, Lippincott Williams and Wilkins, Philadelphia.
3. Cooper, G.M. and Hausman R.E., The Cell: A Molecular Approach, 5<sup>th</sup> Edition, 2009, ASM Press & Sunderland, Washington, D.C.
4. Becker W.M., Kleinsmith L.J., Hardin. J. and Bertoni G. P., The World of the Cell, 7<sup>th</sup> Edition, 2009, Pearson Benjamin Cummings Publishing

#### Cell and Molecular Biology (BMI071A)

- 1) To analyze prepared slides of mitosis.

*[Handwritten signatures and marks]*

- 2) To perform and identify different stages of mitosis in onion root tip.
- 3) To analyze prepared slides of meiosis.
- 4) To perform and identify different stages of meiosis in onion flower bud.
- 5) To prepare the slide of giant chromosome.
- 6) Isolation of genomic and plasmid DNA from *E.coli*
- 7) Estimations of DNA using diphenylamine reagent, and UV spectrophotometer (A260 measurement)
- 8) Estimations of RNA using orcinol reagent, and UV spectrophotometer (A260 measurement)
- 9) Resolution and visualization of DNA by Agarose Gel Electrophoresis.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI072A	Bacteriology and Systematics	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1- Understand the classification of bacterial bergey's manual and functioning of microbial structure.
- CO2- Analyze the various shapes, habitat and function of Gram negative.
- CO3- Analyze the archeabacteria structure, habitat and its type.
- CO4- Analyze the various shapes, habitat and usefulness of Gram positive.
- CO5- Analyze the bacterial growth, control and preservation.

#### Unit I

Bacteria: Internal structure, Bacterial shapes and arrangement, cell membrane, cell wall of bacteria, inclusion bodies, flagella, capsule, slime, fimbriae and pilli. Bacterial endospores – structure, formation and germination. Effect of antibiotics on the cell wall and formation of spheroplasts, protoplasts and L-forms. A brief outline of salient features of major bacterial groups according to Bergey's manual of systematic Bacteriology Volume I and II.

#### Unit II

Gram negative Eubacteria: The Spirochetes, Aerobic/microaerophilic, motile, helical/vibroid, Gram negative Bacteria, Non motile, Gram negative curved bacteria. Aerobic, anaerobic and facultative anaerobic bacteria.

#### Unit III

Sulphur reducing bacteria. Anaerobic Gram negative Cocci. *Neisseria*, *Rickettsia*, *Chlamydia*, Anaerobic Gram negative rods: *Rhizobium*, *Agrobacterium*, *Salmonella*, Archaeobacteria: Introduction to Nanoarchaeota (*Nanoarchaeum*), Crenarchaeota (*Sulfolobus*, *Thermoproteus*) and Euryarchaeota [Methanogens (*Methanobacterium*, *Methanocaldococcus*), thermophiles

*Handwritten signatures and initials:*  
 - Top left: A large signature, possibly "Rashmi".  
 - Middle left: A signature, possibly "Rashmi".  
 - Bottom left: A signature, possibly "Rashmi".  
 - Bottom center: A signature, possibly "Rashmi".  
 - Bottom right: A signature, possibly "Rashmi".

(*Thermococcus*, *Pyrococcus*, *Thermoplasma*), and Halophiles (*Halobacterium*, *Halococcus*).

#### Unit IV

Gram positive Eubacteria: Gram positive Cocci; Streptococcus, staphylococcus, Gram Positive rod; Bacillus, Clostridium, endospore forming Gram positive bacteria, Non-spore forming Gram positive Rods of regular shape, Nonspore forming Gram positive Rods of irregular shape; *Corynebacterium*

#### Unit V

Cultivation of Bacteria: growth of bacteria, growth curve, environmental factors affecting growth, quorum sensing. Nutritional requirements in bacteria and nutritional categories. Culture media: components of media, natural and synthetic media, chemically defined media, complex media, selective, differential, enriched and enrichment media. Physical methods of microbial control: heat, low temperature, high pressure, filtration, desiccation, osmotic pressure, radiation. Chemical methods of microbial control: disinfectants, types and mode of action. Asexual methods of reproduction. Preservation techniques of microbial culture.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	2	3	0	0	1
CO2	3	3	2	2	2	0	1
CO3	3	3	1	3	2	1	0
CO4	3	2	2	3	2	1	0
CO5	3	2	1	1	0	0	1

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Schlegel H S, General Microbiology, 7th edition, 1995, Cambridge University Press
2. Pelczar M J, Chan E C S, Kreig N R, Microbiology, 5th edition, 2006, Tata Mc Graw Publication
3. Cappuccino J G and Sherman N, Microbiology-a Laboratory Manual, 6th edition, 2006, Addison Wesley, Pearson Education, Inc.
4. Tortora G J, Funke B R, Case C L, Microbiology-an introduction, 9th edition, 2008, Pearson Education, Inc.,
5. Stanier RY, Ingraham JL, Wheelis ML, and Painter PR, General Microbiology. 5<sup>th</sup> edition, 2005, McMillan
6. Atlas, Principles of Microbiology, 2<sup>nd</sup> ed., 1997, McGraw-Hill

#### Bacteriology and Systematics Lab (BMI073A)

- 1) Negative staining for capsule

Rashmi

R

Seema P. Ashu

- 2) Flagella staining
- 3) Endospore staining
- 4) Acid fast staining
- 5) Explanation of Culture media and their types.
- 6) Demonstration of sterilization by moist heat using autoclave.
- 7) Preparation of culture media – liquid and solid media.
- 8) Demonstration of selective and differential media.
- 9) Demonstration of culture inoculation techniques – spread plate, streak plate and pour plate methods
- 10) Demonstrations of pure culture techniques – streak plate, pour plate and serial dilution method.
- 11) Demonstration of cultivation of Anaerobic bacteria.
- 12) Antibiotic sensitivity testing by disc diffusion method.
- 13) Bacterial growth curve formation by turbidity measurement method.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI005C	Biochemistry	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO-1 Understand molecular interactions, basic chemical reactions and pH, characterize and understand the roles of biomolecules.

CO-2 Understand and apply the structure, properties and biological importance of carbohydrates and nucleic acids.

CO-3 Understand and apply the classification, chemical properties and biological importance of lipids.

CO-4 Analyze the classification, characteristics and structures of proteins and enzymes, inhibition & kinetics

CO-5 Understand the definition, classification, deficiency of vitamin and inborn error of metabolism

#### Unit I

Introduction to biochemistry, scope and importance Molecular interactions, Types of bonds, colligative properties of water, The concept of pH, dissociation and ionization of acids and bases. Henderson-hasselbalch equation, Classification and biological importance of biomolecules.

#### Unit II

Classification and biological importance of Carbohydrates, Monosaccharides; Disaccharides Oligosaccharides, Polysaccharides (Homo & Heteropolysaccharides). Nucleic acids, Biosynthesis of nucleotides. Base composition. A+T and G+C rich genomes.

#### Unit III

Classification and biological importance of lipids; Chemical properties and characterization of triglycerides, fats & fatty acids, Waxes, phospholipids and glycolipids.

*Pashur*  
*Pashur*

#### Unit IV

Classification, structure, properties and biological importance of Amino acids and Proteins; biologically active peptides, structure of proteins-primary, secondary, tertiary and quaternary, Ramachandran plot. Nomenclature and classification of enzymes & enzyme units, Enzymes: as biocatalyst, classification, specificity, active site, enzyme kinetics (Michaelis and Menten equation) isozymes, coenzymes, factors affecting enzyme activity, enzyme inhibition.

#### Unit V

Definition and classification of vitamins, vitamin deficiency diseases, biochemistry, occurrence & functions of water soluble and fat soluble vitamins, Vitamins as coenzyme.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	2	0	2	3	2
CO2	1	3	3	1	3	2	1
CO3	2	3	2	1	3	1	2
CO4	2	3	2	1	2	1	2
CO5	2	2	1	0	1	2	2

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Conn EE and Stumpf PK, Outlines of Biochemistry, 1976, John Wiley & Sons.
2. Nelson & Cox, Lehninger Principle of Biochemistry, 6<sup>th</sup> edition, 2013, W. H. Freeman Co.
3. Voet & Voet, Principles of Biochemistry, 4<sup>th</sup> edition, 2012, John Wiley & Sons.
4. Rastogi V.B. and Aneja K. R., Zubay's Principles of Biochemistry, revised edition, 2016, Medtec
5. Deb A.C., Fundamental of Biochemistry, 4<sup>th</sup> edition, 1990, new central book agency, Calcutta
6. Berg, Tymoczko and Stryer, Biochemistry, 7<sup>th</sup> edition, 2011, W.H. Freeman & Co Ltd
7. Satyanarayana U and Chakrapani U, Biochemistry, 5<sup>th</sup> edition, 2017, Elsevier.
8. Srivastava H.S., Element of Biochemistry, 2017, Rastogi Publications Meerut.
9. Jain J.L., Fundamentals of Biochemistry, 2017, S.Chand publishers New Delhi.

#### Biochemistry Lab (BMI006C)

- 1) Qualitative test (Molisch's test) for presence of the carbohydrates in a given sample.
- 2) Iodine test for presence of Starch in a given sample.
- 3) Benedict's test for presence of reducing sugars in a given sample.
- 4) Fehling's test for presence of reducing sugars in a given sample.
- 5) Ninhydrin test for the presence of amino acids in a given sample.
- 6) Xanthoproteic test for the presence of aromatic amino acids in a given sample.
- 7) Biuret test for the presence of peptides or proteins in a given sample.
- 8) Solubility test for lipids.

- 9) Qualitative test for the presence of fatty acids by titrimetric method.
- 10) Determination of acid value of fats and oil.
- 11) Determination of iodine number of a fat sample.
- 12) Measurement of Riboflavin (Vitamin B2) in a given sample.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI074A	Mycology & Phycology	4	1	4	2	5

**Course outcome (CO)** On completion of the course, students are able to:

- CO1- Understanding the diversity of the fungi
- CO2- Understanding the various fungus genera and its role in the environment.
- CO3- Analyze the application of the fungus products
- CO4- Understanding the various genera of algae.
- CO5- Analyze the various algae structure and its application.

#### Unit I

Characteristics, classification and cellular & thallus organization of fungi. General features, structure, nutrition, reproduction of different fungi group - Phycomycetes, Ascomycetes, Basidiomycetes and Deuteromycetes. Heterothallism and Parasexuality. Sex hormones in fungi, physiological specialization, phylogeny of fungi.

#### Unit II

General features, taxonomic status and evolutionary significance economic importance of important fungal genera - *Mucor*, *Saccharomyces*, *Neurospora*, *Agaricus*, *Fusarium*, *Alternaria*, *Curvularia* and *Cladosporium*. General account and importance of lichen. Important plant diseases caused by fungi- symptoms, disease cycles and control (Late & Early blight, Black rust, Smut, Wilt and Red rot).

#### Unit III

Role of fungi in biotechnology, Application of fungi in food industry (Flavour & texture, Fermentation, Baking, Organic acids, Enzymes, Myco -proteins); Secondary metabolites (Pharmaceutical preparations); Agriculture (Biofertilizers); Mycotoxins; Biological control (Mycofungicides, Mycoherbicides, Mycoinsecticides). Mushroom and its cultivation.

#### Unit IV

General characteristics and evolution of algae. Occurrence, thallus organization, algae cell ultra-structure, pigments, flagella, eye- spot food reserves and vegetative, asexual and sexual reproduction. Classification of algae.

#### Unit V

General features, structure and reproduction and economic importance of *Chlamydomonas*.

*[Handwritten signatures and marks at the bottom of the page]*

*Chlorella*, *Diatoms*, *Microcystis*, *Oscillatoria*, *Spirulina*, *Anabaena*, *Nostoc*, *Rivularia* and *Scytonema*. Mass cultivation of algae as a source of protein.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	1	2	1	0	0
CO2	2	3	0	2	2	1	1
CO3	3	3	2	2	2	1	2
CO4	2	2	0	2	1	0	0
CO5	3	2	1	2	2	0	2

3 = Highly Related; 2 = Medium; 1 = Low

**Suggested Readings:**

1. Alexopoulos, C.J., Mims, C.W. and Blackwell, M, Introductory Mycology. John Wiley, New York.
2. Mehrotra, R.S. and K.R. Aneja An Introduction to Mycology. New Age International Press, New Delhi.
3. Webster, J. Introduction to fungi. Cambridge University Press. Cambridge, U.K. (1985).
4. Bessey E.A. Morphology and Taxonomy of fungi. Vikas Publishing House Pvt. Ltd., New Delhi.
5. Jhon Webster and R W S Weber. Introduction to Fungi. Cambridge University Press 2007.
6. A. V. S. S. Sambamurty. A Textbook of Algae. I.K. International Publishing House Pvt. Limited, 2010
7. H.D. Kumar and H.N. Singh. A Textbook on Algae (Macmillan international college edition)

**Mycology & Phycology Lab (BMI075A)**

1. Preparation of Potato Dextrose Medium.
2. Isolation and identification of pathogenic and non-pathogenic fungi.
3. Isolation and identification of fungal plant pathogen from leaves, stems and other aerial parts of the plants.
4. Study of the symptoms and life cycle of important plant disease caused by fungi of classes – Myxomycetes, Oomycetes, Phycomycetes, Zygomycetes, Ascomycetes, Basidiomycetes and Deuteromycetes
5. Study of the vegetative and reproductive structures of following genera through temporary and permanent slides: *Mucor*, *Saccharomyces*, *Penicillium*, *Agaricus* and *Alternaria*
6. Purification and preservation of pure cultures of common algae and fungi.
7. Identification of edible and poisonous mushrooms.
8. Isolation and identification of blue-green algae from pond water.
9. Isolation and identification of algae from soil.
10. Determination of algal growth by counting, Estimation of polysaccharides of *Nostoc*, *Volvox*.
11. Demonstration of photosynthesis by algae.

#### Course outcome (CO)

On completion of the course, students are able to:

- CO 1 Understand the history, classification, morphology of virus.
- CO2 Understand the Bacteriophage and plant viruses.
- CO 3 Understand the animal viruses, plant virus transmission and cultivation of viruses.
- CO 4 Understand the Oncogenic and new emerging viruses in society.
- CO 5 Applying the Preventive and control of viral diseases.

#### Unit I

Brief history on discovery of virus. Nomenclature and classification (LHT and as per VII report of the international committee on taxonomy of viruses) Distinctive properties of virus. Morphology and ultrastructure (capsid, envelop and viral genome, their types and structure).

#### Unit II

Virus related agents (viroids, Prions) Bacteriophage, (structural organization life cycle.) Plant Virus: Classification and nomenclature, lytic and lysogenic cycle of reproduction, general symptom and effect of virus on plant (paddy, tomato and sugarcane).

#### Unit III

Animal viruses: Classification and nomenclature. Epidemiology, replication, pathogenicity prevention and treatment of RNA virus; Picorna virus, Rhabdovirus, HIV virus, Influenza Virus and DNA virus; Pox virus, Herpes virus, Hepatitis virus. Transmission of plant virus. Virus of cyanobacteria and fungi. Cultivation of virus on embryonated eggs, experimental animals and cell cultures

#### Unit IV

Oncogenic and emerging viruses: Introduction to oncogenic viruses. Types of oncogenic DNA and RNA viruses: Concepts of oncogenes and proto-oncogenes. Emerging viruses, their management and control strategies: H1N1, Chikungunya, Dengue, Ebola, Zika and Nipah virus, Covid 19.

#### Unit V

Prevention and control of viral diseases: Antiviral compounds and their mode of action: AZT, aciclovir, ganciclovir. Interferons and their mode of action. General principles of viral vaccines: live attenuated vaccines, inactivated viral vaccine, subunit vaccine, recombinant viral vaccine.

MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

10. Versteeg J., A Color Atlas of Virology, 1985, Wolfe Medical Publication.

#### Virology Lab (BMI018C)

1. Demonstration of the diseases of plants caused by viruses viz. Tobacco Mosaic Disease and Cucumber Mosaic disease.
2. Demonstration of the human diseases caused by viruses viz. AIDS, Mumps, Small pox and Chicken pox etc.
3. Demonstration of different types of plant viruses.
4. Demonstration of different types of animal viruses.
5. Cultivation of animal viruses in embryonated eggs.
6. Demonstration of Plaque test for the bacteriophages.
7. Case study of Pandemic COVID-19, MERS-CoV, Ebola virus disease, Zika virus disease, H1N1 Swine Flu disease, AIDS

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI029C	Microbial Physiology	4	1	4	2	5

#### Course outcome (CO)

*Rashmi* *Arul* *R* *MSD*

On completion of the course, students are able to:

- CO1-Understand the nutrition type and transport of nutrients in microorganism.
- CO2-Understand the different physiological pathways and cycles in microbes.
- CO3-Analyze the chemolithotrophy and photosynthesis in bacteria.
- CO4-Analyze the assimilation and disassimilation of nitrogen bacteria in environment.
- CO5-Apply the environmental trends on bacterial growth.

#### Unit I

Microbial growth in response to nutrition and energy – Autotroph/Phototroph, heterotrophy, Chemolithoautotroph, Chemolithoheterotroph, Chemoheterotroph, Chemolithotroph, photolithoautotroph, Photoorganoheterotroph. Passive and facilitated diffusion. Primary and secondary active transport, concept of uniport, symport and antiport Group translocation Iron uptake

#### Unit II

Concept of aerobic respiration, anaerobic respiration and fermentation Sugar degradation pathways i.e. EMP, ED, Pentose phosphate pathway TCA cycle. Electron transport chain: components of respiratory chain, comparison of mitochondrial and bacterial ETC, electron transport phosphorylation, uncouplers and inhibitors. Fermentation - Alcohol fermentation and Pasteur effect; Lactate fermentation (homofermentative and heterofermentative pathways), concept of linear and branched fermentation pathways.

#### Unit III

Introduction to aerobic and anaerobic chemolithotrophy with an example each. Hydrogen oxidation (definition and reaction) and methanogenesis (definition and reaction). Introduction to phototrophic metabolism - groups of phototrophic microorganisms, anoxygenic vs. oxygenic photosynthesis with reference to photosynthesis in green bacteria, purple bacteria and Cyanobacteria.

#### Unit IV

Anaerobic respiration with special reference to dissimilatory nitrate reduction (Denitrification; nitrate/nitrite and nitrate/ammonia respiration; fermentative nitrate reduction). Introduction to biological nitrogen fixation Ammonia assimilation. Assimilatory nitrate reduction, dissimilatory nitrate reduction, denitrification.

#### Unit V

Definitions of growth, measurement of microbial growth, Batch culture, Continuous culture, generation time and specific growth rate, synchronous growth, diauxic growth curve. Microbial growth in response to environment - Temperature (psychrophiles, mesophiles, thermophiles, extremophiles, thermotolerants, psychrotrophs), pH (acidophiles, alkaliphiles), solute and water activity (halophiles, xerophiles, osmophilic), Oxygen (aerobic, anaerobic, microaerophilic, facultative aerobe, facultative anaerobe), barophilic.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	1	1	3	2	0
CO2	3	3	0	0	2	2	1
CO3	2	1	0	1	3	3	0
CO4	2	2	1	0	3	2	0
CO5	2	1	0	1	2	2	1

3 = Highly Related; 2 = Medium; 1 = Low

**Suggested Reading:**

1. Devlin R. M. and Witham F. H., Plant Physiology. 4<sup>th</sup> edition, 1987, Belmont; Calif.; Wadsworth
2. Gottschalk G., Bacterial Metabolism, 2<sup>nd</sup> edition, 1986, Springer
3. Madigan M. T., Martinko J. M. and Parker J., Brock Biology of Microorganisms. 11<sup>th</sup> edition, 2005, Pearson/ Benjamin Cummings.
4. Moat A. G., Foster J. W., Spector M. P., Microbial Physiology. 4<sup>th</sup> edition, 2002, John Wiley & Sons.
5. Reddy S. R. and Reddy S. M., Microbial Physiology, 2008, Scientific Publishers India.
6. Stanier R. Y., Ingraham J. L., Wheelis M. L. and Painter P. R., General Microbiology, 5<sup>th</sup> edition, 2005, McMillan
7. Willey J. M., Sherwood L. M., Woolverton C. J., Prescott, Harley and Klein's Microbiology, 9<sup>th</sup> edition, 2014, McGraw Hill Publishers.

**Microbial Physiology Lab (BMI030C)**

- 1) Demonstration of effect of temperature on bacterial growth.
- 2) Demonstration of effect of pH on bacterial growth.
- 3) Demonstration of effect of salt/sugar concentration on bacterial growth.
- 4) Demonstration of metals on bacterial growth.
- 5) Amylase production test.
- 6) Effect of nitrogen sources on growth of *E. coli*.
- 7) Demonstration of alcoholic fermentation.
- 8) Measurement of bacterial growth by turbidity measurements.
- 9) Preparation of growth curve for bacterial growth in a batch culture and calculate the mean generation time (doubling time).
- 10) Demonstration of the thermal death time and decimal reduction time of *E. coli*.

-------------	--------------	---	---	------------	------------	--------------

BMI138A	Research Methodology	4	0	4	0	4
---------	----------------------	---	---	---	---	---

### Course outcome (CO)

On completion of the course, students are able to:

- CO1-Understand the problem, significance and approaches of research
- CO2- Understand the concept of review paper writing and gap in research
- CO3- Understand the IPR in research publication
- CO4- Understand the writing methods of research articles
- CO5- Analyse the interpretation of results data with statistical tools.

### UNIT I

Meaning of Research, Objectives of Research, Types of Research, Research Approaches, Significance of Research, Defining and formulating the research problem, selecting the problem, necessity of defining the problem

### UNIT II

Importance of literature review in defining a problem, literature review-primary and secondary sources, research databases, web as a source, searching the web, critical literature review, identifying gap areas from literature and research database, development of working hypothesis.

### UNIT III

Ethics-ethical issues, ethical committees (human & animal); IPR- intellectual property rights and patent law, copy right, royalty, scholarly publishing-citation and acknowledgement, plagiarism, reproducibility and accountability.

### UNIT IV

Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

### UNIT V

Meaning of interpretation, technique of interpretation, precaution in interpretation, tools used in interpretation of data. Software used to analyze data (SPSS, GraphPad Prism).

4. Trochim, W.M.K., 2005. Research Methods: the concise knowledge base, Atomic Dog Publishing. 270p.
5. Wadehra, B.L. 2000. Law relating to patents, trade marks, copyright designs and geographical indications. Universal Law Publishing.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI022C	Microbial Genetics	4	1	4	2	5

**Course outcome (CO)**

On completion of the course, students are able to:

CO1-Understand the organization of prokaryotic Genomes.

CO2-Undersatnd the process and mechanism of genetic exchange.

*[Handwritten signatures and marks at the bottom of the page]*

- CO3-Understand the molecular mechanism of gene regulation in prokaryotes.  
 CO4-Understand the different cycles of bacteriophages.  
 CO5-Understand the different aspects of bacteriophage genetics.

### Unit I

Prokaryotic Genomes - Physical organization of bacterial genomes (Structure of the bacterial nucleoid, Replication and partitioning of the bacterial genome and Genome of Archaea). Mutations and mutagenesis: Definition and types of Mutations, Physical and chemical mutagens.

### Unit II

Mechanism of genetic exchange : Plasmid, Types of plasmids (F Plasmid : a Conjugate plasmid, Mobilization of Non-conjugative plasmid, R plasmid, Col plasmid Copy number and incompatibility), Episomes. Transposable elements (Insertion sequence and transposons, Integrins and Antibiotic-Resistance cassettes, Multiple Antibiotic Resistant bacteria, Mu-virus);

### Unit III

Molecular Mechanism of gene regulation in prokaryotes - Transcriptional regulation in prokaryotes (inducible and repressible system, positive regulation and negative regulation); Operon concept - lac, trp, Ara operons. Bacterial Genetics (Mutant phenotype, DNA mediated Transformation; Conjugation (Cointegrate Formation and Hfr Cells, Time-of-Entry Mapping, F' Plasmid); Transduction (Generalized transduction, Specialized Transduction)- gene mapping.

### Unit IV

Bacteriophages: Stages in the Lytic Life Cycle of a typical phage, Properties of a phage infected bacterial culture, Specificity in phage infection, E. coli Phage T4, E.coli Phage T7, E.coli phage lambda, Immunity to infection, Prophage integration, Induction of prophage, Induction & Prophage excision, Repressor, Structure of the operator and binding of the repressor and the Cro product, Decision between the lytic and lysogenic Cycles, Transducing phages, E.coli phage phiX174, The lysogenic Cycle.

### Unit V

Bacteriophage Genetics - Benzer's fine structure of gene in bacteriophage T4 : Plaque Formation and Phage Mutants, Genetic recombination in the lytic cycle, (concept of recon, muton, cistron).

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome

CO4	1	3	1	0	1	2	0

CO5	1	1	3	2	1	0	1
-----	---	---	---	---	---	---	---

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Gardner, E.J., Simmons, M.J., Snustad, D.P., 8<sup>th</sup> edition, 2008, Principles of Genetics, Wiley India
2. Karp G, Cell and Molecular Biology, 4th edition, 2005, John Wiley and Sons
3. Elliott W H and Elliot D C, Biochemistry and Molecular Biology, 3<sup>rd</sup> edition, 2005, Oxford University Press
4. Malacinski G.M. and Freifelder D., Essentials of Molecular Biology, 3<sup>rd</sup> edition, 1998, Jones and Bartlett Publishers
5. Scheeler P. and Bianchi D.E., Cell and Molecular Biology, 3<sup>rd</sup> edition, 1987, John Wiley and Sons
6. Maloy S.R., Cronnan J.E., Freifelder D., Microbial Genetics, 2<sup>nd</sup> edition, 1994, Jones and Bartlett Publishers

#### Microbial Genetics Lab (BMI023C)

- 1) Isolation of antibiotic resistant bacteria population by gradient plate method.
- 2) Isolation of antibiotic resistant mutants by Replica plating technique.
- 3) Demonstration of genetic recombination in bacteria by conjugation.
- 4) UV-induced auxotrophic mutants production and isolation of the mutants by replica plating.
- 5) Demonstration of genetic recombination in bacteria by transduction.
- 6) Demonstration of genetic recombination in bacteria by transformation.
- 7) Demonstration of carcinogens/mutagens by the Ames test.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI024B	Biostatistics	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1-Evaluate the frequency distribution by data and graphical methods.  
 CO2- Evaluate the measure of central tendency.  
 CO3- Evaluate the dispersion from the data.  
 CO4- Evaluate the statistical inference tools.  
 CO5- Evaluate the correlation and regression analysis.

#### Unit I

Introduction, Definition, Functions, scope and application of biostatistics. Understanding the concepts of descriptive and inferential statistics. Frequency distribution, Collection of data : Primary and secondary data, tabulation of data, discrete and continuous series. Graphical presented : Types of diagrams, Graphs of frequency distribution- Bar diagrams, Histogram, frequency Polygon, smooth frequency curve, Ogives.

### Unit II

Measures of Central Value, Introduction, Definition and Limitation of Average; Mathematical Average—Mean; Arithmetic, Geometric, Harmonic and Positional Average- Mode, Median.

### Unit III

Measures of Dispersion, Introduction, Definition, various measures of variation; Range, Quartile deviation, Mean Deviation, Standard Deviation, Variance.

### Unit IV

Statistical Inference, Testing of Hypothesis ; Procedure, test of significance of mean; Standard error of mean and standard deviation ; student's 't' test , chi-square test.

### Unit V

Correlation, Introduction, definition, kinds- negative, positive and zero correlation, coefficient of correlation, methods of studying correlation-scatter diagram, Graphical method, Karl pearson's coefficient of correlation. Regression Analysis, Introduction, definition, regression equation, regression lines and regression coefficients.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	1	3	2	2	1	2	2
CO2	1	2	3	1	0	3	1
CO3	1	3	2	1	0	2	1
CO4	1	2	3	2	0	3	1
CO5	1	3	3	2	1	3	2

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Edmondson and Druce D., Advanced Biology Statistics, 1996, Oxford University Press;.
2. Danial W., Biostatistics: A foundation for Analysis in Health Sciences, 2004, John Wiley and Sons Inc.
3. Gupta S.C. and Kapoor V.K., Fundamental of mathematical Statistics, 2017, sultan chand & sons
4. Sundar Rao P.S.S. and Richard J., Introduction to biostatistics and research methodology, 5<sup>th</sup> edition, 2012, PHI Learning Pvt. Ltd.
5. Banarjee P.K. , Introduction to biostatistics, 3<sup>rd</sup> edition, 2006, S. Chand Publication, India
6. Rastogi V.B. Biostatistics, 3<sup>rd</sup> revised edition, 2015, Rastogi publication

#### Biostatistics Lab (BMI025B)

- 1) Construction of frequency tables.
- 2) Exercises on data interpretation using histograms, polygons and pie- charts.
- 3) Exercises on Airthematic mean, geometric mean and harmonic mean
- 4) Exercises on median.
- 5) Exercises on mode.

- 6) Exercises on the testing of hypothesis using student t test.
- 7) Exercises on the testing of hypothesis using Chi-square test.
- 8) Exercises on computing correlation coefficient.
- 9) Exercises on computing regression coefficient.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI078A	Agriculture and Veterinary Microbiology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO1-Understanding of the multifarious roles of microorganisms in soil, in association with plants and thus in the field of agriculture.

CO2-Understand the Importance of agriculture in national economy and cultivation of various crops.

CO3-Understand the role of Major pests and diseases of rice, wheat, cotton, chickpea, sugarcane and their management

CO4-Understand the animal diseases with respect to etiology, symptoms, mode of transmission, prophylaxis and control.

CO5-Understand the importance of Elementary Livestock Handling.

#### Unit-I

History of Agricultural Microbiology; Microbes and their importance in maintenance of soil, Biogeochemical cycles, role of microbes in maintaining the fertility of soil. Bio fertilizers – Bacterial, - Azotobacter and vermiform compost. Soil microorganism –association with vascular plants- phyllosphere, Rhizobium, Rhizoplane associative nitrogen fixation. Biofertilizers- Cyanobacterial and Azolla.

#### Unit -II

Importance of agriculture in national economy; basic principles of crop production; cultivation of rice, wheat, chickpea, pigeon-pea, sugarcane, groundnut, tomato, and mango. Major soils of India; role of NPK and their deficiency symptoms. Elementary knowledge of growth, development, photosynthesis, respiration and transpiration; Elements of economic botany

*[Signature]*

*[Signature]*

*[Signature]*

*[Signature]*

### Unit – III

Major pests and diseases of rice, wheat, cotton, chickpea, sugarcane and their management. Organic farming; bio-fertilizers; bio-pesticides. Recombinant DNA technology; transgenic crops. Important rural development programmes in India; organizational set up of agricultural research, education and extension in India. Elements of statistics.

### Unit IV

Study of following animal diseases with respect to etiology, symptoms, mode of transmission, prophylaxis and control: FMD, swine flu, bird flu, Rabies, bovine tuberculosis, Marek's, ranikhet, brucellosis, distemper

### Unit V

Elementary Livestock Handling: An overview of animal behaviour, Common tools used for animal control; Restraint and handling of animals, Nutrition Principles of animals nutrition; Nutritional importance of carbohydrates, lipids, proteins, vitamins, minerals and water; Feeds and fodders; Scientific feeding of livestock.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	3	2	3	1	1
CO2	2	1	2	1	2	2	1
CO3	3	1	1	2	3	3	2
CO4	2	3	2	2	2	1	3
CO5	2	1	3	1	1	1	1

### Suggested Readings:

1. Stanbury, PF., Principles of Fermentation Technology. Whittaker, A and Hall, S.J 2<sup>nd</sup> Edition. Pergamon Press (1995).
2. Banwart, GJ. Basic Food Microbiology. CBS Publishers and Distributors, Delhi. (1989).
3. Hobbs BC and Roberts D. Food poisoning and Food Hygiene. Edward Arnold (A division of Hodder and Stoughton) London.
4. Joshi. Biotechnology: Food Fermentation Microbiology, Biochemistry and Technology. Volume 2.

5. Arora MP. 1995. Animal Behaviour. WB London. Bouenger EG. 1994.
6. Animal Behaviour. WB London. Fraser AF & Broom DM. 1997.
7. Farm Animal Behaviour and Welfare. CABI. Fraser AF & Broom DM. 1999.

#### **Agriculture and Veterinary Microbiology Lab (BMI079A)**

- 1) MBRT of milk samples and their standard plate count.
- 2) Alkaline phosphatase test to check the efficiency of pasteurization of milk.
- 3) Various livestock farming units and their economic analysis.
- 4) Evaluation of different farming systems and their economic importance.
- 5) Analysis of breeding, feeding, housing - Disease control management.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI076A	Genetic Engineering	4	1	4	2	5

On completion of the course, students are able to:

CO1- Understand the various tools and methods used in genetic engineering.

CO2- Understand that how genetic tools useful in cloning and genetic transformation.

CO3- Understand the cloning vectors uses, its formation and various types of vectors used in genetic engineering.

CO4- Understand the DNA amplification technique through PCR and DNA sequencing technique.

CO5- Apply the knowledge of genetic engineering in Gene delivery and production of transgenic progeny's.

#### **Unit I**

Introduction to genetic engineering: Milestones in genetic engineering and biotechnology

Restriction modification systems: Mode of action, applications of Type II restriction enzymes in genetic engineering. DNA modifying enzymes and their applications: DNA polymerases.

Terminal deoxynucleotidyl transferase, kinases and phosphatases, and DNA ligases

#### **Unit II**

Cloning: Use of linkers and adaptors: Transformation of DNA: Chemical method, Electroporation. Methods of DNA, RNA and Protein analysis: Agarose gel electrophoresis, Southern - and Northern - blotting techniques, dot blot, DNA microarray analysis, SDS-PAGE, and Western blotting

#### **Unit III**

Cloning Vectors: Definition and Properties Plasmid vectors: pBR and pUC series Bacteriophage lambda and M13 based vectors Cosmids, BACs, YACs Expression vectors: E.coli lac and T7 promoter-based vectors, yeast YIp, YEp and YCp vectors, Baculovirus based vectors,

*Bashir*

*Debin*

*[Signature]*

*[Signature]*

*[Signature]*

mammalian SV40-based expression vectors

#### Unit IV

DNA Amplification and DNA sequencing: PCR: Basics of PCR, RT-PCR, Real-Time PCR  
Genomic and cDNA libraries: Preparation and uses, Genome sequencing Sanger's method of  
DNA Sequencing: traditional and automated sequencing

#### Unit V

Application of Genetic Engineering: Gene delivery: Microinjection, electroporation, biolistic  
method (gene gun), liposome and viral mediated delivery, *Agrobacterium* - mediated delivery.  
Products of recombinant DNA technology: Products of human therapeutic interest - insulin,  
hGH, antisense molecules. Bt transgenic - cotton, brinjal, flavosavo tomato, Gene therapy,  
recombinant vaccine, protein engineering.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome

10. Desmond S. T. Nicholl. An Introduction to Genetic Engineering. Cambridge University Press; (2008)

#### Genetic Engineering Lab (BMI077A)

- 1) Isolation of Plasmid DNA from *E.coli*.

- 2) Digestion of DNA using restriction enzymes and analysis by agarose gel electrophoresis
- 3) Ligation of DNA fragments
- 4) Interpretation of sequencing gel electropherograms
- 5) Designing of primers for DNA amplification
- 6) Amplification of DNA by PCR
- 7) Demonstration of Southern blotting

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI047A	Project Work on Microbiology of Societal Importance	-	-	-	-	6

Course learning outcomes: By the conclusion of this course, the students:

**Outcome 1.** Have developed a very good understanding of areas where microbiology has social importance.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOME:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	3	3	3	3	3	3

### Discipline Specific Electives

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI 082A	Fundamentals of Food Microbiology	4	1	4	2	5

**Course outcome (CO)**

On completion of the course, students are able to:

CO1- Understand the food microorganism and its classification and importance.

CO2- Apply the principle of food preservation and removal of microorganism.

Rashmi

Rashmi

CO3- Understand and analyze about microorganism responsible for food contamination and spoilage.

CO4- Analyze the food infection and intoxication.

CO5- Understand and apply the health standard, fermentation of food and, disposal and treatment process.

#### Unit I

Microorganisms important in food microbiology; Molds, yeasts and bacteria - General Characteristics - Classification and importance, Nutritional requirements of bacteria and fungi.

#### Unit II

Principles of food preservation - Asepsis - Removal of micro organisms, anaerobic conditions - High temperature - Low temperature - Drying - Food additives

#### Unit III

Contamination and spoilage - Cereals, sugar products, vegetables and fruits, meat and meat products, milk and milk products - Fish and sea food - Poultry, Spoilage of canned foods. Spoilage and defects of fermented dairy products - oriental fermented foods

#### Unit IV

Food borne infections and intoxications - bacterial, non -bacterial - Food borne disease outbreaks, Laboratory testing, preventing measures, Food sanitation, plant sanitation

#### Unit V

Employees' health standards, waste treatment and disposal, quality control, Food fermentations : Bread cheese, vinegar, fermented vegetables, fermented dairy products

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

4. Dillion VM and Board RG, Natural Antimicrobial Systems and Food Preservation, 1996, CAB International, Wallingford, Oxon.

5. Frazier WC and Westhoff DC, Food Microbiology. 3rd edition, 1992, Tata McGraw-Hill Publishing Company Ltd, New Delhi, India.
6. Gould GW. New Methods of Food Preservation, 1995, Blackie Academic and Professional, London.
7. Jay JM, Loessner MJ and Golden DA, Modern Food Microbiology. 7<sup>th</sup> edition, 2005, CBS Publishers and Distributors, Delhi, India.
8. Lund BM, Baird Parker AC, and Gould GW, The Microbiological Safety and Quality of Foods. Vol.1-2, 2000, ASPEN Publication, Gaithersburg, MD.
9. Tortora GJ, Funke BR, and Case CL, Microbiology: An Introduction. 9<sup>th</sup> edition, 2008, Pearson Education.

#### **Fundamentals of Food Microbiology Lab (BMI083A)**

- 1) Determination of quality of milk sample by methylene blue reductase test.
- 2) Detection of number of bacteria in milk by standard plate count (SPC).
- 3) Alkaline phosphate test to check the efficiency of pasteurization of milk.
- 4) Production of yogurt/curd.
- 5) Isolation of spoilage microorganisms from spoiled milk.
- 6) Isolation of spoilage microorganisms from spoiled fruits and vegetables.
- 7) Isolation of spoilage microorganisms from spoiled bread.
- 8) Production of bread.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI084A	Food Chemistry	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

- CO1 Understand the properties and reactions of carbohydrates, lipids and proteins during storage and processing of foods and the effect of these on the quality and property of foods.
- CO2 Analyze the main factors influencing the colour and flavour of food.
- CO3 Understand the composition of foods and the effect of these factors on foods.
- CO4 Evaluate large scale and profit motivated production of microorganisms or their products for direct use or as inputs in the manufacture of other products.
- CO5 Understand the process of browning reactions in food.

#### **Unit I**

Introduction to Chemistry of Foods : Carbohydrates Composition and factors affecting composition of foods - Moisture in foods and determination of moisture - Carbohydrates - Chemistry of cellulose, starches, other polysaccharides - starch enzymes, Gel formation and

*[Handwritten signatures and marks at the bottom of the page]*

starch degradation - Pectic substances, their occurrence structure, properties and use in foods - Plant acids, acidity, taste

## Unit II

Classification of proteins, physical and chemical properties of proteins, functional properties of proteins in foods, hydrolysis of proteins - Major food - Proteins and their sources, Changes in proteins during processing - Determination of Proteins

## Unit III

Physical and chemical properties of fats, rancidity and flavour reversion, processing of oil bearing materials, refining of oils and fats, fat hydrolysis and inter-esterification, hydrogenation, shortenings and spreads - Emulsions, Definition, surface activity, surface film theory of emulsions, properties and types of emulsions, emulsifying agents, their chemistry during processing - Essential oils, Chemistry of occurrence, Extraction - Terpene oils and their use in foods.

## Unit IV

Cereals: Cereal varieties and their suitability for processing - Structure of wheat, rice - Chemical compositions and nutritional values of prominent cereals; Distribution of vitamins, proteins, minerals, carbohydrates and fats in different grains Pulses: Nutritional value of prominent pulses (Moong, Redgram, lentil, black gram and soyabeans) Oilseeds: Chemical composition and nutritional value of prominent oilseeds (Sunflower mustard, cotton seed, ground nut, cashewnut and coconut) - Distribution of vitamins, proteins, minerals, carbohydrates and fats in different oilseeds

## Unit V

Browning Reactions in Foods, Nonenzymatic Browning, Pigment Formation, Melanoidin - Maillard Polymers, Caramelization, Ascorbic Acid Oxidation, Antioxidant Activity of Nonenzymatic Browning Products, Inhibition of nonenzymatic browning.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	1	1	1	1	1	2	1
CO2	2	2	1	0	0	1	2
CO3	3	1	2	1	1	1	2
CO4	2	2	1	0	1	1	3
CO5	3	3	2	1	0	2	1

3 = Highly Related; 2 = Medium; 1 = Low

### Suggested Readings:

1. Food Science and experimental foods, Swaminathan, N. (1987) Ganesh Publications, Madras.
2. Food chemistry, Meyer L.M.(1969) Van Nustrand Reinhold co., New York.
3. Foundations of Food Preparation, Peckham, C.G. (1979),The Macmillan co., London.
4. Food Theory and Applications, Paul P.C. and Palmer H.H. (1972), John wiley and Sons, New York.
5. The experimental study of foods, Griswald R.M. (1962), Houghton, Muffin Co., New York.
6. Introductory foods, Bennion M. and Hughes, D. (1975), Macmillan publishing Co., New York.
7. Food facts and principles, SakuntalaManay and shadaksaraswamy, M (1987) Allied Publishers, New Delhi.

#### **Food Chemistry Lab (BMI085A)**

1. Systematic identification of biomolecules – Qualitative tests for amino acids and protein - Biuret test, Millon's test, Nitroprusside test, Ninhydrin test, Sakaguchi test.
2. Qualitative test for carbohydrates - Molisch's test, Bial's test, Benedicts test, Barfoeds test, Fehlings test, Seliwanof's test, Mucic acid test, Iodine test.
3. Qualitative test for Lipids - acrolein test, test for saturation, test for unsaturation, saponification test
4. Qualitative test for NPN substances - Urease test, Phosphotungstic acid test, Jaffes test, Uric acid test.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI086A	Food Packaging Technology	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

CO1 Understand the fundamentals of packaging technology.

CO2 Understand the safety evaluation of materials used for packing.

CO3 Apply and examine the knowledge of properties for selection of packaging materials for foods & food product.

CO4 Analyze the different techniques of food packaging.

CO5 Understand the packaging equipments and machinery.

#### **Unit I**

Introduction of Food packaging - Need of food packaging - Role of packaging in extending shelf life of foods - Designing of package materials - Testing of package materials - Testing of

Rashmi

package performance - Principles in the development of safe and protective packing - Safety assessment of food packaging materials

### Unit II

Food packaging systems, product characteristics and package requirements - Introduction of food packaging system - Different forms of packaging - Rigid, semi-rigid, flexible forms of packaging - Different packaging system for-Dehydrated foods, Frozen foods, Dairy products, Fresh fruits, Vegetables, Meat, Poultry, Sea foods

### Unit III

Types of packaging materials their characteristics and uses - Use of paper as a packaging material-Pulping - Fibrillation, Beating, Types of papers ,Testing methods - Use of glass as a packaging material-Composition, Properties, Types, Methods of bottle making - Use of metals as a packaging material - Tinsplate containers, Tinning process, Components of tinsplate, Tin free steel (TFS), Types of cans, Aluminium containers, Lacquers - Use of plastics as a packaging material-Types of plastics, Plastic films, laminated plastic materials, Co-extrusion

### Unit IV

Package accessories and advances in Packaging technology-Introduction - Active packaging - Modified atmosphere packaging-Controlled atmosphere packaging - Aseptic packaging - Packages for microwave ovens - Biodegradable plastics - Edible gums - Coatings

### Unit V

Packaging equipment and machinery- Vacuum packaging machine - CA & MA packaging machine - Gas packaging machine - Seal and shrink packaging machine - Form & fill sealing machine - Aseptic packaging systems - Retort pouches - Bottling machines - Carton making machines - Package printing machines

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	2	2	1	2	1	2
CO2	1	1	1	2	1	2	1
CO3	2	2	3	1	2	1	2
CO4	1	1	1	2	1	1	2
CO5	2	2	3	1	1	1	1

3 = Highly Related; 2 = Medium; 1 = Low

### Suggested Readings:

1. Srilakshmi,B.,2005, Food Science., New Age International (P) Limited., New Delhi.
2. Subalakshmi, G and Udipi, S.A, 2001, Food processing and preservation. New Age International Publishers, New Delhi.
3. Potter, N. N, Hotchkiss, J. H, 2000 Food Science. CBS Publishers, New Delhi.

4. Manay, N.S, Shadaksharaswamy, M.,2004, Foods- Facts and Principles, New Age International Publishers, New Delhi
5. Miquel Angelo P R C, Ricardo Nuno C P, Oscar Leandro D S R, Jose Antonio C T, Antonio Augusto V , 2016, Edible Food Packaging: Materials and Processing Technologies, CRC Press. Taylor & Francis ,Boca Raton , FL
6. Luciano P, Sara L,2016, Food Packaging Materials, Springer cham Heidelberg, New York
7. Robertson, G.L. 2006 Food Packaging: Principles and Practice (2nd ed.), Taylor & Francis
8. NIIR. (2003). Food Packaging Technology Handbook, National Institute of Industrial Research Board, Asia Pacific Business Press Inc.

#### **Food Packaging Technology Lab (BMI087A)**

- 1) To measure the thickness of a paper and paper boards used in packaging
- 2) To measure water absorption capacity of packaging paper
- 3) To measure the bursting strength of a packaging paper
- 4) To determine the static and dynamic tensile strength of a packaging paper
- 5) Determination of water vapour permeability (WVTR) of packaging material.
- 6) To find the amount of coating in a tin plate
- 7) Determination of a gas transmission rate of packaging material

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI088A	Food Quality and Foodborne Diseases	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

- CO1- Evaluate the different sensory methods used for the quality determination of various foods.  
 CO2- Perform various tests to detect the presence of adulterants in foods.  
 CO3- Understand the various food laws and standards.  
 CO4- Understand the various lab practices in food quality  
 CO5- Understand the importance of Quality Control and Quality Assurance.

#### **Unit I**

Bacterial : Food Poisoning by *Staphylococcus*, *Clostridium perfringens*, *Clostridium botulinum*, *Salmonella*, *Brucella*, *E. coli*, *Shigella*, *Bacillus cereus*, *Yersinia enterocolitica*, *Vibrio cholerae*, *Listeria monocytogenes* - Fungi – Mycotoxins – Aflatoxin, ochratoxin, trichothecenes, Roquefortine. – Protozoas : *Entamoeba histolytica*, *Giardia*; Seafood Toxicants: Shellfish

*[Handwritten signatures and marks]*

poisoning – ciguatera poisoning – scombroid fish poisoning - viral gastroenteritis, infectious hepatitis, poliomyelitis, Viral Diarrhoea – Rotavirus – Norwalk virus Control of food borne diseases

### Unit II

Sensory evaluation - definition and importance of sensory evaluation in relation to consumer acceptability and economic aspects-factors affecting food acceptance-terminology related to sensory evaluation - scoring procedures: types of tests -panel selection-screening and training of judges-requirement of sensory evaluation-sampling procedures-factors affecting sensory measurements. Chemical methods used in quality evaluation-Moisture, PR, HM, TVBN, Peroxide value, Acidity/ acid value detection of adulterants, Microbiological evaluation

### Unit III

Food laws and standards - Food regulations, grades and standards - Food safety objectives - National food legislation/ authorities and their role - product certifications: ISI mark of BIS, AGMARK, FPO, MFPO, international organization and agreements-food and agricultural organization (FAO), Concept of Codex Alimentarius/HACCP /USDA/ISO 9000 series /ISO22000 / Government regulatory practices and policies/FDA perspectives / PFA act and rules – Food Packaging and labelling

### Unit IV

Introduction, principles of sanitation, sanitation chemicals, disinfectants, sanitation methodology, sanitation procedures, CIP and COP- evaluating the effectiveness of sanitation programmes - Good Manufacturing Practices (GMP) and Good Laboratory Practices (GLP) in pharmaceutical industry - Regulatory aspects of quality control - ISO, WHO and US certification

### Unit V

Importance and functions of quality control - Methods for quality assessment - Sterilization control and sterility testing (heat sterilization, D value, z value, survival curve, Radiation, gaseous and filter sterilization) - Sampling and specification of raw materials and finished products - Statistical quality control – A comparison of Quality Control and Quality Assurance - Use of microbiology methods in a Quality-Control system - Use of microbiology methods in a Quality Assurance system

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	2	2	1	2	1	2
CO2	1	1	1	2	1	2	1
CO3	2	2	3	1	2	1	2
CO4	1	1	1	2	1	1	2

CO5	2	2	3	1	1	1	1
-----	---	---	---	---	---	---	---

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Read G. and Nogodwanithana (1991), Yeast Technology, 2<sup>nd</sup> Edition, AVI Book, Van Nostrand, Reinhold, New York.
2. Lee B.H. (1996), Fundamental of Food Biotechnology, VCH Publishers.
3. Goldberg I. and Williams R. (1991), Biotechnology and Food Ingredients, Van Nostrand., Reinhold, New York.
4. Joshi V.K. and Pandey A. (1999), Biotechnology: Food Fermentation Vol. 1 & 2, Education Publisher and Distributer, New Delhi.
5. Marwaha S.S. and Arora, J.K. (2000), Food Processing: Biotechnological applications, Asia tech Publishers Inc., New Delhi.
6. Frazier W. C. and Westhoff D.C. (1995). Food Microbiology. Fourth Edition. Tata McGraw Hill Publishing Company Limited, New Delhi
7. Adams M.R. and M.O. MOSS (2005). Food Microbiology. 1st edition. Reprinted, Published by New Age International (P) Limited. Publishers - New Delhi

#### Food Quality and Foodborne Diseases Lab (BMI089A)

- 1) To find out the ash in the given food sample
- 2) To find out the amount of crude protein in a given food sample
- 3) To find out the amount of crude fiber in a given food sample
- 4) Sensory Evaluation of a food product by Preference Test-Hedonic Rating Scale
- 5) Sensory Evaluation of a food product by Descriptive Rating Test- Star Diagrams
- 6) To examine total plate count of given food sample.
- 7) To identify the gut micro biota in given food sample through specific medium

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI090A	Dairy Microbiology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1-Understand the pathogenic microorganisms transmitted through raw milk.  
CO2-Understand the preservation technique of milk

Rashmi

CO3-Analyze the composition of starter cultures and their use in dairy products

CO4-Analyze the various type of disease transmitted by raw milk.

CO5-Analyze the culture dependent and culture independent techniques for quantification of microorganisms from dairy products.

#### Unit I

Composition of milk of different animals – classes of milk - Microorganisms of concern in milk - Factors influencing microbial growth in milk - antibacterial properties of milk - Scope of dairy microbiology

#### Unit II

Preservation techniques in milk and milk based products – Asepsis, removal of microorganisms, anaerobic conditions, high and low temperatures, drying, irradiation, Chemical and bio preservatives and food additives

#### Unit III

Products from milk: market milk – condensed and dry milk products – frozen desserts Fermented Dairy Products: Starter cultures: their isolation, production, maintenance, biochemical characters - Products: Cream Cheese, yogurt, butter and Indigenous dairy products of India – probiotic dairy products

#### Unit IV

Human pathogens transmitted through raw milk and other dairy products: *Bacillus cereus*, *Campylobacter jejuni*, *Escherichia coli* O157:H7, *Listeria monocytogenes*, *Salmonella spp.*, *Yersinia enterocolitica*. Diseases transmitted through milk: brucellosis, tuberculosis, Q fever

#### Unit V

Quality analysis of milk: platform tests in milk - SPC, MBRT, alkaline phosphatase test, Resazurin test, clot on boiling test, titratable acidity, butter fat content test - FSSAI standards of milk - PMO – MMPO

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	1	1	3	3	1	2
CO2	3	2	2	1	1	2	1
CO3	2	1	3	3	2	1	2
CO4	3	2	3	2	1	2	2
CO5	2	2	1	2	2	1	1

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

7. Hammer B. W. and Babal, Dairy Bacteriology, Prentice Hall Incorporated
8. Jay J.M., Modern Food Microbiology, CBS Publishers and Distributors, New Delhi. India

#### **Dairy Microbiology Lab (BMI091A)**

- 1) Sensory evaluation of milk
- 2) Chemical evaluation- Moisture, PR, HM, TVBN, Peroxide value, Acidity/ acid value
- 3) Detection of adulterants.
- 4) Enumeration of coliforms in milk.
- 5) Quantitative analysis of milk by SPC.
- 6) Enumeration of MPN in milk.
- 7) Enumeration of TPC in milk.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI092A	Food Law and Standards	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

- CO1 Understand the information relating to food laws and regulations.
- CO2 Understand the law making process as it applies to food and food technology.
- CO3 Understanding and interpreting information on food labels.
- CO4 Analyze the major food law legislation and its importance to current regulations.
- CO5 Analyze the the role of regulatory agencies in enforcing current food laws.

#### **Unit I**

*[Handwritten signatures and marks]*

Introduction to food laws, prevention of food adulteration Act (PFA-1954). The preamble of act, definition, primary food, kinds of adulteration in the act, adulterated food, article held as court, misbranded food, functional responsibilities of various authority, central food laboratories, role of inspectors

### Unit II

Food safety and quality requirements. Voluntary requirement, legal requirement, mandatory provision prescribed under PFA Act 1954 and rule 1955. Enforcement of prevention of food adulteration act (PFA-1954) by state government, ministries, departments responsible for ensuring food safety and quality in India

### Unit III

Food safety and standards act 2006 (FSSA 2006) rules and regulations 2011, existing food law in India, salient features of FSSA 2016, important provision of FSSA, essential commodities act.

### Unit IV

Codex alimentarius commission(CAC) , Statutes of Codex alimentarius commission, need for harmonizing national standards with codex. WTO implication, SPS agreement, TBT agreement, relation between the codex and WTO.

### Unit V

Customs act and import control regulation, and other law related to food products, legal Metrology, provisions of weight and measures act 1976, the insecticides act 1968, Consumer Protection Act 1986, Customs Act 1962.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	1	1	3	3	1	2
CO2	3	2	2	1	1	2	1
CO3	3	1	3	3	2	1	2
CO4	3	1	3	2	1	2	2
CO5	2	2	1	2	2	1	1

3 = Highly Related; 2 = Medium; 1 = Low

### Food law and Standards Lab(BMI093A)

1. Case study of any food industry (food processing and packaging where laws applied)

### Suggested Readings:

1. Kiron Prabhakar(2016) A Practical Guide to Food Laws and Regulations.Bloomsbury india
2. Rajan Nijhawan (2016) Food Safety and Standards Act, 2006, Rules & Regulations-- II.BCO 22<sup>nd</sup> edition.
3. Virag gupta (2019) The food safety and standard act,2006 along with rules and regulations as amended upto 15 APRIL, 2019; 12<sup>th</sup> edition commercial law publishers, (India) Pvt. Ltd.
4. Adams M.R. and M.O. MOSS (2005). Food Microbiology. 1st edition. Reprinted, Published by New Age International (P) Limited. Publishers - New Delhi
5. Srilakshmi,B.,2005, Food Science., New Age International (P) Limited., New Delhi.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI094A	Microbial Toxins and Food Protection	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1 Understand the microbial toxins and contamination in food  
 CO2 Understand the food toxicity by various microbes and chemical sources.  
 CO3 Understand the general principle of food protection.  
 CO4. Understand the foods protection by physical methods.  
 CO5 Analyze the food additives role in various food

#### Unit I

Microbial toxins (endotoxin and exotoxin) and toxoids, source and chemistry of microbial toxins in contamination of food grains and food products.

#### Unit II

Food toxicology: classification, dose, determination toxins in food, naturally occurring toxins from animals, bacterial and fungal and sea food sources. Food additives as toxicants: artificial colors, preservatives, sweeteners; toxicants formed during food processing such as nitrosamines, maillard reaction products acrylamide, benzene, heterocyclic amines and aromatic hydrocarbons

*[Handwritten signatures and initials]*

and irradiation, risk of genetically modified food, food supplements, persistent organic pollutants.

### Unit III

General principles of food protection: methods of food protection, asepsis, maintenance of anaerobic conditions, protection by use of high temperature : Thermal death time, heat resistance of microorganisms, determination of thermal death process, protection by use of low temperatures: Growth of microorganisms at low temperatures, effect of subfreezing and freezing temperatures on microorganisms.

### Unit IV

Protection by drying: methods of drying, factors in the control of drying, microbiology of dried foods, food protection with modified temperature: definition, primary effect of CO<sub>2</sub> on microorganism, the safety of Map foods, spoilage of Map and vacuum packaged meats.

### Unit V

Protection by food additives: the ideal antimicrobial protection, food additives, added preservatives, developed preservatives, protection by Radiation: Ultra Violet radiation, ionizing radiations, Gamma rays and Cathode rays, Microwave processing.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	1	2	1	2	0
CO2	2	2	0	1	2	1	1
CO3	3	1	2	1	1	2	1
CO4	2	2	1	0	0	1	2
CO5	3	3	2	1	0	2	1

3 = Highly Related; 2 = Medium; 1 = Low

### Suggested Readings:

1. Introductory foods, Bennion M. and Hughes, D. (1975), Macmillan publishing Co., New York.

2. Food facts and principles, Sakuntala Manay and Shadaksaraswamy, M (1987) Allied Publishers, New Delhi.
3. Microbial Biotechnology by Glazer AN & Nikaido H., 2nd Ed., Cambridge University Press, 2007
4. Molecular Biotechnology by Glick BR, Pasternak JJ & Patten CL, Ed. IV, ASM Press, 2010
5. Biotechnology: A text Book of Industrial Microbiology by Crueger W, Crueger A, 2nd Ed., Sinauer associates, Inc. 1990.

#### Microbial Toxins and Food Protection Lab (BMI095A)

- 1) Detection of microbes from spoiled meat, egg and fish.
- 2) Isolation and identification of *Salmonella*, *E. coli*, *Listeria*, *Proteus*, *Shigella* and *Vibrio* spp.
- 3) Isolation and identification of *Staphylococcus aureus* using Baird parker agar.
- 4) To determine the LD<sub>50</sub> value of common microbial toxin i.e. aflatoxin, enterotoxin.
- 5) To study the antibiotic sensitivity pattern and MIC for different food pathogen.
- 6) To isolate and determine the food spoilage psychrotrophs from frozen food.
- 7) Biochemical characterization of purified bacterial strains for identification.
- 8) Microbial analysis from the chemically preserve food material.
- 9) Detection of microbial toxin from infected food/spoiled food.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI 096A	Introduction of Medical Microbiology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO1-Remember the history and classification of pathogenic and medicinally important microorganisms.

CO2-Understand general characteristic, epidemiology, pathogenicity, diagnosis, prevention and control of Tuberculosis, Typhoid, Tetanus and Leprosy.

CO3- Understand the diseases such as flu, Mumps, Measles, Polio and Hepatitis B, Malaria and Leishmaniasis

CO4- Understand the sexually transmitted diseases (STD) and remember the generation of antibiotics and their mode of action on microorganism.

CO5- Understand the Transmission of pathogens including air borne, contact transmission and vector based transmission.

### Unit I

Discovery and History of pathogenic microorganism. Contribution made by eminent scientist's related to medical microbiology. Classification of medicinally important microorganism. Normal microflora of the human body: Importance of normal microflora, normal microflora of skin, throat, gastrointestinal tract, urogenital tract.

### Unit II

Characteristic of infectious disease. Disease cycle (source of disease, reservoir, carriers). Bacterial diseases, epidemiology, pathogenicity, laboratory, diagnosis, prevention and control of Tuberculosis, Typhoid, Tetanus and Leprosy.

### Unit III

General account of viral diseases; Pneumonia, flu, Mumps, Measles, Polio, Hepatitis B, Disease caused by Protozoan; malaria and leishmaniasis, amoebiasis.

### Unit IV

Brief account of STD diseases. Antibiotic Ist, IInd, IIIrd and advanced antibiotics. Mode of action of antibiotic on microorganism (in brief).

### Unit V

General account of fungal diseases mycoses, subcutaneous. Transmission of pathogens (Air borne, contact transmission and vector transmission). control measures.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	2	2	3	3	2	2
CO2	2	1	3	1	1	2	1
CO3	3	2	2	3	2	1	2
CO4	3	1	3	2	1	2	2
CO5	2	2	2	2	2	1	3

3= Highly Related; 2= Medium; 1 = Low

#### Suggested Readings:

1. Ananthanarayan R and Paniker CKJ, Textbook of Microbiology. 7<sup>th</sup> edition, 2005, University Press Publication.
2. Brooks GF, Carroll KC, Butel JS and Morse SA. Jawetz, Melnick and Adelberg's, Medical Microbiology, 24<sup>th</sup> edition, 2007, McGraw Hill Publication.

3. Goering R, Dockrell H, Zuckerman M and Wakelin D., Mims' Medical Microbiology. 4<sup>th</sup> edition, 2007, Elsevier.
4. Joklik WK, Willett HP and ZinsserADB, Microbiology, 19<sup>th</sup> edition, 1995. Appleton-Century-Crofts publication.
5. Willey JM, Sherwood LM, and Woolverton CJ., Prescott, Harley and Klein's Microbiology, 7<sup>th</sup> edition, 2008, McGraw Hill Higher Education.

#### **Introduction to Medical Microbiology Lab (BMI097A)**

- 1) Direct examination of infected tissues (skin) for dermatophytes.
- 2) Isolation of microorganisms from wound infection.
- 3) Isolation of microorganisms from teeth crevices.
- 4) Examination of microorganisms of sputum.
- 5) Isolation of enteric pathogens (*Salmonella* and *Shigella*).
- 6) Estimation of urine bacteria by pour plate method.
- 7) Determination of antibiotic susceptibility of a given microorganism against various antibiotics.
- 8) Demonstration of various routes for drug delivery to humans.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI 010B	Immunology	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

CO1- Understand the immune system and lymphoid organs.

CO2- Understand and apply to evaluate the structure, classes, interaction and function antigen and antibodies.

CO3- Understand the complementary pathway and structure, function of MHC.

CO4- Understand the auto-immune diseases.

CO5- Understand about types of vaccines, immunodeficiency and autoimmunity.

#### **Unit I**

Overview of immune system; innate immunity and adaptive immunity. Cells and Organs of immune system: lymphocytes, mononuclear phagocytes, granulocytic cells, primary and secondary lymphoid organs, mixed leucocytes culture (MLC)

#### **Unit II**

Antigens: Properties of antigens, Adjuvants, Haptens. Antibodies: Basic structure, classes and function, Polyclonal sera, Monoclonal antibodies, Antigen- Antibody interaction: precipitation reaction, agglutination reaction, neutralization reaction, lytic reaction and phagocytic reaction.

#### **Unit III**

Rashmi

Dr. [Signature]

[Signature]

[Signature]

Complement pathway (Classical and Alternative pathway), Major histocompatibility complex: class I & class II MHC antigens, antigen processing Structure and functions, organ transplant, transplantation immunology

#### Unit IV

Auto-immune diseases – autoimmunity & auto-immune diseases, factors contributing development of auto-immune diseases, mechanism of development, breakdown of self-tolerance, rejection of transplants, molecular mimicry, diagnosis & treatment of auto-immune diseases, replacement therapy, suppression of auto-immune processes, nature of auto-antigens, immunodeficiency, AIDS.

#### Unit V

Immune System in Health and Disease: Brief introduction to Vaccines, Immunodeficiency and autoimmune disorders, Vaccines & Vaccination – adjuvants, cytokines, DNA vaccines, recombinant vaccines, bacterial vaccines, viral vaccines, vaccines to other infectious agents, tumor vaccines, principles of vaccination, passive & active immunization.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	1	1	1	0	1	1
CO2	2	2	1	1	0	1	2
CO3	2	2	2	1	0	1	1
CO4	3	3	3	2	3	2	0
CO5	3	2	3	3	2	2	0

3 = Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Abbas AK, Lichtman AH, Pillai S., Cellular and Molecular Immunology, 6<sup>th</sup> edition, 2007, Saunders Publication, Philadelphia.
2. Delves P, Martin S, Burton D, Roitt IM., Roitt's Essential Immunology, 11<sup>th</sup> edition, 2006, Wiley-Blackwell Scientific Publication, Oxford.
3. Goldsby RA, Kindt TJ, Osborne BA., Kuby's Immunology, 6<sup>th</sup> edition, 2007, W.H. Freeman and Company, New York.
4. Murphy K, Travers P, Walport M., Janeway's Immunobiology, 7<sup>th</sup> edition, 2008, Garland Science Publishers, New York.
5. Peakman M, and Vergani D, Basic and Clinical Immunology, 2<sup>nd</sup> edition, 2009, Churchill Livingstone Publishers, Edinberg.
6. Richard C and Geiffrey S., Immunology. 6<sup>th</sup> edition, 2009, Wiley Blackwell Publication.

#### Immunology Lab (BMI011B)

- 1) Demonstration of the bacterial flora of the skin.
- 2) Demonstration of dermatophytes.
- 3) Isolation of microbial flora of mouth (from saliva).

*[Handwritten signatures and marks at the bottom of the page]*

- 4) Isolation of microbes from upper respiratory tract (from throat).
- 5) Isolation of enteric pathogens (Coli form bacteria).
- 6) Determination of human blood group.
- 7) Determination of blood group along with Rh factor.
- 8) Demonstration of the Widal test.
- 9) Determination of RBCs in a given blood sample.
- 10) Estimation of WBCs count in a given sample.
- 11) Determination of differential leucocytes count (DLC) in given blood sample.
- 12) Determination of hemoglobin content in a given sample.
- 13) Determination of haematocrit (PCV) level of provided blood sample.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI098A	General Pathology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1 Understand the general cell injury and adaptations.
- CO2 Understand the physiology of inflammation.
- CO3 Understand the Haemodynamic Disorders.
- CO4 Understand the collection of specimen.
- CO5 Understand the handling of the samples.

#### Unit I

Cell Injury and Cellular Adaptations. a) Normal Cell b) Cell Injury- types of cell injury, etiology of cell injury, morphology of cell injury, cellular swelling (in brief). c) Cell death: types- autolysis, necrosis, apoptosis & gangrene. d) Cellular adaptations- atrophy, hypertrophy, hyperplasia & dysplasia.

#### Unit II

Inflammation a) Acute inflammation - vascular event, cellular event, inflammatory cells. b) Chronic Inflammation - general features, granulomatous inflammation, tuberculoma.

#### Unit III

Haemodynamic Disorders : Oedema, hyperemia, congestion, haemorrhage, circulatory disturbances, thrombosis, ischaemia & infarction. Neoplasia: Definition, how does it differ from hyperplasia, difference between benign tumor and malignant tumor. Healing Definition, different phases of healing, factors influencing wound healing.

*Rashmi*

*Sevini*

*E*

*msio*

#### Unit IV

Collection and Transportation of Specimen General Principles, Containers, Rejection, Samples- Urine, Faeces, Sputum, Pus, Body fluids, Swab, Blood.

#### Unit V

Care and Handling of Laboratory Animals Fluid, Diet, Cleanliness, Cages, ventilation, Temperature, Humidity, handling of Animals, Prevention of disease. Disposal of Laboratory/Hospital Waste Non-infectious waste, Infected sharp waste disposal, infected non-sharp waste disposal.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	1	1	1	0	1	1
CO2	2	2	1	1	0	1	2
CO3	2	2	2	1	0	1	1
CO4	3	3	3	2	3	2	0
CO5	3	2	3	3	2	2	0

3= Highly Related; 2= Medium; 1 = Low

#### Suggested Readings:

1. Murray PR, Baron EJ, Pfaller MA, Tenover PC and Tenover RH (Eds): Manual of Clinical Microbiology 6 th Ed. American Society for Microbiology, Washington, DC 2005.
2. Woods GL, Washington JA: The Clinician and the Microbiology Laboratory, Mandell
3. Ananthanarayan & Paniker's Textbook of Microbiology, 8th Ed., Orient Longman, India; 2009.
4. Bailey and Scott's Diagnostic Microbiology 9th Ed. C V Mosby, St. Louis, 2003.
5. Brooks, Geo F Jawetz Medical Microbiology 22nd Ed. Mc Graw Hill 2001.

#### General Pathology Lab (BMI099A)

- 1) Components and setting of the Compound microscope.
- 2) Focusing of object.
- 3) Use of low & high power objectives of microscope.
- 4) Use of oil immersion lens.
- 5) Care and Maintenance of the microscope.
- 6) Different types microscopy - • Dark field microscopy • Fluorescence Microscopy
- 7) Electronic Microscopy in brief.
- 8) Preparation of swabs/sterile tubes & bottles.
- 9) Preparation of smear.
- 10) Staining.: Gram & Ziehl -Neelsen staining.

*[Handwritten signatures and marks at the bottom of the page]*

- 11) Identification of Culture Media.
- 12) Identification of common microbes.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI100A	Clinical Biochemistry	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1 Analyze the spectroscopic techniques.
- CO2 Understand the physiology of water and mineral metabolism
- CO3 Understand the Renal Function Tests, electrophoresis, PCR, autoanalysers.
- CO4 Analyze the cardiac profiling.
- CO5 Analyze the biochemistry profiling of the macromolecules in the cell.

#### Unit I

Photometry Definition, laws of photometry, absorbance, transmittance, absorption maxima instruments, parts of photometer, types of photometry-colorimetry, spectrophotometry, flame photometry, fluorometry, choice of appropriate filter, measurements of solution, calculation of formula, applications.

#### Unit II

Water & Mineral Metabolism Distribution of fluids in the body, ECF & ICF, water metabolism, dehydration, mineral metabolism, macronutrients (principal mineral elements) & trace elements. Liver Functions & their Assessment. Carbohydrate metabolism, Protein metabolism, Lipid metabolism, Measurements of serum enzyme levels 4-Bile pigment metabolism, Jaundice, its types and their biochemical findings.

#### Unit III

Renal Function Tests- Various Tests, GFR & Clearance, Immunodiffusion Techniques, Radioimmunoassay & ELISA Principles & Applications. Electrophoresis - Principle, Types & Applications. Polymerase Chain Reaction - Principle & Applications, Autoanalysers - Principle & Applications

#### Unit IV

*Rashmi*

*Seetha*

*R* *MSD*

Vitamins, Fat & water soluble vitamins, sources, requirement, deficiency disorders & biochemical functions. Cardiac Profile - In brief Hypertension, Angina, Myocardial Infarction, Pattern of Cardiac Enzymes in heart diseases

### Unit V

Different methods of Glucose Estimation Principle advantage and disadvantage of different methods. Different methods of Cholesterol Estimation Principle, advantage and disadvantage of different methods.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	1	2	1	1	1	0	3
CO2	2	3	1	1	2	1	2
CO3	1	2	2	2	3	2	1
CO4	2	2	1	1	2	0	1
CO5	1	3	2	2	3	2	3

3= Highly Related; 2= Medium; 1 = Low

#### Suggested Readings:

1. Murray PR, Baron EJ, Pfaller MA, Tenover PC and Tenover RH (Eds): Manual of Clinical Microbiology 6 th Ed. American Society for Microbiology, Washington, DC 2005.
2. Woods GL, Washington JA: The Clinician and the Microbiology Laboratory, Mandell
3. GL, Bennett JE, Dolin R (Eds): Principles and Practice of Infectious Disease 4th Ed. Churchill Livingstone, New York, 2002.
4. E. Joan Stokes, M.W.D. Wren, G.L.Ridgway, Clinical Microbiology 7th Ed. Hodder Arnold Publishers 7 th Edition.
5. Ananthanarayan & Paniker's Textbook of Microbiology, 8th Ed., Orient Longman, India; 2009.
6. Bailey and Scott's Diagnostic Microbiology 9th Ed. C V Mosby, St. Louis, 2003.
7. Brooks, Geo F Jawetz Medical Microbiology 22nd Ed. Mc Graw Hill 2001.
8. Collier, Leslie Topley and Wilson's Microbiology and microbial infections Vol 7; 9th Ed.

#### Clinical Biochemistry lab (BMI101A)

- 1) Blood urea estimation
- 2) Serum creatinine estimation
- 3) Serum uric acid estimation
- 4) Serum total protein estimation
- 5) Serum albumin estimation
- 6) Serum globulin estimation

- 7) Serum glucose estimation
- 8) Total cholesterol estimation
- 9) HDL cholesterol (direct) estimation.
- 10) LDL cholesterol (direct) estimation
- 11) Triglyceride estimation
- 12) Serum Bilirubin total estimation
- 13) Serum Bilirubin direct estimation
- 14) Serum amylase estimation
- 15) Serum GOT (AST) estimation
- 16) Serum GPT (ALT) estimation
- 17) Alkaline phosphatase estimation
- 18) Acid phosphatase estimation
- 19) Serum sodium estimation
- 20) Serum potassium estimation
- 21) Serum chloride estimation

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI102A	Automation in Medical Microbiology	4	1	4	2	5

**Course outcome (CO) :**On completion of the course, students are able to:

- CO1 Understand the precipitation assay  
 CO2 Understand the physiology of inflammation.  
 CO3 Understand the Haemodynamic Disorders.  
 CO4 Understand the collection of specimen.  
 CO5 Understand the handling of the samples.

#### Unit I

Automation - Introduction, meaning, advantages, history. Precipitation assays: Double diffusion method (Ouchterlony techniques), Counter immunoelectrophoresis, Radial immunodiffusion, Quantitative immunoelectrophoresis, Immunonephelometry, Immunoelectrophoresis, Immunofixation (immunoblotting), Western blot

#### Unit II

Assay based on agglutination: Bacterial agglutination, Hemagglutination, Agglutination of inert particles coated with antigen or antibody.

#### Unit III

*Barbini*

*Seetha*

*[Signature]*

*[Signature]*

Tests based on complement fixation. Test based on immunofluorescence, Immunofluorescence tests in microbiology, Quantitative immunofluorescence assay, Immunofluorescence tests for the detection of auto-antibodies, Immunofluorescence tests to detect tissue fixed antigen-antibody complex

#### Unit IV

Flow cytometry-surface staining, cytoplasmic staining, DNA-analysis, sorting, Radio immunoassay, Enzyme immunoassay; Cell culture- primary, secondary and those using established cell lines.

#### Unit V

Latest trends in Automation, Biochips, Lab on a chip (LoC), Nanosensors- advantages and disadvantages, PCR and its clinical applications.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	2	3	2	3	3	1
CO2	1	3	3	3	2	1	2
CO3	2	2	2	2	3	0	1
CO4	3	2	3	0	2	1	2
CO5	1	3	2	2	3	3	1

3= Highly Related; 2= Medium; 1 = Low

#### Suggested Readings:

1. Abbas AK, Lichtman AH, Pillai S., Cellular and Molecular Immunology, 6<sup>th</sup> edition, 2007, Saunders Publication, Philadelphia.
2. Delves P, Martin S, Burton D, Roitt IM., Roitt's Essential Immunology, 11<sup>th</sup> edition, 2006, Wiley-Blackwell Scientific Publication, Oxford.
3. Goldsby RA, Kindt TJ, Osborne BA., Kuby's Immunology, 6<sup>th</sup> edition, 2007, W.H. Freeman and Company, New York.
4. Murphy K, Travers P, Walport M., Janeway's Immunobiology, 7<sup>th</sup> edition, 2008, Garland Science Publishers, New York.
5. Nakara and Choudhary, Instrumentation measurements and analysis, 3<sup>rd</sup> Edition, 2010, Tata Mc Graw Hill
6. Lodish, Berk, Matsudara, Kaiser, Krieger, Zipursky, Darnell, Molecular cell biology, 8<sup>th</sup> edition 2016, W.H. Freeman and Co.

#### Automation in Medical Microbiology Lab (BMI103A)

- 1) Various experiments using ELISA.
- 2) Demonstration of PCR.
- 3) Demonstration of Semi-Autoanalyzer or fully automated analyzer.

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

- 4) Dot ELISA.
- 5) Genotyping of candidate genes for diseases by RFLP.
- 6) Encapsulation of mammalian cells.
- 7) Isolation of cells from Chick embryo.
- 8) Establishment and maintenance of primary cell cultures.
- 9) Subculture of monolayer cells.
- 10) Subculture of suspension cells.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI104A	Human Anatomy and Physiology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1 Understand the general anatomy of the various system of human.  
 CO2 Understand the physiology of cardiovascular and gastrointestinal system.  
 CO3 Understand the physiology of Endocrinology and urinary system.  
 CO4 Understand the physiology of nervous system of human.  
 CO5 Understand the physiology of skin, ear and nose.

#### Unit I

General Anatomy a) Cell - structure & function b) Tissue - Epithelium - Connective - Sclerous - Muscular - Nervous c) Lymphatic System 2. Systemic Basic Features of : a) Cardiovascular system b) Respiratory system c) Digestive system d) Excretory system e) Genital (Male & Female) system f) Nervous system.

#### Unit II

Cell: Structure & function. 2. Blood a) Blood cells b) Haemoglobin c) Blood groups d) Coagulation Factors e) Anaemia & Immunoglobulins 3. Cardiovascular system Heart rate, cardiac cycle, cardiac output, blood pressure, hypertension, radial pulse 4. Respiratory System a) Ventilation b) Functions c) Lungs Volumes and capacities 5. Gastrointestinal System Process of digestion in various parts.

#### Unit III

Endocrinology a) List of Endocrine Glands b) Hormones: Their secretion and functions, Excretion system a) Structure of nephron b) Urine formation, Excretion system a) Structure of nephron b) Urine formation

*Q. S. S. S.*

*Q. S. S. S.*

#### Unit IV

Central Nervous System a) Parts b) Sliding Filament Theory c) Neuro Muscular Junction d) Wallerian Degeneration e) Motor Nervous system - Upper motor neuron system - Lower motor neuron system f) Sensory nervous system g) Sympathetic Nervous system h) Parasympathetic nervous system

#### Unit V

Skin - Function & Structure Muscular System, Classification of muscles & their functions, Special Senses - Eye & ear

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	1	0	1	1	2
CO2	2	2	1	1	0	2	1
CO3	3	3	2	1	1	1	2
CO4	2	2	1	0	0	1	3
CO5	2	3	2	0	0	2	1

3= Highly Related; 2= Medium; 1 = Low

#### Suggested Readings:

1. Guyton. A. Text Book of Medical Physiology, Elsevier Publication
2. Ganong, W.F. Reviews of Medical Physiology Lange Publication
3. Khurana I, Text Book of Physiology
4. Berne V Principal of Physiology Elsevier Mosby Publication
5. Clinical Anatomy for Medical Students, by: Richard S. Snell
6. General Anatomy, by: Vishram Singh
7. General Anatomy, by: B.D. Chaurasia
8. Embryology for Medical Students, by: Inderbir Singh
9. Text Book of Histology, by: Inderbir Singh

#### Human Anatomy and Physiology Labs (BMI105A)

Demonstration on the following:

- 1) Superior extremity: General features & identification of clavicle, scapula, humerus, radius, ulna, identification of the skeleton of hand.
- 2) Thorax: General features for thoracic vertebrae – typical and atypical, ribs-typical and atypical, sternum.
- 3) Inferior Extremity: General features of hip bone, femur, patella, tibia, fibula, identification of the skeleton foot.
- 4) Abdomen and Pelvis: General features of eleventh and twelfth ribs, lumbar vertebrae – typical and atypical, sacrum, coccyx, pelvis – male and female.

- 5) Brain: General feature of basis crania interna., skull cap.
- 6) Head and Neck: General features of skull, identification of individual skull bones, hyoid bone, ear ossicles, general features of cervical vertebrae typical and a typical.
- 7) Recording the arterial pulse.
- 8) Recording of Electrocardiogram.
- 9) Recording of human blood pressure.
- 10) To study the effect of change of posture on blood pressure.
- 11) To study the effect of moderate exercise on blood pressure.
- 12) Examination of Nervous system.
- 13) Examination of motor system.
- 14) To map peripheral field of vision with perimeter.
- 15) To find out acuity of vision.
- 16) To test colour vision.
- 17) To demonstrate light reflexes and accommodation reflex.
- 18) To assess the hearing of individual.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI106A	Parasitology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1 Understand the term parastism and parasites groups.
- CO2 Understand the protozoan parasite infection in human.
- CO3 Understand the malaria parasite infection
- CO4. Understand the nematodes infection and diagnosis
- CO5 Analyze the tissue invade nematodes infection and diagnosis

#### Unit I

Definition - parastism, HOST, Vectors etc. Classification of Parasites; Phylum Protozoa- general Pathogenic and non pathogenic protozoa, Nematelminths/Round words (Nematoda), Platyhelminths - class-Cestoda, class-Trematoda; Protozoa: Intestinal Amoebae; *Entamoeba histolytica*: Life cycle, Morphology, Disease & Lab Diagnosis.

#### Unit II

Rashmi

R

Scuti

F. MS

Flagellates of intestine/genitalia: *Giardia lamblia* : Life cycle, Morphology, Disease & Lab Diagnosis. *Trichomonas vaginalis* : Life cycle, Morphology, Disease & Lab Diagnosis; *E. coli* : Life cycle, Morphology, Disease & Lab Diagnosis

### Unit III

Malarial Parasite: *Plasmodium vivax*: Life cycle, Morphology, disease & lab diagnosis; Differences between *P. vivax*, *P. malaria*, *P. falciparum* & *P. ovale*.

### Unit IV

Nematodes: Intestinal Nematodes : *Ascaris* : Life cycle, Morphology, disease & lab diagnosis ; Brief discussion about *Enterobius vermicularis* (Thread worm ) and *Ancylostoma duodenale* (Hook worm)

### Unit V

Tissue Nematodes: *W. Bancrofti*- Life cycle, Morphology, Disease & Lab Diagnosis Phylum Platyhelminths a. Cestodes - *T. solium*, *T. saginata* & *E. granulosus*. b. Trematodes - *S. haematobium* & *F. hepatica*.

MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	2	1	2	2	2	0
CO2	2	1	1	1	2	0	1
CO3	2	1	2	1	1	2	1
CO4	2	2	1	0	0	1	1
CO5	1	2	3	1	2	1	1

### Suggested Readings:

1. Medical Mycology. Kwon-Chung K.J and Bennett JE. 1992. Lea and Febiger, Philadelphia, USA.
2. Bailey and Scott's Diagnostic Microbiology- 11th edition: Eds: Forbes BA, Sahm DF, Weissfeld AS. 2002, Mosby, St. Louis, USA.
3. Medical Microbiology, 3rd edition. Eds: MIMS and others. 2004 Mosby, Spain.
4. Topley & Wilson's Microbiology and Microbial infections. 10th edition. Volumes 1- 6: 2008 Arnold, London.
5. Medical Parasitology. Rajesh Karyakarte & Ajit Damle, Books & Allied (P) Ltd., 2003.
6. Medical Immunology, 9th edition Eds: Stites DP, Terr AI and Parslow TG.1997, Appleton & Lange, Stamford, USA

*Qashmi*

*Qashmi*

*Qashmi*

### Parasitology Lab (BMI107A)

- 1) Stool examination.
- 2) Identification of different ova & cysts in stool samples.
- 3) Examination of blood films including Leishmans stain for malarial parasites.
- 4) Lab diagnosis of parasitic infections.
- 5) Examination of Bone marrow smears for LD bodies
- 6) Examination of Hydatid fluid for scolices, hydatid hooklets.
- 7) Examination of CSF for *Acanthamoeba*
- 8) Examination of Liver abscess fluid for *Entamoeba*.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI108A	Basic Industrial Microbiology	4	1	4	2	5

### Course outcome (CO)

On completion of the course, students are able to:

CO1- Understand the introduction to industrial microbiology and fermentation processes.

CO2- Understand the types of bioreactors and measurement of fermentation parameters.

CO3- Understand and apply industrially microbial strains and fermentation media.

CO4- Understand and apply the down-stream processing.

CO5- Understand and apply industrially relevant products derived from Microbes.

### Unit I

Brief history and developments in industrial microbiology, Types of fermentation processes: Solid-state and liquid-state (stationary and submerged) fermentations, Batch, fed-batch and continuous fermentations.

### Unit II

Components of a typical bioreactor. Types of bioreactors: Laboratory, pilot-scale and production fermenters, continuously stirred tank reactor, air-lift fermenter. Measurement and control of fermentation parameters: pH, temperature, dissolved oxygen, foaming and aeration.

### Unit III

Industrially important microbes and their isolation, preservation and maintenance methods. Crude and synthetic media: Molasses, corn-steep liquor, sulphite waste liquor, whey, yeast extract, soybean meal, peptone and tryptone.

*Rashmi* *R* *Seetha* *F* *MSD*

#### Unit IV

Cell disruption by physical, chemical and biological methods. Membrane filtration, ultrafiltration, centrifugation, solvent-solvent extraction, precipitation, lyophilization and spray drying. Production of fermented beverages, alcohol, wine, beer, ethanol.

#### Unit V

Microorganisms, fermentation and recovery strategies: citric acid, glutamic acid, Vitamins - riboflavin, cyanocobalamin. Antibiotics: Penicillin, streptomycin. Enzymes: amylase, protease, lipase. Vaccines - genetic recombinant vaccines. Enzyme immobilization (cross linking, entrapment, adsorption and covalent bonding) and its applications.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	3	3	3	2	2
CO2	2	1	2	1	1	2	1
CO3	3	2	1	2	3	3	2
CO4	2	3	2	3	2	2	3
CO5	2	1	3	1	1	1	1

3= Highly Related; 2 = Medium; 1 – Low

#### Suggested Readings:

1. Okafor N. and Okeke B.C., Modern Industrial Microbiology and Biotechnology, 2nd edition. CRC press, UK. 2017.
2. Crueger W., Crueger A. and Aneja K.R., Biotechnology: A Textbook of Industrial Microbiology by. 3rd edition. Medtech Publisher, India. 2017.
3. Clark W., Biotechnology: Industrial Microbiology. CBS Publishers, India. 2016.
4. Peppler H.J. and Perlman D., Microbial technology. Vol I- Microbial processes and Vol II - Fermentation technology, 2nd edition. Academic Press, USA. 2009.
5. Stanbury P.F., Whitaker A. and Hall S.J., Principles of Fermentation Technology 2nd edition. Elsevier Science Ltd, Netherlands. 2006.
6. Waites M.J., Morgan N.L, Rockey J.S. and Higon G., Industrial Microbiology: An Introduction by Wiley -Blackwell. 2001.
7. Patel A.H., Industrial Microbiology, 1st edition. Macmillan India Limited. 1996.
8. Glazer A.N. and Nikaido H., Microbial Biotechnology: Fundamentals of Applied Microbiology, 1st edition. W.H. Freeman and Company, UK. 1995.
9. Casida L.E., Industrial Microbiology by. 1st edition. Wiley Eastern Limited, USA. 1991.

#### Basic Industrial Microbiology Lab (BMI109A)

- 1) Screening for amylase producing microorganisms.

- 2) Screening for organic acid producing microorganisms.
- 3) Microbial production and estimation of enzymes: Protease/Lipase
- 4) Microbial Production and estimation of Ethanol.
- 5) Production and Estimation of Citric acid.
- 6) Estimation of streptomycin.
- 7) A visit to any educational institute/industry to see different parts of an industrial fermenter and downstream processing techniques.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI110A	Fermentation Technology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1- Understand the basic of fermentation technology and apply this knowledge to isolate the industrial important microorganism.
- CO2- Understand the significance of industrial Microorganisms and various media sterilization technique used in fermentation.
- CO3- Understand the basic of fermentor system and types of cell reactors.
- CO4- Understand the basic of fermentor design and its various types.
- CO5- Understand the scale up study, product recovery and down-stream processing, product development.

#### UNIT-I

History and Scope of fermentation technology. Industrial Microorganisms: Desirable characteristics and selection of industrial Microorganism, Isolation of suitable industrial microorganisms from natural habitat, Culture Collection Centres, Strain improvement and maintenance.

#### UNIT-II

Biology of industrial Microorganisms: Cell growth, Microbial growth kinetics, factors affecting growth, Basic nutrition, Primary metabolism, Secondary Metabolism, Regulation of Metabolism. Fermentation Media: Media composition, Media sterilization, Contamination, Inoculum media, Media economics, Screening for fermentation media

#### UNIT-III

*Basim*

*[Signature]*

*[Signature]*

*[Signature]*

Fermentation system: Batch and continuous fermentation system, immobilized cell reactor system, solid state fermentation reactors.

#### UNIT-IV

Fermentor design: Basic design of Fermentor, Construction of bioreactors,, Requirements of aseptic operation, Aeration and mixing, Type of Fermentors stirrer tank bubble column and airlift, Instrumentation and control.

#### UNIT-V

Scale up study: Product recovery, scale up of fermentation, Down-stream processing, Product development, Regulation and safety

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	2	1	2	1	1
CO2	2	2	2	1	1	2	2
CO3	3	3	3	2	2	1	1
CO4	3	2	3	1	1	2	1
CO5	2	2	2	1	1	2	2

3= Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

1. Aneja.K.R et al.: A Text book of Basic and Applied Microbiology, New Age International Publishers, New Delhi.
2. Aneja.K.R and Mehrotra R.S.: Fungal Diversity & Biotechnology, New Age International Publishers, New Delhi.
3. Waites M.J. et al.: Industrial Microbiology, Blackwell Science Ltd.
4. Casida L.E.: Industrial Microbiology, New Age International Publishers, New Delhi.
5. Prescott and Dunn's.: Industrial Microbiology, AVI Publishing Co. USA.
6. Glazer A.N and Nikaido, H.: Microbial Biotechnology, W.N. Freeman and Co

#### Fermentation Technology Lab (BMI111A)

- 1) Determination of oil and grease from industrial waste.
- 2) Estimation of TS, TSS and TDS from sewage and industrial effluent.
- 3) Estimation of TVS from sewage and industrial effluent
- 4) Bacteriological analysis of potable water MPN
- 5) Estimation of chlorine dose of potable water

- 6) Production of penicillin in the laboratory.
- 7) Primary screening of amylase producing bacteria from soil.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI112A	Microbial Production of Metabolites	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO1- Understand the basic of nucleic acid production on large scale.  
 CO2- Understand the microbial production of necessary vitamins through fermentations technique.  
 CO3- Understand the microbial production of antibiotics, organism used production process and recovery of bacitracin.  
 CO4- Understand the taxonomical classification of bacterial biofertilizers and their physiology.  
 CO5- Understand the production of biofertilizers along with culture production, storage, and transportation technique.

#### UNIT – I

Microbial production of nucleosides and nucleotides: i) Introduction ii) Classification of methods for production of 5' IMP and 5'GMP iii) Production of 5'IMP and 5'GMP by fermentation.

#### UNIT – II

Microbial production of Vitamins: 1) Vitamin B12 - Organisms used, production method-process, recovery and assay. 2) Vitamin C - Organisms used, production method, process, recovery and assay.

#### UNIT – III

Microbial Production of Antibiotics: Organism used, production process and recovery of Bacitracin & Chloramphenicol, Production of Bioinsecticides: Introduction, Candidate Microorganisms, Production, Safety, Effectiveness, Advantages and Disadvantages

#### UNIT – IV

Bacterial Biofertilizers: Taxonomy, physiology and mass cultivation of *Rhizobium*, *Frankia*, *Azospirillum*, *Azotobacter* and *Cyanobacteria*

#### UNIT – V

Production of Biofertilizers: Isolation and identification of different nitrogen fixing microbes, assessment of nitrogen fixing ability of different strains under controlled and field conditions. Direct and indirect methods, culture production, storage, culture, carrier.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course	Program Outcome
--------	-----------------

*Radhika* *SR* *Shruti* *Shruti* *Shruti*

Outcome	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	2	2	2	0
CO2	3	2	2	1	1	1	2
CO3	2	1	1	2	2	2	1
CO4	3	2	3	1	1	1	1
CO5	2	2	1	2	2	2	0

3= Highly Related; 2 = Medium; 1 = Low

#### Suggested Readings:

- Alexander, M. Introduction to Soil Microbiology; Wiley, New York.
- Sperut and Spemt: Nitrogen Fixation
- Aneja et al.: A Text book of Basic and Applied Microbiology, New Age International Publishers, New Delhi.

#### Microbial Production of Metabolites Lab (BMI113A)

- 1) Production of wine from grapes in the laboratory.
- 2) Demonstration of mushroom production (White button mushroom).
- 3) Isolation of Azotobacter from soil.
- 4) Isolation of Rhizobium from legume root nodules.
- 5) Preparation of biofertilizer from Azotobacter and Rhizobium in the laboratory.
- 6) Culturing and identification of yeast (*Saccharomyces cerevisiae*) in the lab.
- 7) Demonstration of amylolytic activity by a mold/bacterium.
- 8) Demonstration of proteolytic activity by a mold/bacterium.
- 9)

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI114A	Quality Assurance and Quality Control of Microbial Products	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO1- Understand the basic industrial Rules and standards as per IP, BP, USP, PFA and remember the laws of Indian pharmacopoeia.

CO2- Understand the detection technique of compounds and apply the knowledge to detect the compounds using indian pharmacopoeia.

CO3- Understand and apply the knowledge of quality control tests of pharmaceutical products.

*Handwritten signature*

*Handwritten signature: Jashini*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

CO4- Understand and remember the international standards as per WHO, ISI, Biosafety and Validation.

CO5- Understand the biosafety in laboratories and pharmaceutical industries, environmental monitoring and bioburden tests.

#### UNIT – I

Industrial Rules and standards as per IP, BP, USP, PFA, Indian Pharmacopoeia: i) Introduction ii) Concept of pharmacopoeia iii) Concept of regulatory authorities iv) Types of pharmaceutical products iv) Microbiological Q.C

#### UNIT – II

Detection of Compounds using Indian Pharmacopoeia: A. Detection of Ascorbic acid tablets B. Detection of Vit. B12 C. Detection of Antibiotics - penicillin and streptomycin

#### UNIT – III

Quality Control Tests of Pharmaceutical Products i) Sterility test ii) Pyrogen test iii) Toxicity test iv) Carcinogenicity test iv) Mutagenicity test v) Allergy test

#### UNIT – IV

International Standards as per WHO, ISI, Biosafety and Validation A) Introduction of WHO, ISI standards. B) Concept of validation.-validation of moist heat sterilization in pharmaceuticals

#### UNIT – V

Biosafety in Laboratories and Pharmaceutical Industries, Environmental Monitoring and Bioburden Tests

*[Handwritten signatures and marks at the bottom of the page]*

### Suggested Readings:

1. Aneja.K.R et al.: A Text book of Basic and Applied Microbiology, New Age International Publishers, New Delhi.
2. Aneja.K.R and Mehrotra R.S.: Fungal Diversity & Biotechnology, New Age International Publishers, New Delhi.
3. Waite M.J. et al.: Industrial Microbiology, Blackwell Science Ltd.
4. Casida L.E.: Industrial Microbiology, New Age International Publishers, New Delhi.

### Quality Assurance and Quality Control of Microbial Products Lab (BMII15A)

- 1) Determination of pH
- 2) Determination of Acidity
- 3) Determination of alkalinity
- 4) Determination of moisture content
- 5) Determination of Chlorine dosage
- 6) Examine the Microbial limit test of tablet/capsule
- 7) Determination of sterility test of pharmaceutical products.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMII16A	Industrial Management, Government Laws and Regulations	4	1	4	2	5

### Course outcome (CO)

- On completion of the course, students are able to:
- CO1- Understand the basic principles of management, management meaning and concept of entrepreneurship
  - CO2- Understand the concepts of management and process of organization.
  - CO3- Understand the national and international scenario of patent, biopatent, copyright, trade secret, trademark and geographical Indications.
  - CO4- Understand the laws related to industrial regulation, industrial development and industrial regulation act.
  - CO5- Understand the basic laws related to industrial regulation taxation: Basic concept of taxation.

### UNIT - I

Entrepreneurship - Principles of management, management meaning and importance, Concept of Entrepreneurship

## UNIT – II

Concepts of Management: i. Planning meaning and importance ii. Organizing - Meaning and process of organization iii. Communication – Meaning and process control techniques. iv. Personal Management – Man power planning v. Purchase and store management – Concept of quotation, tenders, comparative statement, inspection and quality control, store management. vi. Concept of marketing – Basic Concepts, Costing, Pricing vii. Financial management – Fund raising, costing and pricing

## UNIT – III

IPR, National and International Scenario:-Patent, Biopatent, Copyright, Trade secret, Trademark, Geographical Indications, Designs, its basic concepts and laws relating to its infringement -IPR and WIPO, TRIPS

## UNIT – IV

Laws related to industrial regulation: Industrial development and regulation act- Object - Licensing of industries -Circumstances when license not required

## UNIT – V

Laws related to industrial regulation taxation: Basic concept of taxation - -Principle of taxation - Direct and indirect tax -Excise, sales MVAI

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	1	2	1	2	1	2	2
CO2	1	2	3	1	1	2	2
CO3	2	3	3	2	2	1	3
CO4	1	1	2	2	1	2	2
CO5	2	2	2	3	2	2	3

3= Highly Related; 2 = Medium; 1 = Low

### Industrial management, Government Laws and Regulations Lab (BMI117A)

1. Case study of any local industry (Management, Process and laws applied)

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI118A	Biomining and Microbial Metabolites	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO 1 Understand the basic concepts of Microbial extraction of metals from minerals and aqueous effluents.
- CO 2 Understand the Concept of enzymology, classification, and largescale isolation methods using fermentation technology and their application.
- CO 3 Understand the Concept of biosurfactants, types and their applications.
- CO 4 Understand the Enzymes – production and applications of other enzymes.
- CO 5 Understand the biosurfactants, definition, classification, types and their application in environment.

#### Unit I

Microorganisms in mineral recovery, indirect leaching and direct leaching, microorganisms involved in oxidation of minerals, recovery of copper by dump leaching, uranium leaching, gold mining, microorganisms in the removal of heavy metals from aqueous effluents

#### Unit II

Broad classification of Enzymes, Production of microbial enzymes (Strain selection and development, fermentation process and composition of the medium), large scale applications of microbial enzymes-Enzymes for starch processing, use of genetically modified Bacillus strain for production of amylases.

#### Unit III

Enzymes for textile designing (Subtilisins, genetic engineering of subtilisins), Enzymes for Cheese making (Chymosin-action, properties and recombinant chymosin. Lipases-properties and applications (interesterification of fats and oils).

#### Unit IV

Enzymes – production and applications of other enzymes such as invertase, pectinase, cellulase, glucose oxidase, catalase, lactase, polymerase, glucose isomerase etc.

#### Unit V

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

Biosurfactants, definition, classification, types and their application in environment, petroleum recovery and other fields Microbial pigments-source, production and application, Biotransformation of steroids and antibiotics.

#### Biomining and Microbial Metabolites Lab (BMII19A)

- 1) Isolation and Identification of Reserve food material (Glycogen / polyphosphates, PHB) of *B. megaterium* and *Azotobacter* sp.
- 2) Quantitative estimation of amino acids by Rosen's method.
- 3) Quantitative estimation of sugars by Summner's method.
- 4) Demonstration of endogenous metabolism in *B megaterium* or *E. coli* and their survival under starvation conditions
- 5) Quantitative estimation of proteins by Folin-Lowry / Biuret method.
- 6) Production of fungal alpha amylase using solid-state fermentation/ production of protease by bacterial species and confirmation by determining the achromic point.
- 7) Purification of fungal alpha-amylase or bacterial protease by fractionation.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	1	2	1	2	1	2	2
CO2	1	2	3	1	1	2	2
CO3	2	3	3	2	2	1	3
CO4	1	1	2	2	1	2	2
CO5	2	2	2	3	2	2	3

#### Suggested Readings:

1. Microbial Biotechnology by Glazer AN & Nikaido H., 2nd Ed., Cambridge University Press, 2007
2. Molecular Biotechnology by Glick BR, Pasternak JJ & Patten CL, Ed. IV, ASM Press, 2010
3. Biotechnology: A text Book of Industrial Microbiology by Crueger W, Crueger A, 2nd Ed., Sinauer associates, Inc.1990.
4. Encyclopedia of Environmental Microbiology, 6 Vol. Set. Willey Publication.
5. Microbial Ecology by Alexander. Willey Publication

*Rashmi*

*Scs*

*Scs*

				Hr	Hr	Credit
BMI120A	Microbial Products for Human Consumption	4	1	4	2	5

### Course outcome (CO)

On completion of the course, students are able to:

- CO 1 Understand the basic Antibiotics types, range and production of different types of antibiotics.
- CO 2 Understanding of immune system and development and production of various kinds of vaccines, vitamins and proteins.
- CO 3 Understand the Use of microbes in various fermented food products for human consumption.
- CO 4 Understand the use of microbes in the production of alcoholic bevarages.
- CO 5 Understand the production of Whiskeys – types and wine

### Unit I

Antibiotic fermentations – production of  $\beta$  lactams (penicillins), semi-synthetic penicillins and cephalosporins, amino-glycosides (streptomycin), macrolids (Erythromycin), quinines.

### Unit II

Production of proteins in bacteria and Yeast (Chymosin production) Recombinant and synthetic vaccines (problems with traditional vaccines, impact of Biotechnology on vaccine development-Subunit vaccine for Hepatitis B, potential problem of subunit vaccines). Vitamins (B12, riboflavin A)

### Unit III

Microbes in food industry, fermented foods (breads, sauerkraut, pickles, soysauce, tofu, tempeh, natto and poi) Dairy products from microbes (cheese, curd, yoghurt), microbes as food - single cell protein, mushrooms, probiotics.

### Unit IV

Alcoholic beverages – brief history of development of industrial process, production of beer (brewing) – media (raw materials used), process, maturation, carbonation. Types of beer (lager, pilsner, bock, ale, stout, porter).

### Unit V

*Handwritten signatures:*  
 1. A large signature on the left.  
 2. A signature below it, possibly "Rashmi".  
 3. A signature to the right of the second one.

*Handwritten signatures:*  
 4. A signature in the center.  
 5. A signature on the right.

Whiskeys – types and production, Production of wine –media and raw material used, different types (sparkling wine, burned wine, cider, wine vinegar), vinegar.

### Microbial Products for Human Consumption Lab (BM1121A)

- 1) Demonstration of antibiotic fermentation through batch fermentation.
- 2) Demonstration of process of penicillin production through fermentation.
- 3) Isolation and identification of chymosin producing bacteria.
- 4) Demonstration of the role of recombinant and synthetic vaccines developed for human's.
- 5) To produce fermented food sauerkraut.
- 6) Study of single cell protein and its production process.
- 7) Production of wine from grapes.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	2	1	2	3	1
CO2	2	2	2	0	3	1	1
CO3	3	3	2	1	1	2	2
CO4	2	1	2	2	2	2	3
CO5	2	1	3	1	1	1	1

### Suggested Readings:

1. Palmer T. (2001) Enzymes Biochemistry, Biotechnology and Clinical Chemistry, 5th Edition, Howood Publishing Chishester, England.
2. Marangoni A.G. (2003), Enzyme Kinetics-A Modern Approach.
3. Price N.C. and Stevens L. (1999), Fundamentals of Enzymology 3rd Edition Oxford University Press, New York.
4. Dixon M. and Webb E.C. (1979), Enzyme, 3rd Edition, Academic Press, New York.
5. Uhlig H (1998), Industrial Enzymes and Their Applications, Jone Wiley, New York.

Course code				Hr	Hr	Credit
BMI122A	Environment and Microorganisms	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO1- Understand the scope and importance of environmental microbiology.

CO2- Understand and apply the aeromicrobiology.

CO3- Understand the biogeochemical cycles and microbial transport.

CO4- Understand and apply the microbial interactions.

CO5- Understand and apply solid waste management.

#### Unit I

Introduction to environmental microbiology, scope and importance. Microorganisms in environment: viruses, bacteria, algae, fungi and protozoa. Terrestrial environment: soil and soil subsurface environment, microorganisms in surface soil, shallow and deep subsurface environment.

#### Unit II

Aeromicrobiology : atmosphere, aeromicrobiological pathway, microbial survival in air, extramural and intramural aeromicrobiology. Aquatic and extreme environments: microbes present in aquatic environment, environment determinants that govern extreme environments.

#### Unit III

Microbial transport: factors affecting microbial transport, factors affecting transport of DNA. Biogeochemical cycling: carbon cycle: Microbial degradation of cellulose, nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate, sulfur cycle: Microbes involved in sulphur cycle; Phosphorus cycle.

#### Unit IV

Microbial interactions: Microbe-microbe interactions: mutualism, synergism, commensalism, competition, amensalism, parasitism, predation. Microbe-plant interactions: microbes associated with roots and aerial plant surfaces, *Rhizobium* symbiosis, *Anabaena-Azolla* symbiosis, mycorrhizal associations, actinorhizal associations.

#### Unit -V

Solid waste management: Sources and types of solid waste, methods of solid waste disposal: incineration, sanitary landfill, composting.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

5. Maier RM, Pepper IL and Gerba CP., Environmental Microbiology. 2<sup>nd</sup> edition, 2009, Academic Press.

#### Environment and Microorganisms Lab (BMI123A)

- 1) Isolation of microbes from soil samples.
- 2) Isolation of microbes from water samples.
- 3) Isolation of microbes from air.
- 4) Determination of dissolved oxygen (DO) of water samples.
- 5) Determination of biological oxygen demand (BOD) of water samples.
- 6) Determination of chemical oxygen demand (COD) of water samples.
- 7) Bacteriological examination of water by multiple tube fermentation test (multiple tube test)
  - (a) Presumptive coli form test, (b) Confirmed coli form test, and (c) Completed coli form test.
- 8) Isolation of *Rhizobium* from root nodule.
- 9) Demonstration of ammonification.
- 10) Demonstration of nitrification.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI124A	Eco-Restoration and Development	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO1- Understand the basic concept of land degradation and apply the knowledge to degraded

*Basim* *Basim* *Basim* *Basim*

lands conservation.

CO2- Understand the necessity of soil conservation and role of microbes in improvement of soil fertility.

CO3- Understand the basic concept of green environment techniques and apply the knowledge to production of eco development and environmental friendly products.

CO4- Understand the PGPR bacteria and their role in eco friendly environment and bio-control of plant pathogen.

CO5- Understand the Microbial transformation, accumulation and concentration of metals, metal leaching, extraction, exploitation of microbes in copper and uranium extraction

#### Unit -I

Degraded lands: agricultural practices and land degradation, Mining and its impact on soil quality Conservation of degraded lands, Rehabilitation of mine soils and salt affected soils.

#### Unit -II

Soil Conservation: Biological reclamation techniques Bio fertilizers, microrhizae, Vermi composting, afforestation, Organic farming, Bio remediation.

#### Unit -III

Approaches for environmental awareness and education, Eco development and environmental friendly products and technologies. Green environment techniques.

#### Unit -IV

PGPR bacteria: biofertilizers, microbial insecticides and pesticides, bio-control of plant pathogen, Integrated pest management; development of stress tolerant plants, biofuel; mining and metal biotechnology.

#### Unit -V

Microbial transformation, accumulation and concentration of metals, metal leaching, extraction; exploitation of microbes in copper and uranium extraction, use of bioreactors for bioremediation.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

4. Singh J.S., Singh S.P. and Gupta S.R., 2006, Ecology Environment and Resource Conservation, Anamaya Publishers, New Delhi.

#### Eco-Restoration and Development Lab (BMI125A)

- 1) Bacteriological examination of water by multiple tube fermentation test
- 2) Isolation of *Rhizobium* from root nodule.
- 3) Demonstration of ammonification.
- 4) Demonstration of nitrification.
- 5) Analysis of pesticides residues using TLC
- 6) Demonstration of soil conservation techniques
- 7) Demonstration of water conservation techniques
- 8) Demonstration of Biogas plant

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI126A	Environmental Monitoring	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

CO1- Understand the basic concept of environmental monitoring and apply the knowledge to monitor the different aspect of environment.

CO2- Understand the sampling process for air monitoring and devices used for the air monitoring.

CO3- Understand the basic concept of water quality monitoring and physical and chemicals characteristics of water.

*Parshini* *[Signature]* *[Signature]* *[Signature]* *[Signature]*

CO4- Understand the biological aspects of environment monitoring and bio indicators used for environmental monitoring

CO5- Understand the EIA – Aims, objectives and methods and Geographical Information System Remote sensing and application in environment

#### Unit -I

Environment monitoring : Concept, aims, measurement and data collection on Meteorological parameters – solar radiation, temperature Humidity, precipitation, wind direction and speed. Plume behaviour, wind rose – a brief idea.

#### Unit -II

Chemical aspect of air quality monitoring : sampling of gaseous and suspended particulate matter ; basic considerations, devices and methods used : absorption, adsorption, condensation, sedimentation, filtration, Impingement, electrostatic precipitation, centrifugal methods.

#### Unit -III

Water quality monitoring : water quality parameters, Physical and chemicals characteristics of water : Colour, turbidity, odour and taste, total solids, conductivity, pH, acidity, alkalinity, hardness, Dissolved Oxygen, Biological Oxygen Demand and Chemical Oxygen demand

#### Unit -IV

Biological aspects of Environment Monitoring: Bio indicators of environmental monitoring Microbiological quality of water Bio indicators of water quality Vegetation monitoring – a brief idea.

#### Unit -V

EIA – Aims, objectives and methods EIA case studies river valley, projects and thermal power plants Geographical Information System Remote sensing and application in environment

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	2	3	2	3	3
CO2	3	1	2	2	3	3	2

5. Botkin, D.B and Keller E.A., 1982: Environmental Studies : The earth as a living plant. Charles E. Merrill, Publishing Co. London.

#### **Environmental Monitoring Lab (BMI127A)**

1. Determination of dissolved oxygen (DO) of water samples.
2. Determination of biological oxygen demand (BOD) of water samples.
3. Determination of chemical oxygen demand (COD) of water samples.
4. Determination of Conductivity in drinking water sample
5. Determination of turbidity in drinking water sample
6. To determine the concentration of iron in water sample by spectrophotometric method
7. Evaluation of Disinfectant – Phenol co-efficient test

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI048A	Waste Management	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

CO1- Understand the municipal solid waste, its sources and types of solid waste- composition and its determinants apply the knowledge for sampling methods of solid waste.

CO2- Understand the collection and transfer of solid waste.

CO3- Understand the basic concept of processing techniques and recovery of energy from solid waste.

CO4- Understand the various techniques used for disposal of solid waste including incineration and land filling.

CO5- Understand the basic of biomedical waste and chemical waste and their harmful effect on human.

#### **Unit - I**

Municipal solid waste Definition - Sources and types of solid waste- composition and its determinants of Solid waste-factors influencing generation-quantity assessment of solid wastes- methods of sampling and characterization.

#### **Unit – II**

Rashmi

Rashmi

Rashmi

Collection and Transfer Collection: Collection of Solid waste – collection services – collection system, equipments – time and frequency of collection – labour requirement – factors affecting collection – analysis of collection system – collection routes – preparation of master schedules.

### Unit-III

Processing Techniques and Recovery of Energy Processing techniques – purposes mechanical volume reduction – necessary equipments – chemical volume reduction – incinerators – mechanical size reduction selection of equipments – components separation – methods – drying and dewatering.

### Unit - IV

Disposal of Solid Wastes Refuse disposal – various methods – incinerations – principle features of an incinerator – site selection and plant layout of an incinerator - sanitary landfill- methods of operation – advantages and disadvantages of sanitary land fill - site selection – reactions accruing in completed landfills– gas and leachate movement and control – equipments necessary.

### Unit V

Biomedical and chemical wastes Biomedical wastes – Types – Management and handling – control of biomedical wastes Chemical wastes – Sources – Domestic and Industrial -Inorganic pollutants – Environmental effects – Need for control – Treatment and disposal techniques – Physical, chemical and biological processes – Health and environmental effects

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

#### **Waste Management Lab (BMI049A)**

1. Determination of pH of MSW
2. Determination of nutrient value (NPK)
3. Lab scale study on vermin-composting
4. Lab scale study of aerobic and anaerobic digesting of solid wastes.
5. Vermi composting of organic wastes.
6. Demonstration of Effluent treatment plant.
7. Demonstration of medical waste collection method.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI128A	Environmental Legislation and Policy	4	1	4	2	5

#### **Course outcome (CO)**

On completion of the course, students are able to:

CO1- Understand the Legal definitions of environmental pollution, natural resource, biodiversity, forest, sustainable development.

CO2- Understand the legal act related to environmental law (British India and Independent India).

CO3- Understand the Indian act relevant to Forest, Wildlife, Water, Air and Motor Vehicle.

CO4- Understand the National Green Tribunal act, scheme and labeling of environment friendly products and Ecomarks.

CO5- Understand the International laws and policy and Case studies in India Stockholm Conference and role of central and state pollution control boards.

#### **UNIT I**

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

*Handwritten signature*

National Green Tribunal. Legal definitions (environmental pollution, natural resource, biodiversity, forest, sustainable development); Article 48A (The protection and improvement of environment and safeguarding of forests and wildlife); Article 51 A (Fundamental duties).

## UNIT II

British India: Indian Penal Code 1860, Forest Act 1865, Fisheries Act 1897; Independent India: Van Mahotsava 1950, National Forest Policy 1952, Orissa River pollution and prevention Act 1953.

## UNIT III

Legislative Instruments The Indian Forest Act 1927; The Wildlife (Protection) Act 1972; The Water (Prevention and Control of Pollution) Act 1974; The Forests (Conservation) Act 1980; The Air (Prevention and Control of Pollution) Act 1981; The Environment (Protection) Act 1986; Motor Vehicle Act 1988.

## UNIT IV

The Public Liability Insurance Act 1991; Noise Pollution (Regulation and Control) Rules 2000; The Biological Diversity Act 2002; The Schedule Tribes and other Traditional Dwellers (Recognition of Forests Rights) Act 2006; The National Green Tribunal Act 2010; scheme and labeling of environment friendly products, Ecomarks.

## UNIT V

International laws and policy and Case studies in India Stockholm Conference 1972; United Nations Conference on Environment and Development 1992; Rio de Janeiro (Rio Declaration, Agenda 21); Convention on Biological Diversity, Montreal Protocol 1987; Kyoto Protocol 1997; Copenhagen and Paris summits. 19 Role of Ministry of Environment, Forests & Climate; role of central and state pollution control boards.

1. A case study of any environmental issue relevant to India.

Course code	Course Title	L	P	Contact Hr	Contact Hr	Total Credit
BMI130A	Microbial Ecology	4	1	4	2	5

#### Course outcome (CO)

On completion of the course, students are able to:

- CO 1 Understand the basic concepts within the field of microbial ecology and environmental microbiology.
- CO 2 Understand and Interpret the various ecological and evolutionary principles that impact microbes.
- CO 3 Analyze and design experimental approaches used in the field of microbial ecology.
- CO 4 Understand functional ubiquity and diversity observed among different microbes.
- CO 5 Apply the arguments that researchers in microbial ecology make based on evidence.

#### Unit 1

Origin of life: A brief history of the physical origin of the Earth, Chemical and Cellular evolution; Microbial Diversification: Consequences for Earth's Biosphere; Endosymbiotic origin of eukaryotes.

#### Unit 2

Rashmi

Devika

P. J. S. S. S.

Microbial Ecology vs. Macroecology, Basic concept of Ecosystem and Biosphere, Concept of habitat and niche, Concept of population growth and community dynamics in microbe, Basic concept of food chain-food web and energy flow.

### Unit 3

Physiological ecology of microorganisms: Adaptation to environmental condition, Abiotic growth limiting factors-Leibig's law of minimum, Shelford law of tolerance. Microbial community succession-biofilm communities.

### Unit 4

Quantitative Ecology: Microbial diversity, OTU, Diversity indices (Shannon, Shimpson), Alpha and beta diversity, Richness and evenness, Samples and samplings, Concept of culturability, Significance of Biogeochemical cycles-Carbon, Nitrogen, Phosphorous, Sulphur.

### Unit 5

Development of microbial communities: r and k strategies. Determination of total and viable microbial number, Molecular analysis of function and diversity of microbial community, Metagenomics and microbiomics

### Microbial Ecology Lab (BMI131A)

- 1) Types of media – differential, selective, synthetic.
- 2) Isolation and enumeration of microbes from soil sample by serial dilution agar plating method or by viable plate count method.
- 3) Direct microscopic count.
- 4) To obtain axenic culture of microbes by streak, spread, pour plate methods.
- 5) Techniques for preservation of microbial cultures.
- 6) To preserve microbes by freeze drying (lyophilization).
- 7) Carbohydrate estimation by Anthrone method.
- 8) Protein estimation by Lowry's, Bradford and
- 9) To plot bacterial growth curve by spectrophotometer.

#### Course outcome (CO)

On completion of the course, students are able to:

- CO 1 Understand the basic concepts of Ethanol fermentation, agro and forest-feedstocks to fermentable sugars, sugars to ethanol.
- CO 2 Understand the alternative ethanol producing organism-Zymomonas mobilis.
- CO 3 Understand the single cell protein, mycoprotein, rDNA technology and its application in Agriculture.
- CO 4 Understand the functional of degradation of lignocellulosic waste and biocomposting methods.
- CO 5 Understand the biodegradation and biotransformation of Xenobiotics compounds.

Pashmi

22

Dev

Pashmi

### Unit I

Ethanol fermentation, agro and forest-feedstocks to fermentable sugars, sugars to ethanol (yeasts, substrate range, substrate utilization), Ethanol tolerance, flocculation and cell recycle, stillages.

### Unit II

Alternative ethanol producing organism-Zymomonas mobilis (Carbohydrate utilization, ED pathway used by the organism, its tolerance to ethanol); Clostridial fermentations.

### Unit III

Single cell protein, mycoprotein, rDNA technology and its application in Agriculture, Environment and healthcare, GMO's and GEM's- Role of Agrobacterium, Ti Plasmid, transgenic crops, issues related to transgenic organisms,

### Unit IV

Degradation of lignocellulosic waste, Biocomposting-different methods, conditions, different types of compost, conditions for production of compost, Leaching of metal from ores- Bioleaching, organisms involved and their usage.

### Unit V

Biodegradation and biotransformation of Xenobiotics including pesticides, chlorinated and nitrated aromatic compounds, phenolic compounds, polycyclic aromatic compounds.

### Agro-Environment microbiology Lab (BMI133A)

- 1) Identification of Fungal Contaminants in Plant Tissue
- 2) Identification of Disease Causing Fungal Pathogen of Fruit Plants
- 3) Identification of Pathogens Causing MD-2 Pineapple Fruit Rot
- 4) Microbial Analysis of Food Items
- 5) Bacteriological Examination of Water by Multiple Tube Fermentation Test
- 6) Microbiological Examination of Milk
- 7) Analyze the bacterial colonies in rotten fruit.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	2	1	2	3	1
CO2	2	2	2	0	3	1	1
CO3	3	3	2	1	1	2	2
CO4	2	1	2	2	2	2	3
CO5	2	1	3	1	1	1	1

### **Suggested Readings:**

1. Waste Water Microbiology by Garbiel, Bitton. Wiley Publication.
2. Biopesticides: A Biotechnical Approach by S R Joshi. New Age Publication.
3. Microbial Ecology by Atlas and Bartha.
4. Soil Organic Matter and Biological Activity. Martinus Nigholf W Junk Publisher.
5. Introduction to Environmental Microbiology by Michel Wiley Liss Publication.
6. Advances in Microbial Ecology. K C Marcell, Plenum Press.

### **Open elective-I Human Microbial Disease Management (BMI134A)**

Course learning outcomes: By the conclusion of this course, the students

CO1. Understanding of practical aspects diagnosis of common human infections.

CO2. Understanding of preventive measures for human infections by the use of antibiotics and vaccines.

#### **Unit I**

Human Diseases: Infectious and non-infectious diseases, microbial and nonmicrobial diseases, Deficiency diseases, occupational diseases, Incubation period, mortality rate, nosocomial infections Sign and Symptoms of common diseases.

#### **Unit II**

Microbial diseases: Respiratory microbial diseases, gastrointestinal microbial diseases, Nervous system diseases, skin diseases, eye diseases, urinary tract diseases, Sexually transmitted diseases: Types, route of infection, clinical systems and general prevention methods, study of recent outbreaks of human diseases (SARS/ Swine flu/Ebola) – causes, spread and control, Mosquito borne disease – Types and prevention.

#### **Unit III**

Therapeutics of Microbial diseases: Treatment using antibiotics: beta lactam antibiotics (penicillin, cephalosporins), quinolones, polypeptides and aminoglycosides. Judicious use of antibiotics, importance of completing antibiotic regimen, Concept of DOTS, emergence of antibiotic resistance, current issues of MDR/XDR microbial strains.

#### **Unit IV**

Treatment using antiviral agents: Amantadine, Acyclovir, Azidothymidine. Concept of HAART. Vaccines: Importance, types, vaccines available against microbial diseases, vaccination schedule (compulsory and preventive) in the Indian context.

#### **Unit V**

Prevention of Microbial Diseases: General preventive measures. Importance of personal hygiene, environmental sanitation and methods to prevent the spread of infectious agents transmitted by direct contact, food, water and insect vectors.

#### Reference Books

1. Ananthanarayan R and Paniker CKJ. Textbook of Microbiology. 7th Edition. University Press Publication. (2005).
2. Brooks GF, Carroll KC, Butel JS and Morse SA. Jawetz, Melnick and Adelberg's Medical Microbiology. 24th edition. McGraw Hill Publication. (2007).
3. Goering R, Dockrell H, Zuckerman M and Wakelin D. Mims Medical microbiology. 4th edition. Elsevier. (2007).
4. Drexler M; What You Need to Know About Infectious Disease. National Academies Press (US); 2010.

#### Open elective-II Microbial Products (BMI135A)

Course learning outcomes: By the conclusion of this course, the students

CO1. Understanding of practical aspects of production of biofertilizers.

CO2. Understanding of practical aspects of the production of biopesticides/bioinsecticides.

#### Unit I

Biofertilizers: General account of the microbes used as biofertilizers for various crop plants and their advantages over chemical fertilizers. Symbiotic N<sub>2</sub> fixers: Rhizobium - Isolation, characteristics, types, inoculum production and field application, legume/pulses plants Frankia - Isolation, characteristics, Alder, Casuarina plants, non-leguminous crop symbiosis

#### Unit II

Cyanobacteria as bio-fertilizers- Isolation, characterization, mass multiplication, Role in rice cultivation, Crop response, field application. Non - Symbiotic Nitrogen Fixers. Free living Azospirillum, Azotobacter free isolation, characteristics, mass inoculums, production and field application

### Unit III

Phosphate Solubilizers :Phosphate solubilizing microbes - Isolation, characterization, mass inoculum production, field application. PGPR – Isolation and Characterization; mass production and application.

### Unit IV

Mycorrhizal Bio-fertilizers: Importance of mycorrhizal inoculum, types of mycorrhizae and associated plants, Mass inoculum production of VAM, field applications of Ectomycorrhizae and VAM.

### Unit V

Bioinsecticides :General account of microbes used as bioinsecticides and their advantages over synthetic pesticides, Bacillus thuringiensis, production, Field applications. Viruses – cultivation and field applications.

#### Open Elective-III Biosafety and IPR (BMII36A)

##### Course outcome (CO)

On completion of the course, students are able to:

- CO1 Analyze and understand the working in a microbiology laboratory taking all safety measures, handling of live bacteria, disposal of infectious waste, care of the equipment requiring safety audit
- CO2- Understand the knowledge of basic concepts related to IPR.
- CO3- Understand and apply knowledge of patent filing, and some well-known/well-publicized case studies related to IPR

Rashmi

→

Pradi

F. J. S. S.

CO4 -Understand and apply grant of patent and patenting authorities

CO5-Understand the agreements and Treaties

#### Unit I

Biosafety: Introduction; biosafety issues in biotechnology; Biological Safety Cabinets & their types; Primary Containment for Biohazards; Biosafety Levels of Specific Microorganisms AERB/RSD/RES guidelines for using radioisotopes in laboratories and precautions.

#### Unit II

Biosafety Guidelines: Biosafety guidelines and regulations (National and International); GMOs/LMOs- Concerns and Challenges; Role of Institutional Biosafety Committees (IBSC), RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Overview of International Agreements - Cartagena Protocol.

#### Unit III

Introduction to Intellectual Property: Patents, Types, Trademarks, Copyright & Related Rights, Industrial Design and Rights, Traditional Knowledge, Geographical Indications- importance of IPR – patentable and non patentables – patenting life – legal protection of biotechnological inventions – World Intellectual Property Rights Organization (WIPO)

#### Unit IV

Grant of Patent and Patenting Authorities: Types of patent applications: Ordinary, PCT, Conventional, Divisional and Patent of Addition; An introduction to Patent Filing Procedures; Patent licensing and agreement; Patent infringement- meaning, scope, litigation, case studies, Rights and Duties of patent owner.

#### Unit V

Agreements and Treaties: GATT, TRIPS Agreements; Role of Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty on international recognition of the deposit of microorganisms; UPOV & Brene conventions; Patent Co-operation Treaty (PCT); Indian Patent Act 1970 & recent amendments.

**Course Structure and Syllabus**

**M.Sc. (Microbiology)**  
**(2022-2024)**

**Academic Programmes**

*[Handwritten signatures]*  
Suniti R. Kashni

The curriculum and syllabus for M.Sc. Program conforms to outcome based teaching learning process. In general, several outcomes have been identified and the curriculum and syllabus have been planned in such a way that each of the courses meets one or more of these outcomes. Program outcomes illustrate the students are expected to know and be able to do by the time of graduation. These relate to the skills, understanding, and behaviors that students acquire as they progress through the program. Further each course in the program brings out clear instructional objectives which are mapped to the student outcomes.

The student outcomes are:

1. An ability to apply profound understanding of science, zoology, botany and microbiology
2. An ability to design and perform experiments, as well as to analyze and interpret data
3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
4. An ability to function on multidisciplinary teams
5. An ability to identify, formulate, and solve microbiological problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively
8. The broad education necessary to understand the impact of biological solutions in global, economic, environmental, and societal context
9. A recognition of the need for, and an ability to engage in life-long learning
10. A knowledge of contemporary issues
11. An ability to use the techniques, skills, and modern microbial tools necessary for microbiological practice.

#### PROGRAM OUTCOMES (POs)

- PO1. To acquire recent technical knowledge in basic and applied biological sciences.
- PO2. Understanding microbiology in medical, industrial, agriculture, food and environmental basis of life.
- PO3. Demonstrate practical skills/competencies in the laboratory including ethical implication of microbial research and the use of good laboratory practices and biosafety.
- PO4. To develop scientific communication, writing skills, problem solving, and innovative thinking in youth with respect to microbiology.
- PO5. To apply the knowledge of microbiology in health, medicine, environment and sustainable development.
- PO6. Competent in practical and project based skills for a career in research and entrepreneurship in fields of microbiology.
- PO7. To gain knowledge of essential facts, concepts, principles and theories relating to the subject areas identified and to recognize, analyze problems and plan strategies for their solution.

MMI 001A	BACTERIOLOGY	4-0-0 [4]
----------	--------------	-----------

### Course outcome

- CO 1 Understand the classical and modern trends in classification with reference to Bergey's manual of systematic bacteriology
- CO 2 Understand and apply the Ultra structure of bacteria, nutritional, bacterial endospores and sporulation.
- CO 3 Apply and Understand general account of eubacteria (Gram + & -) and archaebacteria (methanotrophs, halophiles and sulphur bacteria).
- CO 4 Understand and apply the Cultivation of Bacteria: growth curve and environmental factors affecting growth.
- CO 5 Apply and Analyze account of oxygenic and anoxygenic photosynthesis and the different types pigments molecule involved in photosynthesis

<b>UNIT 1</b>	<b>Classification :</b> Classification of microorganisms- introduction, Haeckel's three kingdom concept, Whittaker's five kingdom concept, three domain system of classification. Modern trends in classification (ribotyping, NA hybridization, RNA fingerprinting). Classification and salient features of bacteria according to Bergey's manual of systematic bacteriology(a brief outline) Morphological types of bacteria . Nutritional classification of bacteria.
<b>UNIT 2</b>	<b>Structure of bacteria :</b> Cell wall structure and synthesis, cell membrane,. Flagella and motility, chemotaxis Pili, Fimbriae, Cell inclusions like Glycogen granules, Volutin granules, Carboxysomes, magnatosomes, chlorosomes, gas vacoules, Slime sheet and capsule. Endospore structure and formation stages of sporulation, activation germination and outgrowth of bacterial endospores, poly- $\beta$ -hydroxyl butyrate, nucleic acids
<b>UNIT 3</b>	<b>Eubacteria and Archaebacteria:</b> General characters and structure of Spirochetes, cyanobacteria, purple and green bacteria, rickettsia, Chlamydia, budding bacteria and sheathed bacteria. Gram positive bacteria- endospore forming bacteria, actinomycetes, mycobacteria. Archaebacteria-methanotrophs, halophiles and sulphur bacteria.
<b>UNIT 4</b>	<b>Microbial Growth :</b> The definition of growth, growth curve, measurement of growth and growth yields, Synchronous growth, Continuous, Batch and Fed Batch Culture; Growth as affected by environmental factors like temperature, acidity, alkalinity, water availability oxygen and pH, activity of water, radiations, osmotic pressure and gaseous environment, maintenance, preservation, Control of microorganisms: physical and chemical methods. Mode of action of antibiotics, Antimicrobial drug resistance - Mechanism and spread.
<b>UNIT 5</b>	<b>Microbial Physiology :</b> Photosynthesis: Oxygenic photosynthetic microbes and anoxygenic photosynthetic microbes. Brief account of photosynthetic and accessory pigments-chlorophyll and bacteriochlorophylls, rhodopsin, carotenoids, phycobiliproteins; oxygenic-anoxygenic photosynthesis.

MMI 002A	Instrumentation	4-0-0 [4]
----------	-----------------	-----------

- CO 1 Understand the construction of principle and applications of microscopy and various types of microscope and their use.
- CO 2 Understand the Principle, sedimentation analysis & RCF of centrifugation and various type of centrifuges.
- CO 3 Understand the Principle, techniques of chromatography and various types of chromatography techniques.
- CO 4 Understand the Principle, factors affecting and types of electrophoresis.
- CO 5 Understand the Spectroscopy technique and Radioisotopic Techniques.

<b>UNIT 1</b>	<b>Microscopy:</b> construction of a microscope, Principle and applications of light microscopy (bright field, dark field, phase-contrast, interference, fluorescence, polarization microscopy). Electron microscopy- TEM, SEM, Scanned probe microscopic techniques (STEM, AFM). Confocal, Steriomicroscope (Basic)
<b>UNIT 2</b>	<b>Centrifugation:</b> Principle, sedimentation analysis & RCF, ultracentrifugation, High speed centrifuge, Zonal & Isopycnic centrifuge: Preparative (differential and density gradient) and analytical centrifuges.
<b>UNIT 3</b>	<b>Chromatography:</b> Principle, techniques of chromatography (Paper chromatography, TLC, Column chromatography), types of chromatography (GC, HPLC, Fast performance liquid chromatography, Adsorption chromatography, Partition chromatography, Gel filtration, Ion-exchange chromatography and Affinity chromatography).
<b>UNIT 4</b>	<b>Electrophoresis:</b> Principle, factors affecting electrophoresis, types of electrophoresis - Agarose gel electrophoresis, PAGE, SDS-PAGE, 2-D electrophoresis, Pulsed field gel electrophoresis, isoelectric focussing, immuno electrophoresis, Isotechophoresis Immunodiffusion.
<b>UNIT 5</b>	<b>Spectroscopy:</b> Beer-Lambert law, UV-Vis spectroscopy, fluorescence spectroscopy, IR spectroscopy, Raman spectroscopy, Atomic absorption spectroscopy, NMR, ESR, Flame emission photometry, flow cytometry. <b>Radioisotopic Techniques:</b> Principle and applications of radiation techniques (Radioisotopes; nature of radioactivity, types of radioactive decay, unit of radioactivity), detection and measurement of radioactivity (Geiger-Muller counter, Solid and liquid scintillation counter, Propotional counter, Film batch pocket dosimetry, autoradiography).

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

MMI020A	Principles of Biochemistry	4-0-0 [4]
---------	----------------------------	-----------

**Course Outcomes**

- CO 1 Describe the chemical foundations of biology with reference to pH, buffers, bioenergies and hierarchy of molecules.
- CO 2 Describe a general account of types, structural and metabolic pathway of amino acids.
- CO 3 Explain general account of types, structural and metabolic pathway of carbohydrates.
- CO 4 Describe the Classification, Structure, functions, catabolism and anabolism of saturated and unsaturated fatty acids.
- CO 5 Describe the Enzyme Kinetics and the mechanism of enzyme catalysis and Factors affecting enzyme activity as well as enzyme inhibition

*Principles*

*Principles*

*Principles*

*Principles*

*Principles*

UNIT 1	<b>Chemical foundations of Biology:</b> pH, pK, acids, bases, buffers, weak bonds, chemical bonds, Bioenergetics: Principles of thermodynamics: free energy, important energy, rich molecules, standard free energy change, concept of redox reactions. Principles of self assembly, Hierarchy of molecular organization of living systems.
UNIT 2	<b>Amino acids and proteins:</b> Structure and chemistry of Amino acids, Classification, Chemical Reactions and Physical Properties, Proteins-purification and criteria for homogeneity, structural organization of proteins- primary, secondary, tertiary and quaternary structure. Ramachandran plot. Protein sequencing, Protein folding & stability, Levinthal's paradox, glyco and lipo protein structure and function. Degradation and reconstruction.
UNIT 3	<b>Carbohydrates:</b> Classification and reactions of aldehyde and ketone group, types, structural features (ring structure, tautomeric forms, mutarotation) of carbohydrates. Metabolism of carbohydrates, glycolysis, Krebs cycle, terminal oxidation/oxidative phosphorylation, reverse TCA cycle, gluconeogenesis, mechanism of ATP synthesis.
UNIT 4	<b>Lipids:</b> Classification, Structure and functions, Biosynthesis of saturated and unsaturated fatty acids, Metabolism of Lipid and fat bodies: Beta-oxidation and channeling of the products to ATP production: minor pathway of fatty acid oxidation, (alpha and omega oxidation), Biosynthesis of saturated and unsaturated fatty acids, denovo and salvage pathways, Degradation of Purines and pyrimidines pathways.
UNIT 5	<b>Enzymes &amp; Enzyme Kintetics:</b> Rate of reactions, specific activity, molecular activity, Km, K, Michaelis Menten & Line weaver Burk plot and Bisubstrate Reaction, Eaidi-Hofstee plot & Hanes-Woolf plot, enzyme inhibition, mechanism of enzyme catalysis (acid-base electrostatic, metal ion, free radicals, transition state binding and covalent, proximity and orientation effects, Contribution of strain). Factors affecting enzyme activity, enzyme inhibition. Allosteric, Iso-, Co-enzymes, Immobilized ezymes & cells and their applications.

MMI 004B	VIROLOGY, MYCOLOGY AND PHYCOLOGY	4-0-0 [4]
----------	----------------------------------	-----------

**Course outcome**

- CO 1 Understand the history, nomenclature, classification, morphology, ultra structure, cultivation and composition-viral genome and virus related agents (viroids, virusoids, prions).
- CO 2 Analyze the viruses of plants, cyanobacteria, bacteriophage, algae and fungi their infection, transmission of plant virus with and without vectors.
- CO 3 Understand the history, classification, nutrition, characteristic and classes of fungi.
- CO 4 Evaluate the general feature and importance of families of algac.
- CO 5 Describe economic importance of algae and lichen as well as their ecology.

*Rashmi*

*[Signature]*

*[Signature]*

*[Signature]*

<b>UNIT 1</b>	<b>Brief outline on discovery of viruses:</b> nomenclature and classification of viruses[LHT system, classification as per VII report of the international committee on taxonomy of viruses], distinctive properties of viruses; morphology & ultra structure; capsids & their arrangements; types of envelopes and their composition-viral genome, their types and structure, virus related agents (viroids, virusoids, mycoplasma, prions) cultivation of viruses in embryonated eggs, experimental animals, cell cultures; Primary & secondary cell cultures; suspension cell cultures and monolayer cell cultures, cell certain, cell lines and transgenic systems.
<b>UNIT 2</b>	<b>Viruses:</b> Classification and nomenclature, different types and effects of viruses on plants and animals in context of external appearance; histology, physiology and cytology; Viruses of cyanobacteria, algae and fungi. Transmission of plant virus with vectors (insects, nematodes, fungi) and without vectors (contact, seed and pollens), Prevention of crop loss due to virus infection- virus free planting material; vector control. Bacteriophage, lysogenic and lytic cycle of bacteriophage.
<b>UNIT 3</b>	<b>Mycology:</b> General characteristics of fungi, Classification of fungi, according to Ainsworth and Alexopolus and Mims with the general aspects of Major division of fungi. Type study of class oomycetes, zygomycetes, ascomycetes, basidiomycetes and deuteromycetes, Homothallism, Heterothallism, Heterokaryosis, Sex Hormones in Fungi. Fungi as insect symbiont. Mycotoxins and Mycotoxicoses. Economic importance of fungi.
<b>UNIT 4</b>	<b>Phycology:</b> General features and classification of algae. Occurrence, thallus organization and reproduction in Chlorophyceae, Euglenophyceae, Phaeophyceae, Rhodophyceae, Xanthophyceae, Pyrrophyceae and diatoms. Algal ecology & biotechnology. Economic importance of algae.
<b>UNIT 5</b>	<b>Lichens:</b> Lichen- ascolichen, basidiolichen, deuterolichen. Economic Importance of lichen.

### **MMI021 Practical I**

**Credits: 12**

1. Instrumentation and general lab introduction
2. To determine the acid value of the given oil sample.
3. To prepare biologically important buffers (phosphate and acetate).
4. To separate and identify amino acids by using TLC.
5. To separate and identify carbohydrates using TLC.
6. To find out the concentration of amino-acids in the given sample using ninhydrin.
7. To estimate the presence of carbohydrates.
8. To estimate the presence of Amino acids.
9. To identify of various Algal members.
10. To prepare potato dextrose Agar medium.
11. To check Oligodynamic effect (effect of heavy metals) on the given bacterial sample.
12. To check the given bacterial culture for amylase (starch hydrolysis) activity.
13. To check the given bacterial culture for protease (protein hydrolysis) activity.

14. To check the given bacterial culture for cellulase (carboxymethyl cellulose hydrolysis) activity.
15. To determine effect of U.V. rays on bacteria.
16. To classify and identify various fungal members.
17. To examine symptoms produced in plants due to virus infection.
18. To examine viral diseases of plants/animals/human (Specimen/photographs)
19. To prepare models of different type of viruses (Photographs/sketches).
20. To stain Endospore.
21. To perform the Gram's staining of bacteria.
22. To check the given bacterial culture for its tryptophan utilizing activity.
23. To estimate the total proteins present in the given sample using lowry's method.
24. To Isolate and identify airflora.
25. To Isolate and identify fungi from sewage water.
26. To Isolate and identify soil flora by sprinkle method & serial dilution method.
27. To perform the pure culture isolation methods.
28. To evaluate alcohol as disinfectant.
29. To find out the size of the given spore.
30. To estimate the carbohydrate present in the given sample using Anthrone reagent.
31. To find out the thermal death time of the given bacterial samples.
32. To study the effect of pH on microbial growth
33. To determine the bacterial growth in liquid medium by growth curve.
34. To perform simple bacterial staining.
35. To perform the capsule staining of given bacterial samples.
36. To check the given bacterial culture for its Citrate utilizing activity.
37. To check the given bacterial culture for its MRVP activity.
38. To study the effect of osmotic pressure on microbial growth.

MMI022A	Industrial Microbiology	4-0-0 [4]
---------	-------------------------	-----------

**Course outcome**

- CO 1 Understand the Introduction to microbial products and fermentation processes.  
 CO 2 Understand and apply the Fermentation system and Media optimization; Batch cultivation, continuous cultivation, multistage chemostat, feedback systems, types of fed-batch cultures, open and closed systems  
 CO 3 Apply and Understand general account of eubacteria (Gram + & -) and archaeobacteria (methanotrophs, halophiles and sulphur bacteria).  
 CO 4 Understand and apply the Downstream processing: Downstream processing for filtration (DSP) cell disruption, liquid-liquid extraction, solvent recovery, supercritical fluid extraction, various chromatography techniques in product recovery  
 CO 5 Apply and Analyze Biotechnological applications of microbes in the commercial production of various products

<b>UNIT 1</b>	<b>Introduction to industrial microbiology:</b> Introduction to microbial products and fermentation processes, sources of industrially important microorganisms, Industrially important microorganisms, preservation techniques for microbial cultures, inoculum development, microbial strain improvement, high throughput screening methods, recombinant DNA technology in strain improvement.
<b>UNIT 2</b>	<b>Fermentation systems:</b> Batch cultivation, continuous cultivation, multistage chemostat, feedback systems, types of fed-batch cultures, open and closed systems. <b>Media Optimization:</b> Substrates for industrial fermentation, media optimization strategies like Plackett–Burman design, response surface methodology. Immobilized cell reactor, solid state fermentation.
<b>UNIT 3</b>	<b>Design and types of fermenters:</b> Basic components of a fermenter, fermenter construction materials, designing of laboratory and industrial scale fermenters, types of impellers, mechanical seal, types of baffle and spargers, sampler design, foam controller, types of fermenter like stirred tank, bubble column, airlift, hollow fibers chambers, packed beds, fluidized beds, perfusion cultures, photo-bioreactors and animal cell culture bioreactor. Different types of sterilization strategies, sterilization of large scale bioreactors.
<b>UNIT 4</b>	<b>Downstream processing:</b> Downstream processing for filtration (DSP) cell disruption, liquid-liquid extraction, solvent recovery, supercritical fluid extraction, various chromatography techniques in product recovery, diafiltration, ultrafiltration and reverse osmosis, drying (lyophilization and spray drying), whole broth processing and crystallization, upstream processing and product recovery.
<b>UNIT 5</b>	<b>Biotechnological applications of microbes in the commercial production of the following:</b> Alcoholic beverages: Beer, Whisky, Organic acids: Citric, lactic and acetic

*Rashmi* *Boh* *S* *psd*

acid.; Microbial enzymes: Cellulases, amylases, proteases and lipases.; Antibiotics: penicillin, tetracycline; Amino acids: Glutamic acid, lysine.

#### Suggested Readings:

MM1007A	MOLECULAR BIOLOGY AND MICROBIAL GENETICS	4-0-0 [4]
---------	--	-----------

Course outcome

- CO1 Understand the prokaryotic and eukaryotic gene structure and function.
- CO2 Understand mechanism of prokaryotic and eukaryotic transcription.
- CO3 Understand the different tools and mechanisms of transcriptional regulation.
- CO4 Understand the Bacterial genetics in reference to molecular mapping, gene transfer mechanisms i.e. transformation, transduction.
- CO5 Understand general account of Bacteriophages eg. Lytic phages, Lysogenic phages and their uses in microbial genetics.

UNIT 1	<b>Prokaryotic and Eukaryotic gene structure and function:</b> Structure and properties of nucleic acids, Central dogma of molecular biology, Prokaryotic genome and its organization, Eukaryotic genome structure and chromosome organization Replication in Prokaryotes and Eukaryotes. Enzymes and accessory proteins involved in DNA Replication.
UNIT 2	<b>Prokaryotic &amp; Eukaryotic transcription:</b> (Initiation, Elongation & Termination), general apparatus of transcription, RNA Polymerase, General & Specific Transcription Factors, Regulatory elements & mechanism of transcription regulation, Post transcriptional gene silencing (PTGS), Modifications in RNA.
UNIT 3	<b>Prokaryotic and Eukaryotic Translation:</b> the translation machinery, Mechanism of initiation, elongation, termination, Regulation of translation, Co & post translational modification of proteins, Localization of proteins, synthesis of secretory & membrane proteins, protein targeting and trafficking in mitochondria, chloroplast & peroxisomes.
UNIT 4	<b>Bacterial genetics:</b> Molecular mapping of genome, genetic and physical mapping, map based cloning. Gene transfer mechanisms-Transformation- molecular mechanism, mapping and other uses of transformation, Transduction- generalized transduction, co-transduction and linkage, mapping by cotransduction, specialized transduction, specialized transducing phage as a cloning vehicle. Conjugation- molecular mechanism
UNIT 5	<b>Bacteriophages:</b> , Lytic phages-T7 and T4. Lysogenic phages lambda phage, and P1, M13 and F, Ø X174 life cycles, Phage MU and their uses in microbial genetics. Role of microbial genetics in vaccine designing. Microbial genetics and design of vaccines. BCG and design of vaccine for TB and leprosy. DNA vaccines. design and advantages.

MM1008A	<b>Immunology</b>	4-0-0 [4]
---------	-------------------	-----------

**Course outcome**

- CO 1 Understand the immune system comprising innat & adaptive immunity also organization and structure of lymphoid organs.
- CO 2 Understand the cellular and molecular aspect of immune system.
- CO 3 Analyze the antigen- antibody interactions and the advanced concepts in Immunology.
- CO 4 Understand the organ and systemic specific autoimmune disease.
- CO 5 Understand the autoimmunity and different models of auto immune disease treatment of autoimmune disorders.

<b>UNIT 1</b>	<b>Introduction to immune system:</b> Phylogeny of immune system, Innate and acquired immunity, Clonal nature of immune response. Cells of the Immune system; Hematopoiesis and differentiation, Lymphocyte trafficking, B-lymphocytes, T-lymphocytes, Macrophages, Dendritic cells, NK and Lymphokine activated killer cells, Eosinophils, Neutrophils and Mast Cells. Organization and structure of lymphoid organs
<b>UNIT 2</b>	<b>Cellular and molecular aspects:</b> Nature and biology of antigens and super antigens. Immunoglobulin: structure, types and their function, Major histocompatibility complex, B-Cell Receptor and T-Cell Receptor, generation and diversity, Complement system. Immune response & its regulation Antigen processing and presentation, generation of Humoral and Cell mediated immune responses, B- and T- cell maturation, activation and differentiation. Cytokines and their role in immune regulation, T-cell regulation, MHC restriction
<b>UNIT 3</b>	<b>Antigen- antibody interactions:</b> Precipitation, Immunodiffusion, Immunoelectrophoresis, Agglutination, RIA, ELISA, Immunofluorescence. Advanced concepts in Immunology: Hypersensitivity, Autoimmunity, Immunity of infectious agents (intracellular parasites, helminthes and viruses), Hybridoma Technology and Monoclonal antibodies and their applications.
<b>UNIT 4</b>	<b>Transplantation:</b> organ specific autoimmune disease, systemic autoimmune diseases, graft rejection, evidence and mechanism of graft rejection, prevention of graft rejection, Vaccine development and immunization programme, AIDS and other immunodeficiencies
<b>UNIT 5</b>	<b>Autoimmunity:</b> immunosuppressive drugs, HLA and disease, mechanism of immunity to tumor antigen, Autoantibodies in human pathogenic mechanism, experimental models of autoimmune disease treatment of autoimmune disorders.

<b>MMI014A</b>	<b>APPLIED ENVIRONMENTAL MICROBIOLOGY</b>	<b>4-0-0 [4]</b>
----------------	---	------------------

#### Course outcome

- CO1 Understand the aerobic treatment of industrial effluents and municipal waste through microorganisms
- CO2 Understand and analyze the anaerobic processes i.e. composting, vermiculture and methanogenesis.
- CO3 Understand the Biodegradation of natural compounds as well as xenobiotics ex situ and in-situ bioaccumulation and biomagnifications.
- CO4 Understand the biodeterioration and bioleaching of paper, wood, paint and other metals.
- CO5 Understand the concept of biofertilizers, Biopesticides and Bioplastics.

<b>UNIT 1</b>	<b>Waste management: Treatment of industrial effluents and municipal waste through micro-or ganisms. Aerobic Processes: Oxidation pools, Rotating</b>
---------------	---

*1/8/20*

*Rashmi*

*R*

*2*

*Seul*

	Biological Discs, Rotating Drums, Trickling filter, Activated sludge process
<b>UNIT 2</b>	<b>Anaerobic Processes:</b> Anaerobic digestion, Anaerobic filter, upflow an aerobic sludge blanket reactors. Indicator microorganisms. Solid wastes: Sources and management composting, vermiculture and Methane Production.
<b>UNIT 3</b>	<b>Biodegradation of natural compounds:</b> (cellulose, hemicelluloses, lignin, chitin,). Biodegradation of xenobiotics in environment – Organisms involved in degradation of chlorinated hydrocarbons, substituted simple aromatic compounds, polyaromatic hydrocarbons, pesticides, synthetic polymers, detergents and hydrocarbons Bioremediation- <i>ex situ</i> and <i>in situ</i> . bioaccumulation, biomagnifications.
<b>UNIT 4</b>	<b>Biodeterioration and Bioleaching:</b> Definition, biodeterioration of paper, wood, paint, textiles, leather, metals (corrosion).Control of biodeterioration. Microorganisms and metal pollutants- metal bioavailability in environment, mechanism of microbial metal resistance and detoxification, metal- microbe interaction, Bioleaching of metals, Microbial enhanced oil recovery. <b>Biomass waste management of plant's residues:</b> Lignocellulolytic microorganisms, enzymes and their biotechnological applications in: (i) biopulping, (ii) biobleaching, (iii) textiles (iv) biofuels, (v) animal feed production.
<b>UNIT 5</b>	<b>Biofertilizers:</b> Definition and types of biofertilizers, Mass cultivation and methods of inoculation of microbial inoculants – (Rhizobium, Azotobacter, & Asospirillum.) Cyanobacteria –Azolla– Anabaena association and its role in rice cultivation Quality control and ISI specifications for Rhizobium cultures. Mycorrhizal Relationship, Biopesticides and Bioplastics

### **MMI023A Practical II**

**Credits: 12**

1. To isolate plasmid DNA.
2. To perform Ouchterlony double diffusion
3. To determine antibody concentration using ELISA
4. To determine antigen concentration using Sandwich ELISA
5. To examine restriction digestion of DNA
6. To isolate rhizospheric microflora.
7. To determine R : S ratio of soil.
8. To isolate microorganisms from soil, water and air
9. To detect MPN coliforms for determination of the purity of potable water.
10. To determine biological oxygen demand (BOD) of sewage sample.
11. To determine chemical oxygen demand (COD) of sewage sample.
12. To isolate and identify common microorganisms spoiling food (Fungi and bacteria).
13. To prepare fermented foods (Sauerkraut).
14. To isolate and identify Rhizobium from root nodules of leguminous plants.
15. To isolate and identify Azotobacter from soil.
16. To detect ammonification by bacteria.

17. To isolate the microorganism from extreme condition (salt or chemical influent).
18. Isolation and identification of coli forms from Water by Presumptive, Confirmed & Completed test
19. Detection of siderophore production by microorganisms.
20. To check the presence of coliform bacteria using LBCP broth.
21. To check the presence of coliform bacteria (E.coli) using EMB agar (confirmatory test).
22. To study DNA profile of the given sample by using Agarose gel electrophoresis.
23. Water analysis for total bacterial population by standard plate count (SPC) method.
24. Isolation of phosphate solubilising microorganisms from soil.
25. Isolation of an antibiotic producer microorganism from soil.
26. Determination of total dissolved solids of water.
27. To perform the fermentation of carbohydrates by microorganisms.
28. To perform Radial Immunodiffusion (RID) by Mancini's technique.
29. To isolate Genomic DNA of bacteria
30. To perform the electrophoresis of bacterial genomic DNA.
31. PCR: Amplification of 16S rRNA gene from E.coli by domain specific primers
32. Isolation of bacterial protein by SDS PAGE.
33. Widal test using tube agglutination reaction
34. Agglutination reaction with reference to blood grouping.
35. Pregnancy testing by using immunological methods.

MMI011A	MEDICAL MICROBIOLOGY	4-0-0 [4]
---------	----------------------	-----------

Course outcome

- CO 1 Understand the Classification of medically important micro organisms and Normal microbial flora of human body
- CO 2 Apply the knowledge for diagnostic of important bacterial diseases including their pathogenicity.
- CO 3 Understand the Pathogenic fungi-*Candida albicans* Protozoan diseases – Malaria, Amoebiasis
- CO 4 Understand the general detail of Epidemiology, life cycle, pathogenicity, diagnosis, prevention and treatment of RNA viruses and DNA animal viruses.

*Pashmi*

*[Signature]*

*[Signature]*

*[Signature]*

*[Signature]*

CO 5 Brief account of available vaccines, Antifungal drugs, antiviral drugs and their mode of action.

<b>UNIT 1</b>	<b>Normal micro flora and factors responsible for pathogenesis:</b> Classification of medically important micro organisms; Normal microbial flora of human body; role of the resident flora. Entry of pathogens into the host; colonization and mechanism of bacterial adhesion establishment, spreading, tissue damage and anti-phagocytic factors; factors predisposing to infections, types of toxins and their structure; mode of action.
<b>UNIT 2</b>	<b>Pathogenic bacteria I:</b> Diagnostic features of important diseases including their pathogenicity and control. Pyogenic cocci- <i>Staphylococci</i> , <i>Streptococci</i> , <i>Neisseria meningitidis</i> , <i>N. gonococcus</i> Gram positive cocci- <i>Clostridium tetani</i> , <i>Mycobacteria-M. tuberculosis</i> , <i>M. leprae</i>
<b>UNIT 3</b>	<b>Fungi and Protozoan:</b> Diagnostic features of important diseases including their pathogenicity and control. Enteric Gram negative bacteria- <i>Salmonella</i> , <i>Shigella</i> , <i>Vibrio cholera</i> , <i>E. coli</i> <i>Spirochaetes- Treponema palladium</i> <i>Chlamydiae- Trachoma</i> , Rickettsial diseases, Diseases caused by <i>Mycoplasma</i> , Pathogenic fungi- <i>Candida albicans</i> Protozoan diseases – Malaria, Amoebiasis
<b>UNIT 4</b>	<b>Animal viruses:</b> Epidemiology, life cycle, pathogenicity, diagnosis, prevention and treatment of RNA viruses- Picorna virus family- Poliomyelitis, influenza, Mumps, Measles, DNA viruses; Pox virus- Variola and Vaccinia, Herpes virus- Varicella Zoster virus, Hepatitis viruses, Arthropod borne (arbo) Viral disease- Dengu, Swine flu.
<b>UNIT 5</b>	<b>Chemotherapy and Antimicrobial agents:</b> Mode of action of penicillin, Sulfa drugs, streptomycin, tetracycline and other broad spectrum antibiotics. Antifungal drugs, antiviral drugs. Brief account on available vaccines

MMI024A	Food and Dairy Microbiology	4-0-0 [4]
---------	-----------------------------	-----------

**Course outcome**

- CO1 Understand the role of microorganism in food microbiology  
 CO2 Understand the spoilage of food and food preservatives.  
 CO3 Analyze the fermented products of food.  
 CO4 Understand the food beverages and enzymes  
 CO5 Understand the Food-borne diseases and poisoning.

<b>UNIT 1</b>	<p><b>Microorganisms important in food microbiology:</b> Taxonomical classification of microbes associated with food products, their phenotypic and biochemical identification. Food associated molds, yeasts, yeast-like fungi and bacteria. General microbiome of food material; Intrinsic and extrinsic factors affecting microbial growth in foods.</p> <p><b>Microbiology of foods:</b> Microbial habitat of specific food materials, adaptations and changes in microbiome of vegetables, fruits, milk, fermented and non-fermented milk products, fresh meats, poultry and non-dairy fermented foods.</p>
<b>UNIT 2</b>	<p><b>Microbial spoilage of foods:</b> Types and causes of spoilage of cereals and cereals products, spoilage of vegetables and fruits, juices, spoilage of meat and meat products, spoilage of fish and other sea foods, spoilage of eggs and other poultry products, spoilage of milk and milk products. Study of microorganisms responsible for spoilage and microbial succession during spoilage. Brief insights into chemical and physical spoilage of foods.</p> <p><b>Food preservation:</b> General principles of food preservation, various classical physical, chemical, and biological methods of preservation. New developments</p>

	in food preservation techniques. Analysis of practical implementation of such techniques. HACCP technology.
<b>UNIT 3</b>	<b>Fermentation processes:</b> Production of fermented milk and milk products, plant-based products, pickles, fish products, and meat products, bread, baker's yeast, Edible mushroom ( <i>Agaricus</i> , <i>Volverella</i> , <i>Pluerotus</i> ). Manufacture of starter cultures from lab to pilot scale. Batch submerged and solid-state fermentation of foods.
<b>UNIT 4</b>	<b>Food beverages and enzymes:</b> Concept of human microbiome, probiotics and prebiotics. Insight into health benefits of fermented milk products. Understanding benefits of tradition and non-traditional fermented foods. Introduction to the concept of bioactive compounds and brief study of such compounds from fermented foods including malt beverages, wines, distilled liquors and vinegar.
<b>UNIT 5</b>	<b>Food-borne diseases:</b> Food borne infections including bacterial, viral and fungal infections. Study of infections due to food borne parasites. In depth study of various types and causes of food intoxication. Botulism, Staphylococcal food poisoning, Clostridium perfringens food poisoning, <i>Bacillus cereus</i> gastroenteritis, Salmonellosis, <i>Escherichia coli</i> diarrhea, and colitis, <i>Vibrio cholera</i> . <b>Fungal poisoning:</b> <i>Aspergillus</i> , <i>Penicillium</i> , <i>Claviceps</i> , <i>Fusarium</i> . Summary of prevention of microbial food infections. Identification and first aid for specific types of food infections.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	2	2	3	2	1
CO2	2	2	1	3	1	3	1
CO3	2	2	1	1	2	3	2
CO4	2	3	2	2	1	2	1

MM1025A	BIostatISTICS AND BIOinformatics	4-0-0 [4]
---------	----------------------------------	-----------

**Course outcome**

- CO 1 Evaluate the classification and tabulation of data, measures of central tendency, different methods of dispersion.
- CO2 Evaluate the Tests of significance- Chi-square test, t-test, F-test, ANOVA, correlation and regression.
- CO3 Evaluate the types and theorems of probability.
- CO4 Understand the basic of elementary idea of Bioinformatics
- CO5 Evaluate the bioinformatics and their tools use to study genomics.

UNIT 1	Introduction, Scope and application of Biostatistics. Classification and tabulation and graphical presentation of data: frequency distribution. Measure of central tendency- Mean, median and mode, Measures of dispersion - range, mean deviation, standard deviation, coefficient of variation, Skewness and kurtosis.
UNIT 2	Tests of significance: Hypothesis testing, Nulls hypothesis and alternative hypothesis, level of significance. Chi-square test, t-test, F-test, ANOVA- one way and two way classifications. Simple correlation and simple regression.
UNIT 3	Probability: addition and multiplication theorem of probability. A brief idea of normal, Poisson and binomial distribution.
UNIT 4	Elementary idea of Bioinformatics, Biological databases-Overview, modes of database search, mode of data storage (file format), formats of GenBank, EMBL, DDBJ, PDB;
UNIT 5	Phylogenetic Analysis: Introduction to phylogenetic analysis and its

1. To isolate antibiotic resistant microorganisms by replica plating.
2. To isolate antibiotic resistant microorganisms by Gradient plate technique.
3. To enumerate the following in blood sample a. RBC b. WBC
4. To prepare blood smear and determine differential WBC count.
5. To detect Antibiotic sensitivity of a given sample by disc method.
6. To determine MIC of antibiotics
7. To immobilize cell using alginate.
8. To isolate *Lactobacillus* species from curd.
9. To test quality of milk by MBRT.
10. Demonstration of fungal human pathogens (dermatophytes) from skin.
11. Isolation of bacterial flora from the skin.
12. Isolation of microbial flora of the mouth teeth cervices.
13. Isolation of microorganisms of the upper respiratory tract (throat).
14. Demonstration of streaking plates using toothpick.
15. Visit and report formation of STP unit/ vermicomposting unit/Biogas plant unit.
16. Construction of exclusive and inclusive frequency tables.
17. Demonstration and exercises on mean, median and mode.
18. Demonstration and exercises on deviation.
19. Demonstration and exercises on probability.
20. Demonstration and exercises on the testing of hypothesis using student t test.
21. Demonstration and exercises on the testing of hypothesis using Chi-square test.
22. Demonstration and exercise on ANOVA.
23. Demonstration and exercise on correlation.
24. Demonstration and exercise on regression.
25. Introduction to bioinformatics databases i.e. NCBI, EMBL, PDB, DDBJ, Uniprot, KEGG.
26. Exploring the integrated database system at NCBI server and querying the PUBMED and GenBank databases.

27. Exploring the integrated database system at EBI server and searching the EMBL Nucleotide database using the SRS search engine.
28. Sequence alignment by using alignment tool BLAST.
29. Sequence alignment by using alignment tool FASTA.

#### **SEMESTER IV**

##### **MMI016A Review Report**

**Credits: 04**

The review report of M.Sc. IV semester will be based on a detailed review of any one of the topics listed in syllabus in about 100 pages. This review will be evaluated by a supervisor, Head of the Department and any other person appointed by the Dean, SSC.

##### **MMI017A Dissertation**

**Credits: 16**

The dissertation work will involve practical work on a problem suggested by the supervisor of the candidate. The student will submit the dissertation report at the end of IV semester. This dissertation report will be examined by the supervisor of the student, Head of the Department and any other person appointed by Dean, SSC.

##### **MMI018A Seminar**

**Credits: 2**

The seminar will be based on a detailed report of any one of the topic listed in syllabus. This report is handwritten. The assessment of the seminar based on report as well as presentation in form of power point or Prezi. This seminar report will be examined by the supervisor of the student, Head of the Department and any other person appointed by Dean, SSC.

**DEPARTMENT OF PHYSICS (FACULTY OF SCIENCES)**

**Minutes of Board of Studies - Physics**

**Date: February 27, 2023**

A meeting of Internal Board of Studies (Physics) called to (i) approve redefined the Vision & Mission, (ii) approve the Program Educational Objectives (PEO), (iii) the minor changes in scheme and henceforth with small updates in the curriculum of BSc (Hons) Physics and BSc (Pass) for the batch 2021 and Batch 2022.

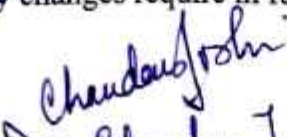

Following members of Board of Studies committee of Physics department were present:

1. Prof. Pranav Saxena (Head & Chairperson)
2. Dr. Chandan Joshi (Associate Professor)
3. Dr. Abhishek Sharma (Associate Professor)

The meeting was chaired by the chairperson and welcomes the other BOS members the meeting was preceded with discussion for the approval on the following agendas:

- (i) Vision & Mission:** The committee approves the redefined the Mission with clear directions along with Vision.
- (ii) Program Educational Objectives (PEO):** To achieve the Missions, the Program Educational Objectives (PEOs) have been introduced which directly aim to the defined Missions and thus mapping of the PEOs with Missions and Program Outcomes are well defined. The committee approves the PEOs for the BSc (Hons) Physics program.
- (iii) BSc (Honors) Physics for the Academic Batch 2021-24:** For the batch 2021-2024 the Study Scheme, Credits, Course Structure and Syllabi content of BSc (Hons) Physics was approved and implemented already in academic session 2021-2022 with the choices of departmental specialization electives (DSE). Due to adoption of NEP-20, open elective courses are also compulsorily running in each course in any program throughout the University. In the current curriculum of BSc (Hons) Physics program, total five Open Electives exist which are not being able to manage in common slots among timetable of all programs running in the University. Thus to address this issue, the scheme of BSc (Hons) Physics program has now been revised (with the guidance of Hon'ble President Sir) where instead of five, only three Open Electives have been kept and thus need to fulfill the total credits of the program some new courses have been introduced. The committee agrees and approves the changes in the study scheme along with the new courses in the curriculum of BSc (Hons) Program for the academic session 2021-24. The approval for the changes in the Study Scheme and curriculum is done for the specialization BSc (Honors) in *Material Science* only as this has been commonly adopted by the students of batch 2021-24. The codes of introduced new courses offered are accordingly redefined with credit structure. The revised study scheme and introduced new courses (enclosed) treated as approved by the BOS. The committee further ensures that remaining courses will remain same as approved in earlier BOS except for any changes in the content of the courses which require in future.

JECRC University, Jaipur-302005

  
Dr. Chandan Joshi

  
(Dr. Abhishek Sharma)

(iv) **BSc (Honors) Physics for the Academic Batch 2022-25:** For this academic batch, a minor change in the study scheme of BSc (Hons) Physics for academic session 2022-23, is the shuffling of the courses within the semesters has been done in accordance with the other parallel program running in University to manage the open electives. No new course has been introduced. The revised study scheme for the specialization BSc (Honors) in *Material Science* is enclosed herewith treated as approved by the BOS. The courses are there remain as such in the curriculum.

(v) **BSc (Pass) for the Academic Batch 2021-24 and 2022-25:** Keeping uniqueness in the offered Open Electives throughout the University, the committee approves the minor changes in the study scheme of Bsc( Pass) for the academic batch 2021-22 and 2022-25 .

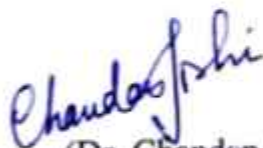

The Chairperson of BOS thanks to the present members for their healthy suggestions and cooperation in revising study schemes and updates.

## DEPARTMENT OF PHYSICS

### VISION

To provide an excellent academic environment that motivates and inspires students to excel globally in interdisciplinary areas and innovative contributions with relevance to contemporary problems faced by industry and the society at large.

### MISSION

- To produce globally competent graduate and undergraduate students in wide areas of science and technology.
- To disseminate the comprehensive knowledge and skills with the specialization of Physics at undergraduate and graduate levels.
- To explore substantial scientific and quality scholarly work in the field of research and teaching in Physical Sciences.

  
**HEAD**  
Department of Physics  
JECRC University, Jaipur-303905

  
Dr. Chandan Joshi

  
(Dr. Abhishek Sharma)

## PROGRAM EDUCATION OBJECTIVES (PEOs)

The PEOs are broad statements that describe the program is preparing its undergraduates to the degree. The PEOs of the B.Sc. (Hons) program in Physics are as follows:

**PEO-1:** Facilitate value-based holistic and comprehensive learning by integrating traditional and innovative learning practices to match standards globally and train students to be effective leaders in their chosen fields and career.

**PEO-2:** Emphasize the discipline of Physics to be the most important branch of science to recognize as an individual or team member having specialized knowledge and expertise to identify, formulate, investigate, analyze and implement on the problems in physical sciences.

**PEO-3:** Equip students with skills needed to unleash their hidden talents, creative potential, nurture the spirit of critical thinking and encourage them towards higher education.

**PEO-4:** Emphasize the importance of Physics as the most important discipline for sustaining the existing industries and establishing new ones to create job opportunities at all levels of employment

**PEO-5:** Develop a sense of social responsibility and work ethically in a multidisciplinary environment, to enhance the advancement in physics in general and contribute significantly towards sustainable development of the nation.

## PROGRAM OUTCOMES (POs)

- I. **Disciplinary Knowledge:** Capable of demonstrating good procedural knowledge and systematic understanding of major concepts, theoretical principles and experimental findings in Physics and its different learning subfields and applications.
- II. **Technical Skill:** Acquire the ability to use modern instrumentation and laboratory techniques to design and perform experiments are highly desirable in almost all the fields of physics. Realize the importance of mathematical modeling to understand problems in physical world.
- III. **Critical Thinker and Problem Solver:** Develop a strong analytical skill and will be able to study critically a physics problem, solve the problem using different tools and present the result/conclusion. Develop global competencies in handling the open ended problems belongs to disciplinary fields of physics.
- IV. **Sense of Inquiry:** Capability for asking relevant/appropriate questions relating to the issues and problems in the field of Physics, executing physics experiments, analyze and interpret data/information collected using appropriate methods and report the findings of the experiment to the relevant theories of Physics.
- V. **Digitally Efficient:** Capable of using computers for simulation and computation for better understanding of problems in Physics. Students will be aware of appropriate software for

 **HEAD**  
Department of Physics  
Jaipur-303905

 Chaudhary

numerical and statistical analysis of data available now days and will be able to retrieve Physics information from e-libraries and other e-sources available using internet.

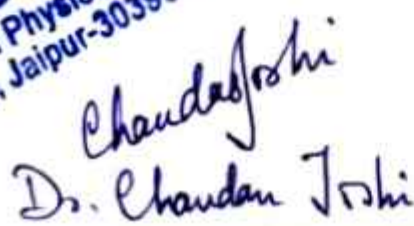

- VI. Skilled Project Manager:** Capable of identifying appropriate resources required for a project, and manage a project through to completion, while observing responsible and ethical scientific conduct with safety measurements.
- VII. Ethical Awareness:** Capable of demonstrating ability to think and analyze rationally and to identify the potential ethical and moral issues in work-related situations, to enhance intellectual property, environmental and sustainability issues, and promoting safe learning and working environment as professional behavior.
- VIII. National and International Perspectives:** Capable of preparing themselves for their appropriate role in contributing towards the national development and projecting our national priorities at the international level pertaining to their field of interest.
- IX. Lifelong Learners:** Capable of self-paced and self-directed learning aimed at personal development and for improving knowledge/skill development and re-skilling in all areas of Physics

# MECHANICS

CODE: BPH063A

CREDIT(S): 4

## UNIT-I

**Kinematics** – Position, velocity and acceleration (1D and 3D)

**Work and Energy Theorem:** Work and Kinetic Energy Theorem. Conservative and Non-Conservative Forces. Potential Energy. Energy Diagram. Stable and Unstable Equilibrium. Gravitational Potential Energy. Elastic Potential Energy. Force as Gradient of Potential Energy. Work and Potential energy. Work done by Non-conservative Forces. Law of Conservation of Energy.

**Collisions:** Elastic and Inelastic Collisions between particles. Centre of Mass and Laboratory Frames.

## UNIT-II

**Rotational Dynamics:** Angular Momentum of a Particle and System of Particles. Torque. Conservation of Angular Momentum. Rotation about a Fixed Axis. Moment of Inertia. Calculation of Moment of Inertia for Rectangular, Cylindrical, and Spherical Bodies. Kinetic Energy of Rotation. Motion involving both Translation and Rotation.

## UNIT-III

**Elasticity:** Relation Between Elastic Coefficients. Twisting Torque on a Cylinder or Wire.

**Fluid Motion:** Kinematics of Moving Fluids: Poiseuille's Equation for Flow of a Liquid through a Capillary Tube.

## UNIT-IV

**Gravitation and Central Force Motion:** Law of gravitation. Inertial and Gravitational Mass. Momentum of variable-mass system: Motion of rocket. Motion of a projectile in Uniform gravitational field, Dynamics of a system of particles. Centre of Mass. Principle of conservation of momentum. Impulse

Potential and Field due to Spherical Shell and Solid Sphere. Motion of a Particle under Central Force Field. Two Body Problem and its Reduction to One Body Problem and its Solution. The Energy Equation and Energy Diagram. Kepler's Laws (Ideas Only). Orbits of Artificial Satellites.

## UNIT-V

**Inertial and Non- Inertial Systems:** Reference Frames: Inertial Frames and Galilean Transformations. Galilean Invariance and Conservation Laws. Non-inertial Frames and Fictitious Forces. Uniformly Rotating Frame. Physics Laws in Rotating Coordinate Systems. Centrifugal forces: Coriolis Force and its Applications. Components of Velocity and Acceleration in Cylindrical and Spherical Coordinate Systems.

## Suggested Books

1. University Physics; F.W Sears, M.W Zemansky, H.D Young 13/e, 1986, Addison Wesley
2. An introduction to Mechanics; Daniel Kleppner, Robert J. Kolenkow, McGraw-Hill, 1973.
3. Theoretical Mechanics; M.R. Spiegel, 2006, Tata McGraw Hill
4. Mechanics Charles Kittel, Walter Knight, Malvin Ruderman, Carl Helmholz, Burton Moyer, Berkeley physics course.
5. Mechanics; D. S. Mathur, S. Chand & Company Limited, 2000.

**Course Outcomes:** After completing this course, students shall be able to-

CO1: Understand laws of motion and their application, various laws of conservation, collisions and idea about center of mass and laboratory frames.

Prof. Y.K. Vijay  
Dr. Pranav Saxena  
HEAD  
Department of Physics  
University of Rajasthan

Chandrajoshi  
(Dr. Chandrajoshi)  
(Dr. Chandrajoshi)

- CO2: Understand of moment of inertia about the given axis for different uniform mass distributions, the basics of kinematics and dynamics linear and rotational motion.
- CO3: Learn the concepts of elastic in constant of solids and viscosity of fluids.
- CO4: Learn skills to understand and solve the equations of Newtonian gravity and central force problem and applications of Kepler's law.
- CO5: distinguish the inertial and non-inertial systems and understand the experiences of fictitious forces in a non-inertial frame.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcomes	Program Outcomes (POs)								
	I	II	III	IV	V	VI	VII	VIII	IX
CO1	H		L	H					M
CO2	L	M		H				M	
CO3	M		H				M		L
CO4	L	H	H	M				L	M
CO5	M		M	L				L	

H=High; M=Medium; L=Low

## MECHANICS LAB

CODE: BPH011B

CREDIT: 1

Student has to perform / learn any ten experiments out of the following experiments:-

1. Measurements of length (or diameter) using vernier caliper, screw gauge and travelling microscope.
2. To determine the height of a building using a Sextant.
3. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
4. To determine the elastic constants of a wire by Searle's method.
5. To find the Torque and angular acceleration of a fly wheel
6. To determine the moment of inertia of fly wheel.
7. To study the torsional oscillation of pendulum in different liquids and determine the rigidity modulus of the suspension wire using torsion pendulum.
8. To verify that energy conservation and momentum conservation can be used with a ballistic pendulum to determine the initial velocity of a projectile, its momentum and kinetic energy
9. To find the Time of flight, Horizontal range and maximum height of a projectile for different velocity, angle of projection, cannon height and environment.
10. To verify the momentum and kinetic energy conservation using collision balls.
11. Study of variation of Momentum, Kinetic energy, Velocity of collision of the objects and the Center of Mass with different velocity and mass and calculation of the Momentum, Kinetic energy, and Velocity after collision.
12. To determine g, the acceleration of gravity at a particular location using Kater's Pendulum

Dr. Y.K. Vijay  
Dr. Chandan Kumar  
Department of Physics  
University, Jaipur

Chandanjoshi  
(Dr. Chandan Joshi)  
(Dr. Chandan Joshi)

13. To determine the time period of oscillations and acceleration of gravity  $g$  using compound pendulum.
14. To find the viscosity of different liquid by rotating cylinder method.
15. \*To determine Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).
16. \*To determine the Young's Modulus of a Wire by Optical Lever Method.

**Suggested Books:**

1. Advanced Practical Physics for students, B. L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. Advanced Level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I. Prakash & Ramakrishna, 11th Edn, 2011, Kitab Mahal
4. Engineering Practical Physics, S. Panigrahi & B. Mallick, 2015, Cengage Learning India Pvt. Ltd.
5. Practical Physics, G.L. Squires, 2015, 4th Edition, Cambridge University Press.

**Course Outcomes:** After completion this course, student shall be able to

- CO1: Learn the mechanics of basic instruments and elastic properties (Young Modulus and Modulus of Rigidity)
- CO2: Learn the linear dynamics by performing compound pendulum, rotational dynamics using Flywheel and torsional oscillations.
- CO3: Understand fluid dynamics (verification of Stokes law, Searle method) and mechanics of collisions and projectile motion.
- CO4: To understand the effect of gravity by calculating  $g$  using Kater's and compound pendulum.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

## OPTICS

CODE: BPH006B

CREDIT(S): 4

### UNIT-I

**Geometrical Optics :** Fermat's Principle: Fermat's Principle of Least Time and Extremum Path. Laws of Reflection and Refraction, Laws of Refraction at Spherical Surface, Thin lens Formula.

**Wave Optics:** Nature of Light- Theories of Light. Electromagnetic Nature of Light, Definition of a Wave Front. Propagation of a Wave Front. Huygens Principle of Secondary Wavelets.

### UNIT-II

**Interference:** Interference: Division of Amplitude and Division of Wavefront. Young's Double Slit Experiment. Lloyd's Mirror and Fresnel's Biprism. Phase Change on Reflection: Stoke's treatment. Interference in Thin Films: Parallel and Wedge-shaped Films. Fringes of Equal Inclination (Haidinger Fringes) and Fringes of Equal Thickness (Fizeau Fringes). Newton's Rings: Measurement of Wavelength and Refractive Index. Michelson's Interferometer: (1) Idea of form of fringes (No Theory required), (2) Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, (5) Standardization of Meter. Fresnel's Biprism: Non localized fringes, Visibility of fringes.

### UNIT-III

**Fresnel's Diffraction:** Kirchhoff's Integral Theorem, Fresnel-Kirchhoff's Integral formula (Qualitative Discussion), Fresnel's Assumptions. Fresnel's Half-Period Zones for Plane Wave. Explanation of Rectilinear Propagation of Light. Theory of a Zone Plate: Multiple Foci of a Zone Plate. Comparison of a Zone plate with a Convex lens. Diffraction due to a Straight Edge, Rectangular Aperture (Slit), Small Circular Aperture, an Opaque Circular Disc. Fresnel's Integrals, Cornu's Spiral: Fresnel Diffraction Pattern due to a Straight Edge.

**Fraunhofer Diffraction:** Diffraction due to a Single Slit, a Double Slit and a Plane Transmission Grating. Rayleigh's criterion of resolution. Resolving Power and Dispersive Power of a Plane Diffraction Grating.

### UNIT-IV

**Polarization:** Electromagnetic nature of light, Polarized light, Plane of vibrations and plane of polarizations, linearly polarized light by (i) reflection (Brewster's law), (ii) refraction, (iii) scattering, (iv) selective absorption, (v) double refraction; Polarizer and Analyzer - Malus law, Huygen's wave theory for double refraction - E Ray and O Ray, positive and negative crystals; production of circularly and elliptically polarized light, Quarter and Half Wave Plates - Analysis of polarized light, Laws of optical activity, Specific Rotation, Lorentz Half shade polarimeter, Biquartz polarimeter.

### UNIT-V

**Coherence:** Wave Train, Temporal Coherence - Coherence length and Coherence time Spectral Purity. Spatial Coherence and Size of the Source. Visibility as a Measure of Coherence, Applications of coherence.

### Suggested Books

1. Fundamentals of Optics; F. A. Jenkins and Harvey Elliott White, McGraw-Hill, 1976.
2. Principles of Optics; B. K. Mathur, 1995, Gopal Printing
3. A Text Book of Optics; N Subrahmanyam, Brij Lal and Avadhanulu, S. Chand.
4. Fundamentals of Optics; H.R. Gulati and D.R. Khanna, R. Chand Publications, 1991.
5. Optics; Eugene Hecht and A R Ganesan, Pearson Education, 2002.
6. Contemporary Optics; A. K. Ghatak & K. Thyagarajan, Plenum Press, 1978.

Dr. Y.K. Vijay

Nam  
(Dr. Nishant Chauhan)

Head of Physics  
JAIPUR

Chandagoshi  
Chandagoshi

(Dr. Nishant Chauhan)

**Course Outcomes:** After the completion of course, student shall be able to

- CO1: Understand geometrical approximation, Fermat's and Huygen's principles, and the paraxial matrix formalism for refractive and reflective surfaces, including Guass thin lens formula.
- CO2: Learn the basic understanding of Interference with different interferometric devices and analytical understanding of fringes formation in various applications.
- CO3: Understand and Analyze the bending of light phenomena due to various zones and optical devices formation of Cornu's spiral and resolving power of instruments.
- CO4: Learn the production of polarized light, role of optical crystals and retardation plates, analysis of specific rotation of light.
- CO5: Learn the importance of coherence in order to produce the quality light source.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcomes	Program Outcomes (POs)								
	I	II	III	IV	V	VI	VII	VIII	IX

CO3		H	M	L				L	
CO4	M	L	H	M					M
CO5	H			L				M	M

H=High; M=Medium; L=Low

## OPTICS LAB

**CODE: BPH008C**

**Credit(s): 1**

Student has to perform / learn any ten experiments out of following experiments:-

1. To determine resolving power of telescope.
2. To determine the wavelength of prominent lines of Mercury by using plane Diffraction Grating.
3. To determine dispersive power of a prism using mercury light source and spectrometer.
4. To determine the specific rotation of glucose/sugar solution by polarimeter.
5. To determine the wavelength of Sodium light using diffraction grating and spectrometer.
6. To determine wavelength of sodium light using Fresnel Biprism.
7. To determine wavelength of sodium light by Newton's rings' experiment.
8. To determine the dispersive power of a plane diffraction grating.
9. To determine transmission coefficient of a semi-transparent glass plate using LB Photometer.
10. To find the Cauchy's constants of a given prism for different pairs of spectral colors using spectrometer.
11. To study of variation of angle of deviation ( $\delta$ ) with angle of incidence ( $i$ ) using a prism and spectrometer and to draw the  $i$ - $\delta$  curve
12. To determine the refractive index of thin glass plate by Michelson's Interferometer.
13. To determine the focal length of the combination of the two lenses separated by a distance
14. To study the polarization of light using He-Ne laser

15. \*To verify the Malus' Law.

16. \*To study the Diffraction pattern due to single slit using laser light.

#### Suggested Books

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. A Text Book of Practical Physics, I. Prakash & Ramakrishna, 11<sup>th</sup> Ed., 2011, Kitab Mahal
3. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4<sup>th</sup> Edition, reprinted 1985, Heinemann Educational Publishers
4. A Laboratory Manual of Physics for undergraduate classes, D.P.Khandelwal, 1985, Vani Pub.

**Course Outcomes:** After completion this course, student shall be able to

- CO1: Acquire thorough fundamental knowledge within interferometry, coherence, polarization and diffraction.
- CO2: To understand various optical phenomena, principles, workings and applications optical instruments like biprism, interferometer, diffraction grating and prism
- CO3: Student will gain hands-on experience of using various optical instruments and making finer measurements of wavelength of light.
- CO4: The student will get a thorough knowledge of the polarization of light and its changes upon reflection and transmission.

## ELECTRICITY AND MAGNETISM

CODE: BPH010B

CREDIT: 4

### UNIT-I

**Electric Field:** Electric Field and Lines. Electric Field  $E$  due to a Ring of Charge. Electric Flux. Gauss's law. Gauss's law in Differential form. Applications of Gauss's Law:  $E$  due to point charge, an Infinite Line of Charge, Uniformly charged spherically shell and solid sphere, a Charged Cylindrical Conductor, an Infinite Sheet of Charge and Two Parallel Charged Sheets, Two Charged Concentric Spherical Shells. Force on the Surface of a Charged Conductor and Electrostatic Energy in the medium surrounding a Charged Conductor.

### UNIT-II

*Prof. Y.K. Vijay*  
*Dr. Nishant Kumar*  
*Chandragoshi*  
*Dr. Abhishek Sharma*

**Electric Potential:** Line Integral of Electric Field. Conservative Nature of Electrostatic Field. Relation between  $E$  and  $V$ . Electrostatic Potential Energy of a System of Charges. Electric Potential due to Dipole, a Charged Wire, a Charged Disc. Calculation of Electric Field from Potential, Force and Torque on a Dipole. Conductors in an Electrostatic Field. Capacitance of an isolated spherical conductor, Parallel plate, spherical and cylindrical condenser.

#### UNIT-III

**Dielectric Properties of Matter:** Dielectrics: Electric Field in Matter. Dielectric Constant. Parallel Plate. Capacitor with a Dielectric. Polarization, Polarization Charges and Polarization Vector. Electric Susceptibility. Gauss's law in Dielectrics. Displacement vector  $D$ . Relations between the three Electric Vectors. Capacitors filled with Dielectrics.

#### UNIT-IV

**Magnetic Field:** Magnetic Effect of Currents: Magnetic Field  $B$ . Magnetic Force between Current Elements and Definition of  $B$ . Magnetic Flux. Biot-Savart's Law:  $B$  due to (1) a Straight Current Carrying Conductor and (2) Current Loop. Current Loop as a Magnetic Dipole and its Dipole Moment (Analogy with Electric Dipole). Ampere's Circuital law (Integral and Differential Forms):  $B$  due to (1) a Solenoid and (2) a Toroid. Properties of  $B$ . Forces on an Isolated Moving Charge. Magnetic Force on a Current Carrying Wire. Torque on a Current Loop in a Uniform Magnetic Field.

#### UNIT-V

**Magnetic Properties of Matter:** Magnetization vector ( $M$ ). Magnetic Intensity ( $H$ ). Magnetic Susceptibility and permeability. Relation between  $B$ ,  $H$ ,  $M$ . Ferromagnetism.  $B$ - $H$  curve and hysteresis.

**Electromagnetic induction:** Faraday's law (Differential and Integral forms). Lenz's Law. Self and Mutual Induction. Energy stored in a Magnetic Field.

**Maxwell's Equations:** Equation of continuity of current, Displacement current, Maxwell's equations, Poynting vector, energy density in electromagnetic field, electromagnetic wave propagation through vacuum and isotropic dielectric medium, transverse nature of EM waves.

#### Reference Books

1. Edward M. Purcell: Electricity and Magnetism, McGraw-Hill Education, 1986.
2. Arthur F. Kip: Fundamentals of Electricity and Magnetism, McGraw-Hill, 1968.
3. D C Tayal; Electricity and Magnetism, Himalaya Publishing House, 1988.
4. J. H. Fewkes & John Yarwood: Electricity & Magnetism, Oxford Univ. Press, 1991.
5. David J. Griffiths: Introduction to Electrodynamics, Benjamin Cummings, 1998 (Also, PHI).

**Course Outcomes:** After completion this course, student shall be able to-

- CO1: Demonstrate the fundamentals of electrostatics and formalism of electric field due to various geometrical charge conductors.
- CO2: Articulate the knowledge of dipole, conductors and capacitors / condenser in terms of electric potential.
- CO3: Describe the properties and behavior of dielectric materials with understanding of Gauss' law.
- CO4: Describe the production of magnetic field due to current carrying elements and magnetic dipole.
- CO5: Explain Faraday-Lenz to articulate the relationship between electric and magnetic fields and behavior of Maxwell laws in different mediums.

## ELECTRICITY AND MAGNETISM LAB

CODE: BPH012B

CREDIT:1

Student has to perform / learn any ten experiments out of the followings:-

1. To use a Multimeter for measuring (a) Resistances, (b) A/C and DC Voltages, (c) AC and DC Currents, (d) Capacitances, and (e) Frequencies.
2. To convert a Galvanometer into an Ammeter of given range and calibrate it.
3. To convert a Galvanometer into a Voltmeter of given range and calibrate it.
4. To determine specific resistance of a wire by Carrey-Foster's Bridge.
5. To study LCR circuit characteristics.
6. To study L-C transmission line and determine attenuation coefficient.
7. To study R-C transmission line and determine attenuation coefficient.
8. To determine an unknown resistance using *de-Sauty Bridge*.
9. To determine an unknown resistance using *Anderson Bridge*.
10. To determine characteristics of Solar Cell. (Complete Kit)
11. To study charging and discharging of a capacitor and determine time constant.
12. To study the Van De Graff generator to produce accelerated high energy particles.
13. To study the variation of magnetic field with distance along the axis of a circular coil carrying current.
14. To find the horizontal intensity of earth's magnetic field at a place and moment of the bar magnet.
15. To determine the magnetic dipole moment ( $m$ ) of a bar magnet and horizontal intensity ( $B_H$ ) of earth's magnetic field using a deflection magnetometer.
16. To find the temperature coefficient of resistance of a given coil using Wheatstone bridge circuit
17. To determine the self inductance of the coil ( $L$ ) using Anderson's bridge.
18. To calculate the value of inductive reactance ( $X_L$ ) of the coil at a particular frequency using Anderson's bridge.
19. To determine the volume magnetic susceptibility of Manganese sulphate solution at different concentrations using Quincke's method
20. To understand the Barkhausen effect on ferromagnetic material.
21. To study the phenomena of magnetic hysteresis and calculate the retentivity, coercivity and saturation magnetization of a material using a hysteresis loop tracer
22. \*To determine radius of a current carrying coil using Tangent Galvanometer.

### Suggested Books

1. Geeta Sanon: B. Sc. Practical Physics, 1st Edn. (2007), R. Chand & Co.
2. B. L. Worsnop and H. T. Flint: Advanced Practical Physics, Asia Publishing House, New Delhi.
3. Indu Prakash and Ramakrishna: A Text Book of Practical Physics, Kitab Mahal, New Delhi.
4. D. P. Khandelwal: A Laboratory Manual of Physics for Undergraduate Classes, Vani Publication House, New Delhi.

**Course Outcomes:** After completion this, student shall be able to

CO1: Understand the functioning of various components, and learn to calculate the unknown resistance and coefficients of given circuits.

CO2: Learn the variation of voltage and current in a circuit consisting of multiple elements.

CO3: Understand the mechanism of generating magnetic fields, and understand the properties of magnetic field

CO4: Identify and calculate the properties and behavior of magnetic substances.

# THERMODYNAMICS & STATISTICAL PHYSICS

CODE: BPH064A

CREDIT: 4

## UNIT-I

**Laws of Thermodynamics:** Zeroth Law of Thermodynamics & Concept of Temperature, Concept of Work & Heat, State Functions, First Law of Thermodynamics and its differential form, Internal Energy, First Law & various processes, Reversible and Irreversible Changes. Conversion of Work into Heat and Heat into Work. Heat Engines, Carnot Cycle, Carnot Engine and its Efficiency. Refrigerator and its Efficiency. Second Law of Thermodynamics: Kelvin-Planck and Clausius Statements and their Equivalence. Carnot's Theorem. Applications of Second Law of Thermodynamics: Thermodynamic Scale of Temperature and its Equivalence to Perfect Gas Scale.

## UNIT-II

**Entropy:** Change in Entropy, Entropy of a State, Clausius Theorem, Clausius Inequality. Second Law of Thermodynamics in terms of Entropy. Entropy of a Perfect Gas. Entropy of the Universe. Entropy Changes in Reversible and Irreversible Processes. Principle of Increase of Entropy. Impossibility of Attainability of Absolute Zero: Third Law of Thermodynamics. Temperature-Entropy Diagrams. First and second order Phase Transitions.

## UNIT-III

**Thermodynamic Potentials:** Extensive and Intensive Thermodynamic Variables. Thermodynamic Potentials  $U$ ,  $H$ ,  $F$  and  $G$ : Their Definitions, Properties and Applications. Surface Films and Variation of Surface Tension with Temperature. Magnetic Work. Cooling due to Adiabatic demagnetization. Approach to Absolute Zero.

**Maxwell's Thermodynamic Relations:** Derivations and applications of Maxwell's Relations, Maxwell's Relations: (1) Clausius Clapeyron equation, (2) Values of  $C_p - C_v$ , (3)  $TdS$  Equations, (4) Joule-Kelvin coefficient for Ideal and Van der Waal Gases, (5) Energy equations, (6) Change of Temperature during Adiabatic Process.

## UNIT-IV

**Classical Statistics:** Macrostate & Microstate, Elementary Concept of Ensemble, Phase Space, Entropy and Thermodynamic Probability, Maxwell-Boltzmann Distribution Law, Partition Function, Thermodynamic Functions of an Ideal Gas, Classical Entropy Expression, Gibbs Paradox, Sackur Tetrode equation, Law of Equipartition of Energy (with proof) – Applications to Specific Heat and its Limitations, Thermodynamic Functions of a Two-Energy Levels System, Negative Temperature.

## UNIT-V

**Quantum Statistics: Bose-Einstein Statistics:** B-E distribution law, Thermodynamic functions of a strongly Degenerate Bose Gas, Bose Einstein condensation, properties of liquid He (qualitative description). **Fermi-Dirac Statistics:** Fermi-Dirac Distribution Law, Thermodynamic functions of a Completely and strongly Degenerate Fermi Gas, Fermi Energy, Electron gas in a Metal, Specific Heat of Metals.

## Suggested Books

1. Enrico Fermi: Thermodynamics, Courier Dover Publications, 1956.
2. Thermal Physics, S. Garg, R. Bansal and Ghosh, 2nd Edition, 1993, Tata McGraw-Hill
3. Thermal Physics, A. Kumar and S.P. Taneja, 2014, R. Chand Publications.
4. Thermodynamics, Kinetic Theory & Statistical Thermodynamics, Sears & Salinger. 1988, Narosa.
5. Statistical Mechanics, R.K. Pathria, Butterworth Heinemann: 2nd Ed., 1996, Oxford University Press.

6. Statistical Physics, Berkeley Physics Course, F. Reif, 2008, Tata McGraw-Hill
7. Statistical and Thermal Physics, S. Lokanathan and R.S. Gambhir, 1991, Prentice Hall
8. Modern Thermodynamics with Statistical Mechanics, Carl S. Helrich, 2009, Springer

**Course Outcomes:** After completion the course, student shall be able to

- CO1: Comprehend the basic concepts of thermodynamics, and apply various laws of thermodynamics to various processes and real systems.
- CO2: Ability to evaluate entropy changes in a wide range of processes and determine the reversibility or irreversibility of a process and other important thermodynamic properties.
- CO3: Understand the thermodynamic potentials and their physical interpretations, Maxwell's thermodynamic relations for various processes
- CO4: Understand the fundamentals of thermodynamic system with their distinguishably or indistinguishably nature, the Gibbs paradox, equipartition of energy and concept of negative temperature.
- CO5: Understand the application of BE and FD statistical distribution law to understand macroscopic properties of degenerate systems.

Student has to perform / learn any ten experiments out of the following experiments:-

1. To study adiabatic changes using Clement and de-Sorme experiment.
2. To determine the mechanical equivalent of heat (J) by Electrical method (Joule's Calorimeter)
3. To verify Newton's cooling law of different materials and different liquid.
4. To determine mechanical equivalent of heat, J, by Callender and Barne's constant flow method.
5. To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method.
6. To study the variation of Thermo-Emf of a thermocouple with difference of temperature of its two junctions.
7. To study the phase change
8. To study the heat transfer by radiations of various test elements
9. To find the thermal conductivity of a material by the two slab guarded hot plate method
10. To determine the thermal resistivity of the sample

Department of Physics  
JECRC University, Jaipur

Prof. Y.K. Nay

Naam  
(Dr. Nishant Naam)

Chaudhary Jishi  
(Dr. Chaudhary Jishi)

11. To verify Newton's cooling law of different materials and different liquid and draw the cooling curve
12. To determine the overall heat transfer coefficient at the surface of a given vertical metal cylinder by the natural convection method and determine the value of Nusselt number
13. \*To determine the Temperature Coefficient of Resistance by Platinum Resistance Thermometer (PRT).
14. \*To determine the Coefficient of Thermal Conductivity of Cu by Searle's Apparatus.

## UNIT-I

**Vector Calculus:** Vector Differentiation. Scalar and Vector Fields. Ordinary and Partial Derivative of a Vector w.r.t. coordinates. Space Curves. Unit Tangent Vector and Unit Normal Vector (without Frenet- Serret Formulae). Directional Derivatives and Normal Derivative. Gradient of a Scalar Field and its Geometrical Interpretation. Divergence and Curl of a Vector Field. Del and Laplacian Operators. Vector Identities.

**Vector Integration:** Ordinary Integral of Vectors. Line, Surface and Volume Integrals. Flux of a Vector Field. Gauss' Divergence Theorem, Green's Theorem and Stokes Theorem.

## UNIT-II

**Orthogonal Curvilinear Coordinates:** Orthogonal Curvilinear Coordinates. Derivation of Gradient, Divergence, Curl and Laplacian in Cartesian, Spherical and Cylindrical Coordinate Systems.

## UNIT-III

**Differential Equations:** First Order Differential Equations and Integrating Factor. Homogeneous Equations with constant coefficients. Particular Integral.

## Calculus of Variations

Variational Calculus: Variational Principle. Concept of Lagrangian. Generalized Coordinates. Definition of Canonical Momenta. Euler-Lagrange's Equations of Motion and its Applications to Simple Problems.

## UNIT-IV

**Tensors:** Transformation of co-ordinates. Einstein's Summation Convention. Relation between Direction Cosines. Tensors: Algebra of Tensors, Sum, Difference and Product of Two Tensors, and Contraction. Quotient Law of Tensors. Symmetric and Anti-symmetric Tensors. Pseudotensors. Invariant Tensors: Kronecker Delta.

## UNIT-V

**The Idea of Space-Time and Minkowski Space.** Geometry of Space-time, space like and time-like interval, Light Cone. Null-Cone representation. Metric Tensor. Four Vector Formalism: Four Velocities, Four Momenta. Transformation of Energy and Momentum

**Special Theory of Relativity:** Galilean Transformations. Postulates of STR. Lorentz Transformations, Simultaneity, Length Contraction. Time Dilation, Twin Paradox. Relativistic Transformation of Velocity, Relativistic Addition of Velocities. Frequency and Wave Number. Mass-Energy equivalence principle. Variation of Mass with Velocity. Relativistic relation between energy and momentum. Relativistic Doppler effect. Relativistic Kinematics.

Department of Physics  
JAIPIIR

Chandajoshi  
Dr. Chandra Joshi

Dr. Abhishek Sharma

9. Arthur Beiser: Prospects in Modern Physics, McGraw-Hill Book Company (1998).

**Course Outcomes:** After completion this course, students should be able to:

- CO1: Learn the basic mathematical structures of vector calculus in solving the problems in various branches of Physics as well as in engineering  
CO2: Understand and learn the Curvilinear coordinates to analyze the applications in problems with spherical and cylindrical symmetries.  
CO3: Learn the representations and dynamics by partial differential equations and variational principle in solving mathematical problems arising in physics by a variety of mathematical techniques  
CO4: Use the mathematical formalism for connections and general tensors to solve problems of general relativistic nature  
CO5: Acquire the knowledge of light cone, null cone, four vector formalism, understanding of the special theory of relativity and able to perform basic calculations in relativistic kinematics.

### ELEMENTS OF MODERN PHYSICS

CODE: BPH067A

CREDIT: 4

#### UNIT -I

Planck's quantum, Planck's constant and light as a collection of photons; Blackbody Radiation: Quantum theory of Light; Photo-electric effect and Compton scattering. De-Broglie wavelength and matter waves; Davisson-Germer experiment. Wave description of particles by wave packets. Group and Phase velocities and relation between them. Two-Slit experiment with electrons. Probability. Wave amplitude and wave functions.

#### UNIT-II

Position measurement- gamma ray microscope thought experiment; Wave-particle duality, Heisenberg uncertainty principle: Derivation from Wave Packets impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle- application to virtual particles and range of an interaction.)

#### UNIT - III

Two slit interference experiment with photons, atoms and particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic

*Prof. Y. K. Yadav*  
*Dr. Nishant Chauhan*  
*Dr. Praveen Sharma*

*Dr. Jyoti K. Sharma*

function, probabilities and normalization; Probability and probability current densities in one dimension.

#### UNIT-IV

One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as example; Quantum mechanical scattering and tunnelling in one dimension across a step potential & rectangular potential barrier.

#### UNIT-V

**Lasers:** Induced Absorption, Spontaneous and Stimulated emissions, Relationship between Einstein's Coefficients, Principle of Lasing. Metastable State, Optical Pumping and Population Inversion. Components of Laser, Three-Level and Four-Level Lasers. Ruby Laser, He-Ne Laser and Diode laser.

**Holography:** Principle of Holography. Recording and Reconstruction Method. Theory of Holography as Interference between two Plane Waves. Point source holograms, Applications of Holography

#### Suggested Books:

1. Concepts of Modern Physics, Arthur Beiser, 2002, McGraw-Hill.
2. Introduction to Modern Physics, Rich Meyer, Kennard, Coop, 2002, Tata McGraw Hill
3. Introduction to Quantum Mechanics, David J. Griffith, 2005, Pearson Education.
4. Physics for scientists and Engineers with Modern Physics, Jewett and Serway, 2010, Cengage Learning.
5. Modern Physics, G.Kaur and G.R. Pickrell, 2014, McGraw Hill
6. Quantum Mechanics: Theory & Applications, A.K.Ghatak & S.Lokanathan, 2004, Macmillan

**Course Outcomes:** After completion this course, student shall be able to

- CO1: Understand the development of quantum mechanics and ability to discuss and interpret experiments that reveal the quantum nature and dual nature of matter.
- CO2: Understand the theory of quantum measurements, wave packets and uncertainty principle.
- CO3: Understand the central concepts of quantum mechanics in the formulation of Wave function and the Schrodinger wave equation.
- CO4: Formulate the basic theoretical problems e.g. one dimensional rigid box, tunneling through potential barrier, step potential, rectangular barrier
- CO5: Understand the basics of lasing and working of different lasers, and learn the technique of Holography.

## ELEMENTS OF MODERN PHYSICS LAB

CODE: BPH068A

CREDIT:1

Student has to perform / learn any eight experiments out of the following:-

1. To determine the Planck's constant using LEDs of at least 4 different colours.
2. To determine the value of  $e/m$  by (a) Magnetic focusing or (b) Bar magnet.
3. To determine the wavelength of laser source using diffraction of single and double slits.
4. To determine (1) wavelength and (2) angular spread of He-Ne laser using plane diffraction grating
5. To experimentally demonstrate the concept of quantization of energy levels according to Bohr's model of atom.
6. To study the phenomenon of Photoelectric effect as a whole; (a) To draw kinetic energy of photoelectrons as a function of frequency of incident radiation, (b) To determine the Planck's constant from kinetic energy versus frequency graph, (c) To plot a graph connecting photocurrent and applied potential, (d) To determine the stopping potential from the photocurrent versus applied potential graph.
7. To study the emission spectra of Hydrogen, Neon and mercury vapours.
8. To experimentally demonstrate the concept of Millikan's oil drop experiment. (a) To find the terminal velocity of the drop, (b) To find the charge on a drop.
9. To determine the wavelength of a laser using the Michelson interferometer.
10. \*To determine work function of material of filament of directly heated vacuum diode.
11. \*To determine the ionization potential of mercury.
12. \*To determine the absorption lines in the rotational spectrum of Iodine vapour.
13. \*To show the tunneling effect in tunnel diode using I-V characteristics.

## WAVES & VIBRATIONS

CODE: BPH069A

CREDIT: 4

### UNIT-I

**Oscillations in Arbitrary Potential Well:** Simple Harmonic Oscillations. Differential Equation of SHM and its Solution. Amplitude, Frequency, Time Period and Phase. Velocity and Acceleration. Kinetic, Potential and Total Energy and their Time Average Values. Reference Circle. Rotating Vector Representation of SHM.

**Free Oscillations of Systems with One Degree of Freedom:** (1) Mass-Spring system, (2) Simple Pendulum, (3) Torsional Pendulum, (4) Oscillations in a U-Tube, (5) Compound pendulum: Centres of Percussion and Oscillation, and (6) Bar Pendulum.

### UNIT-II

**Driven Oscillations:** Damped Oscillations: Damping Coefficient, Log Decrement.

**Forced Oscillations:** Transient and Steady States, Amplitude, Phase, Resonance, Sharpness of Resonance, Power Dissipation and Quality Factor. Helmholtz Resonator.

**Coupled Oscillators:** Normal Coordinates and Normal Modes. Energy Relation and Energy Transfer. Normal Modes of N Coupled Oscillators.

### UNIT-III

**Wave Motion:** Plane and Spherical Waves. Longitudinal and Transverse Waves. Plane Progressive (Travelling) Waves. Wave Equation. Particle and Wave Velocities. Differential Equation. Pressure of a Longitudinal Wave. Energy Transport. Intensity of Wave.

**Velocity of Waves:** Velocity of Transverse Vibrations of Stretched Strings. Velocity of Longitudinal Waves in a Fluid, in a Pipe. Newton's Formula for Velocity of Sound. Laplace's Correction.

### UNIT-IV

Elastic Waves in Solid Rod. Pressure Waves in Glass Columns. Transverse Waves in Strings. Waves in Three Dimensions. Spherical Waves. Plane Electromagnetic Waves. Energy and Momentum of Plane EM Waves. Radiation Pressure. Radiation Resistance of free space. EM Waves in dispersive Media. Spectrum of EM Waves.

### UNIT-V

**Ultrasonics:** Production of ultrasonic waves. Echo; Reverberation, reverberation time, Sabine's formula, remedies over reverberation; Absorption of sound, absorbent materials; Conditions for good acoustics of a building; Noise, its effects and remedies. **Piezoelectric effect.** Detection of ultrasonic waves: Piezoelectric detector. Kundt's tube method. Sensitive flame method. Thermal

Prof. Y. K. Vijay

 Dr. Prannoy Senapati  
 Chaudhary Jishi  
 (Dr. Chaudhary Jishi)  
 (Dr. Abhishek Sharma)

detector method. Properties of ultrasonic waves. Cavitation. Acoustic grating. Velocity measurements.

**SONAR:** Non-destructive testing. Pulse echo technique. Transmission technique. Resonance.

Medical Applications: Echocardiograms/Sonogram. Ultrasonic Imaging (Scan display).

### Suggested Books

1. A. P. French: Vibrations and Waves, CBS Pub. & Dist., 1987.
2. N.K. Bajaj, The Physics of Waves and Oscillations, Tata Mc-Graw Hill Education (1988)
3. H.J. Jain, The Physics of Vibrations and Waves, Sixth Edition, Wiley (2005)
4. R.N. Chaudhari, Waves and Oscillations, New Age International (P) Ltd., (2010)
5. K. Uno Ingard: Fundamentals of Waves & Oscillations, Cambridge University Press, 1988.
6. Daniel Kleppner and Robert J. Kolenkow: An Introduction to Mechanics, McGraw-Hill, 1973.
7. Franks Crawford, Waves: Berkeley Physics Course (SIE), Tata McGrawHill, 2007.
8. M. S. Seymour Lipschutz: Schaum's Outline of Vector Analysis, McGraw-Hill, 2009.

**Course Outcomes:** After completion this course, student shall be able to

CO1: Learn the fundamentals of oscillating system having one degree of freedom.

CO2: Understand the concept of resonance and the response of a system (amplitude and phase, power dissipation) as a function of driving force, coupled oscillating system.

CO3: Understand the nature of waves, relationship between the velocity and physical properties of waves and different modes of vibration in stretched string / fluid or in pipe.

CO4: Understand the types of waves, propagation of EM waves in mediums.

CO5: Understand the concept and characteristics of ultrasonic, detection methods and its applications.

## WAVES AND VIBRATIONS LAB

CODE: BPH070A

CREDIT: 1

Student has to perform / learn any ten experiments out of the followings:

1. To calculate the natural frequency and damping ratio of a spring-mass system, experimentally; and compare the results with theoretical values.
2. To calculate the natural frequency and damping ratio for free vibration of a single DOF cantilever beam with a lumped mass at free end, experimentally; and compare the results with theoretical values.

*Prof. V.K. Vohra*

*Dr. Nishant Chauhan*  
*Dr. Prakash Kumar*

*Chandan Joshi*  
*(Dr. Chandan Joshi)*

*(Dr. Abhishek Sharma)*

3. To calculate the natural frequency and damping ratio for forced vibration of a single DOF cantilever beam with a lumped mass at free end, experimentally; and compare the results with theoretical values
4. To study the Simple Harmonic motion
5. To study simple Damped Harmonic Oscillations
6. To Study Coupled Simple Harmonic Motion
7. To study Nonlinear Oscillations
8. To study Nonlinear Damped Oscillations
9. To study the LC circuit
10. To Study LCR circuit and resonance behavior of circuit.
11. To find the velocity of sound waves in a given rod with Kundt's tube apparatus and also find the Young's modulus of the material of the rod.
12. To calculate the velocity of ultrasonic sound through different liquid media using ultrasonic interferometer
13. To calculate the adiabatic compressibility of the given liquid ultrasonic interferometer
14. To determine the frequency of an electrically maintained tuning fork by, (a) Transverse mode of vibration, (b) Longitudinal mode of vibration

3. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
4. A Laboratory Manual of Physics for undergraduate classes, D.P.Khandelwal, 1985, Vani Pub.

**Course Outcomes:** After completion this course, student shall be able to

- CO1: Develop an understanding of various aspects of harmonic oscillations and waves specially.  
 CO2: Acquire the knowledge of superposition of collinear and perpendicular harmonic oscillations  
 CO3: Understand the dynamics of various types of mechanical waves and their superposition.  
 CO4: Learn the characteristic behavior of coupled, forced and driven oscillators and thereby able to illustrate the Lissajous figures.  
 CO5: Understand the properties of Ultrasonic waves through the experiments.

# ADVANCED MATHEMATICAL PHYSICS

CODE: BPH071A

CREDIT: 4

## UNIT-I

### Dirac-delta function and its properties:

Definition of Dirac delta function. Representation as limit of a Gaussian function and rectangular function. Properties of Dirac delta function.

## UNIT-II

**Fourier Series:** Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only). Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions. Application. Summing of Infinite Series. Term-by-Term differentiation and integration of Fourier Series. Parseval Identity.

## UNIT-III

**Frobenius Method and Special Functions:** Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations. Legendre, Bessel, Hermite and Laguerre. Properties of Legendre Polynomials: Rodrigues Formula, Generating Function, Orthogonality. Simple recurrence relations. Expansion of function in a series of Legendre Polynomials. Bessel Functions of the First Kind: Generating Function, simple recurrence relations. Zeros of Bessel Functions ( $J_0(x)$  and  $J_1(x)$ ) and Orthogonality.

## UNIT-IV

**Some Special Integrals:** Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral).

**Theory of Errors:** Systematic and Random Errors. Propagation of Errors. Normal Law of Errors. Standard and Probable Error. Least-squares fit. Error on the slope and intercept of a fitted line.

## UNIT-V

**Partial Differential Equations:** Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Wave equation and its solution for vibrational modes of a stretched string, rectangular and circular membranes. Diffusion Equation.

## Reference Books

1. Mathematical Methods for Physicists: Arfken, Weber, 2005, Harris, Elsevier.
2. Fourier Analysis by M.R. Spiegel, 2004, Tata McGraw-Hill.
3. Mathematics for Physicists, Susan M. Lea, 2004, Thomson Brooks/Cole.
4. Differential Equations, George F. Simmons, 2006, Tata McGraw-Hill.
5. Partial Differential Equations for Scientists & Engineers, S.J. Farlow, 1993, Dover Pub.
6. Engineering Mathematics, S.Pal and S.C. Bhunia, 2015, Oxford University Press
7. Mathematical methods for Scientists & Engineers, D.A. McQuarrie, 2003, Viva Books

## Course Outcomes

After completion this course, student shall be able to-

- CO1: Learn the Dirac delta function its properties, which have applications in various branches of Physics, especially in quantum mechanics
- CO2: Understand the Fourier analysis of periodic functions and their applications in physical problems such as vibrating strings etc.
- CO3: Understand about the special functions, differential equations and their applications in various physical problems in quantum mechanics.

**Solution of ODE First order Differential equation Euler:-** Radioactive decay, Current in RC, LC circuits with DC source, Newton's law of cooling, Classical equations of motion  
**Partial Differential Equation-** Wave Equation, Heat Equation, Poisson Equation, Laplace Equation Using Scicos/xcos - Generating Square Wave, Saw-tooth Wave, Sine Wave, Solution of Harmonic Oscillator, Study of beat phenomena and Phase space plots.

**Using C++ /Scilab based simulations experiments based on Mathematical Physics problems-**  
 Examples:

1. Dirac-Delta function: Evaluate  $\frac{1}{\sqrt{2\pi\alpha^2}} \int e^{-\frac{(x-2)^2}{2\alpha^2}} (x+3) dx$  for  $\sigma = 1, 0.1, 0.01$  and show it tends to 5.
2. Fourier Series: Program to sum  $\sum_{n=1}^{\infty} 0.2^n$  and Evaluate the Fourier coefficients of agiven periodic function (Square Wave).
3. Frobenius Method and Special Function:  $\int_{-1}^1 P_n(\mu) P_m(\mu) d\mu = \delta_{n,m}$ . Plot  $P_n(x)$ ,  $J_n(x)$  and show recursion relations.
4. Calculation of error for each data point of observations recorded in experiments done (choose any two).
5. Calculation of least square fitting manually without giving weightage to error. Confirmation of least square fitting of data through computer program
6. Evaluation of trigonometric functions e.g.  $\sin \theta$ . Given Bessel's function at N points find its value at an intermediate point. Complex analysis: Integrate  $\frac{1}{(x^2+2)}$  numerically and check with computer integration.
7. Compute the nth roots of unity for  $n = 2, 3$ , and 4.
8. Find the two square roots of  $-5+12j$ .
9. Solve Kirchoff's Current law for any node of an arbitrary circuit using Laplace's transform.
10. Solve Kirchoff's Voltage law for any loop of an arbitrary circuit using Laplace's transform
11. Perform circuit analysis of a general LCR circuit using Laplace's transform
12. Solve differential equations:
  - a.  $\frac{dy}{dx} = e^{-x}$  with  $y=0$  and  $x=0$
  - b.  $\frac{dy}{dx} + e^{-x} y = x^2$
  - c.  $\frac{d^2 y}{dt^2} + 2 \frac{dy}{dt} = -y$
  - d.  $\frac{d^2 y}{dt^2} + e^{-\frac{dy}{dt}} = -y$
13. The differential equation describing the motion of a pendulum is  $\frac{d^2 \theta}{dt^2} = -\sin^2 \theta$

Prof. Y. K. Vijay

Dr. Nishant Rana  
 Dr. Pradeep Saxena  
 Department of Physics  
 University, JAIPUR

(Dr. Chandan Jodhi)

(Dr. P. K. Sharma)

The pendulum is released from rest at an angular displacement  $\alpha$ , i.e.  $\theta(0) = \alpha$  and  $\theta'(0) = 0$ . Solve the equation for  $\alpha = 0.1, 0.5$  and  $1.0$  and plot  $\theta$  as a function of time in the range  $0 \leq t \leq 8\pi$ .

## UNIT-II

**Network analysis:** Nodal analysis with independent and dependent sources, modified nodal analysis, mesh analysis, notion of network graphs, nodes, trees, twigs, links, co-tree, independent sets of branch currents and voltages.

## UNIT-III

**Network theorems:** Voltage Shift Theorem, Zero Current Theorem, Tellegen's Theorem, Reciprocity, Substitution Theorem, Thevenin's and Norton's theorems, pushing a voltage source through a node, splitting a current source, compensation theorem, maximum power transfer.

## UNIT-IV

**Semiconductors:** Intrinsic and extrinsic semiconductors, Energy Level Diagram. Conductivity and Mobility, carrier statistics, and thermal equilibrium carrier concentration.

**Excess carriers in semiconductors:** Excess carriers, lifetime, and carrier transport by drift and diffusion; Continuity equation and its solution under different injections; Solution of diffusion equation in uniformly doped base long and short base limits.

## UNIT-V

**Theory of PN junctions:** p and n Type Semiconductors.. pn Junction Fabrication (Simple Idea). Barrier Formation in pn Junction Diode. Current Flow Mechanism in Forward and Reverse Biased Diode (Recombination, Drift and Saturation of Drift Velocity). Derivation of Mathematical Equations for Barrier Potential, Barrier Width and Current for Step Junction. P-N junction and its characteristics. Static and Dynamic Resistance. Diode Equivalent Circuit. Ideal Diode. Load Line Analysis of Diodes. Load Line and Q-point

### Suggested Books

1. Basic and Applied Electronics-T.K Bandyopadhyay, Books and Allied Pvt Ltd (2002)
2. V.K.Mehta, "Principles of Electronics", S.Chand & Co
3. B.L.Theraja, "Basic solid state Electronics", S.Chand &Co
4. R. L. Boylestad, L. Nashelsky, Electronic Devices and Circuit Theory, Pearson Education (2006).
5. Integrated Electronics, J. Millman and C.C. Halkias, 1991, Tata Mc-Graw Hill.
6. Solid State Electronic Devices, B.G.Streetman & S.K.Banerjee, 6th Edn.,2009, PHI Learning.
7. Electronic Devices & circuits, S.Salivahanan & N.S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill

**Course Outcomes:** After completion this course, student shall be able to

- CO1: Apply Kirchhoff's rules to analyze the circuits consisting of parallel and/or series combinations of voltage sources and resistors and understand their graphical relationship.
- CO2: Acquire the knowledge of important terminology like nodes, trees, twigs, links, co-tree, independent sets of branches in a complex circuit.
- CO3: Demonstrate and learn various network theorems and their applications in electrical circuit and electronics.
- CO4: Learn and understand the basics of semiconductors and the role of diffused charged carriers in changing the properties.
- CO5: Demonstrate the current flow mechanism, nature of potential barrier and understand the characteristics of diode by calculating the dynamical variables.

## CIRCUIT ANALYSIS AND BASIC ELECTRONICS LAB

CODE: BPH074A

CREDIT: 1

Student has to perform / learn any ten experiments out of the followings:-

1. Verification of Kirchhoff's current law and voltage law using hard ware and digital simulation.
2. Verification of mesh analysis using hard ware and digital simulation.
3. Verification of nodal analysis using hard ware and digital simulation
4. Determination of average value, rms value, form factor, peak factor of sinusoidal wave, square wave using hard ware and digital simulation.
5. Verification of super position theorem using hard ware and digital simulation.
6. Verification of reciprocity theorem using hardware and digital simulation.
7. Verification of maximum power transfer theorem using hardware and digital simulation
8. Verification of Thevenin's theorem using hard ware and digital simulation
9. Verification of Norton's theorem using hard ware and digital simulation
10. Verification of compensation theorem using hard ware and digital simulation
11. Verification of self inductance and mutual inductance by using hard ware.
12. Verification of series resonance using hard ware and digital simulation
13. Verification of parallel resonance using hard ware and digital simulation.
14. Study the diode clipping circuits on breadboard, using discrete components for peak clipping and peak detection. i) Positive and Negative Clipping Circuit, ii) Diode series positive and negative Clipping Circuit.

**Course Outcomes:** After completion this course, student shall be able to

- CO1: Learn the role of Kirchhoff's Law in understanding the distribution of voltage and currents in electric circuits.
- CO2: Acquire the knowledge to distinguish the circuits on the basis of Node and Mesh analysis.
- CO3: Demonstrate the theorems to analyze the network circuits through physical and simulations.
- CO4: Test the properties of parallel and series circuits containing the discrete components.

**PROJECT / DISSERTATION**  
(At University/ Academic Institute/ Research Lab)

**Code: BPH026A**

**Credit: 12**

The objective behind introducing project/dissertation is to get familiar the students with the research methodology. Student shall be assigned to work upon a substantial topic related to any core or specialized courses or topic of current interest enlisted in the curriculum of the UG program. This course shall be mandatory and treated as project/dissertation, and it may consists of *review of some research papers, performing a laboratory experiment, fabrication, working out some problem related to Physics, participation in some ongoing research activity, analysis of data, simulations* etc. The work can be carried out in any thrust areas of Physics (Experimental or Theoretical Physics) under the guidance of faculty members of the department. The Guide will be allotted through the DRC of the department in the beginning of the IV semester.

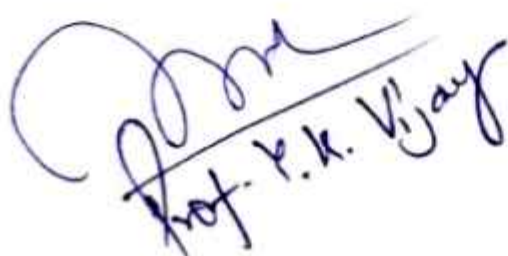

**Assessment:** The internal assessment will be carried out by the respective allotted guide(s) during the semester (at least 2Hrs per week). The external assessment of the project/dissertation work shall be assessed by the External Examiner / panel (nominated by the Chairperson of DRC)/ DRC through the power point presentation by the candidates. The candidates shall require to submit two hard bound copies along with soft copy of the project/dissertation in the department as per the date of submission. The candidates will be awarded marks after defending successfully his/her project/dissertation work. In case of corrections / improvements suggested by the Examiner / committee shall be incorporated by the candidates within 15 days and will have to resubmit his/her work.

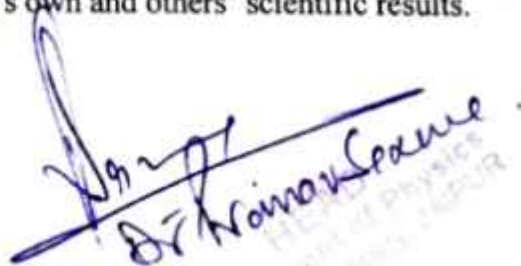

Project/Dissertation shall contain following structure:

1. Cover/Title Page
2. Certificate
3. Acknowledgement
4. Abstract (Executive Summary)
5. Table of contents, List of figures and tables
6. The core chapters-
  - i. Introduction
  - ii. Literature Review
  - iii. Methodology
  - iv. Results
  - v. Discussion
  - vi. Conclusion
7. Reference Lists
8. Appendix

**Course Outcomes:** After this course, student shall be able to-

- CO1: to apply the relevant knowledge and skills, which are acquired within the technical area, to a given problem.
- CO2: formulate the problem within given constraints, even with limited information, independently analyze and discuss and handle complex inquiries/problems within the technical area.
- CO3: Reflect on, evaluate, and critically assess one's own and others' scientific results.

  
Prof. P.K. Vijay

  
Dr. K. Ramesh

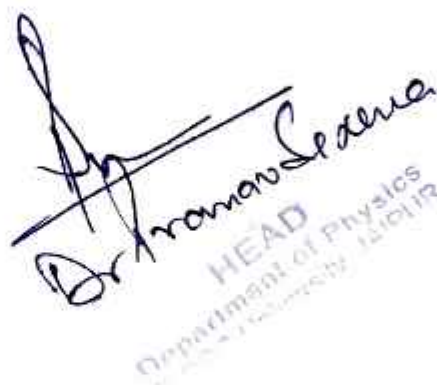

- CO4: Document and present one's own work in a form of technical report with strict requirements on structure, format, and language usage.
- CO5: Be able to identify one's need for further knowledge and continuously develop one's own competencies.

# STRUCTURE AND PROPERTIES OF MATERIALS

CODE: BPH083A

Credits: 4

## UNIT I

**Structure of Solids:** Overview of Crystal Structure, Solid Solutions-Hume Rothery Rules, Crystal Imperfections, Point Defects, Line Defects, Surface Defects, Bulk Defects, Critical nucleus size and Critical Free energy, Mechanism of Crystallisation, Homogeneous and Heterogenous Nucleation Growth, Single crystal, Polycrystalline Materials, Basic principles of solidification of metals and alloys.

## UNIT II

**Phase Diagrams:** Phase Rule, Binary Phase diagrams, Isomorphous systems, congruent phase diagrams, Free energy composition curves, Construction, Microstructural changes during cooling, Typical Phase diagrams, Cu-Zn System, Pb-Sn system, Ag-Pt system, Iron-iron carbide Equilibrium Diagram

## UNIT III

**Alloys:** Classification of steels and cast iron, Microstructure, Effect of alloying elements on steel, Ferrous alloys and their applications, Factors affecting conductivity of a metal, Electrical Resistivity in alloys, Thermal conductivity of metals and alloys, High Resistivity alloys,

## UNIT IV

**Ceramics:** Types, Crystal Structures, Silicate Ceramics, Glasses, Glass Ceramics, Functional properties and applications of ceramic materials ( $\text{SiC}$ ,  $\text{Al}_2\text{O}_3$ ,  $\text{Si}_3\text{N}_4$ ), Super hard materials - Tungsten carbide and Boron nitrides - Graphene.

## UNIT V

**Polymers:** Classification of polymer, Mechanisms of polymerization, Copolymers, Defects in polymers, Thermoplastics, Thermosets (PP, PS, PVC, PMMA, PET, PC, PA, ABS, PI, PAI, PPO, PPS, PEEK, PTFE), Overview: Liquid Crystal Polymers, Conductive polymers, High Performance fibres, Photonic polymers, Elastomers.

1. V. Raghavan, "Materials Science and Engineering", Prentice -Hall of India Pvt. Ltd., 2007
2. Kingery, W. D., Bowen H. K. and Uhlmann, D. R., "Introduction to Ceramics", 2nd Edition, John Wiley & Sons, New York, 1976.
3. F. N. Billmeyer, "Text Book of polymer science", John Wiley & Sons, New York, 1994.
4. William F. Smith, "Structure and Properties of Engineering Alloys", Mc-Graw-Hill Inc., U.S.A, 2nd edition, 1993.
5. W. Bolton, "Engineering materials technology", 3rd Edition, Butterworth & Heinemann, 2001

**Course Outcomes:** At the end of the course, the students will

CO1: To have the knowledge of overview crystal structures and mechanism of crystallization

CO2: Able to understand and classify the phase diagrams.

CO3: Able to recognize basic nomenclature, basic microstructure, and associate terms with the appropriate structure / phenomena.

CO4: To have the knowledge on structure properties correlation in ceramics

CO5: Able to understand the various polymers and its application.

## STRUCTURE AND PROPERTIES OF MATERIALS LAB

CODE: BPH084A

Credit: 1

Student has to perform the following experiments:-

1. To determine the composition in vapour phase and plot graph between temperature and mole fraction to determine the relative volatility.
2. To study the phase change.
3. To determine and separate the constituents like Copper, Zinc, Tin, Lead, and Iron in brass.
4. To determine the melting point of the given substance and to find out the transition time.
5. To study the phase change of a substance from liquid to solid by plotting the cooling curve.
6. To observe the phases present in the microstructure of stainless steels

# SOLID STATE PHYSICS

CODE: BPH017B

CREDIT:4

## UNIT-I

**Crystal Structure:** Solids: Amorphous and Crystalline Materials. Lattice Translation Vectors. Lattice with a Basis – Central and Non-Central Elements. Unit Cell. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Types of Bonds. Ionic Bond, Covalent Bond, Van der Waals Bond. Diffraction of x-rays by Crystals. Bragg's Law, Atomic and Geometrical Factor.

## UNIT-II

**Elementary Lattice Dynamics:** Lattice Vibrations and Phonons: Linear Monatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Einstein and Debye Theories of Specific Heat of Solids.  $T^3$  Law.

## UNIT-III

**Dielectric Properties of Materials:** Dielectric Polarization. Local Electric Field at an Atom. Depolarization Field. Dielectric Constant. Electric Susceptibility. Polarizability. Classical Theory of Electric Polarizability. Clausius-Mosotti Equation. Normal and Anomalous Dispersion. Complex Dielectric Constant.

## UNIT-IV

**Band Theory of Solids:** Bloch Theorem. Kronig-Penney Model. Effective Mass of Electron, Concept of Holes, Band Gaps. Energy Band Diagram and Classification of Solids. Law of Mass Action. Insulators and Semiconductors (P type and N type). Direct and Indirect Band Gap. Conductivity in Semiconductors, mobility, Hall Effect, Measurement of conductivity (4-probe method) and Hall coefficient.

## UNIT-V

**Magnetic Materials:** Dia-, Para-, Ferri- and Ferromagnetic Materials, Classical Langevin Theory of dia- and Paramagnetic Domains, Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains, Discussion of B-H Curve, Hysteresis and Energy Loss

**Superconductivity:** Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect. Idea of BCS theory (No derivation).

## Suggested Books

1. Charles Kittel: Introduction to Solid State Physics, 7th Edition, John Wiley and Sons, Inc.
2. Elements of Solid State Physics, J.P. Srivastava, 4th Edition, 2015, Prentice-Hall of India
3. Introduction to Solids, Leonid V. Azaroff, 2004, Tata Mc-Graw Hill
4. Solid State Physics, Rita John, 2014, McGraw Hill
5. A. J. Dekkar: Solid State Physics, Macmillan India Limited, 2000.
6. J. S. Blackmore: Solid State Physics, Cambridge University Press, Cambridge.
7. N. W. Ascroft and N. D. Mermin: Solid State Physics, (Harcourt Asia, Singapore 2003).

**Course outcomes:-** After completion this course, students shall be able to-

- CO1: Understand about crystalline and amorphous substances, about lattice structure, concept of Brillouin zones and diffraction of X-rays by crystalline materials.
- CO2: Understand the knowledge of lattice vibrations, phonons and in depth of knowledge of Einstein and Debye theory of specific heat of solids.
- CO3: Acquire the essence of dielectric properties of materials.
- CO4: Demonstrate the formation of bands in solids, and their classification into insulators, conductors and semiconductors, and Hall effects.

*Prof. Y. K. Vijay*

*Dr. Nishant Raut*  
*Dr. Pranshu Saxena*  
*HEAD*  
*Dept. of Physics*  
*Chaudan Joshi*

*Dr. Abhishek Sharma*

CO5: Understand the basics of superconductors. Type I and II superconductors, their properties and physical concept of BCS theory.

## SOLID STATE PHYSICS LAB

CODE: BPH075A

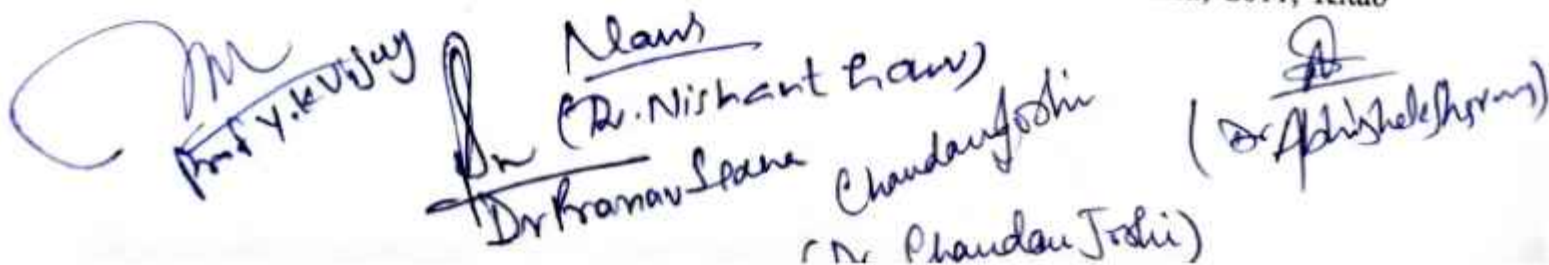

CREDIT: 1

Student has to perform / learn any eight experiments out of the followings:-

1. To measure the resistivity of a semiconductor (Ge) with temperature by four-probe method (room temperature to  $150^{\circ}\text{C}$ ) and to determine its band gap.
2. To determine the Hall coefficient of a semiconductor sample.
3. Determine the Bandgap of a semiconductor
4. To plot the characteristics of thermistor and hence find the temperature coefficient of resistance.
5. To study various crystal structures
6. To find the elastic constants of the Perspex beam using Cornus interference method. (i) Young's modulus(Y), (ii) Poisons ratio ( $\sigma$ ), (iii) Bulk modulus (b)
7. To study the phenomena of magnetic hysteresis and calculate the retentivity, coercivity and saturation magnetization of a material using a hysteresis loop tracer
8. To determine the volume magnetic susceptibility of Manganese sulphate solution at different concentrations by Quincke's method.
9. To measure the dipole moment of gaseous and liquid substances using dipolemeter.
10. Estimation of precise lattice parameters of cubic crystal
11. To gain the knowledge of various techniques for structural characterization of materials
12. \*To measure the Magnetic susceptibility of Solids.
13. \*To measure the Dielectric Constant of a dielectric Materials with frequency
14. \*Study the Bragg's Law.

### Suggested Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Book of Practical Physics, I.Prakash & Ramakrishna, 11th Edn., 2011, Kitab Mahal

  
 Dr. Y.K. Vijay, Dr. Nishant Rana, Dr. Prakash, Chandan Joshi, Dr. Prakash Joshi

**Course Outcomes:** After completion this course student shall be able to-

- CO1: Learn the techniques to determine the properties of semiconductors.  
 CO2: investigate the crystal structures and properties of solids  
 CO3: Acquire the knowledge to measure the magnetic susceptibility of magnetic materials and magnetic hysteresis.  
 CO4: Demonstrate the four probe methods to measure electrical conductivity and the hall set up to determine the hall coefficient of a semiconductor.

CO4		H		M	M				

H = Highly Related; M = Medium L = Low

## NUCLEAR AND PARTICLE PHYSICS

**CODE: BPH021B**

**CREDIT: 5 (4L+1T)**

### UNIT-I

**General Properties of Nuclei:** Constituents of nucleus and their Intrinsic properties, quantitative facts about mass, radii, charge density (matter density), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.

**Radioactivity decay:** (a) Alpha decay: basics of  $\alpha$ -decay processes, theory of  $\alpha$ -emission, Gamow factor, Geiger Nuttall law,  $\alpha$ -decay spectroscopy. (b)  $\beta$ -decay: energy kinematics for  $\beta$ -decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay: Gamma rays emission & kinematics, internal conversion.

### UNIT-II

**Nuclear Models:** Liquid drop model approach, semi empirical mass formula and significance of its various terms, condition of nuclear stability, two nucleon separation energies, Fermi gas model (degenerate fermion gas, nuclear symmetry potential in Fermi gas), evidence for nuclear shell structure, nuclear magic numbers, basic assumption of shell model, concept of mean field, residual interaction, concept of nuclear force.

### UNIT-III

**Nuclear Reactions and Interaction with matter:** Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, reaction rate, reaction cross section, Energy loss due to ionization (Bethe-Block formula), energy loss of electrons, Cerenkov radiation. Elementary Idea of (i) Gamma ray interaction through matter, (ii) photoelectric effect, (iii) Compton scattering, (iv) pair production, (v) neutron interaction with matter.

### UNIT-IV

*Prof. Y. K. Verma*  
*Dr. Nishant Kumar*  
*Dr. Praveen Kumar*  
*Chandana Joshi*  
*Dr. Chandana Joshi*  
*Dr. Ashish Kumar*

Department of Physics  
 University, JAIPUR

**Detector for Nuclear Radiations:** Gas detectors: estimation of electric field, mobility of particle, for ionization chamber and GM Counter. Basic principle of Scintillation Detectors and construction of photo-multiplier tube (PMT) and neutron detector.

**Particle Accelerators:** Accelerator facility available in India: Van-de Graaff Generator (Tandem Accelerator), Linear accelerator, Cyclotron, Synchrotrons.

#### UNIT-V

**Particle physics:** Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm.

#### Suggested Books:

1. Introductory nuclear Physics by Kenneth S. Krane (Wiley India Pvt. Ltd., 2008).
2. Concepts of nuclear physics by Bernard L. Cohen. (Tata McGraw Hill, 1998).
3. Introduction to the physics of nuclei & particles, R.A. Dunlap. (Thomson Asia, 2004).
4. Introduction to High Energy Physics, D.H. Perkins, Cambridge Univ. Press
5. Introduction to Elementary Particles, D. Griffith, John Wiley & Sons
6. Quarks and Leptons, F. Halzen and A.D. Martin, Wiley India, New Delhi
7. Basic ideas and concepts in Nuclear Physics - An Introductory Approach by K. Heyde (IOP Institute of Physics Publishing, 2004).
8. Radiation detection and measurement, G.F. Knoll (John Wiley & Sons, 2000).
9. Physics and Engineering of Radiation Detection, Syed Naeem Ahmed (Academic Press, Elsevier, 2007).
10. Theoretical Nuclear Physics, J.M. Blatt & V.F. Weisskopf (Dover Pub. Inc., 1991)

**Course Outcomes:** After completion this course, student shall be able to-

- CO1: To describe and explain the properties of nuclei and derive the various theoretical formulation of nuclear disintegration.
- CO2: Understand semi empirical mass relation and about the nucleus structure through various models.
- CO3: Develop basic understanding of the interaction of various nuclear radiations with matter in low and high energy.
- CO4: Understand, construct and operate simple detector systems for nuclear radiations and training to work with various types of nuclear accelerators.
- CO5: Demonstrate basic knowledge of elementary particles as fundamental constituent of matter, their properties, and conservation laws during their interactions with matter.

*Chaudhary Jishi (Dr. Chaudhary Jishi)*

**BSc (Hons) Physics - (III/IV Sem)**  
**Research Methodology**

Code: BPH130A

Credits: 3+1

**Unit I**

**Research objectives, Research process and tools:** Types of research, Development of a research question; Science, pseudoscience and rationalism; Physical science and metaphysics; Literature survey, Identification of knowledge gaps and a research problem; Concept of novelty, Formulation and implementation of a research plan; Serendipity, creativity, discovery and innovation. Design of experiments, testing and characterization; Measurement - Standardization, calibration and sampling; Primary and secondary data.

**Unit II**

**Computer applications and tools:** Computer programming, theory, modeling and simulation; Data acquisition, processing, observation, critical analysis and interpretation; Presentation of data; Reliability and reproducibility; Software for documentation, graphs, graphics, drawing and presentation. Web literature search; International standards, reference data and constants; Library system: Physical cataloguing of books and journals; Online catalogue search; Subscribed books and journals

**Unit III**

**Communicating research results and Research ethics:** Journal paper – types of available publishing services; Research proposal, Report, Thesis; Presentation in Seminar and conference; Journal abbreviations, Bibliography standards; Indices of quality assessment of publications. Ethics code of American Psychological Association; Collaboration, cooperation and teamwork; Research outcome; Intellectual property right, Copy-right, patent, fundamentals of patent filing; Usage of pirated version of literatures and software; Plagiarism – Case Studies, Web based verification.

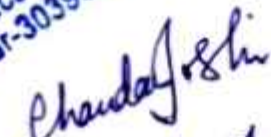

**Unit IV**

**Uncertainties in Measurements, Error Analysis:** Uncertainties in Measurements: Measuring Errors, accuracy and Precision, systematic errors, Random errors, Significant figures and Round off, Uncertainties, Parent and Sample Distributions, Mean, median and mode, Standard Deviation of Distributions. Error Analysis: Instrumental and Statistical Uncertainties, Propagation of Errors, Specific Error Formulas with examples, Application of Error Equations. Numerical Errors.

**Unit V**

**Analytical, Numerical techniques and Statistical, Graphical packages:** Mean deviation, Root mean square deviation, Histogram, Skewness, Kurtosis, Moments, Variance, Chi-square, Correlation, Factor analysis, Mean square weighted deviation, Regression, Time series analysis. Statistical and graphical packages: MS Excel, MATLAB, Microcal Origin / Sigma plot, gnu plot, xmgr – Key Features; Developing algorithms and applications, Tex.

## BSc (Hons) Physics - (III/IV Sem)

### Research Methodology - Seminar

Code: BPH131A

Credit: 1

#### Method of Evaluation:

During the seminar session each student is expected to prepare and present the importance, utility and salient features as outcomes of Research Methodology learned in theory. The presentation and discussion must be at least of 20 minutes. Each student is expected to present at least twice during the semester and the student is evaluated based on that. At the end of the semester, he / she can submit a report on his / her topic of seminar and marks are given based on the report.

**Course Outcomes:** After this course student shall be able-

- CO1:** To use various teaching aids such as projectors, power point presentation and demonstrative models
- CO2:** To review, prepare and present scientific article or a review articles or a publishable research articles
- CO3:** To demonstrate his knowledge learned various important key-factors like, error analysis, analytical, numerical techniques and graphical packages (software's).
- CO4:** Develop their analyzing skill, learn the skill to work in team, helps them to face the placement interviews.
- CO5:** Prepare themselves for their appropriate role in contributing towards the welfare of Society and hence in national development.

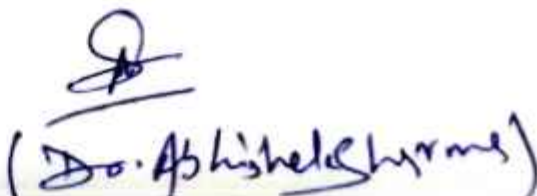

**Mapping of Course Outcomes leading to the achievement of Program Outcomes (POs) and Program Educational Objectives (PEOs)**

Course Outcomes	Program Outcomes (POs)									Program Education Objectives (PEOs)

Chandan

  
(Dr. Abhishek Sharma)

18. To design a digital to analog converter (DAC) of given specifications
19. To study the analog to digital converter (ADC) IC

**Suggested Books:**

1. Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
2. OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edition, 2000, Prentice Hall.
3. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill.
4. Electronic Devices & circuit Theory, R.L. Boylestad & L.D. Nashelsky, 2009, Pearson

**Course Outcomes:** After completion this course, student shall be able to-

- CO1: Learn basic concepts of semiconductor diodes and their applications to rectifiers.  
 CO2: Learn about junction transistor and their applications.  
 CO3: Learn about different types of amplifiers including operational amplifier (Op-Amp) and their applications.  
 CO4: Learn about sinusoidal oscillators of various types and A/D conversion

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcomes	Program Outcomes (POs)								
	I	II	III	IV	V	VI	VII	VIII	IX
CO1	H		L	H	M				M
CO2	H	M	M	H	M		L		M
CO3	H	M	L	M	L		L		L
CO4	H	M	M	L					L

H=High; M=Medium; L=Low

**HEAD**  
 Department of Physics  
 F.C.R.C. University, JAIPUR

**MECHANICS OF MATERIALS**

**Code: BPH089A**

**Credits:4**

**UNIT I**

**Stresses and Strains:** Introduction, Properties of materials, Stress, Strain and Hooke's law, Stress strain diagram for brittle and ductile materials, True stress and strain, Calculation of stresses in straight, Stepped and tapered sections, Composite sections, Stresses due to temperature change, Shear stress and strain, Lateral strain and Poisson's ratio, Elastic constants and relations between them.

**UNIT II**

**Analysis of Stress and Strain:** Introduction to three-dimensional state of stress, Stresses on inclined planes, Principal stresses and maximum shear stress, Principal angles, Shear stresses on principal planes, Maximum shear stress, Mohr circle for plane stress conditions.

**Cylinders:** Thin cylinder: Hoop's stress, maximum shear stress, circumferential and longitudinal strains, Thick cylinders: Lames equations.

**UNIT III**

**Shear Force and Bending Moment:** Type of beams, Loads and reactions, Relationship between loads, shear forces and bending moments, Shear force and bending moments of cantilever beams, Pin support and roller supported beams subjected to concentrated loads, uniformly distributed constant / varying loads.

**Stress in Beams:** Bending and shear stress distribution in rectangular, I and T section beams.

*(Handwritten signatures and names)*  
 Dr. Nishant Kumar  
 Dr. Nishant Kumar  
 Dr. Nishant Kumar  
 Dr. Nishant Kumar

#### UNIT IV

**Theories of Failure:** Maximum Principal stress theory, Maximum shear stress theory.  
**Torsion:** Circular solid and hollow shafts, Torsional moment of resistance, Power transmission of straight and stepped shafts, Twist in shaft sections, Thin tubular sections, Thin walled sections.

#### UNIT V

**Columns:** Buckling and stability, Critical load, Columns with pinned ends, Columns with other support conditions, Effective length of columns, Secant formula for columns.  
**Strain Energy:** Strain energy due to axial, shear, bending, torsion and impact load, Castigliano's theorem I and II and their applications.

#### Suggested Books:

1. Mechanics of Materials; J M Gere, B J Goodno, Cengage Eighth edition 2013
2. Fundamentals of Strength of Materials; P N Chandramouli PHI Learning Pvt. Ltd 2013
3. Strength of Materials; R K Rajput S. Chand and Company Pvt. Ltd 2014
4. Strength of Materials; S C Pilli and N Balasubramanya, Cengage 2019
5. Mechanics of Materials; Ferdinand Beer, Russell Johnston, John Dewolf, David Mazurek McGraw Hill Education (India) Pvt. Ltd Latest edition
6. Mechanics of Materials; R C Hibbeler Pearson Latest edition

**Course Outcomes:** At the end of the course, the student will be able to:

- CO1: Understand simple, compound, thermal stresses and strains their relations and strain energy.  
CO2: Analyse structural members for stresses, strains and deformations.  
CO3: Learn the structural members subjected to bending and shear loads.  
CO4: Analyse shafts subjected to twisting loads.  
CO5: Analyse the short columns for stability.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES

### MECHANICS OF MATERIALS LAB

CODE: BPH090A

Credit: 1

Requisites: Finite Element Analysis Software, MATLAB Software, Computers with necessary accessories

Student has to perform any twelve experiments out of the followings:

1. IZOD impact Test – To find the impact resistance of mild steel and cast iron.
2. CHARPY Impact Test - To find the impact resistance of mild steel and cast iron
3. Shear Force and Bending Moment diagrams for simply supported beams with point load

Prof. Y.K. Vijay

Nam  
N. Nishant Kumar

Dr. Abhishek

4. Shear Force and Bending Moment diagrams for simply supported beams with uniformly distributed load
5. Shear Force and Bending Moment diagrams for Cantilever supported beams with point load
6. Shear Force and Bending Moment diagrams for Cantilever supported beams with uniformly distributed load
7. Mohr's Circle
8. To find the angle of twist and to obtain some of the mechanical properties of the given material by conducting torsion test.
9. To develop an understanding of stress-strain curves of materials, and learn how to use them to determine various mechanical properties of ductile and brittle materials
10. To determine the compressive strength of given sample.
11. To determine the Column stability using boundary conditions.
12. Force and Stress analysis using link elements in Trusses, cables etc.
13. Stress and deflection analysis in beams with different support conditions.
14. Stress analysis of flat plates and simple shells.
15. Stress analysis of axi-symmetric components.
16. Thermal stress and heat transfer analysis of plates.
17. Thermal stress analysis of cylindrical shells.
18. Vibration analysis of spring-mass systems.
19. Model analysis of Beams.

**Suggested Books:**

1. The Mathworks, Inc, "The student Edition of Matlab", student Edition, The MATLAB curriculum series, 1997
2. Rudra Pratap, "Getting started with MATLAB", 1st Edition, Oxford University Press, 2010

**Course Outcomes:** After completion this course, student shall be able to-

- CO1: Make use of software and analytical tools for various applications in the field of manufacturing the materials.
- CO2: Acquire the knowledge in the area of testing of materials and components of structural elements experimentally
- CO3: Learn the techniques and simulation modeling to understand the mechanics of materials under the forces applied.

# QUANTUM MECHANICS

CODE: BPH014B

CREDIT: 4

## UNIT-I

**Time dependent Schrodinger equation:** Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigenvalues and Eigenfunctions. Position, momentum and Energy operators; commutator of position and momentum operators; Expectation values of position and momentum. Wave Function of a Free Particle.

## UNIT-II

**Time independent Schrodinger equation:** Hamiltonian, stationary states and energy eigen values; expansion of an arbitrary wave function as a linear combination of energy eigen functions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to spread of Gaussian wave-packet for a free particle in one dimension; wave packets, Position-momentum uncertainty principle.

## UNIT-III

**Bound States in an Arbitrary Potential:** continuity of wavefunction, boundary condition and emergence of discrete energy levels; application to one-dimensional problem-square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigenfunctions using Frobenius method; Hermite polynomials; ground state, zero point energy & uncertainty principle.

## UNIT-IV

**Quantum theory of hydrogen-like atoms:** time independent Schrodinger equation in spherical polar coordinates; separation of variables for second order partial differential equation; angular momentum operator & quantum numbers; Radial wave functions from Frobenius method; shapes of the probability densities for ground & first excited states; Orbital angular momentum quantum numbers  $l$  and  $m$ ; s, p, d, ... shells.

## UNIT-V

**Atoms in Electric & Magnetic Fields:** Electron angular momentum. Space quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern-Gerlach Experiment. Zeeman Effect: Electron Magnetic Moment and Magnetic Energy, Gyromagnetic Ratio and Bohr Magneton.

**Atoms in External Magnetic Fields:-** Qualitative Discussion: Normal and Anomalous Zeeman Effect, Paschen Back and Stark Effect.

### Suggested Books:

1. A Text book of Quantum Mechanics, P.M. Mathews and K.Venkatesan, 2nd Ed., 2010, McGraw Hill
2. Quantum Mechanics, Robert Eisberg and Robert Resnick, 2nd Edn., 2002, Wiley.
3. Quantum Mechanics, Leonard I. Schiff, 3rd Edn. 2010, Tata McGraw Hill.
4. Quantum Mechanics, G. Aruldas, 2nd Edn. 2002, PHI Learning of India.
5. Quantum Mechanics, Bruce Cameron Reed, 2008, Jones and Bartlett Learning.
6. Quantum Mechanics: Foundations & Applications, Arno Bohm, 3rd Edn., 1993, Springer
7. Quantum Mechanics for Scientists & Engineers, D.A.B. Miller, 2008, Cambridge University Press

**Course Outcomes:** After completion this course, student shall be able to-

- CO1: Explain the microscopic phenomena, quantum theory formulation through Schrodinger equation, and understand the Operator Mechanism in Quantum Mechanics
- CO2: Interpret the wave function of quantum particle and probabilistic nature of its location, construction of Gaussian wave packet.
- CO3: Demonstrate the quantum behavior of a particle under various potential conditions, phenomena of quantum harmonic oscillator in terms of Hermite polynomials.
- CO4: Learn the techniques of separation of variables, and concept of theory of angular Momentum and its application to Hydrogen-like Atom for its spectrum analysis.
- CO5: Interpret the influence of electric and magnetic fields on atoms in understanding Stark effect and Zeeman Effect respectively.

CO4	H	M	M	M					L
CO5	M		L						

H = Highly Related; M = Medium L = Low

### QUANTUM MECHANICS LAB

**CODE: BPH076A**

**CREDIT: 1**

Student has to perform ten programs/simulations out of the followings:

1. To write programme to evaluate scalar potential due to electric charge.
2. To compute and plot electric potential due to two point charges.
3. To plot electric field vector due to electric charge(s).
4. To write programme to evaluate Schrödinger's equation of motion.
5. To write a program to calculate the energy eigen values for harmonic oscillator (first 3 energies)
6. To write programme to evaluate Heisenberg's equation of motion.
7. To write a program to calculate probability of quantum mechanical tunneling.

*Use C/C++/Scilab for solving the following problems based on Quantum Mechanics like-*

8. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the hydrogen atom:

$$\frac{d^2 y}{dx^2} = A(r)u(r), \text{ where } A(r) = \frac{2m}{\hbar^2} [V(r) - E] \text{ and } V(r) = \frac{-e^2}{r}$$

Here, m is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wavefunctions. Remember that the ground state energy of the hydrogen atom is  $\approx -13.6$  eV. Take  $e = 3.795$  (eVÅ)<sup>1/2</sup>,  $\hbar c = 1973$  (eVÅ) and  $m = 0.511 \times 10^6$  eV/c<sup>2</sup>.

9. Solve the s-wave radial Schrodinger equation for an atom:

*Handwritten signatures and names:*  
 Dr. Nishant B. Raw  
 Dr. Pranav Saxena  
 Chaudhary  
 Dr. Abhishek Sharma

$$\frac{d^2 y}{dx^2} = A(r)u(r), \text{ where } A(r) = \frac{2m}{\hbar^2} [V(r) - E] \text{ and } V(r) = \frac{-e^2}{r} e^{-r/a}$$

where  $m$  is the reduced mass of the system (which can be chosen to be the mass of an electron). Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits. Also, plot the corresponding wavefunction. Take  $e = 3.795 \text{ (eV}\cdot\text{\AA)}^{1/2}$ ,  $m = 0.511 \times 10^6 \text{ eV}/c^2$ , and  $a = 3 \text{ \AA}, 5 \text{ \AA}, 7 \text{ \AA}$ . In these units  $\hbar c = 1973 \text{ (eV}\cdot\text{\AA)}$ . The ground state energy is expected to be above  $-12 \text{ eV}$  in all three cases.

10. Solve the s-wave radial Schrodinger equation for a particle of mass  $m$ :

$$\frac{d^2 y}{dx^2} = A(r)u(r), \text{ where } A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

$$\text{For the anharmonic oscillator potential } V(r) = \frac{1}{2}kr^2 + \frac{1}{3}br^3$$

for the ground state energy (in MeV) of particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose  $m = 940 \text{ MeV}/c^2$ ,  $k = 100 \text{ MeV fm}^{-2}$ ,  $b = 0, 10, 30 \text{ MeV fm}^{-3}$ . In these units,  $\hbar c = 197.3 \text{ MeV fm}$ . The ground state energy  $I$  expected to lie between 90 and 110 MeV for all three cases.

11. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule:

Where  $\mu$  is the reduced mass of the two-atom system for the Morse potential

$V(r) = D(e^{-2\alpha r'} - e^{-\alpha r'})$ ,  $r' = \frac{r - r_0}{r_0}$ . Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function.

Take:  $m = 940 \times 10^6 \text{ eV}/c^2$ ,  $D = 0.755501 \text{ eV}$ ,  $\alpha = 1.44$ ,  $r_0 = 0.131349 \text{ \AA}$

### Suggested Books

1. An introduction to computational Physics, T.Pang, 2nd Edn., 2006, Cambridge Univ. Press
2. Simulation of ODE/PDE Models with MATLAB®, OCTAVE and SCILAB: Scientific &
3. Engineering Applications: A. Vande Wouwer, P. Saucez, C. V. Fernández. 2014 Springer.
4. Scilab (A Free Software to Matlab): H. Ramchandran, A.S. Nair. 2011 S. Chand & Co.
5. A Guide to MATLAB, B.R. Hunt, R.L. Lipsman, J.M. Rosenberg, 2014, 3rd Edn., Cambridge University Press
6. Scilab Image Processing: L.M. Surhone. 2010 Betascript Publishing ISBN: 978-6133459274

**Course Outcomes:** After completion this course, student shall be

- CO1: Acquire the skill of doing computational programming using software and languages.  
 CO2: Demonstrate the nature of potential and fields due to a isolated charge by simulations.  
 CO3: Understand the fundamentals of quantum mechanics through simulations and able to demonstrate the techniques for estimating the ground state energy, wave functions and simple harmonic oscillator using Schrodinger equations.  
 CO4: Breakdown the quantum mechanical problems of one dimensional and three dimensional potentials, and Hydrogen like atoms.

# ADVANCED MATERIALS

Credits: 4

CODE: BPH093A

## Unit I

**Photonic Materials:** Need for New Photonic Materials, composite materials for nonlinear optics, nanostructured waveguides for nonlinear optics quantum and nonlinear optics for advanced imaging applications.

**Spintronic Materials:** Modelling the growth of Mn on semiconductor substrates, Dilute magnetic semiconductor nanocrystals, Advances in wide bandgap materials for semiconductor spintronics

## Unit II

**Plasmonics:** Metallic Nanoparticles and Nanorods, Metallic Nanoshells. Local Field Enhancement, Subwavelength Aperture Plasmonics, Plasmonic Wave Guiding. Applications of Metallic Nanostructures. Radiative Decay Engineering

## Unit III

**Smart Materials and Systems:** Thermoresponsive materials, piezoelectric materials, electrostrictive and magnetostrictive materials, Magnetic materials, superparamagnetism in metallic nanoparticles, Giant and colossal magnetic materials, ferrofluids, ER and MR fluids, biomimetic materials, smart gel, shape memory alloys and polymers.

## Unit IV

**Advanced Materials:** Bimetallic Catalysts, Graphite Intercalation Compounds as catalysts, Carbides, Nitrides, and Borides for Catalysis, Complex Catalysts on Inorganic Supports. Zeolite Structures as Drug Delivery Systems and Biomedical applications.

## Unit V

**Nanomaterials:** Amorphous, Crystalline, microcrystalline, quasicrystalline and nanocrystalline materials- historical development of nanomaterials, Nanomaterials classification (Gleiter's Classification) properly changes done to size effects, Hall - petch, inverse Hall- petch effects, polymeric nanostructures

**Zero and 1 Dimensional Nanomaterials:** Nanoparticles - Properties - Processing - Liquid state processing - Sol-gel process, wet chemical synthesis - Vapour state processing - PVD, CVD, Aerosol processing, solid state processing, Application of nanoparticles. Carbon nanotubes: Structure of CNT and classification - Processing - Solid carbon based production techniques.

## Suggested Books

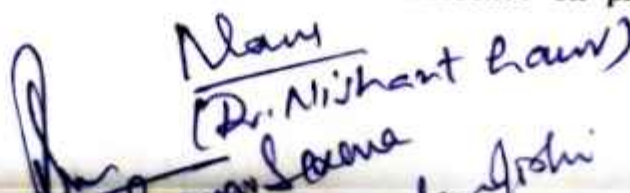

1. Solid State Physics, A. J. Dekkar, Prentice Hall Inc.

## ADVANCED MATERIALS - SEMINAR

CODE: BPH094A

Credit: 1

### Method of Evaluation:

During the seminar session each student is expected to prepare and present a topic on advance materials or latest ongoing research on smart materials, for duration of about 15 minutes. Each student is expected to present at least twice during the semester and the student is evaluated based on that. At the end of the semester, he / she can submit a report on his / her topic of seminar and marks are given based on the report.

**Course Outcomes:** After this course student shall be able-

CO1: To use various teaching aids such as projectors, power point presentation and demonstrative models

CO2: To review, prepare and present scientific article or a review articles or a publishable research articles

CO3: Develop their analyzing skill, learn the skill to work in team, helps them to face the placement interviews.

CO4: Prepare themselves for their appropriate role in contributing towards the welfare of Society and hence in national development.

## Renewable and Electrochemical Energy Storage Materials

Code: BPH132A

Credit: 4

### UNIT-I

**Solar Energy and Solar Cells:** Solar Spectrum, Solar constant, Passive conversion –Materials for Renewable energy conversion, Photovoltaics- Silicon (Si) solar cells, Crystalline/ Semicrystalline/ Amorphous Si solar cells, Thin film solar cells.

### UNIT-II

**Photoelectrochemical and Organic cells:** Semiconductor electrochemistry - Photo electrolysis, photochemical cells, photo catalysis, Mechanism- electron transfer: Factors affecting electron transfer. Organic solar cells- bilayer, Bulk heterojunction, polymer solar cells, perovskite based solar cells, hybrid solar cells. Efficiency; limiting factors

### UNIT-III

**Batteries:** Primary and Secondary cells, Chemistry and materials used in Leclanche/Dry/Alkaline cell, Silver cell, Mercury cell, Lead-acid battery; Ni-Cd battery, Ni Metal Hydride (Ni-MH) battery, Ni-Hydrogen battery, Lithium-ion/Lithium-polymer/ Li-S battery, Metal-air batteries and its applications; Charge-Discharge characteristics, Energy/power density, overcharging, Mechanics of battery cells and materials, Manufacturing of batteries. Battery safety and Abuse tolerance, Coupling with other energy storage devices

### UNIT-IV

**Super/Ultracapacitors:** Fundamentals of Electrochemical Supercapacitors, Electrode and electrolyte interfaces and their capacitances, Charge-Discharge characteristics, Energy/power density, Design, Fabrication, operation and evaluation, Thermal management; Supercapacitor stack manufacturing and construction, Coupling with batteries and fuel cells; Applications

### UNIT-V

**Fuel cells:** Overview of key fuel cell technologies- various types of fuel cells, materials for electrodes, catalyst, electrolytes and other components, working mechanisms, hydrogen generation and storage; limitations, recent progress in fuel cells.

### Suggested Books:

1. B.K. Hodge, Alternate Energy Systems and Applications, John Wiley & sons, Inc., 2010.

**Course Outcome:** On completion of the course, the students shall be

- CO1:** Equipped with the awareness, understanding the importance of switching to renewable energy sources for future energy needs.
- CO2:** Able to demonstrate the knowledge of materials for renewable energy conversion and technologies
- CO3:** To discuss the performance characteristics and manufacturing techniques of batteries
- CO4:** To understand the electrochemical supercapacitors, design, fabrication, operation and analysis of electrochemical energy storage systems
- CO5:** Acquire the knowledge of various fuel technologies to develop materials for energy storage systems

## Renewable and Electrochemical Energy Storage Materials – SEMINAR

Code: BPH133A

Credit: 1

### Method of Evaluation:

During the semester, each student is expected to prepare and present a seminar on topics from Renewable and Electrochemical Storage materials, for duration of about 20 minutes. Each student is expected to present the progress at least twice during the semester (insem exam) and the student is evaluated based on that on account of internal assessment. At the end of the semester, he/she has to present extensive seminar cumulatively and submit a comprehensive report on assigned topics and assessment will be done accordingly.

**Course Outcomes:** After this course student shall be able-

- CO1: understand the environmental impacts of current energy utilization and the importance of switching to the renewable and electrochemical energy sources for a sustainable future.
- CO2: to demonstrate the knowledge of available materials and technologies for tapping renewable and electrochemical energy resources.
- CO3: to explore the processes of production and applications of electrochemical energy storage systems.

## Science of Materials – SEMINAR

Code: BPH134A

Credit: 1

### Method of Evaluation:

During the semester, each student is expected to prepare and present a seminar on topics from the courses they are taught including mechanical and electrical properties of materials important to their use in various engineering and research fields for duration of about 20 minutes. Each student is expected to present the progress at least twice during the semester (insem exam) and the student is evaluated based on that on account of internal assessment. At the end of the semester, he/she has to present extensive seminar cumulatively and submit a comprehensive report on assigned topics and assessment will be done accordingly.

**Course Outcomes:** After this course student shall be able-

**CO1:** to recognize the important aspects of the materials used in modern research and engineering applications.

**CO2:** to explain the underlying principle of materials science: "structure leads to properties.

**CO3:** to identify the role of thermally activated processes in many of these important things.

# COMPOSITE MATERIALS

CODE: BPH103A

Credits: 4

## UNIT I

**Introduction to Nanocomposites** Definition of composite material, Classification based on matrix and topology, Constituents of composites, Interfaces and Interphases, Distribution of constituents, Nano-composites. Advantage of composite materials, mechanical properties, Thermal, electrical and electronic and optical properties. Super hard nanocomposites-designing and mechanical properties - stress-strain relationship, toughness, strength, and plasticity.

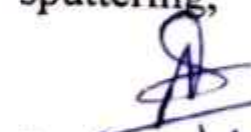

## UNIT II

**Ceramic Nanocomposites** Ceramic based nanoporous composites, metal matrix nanocomposites, natural nano-biocomposites, bio-mimetic nanocomposites and biologically inspired nanocomposites, nanocomposites for hard coatings, DLC coatings, thin film nanocomposites, modelling of nanocomposites, synthesis of various nanocomposites materials, sputtering, mechanical alloying.

## UNIT III

  
Prof. Y.K. Vijay

  
Nash  
(Dr. Nishant Lax)  
  
Dr. Chandrajoshi  
(Dr. Chandrajoshi)

  
Dr. Abhishek

**Polymer Nanocomposites** Introduction to polymer composites, Processing of nanoparticles, binding mechanisms in nanoparticles, dispersion of nanoparticles, and stabilization of nanoparticles. Processing and fabrication of polymer nanocomposites, Melt blending, solvent casting, In-situ polymerization, solution polymerization, template synthesis, high shear mixing. Homogeneous/heterogeneous nucleation, plasma promoted nucleation.

#### UNIT IV

**Natural Nanocomposites:** Spider silk, bones, shells; organic-inorganic nanocomposite formation through self-assembly. Biomimetic synthesis of nanocomposite material; use of synthetic nanocomposites for bone teeth replacement. Bioactive nanocomposites in bone grafting and tissue engineering, inorganic/polymer nanocomposites for dental restoration and bone replacement applications.

#### UNIT V

**Bio ceramics** for implant coating Calcium phosphates-hydroxyapatites Ti6Al4V and other biomedical alloys, implant tissue interfacing-metal organic CVD-use of tricalcium phosphate-biomimetic and solution based processing- osteoporosis- osteo plastic, regeneration of bones by using bio compatible ceramics, bio interactive hydro gels- PEG coating and surface modifications, PEG hydrogels patterned on surfaces- PEG based hydrogels.

#### Suggested Books:

1. Strong, A.B., "Fundamentals of Composite Manufacturing", SME, 1989
2. Sharma, S.C., "Composite materials", Narosa Publications, 2000.
3. Chawla K. K., "Composite materials", Second Edition, Springer – Verlag, 1998
4. P.M. Ajayan, L.S. Schadler and P.V. Braun, "Nanocomposite Science and Technology" WileyVCH GmbH Co. 2003.
5. Ed A.D. Pomogailo and V.N.Kestelman, "Metalopolymer Nanocomposites", Springer-Verlag, 2005. 4.
6. Kenneth E.Gonsalves, Craig R. Halberstadt, Cato T. Laurencin, Lakshmi S. Nair, "Biomedical nanostructures" John-Wiley & Sons, 2008.
7. Steven S Saliterman, Fundamentals of Bio-MEMS and Medical Microdevices, 2006

**Course Outcomes:** After completion this course, students shall be able to-

CO1: Learn the basic concept and classification of composite materials with their properties.

CO2: Acquire the knowledge in various ceramics metal composites and its processing methods.

CO3: Learn the knowledge in polymer based composites and its processing methods.

CO4: Demonstrate the knowledge of Natural and Bio composite materials and its importance to society.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES

## COMPOSITE MATERIALS LAB

CODE: BPH104A

Credit:1

Student has to perform the following experiments through demonstrations-

1. Preparation of Continuous Fiber reinforced Polymer Composites
2. Preparation of Dis-Continuous Fiber reinforced Polymer Composites
3. Study of Tensile strength and young's modulus of FRP composites
4. Study of Flexural strength of FRP composites
5. Study of Hardness of FRP composites
6. Study of drop weight impact testing
7. Preparation of Al-SiC composites by stir casting method
8. Study of microstructure, hardness and density of Al-SiC composite
9. Study of Tensile strength of Al-SiC composites
10. Environmental Testing (Humidity and temperature)

**Course Outcomes:** After completion this course, student shall be able to-

CO1: Learn the fabrication processes of different composite materials and the mechanical characterization of these materials.

CO2: Acquire the knowledge of preparing the composite materials.

CO3: Demonstrate the structural properties of composite materials.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES

Course Outcomes	Program Outcomes (POs)								
	I	II	III	IV	V	VI	VII	VIII	IX
CO1	H		M	M					
CO2	M	H	L	M					L
CO3	M	H	L						L

H = Highly Related; M = Medium L = Low

## GALAXIES AND UNIVERSE

CODE: BPH105A

Credits: 4

### UNIT I

**The Milky Way:** Basic Structure and Properties of the Milky Way, Nature of Rotation of the Milky Way (Differential Rotation of the Galaxy and Oort Constant, Rotation Curve of the Galaxy and the Dark Matter, Nature of the Spiral Arms), Stars and Star Clusters of the Milky Way, Properties of and around the Galactic Nucleus.

### UNIT II

**Classification of Galaxies:** Galaxy Morphology, Hubble's Classification of Galaxies, Elliptical Galaxies (The Intrinsic Shapes of Elliptical, de Vaucouleurs Law, Stars and Gas). Spiral and Lenticular Galaxies (Bulges, Disks, Galactic Halo) The Milky Way Galaxy, Gas and Dust in the Galaxy, Spiral Arms, Active Galaxies.

### UNIT III

**Principles of Relativity:** Overview of Special Relativity-Space time interval and Lorentz metric four vectors, Introduction to general relativity (GR) - equivalence principle - notions of curvature - gravitation as a manifestation of the curvature of space time. Curved surfaces. Schwarzschild solution; Gravitational red shift, the bending of light and gravitational lensing.

Prof. V. K. V. V.

Dr. Nirhant Kumar

Dr. Sandeep Kumar

Dr. Abhishek Kumar

# COMPUTATIONAL MATERIAL SCIENCE

CODE: BPH111A

Credits: 4

## UNIT I

**Introduction** A Brief History of the Finite Element Method - Basic Steps in the Finite Element Method- Theory vs Computer Applications of FEA. Matrices - basic matrix problems, Simultaneous linear algebraic equations - Basic problems. Nodes-Elements-Types of Elements- Element Characteristics

## UNIT II

**One Dimensional Problem:** Discretization - Local and global Numbering- Approximate functions- Coordinate systems-Shape Functions - Two node Linear: bar and link element. Trusses & Beams- Finite element formulation - Solid Mechanics problems on Bar, Shaft, Stepped Shaft, Tapper shaft and Trusses - Heat Transfer Problems on Fin and Composite Wall.

## UNIT III

**Dimensional Problems:** Introduction- Plane Stress - Plane Strain - Triangular Elements - Coordinate System - Shape; Function -Finite Element Formulation - Rectangular Elements -Coordinate System - Shape; Function -Finite Element Formulation- Axisymmetric Elements- Coordinate System - Shape; Function -Finite Element Formulation. Elements used by any finite element analysis (FEA)

## UNIT IV

**Dynamic Analysis:** Introduction - Basic Equations in Vibration -Types of Vibration- Mass matrices - Undamped free vibration -Finite Element Formulation (2node 1D element)

## UNIT V

**Selected Applications in Materials Science:** Materials modeling and simulation across the length scale and applications: Modeling property prediction through first principle calculations. Monte Carlo Method for simulating nucleation and growth of grains in materials.

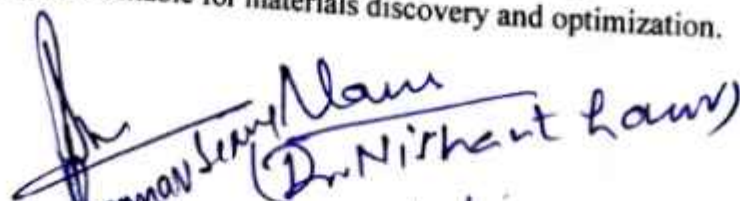

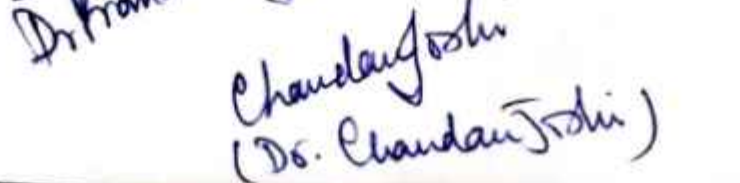

### Suggested Books:

1. Erdogan Madenci and Ibrahim Guven, The Finite Element Method And Applications In Engineering Using ANSYSR, The University of Arizona 2006, Springer Science Business Media, LLC
2. Robert D.Cook, Finite Element Modeling for Stress Analysis, John Wiley & Sons, Inc. 1995.
3. Saeed Moaveni, "Finite Element Analysis Theory and Application with ANSYS", Prentice Hall, Upper Saddle River, New Jersey, 2008
4. Bathe K.-J. and Wilson E. L. Numerical Methods in Finite Element Analysis. - Prentice-Hall, Inc., 1976.
5. Dierk Raabe, Computational Materials Science-The Simulation of Materials Microstructures and Properties, WILEY-VCH Verlag GmbH. 1998.
6. Rao S. S. The Finite Element Method in Engineering. - Pergamon Press, 1989.

**Course Outcomes:** After completion this, student shall be able to

- CO1: Gain an understanding of the theory behind computations and various tools relevant to the design of future materials
- CO2: Use of Mathematical equation to predict the properties of materials
- CO3: Use the software for better understanding of dynamical analysis of materials
- CO4: Become aware of the various tools available for materials discovery and optimization.

## COMPUTATIONAL MATERIALS SCIENCE LAB

CODE: BPH112A

Credit: 1

### A. SIMULATION

1. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and two Variables
2. Use of Matlab to solve simple problems in vibration
3. Mechanism Simulation using software

### B. ANALYSIS

1. Force and Stress analysis using link elements in Trusses, cables etc.
2. Stress and deflection analysis in beams with different support conditions.
3. Stress analysis of flat plates and simple shells.
4. Stress analysis of axi – symmetric components.
5. Thermal stress and heat transfer analysis of plates.
6. Thermal stress analysis of cylindrical shells.
7. Vibration analysis of spring-mass systems.
8. Model analysis of Beams.
9. Harmonic, transient and spectrum analysis of simple systems

**Course Outcomes:** After completion this course, student shall be able to

CO1: Learn the software tools needed to analyze the dimensional problems of materials

CO2: have the exposure to different applications of simulation and analysis tools.

CO3: Make use of software for simulation and analysis for various applications

# MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES

8. Write a program using 8085 to arrange the number in ascending and descending order to check numbers 1's and 0's in a given number
9. Write a program using 8085 to find GCD of two numbers
10. Write a program using 8085 to find LCM of two numbers
11. Write a program using 8085 to add N two digit BCD numbers
12. Write a program to interface Keyboard with 8085.
13. Write a program to interface Temperature measurement module with 8085.
14. Interfacing of 8051 microcontroller with various display devices
15. Interfacing of 8051 microcontroller with Analog-to-Digital and Digital-to-Analog converter.
16. Interfacing of 8051 microcontroller with DC motor.
17. Write a program for Traffic light Control using 8051.
18. Write a program for Elevator control using 8051.

#### Suggested Books:

1. Embedded Systems: Architecture, Programming & Design, R.Kamal, 2008, Tata McGraw Hill
2. The 8051 Microcontroller and Embedded Systems Using Assembly and C, M.A. Mazidi, J.G.Mazidi, and R.D. McKinlay, 2nd Ed., 2007, Pearson Education India.
3. Embedded Microcomputer System: Real Time Interfacing, J.W.Valvano, 2000, Brooks/Cole
4. Embedded System, B.K. Rao, 2011, PHI Learning Pvt. Ltd

**Course Outcomes:** After completion this course, student shall be able to-

CO1: Acquire the knowledge of microprocessor based system performance.

CO2: Demonstrate the operation of microcontrollers and their role in I/O port programming.

CO3: Learn the arithmetic operations, ADC, DAC and microcontroller based system.

## MATERIAL CHARACTERIZATION LAB

CODE: BPH119A

Credit: 1

Student has to perform the following experiments-

1. Production and measurement of X- Rays: (i) Study the effect of Voltage and current on spectra (ii) Study the effect of filters
2. Phase identification by XRD: Study about the about phase identification of different samples through XRD analysis
3. Indexing Powder Method: (i) To determine the lattice parameters of powder specimen, (ii) Determine precisely lattice parameters of these samples by using extrapolation curve fittings
4. Indexing of Diffraction Patterns (Ring Pattern & Spot Pattern)
5. Basics of Scanning Electron Microscopy: Secondary Electron and BSE imaging mode
6. Feature Size measurement: Porosity, Grain, and Reinforcement
7. Effect of Beam voltage on conducting and insulating samples
8. Basic operations of Transmission Electron Microscope (Imaging and Diffraction Pattern)
9. Electron Diffraction for various materials
10. Sample Preparation for TEM analysis (Bulk metal, Powder sample, Brittle material)
11. Cross-sectional Sample Preparation
12. To study the operating principle of Atomic Force Microscopy (AFM) and its usefulness.
13. Surface topography of materials (Metallic and ceramic) using AFM to estimate the level of roughness.
14. To study and obtain the high resolution images of CNT coated with Sn- based materials using AFM.
15. Magnetic Material characterization via Hysteresis

### Suggested Books:

1. Characterization of Nanostructure materials by XZ.L.Wang, Instrumental Methods of Analysis, 7th edition- Willard, Merritt, Dean, Settle
2. Scanning Probe Microscopy: Analytical Methods (NanoScience and Technology)-Roland Wiesendanger
3. X-Ray Diffraction Procedures: For Polycrystalline and Amorphous Materials, 2nd Edition Harold P. Klug, Leroy E. Alexander
4. Transmission Electron Microscopy: A Textbook for Materials Science (4-Vol Set)- David B. Williams and C. Barry Carter
5. Physical Principles of Electron Microscopy: An Introduction to TEM, SEM, and AEM - Ray F. Egerton.

**Course Outcomes:** After this course student shall be able-

- CO1: Understand the physics behind the various metallographic techniques.  
CO2: Describe the principle, construction and working of XRD techniques and analysis the X-ray diffraction data  
CO3: Describe the principle, construction and working of various electron microscopies.

## PLANETARY AND ATMOSPHERIC SCIENCE

CODE: BPH120A

Credits: 4

### UNIT-I

Overview of Solar system: Dynamics: Two-body problem, Three-Body Problem (Lagrangian points) - Resonances - Tidal forces - Solar energy balance and transport: Radiative Equilibrium

### UNIT-II

**Planetary Atmospheres:** Structure, Composition, Atmospheric Escape - Planetary surfaces: Surface morphology - Impact cratering; Minor Bodies: Meteorites, Asteroids, Comets, Minor planets, Trans-Neptunian Objects, Centaurs - Planetary rings

### UNIT-III

**Planet Formation:** Evolution of protoplanetary disks, Growth of solid bodies, Formation of Terrestrial and Giant planets, Extrasolar Planets: Detection techniques, Estimating planetary masses, sizes, orbital parameters Habitable zones: factors influencing habitable zone, continuously habitable zone, Missions to study Planets and Overview of Extrasolar planet

### UNIT-IV

**Atmosphere:** The Neutral atmosphere, atmospheric nomenclature, geopotential height, expansion and contraction, fundamental forces in the atmosphere, apparent forces, atmospheric composition, solar radiation interaction with the neutral atmosphere, climate change, atmospheric aerosols.

### UNIT-V

**Atmospheric Waves and Detection:** Surface water waves, wave dispersion, acoustic waves, buoyancy waves, propagation of atmospheric gravity waves (AGWs) in a nonhomogeneous medium, Qualitative idea of Lamb waves, Rossby waves; Various type of atmospheric radars, Application of radars to study atmospheric phenomena, Lidar and its applications, Application of Lidar to study atmospheric phenomenon.

### Suggested Books:

1. Planetary Sciences by Imke de Pater and Jack J. Lissauer, 2015
2. Exoplanetary Atmospheres: Theoretical Concepts and Foundations by Kevin Heng, 2017
3. Introduction to Astrochemistry: Chemical Evolution from Interstellar Clouds to Star and Planet Formation by Satoshi Yamamoto, 2017
4. Fundamental Planetary Science: Jack Lissauer & Imke de Pater (Latest Edition) - Cambridge University Press
5. Physics of the Upper Atmosphere edited by J. A. Ratcliffe, Cavendish Laboratory, University of Cambridge. Academic Press New York and London (1960).
6. Source book on the Space Sciences - Samuel Glasstone, Princeton, New Jersey.
7. Introduction to Ionospheric Physics - Henry Rishbeth and Owen K. Garriot.
8. Climatology, An atmospheric Science - John E. Oliver and John J. Hindore.

# FUNDAMENTALS OF POLYMER SCIENCE

CODE: BPH126A

Credits: 4

## Unit-I

**Basic concepts** - Molecular forces - chemical bonding - Molecular weight studies - molecular weight distribution-configuration-conformation-Tacticity-Transitions in polymers-viscoelasticity-types of macromolecules-classification of polymers.

## Unit-II

**Structure and Mechanical properties:** Crystalline nature of polymers, factors affecting crystallization, crystallization and melting, melting: factors affecting. The glassy state and glass transition. Tensile, flexural, compressive, abrasion, endurance, fatigue, hardness, tear, resilience, impact, toughness.

## Unit-III

**Mechanism of Polymers:** General characteristics of chain growth polymerisation, initiators, generation of initiators, free radical, anionic and cationic polymerization, ring opening polymerization, General characteristics of step growth polymerization, mechanism of step growth polymerization, coordination polymerization.

**Polymerization techniques:** Homogeneous polymerization techniques- Bulk, Solution, Heterogeneous polymerization techniques- Emulsion, Suspension, solid phase polymerisation.

## Unit-IV

**Polymer solutions:** Thermodynamics of polymer solutions, Solution properties of polymers, Solubility parameter, Conformation of polymer chains in polymer solutions, Flory-Huggins theory, Flory-Krigbaum theory, Solution viscosity, Osmotic pressure, Molecular size and molecular weight.

**Polymer Degradation :** Types of degradation: Thermal, mechanical, ultrasonic and photodegradation, oxidative and hydrolytic degradation, Biodegradable polymers.

## Unit-V

**Industrial Polymers:** Production, properties and applications of industrial polymers; PP, PE, PVC, PS, polyamide, polyacrylates, polyester (PET, PBT). General purpose rubbers: NR, SBR, NPR, EPDM etc.

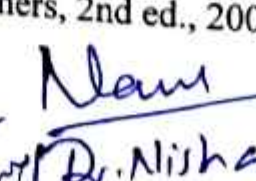

**Electrically and Photoactive Polymers:** Conjugated polymers, intrinsically conductive polymers, Polymers with piezoelectric, pyroelectric and ferroelectric properties, Polymers in insulators, telecommunications and FET. Photo conducting polymers, polymers used in optical applications, photo resists and semiconductor fabrication, Light emission in polymers, Semi conducting materials as light emitting materials.

## Suggested Books:

1. F. W. Billmeyer, Textbook of polymer science, 3rd ed., John Wiley & Sons, Asia, New Delhi, 1994.
2. G. Odian, Principles of Polymerization, 4th ed., Wiley-Interscience, 2004
3. R. J Young and P. A. Lovell, Introduction to Polymers, 2nd ed., 2004

  
Prof. Y. K. Vijay

Chandak

  
Dr. Ashish

4. P. Gosh, Polymer Science and Technology, Mc-Graw Hill, 2002.
5. Robert William Dyson, Speciality Polymers, 2nded., Blackie Academic & Professional, 1998
6. Manas Chanda, Salil K. Roy, Industrial Polymers, Specialty Polymers, and their Applications, CRC Press, 2008
7. Johannes Karl Fink, Hand book of Engineering and Specialty Polymers, John Wiley & Sons, Vol.2, 2011.

**Course Outcomes:** After completion this course, student shall be

- CO1: Able to understand the importance of the polymers as an important class of materials  
 CO2: Able to acquire the basic knowledge, structure-property relationship and mechanical properties of polymers.  
 CO3: Able to learn the mechanism and techniques for synthesis of polymers with specified properties.  
 CO4: Able to understand the basics of polymers solutions and possible ways of degradation.  
 CO5: Aware of the potential of polymers in electric, electronic, optical and structural applications.

### FUNDAMENTALS OF POLYMER SCIENCE - SEMINAR

CODE: BPH127A

Credit: 1

#### Method of Evaluation:

During the semester, seminar session of each student is expected to prepare and present a topic on advance materials or latest ongoing research on smart materials, for duration of about 15 minutes. Each student is expected to present at least twice during the semester and the student is evaluated based on that on account of internal assessment. At the end of the semester, he / she has to produce a comprehensive report on his / her topic of seminar and assessment will be done.

**Course Outcomes:** After this course student shall be able-

- CO1: To use various learning aids such as computer, e-resources, tools for presentation and demonstrative models.  
 CO2: To develop the critical analyzing skill to review, prepare and present scientific review articles or a publishable article.  
 CO3: To develop a professional approach and ability to work in team or individual to compile the project/seminar with meaningful outcomes.

## ASTRONOMICAL TECHNIQUES

CODE: BPH128A

Credits: 4

### UNIT-I

**Telescope:** Types of telescopes, telescope mounting systems, optical telescopes, Infrared, Ultraviolet, X-ray and Gamma-ray telescopes. Schmidt telescopes. Solar telescopes. Idea of designing and construction of a simple optical telescope. Sky charts and their importance.

### UNIT-II

**Detectors:** Classification of detectors, characteristics of detectors. Detectors for optical and infrared wavelength regions, working principle of Charge Coupled Device (CCD). Application of CCD for stellar imaging, photometry and spectroscopy.

### UNIT-III

**Photometry:** Astronomical photometry- simple design of an astronomical photometer, Observing technique with a photometer, Correction for atmospheric extinction.

**Spectroscopy:** Astronomical spectroscopy- Spectral classification. Simple design of astronomical spectrograph. Radial velocity measurements.

### UNIT-IV

**Radio Astronomical Techniques:** Electromagnetic spectrum, Radio window, Antenna parameters. Various types of antennas, Qualitative-Non-steerable, partially steerable and fully steerable radio telescopes. construction of a simple radio telescope. Receiver systems and their calibration. Overview - Radio Interferometer, MST Radar for Ionospheric studies.

### UNIT-V

**Optical Techniques:** Ray optical theory of image formation-Paraxial approximation and Doppler shifts; Diffraction theory of image formation- Airy pattern, two point resolution, Rayleigh criterion, Marechal criterion.

**Stellar Interferometry:** Michelson Stellar Interferometer, Fizeau-Stephen Interferometer

### Suggested Books

7. C.R.Kitchin: Astrophysical Techniques (4th edition).
8. Ian S. McLean: Electronic Imaging in Astronomy: Detectors and instrumentation (2nd edition).
9. Steve B. Howell: Handbook of CCD Astronomy (2nd edition).
10. A. E. Roy and D. Clarke: Astronomy Principles and Practice (Part-3, 4th edition).
11. W. A. Hiltner (Ed): Astronomical Techniques.
12. Gordon Walker: Astronomical Observations - an Optical Perspective (Cambridge Univ Press).

**Course Outcomes:** After completing this course, student shall be able to  
CO1: Acquire the detailed knowledge of telescopes and their functionality.

## Materials Synthesis and Characterization – SEMINAR

Code: BPH135A

Credit: 1

### Method of Evaluation:

During the semester, each student is expected to prepare and present a seminar on topics from the various synthesization processes and characterization techniques in detail for the duration of about 20 minutes. Each student is expected to present the progress at least twice during the semester (insem exam) and the student is evaluated based on that account of internal assessment. At the end of the semester, he/she has to present extensive seminar cumulatively and submit a comprehensive report on assigned topics and assessment will be done accordingly.

**Course Outcomes:** After this course student shall be able-

- CO1: To demonstrate the fundamental principles of the synthesis and characterization techniques presented in the course.
- CO2: To understand the requirements for various samples and acquire the sufficient knowledge to operate the instruments used for synthesis and characterization.
- CO3: To learn the ethics for becoming researcher to produce unbiased analysis.

## M. Sc. Physics

### Objectives

Physics being one of the oldest academic disciplines is fundamental and foremost to all natural sciences. It has been influential through advances in its understanding that have translated into new technologies. The story of physics is also about people who thought out of the box. The progress of science, and Physics in particular is rooted in addressing fundamental questions about the Nature and to test the validity of a hypothesis or a physical theory, using a methodical approach to compare the implications of the theory in question with the associated conclusions drawn from experiments and observations conducted to test it.

The M.Sc. Physics course is aimed at imparting a rigorous study program at post graduate level covering both depth and breadth of all relevant areas. The course structure is designed with a due emphasis on wider conceptual base, including experiments and modern computational techniques. The three courses on Quantum Mechanics and one on Quantum Field Theory assure us of comprehensive and futuristic education that can pave way for Upcoming and Cutting Edge Technologies that mushroom from the laboratories of Physics and transform the society of tomorrow. The program aims to train future generations of physicists with specialization in one of the frontier areas of research, e.g. in Astrophysics and Cosmology/ Atomic and Nuclear Physics/ Atmospheric Physics and Weather Science/ Quantum Information Sciences/ Energy Studies etc.

The M.Sc. Physics is a (post) graduate Four Semester Course spanning over two years duration.

- Semester Exchange and Project Work: Students of M.Sc. Physics Course will have a choice of studying one semester (Fourth Semester) at University of Alabama Systems, USA (which has three campuses namely: UA Birmingham, UA Huntsville, and UA Tusculussa). It is pertinent to mention that JECRC University has an academic collaboration with the University of Alabama Systems, USA.

\*\* Alternatively, a student can visit University of Alabama for his/her Project Work as well.

Prof. Deepak Bhatnagar  
(Dr. Manish Gupta)

Alok Pandya  
Chandan Joshi  
(Dr. Chandan Joshi)

MSK  
(Dr. Manish Kumar)

## PEO-I

Graduates will demonstrate proficiency in critical thinking and analysis as they relate to physics problems in core theoretical areas of mechanics, electromagnetism, quantum mechanics, and statistical mechanics.

## PEO-II

Graduates will demonstrate familiarity with the major fields of modern physics research.

## PEO-III

Graduates will demonstrate capability for conducting independent research.

## Program Outcome(PO's)

A postgraduate of the M.Sc. (Physics) Program will demonstrate:

M.Sc Physics students of JECRC University will keep the ability to:

**PO1.Critical Thinking:** Take informed actions after identifying the assumptions that frame our thinking and actions, checking out the degree to which these assumptions are accurate and valid, and looking at our ideas and decisions (intellectual, organizational, and personal) from different perspectives.

**PO2.Effective Communication:** Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.

**PO3. Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings.

**PO4. Effective Citizenship:** Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.

**PO5. Ethics:** Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.

**PO6. Environment and Sustainability:** Understand the issues of environmental contexts and sustainable development.

Prof. Deepak Bhargava

(Dr. Manish Gupta)

(Atlok Panigrahy)

(Dr. Chandan Joshi)

(Dr. Manish Kumar)

**PO7. Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context sociotechnological changes.

**Program Specific Outcome:**

*Programme specific objectives are to:*

**PSO-I** The course structure is designed with a due emphasis on wider conceptual base, including experiments and modern computational techniques.

**PSO-2.** With the importance of "Energy Crisis" in the world, a course on "Energy Studies and Non-Conventional Energy Sources" has been prescribed in the syllabus of M.Sc. III Semester to update the students with problems, challenges and the possible solutions of the energy crisis.

**PSO-3.** The program aims to train future generations of physicists with specialization in one of the frontier areas of research, e.g. in Astrophysics and Cosmology/ Atomic and Nuclear Physics/ Atmospheric Physics and Weather Science/ Quantum Information Sciences/ Energy Studies etc.

## Semester-I

**MPH001B: Classical Mechanics**

**Credit(s):4**

### Unit-I

**Lagrangian and Hamiltonian Dynamics:** Constraints, holonomic and non-holonomic constraints, D'Alembert's Principle and Lagrange's Equation, velocity dependent potentials, simple applications of Lagrangian formulation, Hamilton Principle, Calculus of Variations, Derivation of Lagrange's equation from Hamilton's principle. Extension of Hamilton's Principle for nonconservative and nonholonomic systems, Method of Lagrange's multipliers, Conservation theorems and Symmetry Properties, Noether's theorem. Conservation of energy, linear momentum and angular momentum as a consequence of homogeneity of time and space and isotropy of space.

### Unit-II

Generalized momentum, Legendre transformation and the Hamilton's Equations of Motion, simple applications of Hamiltonian formulation, cyclic coordinates, Routh's procedure, Hamiltonian Formulation of Relativistic Mechanics, Derivation of Hamilton's canonical Equation from Hamilton's variational principle. The principle of least action.

### Unit-III

**Inertia Tensor:** Inertial tensor, Moment and Product of Inertia. Rotational Dynamics. Pseudo forces. Coriolis forces. Similarity transformations.

(Prof. Deepak Bhatnagar)

(Alok Parajya)

(Dr. Manish Kumar)

(Dr. Manish Kumar)

(Dr. Chandan Toolin)

#### Unit-IV

**Canonical transformation, integral invariant of Poincare:** Lagrange's and Poisson brackets as canonical invariants, equation of motion in Poisson bracket formulation. Infinitesimal contact transformation and generators of symmetry, Liouville's theorem, Hamilton-Jacobi equation and its application.

#### Unit-V

**Action angle variable adiabatic invariance of action variable:** The Kepler problem in action angle variables, theory of small oscillation in Lagrangian formulation, normal coordinates and its applications. Orthogonal transformation, Euler's theorem, Eigenvalues of the inertia tensor, Euler equations, force free motion of a rigid body.

#### Suggested Readings

1. Herbert Goldstein, C. Poole, John Safko: Classical Mechanics, Pearson.
2. L. D. Landau and E.M. Lifshitz: Mechanics, Butterworth-Heinemann.
3. A. Raychoudhary: Classical Mechanics, Oxford University Press
4. N. C. Rana and P. S. Joag: Classical Mechanics, Tata McGraw Hill.
5. Ronald L. Greene: Classical Mechanics with Maple, Springer

CO-1 Have a deep understanding of Newton's laws

CO-2 Be able to solve the Newton equations for simple configurations using various methods,

CO-3 to enable student to learn and to apply concepts learnt in this subject in real life.

CO-4 to enable students to learn the idea of Small Oscillations and to explore its further applications and importance in advancement of technologies

CO-5 Understand the foundations of force free motion of rigid body

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1		H			L			L		
CO2				L			M			H
CO3	M								M

MSR  
(Dr. Manish)

CO4					H				H	
CO5		L	M			H		M		

6. H = Highly Related; M = Medium L = Low

## MPH002B: Quantum Mechanics- I

Credit(s):4

### Unit-I

**Linear spaces and Operators:** Vector spaces, Linear independence, Bases, dimensionality and Isomorphisms. Linear transformations, inverses, matrices, similarity transformations, Eigenvalues and Eigenvectors. Inner product, orthogonality and completeness, complete orthogonal set, Gramm-Schmidt orthogonalization procedure, Eigenvalues and Eigenvectors of Hermitian and Unitary transformations, diagonalization. Function space and Hilbert space. Complete orthonormal sets of functions.

### Unit-II

**Structure of Quantum mechanics:** Postulates of QM, Hilbert space; Hermitian and unitary operators; Orthonormality, completeness and closure. Dirac's bra and ket notations. Matrix Representation and change of basis. Operators and observables, significance of eigenvector and eigenvalues, Commutation relation; Uncertainty principle for arbitrary Operators.

### Unit-III

**Quantum Linear Harmonic Oscillator:** Creation and annihilation operators. Occupation number. Quantization of creation and annihilation operators. Number operator. Coherent states and time-evolution of coherent states.

### Unit-IV

**Angular Momentum-I:** Orbital angular momentum and Quantum Mechanics of rotations. Orbital angular momentum operators and their properties. Theory of Hydrogen-like atoms. Quantum Mechanics of rotations. Infinitesimal rotations. Euler angles. Three-dimensional oscillators. Rotation-vibration spectra of diatomic molecules.

### Unit-V

**Angular Momentum-II:** Total angular momentum. Angular momentum operators:  $\hat{J}_x, \hat{J}_y, \hat{J}_z, \hat{J}, \hat{J}^2$  and  $\hat{J}_+, \hat{J}_-$ . Angular momentum eigen-values. Angular momentum matrices corresponding to spin half particles: Pauli's spinors and their properties. Spin angular momentum. Stern-Gerlach experiment. Larmor's precession. Total angular momentum and spin-orbit ( $L-S$ ) coupling. Addition of angular momentum. Clebsch-Gordan coefficients. Selection rules.

(Prof. Deepak Bhatnagar) (Alok Parida) msh  
 (Dr. Manish Cipte) (Dr. Chandan Joshi) (Dr. Manish Kumar)

### Suggested Readings

1. Ashok Das and A.C. Melissinos: Quantum Mechanics- A Modern Approach, Gordon and Breach Science Publishers.
2. Albert Messiah: Quantum Mechanics, Dover Publications
3. L. I. Schiff: Quantum Mechanics, Mc-Graw Hill.
4. Claude Cohen-Tannoudji, Bernard Diu, Frank Laloe: Quantum Mechanics, Wiley.
5. J. J. Sakurai: Modern Quantum Mechanics, Pearson Education.
6. E. Merzbacher: Quantum Mechanics, John Wiley.

CO-1: Understand the fundamentals of Quantum Mechanics specifically the 'Operator Mechanism in Quantum Mechanics'.

CO-2: Understand the 'Premise and Postulates of Quantum Mechanics' and make them understand Dirac's 'Bra and Ket representation'.

CO-3: Understand the theory of 'Quantum Linear Harmonic Oscillator' and 'The Idea of Creation and Annihilation Operators'.

CO-4: Understand- 'Theory of Angular Momentum in Quantum Mechanics' and apply it to 'Hydrogen-like Atom' and 'Spectroscopic Techniques'.

CO-5: Understand and apply the mathematical techniques of 'Total Angular Momentum' including 'selection rules' and 'Clebsch-Gordon Coefficients'.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

H = Highly Related; M = Medium L = Low

Prof. Deepak Bhatnagar (Aalok Paragya) (Dr. Manish Kumar)

Chandanjodhi

Dr. Manish Kumar

**MPH003B: Classical Electrodynamics – I**

**Credit(s):4**

**Unit-I**

**Electromotive force:** Ohm's law, Electromotive force, Motional EMF

**Faraday's law:** Electromagnetic induction, Inductance, Energy in Magnetic fields

**Unit-II**

**Maxwell's equations:** Maxwell equations for Electromagnetic fields in matter and vacuum (by conventional methods), Electro-magnetic waves, Boundary conditions

**Potential formulation:** Four potentials; Divergence-less and curl-less quantities, Gauge transformations, Coulomb's gauge and Lorentz' force, Lorentz' force in potential forms

**Unit-III**

**Electromagnetism (Without Matter and Medium)**

**Relativistic electrodynamics using potential formulation:** Field tensor and Electrodynamics in tensor notations, *Maxwell's equations in potential formulation*, Relativistic transformations of electro-magnetic fields

**Unit-IV**

**Dipole radiations:** Retarded potentials, Electric dipole radiations, Magnetic dipole radiations, Radiation from an arbitrary distribution of charges

**Radiation from a point charge:** Lienard-Wiechert potentials, The fields of a point charge in motion, Power radiated by a point charge

**Unit-V**

**Radiation reaction:** The Abraham-Lorentz' formula, The physical origin of the radiation reaction.

**Special radiative processes:** Bremstrahlung, Synchrotron radiations, Cerenkov radiations.

**Suggested Readings**

1. L. D. Landau & Lifshitz: Classical Theory of Electrodynamics; Pergamon Press.
2. L. D. Landau & Lifshitz: Electrodynamics of continuous media; Pergamon Press.
3. J. D. Jackson: Classical Electro-dynamics; John Wiley.
4. David J. Griffiths: Introduction to Electro-dynamics; Prentice Hall.
5. Panofsky & Phillip: Classical electrodynamics and magnetism

(Prof. Deepak Bhatnagar)

(Alok Pantya)

(Dr. Manish Kumar)

- CO1: Explain classical electrodynamics based on Maxwell's equations including its formulation in covariant form.
- CO2: Solve the electromagnetic problems with the help of electrodynamic potentials and superpotentials, and make a detailed account for gauge transformations and their use
- CO3: Formulate and solve electrodynamic problems in relativistically covariant form in four-dimensional spacetime.
- CO4: Calculate the electromagnetic radiation from localised charges which move arbitrarily in time and space, taking into account retardation effects.
- CO5: Calculate the electromagnetic radiation from radiating systems, like oscillating electric and magnetic dipoles (aerials, localised charge and current distributions)

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Prof. Deepak Bhatnagar (Alok Pantya)

Manish Upde  
(Dr. Manish Upde)

Chandran Joshi  
(Dr. Chandran Joshi)

Manish  
(Dr. Manish Kumar)

**MPH004B: Mathematical Physics**

**Credit(s):4**

**Unit-I**

**Special Mathematical Techniques:** Dirac Delta Function, Green's Function, Gamma and Beta function, Sterling's formula.

**Unit-II**

**Complex Variables:** Functions of complex variable, Limits and continuity, differentiation, Analytical functions, Cauchy- Riemann conditions, Cauchy Integral theorem, Cauchy integral formula, Derivatives of analytical functions, Liouville's theorem, Power series Taylor's theorem, Laurent's theorem, Calculus of residues -poles, essential singularities and branch points, residue theorem, Jordan's lemma, singularities on contours of integration, evaluation of definite integrals. Analytic continuation. Saddle Point Function.

**Unit-III**

**Second Order Differential Equations and Special functions:** Separation of variables-ordinary differential equations, singular points, series solutions leading to Legendre, Bessel, Hermite, Laguerre as solutions. Orthogonal properties and recurrence relations of these functions. Spherical harmonics and associated Legendre polynomials. Hermite polynomials. Sturm-Liouville systems and orthogonal polynomials. Wronskian-linear independence and linear dependence.

**Unit-IV**

**Integral Transforms:** Fourier Transforms: Development of the Fourier integral from the Fourier Series, Fourier and inverse Fourier transform: Simple Applications: Finite wave train, Wave train with Gaussian amplitude, Fourier transform of derivatives, solution of wave equation as an application. Convolution theorem. Intensity in terms of spectral density for quasi monochromatic EM Waves, Momentum representation.

**Unit-V**

**Applications of integral transforms:** Application of Fourier transform to diffraction theory: diffraction pattern of one and two slits. Laplace transforms and their properties, Laplace transform of derivatives and integrals, derivatives and integral of Laplace transform. Convolution theorem. Impulsive function, Application of Laplace transform in solving linear, differential equations with constant coefficient with variable coefficient and linear partial differential equation.

**Suggested Readings**

1. George Arfken: Mathematical Methods for Physicists, Academic Press.
2. L. A. Pipes: Applied Mathematics for Engineers & Physicists, McGraw Hill.
3. Merle C. Potter and Jack Goldberg: Mathematical Methods, PHI.
4. Fredrick W. Byron and Robert W. Fuller: Mathematics of Classical and Quantum Physics,

*(Prof. Deepak Bhatnagar)*

*(Alok Parida)*

*(Dr. Manish Kumar)*

- Dover Publications.  
5. Tulsı Dass and S.K. Sharma: Mathematical Methods in Classical and Quantum Physics, Orient Longman.

CO-1: apply special mathematical function appropriately in solving problems in physics, understand the Dirac Delta and other distributions and be able to derive their various properties  
CO-2: use Fourier transform to obtain the Fourier series of periodic functions in physics; and apply transform methods to solve elementary differential equations of interest in physics and engineering.

CO-3: be fluent in the use of Fourier and Laplace transformations to solve differential equations, apply techniques of complex variables, to the study of special functions of mathematical physics

CO-4: solve partial differential equations with appropriate initial or boundary conditions; and understand Group theory, special unitary groups

CO-5: have confidence in solving mathematical problems arising in physics by a variety of mathematical techniques

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

MPH005B: Classic Experiments in Physics

Credit(s): 12

#### (Ten Great Experiments in Physics)

Students have to perform any ten experiments

1. Frank-Hertz' experiment to determine Planck's constant.

Prof. Deepak Bhattacharya (Dr. Manish Kumar)  
Chandanyoshi

2. *Millican's Oil Drop experiment* to determine  $e/m$  of electron.
3. *Thomson's experiment* to determine  $e/m$  of electron.
4. *Bragg's experiment* of diffraction of X-Ray.
5. *Compton Effect*: Study of Compton scattering of  $\gamma$ -rays.
6. *Faraday's experiment*: Electromagnetic Induction and Laws of Electrolysis.
7. *Joule's experiment*: Determination of mechanical equivalent of heat.
8. *Davisson Germer's experiment*:
9. *Stern-Gerlach experiment*: Study of spin of particles.
10. *Michelson's Interferometer*: Experiment of interference with Michelson's Interferometer.
11. *Hall effect*: To study *Hall effect* and determine *Hall coefficient*.
12. *Foucault's Pendulum*: Determination of time period of rotation of the Earth.

### ***Suggested Readings***

Morris H. Shamos: Great Experiments in Physics, Dover Publications Inc. (New York 1959).

CO-1. How to determine the crystal structure, lattice parameter and crystallite size?

CO-2. Measurement and analysis of various laws of physics.

CO-3. Determination of time period of rotation of the Earth.

CO-4. Determine *Hall effect* and *Hall coefficient*.

### Semester-II

MPH006B: Statistical Mechanics

Credit(s): 4

#### Unit-I

**Elementary Probability Theory:** Preliminary concepts, Random walk problem, Binomial distribution, mean values, standard deviation, various moments, Gaussian distribution, Poisson distribution, mean values. Probability density, probability for continuous variables.

**Extensive and Intensive Variables:** laws of thermodynamics, Legendre transformations and thermodynamic potentials, Maxwell relations, applications of thermodynamics to (a) ideal gas, (b) magnetic material, and (c) dielectric material. The laws of thermodynamics and their consequences.

#### Unit-II

**Statistical Description of System of Particles:** State of a system, microstates, ensemble, basic postulates, behavior of density of states, density of state for ideal gas in classical limit, thermal and mechanical interactions, quasi-static process. Statistical thermodynamics: Irreversibility and attainment of equilibrium, Reversible and irreversible processes. Thermal interaction between macroscopic systems, approach to thermal equilibrium, dependence of density of states on external parameters, Statistical calculation of thermodynamic variables.

#### Unit-III

**Canonical and Grand Canonical Ensembles:** Concept of statistical distribution, phase space, density of states, Liouville's theorem, systems and ensemble, entropy in statistical mechanics. Connection between thermodynamic and statistical quantities micro canonical ensemble, equation of state, specific heat and entropy of a perfect gas, using micro canonical ensemble. Canonical ensemble, thermodynamic functions for the canonical ensemble, calculation of mean values, energy fluctuation in a gas, grand Canonical ensemble, thermodynamic functions for the grand canonical ensemble, density fluctuations.

#### Unit-IV

**Partition Functions and Statistics:** Partition functions, Properties, partition function for an ideal gas & calculation of thermodynamic quantities, Gibbs Paradox, validity of classical approximation, translational, rotational & vibrational contributions to the partition function of an ideal diatomic gas. Specific heat of a diatomic gas, ortho & para Hydrogen. **Maxwell-Boltzmann Gas Velocity and Speed Distribution:** Chemical potential, Free energy and connection with thermodynamic variables, First and Second order phase transition; phase equilibrium.

#### Unit-V

Prof. Deepak Bhattacharya (Dr. Manish Gupta)  
 (Dr. Manish Gupta)  
 (Dr. Chandan Joshi) (Dr. Manish Kumar)

dipole and electric-quadrupole moments; and their comparison with experimental data; configuration mixing; single particle transition probability according to the shell model; selection rules; approximate estimates for the transition probability and Weisskopf units; Nuclear isomerism.

#### Unit-V

**Collective Nuclear Model:** Collective variable to describe the cooperative modes of nuclear motion; Parametrization of nuclear surface; A brief description of the collective model Hamiltonian (in the quadratic approximation); Vibrational modes of a spherical nucleus, Collective modes of a deformed even-even nucleus and moments of, inertia; Collective spectra and electromagnetic transition in even nuclei and comparison with experimental data; Nilsson model for the single particle states in deformed nuclei.

**Nuclear gamma and beta decay:** Electric and magnetic multipole moments and gamma decay probabilities in nuclear system (no derivations), Reduced transition probability, Selection rules; zero-zero transition. General characteristics of weak interaction; nuclear beta decay and lepton capture; electron energy spectrum and Fermi- Kurie plot; Fermi theory of beta decay (parity conserved selection rules Fermi and Gamow-Teller) for allowed transitions; ft-values; General interaction Hamiltonian for beta decay with parity conserving and non conserving terms; Forbidden transitions ,Experimental verification of parity violation; The V-A interaction and experimental evidence.

**MPH012B: Quantum Mechanics-III**

**Credit(s): 4**

**(Relativistic Quantum Mechanics)**

**Unit-I**

**Relativistic Formulation of Quantum Mechanics:** Attempt for relativistic formulation of quantum theory, The Klein-Gordon equation, Probability density and probability current density, solution of free particle KG equation in momentum representation, interpretation of negative probability density and negative energy solutions.

**Unit-II**

Dirac equation for a free particle, properties of Dirac matrices and algebra of gamma matrices, non-relativistic correspondence of the Pauli equation (inclusive of electromagnetic interaction). Solution of the free particle. Dirac equation, orthogonality and completeness relations for

Dirac spinors, interpretation of negative energy solution.

**Unit-III**

**Symmetries of Dirac Equation :** Lorentz covariance of Dirac equation, proof of covariance and derivation of Lorentz boost and rotation matrices for Dirac spinors, Projection operators involving four

(Prof. Deepak Bhatnagar)

(Atalok Pandya)

(Dr. Manish Cipta)

(Dr. Chandan Joshi)

(Dr. Manish Kumar)

momentum and spin, Parity (P), Charge conjugation(C), time reversal (T) and CPT operators for Dirac spinors, Bilinear covariants, and their transformations behaviour under Lorentz transformation, CP, T and CPT, expectation values of coordinate and velocity, involving only, positive energy solutions and the associated problems, inclusion of negative energy solution, Zitterbewegung, Klein paradox.

#### Unit-IV

**The Quantum Theory of Radiation:** Classical radiation field, transversality condition, Fourier decomposition and radiation oscillators, Quantization of radiation oscillator, creation, annihilation and number operators; photon states, photon as a quantum mechanical excitations of the radiation field, fluctuations and the Uncertainty relation, validity of the classical description, matrix element for emission and absorption, spontaneous emission in the-dipole approximation.

#### Unit-V

Rayleigh scattering, Thomson scattering and the -Raman effect, Radiation damping and Resonance fluorescence.

Quantization of identical Bosons.

### Unit-I

**Lattice Vibrations and Thermal Properties:** Interrelations between elastic constants  $C_{11}$ ,  $C_{12}$  and  $C_{44}$  wave propagation and experimental determination of elastic constant of cubic crystal, vibrations of linear mono and diatomic lattices, Determination of phonon dispersion by inelastic scattering of neutrons.

### Unit-II

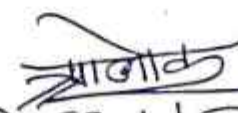

**Band Theory:** Block theorem, Kronig Penny model, effective mass of electrons, Wigner-Seitz approximation, NFE model, tight binding method and calculation of density for a band in simple cubic lattice, pseudo potential method.

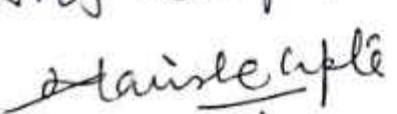

### Unit-III

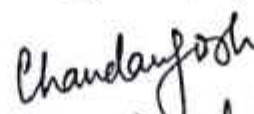

**Semiconductors:** law of mass action, calculation of impurity conductivity, ellipsoidal energy surfaces in Si and Ge, Hall effect, recombination mechanism, optical transitions and Shockley-Read theory excitons, photoconductivity, photo-Luminescence. Point line, planar and bulk defects, colour centres, F-centre and aggregate centres in alkali halides. **Theory of Metals:** Fermi-Dirac distribution function, density of states, temperature dependence of Fermi energy, specific heat, use of Fermi-Dirac statistics in the calculation of thermal conductivity and electrical conductivity, Wiedemann-Franz ratio, susceptibility, width of conduction band, Drude theory of light, absorption in metals.

### Unit-IV

  
 (Prof. Deepak Bhatnagar)

  
 (Aalok Pandya)

  
 (Dr. Manish Gupta)

  
 (Dr. Chandan Joshi)

  
 (Dr. Manish Kumar)

**Magnetism:** Larmor diamagnetism. Paramagnetism, Curie Langevin and Quantum theories. Susceptibility of rare earth and transition metals. Ferromagnetism: Domain theory, Weiss molecular field and exchange, spin waves: dispersion relation and its experimental determination by inelastic neutrons scattering, heat capacity. Nuclear Magnetic resonance: Conditions of resonance, Bloch equations. NMR-experiment and characteristics of an absorption line.

## Unit-V

**Superconductivity:** (a) Experimental results: Meissner effect, heat capacity, microwave and infrared properties, isotope effect, flux quantization, ultrasonic attenuation, density of states, nuclear spin relaxation, Gorter and AC and DC, Josephson tunnelling. (b) Cooper pairs and derivation of BCS Hamiltonian. Results of BCS theory. High  $T_c$  superconductors. Superconductivity at room temperature. Applications of Superconductors: SQUIDS. Cryotrons. Magnetic-Levitation.

**Spin Waves and Plasma:** The idea of plasmons.

### Suggested Readings

1. Charles Kittel, Introduction to Solid State Physics, 7th Edition, John Wiley and Sons, Inc.
2. A. J. Dekkar, Solid State Physics, Macmillan India Limited, 2000.
3. J. S. Blackmore, Solid State Physics, Cambridge University Press, Cambridge.
4. N. W. Ascroft and N. D. Mermin, Solid State Physics, (Harcourt Asia, Singapore 2003).
5. S. O. Pillai, Solid State Physics, Wiley Eastern.

CO1. have an understanding in different approaches to study band structures of solids

CO2. have an understanding of the properties of metals on the basis of the free electron gas models.

CO3. have an understanding of the essence of lattice vibrations and thermal properties.

CO4. have an understanding of magnetic phase transitions and magnetic structure properties and gain basic understanding on magnetic resonance (NMR).

CO5. have an understanding of the basic knowledge on (low temperature) superconductivity in type I and type II super conductors.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

MPH014B: Solar Energy and Energy Studies

Credit(s): 4

#### Unit-I

**Heat conduction:** Differential equation of heat conduction, Initial and boundary conditions. methods of solving heat conduction problems : separation of variable method for one dimension, steady and non steady state method: Theory and measurement of thermal conductivity and thermal diffusivity by transient plane source techniques.

#### Unit-II

**Convective Heat Transfer:** Theory of convective heat transfer, Laminar and turbulent flow, Boundary layer theory. Heat transfer in duct.

**Characteristics of solar Radiation:** Solar radiation at the earth surface, direct, diffuse and global radiation, Elements of solar radiations geomatary, empirical equations for predicting the availability of solar radiations, computation of insulations on a tilted surface. Atmospheric attenuation, solar radiation measurements.

#### Unit-III

**Flat Plate solar collectors:** Selective absorber surfaces. Transparatent plates. Collector energy losses. Thermal analysis of flat plate water and air heating collectors. Collector performance testing. Simple appliances working with flat plate collectors: solar cooker; water heater, air dryer and stills.

#### Unit-IV

**Concentrating collectors:** Optical concentration, flat plate collectors with plane reflectors, cylindrical parabolic concentrating collectors. Tracking requirements.

(Prof. Deepak Bhatnagar)

(Alok Pandya)

(Dr. Manish Gupta)

(Dr. Chandan Joshi) (Dr. Manish Kumar)

**Thermal Energy Storage and Solar Thermal Devices:** Water storage. Stratification of water storage, Packed bed storage. Phase change storage. Chemical storage. Solar pond. Economics of solar energy appliances. Efficiencies in different storages. space conditioning.

#### Unit-V

**Solar space conditioning:** Energy requirements in buildings, Performance and design of Passive system architecture, Absorption refrigeration cycle, Performances of solar absorption air conditioning.

**Essentials of wind energy:** Classifications and Description of Wind machines. Performances of wind machine (solidity factor  $\gamma$  (Lamda); Energy in the wind.

#### Suggested Readings

1. Heat Conduction: M. Necati Ozisik-John Wiley & Sons.
2. Hand Book of Heat transfer Application: Edited by Warren M. Rohsenow, James P. Harnou and Ejup N. Ganic.
3. Conduction of Heat in Solids: H.S., Carslaw and J.C. Jaeger, Oxford Clarendon Press 1959.
4. Heat and Mass Transfer: A Luikov, Mir Publishers Moscow.
5. Thermal conductivity of Solids: J.E. Parrot and Audrey D. Stuckers : Pion Limited, London.
6. Solar energy Thermal Processes : Duffie and Beckman. Wiley & Sons. New York.
7. Solar Energy Engg.: Jui Sheng Haieh, Prentice Hall, New Jersey.

CO-1: explain the principles that underlie the ability of various natural phenomena to deliver solar energy

CO-2: outline the technologies that are used to harness the power of solar energy

CO-3: discuss the positive and negative aspects of solar energy in relation to natural and human aspects of the environment.

CO-4: will design the solar devices and different types of collectors.

CO-5: analyze the different modes of heat transfer.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

Prof. Deepak Bhatnagar

Harsh Gupta  
[Dr. Manish Gupta]

Atul Pandya

Chandrayoshi  
[Dr. Chandrayoshi]

Manish Kumar  
(Dr. Manish Kumar)

**Formulation of Quantum Statistics:** Density Matrix, ensembles in quantum statistical mechanics, simple applications of density matrix. Theory of simple gases: Maxwell-Boltzmann, Bose-Einstein, Fermi-Dirac gases. Statistics of occupation numbers, Evaluation of partition functions, Ideal gases in the classical limit.

#### Ideal Bose

**System:** Thermodynamic behavior of an Ideal Bose gas, Bose-Einstein condensation. Thermodynamics of Black body radiation, Stefan-Boltzmann law, Wien's displacement law. Specific heat of solids (Einstein and Debye models).

**Ideal Fermi System:** Thermodynamic behavior of an ideal Fermi gas, degenerate Fermi gas, Fermi energy and mean energy, Fermi temperature, Fermi velocity of a particle of a degenerate gas. **Black Holes, White Dwarfs and Chandrasekhar Limit.**

#### Suggested Readings

1. F. Reif: Fundamentals of Statistical and Thermal Physics, McGraw Hill.
2. K. Huang: Statistical Mechanics, John Wiley & Sons.
3. L. D. Landau and E. M. Lifshitz: Statistical Physics, Butterworth-Heinemann.
4. Richard P. Feynman: Statistical Mechanics, West View Press.

CO1. define and discuss the concepts of microstate and macrostate of a model system

CO2. define and discuss the concepts and roles of entropy and free energy from the view point of statistical mechanics

CO3. define and discuss the Boltzmann distribution and the role of the partition function

CO4. apply the machinery of statistical mechanics to the calculation of macroscopic properties resulting from microscopic models of magnetic and crystalline systems

CO5. define the Fermi-Dirac and Bose-Einstein distributions; state where they are applicable; understand how they differ and show when they reduce to the Boltzmann distribution.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

MPH007B: Quantum Mechanics- II

Credit(s): 4

Prof. Deepak Bhatnagar

Atalok Pandya

(Dr. Manish Gupta)

(Dr. Chandan Joshi)

(Dr. Manish Kumar)

### Unit-I

**Density Matrices:** Basic definition and properties. Pure and Mixed states.

**Quantum Entanglement and Quantum Teleportation (Introduction)**

**Quantum Computing:** Basic Idea of Quantum Computation and Quantum Information Theory.

### Unit-II

#### Approximation Methods

**Time Independent Approximation Methods:** Variational Methods, WKB method, tunneling.

**Perturbation Theory:** Non-degenerate perturbation theory, degenerate case, Stark effect, Zeeman effect and other examples.

### Unit-III

**Time-dependent Perturbation Theory:** Interaction Picture; Constant and harmonic perturbations; Fermi Golden rule; Sudden and adiabatic approximations. Beta decay as an example.

### Unit-IV

**Scattering Theory:** Differential cross-section, scattering of a wave packet, integral equation for the scattering amplitude, Born approximation, method of partial waves, low energy scattering and bound states, resonance scattering.

### Unit-V

**Symmetry in Quantum Mechanics:** Symmetry Operations and Unitary Transformations, conservation principles, space and time translation, rotation, space inversion and time reversal, symmetry and degeneracy.

**Identical Particles:** Meaning of identity and consequences; Symmetric and anti-symmetric wavefunction; incorporation of spin, symmetric and antisymmetric spin wave function of two identical particles, Slater's determinant, Pauli exclusion principle.

#### Suggested Readings

1. Claude Cohen-Tannoudji, Bernard Diu, Frank Laloe: Quantum Mechanics, Wiley.
2. Albert Messiah: Quantum Mechanics, Dover Publications.
3. S. Flugge: Quantum Mechanics, Springer.
4. L. I. Schiff: Quantum Mechanics, Mc-Graw Hill.
5. J. J. Sakurai: Modern Quantum Mechanics, Pearson Education.
6. E. Merzbacher: Quantum Mechanics, John Wiley.

Prof. Deepak Bhatnagar (Alok Parjya)

Dr. Manish Kupte (Dr. Manish Kupte)

Chandans Joshi (Dr. Chandans Joshi) (Dr. Manish Kumer)

CO-1: Understand the idea of 'Quantum Computers', 'Quantum Entanglements', 'Quantum Information Theory' and train them with techniques of 'Density Matrices'.

CO-2: Understand various 'Time Independent Approximation Methods in Physics' such as 'WKB Approximation', 'Variational Method', and ''.

CO-3: Understand 'Time Dependent Perturbation Methods' including 'Fermi's Golden Rule of Quantum Mechanics'.

CO-4: Understand nitty-gritty of 'scattering theory'.

CO-5: Understand 'symmetries in Quantum Mechanics' and conservation of symmetries.

#### MPH008B: Classical Electrodynamics-II

Credit(s): 4

(Classical Electrodynamics in Matter and Medium)

##### Unit-I

##### Special techniques for calculating potentials

**Laplace's Equation:** Laplace's equation in one dimension. Laplace's equation in two dimensions. Laplace's equation in three dimensions. Boundary conditions and Uniqueness theorems. Conductors and second uniqueness theorem

##### Unit-II

**The Method of Images:** The classic image problem. The induced surface charge. Other image problems

Prof. Deepak Bhatnagar  
Hanselupte  
(Dr. Manshelupte)

Aalok Parashar  
Chandan Joshi  
(Dr. Chandan Joshi)

msk  
(Dr. Manish Kumar)

**Multi-pole Expansion:** Approximate potentials at large distances. The monopole and dipole terms. Origin of coordinates in multi-pole expansion. The electric field of an electric charge

### Unit-III

#### Electro-magnetic waves in conducting and non-conducting media

**Electro-magnetic waves in non-conducting media:** Monochromatic plane waves in vacuum. Energy and momentum of electro-dynamic waves. Propagation through linear media. Reflection and transmission at normal and oblique incidence

### Unit-IV

**Electromagnetic Waves in Conductors:** The modified wave equation. Monochromatic plane waves in conducting media. Reflection and transmission at conducting surface

**Dispersion:** The frequency dependence of  $\epsilon$ ,  $\mu$  and  $\sigma$ . Dispersion in non-conductors. Free electrons in conductors and plasma

**Guided waves:** Wave guides. TE waves in rectangular wave-guides. The coaxial transmission lines

### Unit-V

#### Magneto-Hydrodynamics and Plasma Physics

Introduction and definitions. MHD equations. Magnetic Diffusion: Viscosity and Pressure. Pinch effect: instabilities in pinched plasma column. Magneto-hydrodynamics waves. Plasma Oscillations: Short wave length limit of plasma oscillations and Debye shielding distance

#### Suggested Readings

- 1 L. D. Landau & Lifshitz: Classical Theory of Electrodynamics; Pergamon Press.
- 2 L. D. Landau & Lifshitz: Electrodynamics of continuous media; Pergamon Press.
- 3 J. D. Jackson: Classical Electro-dynamics; John Wiley.
- 4 David J. Griffiths: Introduction to Electro-dynamics; Prentice Hall.
- 5 Panofsky & Phillip: Classical electrodynamics and magnetism.
- 6 N. N. Rao: Elements of Engineering Electromagnetics, Pearson Education.

CO1: Explain classical electrodynamics based on Maxwell's equations including its formulation in covariant form.

CO2: Solve the electromagnetic problems with the help of electrodynamic potentials and superpotentials, and make a detailed account for gauge transformations and their use

CO3: Formulate and solve electrodynamic problems in relativistically covariant form in four-dimensional spacetime.

Prof. Deepak Bhatnagar (Aalok Panigrahy) msh

CO4: Calculate the electromagnetic radiation from localised charges which move arbitrarily in time and space, taking into account retardation effects.

CO5: Calculate the electromagnetic radiation from radiating systems, like oscillating electric and magnetic dipoles (aerials, localised charge and current distributions)

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

H = Highly Related; M = Medium L = Low

MPH009B: Computational Physics

Credit(s): 4

Students are required to learn the following computational exercises using MATLAB/Mathematica/other tools with at least two from each unit.

- Evaluation of integrals
- To write programmes to solve differential equations
- To write programme to evaluate Schrödinger's equation of motion.
- To write programme to evaluate problem of 'Quantum Linear Harmonic Oscillator'.
- To write programme to evaluate Heisenberg's equation of motion.
- Stochastic methods, especially Monte Carlo methods.
- Specialized partial differential equation methods, for example the finite difference method and the finite element method

(viii) The matrix eigen value problem – the problem of finding eigen values of very large matrices, and their corresponding eigenvectors (eigen states in quantum physics).

(ix) Understanding Molecular dynamics by computational means. Understanding Computational fluid dynamics.

(x) Understanding Computational Magneto-hydrodynamics

(Prof Deepak Bhatnagar) (Aalok Pandya) msh  
 (Dr. Manish Apte) (Dr. Chandan Joshi) (Dr. Manish Kumar)

### *Suggested Readings*

1. Andi Klein and Alexander Godunov, Introductory Computational Physics (2006)
2. Rubin H. Landau, José Páez and Cristian C. Bordeianu and A Survey of Computational Physics: Introductory Computational Science.

1. demonstrate knowledge in essential methods and techniques for numerical computation in physics
2. apply Monte Carlo method and other simulation methods to solve deterministic as well as probabilistic physical problems
3. employ appropriate numerical method to interpolate and extrapolate data collected from physics experiments
4. use appropriate numerical method to solve the differential equations governing the dynamics of physical systems
5. formulate and computationally solve a selection of problems in physics, use the tools, language (MATLAB/C++) and conventions of physics to test and communicate ideas and explanations

### **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

CO4					M					M
CO5		L			H				H	

H = Highly Related; M = Medium; L = Low

**MPH010B: Advanced Physics Lab**

**Credit(s): 12**

**Students have to perform any ten experiments**

1. Complete study of characteristics of Photovoltaic Cells (Solar Cells).

*(Prof. Deepak Bhatnagar)*  
*(Dr. Manish Gupta)*  
*(Dr. Manish Kumar)*  
*(Dr. Chandan Joshi)*  
*(Dr. Manish Kumar)*

2. To study temperature variation of resistivity for a semi-conductor and to obtain band gap using *Four Probe method*.
3. To verify *Hartmann's formula* using constant deviation spectrograph.
4. To study *ESR* and determine *g-factor* for a given spectrum.
5. To find *e/m* of electron using *Zeeman effect*.
6. To determine *internal friction* at the *grain boundaries of solids* using *torsional pendulum*.
7. To study a *driven mechanical oscillator*.
8. To study *coupled pendulums*.
9. To study the *dynamics of a lattice* using electrical analog.
10. To study the variation of rigidity of a given specimen as a function of the temperature.
11. Verification of *Bragg's law* using microwaves.
12. Study of analog to digital and digital to analog conversion.

CO-1. How to determine the lattice structure, lattice parameter and crystallite size?

CO-2. Measurement and analysis of various laws of physics.

CO-3. Determination of characteristics of Photovoltaic Cells (Solar Cells).

CO-4. Determine *Zeeman effect*.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

## Semester-III

### MPH011B: Nuclear Physics

Credit(s): 4

#### Unit-I

**Interaction of radiation and charged particle with matter (No derivation):** Law of absorption and attenuation coefficient; Photoelectric effect, Compton scattering, pair production; Klem-Nishima cross sections for polarized and unpolarized radiation, angular distribution of scattered photon and electrons, Energy loss of charged particles due to ionization, Bremstrahlung; energy target and projectile dependence of all three processes, Range-energy curves; Straggling.

#### Unit-II

**Nucleon-Nucleon Scattering and Potentials :** Partial wave analysis of the neutron-proton scattering at low energy assuming central potential with square well shape, concept of the-scattering length, coherent scattering of neutrons by protons in (ortho and para) Hydrogen molecule; conclusions of these analyses regarding scattering lengths, range and depth of the potential; the effective range theory (in neutron-proton scattering) and the shape independence of nuclear potential; A qualitative discussion of Proton- Proton scattering at low energy; General features of two-body scattering at high energy Effect of exchange forces: Phenomenological Hamada- Johnston hard core potential and Reid hard core and soft core potentials; Main features of the One Boson Exchange Potentials (OBEP) no derivation.

#### Unit-III

**Two Nucleon system and Nuclear Forces:** General nature of the force between nucleons, saturation of nuclear forces, charge independence and spin dependence, General forms of two nucleon interaction, central, noncentral and velocity dependent potentials, Analysis of the ground state ( $3S_1$ ) of Deuteron using a square well potential, range-depth relationship, excited states of deuteron, Discussion of the ground state of Deuteron under noncentral force, calculation of the electric quadru-pole and magnetic dipole moments and the D-state admixture.

**Experimental Techniques:** Gas filled counters; Scintillation counter, Cerenkov counters; Solid state detectors; Surface barrier detectors; Electronic circuits used with typical nuclear detectors; Multiwire proportion chambers; Nuclear emulsions, techniques of measurement and analysis of tracks; Proton synchrotron; Linear accelerations; Acceleration of heavy ions.

#### Unit-IV

**Nuclear Shell Model:** Single particle and collective motions in nuclei: Assumptions and justification of the shell model, average shell potential, spin orbit coupling; single particle wave functions and level sequence; magic numbers; shell model predictions for ground state parity; angular momentum, magnetic

Prof. Deepak Bhatnagar

CO5		L	L			H			H	

H = Highly Related; M = Medium; L = Low

**MPH015B: Nuclear Physics Lab**

**Credit(s): 12**

**(Experiments in Nuclear Physics)**

**Students have to perform all ten experiments**

1. To study G.M. detector characteristics and determine operating voltage of a G.M. tube.
2. To study random nature of radioactive decay using G.M. counter.
3. To determine the resolving time of G.M. counting set up (single and double source methods).
4. To study the absorption of  $\beta$  - particles and determine end point energy using G.M. counter.
5. To determine absorption coefficient of  $\gamma$  - rays.
6. Study of secular equilibrium in radioactive decay.
7. To determine end point energy of  $\beta$  - particles using Scintillation counter.
8. To study Compton scattering of  $\gamma$  - rays using Scintillation counter.
9. Study of absorption curve of  $\alpha$  - particles using semiconductor detectors.
10. Study of specific energy loss and straggling of  $\alpha$  - particles using semiconductor detectors.

***Suggested Readings***

1. Nuclear Detectors: Knoll.

*(Prof. Deepak Bhatnagar)*  
*(Dr. Manish Chopra)*

*(Atalok Pandya)*  
*(Dr. Chandan Joshi)*

*(Dr. Manish Kumar)*

2. Experimental Nuclear Physics: S.S. Kapoor and Ramamurthy; Tata McGraw Hill.

- CO-1: to train the students for advanced techniques in nuclear physics  
 CO-2: how to operate a GM counter?  
 CO-3: how to find the absorption coefficient of different materials?  
 CO-4: how to handle nuclear materials and nuclear safety management

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

CO4						M				M

**Semester-IV**

**MPH016B: Quantum Field Theory**

**Credit(s): 4**

**Unit-I**

**Scalar and vector fields:** Classical Lagrangian field theory, 'Euler-Lagrange's equation, Lagrangian density for electromagnetic field. Occupation number representation for simple harmonic oscillator, linear array of coupled oscillators, second quantization, of identical bosons, second quantization of the real Klein Gordan field and complex, Klein-Gordan field, the meson propagator.

**Unit-II**

The occupation number representation for fermions, second quantization of the Dirac field, the fermion propagator, the electromagnetic interaction and gauge invariance, covariant quantization of the free electromagnetic field, the photon propagator.

Dr. Deepak Bhatnagar  
 Dr. Manish Gupta  
 Dr. Manish Gupta  
 Dr. Chandan Toshi  
 Dr. Chandan Toshi  
 Dr. Manish Kumar

### Unit-III

**S-matrix formulation:**  $S$ -matrix expansion. Wick's theorem. Diagrammatic representation in configuration space, the momentum representation, Feynman diagrams of basic processes, Feynman rules of QED.

### Unit-IV

**Specific Processes:** Applications of  $S$  matrix formalism: the Coulomb scattering, Bhabha scattering, Moller scattering, Compton scattering and pair production. Weak interaction by means of V-A theory.

### Unit-V

**Path Integral Formalism:** Applications

### Suggested Readings

1. F. Mandal & G. Shaw: Quantum Field Theory, John Wiley.
2. J. M. Ziman: Elements of Advance Quantum Theory, Cambridge University Press.

CO1: Understand the basics of quantum field theory and provide some motivation for the use of fields to describe fundamental particle physics; apply abstract concepts to real-world situations.

CO2: Understand the notion of a path integral in quantum mechanics and field theory and the connection between the path integral formalism and the operator (scattering) formalism.

CO3: Demonstrate an understanding of field quantisation and the expansion of the scattering matrix

CO4: Quantize a free scalar field theory using canonical quantization and derive Feynman diagrams.

CO5: Use the language of Feynman diagrams in quantum field theory for electromagnetic processes, and calculate amplitudes, cross sections of scattering of particles based on Feynman diagrams.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

## MPH017B: Instrumentation techniques

Credit(s): 4

### Unit-I Classification

Absolute and Secondary instruments, indicating instruments, control, balancing and damping, construction details, characteristics, errors in measurement.

**Wattmeters:** Induction type, single phase and three phase wattmeter's, compensations.

**Energy meters:** AC Induction type single phase and three phase energy meter compensation, creep, error, testing.

**Frequency meters:** Vibrating reed type, electrical resonance type

**Transducer:** Strain Gauges, Thermistors, Thermocouples. Linear Variable Differential Transformer (LVDT) Capacitive Transducers, Piezo-Electric transducers. Optical Transducer, Torque meters, inductive torque transducers, electric tachometers, photo electric tachometers.

### Unit-II

#### Electronic Instruments

**CRO:** Block Diagram, sweep generation, vertical amplifiers, use of CRO in measurement of frequency, phase, Amplitude and rise time of a pulse.

**Digital Multimeter:** Block diagram, principle of operation, Accuracy of measurement

#### Electronic Voltmeter:

Transistor Voltmeter, Block diagram, principle of operation, accuracy of measurement: metering amplifier.

### Unit-III

#### Power Semiconductor Devices

**Power Diodes:** Types, characteristics

**Thyristors:** SCR, Static V-I characteristics of SCR, two transistor analogy of SCR, dynamic characteristics of SCR, Gate characteristics of SCR, Thyristor ratings, DIAC, TRIAC, GRO, UJT.

**Power Transistor:** Power BJT, Power MOSFETS, IGBT.

Dr. Deepak Bhatnagar

Atalok Pantya

Dr. Manish Gupta

Chandanshri (Dr. Chandan Joshi)

Dr. Manish Kumar

**Triggering Circuits:** R- Triggering, R-C Triggering, UJT triggering, Design of UJT triggering circuit, Cosine law triggering, triggering circuit using pulse train.

**Thyristor commutation circuits:** Class-A, Class-B, Class-C, Class-D, Class-E, Class-F commutation circuits. Series and parallel operation of thyristors, protection of thyristors :  $di/dt$  protection,  $dv/dt$  protection, design of snubber circuit, overvoltage protection, over current protection.

#### Unit-IV

##### Sensors and Transducers

**Basic concepts and Classification:** Introduction, System Configuration, Problem Analysis, Basic Characteristics of Measuring Devices, Calibration

**Transducer classification:** Introduction, Electrical Transducer, Classification, Basic Requirements of a Transducer. Introduction, Principles of Transduction, Digital Transducers, Level Measurements

**Strain Measurement:** Introduction, Factors affecting Strain Measurements, Types of Strain Gauges, Theory of Operation of Resistance Strain Gauges, Types of Electrical Strain Gauges, Materials for Strain Gauges, Gauging Techniques and Other Factors, Strain Gauge Circuits, Temperature Compensation, Applications.

#### Unit-V

**Pressure Transducer:** Introduction, Diaphragms, Other Elastic Elements, Transduction Methods, Force- Balance Transducer, Solid State Devices, Thin Film Pressure Transducers, Piezoelectric Pressure Transducer, Vibrating Element Pressure Sensors, Pressure Multiplexer, Pressure Calibration

**Temperature Transducer:** Introduction, Temperature Scales, Mechanical Temperature Sensors, Resistance- Type Temperature Sensors, Platinum Resistance Thermometer, Thermistors. Thermocouples, Solid-State Sensors, Quartz

Thermometer, Temperature Measurement by Radiation Methods, Optical Pyrometer, Calibration of Thermometers.

**Force and Torque transducer:** Introduction, Force-Measuring Sensor- Load Cell, Effect of Temperature Variations, Dynamic Response of Elastic Transducers, Digital Force Transducers, Force-Balance Device, Hydraulic Load Cell, Electronic Weighing System, Torque Measurement.

**Vibration Transducers:** Introduction, Characteristic of Vibration, Analysis of Vibration- Sensing Devices, Vibration- Sensing Devices, Signal Conditioners, Shock Measurements, System Characteristics, Vibration Exciters, Calibration.

Credit(s): 4

### Astrophysics: Overview

The structure, origin, and evolution of the major components of the Universe: planets, stars, and galaxies. Formation of the Sun and planets.

Luminosity and magnitudes of stars. Saha's ionisation equation.

Astrophysical processes: Basics of electromagnetic radiations; Statistical mechanics of Astrophysical phenomena; Radiative processes; Spectra; Neutral fields and plasma in Astrophysics.

Stellar evolution; X-ray sources, Binary stars, Pulsars, Quasars and other compact stars. The origin and search for life in the Universe.

### Structure Formation and the Evolution of the Universe

Structure formation in the early Universe. Galaxy formation. Elliptical and spiral galaxies. Rotational curves of galaxies and signatures of dark matter. Physics of the inter-stellar and inter-galactic media. Star formation. Radiative transfer and stellar mechanics. Chandrasekhar limit and life-cycles of stars: Supernovae-Adult stars-Red Giants-Black Holes/White Dwarfs. The idea of White holes and Brown Dwarfs.

### Suggested Readings

1. Arbab Rai Chaudhary: Astrophysics for Physicists, Cambridge University Press.
2. T. Padmanabhan: Theoretical Astrophysics-I, Cambridge University Press.
3. T. Padmanabhan: Theoretical Astrophysics-II, Cambridge University Press.
4. T. Padmanabhan: Theoretical Astrophysics-III, Cambridge University Press.

CO-1: Describe the features of objects in the Solar System (i.e. Sun, planets, moons, asteroids, comets, planetary interiors, atmospheres, etc.) giving details of similarities and differences between these objects

CO-2: detail the presently accepted formation theories of the solar system based upon observational and physical constraints

*(Signature)*

## MPH020B: Ionospheric Physics

Credit(s): 4

**Sun:** Structure of Sun. Thermonuclear Reactions in the core of the Sun. Convection and radiative transfer. Photosphere, Chromosphere and Corona. Nanoflares. Sun Spots and Solar Cycle. Solar Cycle and Weather on the Earth.

**Ionosphere:** Production of Ionosphere. Different layers of the Ionosphere. Photochemical reactions in the Ionosphere. Loss reactions. Equation of continuity. Air Glow and Aurora.

**Morphology of the Ionosphere:** Morphology of the D, E, F1 and F2 regions.

**Passage of the Electromagnetic waves through Ionosphere:** Dispersion. A wave in the continuous medium of specific dielectric constant. Polarization of E-M waves. Curves of  $R(X)$ . Quasi-Longitudinal (QL) and Quasi-Transverse (QT) approximations.

The Role of Ionosphere in the communication of Radio waves. The *Skip* distance.

**Magnetosphere:** Formation of the Earth's Magnetosphere. Its role in controlling the Solar wind, plasma particles and protecting life on the Earth. Physics of the Magnetosphere associated phenomena.

### Suggested Readings

1. C. Donald Ahrens: Essentials of Meteorology (3<sup>rd</sup> Edition).
2. James R. Holton: Dynamic Meteorology (4<sup>th</sup> Edition), Elsevier- Academic Press.

CO-1: detail the main features and formation theories of the various types of observed galaxies, in particular the Milky Way

CO-2: explain the evolution of the expanding Universe using concepts of the Big Bang and observational evidence

CO-3: use information learned in class and develop observation skills to be able to explain astronomical features

CO-4: observations obtained via telescopic observations or data provided through computer simulations

MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

 (Mainshetle)

**MPH021B: Atmospheric Physics and Weather Science**

**Credit(s): 4**

**Atmosphere and its constituents:** Synoptic observations- surface and upper air. Preparation of weather charts and their analysis, Diurnal variation of temperature, pressure, relative humidity, clouds etc.

**Tropical meteorology :** Easterly Waves, ET-ITCZ, Inversion.

**Extratropical Meteorology:** Air mass, Fronts- Frontogenesis and Frontolysis, Extratropical Cyclones and Anticyclones, Jet Streams

**Synoptic systems:** Winter - Western disturbance, Rossby Waves,

Westerly Jet Stream, Fog, Cold Wave etc. Summer - Thunderstorms, Dust storms, Heat wave, Cyclonic disturbances. Monsoon - Onset, Activity, Withdrawal, Breaks,

Depressions, Easterly Jet Stream. Post Monsoon - Cyclones in the Indian Seas, N.E. Monsoon.

**Global Climatology:** Global distribution of pressure and temperature at m.s.l. in winter and summer, distribution of annual rainfall and its variability, distribution of moisture and clouds. Vertical distribution of temperature. General circulation of atmosphere.

Development of monsoons. Major categories of world climates.

**Indian Climatology** - Different seasons, Distribution of Means Sea level

Pressure/temperature in different seasons, Wind circulation and temperature distribution over India in lower, middle and upper troposphere in different seasons. Indian rainfall in different seasons. Indian summer monsoon, onset, withdrawal, rainfall distribution, inter annual variability of monsoon. Main synoptic pressure systems causing weather over India in different seasons.

**MPH022B: Particle Physics- I**  
**Credit(s): 4**

**Elementary particles and the fundamental forces.** Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws.

**Bound states.** Discoveries and observations in experimental particle physics and relation to theoretical developments. Symmetries, group theory, The group SU(2), Finite Symmetry Group: P and C, SU(2) of Isospin, The group SU(3)

**Quark and Antiquark states:** Mesons, Three quark states: Baryon, color factors, Asymptotic freedom. Charged and neutral weak interactions. Electroweak unification.

**Decay rates and Cross sections:** Feynman diagrams Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics (no derivation). Moller scattering, trace theorems and properties of gamma matrices, helicity representation at high energies., the electron propagator, the photon propagator.

**Structure of Hadrons:** form factors, e-p scattering, inelastic e-p scattering, Bjorken scaling, Partons, gluons, deep inelastic scattering, evolution equations for parton densities.

**QCD:** Electron positron annihilation into hadrons, heavy quark production, three jet events, QCD corrections, Perturbative QCD, Drell-Yan process

**Weak Interactions:** Parity violation, V-A form of weak interaction, Nuclear beta decay, muon decay, pion decay, charged current neutrino electron scattering, neutrino quark scattering, weak neutral currents, the Cabibo angle, weak mixing angles, CP invariance.

***Suggested Readings***

1. Francis Halzen and Allan D. Martin, Quarks and Leptons: An Introductory Course in Modern Particle Physics, John Wiley and Sons
2. B.R. Martin and G. Shaw, Particle Physics, 2nd edition, J. Wiley and Sons (1997).
3. The Review of Particle Physics, (Particle Data Group)
4. David Griffiths: Introduction to Elementary Particles.
5. Byron Roe: Particle Physics at the New Millennium.
6. Donald Perkin: Introduction to high energy physics.

**CO1:** Basic knowledge nuclear and particle physics. Knowledge and understanding of the elementary particle interactions. Capability of relating the theory predictions and measurements.

**CO2:** Conservation laws in nuclear and particle physics, to determine which nuclear processes and particle processes are allowed and why?

*[Handwritten signatures and names]*  
(Dr. Deepak Bhargava) (Alok Pandya)  
(Dr. Chandan Joshi) (Dr. Manish Kumar)

CO3: the Symmetries and Group Theory, bound states of matter and antimatter; the concept of Feynman diagrams to estimate the rate of particle physics processes, for instance in neutrino scattering

CO4: Quantitatively comparison of theory and experiments for scattering and disintegration processes (Decay rates and cross sections). Formulate the basic elements of calculations of cross sections and decay rates in particle physics

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3

4. David Griffiths, **Introduction to Elementary Particles**
5. Byron Roe **Particle Physics at the New Millennium**
6. Donald Perkin, **Introduction to high energy physics**).
7. Martin and Shaw, **Particle Physics**

CO1: to understand the role that global and local symmetries play in modern elementary particle physics and to become acquainted with the concept of symmetry breaking;

CO2: Explain the important properties of elementary particles, and their interactions, in the Standard Model of particle physics. Describe essential experimental results which have lead to the formulation of the Standard Model.

CO3: to introduce the experimental motivation and theoretical framework of the Standard Model (SM) for Electroweak (EW) and Strong interactions (QCD)

CO4: to understand the theoretical framework of Neutrino physics, Higgs mechanism, CKM mass mixing matrix, experiments from accelerators physics

CO5: to develop tools to enable the quantitative calculation of tree-level electroweak cross-sections; to provide a foundation for more advanced studies in particle physics.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome							Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CO1	H					M				L
CO2		L			H				M	
CO3	L				H			M		
CO4		L	H							M
CO5			M			M				H

H = Highly Related; M = Medium L = Low

Dr. Deepak Bhattacharya  
Dr. Manish Gupta  
Dr. Manish Gupta  
Dr. Chandan Joshi  
Dr. Chandan Joshi  
Dr. Manish Kumar

**Structure Factor:** Static structure factor and its relation with the pair correlation function. Determination of structure factor by X-ray and neutron scattering. Inelastic neutron scattering and dynamic structure factor, space time correlation function and its relation with dynamic structure factor, properties of space time correlation function. Langevin's equation for Brownian Motion and its modifications. Velocity autocorrelation function, mean square displacement, Relation between velocity autocorrelation function and diffusion coefficient.

**Liquid Metals:** Metallic interactions-Kinetic energy, electrostatic exchange and correlation, Pseudopotential formalism, diffraction model, structure factor, form factor for local and nonlocal potentials, energy eigen states, dielectric screening, Energy wave number characteristics, calculation of phonon dispersion of liquid metals, Band structure energy in momentum and direct space, Ziman's resistivity formula, Green function method for energy bands in liquid metals.

**Quantum Liquids:** Distinction between classical and quantum liquids, criteria for freezing, phase diagram of He-4, He-1 and He-2 Tisza's two fluid model, entropy filter, Fountain effect, superfluid film vehicle, Viscosity and specific heat of He-4, first sound, second sound, third sound and fourth sound, Landau theory: Rotons and Phonons, t-matrix theory of superfluid He. Basic differences in superfluidity in He-3 and He-4.

**Exotic Solids:** Structure and symmetries of liquids, liquid crystals and amorphous solids. Aperiodic solids and quasicrystals; Fibonacci sequence, Penrose lattices and their extension to 3-dimensions, Special carbon solids, Fullerenes and tubules; formation and characterization of fullerenes and tubules. Single wall and multiwall carbon tubules. Electronic properties of tubules. Carbon nanotubule based electronic devices Definition and properties of nanostructured materials. Methods of synthesis of nanostructured materials. Special experimental techniques for characterization of nanostructured materials. Quantum size effect and its applications.

## MPH025B: Condensed Matter Physics-II

Credit(s): 4

**Phase Transformation and Alloys:** Equilibrium transformation of first and second order. Equilibrium diagrams. Phase rule. Interpretation of phase diagrams. Substitutional solid solutions. Vegard's law, intermediate phases, Hume-Rothery rules. Interstitial phases (carbides, nitrides, hydrides, borides). Martensitic transitions. structure factor of liquid metal alloys, behaviour of  $s(q)$ , radial distribution function  $g(r)$  and relationship between  $s(q)$  and  $g(r)$

**Disordered Systems:** Disorder in condensed Matter, Substitutional, positional and topographical disorder. Short and long range order. Spinning, sputtering and ion-implantation techniques, glass transition, glass formation ability, nucleation and growth processes. Anderson model for random system and electron localization, mobility edge, qualitative application of the idea of amorphous semiconductors and hopping conduction. Metglasses, Models for structure of metalglasses. Structure factor of binary metallic glasses and its relationship with the radial distribution functions. Discussion of electric, magnetic and mechanical properties of glassy system.

Dr. Deepak Bhatnagar

Dr. Chandan Joshi

Dr. Manish Kumar

Dr. Manish Cupte

**Structure determination/characterization:** Basic theory of X-ray diffraction. Indexing of Debye-Scherrer patterns powder samples, examples from some cubic and non-cubic symmetries. Neutron diffraction-basic interactions, cross section, scattering length and structure factor. Mossbauer effect, hyperfine parameters-Isomer shift, quadrupole splitting and Zeeman splitting. Application of Valence and coordination, site symmetry magnetic behaviour. Discussion in context of Fe<sup>57</sup>.

**Electronic Structure Determination:** Basic principles of X-ray, photo-emission and positron annihilation techniques. qualitative discussion of experimental arrangement and typical results for both simple as well as transition metals.

MPH026B: Digital Electronics

Credit(s): 4

**Analog Circuits:** Integrated Circuits (Qualitative Treatment only): Active and Passive components. Discrete Circuit Component. Wafer. Chip. Advantages and Drawbacks of ICs. Scale of integration: SSI, MSI, LSI and VLSI (Basic Idea and Definitions Only). Classification of ICs. Fabrication of Components on Monolithic ICs. Examples of Linear and Digital ICs.

**Operational Amplifiers** (Use Black Box approach): Basic Characteristics of Op-Amps. Characteristics of an Ideal Op-Amp. Feedback in Amplifiers. Open-loop and Closed-loop Gain. Frequency Response. CMRR. Virtual ground.

**Applications of Op-Amps:** (1) Inverting and Non-inverting Amplifiers, (2) Adder, (3) Subtractor, (4) Unity follower, (5) Differentiator, (6) Integrator, (7) Zero Crossing Detector.

**Timers** (Use Black Box approach): 555 Timer and its Applications: Astable and Monostable Multivibrator.

**Digital Circuits:** Difference Between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion. AND, OR and NOT Gates (Realization using Diodes and Transistor). NAND AND NOR Gates. Exclusive OR and Exclusive NOR Gates.

**Boolean algebra:** De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean Algebra. Fundamental Products. Minterms and Maxterms. Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map.

**Data processing circuits:** Basic Idea of Multiplexers, De-multiplexers, Decoders, Encoders, Parity Checkers.

**Memories:** Read-only memories (ROM), PROM, EPROM.

**Arithmetic Circuits:** Binary Addition. Binary Subtraction using 2's Complement Method).

Half Adders and Full Adders and Subtractors (only up to Eight Bits).

**Sequential Circuits:** RS, D, and JK Flip-Flops. Level Clocked and Edge Triggered Flip-Flops.

Dr. Depak Bhattacharya  
Dr. Manish Gupta  
Dr. Allok Pandya  
Dr. Chandan Joshi  
Dr. Manish Kumar

preset and Clear Operations. Race-around Conditions in JK Flip-Flops. Master-Slave JK Flip-Flop (As Building Block of Sequential Circuits).

**Shift registers:** Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out, and Parallel-in-Parallel-out Shift Registers (only up to 4 bits).

**Counters:** Asynchronous and Synchronous Counters. Ring Counters. Decade Counter. D/A and A/D conversion: D/A converter – Resistive network. Accuracy and Resolution.

**JECRC UNIVERSITY  
SCHOOL OF SCIENCES  
DEPARTMENT OF ZOOLOGY**

**Programme Educational Objectives:**

The programme **M.Sc. in Zoology** aims to equip students with recent advances in Zoology from organismic to reductionist biology. It also aims to empower students to understand the challenges of society and the country that falls into the realms of Zoology, such as Aquaculture, Reproductive health, Behaviour and Biological time keeping, Cancer Biology, Microbiome and their roles in health and diseases, Bioremediation of pollutants and pesticides, etc.

This course is designed to ignite the inquisitive mind to enter into research in interdisciplinary areas. In this program, the student gains an in-depth study of various invertebrate and vertebrate specimens. The purpose of this program is:

- To acquaint students with the identification, systematics, life history, anatomy, and adaptive strategies of the invertebrate and vertebrates and to expose them to field techniques used in their study.
- To inculcate in the students an understanding, appreciation and respect for the other animals which share our planet.
- To make students aware of the various disciplines encompassed by the field of zoology and to encourage them to pursue those areas that interests them through further reading and coursework.
- To understand the systemic and functional morphology of various groups of chordates.
- To know the principles of genetics, pedigree analysis and population genetics.
- To generate up-to-date knowledge on environmental conservation and management through a comprehensive understanding of the components of ecosystem, biological cycles, habitat ecology, resource ecology, pollution and its management.
- To comprehend the chemical constituents of living matter, chemistry of food stuffs and their transformation in animal systems, the energy changes associated with these transformation and hormonal regulation.

**PROGRAM OUTCOMES (PO's)**

**PO1. Disciplinary Knowledge and Skills:** Capable of demonstrating (i) comprehensive knowledge and understanding of major concepts, theoretical principles and experimental findings in Zoology and its different subfields (animal diversity, principles of ecology, comparative anatomy and developmental biology of vertebrates, physiology and biochemistry, genetics and evolutionary biology, animal biotechnology, applied Zoology, aquatic biology, immunology, reproductive biology, and insect, vectors and diseases), and other related fields of study, (ii) ability to use modern instrumentation including detailed and recent update knowledge about the tools and techniques used in zoology.

**PO2. Skilled communicator and digitally literate:** Ability to impart complex technical knowledge relating all areas in zoology in a clear and concise manner in writing and oral skills. Able to describe the Biological applied solutions, capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources and to use appropriate software for analysis of data.

**PO3. Critical thinker and problem solver:** Ability to have critical thinking and efficient problem solving skills in the basic and advanced areas of Zoology (animal diversity, principles of ecology, comparative anatomy and developmental biology of vertebrates, physiology and biochemistry, genetics and evolutionary biology, animal biotechnology, applied Zoology, aquatic biology, immunology, reproductive biology, insect, vectors and diseases etc.).

*Shrijinibee* *Zumar* *B*

**PO4. Sense of inquiry:** Capability for asking relevant/appropriate questions relating to issues and problems in the field of zoology, and planning, executing and reporting the results of a theoretical or experimental investigation.

**PO5. Skilled project manager:** Capable of identifying/mobilizing appropriate resources required for a project, and manage a project to completion, while observing responsible and ethical scientific conduct; and safety and laboratory hygiene regulations and practices. Also acquaint with the instruments used in biological field.

**PO6. Ethical awareness/reasoning and Environmental Sustainability:** Capable of conducting their work with honesty and precision thus avoiding unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, and appreciating environmental and sustainability issues and adopt objective, unbiased and truthful actions in all aspects of work. Research ethics committee expects them to declare any type of conflict of interest that may affect the research. Any plan to withhold information from researchers should be properly explained with justification in the application for ethical approval. Understand the issues of environmental contexts and sustainable development.

**PO7. Self-directed, Team player and Life-long Learners:** Acquire the ability to work independently, identify appropriate resources required for a project, and manage a project through to completion. Capable of working effectively and interact respectfully with diverse teams in classroom, laboratory and in industry and field-based situations. The broad skills and the deeper knowledge in the field would make them highly successful and excellent researcher in advanced areas of research in the Biological sciences. Capable of acquiring knowledge and skills through self-paced and self-directed learning aimed at personal development and for improving knowledge/skill development and reskilling.

**MZO001B: BIOSYSTEMATICS, TAXONOMY AND EVOLUTION** Credit(s): 4

**Unit I**

Definition and basic concepts of biosystematics and taxonomy- Importance and applications of biosystematics in biology. Material basis of biosystematics-different attributes, Trends in biosystematics

Definition and understanding of various taxonomic categories. Species concepts and species categories –subspecies and infra species. Modern trends in taxonomy- Chemotaxonomy. Cytotaxonomy. Molecular taxonomy. Neotaxonomy. Theories of biological classification. hierarchy of categories

**Unit II**

Taxonomic procedures; collection, preservation, curation and process of identification. Different kinds of systematic Publications. Taxonomic characters of different kinds. Quantitative and Qualitative analysis of variation. Process of typification, different zoological types and their significance.

**Unit III**

Taxonomic Keys: their kinds, merits and demerits. Use of taxonomic keys. International Code of Zoological Nomenclature (ICZN). Interpretation and application of important rules, Zoological nomenclature and formation of scientific names of different taxa. Evaluation of biodiversity indices. Shannon-Weinner index, dominance index.

**Unit IV**

Concepts of evolution and theories of organic evolution with an emphasis on Darwinism, Neo-Darwinism: Gene pool, Gene frequency, Hardy-Weinberg law of genetic equilibrium. Destabilizing forces- Natural selection, Mutation, Genetic drift, Migration. Micro and Macro-evolution.

**Unit V**

Genetics of speciation- Isolation; and role in evolution. Genetics of quantitative traits in populations. Analysis of quantitative traits. Quantitative traits and natural selection. Genotype-environment interactions. Inbreeding depression and heterosis. Molecular analysis of quantitative traits. Phenotypic

*Shingji milbee* *4*

plasticity. Molecular phylogenetics. How to construct phylogenetic trees. Phylogenetic inference- Distance methods, parsimony methods, maximum likelihood method. Immunological techniques.

**Course outcome (CO) :** On completion of the course, students are able to:

CO-1 Understand Definition and basic concepts of biosystematics and taxonomy.

CO-2 Critically analyse the Taxonomic procedures and Taxonomic characters

CO-3 Understand the concept of taxonomic keys, Zoological nomenclature

CO-4 Understand the process of evolution, Lamarckism, Neo-Lamarckism, Darwinism, Neo-Darwinism, Hardy-Weinberg law, destabilizing forces.

CO-5 Understand the concept of Speciation, Isolation, Quantitative traits and Molecular phylogenetics.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	2	1	0	0	2
CO2	3	0	2	1	0	0	2
CO3	3	0	2	1	0	0	2
CO4	3	1	2	2	0	2	0
CO5	3	0	2	1	0	2	0

3 = Highly Related; 2 = Medium 1 = Low

#### Suggested Readings

- Principle of Animal Taxonomy; G.G Simpson. Oxford IBH Publishing Company.
- Elements of Taxonomy. E. Mayer.
- Theory & Practice of Animal Taxonomy. V.C. Kapoor. Oxford & IBH Publishing Co.Pvt. LTD.
- Advancement in Invertebrate Taxonomy & Biodiversity. Rajeev Gupta. AgrobiosInternational.
- Evolution of the vertebrates, Colbert. E.H. John Wiley and Sons Inc., New York.
- Genes and Evolution. Jha A.P. John Publication, New Delhi
- Evolutionary Genetics. Smith, J.M. Oxford University Press, New York.
- Evolution and population genetics, Rashmi Sisodia, Paragon, International Publishers.
- Evolutionary Biology, Futuyama, D.J. Suinuaer Associates, INC Publishers, Sunderland.
- A Primer of Population Genetics. Hart, D.L. suinuaer Associates, Inc, Massachusetts.
- Species Evolution-The role of chromosomal change. King, M. Cambridge University Press. Cambridge.
- Evolution and Genetics Merril, D.J. Holt, Rinehart and Winston, Inc.
- Evolution. Strickberger, M.W. Jones and Barlett Publishers, Boston London

### MZO002A: STRUCTURE & FUNCTION OF INVERTEBRATES Credit(s):4

#### Unit I

Organization of Body: Uni and multi cellular organisms,

Body cavity: Acoelome, Pseudocoelome, Coelome (schizo and enterocoelous)

Fate of Blastopore (Protostome, Deuterostome) and Blastomeres (Determinate and Indeterminate blastomeres)  
Type of cleavage (Spiral and Radial)

## Unit II

Type of symmetry: Body planes, Asymmetry, Radial, biradial, bilateral symmetry  
Segmentation: Pseudo, superficial and metameric  
Locomotion: Flagellar, ciliary movement in Protozoa and Hydrostatic movement in coelenterate, annelid and echinodermata,

## Unit III

Nutrition and Digestion in invertebrates and lower Metazoa. Filter Feeding in Polychaeta, Mollusca and Echinodermata.  
Respiration: respiratory organs in invertebrates (Gills, book lungs and trachea). Mechanism of respiration, respiratory pigments.

## Unit IV

Excretion: Excretory organs in invertebrates (Coelomoducts, Nephridia and Malpighian tubules, organ of bojanus, green gland), Mechanism of excretion  
Nervous System : Primitive type (Coelenterata and Echinodermata) and Advanced type (Annelida, Arthropoda (Crustacea and insecta) and Mollusca (Cephalopoda))

## Unit V

Reproduction: Asexual (*Paramecium*, *Obelia*) and sexual reproduction (annelida, arthropoda and mollusca)  
Larval forms of invertebrates, Evolutionary significance of larval forms.

**Course outcome (CO) :** On completion of the course, students are able to:

- CO-1 Critically analyse the organization, complexity, coelom and cleavage patterns in non-chordates.
- CO-2 Understand the types of symmetry and segmentation, locomotion in invertebrates.
- CO-3 Understand the process of digestion and respiratory organs in invertebrates.
- CO-4 Understand the process of excretion and nervous system in invertebrates.
- CO-5 Understand the modes of reproduction in invertebrates and Evolutionary significance of larval forms

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	2	1	0	0	2
CO2	3	0	2	1	0	0	2
CO3	3	0	2	1	0	0	2
CO4	3	0	2	1	0	0	2
CO5	3	0	2	1	0	0	2

3 = Highly Related; 2 = Medium 1 = Low

### ***Suggested Readings***

- Invertebrate structure and function. Barrington, E.J.W. Thomas Nelson and Sons Ltd. London.
- Invertebrate Zoology Barnes, RD. W.B.Saunders Co., Philadelphia
- A Biology of higher invertebrates, Russel-Hunter, WD. McMillan Co. Ltd., London
- Text book of Zoology. Parker, T.J., Haswell. W.A.Macmillan Co., London.
- Invertebrates Richard C. Brusca , Gary J. Brusca and Nancy J. Haver

### **MBI001A: BIOCHEMISTRY**

**Credit(s): 4**

#### **Unit- I**

**Chemical foundation of biology:** pH, acids, bases, Buffers, Henderson and Hasselbach equation, pKa, pKb. Preparation of buffers, chemical bonding, properties of water, Gibbs free energy, High energy compounds, ATP Cycle, classification of high energy compounds, Structure of ATP, ATP Production, Chemoosmotic theory

#### **Unit-II**

**Carbohydrates:** Classification and properties of carbohydrates, mono (glucose, galactose and fructose) di (lactose, maltose, and sucrose), poly (starch, glycogen, cellulose). Physical and chemical properties of carbohydrates. Carbohydrate derivatives: mureins, glycoproteins, glycolipids, peptidoglycan. Mutarotation, Ozone formation etc. Role of carbohydrates in signaling, glycosylation of other biomolecules. Metabolism of carbohydrates, Glycolysis, TCA, Gluconeogenesis, Glycogenesis, Glycogenolysis, glyoxalate cycle and their regulations, anaerobic oxidation of glucose, alternative oxidation pathway of glucose (HMP, PPP pathway etc.)

#### **Unit-III**

**Lipids:** Classification, Structure and biological function of fatty acids, triacylglycerols, phospholipids, steroids. Physico-chemical properties and analysis of fats and oils, Structure and functions of prostaglandins, thromboxanes, cholesterol, properties of oil and fats, acid value, iodine number, Saponification number, beta, alpha, and omega oxidation of fatty acids, cholesterol biosynthesis, fatty acids synthesis, oxidation of odd chain fatty acids, Ketone bodies production and degradation

#### **Unit IV**

**Amino acids:** Classification; Structure and physicochemical properties; Peptides Peptide bonds, Proteins-Classification, Primary structure of proteins and its sequence determination

**Proteins:** Secondary (Ramachandran plot), tertiary and quaternary structural features of proteins; Primary structure, Bonds responsible for protein stability. Myoglobin, hemoglobin, fibrous proteins (collagen, keratins, silk fibroin), transamination, urea cycle, deamination oxidative and non oxidative, regulation of urea cycle. Vitamins and Co-enzyme (biological and biochemical functions).

#### **Unit V**

**Nucleic Acids:** Structure of purines, pyrimidine, nucleosides, and nucleotides. Structure, properties and functions of nucleic acids (DNA, RNA), Different forms of DNA and RNA. Three dimensional structure of tRNA, De novo synthesis of purine and pyrimidine and its degradation. Salvage pathway.

**Enzymes-** Nomenclature, Holoenzyme, Apo enzyme, Co enzyme, Kinetics of Enzyme, Mechanism of their action, MM equation, Line Weaver Burk Plot, Inhibition of Enzyme, Reversible, Irreversible and Feed Back

**Course outcome (CO):** On completion of the course, students are able to:

- CO-1 Describe the basics of biomolecules and
- CO-2 Illustrate basis of carbohydrates and its metabolism
- CO-3 Illustrate basis of lipids and its metabolism

- CO-4 Recognize amino acid structures and illustrates the function and metabolism of proteins.  
CO-5 Describe nucleic acids, DNA, RNA and enzymes.

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	3	2	2	2	2
CO2	3	2	3	1	2	2	1
CO3	3	2	2	1	2	2	2
CO4	2	3	3	2	2	1	2

1-Low, 2-Medium, 3-High

**Suggested Readings**

1. Textbook of Biochemistry. 1968 by West and Todd (MacMillan)
2. Principles of Biochemistry. 1993 by A.L. Lehninger, Nelson and Cox (C.B.S., India).
3. Principles of Biochemistry General Aspects. 1983 by Smith et al., (McGraw Hill)
4. Biochemistry (2nd edition) by Donald Voet and Judith Voet.
5. Biochemistry (4th edition) by L. Stryer (Free man).
6. Textbook of Biochemistry with Clinical Correlation (4th edition) by Thomas M. Devlin.
7. Biochemistry by Zubay.
8. Nucleic acid Biochemistry and Molecular Biology by Main Waring et al., (Blackwell).
9. Biochemistry, 2nd edition by Albert L. Lehninger. 1978. Kalyani Publishers, New Delhi.
10. Biochemical calculations, Irwin H. Segel, John Wiley and sons Inc
11. Organic Chemistry, DJ Cram and GS Hammond

**MZO009B: MOLECULAR BIOLOGY & BIOTECHNOLOGY Credit(s): 4**

**Unit I**

Nucleic acids –DNA & RNA, DNA replication: modes of replication, Prokaryotic and eukaryotic DNA replication, Mechanics of DNA replication, Enzymes and Accessory proteins involved in DNA replication, Models of DNA replication, Inhibitors of DNA replication, DNA repair mechanisms

**Unit II**

Transcription in prokaryotes and eukaryotes: Structural organisation and life span of mRNA; rRNA & tRNA, Mechanism of transcription in prokaryotes and eukaryotes. Post transcriptional modification of RNA- Capping, Polyadenylation, Splicing, RNA editing.

**Unit III**

Genetic code : Characteristics of genetic code, Start codons and stop codons, Degeneracy of the code: Wobble hypothesis  
Translation in prokaryotes and eukaryotes: Aminoacylation of tRNA & initiation, elongation and termination of protein synthesis, Translational inhibitors, Post- translational modification of proteins: protein folding (role of chaperones) and biochemical modifications.

**Unit IV**

Bacterial genetics: Molecular mapping of genome, genetic and physical mapping, Gene transfer mechanisms-Transformation- molecular mechanism, mapping and other uses of transformation, Transduction- generalized transduction, co-transduction and specialized transduction. Bacterial conjugation, Chromosome transfer in other bacteria. Plasmids and Transposons: types and properties.

*Signature* *Shirji Mishra* *Signature* *...* *Signature*

## Unit V

Molecular markers in genome analysis (RFLP, RAPD and AFLP).

Principle and technique of genetic engineering: Cutting and joining of DNA molecules. Cloning strategies, gene library and cDNA. Application of recombinant DNA technology, Recombination selection and screening. Nucleic acid probes and their application. Transgenic animals and knock outs. Animal Cloning. Stem cell: types and applications.

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Understand the structure of nucleic acid, replication process and DNA repair mechanism.

CO2 Analyze the mechanism of transcription in prokaryotes and eukaryotes.

CO3 Explain the translational process for prokaryotes and eukaryotes.

CO4 Understand about Bacterial genetics and Gene transfer mechanisms.

CO5 Understand the concept of Molecular markers in genome analysis, molecular markers, transgenesis and stem cells.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	0	2
CO2	3	0	3	1	0	0	2
CO3	3	0	3	1	0	0	2
CO4	3	0	3	1	0	0	2
CO5	3	0	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

- Gene VII, Indian eds. Lewin, B. Oxford university press, Bombay

### MZO005C: Laboratory Exercises of Biochemistry, Molecular Biology, Taxonomy & Invertebrates Credit(s): 6

1. To study and assess taxonomic diversity in a habitat. (grassland, arid land, wet land etc.)

2. To study and identify at least 6-10 orders of insects (upto order level only) by the use of taxonomic keys.
3. To study zooplanktons in different water samples collected from ponds etc.
4. To study methods of Collection, Preservation and curation of specimens.
5. To prepare dichotomous (simple bracket) keys; minimum ten sets from the identified specimens.
6. To identify, classify & study distinguishing features of representatives from :  
Phylum Protozoa- Polystomella, Opalina, Paramecium(Fission & conjugation), Vorticella, Euglena.
7. To identify, classify & study distinguishing features of representatives from :  
Phylum Porifera-Sycon L.S & T.S, Spicules, Spongin fibres, Leucosolenia, Euplectella
8. To identify, classify & study distinguishing features of representatives from :  
Phylum Cnidaria- Obelia,( polyp & Medusa), Millepora, Physalia, Pennatula, Metridium, Madrepora, Alcyonium, Gorgonia, Aurelia.
9. To identify, classify & study distinguishing features of representatives from :  
Phylum Helminthes- Ascaris, Taenia, Planaria
10. To identify, classify & study distinguishing features of representatives from :  
Phylum Annelida- Aphrodite, Leech, Polygordius, Chaetopterus, Neries, Heteroneries, Arenicola.
11. To identify, classify & study distinguishing features of representatives from :  
Phylum Arthropoda- Peripatus, Balanus, Lepas, Limulus, Eupagurus, Julus, Scolopendra, Praying mantis.
12. To identify, classify & study distinguishing features of representatives from :  
Phylum Mollusca- Pinctada, Cypraea, Octopus, Nautilus.
13. To identify, classify & study distinguishing features of representatives from :  
Phylum Echinodermata- Echinus, Holothuria, Antedon, Asterias, ophiothrix
14. To identify and study the larval Stages: Planula, Redia, Miracidium, Sporocyst, Cercaria, Metacercaria Trochophore,
15. To identify and study the larval Stages: Nauplius, Zoea, Mysis, Velligar, Bipinnaria, Echinopluteus, Auricularia, Tornaria
16. To prepare permanent slides of - Hydra, Obelia,
17. To prepare permanent slides of - paramecium, different zooplanktons.
18. To Determine pH of different solutions.
19. To identify unknown carbohydrates (Glucose, Fructose, Lactose, Maltose, Sucrose, Dextrin & Starch) by suitable tests.
20. To perform the qualitative estimation of proteins in various tissues/food materials.
21. To perform the qualitative estimation of carbohydrate in various tissues/food materials.
22. To perform the qualitative estimation of lipid in various tissues/food materials.
23. To perform the quantitative estimation of glycogen in given sample.
24. To perform the quantitative estimation of glucose in given sample.
25. To perform the quantitative estimation of ascorbic acid in given sample.
26. To estimate the quantitative estimation of sialic acid in given sample.
27. To perform the quantitative estimation of total proteins in given sample.
28. To perform the quantitative estimation of Total lipid and phospholipids in given sample.
29. To perform the quantitative estimation of cholesterol in given sample.
30. To perform the quantitative estimation of Acid phosphatase in given sample.
31. To perform the quantitative estimation of alkaline phosphatase in given sample.
32. To separate proteins and DNA by agarose electrophoresis.
33. To separate proteins and isoenzymes on SDS-PAGE and PAGE.
34. To separate amino acids by paper chromatography.
35. To separate phospholipids by TLC.
36. To prepare salivary gland chromosomes from Drosophila / Chironomous larva and stain with acetocarmine/aceto-orcein/ fuelgen.
37. To estimate DNA by Diphenyl Amine method.
38. To estimate RNA by Orcinol method.
39. To estimate Protein by Lowry's method.
40. To isolate RNA from Yeast.

## SEMESTER-II

MZO006B	Biology of Chordates & Immunology	4
MZO007B	Tools And Techniques	4
MZO008A	General Physiology	4
MZO033A	Fundamentals in Quantitative Research Methods	4
MZO010B	Laboratory Exercises of Immunology, Physiology, quantitative research methods & Chordates	6
	<b>Total Credits</b>	<b>22</b>

### MZO006B: BIOLOGY OF CHORDATES & IMMUNOLOGY Credit(s): 4

#### Unit I

Origin and outline classification of the chordates.  
Salient features and Interrelationships of Hemichordata, Urochordata and Cephalochordata.  
Life – histories of- *Pyrosoma*, *Salpa*, *Doliolum* and *Oikopleura*

#### Unit II

General characters of Agnatha: Ostracoderms and Cyclostomes.  
A general account of the Dipnoi, Difference between chondrichthyes & Osteichthyes.  
Parental care in Amphibia, Neoteny in Amphibia  
Living reptiles: a brief account of Rhynchocephalia.  
Birds. Origin of flight: Flight adaptations. Flightless Birds.  
Origins of mammals: Primitive mammals (Prototheria and Metatheria).

#### Unit III

General account on adaptive radiations in chordates (fishes, amphibians, mammals)  
Development and physiology of extra-embryonic membranes in amniotes.  
Evolution of viviparity, Placentation.  
Metamorphosis in Amphibia, Endocrine control of metamorphosis.  
Regeneration: Morphological and histological process in amphibian limb regeneration.

#### Unit IV

Immunology: Introduction- Innate and adaptive immunity, Cells and organs of the immune system (Primary lymphoid organs, Secondary lymphoid organs, B-lymphocytes, T-lymphocytes and Antigen presenting cells), Humoral and cell-mediated immune responses (CMI), Antigenicity, immunogenicity and Haptens, Factors influencing immunogenicity, Recognition of antigen by B-and T-lymphocytes, Antigens,

#### Unit V

Antibodies: Structure and functions of Antibody Molecules, Molecular structure of Ig, Immunoglobulin classes (IgG, IgM, IgE and IgD and their biological activities).  
Antigen-Antibody Interactions: Strength of Antigen Antibody Interactions, Cross reactivity, precipitation reactions, agglutination reactions,  
Immune effector Mechanisms: Cytokines & Antagonists, Complement System

**Course outcome (CO):** On completion of the course, students are able to:

CO-1 Understand the classification of Chordates and life-histories of *Pyrosoma*, *Salpa*, *Doliolum* and *Oikopleura*.

CO-2 Understand the concepts of parental care, neoteny, flight adaptations, flightless birds, primitive mammals.

CO-3 Analyze the development and physiology of extra-embryonic membranes in amniotes, evolution of viviparity, metamorphosis and regeneration.

CO4 Understand the concept of Immunology, Mechanism of immunity, Immunity regulating cells, Antigens

CO5 Understand the basic structure, classes and function of Antibodies, Antigen-Antibody interaction, complement system

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	0	2
CO2	3	0	3	1	0	0	2
CO3	3	0	3	1	0	0	2
CO4	3	0	3	1	0	0	2
CO5	3	0	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

#### Suggested Readings

- Comparative anatomy of vertebrates. Kent. C.G.
- The Biology of Hemichordata and Protochordata. Barrington, E.J.W. Olter and Boyd Edinhourgh.
- Vertebrate Paleontology. Romer. A.S. University of Chicago Press, Chicago.
- Chordata structure and function. Waterman. A.J. Macmillan Co. New York.
- Vertebrate evolution. Joysey. K.A. and T.S. Kemp. Oliver and Boyd. Edinburgh.
- The Phylogeny of vertebrate. Lovtrup. S. John Wiley and Sons. London
- Kuby Immunology, Goldsby R.A., Kindt Thomas J., Osbarne B.A., WH Freeman & Company, (2000).
- Roitt's essential Immunology, Roitt I.M. and Delves P.J., Blackwell Science Ltd., (2001).

### MZO007B: TOOLS AND TECHNIQUES

Credit(s): 4

#### Unit I

Principle and application of:- Light & electron microscopy  
Principle, types and applications of Centrifugation

#### Unit II

Principle, types and applications of:- Electrophoresis  
Principle, types and applications of:- Chromatography,

#### Unit III

Spectrophotometry : X-ray diffraction, Lamberts – Beer's Law and Colorimetry, Flow cytometry  
Principle and application of : radiation techniques in biology, Radioisotopes and half-life of isotopes, Geiger Muller counter, Scintillation Counter, Autoradiography,

#### Unit IV

Principles and technique of :- Nucleic acid hybridization and cot curves, Blotting techniques (southern, northern and western), Polymerase chain reaction  
Assay: Definition and types - Chemical assays, Biological assays-in vivo and in vitro assays.  
Principles of cytological and cytochemical techniques: Fixation & staining

## Unit V

Cell Culture techniques: Design of tissue culture laboratory, Culture media preparation and cell harvesting methods, cell cloning  
Immuno-techniques -Detection of molecules using ELISA, RIA, Western Blot, Immuno-precipitation, Monoclonal antibodies-Hybridoma Technology and Applications, Production of monoclonal antibodies, Clinical uses of monoclonal antibodies

**Course outcome (CO):** On completion of the course, students are able to:

- CO1 Understand the Principle and applications of Light & electron microscopy, Centrifugation
- CO2 Describe and compare different types of electrophoresis and chromatographic techniques.
- CO3 Acquire skills to analyze spectrometric and radiation techniques, autoradiography.
- CO4 Understand the Principles of blotting techniques, types of Assays, cytochemical techniques.
- CO5 Understand the concept of Cell Culture techniques, Immuno-techniques, monoclonal antibodies.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	1	0	0	2
CO2	3	1	3	1	0	0	2
CO3	3	1	3	1	0	0	2
CO4	3	1	3	1	0	0	2
CO5	3	1	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

## Suggested Readings

- Animals Cell Culture - A practical approach, John R.W.Masters, IRL Press.
- Introduction to Instrumental analysis. Robert Braun. McGraw Hill International Edition
- Principles and Techniques of Biochemistry and Molecular Biology, (6th edition), K Wilson and J Walker (editor), Cambridge University Press,
- Cell and Molecular Biology, P Sheeler and D E Bianchi, John Wiley & Sons, Inc,
- Essentials of Biophysics, P Narayanan, New Age Int. Pub. New Delhi.
- Bioinstrumentation, J G Webster, John Wiley & Sons Inc.
- Methods in Modern Biophysics, B Notting, Springer Verlag Berlin Heidelberg New York,
- Spectroscopy for the Biological Sciences, G G Hames, John Wiley & Sons Inc.

## MZO008A: GENERAL PHYSIOLOGY

Credit(s): 4

### Unit I

Digestion and Metabolism: Nature of food-stuff, various types of digestive enzymes and their action in alimentary canal, Absorption and assimilation of food, control of digestion.  
Circulatory system: Composition and function of blood, blood groups, Haemopoiesis, blood clotting, homeostasis, anatomy of heart structure, Myogenic heart, cardiac cycle, ECG – its principle and significance.

### Unit II

Mechanism of breathing, Physiology of respiration, Oxygen and Carbon dioxide transport in blood, The role of hemoglobin, control of breathing. Gas Exchange and Acid-base Balance: Respiratory organs (lungs).  
Excretory system: Osmoregulation in aquatic and terrestrial environments, physiology of Excretion -Functional architecture of nephron, formation and regulation of nitrogenous end products, formation of urine and its hormonal control, Role of kidney in osmoregulation, counter- current multiplier system.

### Unit III

Muscle Function and Movement: Types and properties of muscles, Anatomy of muscle, Regulation of contraction, Excitation-contraction coupling, Molecular theory of muscle contraction, Cori cycle. Nervous system: Functional architecture of neurons, Origin and propagation of nerve impulse through neuron (myelinated, non-myelinated), Action potential, Synapses and neurotransmitters, Reflex arc and reflex action.

### Unit IV

Sensory Transduction: Auditory receptors, Chemoreceptors; taste and smell, Mechanoreceptors, Vision and Photoreception, Thermoreception.

Stress Biology : Basic concepts of environmental stress and strain, Adaptation, Acclimation and acclimatization, Concept of Homeostasis, Physiological response to oxygen deficient stress.

### Unit V

Endocrinology: Hormones as messengers. Classification of hormones, endocrine glands (Pituitary, pancreas, adrenal, thyroid, testes, ovary).

Neuroendocrine system and neurosecretion, General principles, structure and hormone action.

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Understand the Physiology of Digestion & Circulation.

CO2 Understand the Physiology of Respiration & Excretion.

CO3 Understand the Physiology of muscle contraction & nerve impulse and Reflex Action.

CO4 Understand the concept of Sensory Transduction and Stress Biology.

CO5 Understand the Physiology & Types of Endocrine glands.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	1	0	2
CO2	3	0	3	1	1	0	2
CO3	3	0	3	1	1	0	2
CO4	3	0	3	1	1	0	2
CO5	3	0	3	1	1	0	2

3 = Highly Related, 2 = Medium, 1 = Low

### Suggested Readings

- Animal Physiology Mechanisms & Adaptation, Eckert, R.W.H. Freeman & Company, New York
- General and Comparative Animal Physiology, Hoar, W.S. Prentice Hall of India.
- Animal Physiology: adaptation and Environment, Schiemdt Neilsen. Cambridge
- Environmental and Metabolic Animal Physiology, Prosser, C.L. Wiley-Liss Inc., New York.
- General and Comparative Endocrinology, E.J.W. Barrington. Oxford. Clarendon Press.
- Comparative Vertebrate Endocrinology. P.J. Bentley. Cambridge University Press.
- Text Book of Endocrinology, R.H. Williams. W.B. Saunders.
- Endocrine Physiology. C.R. Martin. Oxford Univ. Press.
- Comparative Endocrinology, A. Gorbman et al. John Wiley & Sons.

### MZO033A: FUNDAMENTALS IN QUANTITATIVE RESEARCH METHODS Credit(s):4

#### Unit I

Introduction: Biostatistics: Definition, Terms, Applications & Role of biostatistics in modern research.

Data collection: Types of data: Primary, secondary, qualitative, quantitative  
Methods of data collection and classification: Types of sampling method- Advantages and disadvantages of census and sampling method, Classification of data, Tabulation, Methods of classification, Class intervals- exclusive and inclusive method,  
Diagrammatic and graphical presentation of data, Bar diagram – (types), Pie diagram, Histograms, Frequency polygon, Frequency curve (types- skewness, kurtosis, ogive)

#### Unit II

Statistical Methods: Measures of central tendency and dispersal, Mean, median, mode, quartile; Range, Mean deviation, Quartiles deviation, variance, Standard deviation, Standard error, degree of freedom, Standard error of mean.

Probability distributions: Basic concepts and definition; Laws of probability, Probability distribution: Binomial, Poisson and Normal

#### Unit III

Correlation and Regression : Types of correlation, Methods to measure correlation, types of Regression analysis, differences between regression and correlation analysis.

Statistical inference: Difference between parametric and non-parametric statistics; Testing of hypothesis, Errors, Student's t-test, F-test, Testing goodness of Fit, Chi-square test, Chi-square distribution and characteristics, Applications of Chi-square test. Yate's correction. Analysis of Variance (ANOVA) One-way classification. Two-way classification.

#### Unit IV

Basic Concepts of Research : Introduction, definition and characteristics and objective of research, types of research (Descriptive vs analytical; applied vs fundamental; quantitative vs qualitative; conceptual vs empirical), research approaches, significance of research, research methods versus methodology, research in decision making, role of research in various areas, limitations of research, Literature-review and its consolidation; Library research; field research; laboratory research, formulation of a research problem and hypothesis testing

#### Unit V

Data Collection and Documentation of Observations: Maintaining laboratory record; Tabulation and generation of graphs. Imaging of tissue specimens and application of scale bars. The art of field photography.

Overview of Biological Problems: History; Key biology research areas, Model organisms in biology (A brief overview)

Ethics and Art of Scientific Writing: Authors, acknowledgements, reproducibility, plagiarism, Numbers, units, abbreviations and nomenclature used in scientific writing. Writing references. Power-point presentation. Poster presentation. Scientific writing and ethics, Introduction to copyright-academic misconduct / plagiarism.

**Course outcome (CO) :** On completion of the course, students are able to:

CO-1 Understand the Functions, scope and application of biostatistics, Data Classification and Graphical presentation of frequency distribution.

CO-2 Understand the measures of central tendency and dispersion like Computation of arithmetic mean, mode and median, Standard Deviation, Standard error of mean and Probability distributions.

CO-3 Understand the concept of correlation and regression, student's 't' test, F-test, chi-square test, ANOVA

CO-4 Understand the concept of research and different types of research in the context of biology and to have basic awareness of Scientific Methods and Research

CO-5 Develop competence on data collection and process of scientific documentation and Analyze the ethical aspects of research and Evaluate the different methods of scientific writing and reporting

15

# MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7

CO2	3	0	2	1	0	0	2
CO3	3	0	2	1	0	0	2
CO4	3	3	2	2	0	0	2
CO5	3	2	3	2	1	3	2

3 = Highly Related; 2 = Medium 1 = Low

## Suggested Readings

- Agarwal, B.L. (1996) Basic statistics, New Age International(P) Ltd. Publishers, New Delhi.
- Bailey, N.T.J. (1981) Statistical methods in Biology, Hodder and Stongtton, London.
- Campell, R.C. (1978), Statistics for biologists. Blacker and Sons Publishers, Bombay.
- Gupta, C.B. and Gupta, V. (2002) Statistical methods. Ika's Publishing House, New Delhi.
- Rostogi, V. B. (2009) Fundamentals of Biostatistics. Ane's Students Edition New Delhi.
- Dawson, C. (2002). Practical research methods. UBS Publishers, New Delhi.
- Stapleton, P., Yondeowei, A., Mukanyange, J., Houten, H. (1995). Scientific writing for agricultural research scientists – a training reference manual. West Africa Rice Development Association, Hong Kong.
- Ruzin, S. E. (1999). Plant microtechnique and microscopy. Oxford University Press, New York, U.S.A.
- S. C. Gupta. Fundamentals of Statistics. Himalaya Pub. House.

## MZO010: LABORATORY EXERCISES OF IMMUNOLOGY, QUANTITATIVE RESEARCH METHODS & CHORDATES

Credit(s): 6

- To identify, classify & study distinguishing features of representatives from : Lower Chordates: Salpa, Doliolum, Botrylus, Herdmania, and Amphioxus.
- To identify, classify & study distinguishing features of representatives from : Cyclostomata: Petromyzon, Myxine, Pisces: Pristis, Trygon, Chimaera, Polydon,
- To identify, classify & study distinguishing features of representatives from : Pisces: Acipenser, Amia, Lepidosteus, Protopterus, Lepidosiren, Neoceratodus, Notopterus,
- To identify, classify & study distinguishing features of representatives from : Pisces : Exocoetis, Echinoides, Pleuronectes, Diodon, Tetradon, Ostracion,
- To identify, classify & study distinguishing features of representatives from : Syngnathus, Hippocampus, Anguilla, Labeo.
- To identify, classify & study distinguishing features of representatives from : Amphibia: Ichthyophis, Necturus, Proteus, Ambystoma, Axolotl,
- To identify, classify & study distinguishing features of representatives from : Amphibia: Siren, Alytes, Pipa, Bufo, Hyla, Rhacophorus.
- To identify, classify & study distinguishing features of representatives from : Reptilia: Testudo, Chelonea, Sphenodon, Calotes, Hemidactylus, Phrynosoma, Draco, Varanus,
- To identify, classify & study distinguishing features of representatives from : Reptilia: Chamaeleon, Cobra, Hydrophis, Viper, Pit Viper, Krait, Eryx, Gavius, alligator, crocodile.
- To identify, classify & study distinguishing features of representatives from : Aves: Talor Bird, Indian koel, Jungle fowl, Pavo cristatus, Columba, parrot, Wood packer, ostrich, Archéopteryx.
- To identify, classify & study distinguishing features of representatives from : Mammals: Ornithorhynchus, Echidna, Macropus, Hedgehog, Manis, Loris, Bat.

11. To identify and study the permanent slides of: Lower Chordates: *Herdmania* spicules, ascidian tadpole larva, *Amphioxus* T. S. passing through oral hood, pharynx, testes, ovary, intestine and caudal regions. Ammocoete larva (whole mount).
12. To identify and study the permanent slides of: Pisces: Placoid scale, Cycloid scale, Ctenoid scale.
13. To identify and study the permanent slides of: Amphibia: V S skin of Frog, T S passing through stomach, duodenum, intestine, liver, pancreas, lung, kidney, testes, ovary.
14. To identify and study the permanent slides of: Reptilia: V S skin of lizard.  
Aves: V S skin of bird, contour feather, down feather.
15. To identify and study the permanent slides of: Mammals: V S skin of mammals, T S passing through stomach, intestine, liver, pancreas, kidney.
16. To identify and study the permanent slides of: Mammals: testes, ovary, thyroid gland, adrenal gland, pituitary gland, lung, bone, spinal cord.
17. To study a comparative account of Skull of Frog, Varanus, Fowl and Rabbit.
18. To study a comparative account of pectoral girdle of Frog, Varanus, Fowl and Rabbit (both articulated and disarticulated).
19. To study a comparative account of pelvic girdle of Frog, Varanus, Fowl and Rabbit (both articulated and disarticulated).
20. To study a comparative account of forelimb of Frog, Varanus, Fowl and Rabbit (both articulated and disarticulated).
21. To study a comparative account of hindlimb of Frog, Varanus, Fowl and Rabbit (both articulated and disarticulated).
22. To perform the Differential leucocytes count.
23. To separate serum from blood.
24. To Study the Double immuno diffusion test using specific antibody and antigen.
25. To identify blood groups in man.
26. To demonstrate agglutination reaction.
27. To demonstrate ELISA technique.
28. To determine haemoglobin in given blood samples.
29. To enumerate the RBC in given blood samples.
30. To enumerate the WBC in given blood samples.
31. To enumerate the MCV, MCH, MCHC of the given sample of blood.
32. To determine the blood clotting time, erythrocyte sedimentation rate, haemolysis and crenation.
33. To study and prepare frequency tables, bar diagrams, histograms, frequency curves, ogives and pie diagrams.
34. To calculation standard deviation and coefficient of variation.
35. To estimate significance between samples using Student's t-test, F-test and Chi-square test..
36. To plot regression lines and calculate correlation and regression analysis.
37. To study analysis of variance (One-way & Two-way classification).
38. Introduction to the statistical software like R and SPSS
39. Use of excel sheet and graph pad Prism for data processing.
40. Use of search engines like Pub-Med, Scopus, Science direct for reference material collection and management.

### SEMESTER-III

MZO011B	Genetics & Developmental Biology	4
MZO012B	Ethology & Applied Zoology	4
MZO017B	Laboratory Exercises of genetics, developmental biology, & ethology & applied Zoology	2
Discipline Elective Group A - ENTOMOLOGY *		
MZO031A	Insect Diversity, Society and Insect Physiology	4
MZO032A	Insect Toxicology and Ecology	4
MZO026A	Agricultural & Medical Entomology	4
MZO027A	Practicals in Entomology	4

Ageing- cellular and extra cellular aging. Causes- Wear and tear, Oxidative damage, Mitochondrial genome damage, genetically programmed ageing.

**Course outcome (CO) :** On completion of the course, students are able to:

- CO1 Understand the concept of Reproductive Genetics, mutation and teratology..
- CO2 Understand the concept of Molecular Diagnosis, Prenatal Diagnosis, Genetic counseling, Eugenics, Euthenics, Euphenics
- CO3 Understand the Basic concepts of development, Environmental regulation of animal development and sex determination.
- CO4 Understand the process of gametogenesis and Cellular and Molecular basis of development.
- CO-5 Understand the concept of Embryogenesis and Organogenesis, ageing.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	2	0	2
CO2	3	0	3	1	2	2	2
CO3	3	0	3	1	0	0	2
CO4	3	0	3	1	0	0	2
CO5	3	0	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

#### Suggested Readings

- Gardnor: Principles of Genetics
- Pierce Benjamin: Genetics- A Conceptual Approach
- Scriver *et al.*: The metabolic and molecular basis of inherited diseases. 8th edition, McGraw-Hill.
- Stratchan, T. and Read, A.P.: Human molecular Genetics. John Wiley, New York
- Tomarin Robert, H: Principles of Genetics
- Development Biology S.F. Gilbert, Sinauer Associates Inc., Massachusetts
- An Introduction to embryology, Balinsky, B.I.: W.B. Saunders Comp.
- Developmental Biology. R.M Twyman. Viva Books Private Limited. New Delhi.
- Principles of Development. Wolpert, L. Oxford University Press, Oxford, UK.
- Berril, N. J. Developmental biology.
- Snustad, D. P., J. M. Simmons & J. B. Jenkins. Principles of Genetics.
- Development Biology. Berrill, N.J. McGraw Hill book Com. New York.
- Modern Embryology: Bodemer, C.W.: Holt Reinchart and Winstom, Inc. New York. Chicago.

#### MZO012C: ETHOLOGY AND APPLIED ZOOLOGY

Credit(s): 4

##### Unit I

Introduction of Ethology: Aims of Behavioural research. Diversity of animal behaviour, Historical perspective, Mechanism of behavior: Neural control of behavior, sensory processes and perception, Complex behavior: Instinct and learning, Concepts of Ethology: Fixed Action Pattern, ASE, Sign Stimulus, Innate Releasing Mechanism.

##### Unit II

Orientation: Mechanism of orientation: primary and secondary orientation; kinesis and taxis. Learning: Definition and forms: habituation, classical conditioning, operant conditioning, latent learning, social learning, Imprinting.

Homeostasis and behavior, Hormonal regulation of behaviours. Brain and behaviour.

### Unit III

Behavioural genetic; Parental care and mating systems

Altruism: reciprocal altruism, group selection, kin selection and inclusive fitness.

Social organization: Dominance hierarchies and Territoriality, Animal communication: Dance language of Honey bee, Migration: Fish (Catadromous and Anadromous), Birds.

### Unit IV

Economic importance of Protozoa and Helminthes, Arthropods, Mollusca.

Important insect pest and their management.

Edible Freshwater and Marine Fishes of India and products of fishing industry, Fishes diseases

### Unit V

A brief account of sericulture, apiculture, vermiculture, lac culture and pearl culture.

Pisciculture, Prawn fisheries, Poultry, Basic concepts in dairy sciences

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Demonstrate knowledge of key concepts in animal behavior

CO2 Understand the concepts of orientation, learning and Hormonal regulation of behaviour.

CO3 Understand the concept of Parental care and mating systems, Altruism and Sociality in animal systems.

CO4 Understand and study the economical importance of Protozoa, Helminthes, Arthropods, Mollusca and a basic idea of IPM, Recognize Edible Freshwater and Marine Fishes of India

CO5 Understand general topics like vermiculture, Apiculture, Sericulture, lac culture, Pearl culture. Pisciculture, prawn culture, poultry, dairy industry

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	0	2
CO2	3	0	3	1	0	0	2
CO3	3	0	3	1	0	0	2
CO4	3	0	3	1	1	0	2
CO5	3	0	3	1	1	0	2

3 = Highly Related, 2 = Medium, 1 = Low

### Suggested Readings

- An Introduction to Animal Behaviour (6th Edition). Aubrey Manning and Marian Stamp Dawkins, Cambridge University Press.
- Animal Behaviour: An Evolutionary Approach, 9th Edition. John Alcock, Sinauer Associate Inc., USA, 2009.
- Animal Behaviour (11th Edition). Dustin R. Rubenstein and John Alcock, Sinauer Associate Inc., USA, 2018.
- Neuroscience of Emotion: A New Synthesis. Ralph Adolphs and David J. Anderson, Princeton University Press, 2018.
- Economic Zoology by G.S Shukla & V.B. Upadhyay, 1991-92 Rastogi Publications, Meerut.
- A hand book on Economic Zoology by Jawid Ahsan and Subhas Prasad Sinha, S. Chand & company Ltd. Ramnagar.
- Dennis, H. (2009). Agricultural Entomology. Timber Press (OR).
- Hafez, E. S. E. (1962). Reproduction in Farm Animals. Lea & Fabiger Publisher

- Dunham R.A. (2004). Aquaculture and Fisheries Biotechnology Genetic Approaches. CABI publications. U.K.
- Pedigo, L.P. (2002). Entomology and Pest Management, Prentice Hall.
- Manning An introduction to behaviour Edward. Arnold.London
- Animal behaviour,R.A. Publication Mc Graw Hill Co.New York.
- Animal Societies and Evolution : Scientific Ameridan Publications.
- Animal behaviour : Mac Farland D. Publications,ILBS.
- Animal behaviour : Werlace, R.A. Publ. Goodyear Publishin Co Inc.
- Grizimek's encyclopaedia of Ethology.
- Hand book of Ethological method Laharen.Publ.Garland STPM Press.
- Animal behaviour- Reena Mathur, Rastogi Publications Meerut.

**MZO017B: LABORATORY EXERCISES OF GENETICS, DEVELOPMENTAL BIOLOGY, ETHOLOGY & APPLIED ZOOLOGY** Credit(s): 2

1. To study Karyotyping of normal human cells.
2. To study Karyotyping of abnormal human cells.
3. To study the developmental stages of Frog.
4. To study the developmental stages of Chick embryo.
5. To study the chick embryo culture.
6. To study the life cycle and developmental stages of *Drosophila melanogaster*.
7. To study the sex chromatin.
8. To prepare slide of salivary gland , polytene chromosome from *Drosophila* larva.
9. To study various meiotic stages in Grass hopper – (testes –squash preparation).
10. To study various mitotic stages in onion root tip by squash preparation.
11. To study chromosomal basis of Inheritance.
12. Isolation of mitochondria from liver tissue by differential centrifugation.
13. To study the geotaxis, phototaxis, chemotaxis and hydrotaxis of earthworm.
14. To study the Fixed action pattern in spider.
15. To study the Territorial behaviour in stray dogs.
16. To study and prepare slides of protozoan species of economic importance.
17. To study selected species of Platyhelminthes of economic importance.
18. To study the characters of Mites, Ticks, Spiders, Insects.
19. To study the Life cycle of silk worm.
20. To study the Life cycle of honey bee.
21. To study the Life cycle of mosquitos.
22. To Visit a fish industry/Poultry farm/ Dairy/ Leather industry etc.
23. To prepare and study protozoan culture.

**Discipline Elective**

**Group A - ENTOMOLOGY**

**MZO031A: INSECT DIVERSITY, SOCIETY & INSECT PHYSIOLOGY** Credits-4

**Unit I**

Introduction to insects and their biology: Morphology: external features and their articulation. Comparative study of head-antennae, mouth parts; thorax – legs, wings; abdominal appendages, genitalia of the different orders of insects

## Unit II

Historical development of classification of insect: basis of insect classification; classification of insects up to sub orders and up to super families in economically important groups

Insect Society: group of social insects and their social life. Evolution of sociality; Social organization and social behaviour in honey bee, ants, termites, aphids and wasps

## Unit III

Integumentary system: Structure, function & formation, Growth, Moulting and Metamorphic development, hormonal influence, Sclerotization.

Respiratory system: Tracheal system and physiology of gas exchange.

## Unit IV

Digestive & Excretory system: Alimentary tract, digestive and excretory physiology, Malpighian tubules, osmoregulation.

Circulatory system: Open circulatory system, hemolymph, hemocytes, Immunity and thermoregulation

## Unit V

Reproductive system: Female & Male reproductive systems; Usual and unusual modes of reproduction.

Nervous system: Components of the nervous system, Sensing the environment - Sensory receptors, vision & acoustics.

Endocrine system: Insect hormones- with reference to metamorphosis & reproduction

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Critically analyze the value and importance of insects, the basic biology and the significant identification characters of the insects belonging to different orders.

CO2 Recognize the insects upto suborders and understand the concept of insect societies and would develop an ability to appreciate their implications on societal impacts.

CO3 Understand the structure and function of various physiological systems like integumentary and Respiratory system operating in insects

CO4 Understand the properties, processes, and functions of insect systems like Digestive, Excretory and Circulatory system.

CO5 Identify the influence/control (neural and/or hormonal) within each system and develop a sense of how physiology can be infused in major research topics in entomology.

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	1	0	2
CO2	3	0	3	1	1	0	2
CO3	3	0	3	1	1	0	2
CO4	3	0	3	1	1	0	2
CO5	3	0	3	1	1	0	2

3 = Highly Related, 2 = Medium, 1 = Low

## Suggested Reading:

- A general text book of entomology, Imms, A. D., Chapman & Hall, UK
- Introduction to the study of insects, Borror, D. J., Triplehorn, C. A., and Johnson, N. F., M Saunders College Publication, USA
- Principles of Insect Morphology, Snodgrass, R. E., Cornell Univ. Press, USA

- The Insect Societies. Wilson, E. O., Harvard Univ. Press, UK
- Whitfield, J. B. and A. H. Purcell III. 2014. Daly and Doyen's Introduction to Insect Biology and Diversity. 3rd Edition. Oxford University Press, Oxford, UK.
- The Principles of Insect Physiology, Wigglesworth, Vincent B, Chapman & Hall Ltd. USA.
- The Insects: Structure and function, Chapman, R. F., Cambridge University Press, UK
- Physiological system in Insects, Klowden, M. J., Academic Press, USA
- The Insects, An outline of Entomology, Gullan, P. J., and Cranston, P. S., Wiley Blackwell, UK
- Insect Physiology and Biochemistry, Nation, J. L., CRC Press, USA

## **MZO032A: INSECT TOXICOLOGY AND ECOLOGY**

**Credits-4**

### **Unit I**

Introduction : Definition of pesticides, brief history, pesticides registration, pesticide industries and markets in world and India.

Toxicology of pesticides : LD50 and LC 50 , Dose-response relationship; Carcinogenic, Mutagenic and Teratogenic effects, Method of testing chemicals on insect and evaluation of toxicity.

### **Unit II**

Group characteristics and function of pesticides :Organochlorines, Organophosphorus insecticides, Carbamates, Pyrethroids, other plant origin bio-insecticides, neonicotinoids and nitrogenous insecticides; fumigants; IGRs, attractants, repellents and anti-feedants. Properties of few individual insecticides i.e. DDT, HCH (BHC), Lindane, Endosulfan, Parathion, Malathion, Carbaryl, Cypermethrin, etc.

### **Unit III**

Mode of action : Central Nervous system, Acetylcholinesterase and unknown modes of action.

Metabolism of insecticides: Phase I and Phase II reactions and metabolism of other pesticides.

Toxicological symptoms of Organochlorines, Organophosphorus, Carbamates, Pyrethroids, plant origin insecticides and other bioinsecticides.

### **Unit IV**

Safer pesticides:Next generation molecules to be used as pesticides for plant protection and their chemistry.Nano-pesticides: Use of nanopesticides in plant protection, delivery technology and their behavior in different ecosystem.

Therapy and antidotes: Type and severity of contamination and medical aid.

### **Unit V**

Ecology and biodiversity of insects: Insect biodiversity and their functioning in Terrestrial and aquatic ecosystem, Restoration of terrestrial ecosystem using the soil biota.

Global environmental impact on insects: Impact of global climatic changes on insect behavior, physiology and reproduction.

Toxic chemicals and survival of insects: Impact of Pesticides, Heavy Metals, Pharmaceuticals and other pollutants on insect physiology, their survival, reproduction and biodiversity.

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Understand the concept of pesticides and Toxicology of pesticides.

CO2 Understand about Group characteristics and function of pesticides, insecticides, bio-insecticides.

CO3 Understand and analyze the Mode of action, metabolism and Toxicological symptoms of insecticides.

CO4 Analyze handling of the pesticides in crop protection and understand the therapy and antidotes at the time of poisoning.

CO5 Understand the biodiversity of insects in different ecosystems and the impact of global climatic changes on insects diversity and their behaviour

## MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	1	0	0	2
CO2	3	1	3	1	0	0	2
CO3	3	1	3	1	0	0	2
CO4	3	1	3	1	0	0	2
CO5	3	1	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

### Suggested Reading:

- Toxicology and Risk Assessment: A Comprehensive Introduction, Greim H., and Snyder, R. (ed), John Wiley and Sons, UK
- The Complete Book of pesticide management, Whitford, F., Wiley Interscience, John Wiley and Sons, UK
- Safer Insecticides, Hodgson, E., and Kuhr, R. J., (ed), Marcel Dekker Inc., New York, USA
- Pesticide Application Methods, Matthews, G. A., Blackwell Science, London, UK
- Pesticide Biochemistry and Physiology, Wilkinson, C. F., Plenum Press, New York, UK
- Metabolic pathways of agrochemicals Part II, Roberts, T. R., and Hutson, D. H. The Royal Society of Chemistry, UK
- Chemical Ecology of Insects, Carde, R. T., and Bell, W. J., Chapman & Hall, New York, USA

## MZO026A: AGRICULTURAL & MEDICAL ENTOMOLOGY Credits-4

### Unit I

Agricultural Entomology: Agricultural pests: Pest status and factors responsible for achieving the status of pest, economic injury level, economic threshold, action threshold, pest spectrum, pest complex, carrying capacity, secondary pest outbreak, pest surveillance and sampling.

Insect Plant Interactions - Theory of co-evolution, role of allelochemicals in host plant mediation, tritrophic interaction, host-plant selection by phytophagous insects, establishment of insect population on a plant surface.

### Unit II

Crop pests biology & control: Identification, seasonal history, nature of damage and control measures of pests, of cereals, pulse crops, cotton, vegetables (summer vegetable and winter vegetable), oil seeds, fruit crops, sugarcane and stored grains.

Locusts- different species and phases, phase transition, periodicity, migration, biology and control measures.

### Unit III

Integrated Pest Management: Physical, Cultural, Chemical, Biological control, Genetic methods (SIT, FI sterility, etc) and biotechnological methods of pest control. Biorational methods (Using Pheromones, JH mimics, MH agonists, etc) in pest management.

Stored grain pests: Control and quarantine

Plant resistance to insects: types of resistance, mechanism of resistance-antibiosis, antixenosis, tolerance, factors mediating resistance. Transgenic plants (using genes of *Bacillus thuringiensis*, etc) by recombinant DNA technology, resistance management of Bt crops.

### Unit IV

Medical Entomology: Introduction-Vector biology, medical importance and management of the medically important insects (fleas, lice, bugs, mosquitoes and flies); Modes of Transmission of

For Shrinivisha

arthropod borne communicable diseases; Epidemiology of Vector-Borne diseases through Parasites and Pathogens of Public Health Importance- Occurrence, causative agents, transmission and control of protozoan, bacterial, rickettsial and viral diseases. e.g. Malaria, Leishmaniasis, Sleeping sickness, Filariasis, Plague, Japanese Encephalitis, Yellow fever, Dengue, Chikungunya; Ecto- & endoparasites- of skin. Internal Insect Parasites (myiasis causing insects).

#### Unit V

Control of insect vectors of public health importance; Management of Vector-Borne Diseases by Integrated Vector Management.

Forensic Entomology: Forensically important insects, role of insects/arthropods in criminal investigation, by predicting time and cause of death.

**Course outcome (CO) :** On completion of the course, students are able to:

CO-1 Demonstrate knowledge of key concepts in Agricultural Entomology, Agricultural pests and Insect Plant Interactions

CO-2 Understand the concept of Crop pests biology & control.

CO-3 Understand Integrated Pest Management and Plant resistance to insects.

CO4 Understand Vector biology, medical importance and management of the medically important insects.

CO5 Analyze control and management of insect vectors of public health importance and Forensic Entomology.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	1	3	2	0	0	2
CO2	3	1	3	2	0	0	2
CO3	3	1	3	2	0	0	2
CO4	3	1	3	2	0	1	2
CO5	3	1	3	2	0	1	2

3 = Highly Related, 2 = Medium, 1 = Low

#### Suggested Readings:

- Insect Plant Biology, Schoonhoven, L. M., van Loon, J.A., & Dicke, M., Publisher Oxford University Press, USA
- Interrelationship between insects and Plants, Jolivet, P., CRC Press, USA
- Entomology & Pest Management, Pedigo, L. P., Prentice Hall, New Jersey, USA
- Concepts of IPM, Norris, Caswell-Chen and Kogan, Prentice-Hall, USA
- Agricultural insects pests of the tropics and their control, Hill, D. S., Cambridge University Press, UK
- Medical and Veterinary Entomology Mullen, G., Durden, L., Academic Press, USA
- Medical and Veterinary Entomology, Kettle, D. S., Cabi Press, USA
- Medical Entomology for students, Service, M. Cambridge University Press, UK .

#### MZO027A: PRACTICALS IN ENTOMOLOGY

Credits-4

1. Morphology: Study of head and its sclerites of honeybee and cockroach.
2. Study of mouth parts of cockroach, housefly, honeybee, mosquito and butterfly.
3. Study of wings and their venation, Different types of antennae and legs of insects.
4. Study of stinging apparatus of honey bee.

*[Handwritten signatures and marks]*

5. Taxonomy: Identification of insects belonging to different groups up to orders and sub orders.
6. Social Insects: Morphological studies of various castes of *Polistes*, *Apis*, *Camponotus*, and *Odontotermes*.
7. Study of various types of social insects and their nests.
8. Dissection of alimentary canal of *Dysdercus*, honeybee, butterfly and grasshopper.
9. Reproductive system: Dissection of male & female reproductive system of moths; Apyrene & Eupyrene sperm in moths.
10. Filter chamber of homopteran; salivary glands of mosquito, honeybee and *Dysdercus*.
11. Excretory system detection of uric acid in malpighian tubules, uptake of dye in malpighian tubules.
12. Circulation: haemocyte count, estimation of protein in hemolymph.
13. Respiratory system: dissection of butterfly, *Dysdercus* and grasshopper.
14. Nervous system: dissection of *Dysdercus*, butterfly, honey bee and locust, stomodeal nervous system of cockroach and grasshopper.
15. Insect Toxicology: Estimation of LD50 and LC 50 using insects.
16. Pesticide residue analysis of contaminated soil, vegetable and water using TLC, GLC and HPLC.
17. Studies on dissipation of pesticides from soil and half- life estimation.
18. Estimation of uncertainty and variability in pesticide residue analysis.
19. Estimation of acetylcholinesterase activity to evaluate the toxicity of xenobiotic compounds.
20. Ecology: Measuring insect microclimate
21. Agricultural Entomology: Collection and identification of economically important insects and various stages of their life history.
22. Methods of rearing insects in the laboratory.
23. Identification of important insect pests of different crop plants and stored products.
24. Visits to agricultural fields and forests for on spot study of pests and damage caused by them.
25. Vector Biology: Study of life history stages of medically important arthropods, Diptera, Phthiraptera, Siphonoptera.
26. Identification and anatomical studies of major vector species of *Anopheles*, *Culex* and *Aedes*.
27. Field collection of immature stages of mosquitoes. Study of few available pathogens of arthropod-borne diseases.

### Discipline Elective

#### Group B - ENVIRONMENTAL BIOLOGY

#### MZO028B: PRINCIPLES OF ECOLOGY

Credits-4

##### Unit I

Concept of Ecology - Introduction to ecology, evolutionary ecology, environmental concepts – laws and limiting factors, ecological models. Characteristics of population, population size and exponential growth, limits of population growth, population dynamics, life history pattern, fertility rate and age structure. Competition and coexistence, intraspecific and inter-specific interactions, scramble and contest competition model, mutualism and commensalism, prey-predator interactions.

##### Unit II

Ecosystem - Nature of ecosystem, production, food webs, energy flow through ecosystem, adaptation, resilience of ecosystem, ecosystem management. Synecology and autecology, Importance and Scope of Ecology. Ecological Succession

### Unit III

Restoration Ecology, Climate change - Environmental Stresses and their management, global climatic pattern, global warming, atmospheric ozone, acid and nitrogen deposition, coping with climatic variations.

### Unit IV

Bioremediation - Major classes of contaminants. Uptake, biotransformation, detoxification, elimination and accumulation of toxicants.

Factors influencing bioaccumulation from food and trophic transfer.

Chemical Pesticides and human health, industry and hygiene and their disposal.

Impact of chemicals on biodiversity of microbes, animals and plants.

Bioindicator and biomarkers of environmental health.

Biodegradation and bioremediation of chemicals.

### Unit V

Biodiversity - Biodiversity as a natural resource, Global Biodiversity and Indian Biodiversity, biodiversity act and related international conventions. Sustainable development, natural resource management in changing environment. Molecular ecology, genetic analysis of single and multiple population, phylogeography, molecular approach to behavioural ecology, conservation genetics.

**Course outcome (CO) :** On completion of the course, students are able to:

CO1 Understand the fundamental aspects of ecology.

CO2 Understand the concepts of ecosystem and ecological succession.

CO3 Analyze about the impact of anthropogenic activities on the environment like climate change, global warming etc.

CO4 Understand the concept of bioremediation.

CO5 Understand about biodiversity, natural resources and their conservation.

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	1	2
CO2	3	0	3	1	0	1	2
CO3	3	0	3	1	0	1	2
CO4	3	2	3	1	0	1	2
CO5	3	1	3	1	0	1	2

3 = Highly Related, 2 = Medium, 1 = Low

### Suggested Readings:

- Field Sampling: Principles and Practices in Environmental Analysis. 2004. Conklin, A.R. Jr. CRC Press.
- Principles and Standards for Measuring Primary Production. 2007. Fahey, T.J. and Knapp, A.K. Oxford University Press, UK.
- Ecological Modeling. 2008. Grant, W.E. and Swannack, T.M., Blackwell.
- Fundamental Processes in Ecology: An Earth system Approach. 2007. Wilkinson, D.M. Oxford University Press, UK.
- Principles of Terrestrial Ecosystem Ecology. 2011. Chaplin, F.S., Matson, P.A. and Vitousek, P.M. Springer.
- Environmental Chemistry. 2010. Stanley and Manahan, E. CRC, Taylor & Francis. London.

*[Signature]*

*[Signature]* 27

*[Signature]*

*[Signature]*

- Freshwater Ecology: A Scientific Introduction. 2004, Closs, G., Downes, B. and Boulton, A. Wiley-Blackwell publisher, Oxford.

## **MZO015A: ENVIRONMENT & NATURAL RESOURCES**

**Credit(s): 4**

### **Unit I**

Environment and climate, Earth (core, mantle, tectonic plates); Atmosphere- structure and composition;  
Clouds and their formation and Cloud categories;  
Element and factors of climate: External factors: solar radiation, Internal factors.  
Biosphere and Biogeochemical cycles,  
Environmental monitoring and impact assessment.

### **Unit II**

Cause, effects and remedial measure of Air pollution, Water pollution,  
Noise, radioactive and thermal pollution,  
soil pollution.  
Solid waste management.

### **Unit III**

Global warming : Cause of global warming, Impact of global warming – acid rains and ozone depletion, green house effect, Control measures of global warming  
Natural Disasters and their management (floods, earthquake, Cyclones, landslides etc.)

### **Unit IV**

Natural Resources:-Renewable and nonrenewable natural resources.  
Forest, Land, Water, Mineral, Food resources  
Energy resources

### **Unit V**

Biomes of the World, Natural History of Flora & Fauna of India- Major flora & Fauna, Methods of recording Natural History of a place. Agro climatic Zones of India. Human -Wildlife Interactions: Conflict and Co-existence  
Species interactions: Herbivory, Carnivory, parasites, Prey- Predator, Commensalisms, mutualism and Symbiosis

**Course outcome (CO) :** On completion of the course, students are able to:

- CO1 Understand about Environment and climate, Environmental monitoring and impact assessment.  
CO2 Analyze the problems of pollution, its cause, effects and remedial measures.  
CO3 Understand the concept of Global warming, Natural Disasters and their management.  
CO4 Understand the Natural Resources and Energy resources.  
CO5 Understand the concept of biomes of world, human-wildlife & Species interactions.

## **MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:**

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	1	2
CO2	3	0	3	2	0	1	2
CO3	3	0	3	2	0	1	2
CO4	3	0	3	1	0	1	2
CO5	3	0	3	1	0	1	2

3 = Highly Related, 2 = Medium, 1 = Low

**Suggested readings:**

- Bottain : Environmental studies
- Clark : Elements of ecology
- Kormondy : Concepts of ecology
- Odum : Ecology
- Simmons : Ecology of estuaries and costal water
- Pawlosuske : Physico-chemical methods for water
- South Woods : Ecological methods
- Trivedi and Goel : Chemical and biological methods for water pollution studies

**MZO016B: ECO-TOXICOLOGY & BIODIVERSITY CONSERVATION Credit(s): 4**

**Unit I**

Environmental indicators and their role in environmental balance.  
 Toxicology- Basic concepts, toxicological methods.  
 Toxicity testing principles, hazards, risks and their control methods.  
 Food toxicants and their control methods.  
 Monitoring Environment: Abiotic parameters to be monitored for various types of habitats. Keystone species & Indicator species, Continuous & seasonal monitoring

**Unit II**

Pesticides, types, nature and their effects on environment.  
 Important heavy metals and their role in environment.  
 Agrochemical use and misuse, IPM.  
 Occupational Health Hazards and their Control.

**Unit III**

Biodiversity : concept ,principle and significance of biodiversity  
 Causes for the loss of biodiversity, threats to biodiversity  
 Biodiversity hot spots.

**Unit IV**

Wildlife of India according to climatic zones  
 Values of wildlife: positive and negative  
 Wildlife Trade and Laws  
 Wildlife protection Act and its major amendments  
 Endangered and threatened species  
 Red Data Book and its significance  
 Wildlife corridors and wildlife translocation.  
 Biodiversity crisis – habitat degradation, poaching of wild life.

**Unit V**

Conservation of Biodiversity: - In-situ and ex-situ conservation  
 Major protected areas & their importance: National Parks and Sanctuaries  
 Project Tiger, Project Gir Lion and Crocodile breeding project  
 Wildlife in Rajasthan with references to Reptiles, Birds and mammals  
 Study of state bird – and state animal  
 Conserving species of Economic significance  
 People and Conservation

**Course outcome (CO) :** On completion of the course, students are able to:

*[Signature]*

*[Signature]*

*[Signature]*

*[Signature]*

- CO1 Demonstrate knowledge of Environmental indicators and their role in environmental balance and eco-toxicology
- CO2 Understand the concept of pesticides, IPM, Occupational Health Hazards and their Control
- CO3 Understand the concept, principle and significance of biodiversity.
- CO4 Understand Wildlife of India according to ecological zones.
- CO5 Demonstrate knowledge of Conservation of Biodiversity, Wildlife in Rajasthan and Biospheres reserves

### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES:

Course Outcome	Program Outcome						
	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	0	3	1	0	0	2
CO2	3	0	3	1	0	0	2
CO3	3	0	3	1	0	0	2
CO4	3	0	3	1	0	0	2
CO5	3	0	3	1	0	0	2

3 = Highly Related, 2 = Medium, 1 = Low

#### Suggested Readings :

- Wild life management - Hossetti
- V.B. Saharia wildlife in India
- S.K. Tiwari wildlife in central India
- R.K. Tondon Biodiversity Taxonomy & Ecology
- P.C. Kotwal Biodiversity and conservation

#### MZO017C: Laboratory Exercises of Environmental Biology

Credits-4

1. To Mark important sanctuaries and national parks of Rajasthan on map, and write details of any three.
2. To estimate any environmental toxicants (biochemical/ GC/TLC).
3. To determine chloride concentration in the given water sample.
4. To estimate the total hardness of given water sample.
5. To determine the acidity of water.
6. To determine the alkalinity of water.
7. To estimate total dissolved solid in water sample.
8. To determine the dissolved oxygen in given water sample.
9. To determine the BOD of given water sample.
10. To determine the free CO<sub>2</sub> of given water sample.
11. To estimate salinity, phosphates, sulphates, silicates and nitrates in water samples.
12. To separate and identify soil arthropods using Berlese funnel.
13. To Determine organic matter in soil sample.
14. To Determinate Carbonates & bicarbonates in soil sample.
15. To Determine moisture content and water holding capacity of soil sample.
16. To study the physical and chemical characteristics of soil.
17. To study the physico-chemical properties of water.
18. Assessment of density, frequency and abundance of plants/ animals in a community using various techniques i.e. transect, quadrat etc.
19. Decomposition of various organic matters and nutrient release mechanisms/role of arthropods and other micro- and macro-fauna in decomposition.
20. Understanding ecosystem succession by studying various stages of vegetation/community assemblage development.
21. Application of molecular techniques in ecological study.

*[Signature]*

*[Signature]*

*[Signature]*

22. Study of Insect diversity in soil.
  23. Identification of aquatic organisms of different trophic levels and construction of food chain and food web.
  24. Principles of GIS, GPS and RS technology.
  25. Interpretation (visual and automated) of remote sensing information for landscape differentiation.
  26. FIELD STUDY-A study tour of at least five days duration (need not be at a stretch) to observe the ecology and behaviour of animals should be undertaken. The places of visit include inter tidal region, fresh water bodies, lakes, rivers, hill streams, wetlands, mangroves, forests grasslands, drinking water treatment plants, and sewage treatment plants.
- A report of the field study is to be included in the practical record to be submitted at the time of Examination

#### SEMESTER IV

MZO021B	Project/ Dissertation	16
MZO022A	SEMINAR	2
MZO029A	Review Report/Scientific Writing	3
	Total credits	21

#### MZO021B: Project/ Dissertation

Credit(s):16

The students should carry out a project/dissertation work for at least 16 weeks in a National Lab/Private industry/reputed lab/institute. Dissertation will be based upon research and actual bench work. It will begin from the end of III semester and will continue through the IV semester. Dissertation report will be submitted and evaluated at the end of IV semester and students should defend their work in front of a selected committee in their last semester.

#### MZO 022A: Seminar

Credit(s): 2

#### MZO029A: Review Report/Scientific Writing

Credit(s): 3

Student will compile the review of literature (at least a ten-year data) on any topic related to the importance of Zoology and its applied fields. The review matter will be supported by the publication in indexed Journal of National/International repute and/or submission of manuscript.

## DEPARTMENT OF ZOOLOGY

The curriculum and syllabus for B.Sc. Program conforms to outcome based teaching learning process. In general, several outcomes have been identified and the curriculum and syllabus have been planned in such a way that each of the courses meets one or more of these outcomes. These relate to the skills, understanding and behaviors that students acquire as they progress through the program. Further each course in the program brings out clear instructional objectives which are mapped to the student outcomes.

The student outcomes are:

1. An ability to apply profound understanding of Chemistry, Zoology and Botany
2. An ability to design and perform experiments, as well as to analyze and interpret data
3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, and sustainability
4. An ability to function on multidisciplinary teams
5. An ability to identify, formulate, and solve scientific problems
6. An understanding of professional and ethical responsibility
7. An ability to communicate effectively
8. The broad education necessary to understand the impact of scientific solutions in global, economic, environmental, and societal context
9. A recognition of the need for, and an ability to engage in life-long learning
10. A knowledge of contemporary issues
11. An ability to use the techniques, skills, and modern scientific tools that provide the learning base for future careers in disciplines such as health sciences, agriculture, environmental management, the emerging biotechnologies, publishing, teaching, research and consultancy.

**JECRC UNIVERSITY**  
**SCHOOL OF SCIENCE**  
**DEPARTMENT OF ZOOLOGY**  
**B.Sc. Pass Course**

**Program Educational Objective (PEO's):**

A graduate of the B.Sc. (Pass course) Program should:

**PEO- I**

The student will recognize and be able to apply basic ethical principles to basic and applied biological/biomedical practice and will understand the role of chemical/biological/biomedical science, scientists, and practitioners in society.

**PEO- II**

The student will be able to facilitate their acquisition of basic and specialist science skills that instill qualities of self-confidence and self-reliance, so that the products of the degree Programs can play active and informed roles in personal, community, national and international development strategies.

**PEO- III**

Students will be able to make valuable contributions to contemporary chemical/biological issues of national and international interest.

**PEO- IV**

Students will be provided with a modern, high-quality foundation education that prepares them for excellence, leadership roles along diverse career paths with encouragement to professional ethics and active participation needed for a successful career.

**Program Outcome (PO's)**

A graduate of the B.Sc. (Pass course) Program will demonstrate:

**PO1 Core competency:** The graduates are expected to know the fundamental concepts of Science and other subjects. These fundamental concepts would reflect the latest understanding of the subject and in allied subject areas. Students will learn to investigate, experiment, relate information and draw logical conclusions based on scientific reasoning.

**PO2 Disciplinary knowledge and skill:** To learn and apply the knowledge in understanding research and addressing practical problems and to apply various scientific methods to address different questions by formulating the hypothesis, data collection and critically analyze the data. The student will be inquisitive about processes and phenomena happening during experiments in laboratories and seeks answers through the research path..

**PO3 Skilled communicator:** Communicate effectively on various scientific issues with the with society at large, They are expected to read and understand documents with in-depth analyses and logical arguments. Graduates are expected to be well-versed in speaking and communicating their idea.

**PO4 Critical thinker and problem solver:** Critical thinking and analytical reasoning and the scientific knowledge will help to develop scientific temper that will be more beneficial for the society. The student will be able to draw logical conclusions based on a group of observations, facts and rules.

**PO5 Team player:** The course curriculum has been designed to provide opportunity to act as team player by contributing in laboratory, field based work, project and industry.

**PO6 Moral and ethical awareness:** Graduates are expected to be responsible citizen of India and be aware of moral and ethical baseline of the country and the world.. Emphasis be given on academic and research ethics, including fair Benefit Sharing, Plagiarism, Scientific Misconduct and so on.

**PO7 Skilled project manager:** Graduates are expected to be familiar with decision making process and basic managerial skills to become a better leader by acquiring knowledge about project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

**PO8 Digitally literate:** The student will acquire knowledge in understanding and carrying out data analysis, use of library search tools, and use of software and related computational work. Students will acquire digital skills and integrate the fundamental concepts with modern tools.

**PO9 Environment and sustainability:** Apply the knowledge of basic science and allied fields to protect environment and to prevent environmental degradation as science graduate, to stay firm on the value systems, of their culture, including their own for a healthy socio cultural environment.

**PO10 Lifelong learner:** Graduates will acquire the ability to engage independent and self-learning as well as to successfully pursue their career objectives in advanced education and in professional courses, through the use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability.

### **Program Specific Outcomes (PSO's)**

In pursuit of the general objective of producing these self-reliant young biological scientists and contributing to scientific knowledge, the following are the **Program Specific Outcomes** of the B.Sc. (Pass course) degree Programme:

**PSO1.** Understand the nature and basic concepts of cell biology, Biochemistry, Taxonomy and ecology and analyze the relationships among animals, plants and microbes. **(Scientific Knowledge)**

**PSO2.** Perform procedures as per laboratory standards in the areas of Biochemistry, ethology, Biostatistics, Taxonomy, Economic Zoology and Ecology and Understand the applications of biological sciences in Apiculture, Aquaculture, Pisciculture, Agriculture and Medicine. **(Professional Skills)**

**PSO 3:** To train academically sound future researchers and intellectuals in the area of general biology, with emphasis in areas on the cutting edge of modern biology, e.g., Molecular biology, Biochemistry, physiology, Genetics, Cytology and Environmental Conservation. **(Successful Career and Entrepreneurship)**

### **Course Learning Objective:**

- To study individual organisms and populations, as well as their relationships to each other and the environment, with the core foundation of evolution and ecology.

*Shivajiniksh...*  
3

*[Signature]*

- To comprehend the genetics, anatomy, physiology and behavior along with other specialized fields of interest
- To comprehend the basic phylogenetic relationships of the major groups of vertebrates
- To comprehend and analyze the adaptive changes that have occurred in invertebrates & vertebrates
- To comprehend and analyze the changes in homologous structures which accompanied the invasion of terrestrial habitats by vertebrates
- To recognize, describe, and point out the external and internal features that characterize the major groups of modern day vertebrate & invertebrates
- To recognize and describe the basic habit, habitat & behavior of chordates
- To gain an in-depth knowledge and practical skills in various aspects of animal biology.
- To Enhance collaborative learning and communication skills through practical sessions, team work, group discussions, assignments and projects.

**JECRC UNIVERSITY  
SCHOOL OF SCIENCE  
DEPARTMENT OF ZOOLOGY  
B.Sc. Pass course**

**SEMESTER-I**

**BSZ001A: Animal Diversity (Non-Chordates) and Evolution      Credit(s)-4**

**Unit I**

**Animal Diversity (Non chordates)**

**Taxonomy and classification:** General principles of taxonomy - Binomial nomenclature, Trinomial nomenclature, Rules of nomenclature, Concept of Five kingdom, Basis of Classification: symmetry, coelom, segmentation and embryogeny.

**Unit II**

Salient features and Outline Classification upto class in Non-Chordates (Protozoa to Coelenterata)

Phylum Protozoa: Type study-*Paramecium*,

Phylum Porifera Type study- *Sycon*

Phylum Coelenterata, Type study – *Obelia*

Reproduction in Protozoans

Evolution of canal system in sponges

**Unit III**

Salient features and Outline Classification upto class in Non-Chordates (Platyhelminthes to Annelida)

Phylum Platyhelminthes, Type study- *Fasciola*

**Onychophora:** Peripatus (salient features) and as connecting link

Phylum Annelida: Type study- *Neries*

Parasitic adaptations in Platyhelminthes

**Unit IV**

Salient features and Outline Classification upto class in Non-Chordates (Arthropoda to Echinodermata)

Phylum Arthropoda, Type study- Prawn

Phylum Mollusca, Type study - *Pila*

Phylum Echinodermata Type study- *Asterias*

Metamorphosis in insects

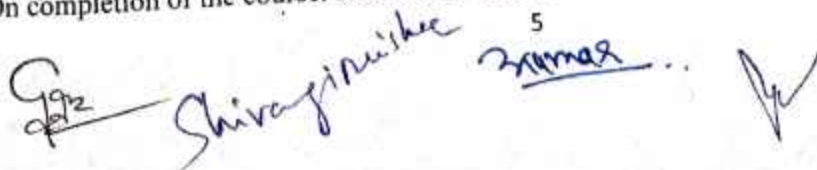

Water vascular system of star fish

**Unit V**

**Evolution:** Lamarckism, Darwinism, Natural Selection, Modes of speciation, Isolation and Isolating mechanisms, Variations: Heritable variations and their role in evolution, Adaptations, Mimicry, Fossils

**Course Outcomes (COs) of the course "Animal Diversity (Non Chordates) & Evolution":**

On completion of the course, students are able to:

The bottom of the page features several handwritten signatures and initials. On the left, there is a signature that appears to be 'Shivaji Mishra'. In the center, there is a signature that looks like 'Zuma' with a small '5' written above it. To the right of this, there are more initials and a signature that is partially visible.

- CO1 Understand general taxonomic rules on animal classification, the principles and methods of taxonomy, the Levels of structural organization and the Basis of Classification -coelom, symmetry, segmentation and its types.
- CO2 Critically analyse the organization, complexity and characteristic features of non-chordates making them familiarize with the morphology and anatomy of representatives of various animal phyla like Protozoa, Porifera, Coelenterata, using examples and Understand the concept of canal system in Porifera
- CO3 Write down the classification and characteristics of Phylum Platyhelminthes, Aschelminthes Onychophora, Annelida and understand about the Parasitic adaptations in Platyhelminthes
- CO4 Write down the classification and characteristics of Phylum Arthropoda, Mollusca and Echinodermata and Understand Metamorphosis in insects, Water vascular system of star fish
- CO5 Understand the process of evolution, Lamarckism, Neo-Lamarckism, Darwinism, Neo-Darwinism, Natural selection, Speciation, Isolation, Variation, Adaptations, Mimicry

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome										Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	H	M		L							H	M	M
CO2	H	M		L							H	M	M
CO3	H	M		L							H	M	M
CO4	H	M		L							H	L	L
CO5	H	M		L							H	L	L

H = Highly Related; M = Medium L = Low

**Recommended readings:**

- Barnes, R.D. (2006). Invertebrate Zoology, VII Edition, Cengage Learning, India.
- Pechenik, J. A. (2015). Biology of the Invertebrates. VII Edition, McGraw-Hill Education
- R.L.Kotpal :Modern text book of biology – Invertebrate –(Rastogi Publication, Meerut).
- Ridley, M. (2004). Evolution. III Edition. Blackwell Publishing.
- Barton, N. H., Briggs, D. E. G., Eisen, J. A., Goldstein, D. B. and Patel, N. H. (2007). Evolution. Cold Spring, Harbour Laboratory Press.
- Hall, B. K. and Hallgrimsson, B. (2008). Evolution. IV Edition. Jones and Bartlett Publishers

### BSZ002A: Non-Chordates and Evolution Lab Credit(s) -1

1. Study the working of optical microscope- compound & dissecting and methods of preparation of permanent slides-single staining and double staining.
2. To prepare permanent slides of - Hydra, Obelia colony, sponge-fibre/spicules/gemmules
3. To identify and study the characteristics of whole mount of *Euglena*, *Amoeba*, *Paramecium*, Binary fission and Conjugation in *Paramecium*, *Elphidium*, *Vorticella*, *Planaria w.m.*
4. Study of animals through museum specimens in the laboratory with details on their classification, biogeography and diagnostic features of *Euplectella*, *Vellela*, *Alcyonium*, *Metridium*, *Gorgonia*, *Physalia*, *Penatulla*, *Aurelia*, any Ctenophore
5. To identify and study the characteristics of: *Heteronereis*, *Aphrodite*, *Arenicola*, *Limulus*, *Scorpion*, *Centipede*, *Millipede*, *Lepas*, *Squilla*, *Eupagurus*, *Crab*, *Mantis*, *Peripatus*.
6. To identify and study the characteristics of: *Chiton*, *Loligo*, *Nautilus*, *Pentaceros*, *Echinus*, *Ophiothrix*, *Antedon*.
7. Examination of water samples collected from different places to observe diversity in Protista
8. Study of adult *Fasciola hepatica*, *Taenia solium*, *Ascaris lumbricoides* and their life stages (Slides/microphotographs)
9. Comparison of two species of birds belonging to same genus (Interspecific difference) and same family but dissimilar genera.
10. Study of adaptive radiations in feet of birds and mouth parts of insects.
11. Study of homology and analogy from suitable specimens (like wings of birds and insects, forelimbs of bat and rabbit), Serial homology in appendages of *Palaemon*.
12. Collection of five species (preferably invertebrates, insects) belonging to a clade. A project work on their generic identification, description and illustration with a note on their locality.
13. Submit a Project Report on field study of the social behaviour of any insect (bees/termites/ants/wasps) or behavioural pattern of earthworm in nature or life cycles of parasites or pathogens.

**Note:** Classification to be followed from "Barnes, R.D. (2006). Invertebrate Zoology, VII Edition, Cengage Learning, India"

Study of live animals should be done without painning them, prefer studies of species which are easy to culture. Digital media can be used to study various characters of animal species. Use of animals for dissection is subject to the conditions that these are not banned under the Wild life (Protection) Act, 1972.

## SEMESTER II

L	T	P	C
4	-	1	5

### BSZ003A: Cell Biology and Genetics

Credit(s)-4

#### Unit I

##### Introduction to cell: Prokaryotic & Eukaryotic

Structure & functions of- cell membrane, mitochondria, Endoplasmic reticulum, ribosome, golgi complex, lysosomes, centrioles, cilia & flagella

Nucleic acids- structure, polymorphism. DNA, RNA- Types of RNA (mRNA, rRNA, tRNA).

#### Unit II

Central Dogma

**DNA Replication** : Experiments of Messelson and Stahl; Mechanism of replication, Enzymology of DNA replication (Enzymes and Proteins associated with DNA replication), Synthesis of RNA : (Transcription in Prokaryote and Eukaryotes), RNA processing.

#### Unit III

Genetic Code – Essential features, Wobble hypothesis.

Protein synthesis – Translation in Prokaryotes and Eukaryotes.

Regulation of gene expression: Inducible system; Lac operon, Repressible system; Tryptophan.

#### Unit IV

**Heredity**: Mendel and his work, Laws of Inheritance, Monohybrid Cross, Dihybrid Cross Multiple allelism

Sex- linked Inheritance

**Gene**– Concept, types and functions of gene.

#### Unit V

Gene interaction (Intragenic and Intergenic interaction)

Cytoplasmic inheritance in animals

Mutations, Eugenics, Genetic counseling, Euthenics, Euphenics

### Course Outcomes (COs) of the course “Cell Biology and Genetics”

On completion of the course, students are able to:

CO1 Understand about the structure and function of different cell organelles, genetic material (Nucleic acids) and various types of RNA

CO2 Understand about process of DNA replication, Transcription & RNA processing,

CO3 Understand about Genetic Code, Translation & gene regulation.

CO4 Understand the concept of gene, Mendelism & Multiple allelism, & Sex- linked Inheritance

CO5 Understand the concept of gene interaction, Cytoplasmic inheritance in animals and the terms like Mutations, Eugenics, Genetic counseling, Euthenics, Euphenics

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF  
PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome										Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PSO 1	PSO 2	PSO 3

CO2	H	M		L							H	L	L
CO3	H	M		L							H	M	M
CO4	H	M		L							H	L	L
CO5	H	M		L							H	L	M

H = Highly Related; M = Medium L = Low

**Suggested books**

- De Roberties, E.D.P. and De Roberties, E.M.F.: Cell and Molecular Biology, B.I. Publications Pvt. Ltd. Lippincott Williams and Wilkins.
- Rastogi, S.C. Cell biology, New age international (P) Ltd, Publishers.
- Lodish, H, Matsudaira, P. and Darnell, J. Molecular cell biology, W.H. Freeman and company.
- Rastogi V.B.: Genetics, Rastogi Publications, Meerut.
- Freifelder, D. Essential of Molecular biology, Narosa Publishing House.
- Gardner : Genetics

**BSZ004A: Cell Biology and Genetics Lab Credit(s): 1**

1. To study the permanent slides and prepare slides of mitotic stages from onion root tip.
2. To study the permanent slides of meiotic cell division.
3. To isolate RNA from Yeast.
4. To Extract DNA from onion.
5. To study and prepare slide of giant chromosome in salivary glands of Chironomous larva.
6. To prepare slide and study Barr body for identification of Gender in Human.
7. To identify male and female *Drosophila*.
8. To prepare culture and study the life-cycle of *Drosophila*.
9. To identify wild and mutant forms of *Drosophila*.
10. To study the permanent prepared slides: Sex comb, Salivary gland chromosomes.
11. To do exercises related to the Human pedigree chart.
12. To do genetics exercises related to monohybrid cross, dihybrid cross, multiple allelism, sex-linked inheritance, genetic interaction

*Shingimibee* *umar*

### SEMESTER-III

L	T	P	C
4	-	1	5

#### BSZ005A: Biology of Chordates and Economic Zoology

CREDIT(S): 4

##### Unit I

**Protochordata:** Classification upto order, General characters

Ascidia: retrogressive metamorphosis, salient features of Amphioxus.

**Agnatha:** Classification upto order, General characters,

Salient features: Petromyzon, Ammocoet larva.

**Gnathostomata:** Classification upto order, General characters,

##### Unit II

General characters and outline classification of Pisces, Amphibia, Reptilia, Aves and Mammals upto order

Comparative anatomy of Integumentary, digestive and Respiratory system of frog, varanus, pigeon and rabbit.

##### Unit III

Salient features: Dipnoi (Lung fishes), Migration in fishes & birds, Adaptive radiation in Amphibian & mammals, Neoteny, Parental care in amphibians. Flight adaptation and Perching mechanism; Structure and types of feathers, hair and its development

##### Unit IV

Economic importance of Protozoa, Coral and coral reefs, parasitic adaptations in helminthes. General introduction about vermiculture, Apiculture, Sericulture, lac culture, Pearl culture, stored grain pests.

##### Unit V

General introduction about Venom industry (Poisonous and non-poisonous snakes), Pisciculture, prawn culture.

General introduction about poultry, dairy industry and wool industry, Wildlife tourism

#### Course Outcomes (COs) of the course "Biology of Chordates & Economic Zoology"

On completion of the course, students are able to:

- CO1 Understand and study the classification of Protochordata, Agnatha & Gnathostomata and general characters of Ascidia, Amphioxus & Petromyzon
- CO2 Understand the classification of Pisces, Amphibia, Reptilia, Aves and Mammals and comparative account of Integumentary, digestive and circulatory system
- CO3 Understand General Topics like migration in fishes Adaptive radiation in Amphibian & mammals, Neoteny, Parental care in amphibians. Flight adaptation and Perching mechanism; Structure and types of feathers, hair and its development
- CO4 Understand and study the economical importance of Protozoa, Coral and coral reefs, parasitic adaptations in helminthes and a basic idea of vermiculture, Apiculture, Sericulture, lac culture, Pearl culture.
- CO5 Understand general topics like Venom industry (Poisonous and non-poisonous snakes), Pisciculture, prawn culture, poultry, dairy industry, wool industry and Wildlife tourism

**MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

Course Outcome	Program Outcome										Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PSO 1	PSO 2	PSO 3
CO1	H	M		L							H	L	L
CO2	H	M		L							H	L	L
CO3	H	M		L							H	L	L
CO4	H	M		L							H	L	L
CO5	H	M		L							H	L	L

H = Highly Related; M = Medium L = Low

**Suggested books**

- R.L.Kotpal : Modern text book of biology –Vertebrate –(Rastogi Publication, Meerut).
- Young, J.Z. : Life of Vertebrate.(E L B S) 1983.Oxford.
- Dalela, R.C. : A text book of Chordate Zoology, (Jai Prakash Nath publications, Meerut.).
- Park, K. (2007). Preventive and Social Medicine. XVI Edition. B.B Publishers.
- Newman, H.H. : The phylum Chordate, (Satish Book Enterprise, Agra).
- Jordon, E.L. : Vertebrate Zoology, ( S.Chand and Co., New Delhi.).
- Arora, D. R and Arora, B. (2001). Medical Parasitology. II Edition. CBS Publications and Distributors.
- Kumar and Corton. Pathological Basis of Diseases.
- Atwal, A.S. (1986). Agricultural Pests of India and South East Asia, Kalyani Publishers.
- Dennis, H. (2009). Agricultural Entomology. Timber Press (OR).
- Hafez, E. S. E. (1962). Reproduction in Farm Animals. Lea & Fabiger Publisher
- Dunham R.A. (2004). Aquaculture and Fisheries Biotechnology Genetic Approaches. CABI publications, U.K.
- Pedigo, L.P. (2002). Entomology and Pest Management, Prentice Hall.

**BSZ006A: Chordates and Economic Zoology Lab Credits :1**

1. To identify and study the characteristics of: *Balanoglossus*, *Amphioxus*, *Petromyzon*, *Hippocampus*, *Torpedo*, *Acipenser*, *Amia*, *Clarias*, *Exocoetus*, *Echeneis*, *Protopterus*.
2. To identify and study the characteristics of: *Ichthyophis*, *Proteus*, *Ambystoma*, *Axolotl*, *Alytes*, *Hyla*, fresh water Tortoise; *Sphenodon*; *Phrynosoma*, *Draco*; *Chameleon*; *Viper*/ *Hydrophis*

11 *Shivgimish* *2009*

3. To identify and study the characteristics of: *Archaeopteryx* Parrot, *Ornithorhynchus*, *Tachyglossus*, *Macropus*, Bat, Loris
4. To Study the life cycle of endoparasites through permanent slides/photomicrographs / specimens.
5. To Study the life cycles of earthworm, silk-moth, honey bee.
6. To prepare permanent slides of - Herdmania spicules, Striped muscle fibers
7. To Study arthropod vectors associated with human diseases: *Pediculus*, *Culex*, *Anopheles*
8. To study the identifying feature and economic importance of common food pest – locust, beetle, *Callosobruchus chinensis* ( pulse beetle), *Sitophilus oryzae* (rice weevil) and *Tribolium castaneum* (red flour beetle)
9. To prepare a list of all vertebrates found in and around your locality /A Visit to poultry farm / animal breeding centre/ wool industry and submission of visit report
10. To prepare and maintain freshwater aquarium or study of economic important fishes species through photomicrographs/ specimens
11. To make a chart explaining types of wools found in the world.
12. To study the Key for Identification of poisonous and non-poisonous snakes. An "animal album" containing photographs, cut outs, with appropriate write up about the above mentioned taxa. Different taxa/ topics may be given to different sets of students for this purpose
13. To study anatomy of any edible fresh water fish.

#### SEMESTER-IV

L	T	P	C
4	-	1	5

#### **BSZ007A: Developmental Biology and Immunology**

**Credit(s): 4**

##### **Unit I**

Animal development: Gametogenesis (Spermatogenesis and oogenesis - vitellogenesis), fertilization, cleavage and morulation, blastulation, gastrulation, fate map, morphogenetic movement, Significance of cleavage and gastrulation.

##### **Unit II**

Elementary idea about embryonic induction: primary organizer and competence.  
Extra-embryonic membranes in chick, their development and functions  
Placentation in Mammals

##### **Unit III**

Brief idea of: Parthenogenesis, Regeneration, Cloning of animals, transgenesis  
Stem cells: types and their applications  
Teratology  
Aging: the biology of senescence

##### **Unit IV**

Immunology -Overview of immune system; types of immunity

Mechanism of humoral immunity. Immunity regulating cells: Macrophages, lymphocytes (B & T types), Plasma cells and memory cells.  
Antigens: Types and Properties of antigens

#### Unit V

Antibodies: Basic structure, classes and function, Antigen-Antibody interaction: precipitation reaction, agglutination reaction, neutralization reaction, complement and lytic reaction and phagocytosis. Brief idea of vaccines.

#### Course Outcomes (COs) of the course "Developmental Biology and Immunology"

On completion of the course, students are able to:

- CO1 Understand the process of: Gametogenesis, Fertilization and early development.
- CO2 Understand the concept of embryonic induction: primary organizer and competence, extra-embryonic membranes and placentation
- CO3 Understand the concept of parthenogenesis, regeneration, cloning, transgenesis, stem cell, teratology and ageing
- CO4 Understand the concept of Immunology, Mechanism of immunity, Immunity regulating cells, Antigens
- CO5 Understand the basic structure, classes and function of Antibodies, Antigen-Antibody interaction

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome										Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PSO 1	PSO 2	PSO3
CO1	H	M		L							H	L	L
CO2	H	M		L							H	L	L
CO3	H	M		L							H	L	L
CO4	H	M		L							H	M	L
CO5	H	M		L							H	L	L

H = Highly Related; M = Medium L = Low

#### Suggested Books

- Gilbert, S.F. (2006) 8th edn. Developmental Biology, Sinauer Associates, Inc.
- Rastogi, V.B.: Development Biology
- Kindt, T. J., Goldsby, R. A., Osborne, B. A., Kuby, J. (2006). VI Edition. Immunology. W.H. Freeman and Company.
- Delves, P. J., Martin, S. J., Burton, D. R., Roitt, I.M. (2006). XI edition. Roitt's Essential Immunology, Blackwell Publishing

*Signatures:* [Signature] [Signature] [Signature] ...

**BSZ008A: Developmental Biology and Immunology Lab**      **Credit(s): 1**

1. To study developmental stages of frog: - egg, cleavage, blastula, gastrula, neurula (neural plate, neural fold, neural tube).
2. To study developmental stages of frog: - tadpole larva, metamorphic stages of tadpole.
3. To Study developmental stages of chick - 18h, 24h, 33h.
4. To Study developmental stages of chick - 48h, 72h, 96h of incubation.
5. To make a window in shell of egg to study developmental stages of chick embryo.
6. To identify different blood groups and Rh factor in human blood samples.
7. To study the Rh compatibility conditions.
8. To study the differential count of W.B.Cs.
9. To study the antibiotic resistance in bacterial culture.
10. To study the effect of disinfectants/antiseptic on microorganism.
11. To study cell permeability in mammalian RBC.
12. To study about Vaccines/Vaccination programs.
13. To study about Immunity regulating cells.

**SEMESTER-V**

L	T	P	C
4	-	1	5

**BSZ009A: Ecology, Ethology and Biostatistics**

**Credit(s): 4**

**Unit I**

**Ecology**

Ecosystem – definition, types, Structure: Abiotic & Biotic

Basic concepts of ecology.

**Population Ecology:** Density and methods of its measurement, natality, mortality, age and ratio distribution, population structure, biotic potential, dispersal and dispersion of population, species distribution, population interactions and propagation, reproductive strategies.

**Unit II**

**Community Ecology:** Characteristics of natural communities structure, composition, stratification, host-parasite interactions.

**Ecological Succession:** Types and patterns of succession, concept of climax (mono-, di-, polyclimax), ecotone and edge effect, niche.

**Habitat Adaptations:** Deep sea and Desert, behavioral adaptations

**Unit III**

**Ethology**

**Concepts of Ethology-** Motivation, Fixed Action Patterns (FAP), Sign Stimulus; Innate Releasing Mechanism (IRM); Action Specific Energy (ASE); Learning; Imprinting.

**Methods of Studying Behaviour:** Studies in Laboratory- Neuroanatomical, Neurophysiological and Neurochemical techniques.

Brief account on Pheromones, Biological Clocks, Orientation.

#### Unit IV

##### Biostatistics

**Introduction:** Definition, Functions, scope and application of biostatistics.

**Frequency distribution:** Collection and tabulation of data, Graphical presentation of frequency distribution- Bar diagram, Histogram, Frequency Polygon, smooth frequency curve, ogives, Pie charts.

#### Unit V

**Measures of Central Value:** Average, Mean, Mode, Median. Mean and Standard Deviation.

**Statistical Inference:** student's 't' test, Chi square test.

#### Course Outcomes (COs) of the course "Ecology, Ethology and Biostatistics"

On completion of the course, students are able to:

CO1 Understand the basic concepts of ecosystem, ecology & Population Ecology.

CO2 Understand the Characteristics of Community; Ecological Succession and habitat adaptation.

CO3 Understand the concepts of Ethology, Methods of Studying Behavior and a Brief idea about Pheromones, Biological Clocks, Orientation.

CO4 Understand the Functions, scope and application of biostatistics, Data Classification and Graphical presentation of frequency distribution.

CO5 Understand the measures of central tendency and dispersion like Computation of arithmetic mean, mode and median, Standard Deviation, Standard error of mean and student's 't' test, Chi square test.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome										Program Specific Outcome		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PSO 1	PSO 2	PSO 3
CO1	H	M		L					H		M	L	L
CO2	H	M		L					H		M	L	L
CO3	H	M		L							M	L	L
CO4	H	M		L							H	M	L
CO5	H	M		L							H	M	L

H = Highly Related; M = Medium L = Low

#### Suggested Books

- Odum, E.P.: Fundamental of Ecology, W.B. Saunders, New Delhi.
- Verma, P.S. and Agarwal, U.K.: Environmental Biology, S. Chand and co., New Delhi.

- Gupta, P.K.: Environmental Biology, Rastogi Publication, Meerut.
- Manning, A.: An introduction to Behaviour, Edward Arnold, London.
- Mathur, R.: Animal Behaviour, Rastogi Publications, Meerut.
- Bailey: Biostatistics
- Gupta, S.P.: Biostatistics.

### BSZ010A: Ecology, Ethology and Biostatistics Lab Credit(s): 1

1. To determine the alkalinity of given water sample.
2. To determine the acidity of given water sample.
3. To determine the free carbon dioxide of given water sample.
4. To determine the dissolved oxygen of given water sample.
5. To determine the moisture content and water holding capacity of given soil sample.
6. To determine the carbonate and bicarbonate content in given soil sample.
7. To prepare culture of Paramecium and study its behavior (Thigmotrophism, thermotrophism, chemotrophism).
8. To study behavior of different zoo-planktons.
9. To study food preference/ phototactic response in *Tribolium*.
10. To study antennal grooming in Cockroach.
11. To prepare a list of all animals found in and around your locality/Institute or A visit to a zoo/ national park / wildlife sanctuary and study their behavior.
12. To do exercises on Bar diagram, Histogram, Frequency Polygon, smooth frequency curve, ogives, Pie charts.
13. To do exercises on Mean, Mode & Median. Standard deviation

### BSZ011A: Project (Discipline Specific)

Credit(s): 6

### SEMESTER-VI

L	T	P	C
4	-	1	5

### BSZ012A: Animal Physiology and Biochemistry

Credit(s): 4

#### Unit I

#### Animal Physiology

**Physiology of Digestion:** Mechanism of digestion, absorption and elimination.

**Physiology of Respiration:** Mechanism of breathing: exchange of gases, transport of oxygen & carbon dioxide in blood, regulation of respiration.

#### Unit II

**Physiology of Circulation:** Composition and function of blood, mechanism of blood clotting, heartbeat, cardiac cycle, homeostasis.

**Physiology of nerve impulse and Reflex Action:** Functional architecture of a neuron, origin and propagation of nerve impulse, synaptic transmission, reflex action.

*[Signature]*

*[Signature]*

*[Signature]*

*[Signature]*

### Unit III

**Physiology of muscle contraction:** Functional architecture of skeletal muscles, chemical and biophysical events during contraction and relaxation of muscle fibre, Cori's cycle

**Physiology of Excretion:** Nitrogenous excretory products, role of liver in formation of these end products, Functional architecture of a nephron, mechanism and regulation of urine formation.

### Unit IV

**Physiology of endocrine glands: Classification of hormones:** Regulation of their secretion; Mode of hormone action. Types of Endocrine glands, their secretion, functions and mechanism of action, disorders related to hypo and hyper secretion – pituitary, adrenal, thyroid, islet of langerhan's, gonads (testes & Ovary), Placental hormones

### Unit V

#### Biochemistry

Structure, function and significance of Carbohydrates, Proteins and Lipids.

Metabolism of Carbohydrate (glycolysis, kreb's cycle, oxidative phosphorylation and ETS)

Protein (Deamination, transamination and decarboxylation), Lipids (beta-oxidation)

#### Course Outcomes (COs) of the course "Animal Physiology and Biochemistry"

On completion of the course, students are able to:

CO1 Understand the Physiology of Digestion & Respiration.

CO2 Understand the Physiology of Circulation & nerve impulse and Reflex Action.

CO3 Understand the Physiology of muscle contraction & Excretion

CO4 Understand the Physiology & Types of Endocrine glands, Classification of hormones.

CO5 Understand the Structure, function, significance and Metabolism of Carbohydrates, Proteins and Lipid.

#### MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcome	Program Outcome										Program Specific Outcome		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PSO1	PSO2	PSO3
CO1	H	M		L							H	L	M
CO2	H	M		L							H	L	M
CO3	H	M		L							H	L	M
CO4	H	M		L							H	L	M
CO5	H	M		L							H	H	M

H = Highly Related; M = Medium L = Low

**Suggested books**

- Berry, A.K.; A Textbook of Animal Physiology; Emkay Publisher, Delhi
- Chatterjee, M.N and Shinde, R.; Text Book of Medical Physiology; Jaypee brothers.
- Animal physiology and biochemistry, Dr. K.V. Sastry; rastogi publications, Meerut, India.
- Leninger, A.D. Principles of Biochemistry, CBS Publishers and Distributors, Shahdra, Delhi.
- Jain, J.L. Fundamentals of Biochemistry, S.Chand publishers New Delhi.

**BSZ013A: Physiology and Biochemistry of Animals Lab**

**Credit(s): 1**

1. To study histological structure of major endocrine glands of mammals.
2. To enumerate the red blood cells in given blood sample.
3. To enumerate the white blood cells in given blood sample.
4. To estimate the hemoglobin content in given blood sample.
5. To estimate haematocrit values in given blood sample.
6. To study the enzymatic activity (catalases) in microorganisms/Liver.
7. To study the salivary digestion.
8. To perform the qualitative estimation of carbohydrates in given samples.
9. To perform the qualitative estimation of proteins in given samples.
10. To perform the qualitative estimation of lipids in given samples.
11. To separate different dyes by circular paper chromatography and calculate the  $R_f$
12. To separate different amino acids/ carbohydrates by thin layer chromatography.
