## Department of Chemistry

### M.Sc. Syllabus

(Session 2021-2022)

#### SEMESTER WISE STRUCTURE of M.Sc. (CHEMISTRY) PROGRAMME SEMESTER – I

New Code	Title of Course	Contact Hrs.	Credits
MCH 001A	Compounds of Different Elements	4	4
MCH 002A	Reaction Mechanism : Structure and Reactivity	4	4
MCH 003A	Quantum Chemistry and Electro Chemistry	4	4
MCH 004A	Mathematics and Computers for Chemists	4	4
MCH 005A	Qualitative and Quantitative Analysis (Practical)	12	6
			<b>Total Credits = 22</b>

#### SEMESTER – II

New Code	Title of Course	Contact Hrs.	Credits
MCH 006A	Chemistry of Transition Metals	4	4
MCH 007A	Reaction Mechanism : Addition, Elimination and Pericyclic Reactions	4	4
MCH 008A	Thermo Dynamics and Chemical Kinetics	4	4
MCH 009A	Spectroscopic Techniques	4	4
MCH 010A	Chromatographic Separations, Organic Synthesis and Potentiometric Analysis (Practical)	12	6
			<b>Total Credits = 22</b>

#### SEMESTER – III

Paper MCH 011A is compulsory to all. Moreover the students should select any one of the Elective group consisting three Theory Papers and One Practical in semester III.

New Code	Title of Course	Contact Hrs.	Credits
MCH 011A	Green Chemistry	4	4
MCH 012A	Inorganic Elective I: PHOTOINORGANIC CHEMISTRY AND X-RAY DIFFRACTION	4	4
MCH 013A	Inorganic Elective II: BIOINORGANIC CHEMISTRY	4	4
MCH 014A	Inorganic Elective III: ORGANOTRANSITION METAL CHEMISTRY-I	4	4
MCH 015A	Spectrophotometric Analysis (Practical)	12	6
MCH 016A	Organic Elective I: ORGANIC SYNTHESIS	4	4
MCH 017A	Organic Elective II: HETEROCYCLIC CHEMISTRY	4	4
MCH 018A	Organic Elective III: NATURAL PRODUCTS-I	4	4

*[Handwritten signatures and initials]*

MCH019A	Multi-step Synthesis (Practical)	12	6
MCH020A	Physical Elective I: ELECTROANALYTICAL TECHNIQUES	4	4
MCH021A	Physical Elective II: ELECTROCHEMISTRY-I	4	4
MCH022A	Physical Elective III: CHEMICAL KINETICS-I	4	4
MCH023A	Thermodynamical Studies (Practical)	12	6
RM	Research Methodology	2	2
		Total Credits = 24	

#### SEMESTER – IV

A set of three elective theory papers, one Practical and a Minor Project.

New Code	Title of Course	Contact Hrs.	Credits
MCH024A	Inorganic Elective I: ORGANOTRANSITION METAL CHEMISTRY-II	4	4
MCH025A	Inorganic Elective II: INORGANIC POLYMERS	4	4
MCH026B	Inorganic Elective III: MINERAL BASED INDUSTRIAL CHEMISTRY	4	4
MCH027A	Flame Photometric and Flame Photometric Determination (Practical)	12	6
MCH028A	Organic Elective I: Disconnection Approach	4	4
MCH029A	Advanced Organic Spectroscopy	4	4
MCH030A	Organic Elective III: NATURAL PRODUCTS-II	4	4
MCH031A	Chromatography and Spectroscopy (Practical)	12	6
MCH032A	Physical Elective I: CHEMICAL ANALYSIS	4	4
MCH033A	Physical Elective II: ELECTRO CHEMISTRY-II	4	4
MCH034A	Physical Elective III: CHEMICAL KINETICS-II	4	4
MCH035A	Polarography and Chemical Kinetics (Practical)	12	6
MCH036A	Minor Project (Which will be done in vacations after Semester-III and will be evaluated in Semester-IV)		8
		Total Credits = 26

## Program Outcomes (PO) M.Sc. Chemistry 2021

**PO1 Core competency:** The Chemistry students are expected to know the fundamental concepts of chemistry and applied chemistry. These fundamental concepts would reflect the latest understanding of the subject and in allied subject areas. Students will learn to investigate, experiment, relate information and draw logical conclusions based on scientific reasoning.

**PO2 Disciplinary knowledge and skill:** To learn and apply the knowledge of advanced Chemistry in research and addressing practical problems and to apply various scientific methods to address different problems and critically analyze the data. The student will be inquisitive about processes and phenomena happening during experiments in laboratories and seeks answers through the research path.

**PO3 Skilled communicator:** Communicate effectively on various scientific issues with the with society at large, They are expected to read and understand documents with in-depth analyses and logical arguments. Graduates are expected to be well-versed in speaking and communicating their idea.

**PO4 Critical thinker and problem solver:** Critical thinking and analytical reasoning and the scientific knowledge will help to develop scientific temper of a Chemistry graduate that will be more beneficial for the society. The student will be able to draw logical conclusions based on a group of observations, facts and rules. Student will be able to solve the problems related with society like water sanitation, effective remediation, pollution, development of effective drugs and other necessary chemicals without side effects.

**PO5 Team player:** The course curriculum has been designed to provide opportunity to act as team player by contributing in laboratory, field based work ,project and industry.

**PO6 Moral and ethical awareness:** Post graduate students are expected to be responsible citizen of India and be aware of moral and ethical baseline of the country and the world.. Emphasis be given on academic and research ethics, including fair Benefit Sharing, Plagiarism, Scientific Misconduct and so on.

**PO7 Skilled project manager:** Students are expected to be familiar with decision making process and basic managerial skills to become a better leader by acquiring knowledge about Chemistry project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

**PO8 Digitally literate:** The student will acquire knowledge in understanding and carrying out data analysis, use of library search tools, and use of chemical simulation software and related computational work. Students will acquire digital skills and integrate the fundamental concepts with modern tools.

**PO9 Environment and sustainability** Apply the knowledge of basic science, Chemistry and allied fields to protect environment and to prevent environmental degradation as science graduate, to stay firm on the value systems, of their culture, including their own for a healthy socio cultural environment.

**PO10 Lifelong learner:** Graduates will acquire the ability to engage in independent and self-learning as well as to successfully pursue their career objectives in advanced education and in professional courses, through the use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability.

## SEMESTER – I

### MCH 001A Compounds of Different Elements

After the completion of the course, student will be able to understand the:

CO-1: Basics of stereochemistry and bonding in different compounds and reactions. CO-2 The knowledge of metal- ligand bonding in complexes. CO-3 Preparation, structure, bonding, reactions and applications of Hydrogen, Alkali and Alkaline Earth Metals. CO-4 Preparation, structure and bonding of compounds of Carbon and Silicon group elements. CO-5 Types of nuclear reactions

#### Unit-I

##### Stereochemistry and Bonding in Main group compounds

VSEPR Theory, Walsh diagram, Hybridization including energetic of hybridization, Bent's rule,  $d\pi-p\pi$  bond. Some simple reactions of covalently bonded molecules (i) Atomic inversion (ii) Berry pseudo rotation (iii) Nucleophilic displacement (iv) Free radical mechanism

#### Unit-II

##### Metal-Ligand bonding

Valence Bond Theory (VBT), Crystal field theory (CFT) for octahedral, trigonal bipyramidal, square pyramidal, tetrahedral and square planar complexes. Crystal field stabilization energy (CFSE), Factor affecting the crystal field parameters, weak and strong field complexes, spectrochemical series, Jahn-Teller effect. Thermodynamic and related aspects of crystal fields - ionic radii, heats of ligation, lattice energy, site preference energy. Merits and limitations of CFT. Molecular orbital theory of octahedral, tetrahedral and square planar complexes.  $\pi$  bonding in bonding in octahedral complexes.

#### Unit-III

##### Hydrogen, Alkali and Alkaline Earth Metals

Classification of hydrides; e-deficient, e-precise & e-rich hydrides. Applications of crown ethers in extraction of alkali and alkaline earth metals.

##### Boron compounds

Preparation, structure, bonding, reactions and applications of boranes, carboranes, metalloboranes, metallocarboranes, borazines.

##### Noble gases

Isolation and properties. Preparation and structure of noble gas compounds

#### Unit-IV

##### Compounds of Carbon and Silicon

Fullerenes and their compounds, Intercalation compounds of graphite, Synthesis, structure, properties, and applications. Carbides, fluorocarbons, silanes, silicates, zeolites and silicones.

*[Handwritten signatures and marks at the bottom of the page]*

**Compounds of Nitrogen, Oxygen and Halogen group elements** Compounds of Nitrogen ,  
**Oxygen and Halogen group elements**  
Nitrogen activation. Oxidation states of nitrogen and their interconversion. BN, PN and SN  
Synthesis, properties, bonding, and applications of interhalogens, pseudohalogens, polyhalides,  
oxyacids and oxoanions of halogens.

#### Unit-V

**Nuclear Chemistry:** Types of radioactive decay, units of radioactivity, Nuclear reaction –  
evaporation, spallation, fragmentation, transfer reactions (Buckshot hypothesis), nuclear fission:  
Theory of nuclear fission, fission fragments, their mass and charge distribution, fission energy,  
compound nucleus theory for nuclear reaction, Photoneuclear reaction and nuclear fusion (thermonuclear reaction), nuclear reactors Interaction of radiation with matter.  
Counters – Geiger counter, scintillation counter, proportional counter, semi conductor detector.  
Analytical applications (neutron activation analysis and isotope dilution analysis)

**Self Study:** Sub-nucleons, classification of nuclides, nuclear stability, binding energy, nuclear  
radius, nuclear models – liquid drop model, shell model. Applications of radio isotopes as  
tracers: chemical investigations (structure determinations, reaction mechanism, isotope exchange  
reactions), age determination, medical, agricultural and industrial applications.

#### Suggested Books & References

1. Advanced Inorganic Chemistry, Cotton F.A. and Wilkinson G, John Wiley.
2. Inorganic Chemistry, Huhey J.E., Harper & Row.
3. Chemistry of the Elements, Greenwood N.N. and Earnshaw A., Pergamon
4. Inorganic Chemistry: A unified Approach, Porterfields W. W., Elsevier
5. Inorganic Chemistry, Sharpe Alan G., Pearson Education Ltd.
6. Inorganic Chemistry, Shriver D.F., Atkins, P.W. and Langford C.H., Oxford University Press, 1998
7. Inorganic Chemistry, Miessler G. L. and Tarr D. A., Pearson Publications
8. Inorganic Chemistry, Wulfsberg, G, University Science Books, Viva Books.

#### MCH 002A: Reaction Mechanism: Structure and Reactivity

**Course Outcomes:** On the completion of this course student will be able to-

- CO1: Understand the nature of different types of bonding associated with organic molecules.  
CO2: Understand the different stereo isomers of a particular organic molecule, will be able to identify the  
chiral centre present in a molecule and will be able to communicate the different optical isomers with  
universal notation. CO3: Understand the reaction mechanism and the impact of structure on reactivity.  
CO4: Understand the aliphatic nucleophilic substitution and its mechanism. CO5: Understand the  
photochemical reactions.

#### Unit-I

##### Nature of Bonding in Organic Molecules

Delocalized chemical bonding-conjugation, cross conjugation, resonance hyperconjugation,  
bonding in fullerenes, tautomerism. Aromaticity in benzenoid and non-benzenoid compounds,  
alternate and non-alternate hydrocarbons. Huckel's rule, energy level of p-molecular orbitals,

*[Handwritten signatures and initials]*

annulenes, anti-aromaticity, homo-aromaticity, PMO approach. Bonds weaker than covalent bond, addition compounds, crown ether complexes and cryptands, inclusion compounds, catenanes and rotaxanes.

## Unit-II

### Stereochemistry

Conformational analysis of cycloalkanes, decalines, effect of conformation on reactivity, conformation of sugars, strain due to unavoidable crowding. Elements of symmetry, chirality, molecules with more than one chiral center, threo and erythro isomers, methods of resolution, optical purity, enantiotopic and diastereotopic atoms, groups and faces, stereospecific and stereoselective synthesis, asymmetric synthesis. Optical activity in the absence of chiral carbon (biphenyls, allenes and spirane chirality due to helical shape). Stereochemistry of the compounds containing nitrogen, sulphur and phosphorus.

## Unit-III

### Reaction Mechanism : Structure and Reactivity

Type of mechanisms, types of reactions, thermodynamic and kinetic requirements, kinetic and thermodynamic control, Hammond's postulate, Curtin-Hammett principle. Potential energy diagrams, transition states and intermediates, methods of determining mechanisms, isotope effects. Generation, structure, stability and reactivity of carbocations, carbanions, free radicals, carbenes and nitrenes. Effect of structure on reactivity, resonance and field effects, steric effect, quantitative treatment. The Hammett equation and linear free energy relationship, substituent and reaction constants, Taft equation.

## Unit-IV

### Aliphatic Nucleophilic Substitution

The  $S_N1$ ,  $S_N2$ ,  $S_Ni$  and SET mechanism. The neighbouring group participation mechanism, neighbouring group participation by p and s bonds, anchimeric assistance. Classical and nonclassical carbocations, phenonium ions, norbornyl systems, common carbocation rearrangements.

### Allylic Nucleophilic Substitution

Nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Phase transfer catalysis and ultrasound, ambident nucleophile,

## Unit-V

**Photochemistry:** Photochemical reaction, principle, types of excitations, Jablonskii diagram, energy dissipation, fate of excited molecule, energy transfer, quantum yield, photochemistry of dienes and carbonyl compounds, Photo-Fries rearrangement, photochemistry of vision.

### Suggested Books & References:

1. Advanced Organic Chemistry-Reactions, Mechanism and Structure, Jerry March, John Wiley.
2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
4. Structure and Mechanism in Organic Chemistry, C.K. Ingold, Cornell University Press.
5. Organic Chemistry, R.T. Morrison and R.N. Boyd, Prentice-Hall.

*[Handwritten signatures and initials are present at the bottom of the page.]*

6. Modern Organic Reactions, H.O. House, Benjamin.
7. Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.
8. Reaction Mechanism in Organic Chemistry, S.M. Mukherji and S.P. Singh, Macmillan.
9. Pericyclic Reactions, S.M. Mukherji, Macmillan, India
10. Stereochemistry of Organic Compounds, D.Nasipuri, New Age International.
11. Stereochemistry of Organic Compounds, P.S. Kalsi, New Age International.

### MCII 003A: Quantum Chemistry and Electro Chemistry

**Course Outcome:** On completion of this course student will be able to-

- CO-1 understand the postulates of quantum mechanics and derivation of Schrodinger wave equation.  
 CO-2 apply and analyze the basic knowledge of various adsorption isotherms.  
 CO-3 describe the basic concept of surfactants and their applications.  
 CO-4 think critically on electrified double layer and different models.  
 CO-5 understand practical aspects of polarography

#### Unit-I

##### Introduction to Exact Quantum Mechanical Results

The Schrodinger equation and the postulates of quantum mechanics. Operators, Hamiltonian and Hermitian operator, Discussion of solutions of the Schrodinger equation to some model system viz., particle in a box, quantization of energy levels, degeneracy, zero point energy and justification for Heisenberg uncertainty principle, the harmonic oscillator, the rigid rotor, the hydrogen atom.

##### Approximate Methods

The variation theorem, linear variation principle. Perturbation theory (First order and nondegenerate). Applications of variation method and perturbation theory to the Helium atom.

#### Unit-II

Molecular Orbital Theory, LCAO Concept, Extension of MO theory to homonuclear and heteronuclear diatomic molecules, Qualitative MO theory and its applications to  $AH_2$  type molecule, Huckel theory of conjugate systems, bond order and charge density calculations. Applications to ethylene, butadiene, cyclobutadiene, benzene, allyl system and cyclopropenyl system. Introduction to extended Huckel theory.

#### Unit-III

##### Surface Chemistry

Surface tension, capillary action, pressure difference across curved surface (Laplace equation), vapour pressure of droplets (Kelvin equation), Gibbs adsorption isotherm, estimation of surface area (BET equation), Surface films on liquids (Electro-kinetic phenomenon).

##### Micelles

Surface active agents, classification of surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants,

*[Handwritten signatures and initials are present at the bottom of the page, including "Dun", "Am", "S", "D", "De", "SSh", and a large signature "J. B. Chel".]*

counter ion binding to micelles, thermodynamics of micellization-phase separation and mass action models, solubilization, micro emulsion, reverse micelles.

#### Unit-IV

##### Electrochemistry

Electrochemistry of solutions. Debye-Huckel-Onsager treatment and its extension, ion solvent interactions. Thermodynamics of electrified interface equations. Derivation of electrocapillarity, Lippmann equations (surface excess), methods of determination. Structure of electrified interfaces. Gouy-Chapman, Stern, Grahame Devanathan-Mottswatts, Tobin, Bockris, Devanathan model.

#### Unit-V

##### Overpotential

Introduction, types of overpotential, theories, exchange current density, introduction of Butler Volmer equation, Tafel plot. Semiconductor interfaces-theory of double layer at semiconductor, electrolyte solution interfaces, Effect of light at semiconductor solution interface. Polarography theory, Ilkovic equation; half wave potential and its significance.

#### Suggested Books & References:

1. Physical Chemistry, P.W. Atkins, ELBS.
2. Introduction to Quantum Chemistry, A.K. Chandra, Tata Mc Graw Hill.
3. Quantum Chemistry, Ira N. Levine, Prentice Hall.
4. Coulson's Valence, R. Mc Weeny, ELBS.
5. Chemical Kinetics. K.J. Laidler, McGraw-Hill.
6. Kinetics and Mechanism of Chemical Transformation J. Rajaraman and J. Kuriacose, Mc Millan.
7. Micelles, Theoretical and Applied Aspects, V. M. Rao, Plenum.
8. Modern Electrochemistry Vol. I and Vol II J.O.M. Bockris and A.K.N. Reddy, Plenum.
9. Introduction to Polymer Science, V.R. Gowarikar, N.V. Vishwanathan and J. Sridhar, Wiley Eastern.

#### MCH 004A: Mathematics and Computers for Chemists

**Course Objectives:** This course has the following objectives:

CO1 To teach students the addition and multiplication; inverse, adjoint and transpose of matrices, special matrices and their properties. Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. eigenvalues and eigenvectors, diagonalization, determinants.

CO2 To expose students to the Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima, Integral calculus, basic rules for integration.

CO3 To expose students basics of First-order and first degree differential equations and their applications. Second order differential equation and their solutions.

CO4 To teach students 'Introduction to computers, Basic structure and functioning of computer with a PC as illustrative example. Memory I/O devices. Secondary storage Computer languages. Operating systems.

CO5 To teach students Computer Programming in C, History of "C", operators and expression, input & output operation, decision making and branching looping, arrays, function, structures and unions.

*Handwritten signatures and initials:*  
Dun, M, An, J, S, Al, De, SKH

## Unit-I

### Matrix Algebra.

Addition and multiplication; inverse, adjoint and transpose of matrices, special matrices (Symmetric, skew-symmetric, Hermitian, Skey-Harmitian, unit, diagonal, unitary etc.) and their properties. Matrix equations: Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. Introduction to vector spaces, matrix eigenvalues and digenvetors, diagonalization, determinatnts (examples from Juckel theory).

## Unit-II

### Differential Calculus

Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima (examples related to maximally populated rotational energy levels, Bohr's radius and most probable velocity from Maxwell's distribution etc.).

Integral calculus, basic rules for integration, integration by parts, partial fractions and substitution. Reduction formulae, applications of integral calculus.

Functions of several variables, partial differentiation, co-ordinate transformations (e.g. cartesian to spherical polar).

## Unit-III

### Elementary Differential equations

First-order and first degree differential equations, homogenous, exact and linear equations. Applications to chemical kinetics, secular equilibria, quantum chemistry etc. second order differential equation and their solutions.

## Unit-IV

### Introduction to computers

Basic structure and functioning of computer with a PC as illustrative example. Memory I/O devices. Secondary storage Computer languages. Operating systems Introduction to UNIX and WINDOWS. Principles of programming Alogrithms and flow-charts.

## Unit-V

### Computer Programming in C

History of "C" constants, variables and data types, operators and expression, input & output operation, decision making and branching looping, arrays, function, structures and unions, Program with data preferably from physical chemistry Laboratory. Introduction of working of LOTUS/EXCEL/FOXPRO/MOPAC and word processing softwares]

### Suggested Books & References:

1. The chemistry Mathematics Book, E.Steiner, Oxford University Press.
2. Mathematifs for chemistry, Doggett and Suiclific, Logman.
3. Mathematical for Physical chemistry : F. Daniels, Mc. Graw Hill.
4. Chemical Mathematics D.M. Hirst, Longman.
5. Applied Mathematics for Physical Chemistery, J.R. Barante, Prenice Hall.
6. Basic Matchematics for Chemists, Tebbutt, Wiley
7. Fundamentals of Computer : V. Rajaraman (Prentice Hall)
8. Computers in Chemistry : K.V. Raman (Tata Mc Graw Hill)
9. Computer Programming in FORTRAN IV-V Rajaraman (Prentice Hall)

SSK

**MCH 005A: Qualitative and Quantitative Analysis (Practical)**  
**Inorganic Chemistry**

1. To identify acidic radicals of dilute  $H_2SO_4$  group.
2. To identify acidic radicals of concentrated  $H_2SO_4$  group.
3. To identify acidic radicals not identify with dilute or concentrated  $H_2SO_4$  group.
4. To analyze basic radicals of group I and II.
5. To analyze basic radicals of group III and IV.
6. To analyze basic radicals of group V, VI and VII.
7. To analyze less common metal ions : Ti, MO, W, Ti, Zr, Th, V, U
8. Analysis of the mixture number 1 containing four acidic and four basic radicals.
9. Analysis of the mixture number 2 containing four acidic and four basic radicals.
10. Analysis of the mixture number 3 containing four acidic and four basic radicals.
11. Analysis of the mixture number 4 containing four acidic and four basic radicals.
12. Qualitative Analysis: Separation and determination of two metal ions Cu-Ni involving volumetric and gravimetric methods.
13. Qualitative Analysis: Separation and determination of two metal ions Ni-Zn involving volumetric and gravimetric methods.
14. Qualitative Analysis: Separation and determination of two metal ions Cu-Fe etc. involving volumetric and gravimetric methods.

**Organic Chemistry**

1. To separate and identify the organic mixture containing two solid components using water and prepare their suitable derivatives.
2. To separate and identify the organic mixture containing two solid components using hot water and prepare their suitable derivatives.
3. To separate and identify the organic mixture containing two solid components using NaOH and prepare their suitable derivatives.
4. To separate and identify the organic mixture containing two solid components using  $NaHCO_3$  and prepare their suitable derivatives.
5. To separate and identify the organic mixture number 1 containing one solid and one liquid components and prepare their suitable derivatives.
6. To separate the mixture of Methyl Orange and Methylene Blue by using cyclohexane and ethyl acetate (8.5:1.5) as solvent system.
7. Preparation and separation of 2,4-dinitro Phenylhydrazone of acetone, 2-butanone using toluene and petroleum ether (40:60).
8. Preparation and separation of 2,4-dinitro Phenylhydrazone of hexane-2-one and hexane-3-one using toluene and petroleum ether (40:60).
9. To separate the mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent - Ninhydrin.
10. To separate the mixture of D,L-alanine, glycine and L-leucine using n-butanol : acetic acid : water (4:1:5). Spray reagent- Ninhydrin.
11. To separate monosaccharides - a mixture of D-galactose and D-fructose using n-butanol : acetone: water (4:1:5). Spray reagent - aniline hydrogen phthalate.
12. Determination of DO, COD and BOD of water sample.

*[Handwritten signatures and marks at the bottom of the page]*

Physical Chemistry

1. Calibration of volumetric apparatus, burette, pipette and standard flask.
2. To investigate the adsorption of oxalic acid from aqueous solution by activated charcoal, and examine the validity of Freundlich and Langmuir adsorption isotherm.
3. To investigate the adsorption of acetic acid from aqueous solution by activated charcoal, and examine the validity of Freundlich and Langmuir adsorption isotherm.
4. Determination of congruent composition and temperature of a binary system (e.g. diphenylamine-benzophenone system).
5. Determination of glass transition temperature of given salt (e.g.,  $\text{CaCl}_2$ ) conductometrically.
6. To construct the phase diagram for three component system (e.g. chloroform-acetic acid-water).
7. To construct the phase diagram for three component system (e.g. alcohol-benzene-water).
8. To determine CST of phenol and water in presence of 1.0% NaCl, 0.5% naphthalene, 1% succinic acid.
9. Determination of the velocity constant, order of the reaction and energy of activation for saponification of ethyl acetate by sodium hydroxide conductometrically.
10. Determination of solubility and solubility product of sparingly soluble salts e.g.  $\text{PbSO}_4$ ,  $\text{BaSO}_4$ ) conductometrically.
11. Determination of the strength of strong and weak acid in a given mixture conductometrically.
12. To study of the effect of solvent on the conductance of  $\text{AgNO}_3$ /acetic acid and to determine the degree of dissociation and equilibrium constant in different solvents and in their mixtures (DMSO, DMF, dioxane, acetone, water) and to test the validity of Debye-Huckel-Onsager theory.
13. Determination of the activity coefficient of zinc ions in the solution of 0.002 M zinc sulphate using Debye Huckel's limiting law.

### Books Suggested

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly. Prentice Hall.
3. Experiments and Techniques in Organic Chemistry, D.P. Pasto, C. Johnson and M. Miller, Prentice Hall.
4. Macroscale and Microscale Organic Experiments, K.L. Williamson, D.C. Heath.
5. Systematic Qualitative Organic Analysis, H. Middleton, Adward Arnold.
6. Handbook of Organic Analysis-qualitative and Quantitative. H. Clark, Adward Arnold.
7. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley.
8. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
9. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
10. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

*[Handwritten signature]*

## SEMESTER II

### MCH 006A: Chemistry of Transition Metals

**Course Outcome:** After the completion of the course, student will be able to understand:

CO1: metal-ligand bonding through different theories and metal-ligand equilibria in solution and their relative stability.

CO2 electronic spectra and calculation of different parameters.

CO3 energy profile and reaction mechanism of transition metal complexes and different types of reactions like substitution, redox etc. and related theories.

CO4 Symmetry, symmetry elements, orthogonality theorem and group theory of molecules.

CO5 to apply the knowledge of group theory on different molecules and systems..

#### Unit-I

##### Metal ligand Equilibria in solution

Stepwise and overall formation constants and their interaction, trends in stepwise constants. Factors affecting stability of metal complexes with reference to the nature of metal ion and ligand chelate effect and its thermodynamic origin. Determination of binary formation constant by pHmetry and spectrophotometry.

#### Unit-II

##### Electronic spectra of transition metal complexes

Types of electronic transition, selection rules for d-d transitions. Spectroscopic ground states, correlation. Orgel and Tanabe-Sugano diagrams for transition metal complexes. Calculation of Racah parameters. Charge transfer spectra.

#### Unit-III

##### Reaction mechanism of transition metal complexes

Energy profile of a reaction, reactivity of metal complex, inert and labile complexes, kinetics of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reactions, reactions without metal ligand bond cleavage.

**Substitution reactions** in square planar complexes, the trans effect, mechanism of the substitution reaction. Redox reaction, electron transfer reactions, mechanism of one electron transfer reactions, outer sphere type reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions.

#### Unit-IV

##### Symmetry and Group Theory

Symmetry elements and symmetry operations, definition of group and subgroup, conjugacy relation and classes, product of symmetry operations, relation between symmetry elements and symmetry operations, orders of a finite group and its subgroup, point group symmetry, Schonflies symbols, representations of groups by reducible and irreducible representations and relation between them (representation for the  $C_n$ ,  $C_m$ ,  $D_{nh}$  etc. groups to be worked out explicitly), character of a representation, the great orthogonality theorem (without proof) and its importance, character tables of  $C_{2v}$  and  $C_{3v}$  and their use.

#### UNIT V

##### Applications of Group Theory in Chemistry

Formation of hybrid orbitals; sigma bonding in linear structure ( $\text{BeCl}_2$ ), trigonal planar ( $\text{BF}_3$ ), tetrahedral ( $\text{CH}_4$ ), square pyramid ( $\text{BrF}_5$ ) and square planar ( $\text{XeF}_4$ ), octahedral and square planar complexes,  $\pi$  bonding in complex compounds: square planar molecule and tetrahedral molecule. Molecules with delocalized- $\pi$  orbitals, cyclopropenyl system, cyclobutenyl system, cyclopentadienyl system and benzene.

### Suggested Books & References:

7. Chemical Bonding by Patel & Patel, Vallabh Vidyanagar
8. Chemical Applications of Group Theory by F. Albert Cotton, Wiley.
9. Symmetry and Structure: Readable Group Theory for Chemists By Sidney F. A. Kettle, Wiley
10. Molecular symmetry and group theory by Robert L. Carter, Wiley
11. Introduction to the Chemical Applications of Group Theory by L E Laverman
12. Group Theory Applied to Chemistry (Theoretical Chemistry and Computational by Arnout Jozef Ceulemans
13. Group Theory and its Chemical Applications by Bhattacharya P.K., Himalaya Publishing House

### MCH 007A: Reaction mechanism: Addition, Elimination and Pericyclic Reactions

**Course Outcome:** After the completion of the course, student will be able to understand:

CO-1: different aromatic nucleophilic substitution and free radical reactions. CO-2 aliphatic and aromatic electrophilic substitution reactions. CO-3 mechanistic and stereochemical aspects of addition to C-C multiple bonds. CO-4 mechanism of C-hetero multiple bonds and elimination reactions. CO-5 symmetry, types and rearrangement of pericyclic reactions.

#### Unit - I

##### Aromatic Nucleophile Substitution

The  $\text{S}_{\text{N}}\text{Ar}$   $\text{S}_{\text{N}}1$ , benzyne and  $\text{S}_{\text{N}}1$  mechanism, Reactivity effect of substrate structure, leaving group and attacking nucleophile. The Von Richter, Sommelet-Hauser, and Smiles rearrangements.

##### Free Radical Reactions

Types of free radical reactions, free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Reactivity for aliphatic and aromatic substrates at a bridgehead. Reactivity in the attacking radicals. The effect of solvents on reactivity. Allylic halogenation (NBS), oxidation of aldehydes to carboxylic acids, auto-oxidation, coupling of alkynes and arylation of aromatic compounds by diazonium salts, Sandmeyer reaction. Free radical rearrangement. Hunsdiecker reaction

#### Unit - II

*Signature*

*Signature*

*Signature*

*Signature*

*Signature*

*Signature*

### Aliphatic Electrophilic Substitution

Bimolecular mechanisms  $SE_2$  and  $SE_1$ , The  $SE_1$  mechanism, electrophilic substitution accompanied by double bond shifts. Effect of substrates, leaving groups and the solvent polarity on the reactivity.

### Aromatic Electrophilic Substitution

The arenium ion mechanism, orientation and reactivity, energy profile diagrams. The ortho/para ratio, ipso attack, orientation in other ring systems. Quantitative treatment of reactivity in substrates and electrophiles. Diazonium coupling, Vilsmeier reaction, Gatterman-Koch reaction

### Unit - III

#### Addition to Carbon-Carbon Multiple Bonds :

Mechanistic and stereochemical aspects of addition reactions involving electrophiles, nucleophiles and free radicals, regio- and chemoselectivity, orientation and reactivity. Addition to cyclopropane ring. Hydrogenation of double and triple bonds, hydrogenation of aromatic rings. Hydroboration, Michael reaction, Sharpless asymmetric epoxidation.

### Unit-IV

#### Addition to Carbon-Hetero Multiple bonds

Mechanism of metal hydride reduction of saturated and unsaturated carbonyl compounds, acid esters and nitriles. Addition of Grignard reagents, Organozinc and Organolithium reagents to carbonyl and unsaturated carbonyl compounds. Wittig reaction. Mechanism of condensation reactions involving enolates-Aldol, Knoevenagel, Claisen, Mannich, Benzoin, Perkin and Stobbe reactions. Hydrolysis of esters and amides, ammonolysis of esters.

#### Elimination Reactions

The  $E_2$ ,  $E_1$  and  $E_1cB$  mechanisms and their spectrum. Orientation of the double bond. Reactivity-effects of substrate structures, attacking base, the leaving group and the medium. Mechanism and orientation in pyrolytic elimination.

### Unit-V

#### Pericyclic Reactions

Molecular orbital symmetry, Frontier orbitals of ethylene, 1,3-butadiene, 1,3,5-hexatriene and allyl system. Classification of pericyclic reactions. Woodward-Hoffmann correlation diagrams. FMO and PMO approach. Electrocyclic reactions-conrotatory and disrotatory motions,  $4n$ ,  $4n+2$  and allyl systems. Cycloadditions-antarafacial and suprafacial additions,  $4n$  and  $4n+2$  systems,  $2+2$  addition of ketenes, 1,3 dipolar cycloadditions and cheletropic reactions. Sigmatropic rearrangements-suprafacial and antarafacial shifts of H, sigmatropic involving carbon moieties, 3,3- and 5,5 sigmatropic rearrangements. Claisen, Cope and aza-Cope rearrangements. Fluxional tautomerism. Ene reaction.

2. Advanced Organic Chemistry, F.A. Carey and R.J. Sundberg, Plenum.
3. A Guide Book to Mechanism in Organic Chemistry, Peter Sykes, Longman.
4. Structure and Mechanism in Organic Chemistry, C.K. Ingold, Cornell University Press.
5. Organic Chemistry, R.T. Morrison and R.N. Boyd, Prentice-Hall.
6. Modern Organic Reactions, H.O. House, Benjamin.
7. Principles of Organic Synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.
8. Reaction Mechanism in Organic Chemistry, S.M. Mukherji and S.P. Singh, Macmillan.

9. Pericyclic Reactions, S.M. Mukherji, Macmillan, India
10. Stereochemistry of Organic Compounds, D.Nasipuri, New Age International.  
Stereochemistry of Organic Compounds, P.S. Kalsi, New Age International.

### MCH 008A: Thermodynamics and Chemical Kinetics

Course outcomes: After the completion of the course, student will be able to understand the:

CO-1: concepts of classical thermodynamics.

CO-2 criteria for statistical and non equilibrium thermodynamics.

CO-3 translation, rotational, vibrational and electronic partition functions and molar quantities.

CO-4 rate laws, collision theory of reaction rates, Arrhenius equation and the activated complex theory.

CO-5 kinetics of enzyme catalyzed reactions, fast and unimolecular reactions.

#### Unit I

##### Classical Thermodynamics

Concepts of laws of thermodynamics, free energy, chemical potential and entropies. Partial molar free energy, partial molar volume and partial molar heat content and their significance. Determinations of these quantities. Concept of fugacity and determination of fugacity, activity, activity coefficient, determination of activity and activity coefficients.

#### Unit II

##### Statistical Thermodynamics and Non equilibrium thermodynamics

Concept of distribution, thermodynamic probability and most probable distribution. Ensemble averaging, postulates of ensemble averaging. Canonical, grand canonical and microcanonical ensembles, corresponding, distribution laws (using Lagrange's method of undetermined multipliers). Thermodynamic criteria for non equilibrium states, entropy production and entropy flow, transformation of generalized fluxes and forces, non equilibrium stationary states, phenomenological equations, Onsager's reciprocity relations.

#### Unit III

##### Partition Functions

Partition functions-translation, rotational, vibrational and electronic partition functions, Fermi-Dirac Statistics, Maxwell distribution law and applications to metal. Bose-Einstein statistics distribution Law and application to helium, Partition molar quantities in term of thermodynamic functions.

#### Unit IV

##### Chemical Dynamics-I

Methods of determining rate laws, collision theory of reaction rates, steric factor, activated complex theory, Arrhenius equation and the activated complex theory; ionic reactions, kinetic salt effects, steady state kinetics, kinetic and thermodynamic control of reactions, Dynamic chain reaction (hydrogen-bromine reaction, pyrolysis of acetaldehyde, decomposition of ethane), photochemical reaction (hydrogen-bromine and hydrogen-chlorine reactions), Oscillatory reactions: Belousov-Zhabotinsky reaction.

#### Unit V

##### Chemical Dynamics-II

Kinetics of enzyme catalyzed reactions, general features for fast reactions, study of fast reactions by flow method, relaxation method, flash photolysis and the nuclear magnetic resonance method,

*[Handwritten signatures and initials at the bottom of the page]*

dynamics of unimolecular reactions (Lindemann Hinshelwood, Rice-Ramsperger and Kassel theories and Marcus (RRKM) theories for unimolecular reactions).

#### Suggested Books & References:

1. Physical Chemistry, P.W. Atkins, ELBS.
2. Introduction to Quantum Chemistry, A.K. Chandra, Tata Mc Graw Hill.
3. Quantum Chemistry, Ira N. Levine, Prentice Hall.
4. Coulson's Valence, R. Mc Ween y, ELBS.
5. Chemical Kinetics, K.J. Laidler, McGraw-Hill.
6. Kinetics and Mechanism of Chemical Transformation J.Rajaraman and J. Kuriacose, Mc Millan.
7. Molecules, Theoretical and Applied Aspects, V. Moraoi, Plenum.
8. Modern Electrochemistry Vol. I and Vol II J.O.M. Bockris and A.K.N. Reddy, Plenum.
9. Introduction to Polymer Science, V.R. Gowarikar, N.V. Vishwanathan and J. Sridhar, Wiley Eastern.

#### MCII 009A: Spectroscopic Techniques

**Course Outcomes:** After the completion of the course, student will be able to-

CO1 Understand the common terms and principles in spectroscopy. Principles of UV spectroscopy, its applications in structure determination and working method of Instrument. CO2 Understand the Principles IR spectroscopy and Raman spectroscopy, their applications in structure determination and working method of Instrument. CO3 Understand the principles of Rotational spectroscopy, ESR spectroscopy, their applications in structure determination and working method of Instrument. CO4 Understand the basic principle Principles of NMR Spectroscopy, instrumentation and applications. Student will also learn about the use of NMR technique in medical sciences. CO5 Understand the basic principles of Photoelectron spectroscopy, Electron microscopy and their applications in structure determination and working method of Instrument. Student will also learn about chromatographic techniques.

##### Unit-I

##### Basic Elements of Spectroscopy

Uncertainty relation and natural line width, natural line broadening, doppler line broadening, pressure broadening, saturation broadening, removal of line broadening, signal-to-noise ratio, resolving power, intensity of spectral lines – transition probability, population of states, path length of sample. General components of an absorption experiment in various regions, dispersing elements, basic elements of practical spectroscopy, Born-Oppenheimer approximation: derivations, Fourier Transform methods (IR and NMR)

##### Ultraviolet and Visible spectroscopy

Various electronic transitions (185-800 nm) Beer-Lambert law, effect of solvent on electronic transitions, ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes, conjugated polyenes, Fiesher -Woodward rules for conjugated dienes and carbonyl compounds, ultraviolet spectra of aromatic compounds. Steric effect in biphenyls.

##### Unit-II

##### Infrared Spectroscopy

Instrumentation and Sample handling. Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ether's, phenols and amines, and carbonyl compounds (ketones, aldehydes, esters, amides, acids, anhydrides, lactones, lactams and conjugated carbonyl

compounds). Effect of hydrogen bonding and solvent effect on vibrational frequencies, overtones, combination bands and fermi resonance.

### Raman Spectroscopy

Principle, stokes-antistokes lines, raman effect, applications, Coherent Antistokes Raman Spectroscopy CARS (an elementary idea), Raman spectroscopy particularly for the study of active sites of metalloproteins

### Unit-III

**Rotational Spectroscopy.** Classification of molecules, linear triatomic molecule, intensities, energy levels and rotational spectra of symmetric top molecules, Stark effect, nuclear and electron spin interaction, effect of external field, applications.

### Electron Spin Resonance Spectroscopy

Some basic elements of ESR spectroscopy, relaxation processes: spin-lattice relaxation, spin-spin relaxation and exchange interaction. Zero field splitting and Kramer's degeneracy, 'g' value and factors affecting ESR lines.

### Unit-IV

**Nuclear Magnetic Resonance Spectroscopy** General introduction and definition, chemical shift, spin-spin interaction, shielding mechanism of measurement, chemical shift values and correlation for protons bonded to carbon and other nuclei, chemical exchange, effect of deuteration, complex spin-spin interaction between two, three, four and five nuclei (first order spectra). NMR shift reagents, solvent effects, Nuclear Overhauser effect (NOE). Introduction of Mass Spectrometry, NQR Spectroscopy, Introduction of Mössbauer spectroscopy.

### Unit-V

#### Photoelectron Spectroscopy

Basic principle, ionization process, Koopmen's theorem, photoelectron spectra of simple molecules, ESCA and its applications, Auger electron spectroscopy (basic idea), spectra of transition metal complexes, charge transfer spectra.

#### Electron Microscopy

Basic principles of Electron Microscopy: SEM, TEM and their applications in structural analysis

#### Suggested Books & References:

12. Spectroscopic Methods in Organic Chemistry D.H. Williams, I. Fleming, Tata McGraw-Hill.

*[Handwritten signatures and marks at the bottom of the page]*

## INORGANIC CHEMISTRY

### A. Chromatography Separation of cations and anions by

1. Paper Chromatography.
2. Chromatography : Ion exchange.

### B. Chromatographic Separations

3. Cadmium and zinc
4. Zinc and magnesium.
5. Thin-layer chromatography-separation of nickel, manganese, cobalt and zinc.  
Determination of Rf values.
6. Separation and identification of the sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of Rf values.

### C. Preparations(Any Six)

Preparation of selected inorganic compounds and their studies by I.R. electronic spectra, Mossbauer, E.N.R. and magnetic susceptibility measurements. Handling of air and moisture sensitive compounds.

1. VO(acac)<sub>2</sub>
2. TiO (C<sub>9</sub>H<sub>8</sub>NO)<sub>2</sub>H<sub>2</sub>O
3. cis-K<sub>2</sub>[Cr(C<sub>2</sub>O<sub>4</sub>)<sub>2</sub>(H<sub>2</sub>O)<sub>2</sub>]
4. Na[Cr(NH<sub>3</sub>)<sub>2</sub>(SCN)<sub>4</sub>]
5. Ni(acac)<sub>2</sub>
6. K<sub>3</sub>[Fe(C<sub>2</sub>O<sub>4</sub>)<sub>3</sub>]
7. Prussian Blue, Turnbull's Blue.
8. [Co(NH<sub>3</sub>)<sub>6</sub>][Co(NO<sub>2</sub>)<sub>6</sub>]
9. cis-[Co(trien)(NO<sub>2</sub>)<sub>2</sub>]Cl.H<sub>2</sub>O
10. Hg[Co(SCN)<sub>4</sub>]
11. [Co(Pv)<sub>2</sub>Cl<sub>2</sub>]
12. [Ni(NH<sub>3</sub>)<sub>6</sub>]Cl<sub>2</sub>
13. Ni(dmg)<sub>2</sub>
14. [Co(NH<sub>3</sub>)<sub>4</sub>]SO<sub>4</sub>.H<sub>2</sub>O

## ORGANIC CHEMISTRY

### Organic Synthesis

1. Acetylation : Acetylation of cholesterol and separation of cholesteryl acetate by column chromatography.
2. Oxidation : Adipic acid by chromic acid oxidation of cyclohexanol
3. Grignard reaction : Synthesis of triphenylmethanol from benzoic acid
4. Aldol condensation : Dibenzal acetone from benzaldehyde.
5. Sandmeyer reaction : p-Chlorotoluene from p-toluidine.
6. Acetoacetic ester Condensation : Synthesis of ethyl-n-butylacetoacetate by A.E.E. condensation.
7. Cannizzaro reaction : 4-Chlorobenzaldehyde as substrate.
8. Friedel Crafts reaction : n-Benzoyl propionic acid from succinic anhydride and benzene.
9. Aromatic electrophilic substitution : Synthesis of p-nitroaniline and p-bromoaniline.
10. Estimation of amines/phenols using bromate bromide solution/or acetylation method.

*[Handwritten signatures and initials]*

11. Determination of the percentage or number of hydroxyl groups in an organic compound by acetylation method
12. Determination of Iodine and Saponification values of an oil sample.

### PHYSICAL CHEMISTRY

1. Determination of the effect of (a) Change of temperature (b) Change of concentration of reactant and catalyst and (c) Ionic strength of the media on the velocity constant of hydrolysis of an ester/ionic reaction.
2. Determination of the velocity constant of hydrolysis of an ester/ionic reaction in miscellar media.
3. Determination of the velocity constant for the oxidation of iodide ions by hydrogen peroxide study the kinetics as an iodine clock reactions.
4. Flowing clock reactions (Ref: Experiments in Physical Chemistry by Sherwood)
5. Determination of the primary salt effect on the kinetics of ionic reaction and testing of the Bronsted relationship (iodide ion is oxidised by persulphate ion).
6. To determine the relative strength of the acids by studying the hydrolysis of an ester (at room and at any higher temperature)
7. Determine the energy of activation for the hydrolysis of an ester.
8. Determination of molecular weight of non-volatile and electrolyte/electrolytes by cryoscopic method and to determine the activity coefficient of an electrolyte.
9. Determination of the degree of dissociation of weak electrolyte and to study the deviation from ideal behaviour that occurs with a strong electrolyte.
10. Determination of strengths of halides in a mixture potentiometrically.
11. Determination of the strength of strong and weak acids in a given mixture using a potentiometer/pH meter.
12. Determination of temperature dependence of EMF of a cell.
13. Determination of the formation constant of silver-ammonia complex and stoichiometry of the complex potentiometrically.
14. Determination of rate constant for hydrolysis/inversion of sugar using a polarimeter.

### Books Suggested

1. Vogel's Textbook of Quantitative Analysis, revised, J. Bassett, R.C. Denney, G.H. Jeffery and J. Mendham, ELBS.
2. Synthesis and Characterization of Inorganic Compounds, W.L. Jolly, Prentice Hall.
3. Experiments and Techniques in Organic Chemistry, D.P. Pasto, C. Johnson and M. Miller, Prentice Hall.
4. Macroscale and Microscale Organic Experiments, K.L. Williamson, D.C. Heath.
5. Systematic Qualitative Organic Analysis, H. Middleton, Edward Arnold.
6. Handbook of Organic Analysis-qualitative and Quantitative, H. Clark, Edward Arnold.
7. Vogel's Textbook of Practical Organic Chemistry, A.R. Tatchell, John Wiley.
8. Practical Physical Chemistry, A.M. James and F.E. Prichard, Longman.
9. Findley's Practical Physical chemistry, B.P. Levitt, Longman.
10. Experimental Physical Chemistry, R.C. Das and B. Behera, Tata McGraw Hill.

## Semester III

### MCH 011A: Green Chemistry

**Course Outcomes:** After the completion of the course, student will be able to-

- CO1 Understand the twelve principles of green chemistry with their explanations and examples.
- CO2 Understand the Prevention of waste /byproducts, Prevention/Minimization of hazardous/toxic products, & designing safer chemicals - different basic approaches, Designing biodegradable products.
- CO3 Understand the Introduction of microwave induced organic and inorganic synthesis; microwave activation equipment ;time and energy benefits;limitations;
- CO4 Understand the use Ionic liquids as green solvents, Electrochemical synthesis.
- CO5 Understand Oxidation-reduction reagents and catalysts; multifunctional reagents; Combinatorial green chemistry, solventless reactions, Noncovalent derivatization. Biomass conversion, emission control. Biocatalysis.

#### Unit-I

##### INTRODUCTION ,PRINCIPLE AND CONCEPTS OF GREEN CHEMISTRY:

What is green chemistry? Need for green chemistry; inception and evolution of green chemistry; twelve principles of green chemistry with their explanations and examples; designing a green synthesis using these principles ;green chemistry in day to day life.

#### Unit\_II

**Basic principles of Green Chemistry and their illustrations with examples.**

- (i) Prevention of waste/byproducts.
- (ii) Maximum Incorporation of the materials used in the process into the final product (Atom Economy): Green metrics
- (iii) Prevention/Minimization of hazardous/toxic products.
- (iv) Designing safer chemicals - different basic approaches
- (v) Selection of appropriate auxiliary substances (solvents, separation agents etc)
- (vi) Energy requirements for reactions—use of microwave, ultrasonic energy
- (vii) Selection of starting materials—use of renewable starting materials.
- (viii) Avoidance of unnecessary derivatization—careful use of blocking/protection groups.
- (ix) Use of catalytic reagents (wherever possible) in preference to stoichiometric reagents.
- (x) Designing biodegradable products.
- (xi) Prevention of chemical accidents.
- (xii) Strengthening/development of analytical techniques to prevent and minimize the generation of hazardous substances in chemical processes. Development of accurate and reliable sensors and monitors for real time in process monitoring.

#### Unit-III

**Application of non conventional energy sources :Microwave induced and ultrasound assisted green synthesis.**

Introduction of microwave induced organic and inorganic synthesis; microwave activation – equipment ;time and energy benefits;limitations;

- (a) Synthesis of nitrogen-oxygen /sulphur donor ligands and their coordination complexes ;synthetic organic transformations under microwaves.
- (b) Reactions in organic solvents –esterifications ;Fries rearrangement;Diels alder reaction and decarboxylation.

*[Handwritten signatures and initials are present at the bottom of the page, including "Deen", "An", "h", "Sant", "A", "De", "SB", and "M. B. Bhal"]*

(a) Solvent free reactions(solid state reactions); decarbonylation; deprotection; saponification of ester; alkylation of reactive methylene compounds; synthesis of nitriles from aldehydes; heterocyclic synthesis -  $\beta$ -lactams, pyrrole, quinoline. Ultrasound assisted green synthesis; introduction; instrumentation; physical aspects; oxidation; reduction; addition, substitution reactions and synthesis of chromenes.

#### Unit-IV

**Environmentally benign solutions to organic solvents(focus on water and ionic liquids).**

(a) Ionic liquids as green solvents - Introduction; properties and types of ionic liquids; synthetic applications-Diels-Alder reaction; epoxidation; Heck reaction; preparation of pharmaceutical compounds; enzyme catalysed synthesis.

(b) Aqueous phase reactions-Introduction; Pseudo organic solvent

(1) Application in oxidation of nitro; aromatic and carbonyl compounds; reduction of carbon-carbon multiple bond, Benzoin condensation; Michael reaction; Claisen rearrangement; Knoevenagel reaction.

(2) Electrochemical synthesis- introduction, synthesis of sebacic acid, adiponitrile. Introduction on role of fluorous solvents and supercritical carbon dioxide in green chemistry.

#### Unit-V

**Hazard assessment and mitigation in chemical industry**

**Future trends in Green Chemistry:** Oxidation-reduction reagents and catalysts; Biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solventless reactions; Noncovalent derivatization. Biomass conversion, emission control. Biocatalysis

#### Suggested Books References:

1. Organic synthesis in water, Paul A. Grieco Blackie.
2. Green Chemistry, theory and practice, Paul T. Anastas and John C. Warner.
3. New Trends in Green Chemistry, V.K. Ahluwalia and M. Kidwai.
4. Green Chemistry For Sustainability, Sanjay K. Sharma and A. Mudhoo, CRC Taylor & Francis, USA
5. Organic synthesis: Special techniques, V.K. Ahluwalia and Renu Aggarwal.
6. A Handbook of Applied Biopolymer Technology, Sanjay K. Sharma and A. Mudhoo, RSC Publishing, UK
7. Lancaster, M. Green chemistry; An Introductory Text; the Royal Society of Chemistry: Cambridge, UK, 2002.
8. Green Corrosion Chemistry & Engineering, Sanjay K. Sharma, Wiley Publications, UK
9. Chem. Rev. 2007, 107, 2167-2820 (special issue on green chemistry).

**Specialization: Inorganic Chemistry**

## MCH 013A: Inorganic Elective I: PHOTOINORGANIC CHEMISTRY AND X-RAY DIFFRACTION

**Course outcome:** After the completion of the course, student will be able to-

- CO1 understand basics of photochemistry including various excitations and energy dissipation.
- CO2 articulate the photochemical kinetics for radiative processes and deactivation of molecules by quenching.
- CO3 understand the different photochemical reactions viz. reduction, oxidation, substitution at ground and excited level.
- CO4 understand the mechanisms of electron relay, water photolysis, nitrogen fixation and CO<sub>2</sub> reduction.
- CO5 understand the applications of XRD, methods of structural analysis of crystal, diffraction pattern etc.

### Unit-I

#### Basics of Photochemistry

Absorption, excitation, photochemical laws, quantum yield, electronically excited states-life times-measurements of the times. Flash photolysis, Energy dissipation by radiative and non-radiative processes, absorption spectra, Frank-Condon principle, photochemical stages-primary and secondary processes.

### Unit-II

#### Properties of Excited States

Structure, dipole moment, acid-base strengths, reactivity. Photochemical kinetics-calculation of rates of radiative processes. Bimolecular deactivation-quenching.

#### Excited States of Metal Complexes

Excited states of metal complexes : Comparison with organic compounds, electronically excited states of metal complexes, charge transfer spectra.

### Unit-III

#### Ligand Field Photochemistry

Photosubstitution, photooxidation and photoreduction, lability and selectivity, zero vibrational levels of ground state and excited state.

### Unit-IV

#### Metal Complex Sensitizers

Metal complex sensitizer, electron relay, metal colloid systems, water photolysis, nitrogen fixation and carbon dioxide reduction.

### Unit-V

#### X-RAY DIFFRACTION

Bragg condition, Miller indices, Laue Method, Bragg method, Debye Scherrer method of X-ray structural analysis of crystals, index reflections, identification of unit cells from systematic absences in diffraction pattern, Structure of simple lattices and X-ray intensities, structure factor and its relation to intensity and electron density, phase problem. Description of the procedure for an X-ray structure analysis, absolute configuration of molecules.

#### Suggested Books References:

1. Concepts of Inorganic Photochemistry, A.W. Adamson and P.D. Fleischauer, Wiley.
2. Inorganic Photochemistry, J.Chem. Educ. vol. 60 No. 10, 1983.
3. Progress in Inorganic Chemistry, Vol. 30ed. S.J. Lippard, Wiley.

*[Handwritten signatures and initials are present at the bottom of the page.]*

4. Coordination Chem. Revs. 1981, vol. 39, 121, 1231, 1975, 14, 321.; 1990 97, 313.

6. Elements in Inorganic Photochemistry, G.J. Ferraudi, Wiley.

### **MCH 013A: Inorganic Elective II: BIOINORGANIC CHEMISTRY**

**Course outcome:** On completion of this course student will be able to-

- CO-1 analyze the structure and function of metal ion containing biomolecules.
- CO2 explain principle and mechanism of various cycles involved in energy production and structure and functions of DNA, RNA.
- CO3 explain Haem proteins and oxygen uptake structure and function of haemoglobin's, myoglobin, haemocyanins and hemerythrin, model synthetic complexes of iron, cobalt and copper.
- CO4 explain Metal deficiency and disease, toxic effects of metals, metals used for diagnosis and chemotherapy. Biological and Chemical nitrogen fixation.
- CO5

#### **Unit-I**

##### **Metal Ions in Biological Systems**

Bulk and trace metals with special reference to Na, K, Mg, Ca, Fe, Cu, Zn, Co, and  $K^+/Na^+$  pump.

##### **Metal Storage and Transport**

Ferritin transferrin, and siderophores.

#### **Unit-II**

##### **Bioenergetics and ATP Cycle.**

DNA polymerisation, glucose storage, metal complexes in transmission of energy; chlorophyll's, photosystem I and photosystem II in cleavage of water.

##### **DNA and RNA**

Metal complexes of polynucleotide, nucleosides and nucleic acids (DNA and RNA)

Template temperature stability of DNA.

#### **Unit-III**

##### **Transport and Storage of Dioxygen**

Haem proteins and oxygen uptake structure and function of haemoglobin's, myoglobin, haemocyanins and hemerythrin, model synthetic complexes of iron, cobalt and copper.

#### **Unit-IV**

##### **Metals in Medicine**

Metal deficiency and disease, (Iron, Zinc, Copper) toxic effects of metals, metals used for diagnosis and chemotherapy with particular reference the anticancer drugs.

##### **Nitrogen fixation**

Nitrogen in biosphere, nitrogen cycle, nitrification role microorganism, nitrogen fixation in soils. Biological nitrogen fixation, and its mechanism, nitrogenase, Chemical nitrogen fixation

#### **Unit-V**

Origin of supramolecular chemistry - "Chemistry beyond the molecules". Concepts and terminology of supramolecular chemistry. Nature and types of supramolecular interactions

*[Handwritten signatures and marks at the bottom of the page]*

(Hydrogen bonding, van der Waal interactions,  $\pi$ -stacking, C-H... $\pi$  interactions etc.). Molecular recognition- Information and complementarity. Different types of receptors with special reference of Crown ethers, cryptates and Calix[4]arene. Molecular self-assembly formation and examples. Supramolecular chemistry of life, application of supramolecular chemistry in drug design. Application in material science-molecular machines.

#### Suggested Books References:

10. Supramolecular Chemistry; Second Edition; J. W. Steed, J. L. Atwood; Wiley, New York, 2009.

#### MCH014A :Inorganic Elective III: ORGANOTRANSITION METAL CHEMISTRY-I

**Course outcome:**After the completion of course students will be able to learn about the CO1- types, routes of synthesis, stability and decomposition pathways organo-copper in organic synthesis. CO2- Compounds of Transition Metal-Carbon Multiple Bonds alkylidenes, alkylidynes and their synthesis. CO-3 Compounds of low valent carbenes and carbynes-synthesis CO-4 Transition metal p-Complexes with unsaturated organic molecules, alkenes, alkynes, allyl complexes. CO-5 Transition metal p-Complexes with unsaturated organic molecules, diene, dienyl, arene and trienyl complexes,

##### Unit-I

##### Alkyls and Aryls of Transition Metals

Types, routes of synthesis, stability and decomposition pathways organocopper in organic synthesis.

##### Unit-II

##### Compounds of Transition Metal

Carbon Multiple Bonds alkylidenes, alkylidynes, synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reactions on the ligands, role in organic synthesis.

##### Unit-III

##### Compounds of low valent carbenes and carbynes

Synthesis, nature of bond, structural characteristics, nucleophilic and electrophilic reactions on the ligands, role in organic synthesis.

##### Unit-IV

##### Transition Metal $\pi$ -Complexes I

*[Handwritten signatures and marks are present below the Unit-IV header.]*

Transition metal  $\pi$ -Complexes with unsaturated organic molecules, alkenes, alkynes, allyl, complexes, preparation, properties, nature of bonding and structural features. Important reactions relating to nucleophilic and electrophilic attack on ligands and to organic synthesis.

#### Unit-V

##### Transition Metal $\pi$ -Complexes II

Transition metal  $\pi$ -Complexes with unsaturated organic molecules, diene, dienyl, arene and trienyl complexes, preparation, properties, nature of bonding and structural features. Important reactions relating to nucleophilic and electrophilic attack on ligands and to organic synthesis

##### Suggested Books References:

1. Principles and Application of Organotransition Metal Chemistry, J.P. Collman, L.S. Hegsdus, J.R. Norton and R.G. Finke, University Science Books.
2. The Organometallic Chemistry of the Transition Metals, R.H. Crabtree. John Wiley.
3. Metallo-organic Chemistry, A.J. Pearson, Wiley.
4. Organometallic Chemistry, R.C. Mehrotra and A. Singh New Age International

#### MCH 015A:Spectrophotometric Analysis (Practical)

##### Preparation (Any Six)

Preparation of selected inorganic compounds and their study by IR, electronic spectra, Mossbauer. ESR and magnetic susceptibility measurements. Handling of air and moisture sensitive compounds involving vacuum lines. Selection can be made from the following :

1. Sodium amide.
2. Synthesis and thermal analysis of group II metal oxalate hydrate.
3. Atomic absorption analysis of Mg and Ca.
4. Preparation of Tin (IV) iodide, Tin (IV) chloride and Tin (II) iodide.
5. Preparation of ammonium hexachlorostannate  $(\text{NH}_4)_2 \text{SnCl}_6$  ammonium hexachloroplumbate  $(\text{NH}_4)_2 \text{PbCl}_6$ .
6. Hexa-bis (4,nitrophenoxy) cyclotriphosphazene.
7. Synthesis of trichlorodiphenylantimony (V) hydrate.
8. Sodium tetrathionate  $\text{Na}_2\text{S}_4\text{O}_6$ .
9. Synthesis of metal acetylacetonate .
10. Bromination of  $\text{Cr}(\text{acac})_3$ .
11. Magnetic moment of  $\text{Cu}(\text{acac})_2 \cdot 2\text{H}_2\text{O}$ .
12. Cis and Trans  $[\text{Co}(\text{en})_2\text{Cl}_2]^+$ .
13. Separation of optical isomer of cis- $[\text{Co}(\text{en})_2\text{Cl}_2]$ .
14. Ion exchange separation of oxidation state of vanadium.
15. Preparation and use of Ferrocene.
16. Preparation of copper glycine complex-cis and trans bis (glycinato Copper (II)
17. Preparation of phosphine  $\text{Ph}_3\text{P}$  and its transition metal complexes.
18. Preparation of  $[\text{Co}(\text{phenanthroline-5,6 quinone})]$ .

##### Spectrophotometric Determinations

1. Manganese/Chromium/Vanadium in steel sample.
2. Nickel/molybdenum/tungsten/vanadium/uranium by extractive spectrophotometric method.
3. Fluoride/nitrite/phosphate.
4. Zirconium-alizarin Red-S complex : Mole-ratio method.

*[Handwritten signatures and marks are present below the list of determinations.]*

5. Copper-Ethylene diamine complex : Slope-ratio method.
6. Iron-phenanthroline complex : Job's method of continuous variations.

**Specialization: Organic Chemistry**

## MCH 016A: Organic Elective I: ORGANIC SYNTHESIS

**Course Outcome:** After the completion of course, student will be able to

CO1:-Understand the nature of different oxidation process.

CO<sub>2</sub>:-Understand the various steps involved in the reduction process of organic molecules.

CO3:-Understand the specific reaction mechanism in the process of hydrogenolysis.

CO4:-Understand the basic principle involved in various rearrangement processes.

CO5:- Understand the various steps involved in different rearrangement reactions.

## Unit-I

### Oxidation

**Oxidation**  
Introduction, Different oxidative processes. Hydrocarbons-alkenes, aromatic rings, saturated C-H groups (activated and unactivated) Alcohols, diols, aldehyde's, ketones, ketals and carboxylic acids. Amines, hydrazines, and sulphides. Oxidations with ruthenium tetroxide, iodobenzene diacetate and thallium. (III) Nitrate.

## Unit-II

### Reduction-I

**Reduction-I**  
Introduction, Different reductive processes. Alkanes, alkenes, alkynes, and aromatic rings.  
Carbonyl compounds-aldehydes, ketones, acids and their derivatives. Epoxides.

### Unit-III

### Reduction-II

**Reduction-II**  
Introduction, Different reductive processes, Nitro, nitroso, azo and oxime groups. Expoxide, Nitro, Nitroso, azo and oxime groups. Hydrogenolysis.

## Unit-IV

### Rearrangements - I

**Rearrangements - I**  
General mechanistic considerations-nature of migration, migratory aptitude, memory effects. A detailed study of the following rearrangements. Pinacol-pinacolone, Wagner-Meerwein.

### Unit-V

### Unit-V

#### Rearrangements - II

**Rearrangements - II**  
Demjanov, Benzil-Benzillic acid. Favorskii, Arndt-Eister synthesis, Neber, Beckmann, Hotmann  
Curtius, Schmidt, Baeyer-Villiger, Shapiro reaction. Schmidt, Baeyer-Villiger. Shapiro reaction

  3. Advanced Organic Chemistry, Reactions Mechanisms and Structure, J. March. John Wiley.
  4. Principles of Organic synthesis, R.O.C. Norman and J.M. Coxon, Blackie Academic & Professional.

4. Principles of Organic Synthesis, Professional.

5. Advanced Organic Chemistry Part B.F.A. Carey and R.J. Sundberg Plenum Press.
6. Rodd's Chemistry of Carbon Compounds. Ed. S. Coffey, Elsevier.

## MCH 017A: Organic Elective II: Heterocyclic Chemistry

**Course Outcome:** After the completion of syllabus, student will be able to learn the

- CO-1 Nomenclature patterns of heterocyclic compounds, aromaticity and chemical behaviour
- CO-2 Nature, confirmation and stability of non aromatic heterocycles
- CO-3 Synthesis, and reaction of small ring (3,4,5) membered heterocycles.
- CO-4 The synthesis and reaction of benofused and meso-ionic heterocycles.
- CO-5 The synthesis and reaction of six membered with one heteroatom and more than one heteroatom

### Unit-I

#### Nomenclature of Heterocycles

Replacement and systematic nomenclature (Hantzsch-Widman system) for monocyclic fused and bridged heterocycles.

#### Aromatic Heterocycles

General chemical behaviour of aromatic heterocycles, classification (structural type), criteria of aromaticity (bond lengths, ring current and chemical shifts in  $^1\text{H}$  NMR-spectra. Empirical resonance energy, delocalization energy and Dewar resonance energy, diamagnetic susceptibility exaltations). Heteroaromatic reactivity and tautomerism in aromatic heterocycles.

### Unit-II

#### Non-aromatic Heterocycles

Strain-bond angle and torsional strains and their consequences in small ring heterocycles. Conformation of six-membered heterocycles with reference to molecular geometry, barrier to ring inversion, pyramidal inversion and 1,3-diaxial interaction. Stereo-electronic effects anomeric and related effects, Attractive interactions-hydrogen bonding and intermolecular nucleophilic electrophilic interactions. Heterocyclic Synthesis. Principles of heterocyclic synthesis involving cyclization reactions and cycloaddition reactions.

### Unit-III

#### Small Ring Heterocycles

Three-membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes, thiranes, azetidines, oxetanes and thietanes.

### Unit-IV

**Benzo-Fused Five-Membered Heterocycles and Meso Ionic Synthesis** and reactions including medicinal applications of benzopyrroles, benzofurans and benzothiophenes. Meso-ionic heterocycles: classification, chemistry of some important meso-ionic heterocycles of type-A and B and their applications. Sydnones.

### UNIT-V

**Six Membered Heterocycles with one heteroatom:** synthesis and reactions of pyrilium salts and pyrones and their comparison with pyridinium and thiopyrylium salts and pyridones; synthesis and reactions of quinolizinium and benzopyrylium salts, coumarins and chromones.

**With two or more heteroatoms:** synthesis and reactions of diazines, triazines, tetrazines and thiazines. Some important macroheterocycles.

*[Handwritten signatures and marks at the bottom of the page]*

### Suggested Books References:

1. Heterocyclic Chemistry Vol. 1-3, R.R. Gupta, M. Kumar and V. Gupta, Springer Verlag.
2. The Chemistry of Heterocycles, T. Eicher and S. Hauptmann, Thieme.
3. Heterocyclic chemistry J.A. Joule, K. Mills and G.F. Smith, Chapman and Hall.
4. Heterocyclic Chemistry, T.L. Gilchrist, Longman Scientific Technical.
5. Contemporary Heterocyclic Chemistry, G.R. Newkome and W.W. Paudler, Wiley-Interscience.
6. An Introduction to the Heterocyclic Compounds, R.M. Acheson, John Wiley.
7. Comprehensive Heterocyclic Chemistry, A.R. Katritzky and C.W. Rees, eds. Pergamon Press.
8. I.L. Finar Organic Chemistry vol 2 (3rd ed.) Longmans Green & Co.
9. Organic Chemistry by Morrison & Boyd.

### MCH 018A: Organic Elective III: NATURAL PRODUCTS-I

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

**CO-1** Physical properties, chemical properties, synthesis and uses of terpenoids. It is found in various citrus fruits and herbs and is known to have antioxidant properties and is also used in various household products such as detergents and soaps.

**CO-2** Classification, nomenclature, isolation and uses of carotenoids. The health benefits of carotenoids generally derive from their vitamin A activity in the body. These benefits include support for the skin, immune system, heart and eyes.

**CO-3** Students gain specific knowledge necessary for understanding the structure, isolation and physiological action of alkaloids, their structures, functions, as well as their possible use in human.

**CO-4** The general properties of the alkaloids, importance of these compounds to humans. Synthesis and biosynthesis of these natural products are also discussed.

**CO-5** Nomenclature, basic skeleton, isolation, structure determination and health benefits of steroids.

#### Unit - I

##### Terpenoids

Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene and biogenic isoprene rules. Structure and synthesis of the following representative molecules: Citral, Geraniol,  $\alpha$ -Terpineol, Zingiberene, Santonin, abietic acid, biogenesis of terpenes.

#### Unit-II

##### Carotenoids

Introduction, nomenclature, occurrence, isolation, general methods of structure determination, structure and synthesis of  $\beta$ -Carotene, Vitamin-A, Capsorubin, Kuhn-Roth methyl side-chain determination.

#### Unit-III Alkaloids-I

Definition, nomenclature and physiological action, occurrence, isolation, general methods of structure elucidation, degradation (Hofmann's exhaustive, Emde and Von Braun's method), classification based on nitrogen heterocyclic ring, structure and synthesis of D-ephedrin, Coniine.

#### Unit-IV

##### Alkaloids-II

Structure, stereochemistry, synthesis and biosynthesis of the following: Nicotine, Atropine, Cocaine, Quinine and Morphine.

#### Unit-V

##### Steroids

Occurrence, nomenclature, Diel's hydrocarbon, isolation, structure determination and synthesis of Cholesterol, Bile acids, steroidal hormones (Androsterone, Testosterone, Oestrone), Progesterone, Aldosterone, Biosynthesis of Steroids.

#### Suggested Books References:

1. Natural Products : Chemistry and Biological Significance, J. Mann, R.S. Davidson, J.B. Hobbs, D.V. Banthorpe and J.B. Harborne, Longman, Essex.
2. Organic Chemistry : Vol. 2 IL. Finar, ELBS
3. Stereoselective Synthesis : A Practical Approach, M. Norgadi, VCH.
4. Rodd's Chemistry of Carbon Compounds, Ed. S. Coffey, Elsevier.
5. Chemistry, Biological and Pharmacological Properties of Medicinal Plants from the Americas, Ed. Kurt Hostettmann, M.P. Gupta and A. Marston. Harwood Academic Publishers.
6. Introduction to Flavonoids, B.A. Bohm. Harwood Academic Publishers.
7. New Trends in Natural Product chemistry, Ata-ur-Rahman and M.L. Choudhary, Harwood Academic Publishers.
8. Insecticides of Natural Origin, Sukh Dev, Harwood Academic Publishers

#### MCH 019A: Multi-step Synthesis (Practical)

##### Qualitative Analysis

Separation, purification and identification of the components of a mixture of three organic compounds (three solids or two liquids and one solid or two solids and one liquid), using TLC for checking the purity of the separated compounds, chemical analysis, IR, PMR and Mass spectral data.

##### Multi-step Synthesis of Organic Compounds

The exercise should illustrate the use of organic reagents and may involve purification of the products by chromatographic techniques.

1. Photochemical reaction Benzophenone  $\rightarrow$  Benzopinacol  $\rightarrow$  Benzpinacolone
2. Beckmann rearrangement : Benzanilide from benzene, Benzene  $\rightarrow$  Benzophenone  $\rightarrow$  Benzophenone oxime  $\rightarrow$  Benzanilide
3. Benzilic acid rearrangement : Benzilic acid from benzoin Benzoin  $\rightarrow$  Benzil  $\rightarrow$  Benzilic acid Synthesis of heterocyclic compounds
4. Skraup synthesis : Preparation of quinoline from aniline
5. Fisher Indole synthesis : Preparation of 2-phenylindole from phenylhydrazine.
6. Enzymatic synthesis Enzymatic synthesis
7. Enzymatic reduction : reduction of ethyl acetoacetate using Baker's yeast to yield enantiomeric excess of S (+) ethyl-3-hydroxybutanoate and determine its optical purity.
8. Biosynthesis of ethanol from sucrose.
9. Synthesis using microwave Alkylation of diethyl malonate with benzyl chloride.
10. Synthesis using phase transfer catalyst. Alkylation of diethyl malonate or ethyl acetoacetate with an alkylhalide.

##### Paper Chromatography

Separation and identification of the sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of  $R_f$  values.

##### Spectroscopy

Identification of organic compounds by the analysis of their spectral data (UV, IR, PMR,  $C^{13}$ NMR & MS) Spectrophotometric (UV/VIS) Estimations -

1. Amino acids

*[Handwritten signatures and marks are present below the text, including "Amino acids", "Spectroscopy", and "Paper Chromatography".]*

2. Proteins
3. Carbohydrates
4. Cholesterol
5. Ascorbic acid
6. Aspirin
7. Caffeine

#### Books Suggested

1. Inorganic Experiments, J. Derek Woolings, VCH.
2. Microscale Inorganic Chemistry, Z. Szafran, R.M. Pike and M.M. Singh, Wiley.
3. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrand.
4. The systematic Identification of Organic Compounds, R.L. Shriner and D.Y. Curtin.

### Specialization: Physical Chemistry

#### MCH 020A: PHYSICAL ELECTIVE I: ELECTROANALYTICAL TECHNIQUES

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

- CO-1 Introductory idea of analytical methods and laboratory operations.
- CO-2 Errors and evaluation of statistical data and methods of reporting analytical data
- CO-3 Conductometric titrations and measurements.
- CO-4 Potentiometric methods, pH determination by instruments and its applications
- CO-5 principle and applications of colorimetry

#### Unit I

##### Introduction

Role of analytical chemistry Classification of analytical methods classical and instrumental. Types of instrumental analysis. Selecting an analytical method. Neatness and cleanliness. laboratory operations and practices. Analytical balance. Techniques of weighing, errors. Volumetric glassware cleaning and calibration of glassware. Cleaning and Calibration of glassware. Sample preparation-dissolution and decompositions.

#### Unit II

##### Errors and Evaluation (Statistical Analysis)

Definition of terms in mean and median. Precision-standard deviation, relative standard deviation. Accuracy-absolute error, relative error. Types of error in experimental data determinate (systematic), indeterminate (or random) and gross. Sources of error and the effects upon the analytical results. Methods for reporting analytical data. Statistical evaluation of data-indeterminate errors. The uses of statistics.

#### Unit III

##### Conductometry

Important laws, definitions, relations, effect of dilution on conductivity, measurement of conductivity, types of conductometric titrations, its applications and limitations.

#### Unit IV

##### Potentiometry

Principle instrumentation, types of potentiometric titrations and its applications, pH measurements, determination of pH, ion selective electrodes, instrumentation and its applications

#### Unit V

##### Coulometry

Introduction, principle, experimental details of coulometry at constant current and constant potential, titration applications.

*Don*

*Handwritten signatures and initials: A large 'S' with a checkmark, and several other illegible signatures.*

### Suggested Books References:

1. Principles of Instrumental analysis D.A. Skoog and J.L. Loary, W.B. Saunders.
2. Principles of Instrumental Analysis D.A. Skoog W.B. Saunders.
3. Handbook of Instrumental Techniques for Analytical Chemistry, F. Settle, Prentice Hall

## MCH 021A: PHYSICAL ELECTIVE II : ELECTROCHEMISTRY-I

**Course outcome:** On completion of the course, student will be able to understand about the

- CO-1 Electrochemical batteries
- CO-2 role of electrochemical reactions in biological processes.
- CO-3 details of the process of corrosion.
- CO-4 corrosion inhibition methods
- CO-5 Kinetics of electrode process

### Unit I

#### Electrochemical Energy Storage

Properties of Electrochemical energy storers : Measure of battery performance, Charging and discharging of a battery, Storage Density, Energy Density. Classical Batteries : (i) Lead Acid (ii) Nickel-Cadmium, (iii) Zinc manganese dioxide. Modern Batteries : (i) Zinc-Air (ii) Nickel-Metal Hydride, (iii) Lithium Battery, Future Electricity storers : Storage in (i) Hydrogen, (ii) Alkali Metals, (iii) Non aqueous solutions.

### Unit II

#### Bioelectrochemistry

Membrane Potentials, Simplistic theory, Modern theory, Electrical conductance in biological organism: Electronic, Protonic electrochemical mechanism of nervous systems, enzymes as electrodes.

### Unit III

#### Corrosion and Stability of Metals :

Civilization and Surface mechanism of the corrosion of the metals; Thermodynamics and the stability of metals, Potential -pH (or Pourbaix) Diagrams; uses and abuses, Corrosion current and corrosion potential -Evans diagrams. Measurement of corrosion rate : (i) Weight Loss method, (ii) Electrochemical Method.

### Unit IV

#### Inhibiting Corrosion

Cathodic and Anodic Protection. (i) Inhibition by addition of substrates to the electrolyte environment, (ii) by changing the corroding method from external source, anodic Protection, Organic inhibitors, The fuller Story Green inhibitors.

#### Passivation

Structure of Passivation films, Mechanism of Passivation, Spontaneous Passivation Nature's method for stabilizing surfaces.

### Unit V

#### Kinetic of Electrode Process :

Essentials of Electrode reaction. Current Density, Overpotential, Tafel Equation, Butler Volmer equation. Standard rate constant ( $K_0$ ) and Transfer coefficient ( $\alpha$ ), Exchange Current.

#### Irreversible Electrode processes

*[Handwritten signatures and marks]*

Criteria of irreversibility, information from irreversible wave. Methods of determining kinetic parameters for quasi-reversible and irreversible waves, Koutecky's methods, Meites Israel Method, Gellings method

#### Suggested Books References:

1. Modern Electrochemistry Vol. I, IIa, Vol. IIB JOM Bockris and A.K.N. Reddy, Plenum Publication, New York.
2. Polarographic Techniques by L. Meites, Interscience.
3. "Fuel Cells : Their electrochemistry". McGraw Hill Book Company, New York.
4. Modern Polarographic Methods by A.M. Bond, Marcell Dekker.
5. Polarography and allied techniques by K. Zutshi, New age International publication. New Delhi.
6. "Electroanalytical Chemistry by Basil H. Vessor & Galen W. ; Wiley Interscience.
7. Electroanalytical Chemistry by Basil H. Vessor & Galen W. ; Wiley Interscience.
8. Topics in pure and Applied Chemistry, Ed. S. K. Rangrajan, SAEST Publication, Karaikudi (India)

### MCH 022A: PHYSICAL – ELECTIVE III :CHEMICAL KINETICS I

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

CO-1 kinetics of oscillatory reactions

CO-2 Kinetics of enzyme inhibition reactions

CO-3 Adsorption-desorption kinetics and importance of Industrial catalysts

CO-4 statistical mechanics and transition state theory, applications in calculation of the second order rate constant for reactions.

CO-5 mechanism of metal ion catalysis

#### Unit I

##### Oscillatory Reactions

Autocatalysis and oscillatory reactions, Kinetics and mechanism of Belousov-Zhabotinski (B-Z) reactions.

#### Unit II

##### Enzymes and Inhibitions

Kinetics of one enzymes-Two substrate systems and their experimental characteristics, Kinetics of enzyme inhibited reactions, Enzyme inhibitors and their experimental characteristics.

#### Unit III

##### Dynamics of Gas-surface Reactions

Adsorption/desorption kinetics and transition state theory. Dissociative adsorption and precursor state. Mechanism of Langmuir's adsorption of the oxidation of carbon monoxide to carbon dioxide. True and apparent activation energies. Industrial importance of heterogeneous catalysis.

#### Unit IV

##### Transition State

A brief aspect of statistical mechanics and transition state theory. Application in calculation of the second order rate constant for reactions with collision for (1) atom + atom, (2) atom + molecule (linear), (3) atom + non linear molecule, (4) linear and linear molecule, (5) linear molecule + non linear molecule reactions. Static solvent effects and thermodynamics formulations. Adiabatic electron transfer reactions, energy surfaces.

#### Unit V

### Metal ion catalysis

Kinetics and mechanism of following reaction-

- (a) i. When reaction rate is independent of one of the reactants in presence of metal ion catalyst.
- ii. When reaction rate is retarded of one of the products in the presence of metal ion catalyst.
- iii. When metal ion catalysis indicates an intermediate complex.
- (b) (i). Cyclodextrines and their mode of catalysis, a case study.

### Suggested Books References:

1. Progress in Inorganic Chemistry, Vol. 30 1967.
2. R. Lumry and R.W. Raymond, Electron Transfer Reactions, Interscience.
3. N.L. Bender, Mechanism of Homogeneous Catalysts from protein to protein, Wiley.
4. A.G. Sykes, Kinetics of Inorganic reactions, Pergamon.
5. S.W. Benson, Mechanism of Inorganic Reactions, Academic Press.
6. Physical Chemistry Vol. 2, Ed. Prof Ya Grashinov, Mir publisher.
7. Basolo and Pearson, Inorganic Reaction Mechanisms, Wiley.
8. H. Taube, Electron Transfer Reactions, Oxford Press.

### MCH 023A: Thermodynamical Studies (Practical)

1. Determination of partial molar volume of solute (e.g. KCl) and solvent in a binary mixture.
2. Determination of the temperature dependence of the solubility of a compound in two solvents having similar intramolecular interactions (benzoic acid in water and in DMSO) water mixture and calculate the partial molar heat of solution.
3. Determination of  $pK_a$  of an indicator (e.g. methyl red) in (a) aqueous and (b) micellar media.
4. Determination of stoichiometry and stability constant of Ferricisothiocyanate complex ion in solution.
5. Determination of rate constant of alkaline bleaching of Malachite green and effect of ionic strength on the rate of reaction.
6. Verify Beer's law for solution of  $KMnO_4$  and determine concentration of given aqueous solution of unknown concentration of this salt.
7. Determine the solubility and solubility product of a sparingly soluble salt conductometrically.
8. Determine the dissociation constant of a weak acid conductometrically and verify Ostwald's dilution law.
9. Study the hydrolysis of methyl acetate catalysed by HCl solution and equimolar solution of urea hydrochloride and determine the degree of hydrolysis of the salt.
10. Study saponification of ethyl acetate conductometrically.
11. Oscillatory reaction (demonstration) and note down the time for damping of oscillation.
12. Study the reaction rate of decomposition of  $H_2O_2$  Kinetically in presence of iodide in acid solution.

### Books Suggested

- i. Inorganic Experiments, J. Derek Woolings, VCH.
- ii. Microscale Inorganic Chemistry, Z. Szafran, R.M. Pike and M.M. Singh, Wiley.
- iii. Practical Inorganic Chemistry, G. Marr and B. W. Rockett, Van Nostrand.
- iv. The systematic Identification of Organic Compounds, R.L. Shriner and D.Y. Curtin.

*[Handwritten signatures and initials are present at the bottom of the page.]*

## Semester IV

### Specialization: Inorganic Chemistry

#### MCH 024A: Inorganic Elective I: ORGANOTRANSITION METAL CHEMISTRY-II

**Course outcome:** After the completion of course

- CO-1 Students will be able to understand the transition metal compounds with bonds to hydrogen.
- CO-2 Students will be able to apply and analyze the basic knowledge of stoichiometric reactions for catalysis.
- CO-3 Students will be able to describe the basic concept of catalytic reactions involving carbon monoxide.
- CO-4 Students will be able to explain reactions involving activation of C-H bond.
- CO-5 Students will be able to understand fluxional Organometallic Compounds and their properties.

##### Unit-I

**Transition metal compounds with bonds to hydrogen**

Transition metal compounds with bonds to hydrogen.

##### Unit-II

**Homogeneous Catalysis**

Stoichiometric reactions for catalysis, homogeneous catalytic hydrogenation, Zeigler-Natta polymerization of olefins,

##### Unit-III

**Reactions of CO**

Catalytic reactions involving carbon monoxide such as hydrocarbonylation of olefins (oxoreaction), explanation reactions,

##### Unit-IV

**Activation of C-H bond**

Reactions involving activation of C-H bond

##### Unit-V

**Fluxional Organometallic Compounds**

Flexionality and dynamic equilibrium in compounds such as  $\eta^2$  olefine,  $\eta^3$ -allyl and dienyl complexes.

#### Suggested Books References:

1. Principles and Application of Organotransition Metal Chemistry, J.P. Collman, L.S. Hegsdus, J.R. Norton and R.G. Finke, University Science Books.
2. The Organometallic Chemistry of the Transition Metals, R.H. Crabtree. John Wiley.
3. Metallo-organic Chemistry, A.J. Pearson, Wiley.
4. Organometallic Chemistry, R.C. Mehrotra and A. Singh New Age International.

#### MCH 025A: Inorganic Elective II: INORGANIC POLYMERS

**Course Outcome:** After the completion of this course

- CO-1 Students will be able to understand the basic concept of polymers.
- CO-2 Students will be able to explain basic knowledge of polymer characterization and poly dispersion concept.
- CO-3 Students will be able to describe the structure, properties and applications of polymers based on boron.
- CO-4 Students will be able to explain the structure, properties and applications of polymers based on silicon.
- CO-5 Students will be able to explain the structure, properties and applications of polymers based on phosphorous.

*[Handwritten signatures and marks at the bottom of the page]*

### Unit-I

#### Basics

Importance of polymers. Basic concepts : Monomers, repeat units, degree of polymerization  
Linear, branched and network polymers. Classification of polymers. Polymerization :  
condensation, addition/radical chain-ionic and co-ordination and copolymerization.  
Polymerization conditions and polymer reactins. Polymerization in homogeneous and  
heterogeneous systems.

### Unit-II

#### Polymer Characterization

Polydispersion-average molecular weight concept. Number, weight and viscosity average  
molecular weights. Polydispersity an molecular weight distribution.

### Unit-III

#### Polymers of Boron

Structure, Properties and Applications of Polymers based on boron-borazines, boranes and  
carboranes.

### Unit-IV

#### Polymes of silicon

Structure, Properties and Applications of Polymers based on Silicon, silicone's polymetalloxanes  
and polymetallosiloxanes, silazanes.

### Unit-V

#### Polymers of Phosphorous and sulphur

Structure, Properties and Application of-

- i. Polymers based on Phosphorous-Phosphazenes, Polyphosphates
- ii. Polymers based on Sulphur -Tetrasulphur tetranitride and related compounds.

#### Suggested Books References:

1. Inorganic Chemistry, J.E. Huheey, Harper Row.
2. Developments in Inorganic polymer Chemistry, M.F. Lappert and G.J. Leigh.
3. Inorganic polymers- N.H> Ray.
4. Inorganic polymers, Graham and Stone.
5. Inorganic Rings and Cages : D.A. Armitage.
6. Textbook of Polymers Science, F.W. Billmeyer Jr. Wiley.
7. Contemporary Polymer Chemistry, H.R. Al cock and F.W. Lambe, Prentice Hall

### MCH 026A: Inorganic Elective III: MINERAL BASED INDUSTRIAL CHEMISTRY

Course Outcome: After the completion of this course:

- CO-1 Students will be able to understand general principles applied in studying an industry and manufacture of iron,steels etc.  
CO-2 Students will be able to explain classification of cement and manufacture of portland cement.  
CO-3 Students will be able to describe the classification of ceramics and basic raw materials.  
CO-4 Students will be able to explain the solid industrial poisons and their classification.  
CO-5 Students will be able to explain the liquid and gaseous industrial poisons and their classification.

*[Handwritten signatures and initials are present at the bottom of the page, including 'S', 'Am', 'Sai', 'W', 'C', and 'Sde']*

## Unit-I

### INDUSTRIAL CHEMISTRY

Ferrous and non-ferrous industries-quality, control methods, general principles applied in studying an industry - manufacture of iron, steels metallurgy of gold and silver.

## Unit-II

### CEMENT

Classification of cement, manufacture of Portland cement - setting and hardening of cement, chemical constitution of Portland cement and their characteristics - special cement and their characteristics - special cements and their uses.

Cermics

## Unit-III

### Ceramics

Classification of ceramics, basic raw materials-application of colours to pottery porcelain and china ware-manufacture, glass-raw materials, manufacture of special glass-optical, borosilicate, flint and coloured glass.

## Unit-IV

**Main group elements and their compounds:** Allotropy, synthesis, structure and bonding, industrial importance of the compounds.

## Unit-V

**Classification of pollutants :** Their sources, Sewage water treatment, waste water treatment - domestic and industrial.

### Suggested Books References:

1. Chemical Process Industries; N.D. Shreeve.
2. Applied Chemistry for Engineer; Diamont.
3. Chemistry of engineering materials; Jain & Jain
4. Engineering chemistry; B.K. Sharma.

### MCH 027A: Flame Photometric and Flame Photometric Determination (Practical)

#### Flame Photometric Determinations

1. Sodium.
2. Potassium
3. Sodium and potassium when present together
4. Lithium
5. Calcium
6. Barium
7. strontium.
8. Cadmium
9. Magnesium in tap water.

#### Quantitative determinations of a two component mixture

One Volumetrically and one gravimetrically

1.  $\text{Cu}^{+2}$ ,  $\text{Ni}^{+2}$

#### Quantitative determinations of a three component mixture :

One Volumetrically and two gravimetrically

1. Cu+2, Ni+2, Zn+2
2. Cu+2, Ni+2, Ng+2

## Specialization: Organic Chemistry

### MCH 028A: Organic Elective I: Disconnection Approach

**Course Outcome:** On completion of the course, M.Sc. student will be able to understand:

- CO-1 Synthons and synthetic equivalents, disconnection approach, chemo selectivity, Order of Reactions etc.
- CO-2 Principle of protection of alcohol, amine, carbonyl and carboxyl groups, Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis.
- CO-3 Diels-Alder Reaction, 1,3-difunctionalised compounds,  $\alpha$ - $\beta$  unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation.
- CO-4 Retyrosynthesis of Saturated heterocycles, synthesis of 3,4,5 and 6 membered rings. aromatic heterocycles in organic synthesis. General strategy and stereoselectivity, Cyclisation and insertion reaction rearrangement in synthesis,
- CO-5 Retrosynthesis in Photocycloaddition and use of ketenes, Pericyclic rearrangement and special methods, carbonyl condensation, Diels-Alder reaction and reduction of aromatic compounds as a tool for retrosynthetic analysis.

#### Unit-I

##### Disconnection Approach

An introduction to synthons and synthetic equivalents. Disconnection approach, functional group inter-conversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, Chemoselectivity, reversal of polarity, cyclisation reaction, amine synthesis.

#### Unit-II

##### Protecting Groups

Principle of protection of alcohol, amine, carbonyl and carboxyl groups.

#### One Group C-C Disconnections

Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis.

#### Unit-III

##### Two Group C-C Disconnections

Diels-Alder Reaction, 1,3-difunctionalised compounds,  $\alpha$ , $\beta$ -unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds. Micheal addition and Robinson annelation.

#### Unit-IV

##### Ring Synthesis-I

Saturated heterocycles, synthesis of 3,4,5 and 6 membered rings. aromatic heterocycles in organic synthesis. General strategy and stereoselectivity, Cyclisation and insertion reaction, rearrangement in synthesis,

#### Unit-V

##### Ring Synthesis-II

*[Handwritten signatures and marks]*

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

*[Handwritten signature]*

Photocycloaddition and use of ketenes, Pericyclic rearrangement and special methods, carbonyl condensation, Diels-Alder reaction and reduction of aromatic compounds.

## Organic Elective-II: MCH029A Advanced Organic Spectroscopy

**Course Outcomes:** After the completion of the course, student will be able to-

- CO1 Understand the advanced Proton magnetic resonance spectroscopy, complex splitting patterns etc.
- CO2 Understand the Principles  $^{13}\text{C}$  spectroscopy, their applications in structure determination and working method of Instrument and two dimensional spectroscopy, 2DNMR inadequate - COSY, NOESY, HETCOR.
- CO3 Understand the mass spectrometry in detail.
- CO4 Understand the UV spectra of heterocyclic, azulenes and acetylinic compounds, optical rotation, optical rotatory dispersion (ORD), circular dichorism (CD), octant rule and axial halo ketone rule.
- CO5 apply the knowledge of various spectroscopic techniques in structure identification of organic compounds.

### UNIT-I

#### Proton magnetic resonance spectroscopy

Nuclear properties, Pulse techniques, Fourier Transform technique and its advantages, complex splitting patterns ( $\text{AX}$ ,  $\text{AB}$ ,  $\text{AB}_x$ ,  $\text{AM}_x$ ,  $\text{ABC}$ ,  $\text{AM}_3$ ,  $\text{A}_2\text{X}_2$ ,  $\text{A}_2\text{X}_3$ ), coupling constant [germinal, vicinal, long range (allylic, homoallylic), coupling through space].

Hindered rotation, Karplus equation and curve variation of coupling constant with dihedral angle, simplification of complex spectra: nuclear magnetic double resonance, contact shift reagents, variable temperature dynamic NMR spectroscopy.

Effect of quadrupolar nuclei ( $10\text{B}$ ) on the  $^1\text{H}$  NMR spectra, Satellite spectra -examples for different spin systems -Systems with chemical exchange -study of fluxional behavior of molecules.

A brief introduction of compounds carrying NMR active nuclei like  $\text{N}^{15}$ ,  $\text{F}^{19}$ ,  $\text{P}^{31}$ .

### UNIT- II

$^{13}\text{C}$  NMR spectroscopy  $^{13}\text{C}$  NMR spectroscopy: Basic principles Carbon- 13 NMR spectroscopy, chemical shift (aliphatic, olefinic, alkyne, aromatic, heteroaromatic and carbonyl carbon). Two dimension NMR spectroscopy.

proton ( $^1\text{H}$ ) coupled  $^{13}\text{C}$  NMR spectrum, off-resonance and noise decoupled  $^{13}\text{C}$  NMR spectrum, DEPT . 2DNMR inadequate - COSY, NOESY, HETCOR.

### Unit-III

#### Mass Spectrometry

Introduction, ionization methods EI, CI, FD and FAB, Fragmentation: basic fragmentation types and rules, factors affecting fragmentation, ion analysis, ion abundance, Mass spectral

*[Handwritten signatures and initials at the bottom of the page]*

fragmentation of organic compounds (hydrocarbons, alcohols, ethers, ketones, aldehydes, carboxylic acids, amines, nitriles, nitro and halogenated compounds), common functional groups, molecular ion peak, meta stable peak. Mc-Lafferty rearrangement. Nitrogen rule, HRMS.

#### Unit-IV

##### UV-Visible spectroscopy and ORD

Determination of configuration of E/Z isomer, steric effect, UV spectra of heterocyclic, azulenenes and acetylenic compounds, optical rotation, optical rotatory dispersion (ORD), circular dichorism (CD), octant rule and axial halo ketone rule.

#### Unit-V

##### Structure Elucidation of complex organic molecules

Structure elucidation of organic compounds by combined applications of UV, IR, NMR and mass spectrometry

##### Suggested Books References:

#### MCH 030A: Organic Elective III: NATURAL PRODUCTS-II

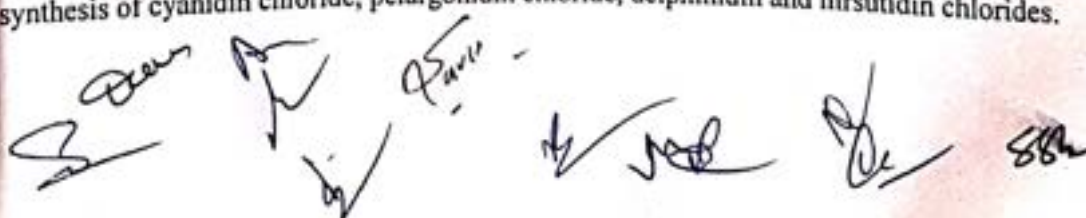

##### Course Outcome: After the completion of this course

- CO-1 Students will be able to understand primary function of pigments in plants and and general methods of structure determination.
- CO-2 Students will be able to describe biosynthesis of plant pigments and gain knowledge about Acetate pathway and Shikimic acid pathway.
- CO-3 Students will be able to describe the Structure, synthesis and binding of Haemoglobin and Structure, synthesis of light absorbing pigment Chlorophyll.
- CO-4 Students will be able to explain isolation, nomenclature, classification, biogenesis and physiological effects of Prostaglandins.
- CO-5 Students will be able to understand synthesis and structure elucidation of Pyrethroids and Rotenones. Student will also be able to understand the concepts of medicinal chemistry.

#### Unit-I

##### Plant Pigments-I

Occurrence, nomenclature and general methods of structure determination, structure and synthesis of cyanidin chloride, pelargonidin chloride, delphinidin and hirsutidin chlorides.

## Unit-II

### Plant Pigments-II

Occurrence, nomenclature, structure and synthesis of flavonol (3-hydroxy flavone), quercetin, isoflavone, daidzein, butin and aureusin, butein, Aureusin, Biosynthesis of flavonoids.

## Unit-III

### Prophyrins

Haemoglobin, degradation products of haemoglobin and synthesis of haemin, porphyrins, spectral properties, structure elucidation and synthesis of Chlorophyll.

## Unit-IV

### prostaglandin

Occurrence, nomenclature, classification, biogenesis and physiological effects. Synthesis of PGE<sub>2</sub> and PGF<sub>2a</sub>.

## Unit-V

### Pyrethroids and Rotenones

Synthesis and reactions of Pyrethroids and Rotenones. (For structure elucidation, emphasis is to be placed on the use of spectral parameters wherever possible).

### Medicinal Chemistry:

Drugs and their Classification, Drug-target interactions, Therapeutic action of a new important class of drugs (antacids, antihistamines), neurologically active drugs, (tranquilizers, analgesics), antimicrobials (antibiotics, antiseptics & disinfectants), anticancer drugs; Taxol, Artemisinin, antifertility drugs, artificial sweetening agents (sucralose, rotenoid) and food preservatives. New development in Drug research. Drug designing.

### Suggested Books References:

1. Natural Products : Chemistry and Biological Significance, J. Mann, R.S. Davidson, J.B. Hobbs, D.V. Banthorpe and J.B. Harborne, Longman, Essex.
2. Organic Chemistry : Vol. 2 I.L. Finar, ELBS
3. Stereoselective Synthesis : A Practical Approach, M. Norgard, VCH.
4. Rodd's Chemistry of Carbon Compounds, Ed. S. Coffey, Elsevier.
5. Chemistry, Biological and Pharmacological Properties of Medicinal Plants from the Americas, Ed. Kurt Hostettmann, M.P. Gupta and A. Marston, Harwood Academic Publishers.
6. Introduction to Flavonoids, B.A. Bohm, Harwood Academic Publishers.
7. New Trends in Natural Product chemistry, Ata-ur-Rahman and M.L. Choudhary, Harwood Academic Publishers.

### MCH 031A: Chromatography and Spectroscopy (Practical)

#### Thin Layer Chromatography

1. To separate the mixture of Methyl Orange and Methylene Blue by using cyclohexane and ethyl acetate (8.5:1.5) as solvent system.
2. To Prepare and separate 2,4-dinitro Phenylhydrazone of acetone, 2-butanone, hexane-2-one and hexane-3-one using toluene and petroleum ether (40:60).

#### Paper Chromatography

3. To separate the mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent - Ninhydrin.

*[Handwritten signatures and initials are present at the bottom of the page.]*

4. To separate the mixture of D,L-alanine, glycine and L-leucine using n-butanol : acetic acid : water (4:1:5). Spray reagent- Ninhydrin.
5. To separate monosaccharides - a mixture of D -galactose and D-fructose using n-butanol : acetone: water (4:1:5). Spray reagent -aniline hydrogen phthalate.
6. To Separate and identify sugars present in the given mixture of glucose, fructose and sucrose by paper chromatography and determination of Rf values.

### Spectroscopy

Identification of organic compounds by the analysis of their spectral data (UV, IR, PMR, CMR & MS) Spectrophotometric (UV/VIS) Estimations-

- i. Amino acids
- ii. Proteins
- iii. Carbohydrates
- iv. Cholesterol
- v. Ascorbic acid
- vi. Aspirin
- vii. Caffeine

### Specialization: Physical Chemistry

#### MCH 032A: PHYSICAL ELECTIVE I: CHEMICAL ANALYSIS

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand Food analysis, use of HPLC and TLC in food adulteration etc

CO-2 Students will be able to analyse soil characteristics and quality

CO-3 Students will be able to perform the analysis of solid, liquid and gaseous fuels.

CO-4 Students will be able to perform the analysis of water, various parameters and impurities present in water. CO-5 Students will be able to understand clinical analysis and drug analysis by various physical methods.

#### Unit I

##### Food analysis

Moisture, ash, crude protein, fat crude fibre, carbohydrates, calcium, potassium, sodium and phosphate. Food adulteration-common adulterants in food, contamination of food stuffs. Microscopic examination of foods for adulterants. Pesticide analysis in food products. Extraction and purification of sample. HPLC. Gas chromatography for organophosphates. Thin-layer chromatography for identification of chlorinated pesticides in food products.

#### Unit II

##### Analysis of soil

Analysis of Soil, moisture pH total nitrogen, phosphorus, silica, lime, manesia, manganese, sulphur and alkali salts.

#### Unit III

##### Analysis of Fuel

Fuel analysis : liquid and gas. Ultimate and proximate analysis-heating values-grading of coal. Liquid fuels-flash point, aniline point, octane number and carbon residue. Gaseous fuels-produced gas and water gas-calorific value

*[Handwritten signatures and initials]*

### Analysis of Water

## Unit V

## Clinical Chemistry

### Drug analysis

**MCH 033A : PHYSICAL ELECTIVE II: ELECTRO CHEMISTRY-II**

**Course Outcome:** After the completion of this course

**Course Outcome:** After the completion of this course  
**CO-1** Students will be able to understand the formation and working of fuel cells  
**CO-2** Students will be able to understand the electrocatalysis in simple redox reactions

CO-2 Students will be able to understand the electrocatalysis in simple redox reactions and

**CO-2** Students will be able to understand the electrocatalysis in simple redox reactions and biological systems. **CO-3** Students will be able to understand the principles and applications of electrochemistry. **CO-4** Students will be able to understand the types of electro organic reaction and

biological systems. **CO-3** Students will be able to understand the principles and applications of voltammetry. **CO-4** Students will be able to understand the types of electro organic reaction and their applications in sewage water treatment. **CO-5** Students will be able to understand controlled current techniques.

## Unit I

### Fuel cell

**Fuel cell**  
Electrochemical Generators (Fuel Cells) : Hydrogen oxygen cells, Hydrogen Air cell, Hydrocarbon air cell, Alkaline fuel cell, Phosphoric acid fuel cell, direct NaOH fuel cells, applications of fuel cells.

## Unit II

## Unit II

### Electrocatalysis

Electrocatalysis

W. S. L. H. R. J. 100  
by do P. 882

Chemical catalysts and Electrochemical catalysts with special reference to porphyrins, oxides of rare earths. Electrocatalysis in simple redox reactions, in reaction involving adsorbed species. Influence of various parameters.

### Unit III

#### Voltammetry

General principle and applications, linear sweep voltammetry (LSV), cyclic voltammetry (CV), square wave voltammetry, stripping voltammetry, cathodic and anodic adsorptive stripping voltammetry (CAAdSV and AAAdSV).

### Unit IV

#### Electro-organic synthesis

Types of electro organic reaction, constant current and constant potential electrolysis, cell design, effect of variable, nature of medium, nature of electrode materials, over voltage, effect of redox couple, application of sewage waste water treatment.

### Unit V

#### Controlled Current Techniques

Introduction, general theory, Sand equation, programmed current chronopotentiometry, Quasireversible waves, reversal techniques, galvanostatic double pulse method.

#### Suggested Books & References:

1. Electrochemical methods by Allen J. Bard and Larry R. Faulkner, John Wiley. Pub.
2. Electrochemistry by Carl H. Hamann, Andrew Hammett and Wolfgang Vielstich.
3. Modern Polarographic Methods by H. Vessier & Galen W. Wiley Interscience.
4. Topics in pure and applied chemistry Ed. S.K. Rangrajan SAEST Pub., Karaikudi, (India).
5. Techniques of electro-organic synthesis Part I, II & III by N.L. Weinberg John Wiley Pub.

### MCH 034A: PHYSICAL ELECTIVE III : CHEMICAL KINETICS-II

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand the kinetics and mechanism of micelle catalyzed reactions

CO-2 Students will be able to understand the radiation chemistry and photochemistry. Kinetics and mechanism of photochemical and photosensitized reactions, electron transfer reactions.

CO-3 Students will be able to understand the kinetics and mechanism of induced reactions.

CO-4 Students will be able to understand the electron transfer reactions in metal complexes.

CO-5 Students will be able to understand bridged outer-sphere electron transfer mechanism, Nucleophilic and electrophilic catalyst and their mode of action.

### Unit I

#### Micelles catalysis and inhibition

Kinetics and mechanism of micelle catalyzed reactions (1st order and second order) Various type of micelle catalyzed reactions. Micelle inhibited reactions.

#### Kinetics and Mechanism of Substitution Reaction

Classification of ligand substitution mechanism. Aqueous and base catalyzed kinetics of aquation reactions. Aquation and acid catalyzed kinetics of aquation reactions (octahedral complexes).

*[Handwritten signatures and initials are present at the bottom of the page.]*

## Unit II

### Radiation Chemistry

Radiation chemistry and photochemistry. Radiation chemistry of water and aqueous solutions. Hydrogen atom and hydroxyl radical-oxidizing and reducing conditions. Kinetics and mechanism of photochemical and photosensitized reactions (One example in each case). Stern-Volmer equation and its application. Hole-concept in the presence of semiconductor type photocatalysts. Kinetics and mechanism of electron transfer reaction in the presence of visible light. Kinetics of exchange reactions (Mathematical analysis)

## Unit III

### Induced Phenomenon

Induced reactions concept and their characteristics. Induction factor. Mechanism of (i) Fe (II) induced oxidation of iodine by Cr(VI) in weak acid medium, (ii) As (III) induced oxidation of Mn(II) by chromate in acid solutions. Kinetics and mechanism of induced reactions in metal complexes (octahedral complexes of Cobalt (III) only)-basic concepts.

## Unit IV

### Electron Transfer Reaction in Metal Complexes

Kinetics and mechanism of 1:1, 1:2, 1:3 metal substrate complexes as intermediate. Henry Taubes classical reaction, its kinetics and mechanism. Inner-sphere and outer sphere, electron transfer reactions and mechanism. Various types of inner sphere bridges, adjacent and remote attack. Linkage isomerism. Chemical and resonance mechanism.

## Unit V

Marcus-Cross relation in outersphere reactions (no mathematical derivation). Its application in reactions :

Bridged outer-sphere electron transfer mechanism. Nucleophilic and electrophilic catalyst and their mode of action.

7. Basolo and Pearson, Inorganic Reaction Mechanisms, Wiley.
8. H. Taube, Electron Transfer Reactions, Oxford Press

### MCH 035A : Polarography and Chemical Kinetics (Practical)

1. Identification and estimation of metal ions such as  $\text{Cd}^{+2}$ ,  $\text{Pb}^{+2}$ ,  $\text{Zn}^{+2}$ , polarographically.
2. Study of a metal ligand complex polarographically (using Lingane's Method).
3. Determination of rate constant and formation constant of an intermediate complex in the reaction of Ce(IV) and Hypophosphorous acid at ambient temperature.
4. Determination of energy and enthalpy of activation in the reaction of  $\text{KMnO}_4$  and benzyl alcohol in acid medium.

*[Handwritten signatures and marks]*

5. Determination of energy of activation and entropy of activation from a single kinetic run.
6. Kinetics of an enzyme catalyzed reaction
7. To determine the hardness of Water by complexometric method and by HCl method.
8. To determine the amount of free chlorine in given water sample.
9. Determination of Total residual Chlorine and amount of Fluoride ion in given water samples.
10. Determination of Viscosity of a given lubricant by Redwood Viscometer No.1.
11. Determination of Flash and Fire Points of a given lubricant by Pensky Martin Apparatus.
12. Determination of Cloud and Pour Points of a given lubricant.
13. To determine moisture, volatile and ash content in a given coal sample by proximate analysis.
14. To determine the calorific value of Solid Fuel by Bomb's Calorimeter.

#### Books Suggested

<b>UNIT 1</b>	<b>Nature of Bonding in Organic Molecules</b>
<b>UNIT 2</b>	<b>Stereochemistry</b>
<b>UNIT 3</b>	<b>Reaction Mechanism : Structure and Reactivity</b>
<b>UNIT 4</b>	<b>Aliphatic &amp; Allylic Nucleophilic Substitution</b>
<b>UNIT 5</b>	<b>Photochemistry</b>

**Course Outcomes:** On the completion of this course student will be able to-

CO1: Understand the nature of different types of bonding associated with organic molecules.

CO2: Understand the different stereo isomers of a particular organic molecule, will be able to identify the chiral centre present in a molecule and will be able to communicate the different optical isomers with universal notation. CO3: Understand the reaction mechanism and the impact of structure on reactivity.

CO4: Understand the aliphatic nucleophilic substitution and its mechanism.

CO5: Understand the photochemical reactions.

Course Outcome	Program Outcome									
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

CO1	3	1	1	2	2	3	3	1	1	3

### MCH 003A: Quantum Chemistry and Electro Chemistry

UNIT 1	Introduction to Exact Quantum Mechanical Results
UNIT 2	Molecular Orbital Theory
UNIT 3	Surface Chemistry & Micelles
UNIT 4	Electrochemistry
UNIT 5	Overpotential

**Course Outcome:** On completion of this course student will be able to-

CO-1 understand the postulates of quantum mechanics and derivation of Schrodinger wave equation.

CO-2. Understand the quantum mechanical approach of MOT

CO-3 apply and analyze the basic knowledge of various adsorption isotherms describe the basic concept of surfactants and their applications.

CO-4 think critically on electrified double layer and different models.

CO-5 understand practical aspects of polarography

#### Mapping of COs and POs

### MCH 004A: Mathematics and Computers for Chemists

Unit-I Matrix Algebra.

Unit-II Differential Calculus

Unit-III Elementary Differential equations

Unit-IV Introduction to computers

Unit-V Computer Programming in C

**Course Objectives:** This course has the following objectives:

CO1 To teach students the addition and multiplication; inverse, adjoint and transpose of matrices, special matrices and their properties. Homogeneous, non-homogeneous linear equations and conditions for the solution, linear dependence and independence. eigenvalues and eigenvectors, diagonalization, determinants.

*Amey* ✓ *Boh*

- CO2 To expose students to the Functions, continuity and differentiability, rules for differentiation, applications of differential calculus including maxima and minima, Integral calculus, basic rules for integration.
- CO3 To expose students basics of First-order and first degree differential equations and their applications. Second order differential equation and their solutions.
- CO4 To teach students 'Introduction to computers, Basic structure and functioning of computer with a PC as Illustrative example. Memory I/O devices. Secondary storage Computer languages. Operating systems.
- CO5 To teach students Computer Programming in C, History of "C", operators and expression, input & output operation, decision making and branching looping, arrays, function, structures and unions.

#### CO/PO Mapping

## SEMESTER II

### MCH 006A: Chemistry of Transition Metals

UNIT 1	Metal ligand equilibria in solution.
UNIT 2	Electronic spectra of transition metal complexes
UNIT 3	Reaction mechanism of transition metal complexes
UNIT 4	Symmetry and Group Theory
UNIT 5	Applications of Group Theory in Chemistry

**Course Outcome:** After the completion of the course, student will be able to understand:

CO1: metal-ligand bonding through different theories and metal-ligand equilibria in solution and their relative stability.

CO2 electronic spectra and calculation of different parameters.

CO3 energy profile and reaction mechanism of transition metal complexes and different types of reactions like substitution, redox etc. and related theories.

CO4 Symmetry, symmetry elements, orthogonality theorem and group theory of molecules.

CO5 to apply the knowledge of group theory on different molecules and systems..

#### Mapping of COs and POs

### MCH 007A: Reaction mechanism: Addition, Elimination and Pericyclic Reactions

UNIT 1	Aromatic Nucleophilic Substitution
UNIT 2	Aliphatic Electrophilic Substitution, Aromatic Electrophilic Substitution
UNIT 3	Addition to Carbon-Carbon Multiple Bonds
UNIT 4	Addition to Carbon-Hetero Multiple bonds Elimination Reactions
UNIT 5	Pericyclic Reactions

**Course Outcome:** After the completion of the course, student will be able to understand:

CO-1: different aromatic nucleophilic substitution and free radical reactions.

CO-2 aliphatic and aromatic electrophilic substitution reactions.

CO-3 mechanistic and stereochemical aspects of addition to C-C multiple bonds.

CO-4 mechanism of C-hetero multiple bonds and elimination reactions.

CO-5 symmetry, types and rearrangement of pericyclic reactions.

#### Mapping of COs and POs

### MCH 008A: Thermodynamics and Chemical Kinetics

UNIT 1	Classical Thermodynamics
UNIT 2	Statistical Thermodynamics and Non equilibrium thermodynamics
UNIT 3	Partition Functions
UNIT 4	Chemical Dynamics-I
UNIT 5	Chemical Dynamics-II

**Course outcomes:** After the completion of the course, student will be able to understand the:

CO-1: concepts of classical thermodynamics.

CO-2 criteria for statistical and non equilibrium thermodynamics.

CO-3 translation, rotational, vibrational and electronic partition functions and molar quantities.

CO-4 rate laws, collision theory of reaction rates, Arrhenius equation and the activated complex theory.

CO-5 kinetics of enzyme catalyzed reactions, fast and unimolecular reactions.

#### Mapping of COs and POs

#### MCH 009A: Spectroscopic Techniques

UNIT 1	Ultraviolet spectroscopy & IR Spectroscopy
UNIT 2	Infrared Spectroscopy
UNIT 3	Rotational Spectroscopy
UNIT 4	Nuclear Magnetic Resonance Spectroscopy
UNIT 5	Photoelectron Spectroscopy

**Course Outcomes:** After the completion of the course, student will be able to-

CO1 Understand the common terms and principles in spectroscopy. Principles of UV spectroscopy, its applications in structure determination and working method of Instrument.

CO2 Understand the Principles IR spectroscopy and Raman spectroscopy, their applications in structure determination and working method of Instrument.

CO3 Understand the principles of Rotational spectroscopy, ESR spectroscopy, their applications in structure determination and working method of Instrument.

CO4 Understand the basic principle Principles of NMR Spectroscopy, instrumentation and applications. Student will also learn about the use of NMR technique in medical sciences

CO5 Understand the basic principles of Photoelectron spectroscopy, Electron microscopy and their applications in structure determination and working method of Instrument. Student will also learn about chromatographic techniques.

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3	1	3	2	1	2	2	2	3
CO2	3	3	1	3	2	1	2	2	2	3
CO3	3	3	1	3	2	1	2	2	2	3
CO4	3	3	1	3	2	1	2	2	2	3
CO5	3	3	1	3	2	1	2	2	2	3

### Semester III

#### MCH 011A: Green Chemistry

UNIT 1	Introduction, principle and concepts of green chemistry
UNIT 2	Basic principles of Green Chemistry and their illustrations with examples.
UNIT 3	Application of non conventional energy sources : Microwave induced and ultrasound assisted green synthesis
UNIT 4	Environmentally benign solutions to organic solvents (focus on water and ionic liquids).
UNIT 5	Hazard assessment and mitigation in chemical industry Future trends in Green Chemistry

**Course Outcomes:** After the completion of the course, student will be able to-

CO1 Understand the twelve principles of green chemistry with their explanations and examples.

*Amr* *Arav*

*Y* *Arav*

CO2 Understand the Prevention of waste /byproducts, Prevention/Minimization of hazardous/toxic products.& designing safer chemicals - different basic approaches, Designing biodegradable products.  
 CO3 Understand the Introduction of microwave induced organic and inorganic synthesis; microwave activation equipment ;time and energy benefits;limitations;  
 CO4 Understand the use Ionic liquids as green solvents, Electrochemical synthesis.  
 CO5 Understand Oxidation-reduction reagents and catalysts; multifunctional reagents; Combinatorial green chemistry, solventless reactions, Noncovalent derivatization.Biomass conversion, emission control. Biocatalysis

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3	1	3	3	3	2	1	3	3
CO2	3	3	1	3	3	3	2	1	3	3
CO3	3	3	1	3	3	3	2	1	3	3
CO4	3	3	1	3	3	3	2	1	3	3
CO5	3	3	1	3	3	3	2	1	3	3

### Specialization: Inorganic Chemistry

#### MCH 012A: Inorganic Elective I: PHOTOINORGANIC CHEMISTRY AND X-RAY DIFFRACTION

UNIT 1	Basics of Photochemistry
UNIT 2	Properties of Excited States Excited States of Metal Complexes
UNIT 3	Ligand Field Photochemistry
UNIT 4	Metal Complex Sensitizers
UNIT 5	X-RAY DIFFRACTION

**Course outcome:** After the completion of the course, student will be able to-

CO1 understand basics of photochemistry including various excitations and energy dissipation.

CO2 articulate the photochemical kinetics for radiative processes and deactivation of molecules by quenching.

CO3 understand the different photochemical reactions viz. reduction, oxidation, substitution at ground and excited level.

CO4 understand the mechanisms of electron relay, water photolysis, nitrogen fixation and CO<sub>2</sub> reduction.

CO5 understand the applications of XRD, methods of structural analysis of crystal, diffraction pattern etc.

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3		3	1	2	2	1	2	3
CO2	3	3		3	1	2	2	1	2	3
CO3	3	3		3	1	2	2	1	2	3
CO4	3	3		3	1	2	2	1	2	3
CO5	3	3		3	1	2	2	1	2	3

#### MCH 013A: Inorganic Elective II: BIOINORGANIC CHEMISTRY

UNIT 1	Metal Ions in Biological Systems Metal Storage and Transport
UNIT 2	Bioenergetics and ATP Cycle
UNIT 3	Transport and Storage of Dioxygen
UNIT 4	Metals in Medicine
UNIT 5	Supramolecular Chemistry

*Don* *Arny* *Go*

**Course outcomes:** On completion of this course student will be able to-

CO-1 analyze the structure and function of metal ion containing biomolecules

CO2 explain principle and mechanism of various cycles involved in energy production and structure and function of DNA, RNA.

CO3 explain Hem proteins and oxygen uptake structure and function of haemoglobin, myoglobin, haemocyanin and hemerythrin, model synthetic complexes of iron, cobalt and copper.

CO4 explain Metal deficiency and disease, toxic effects of metals, metals used for diagnosis and chemotherapy. Biological and Chemical nitrogen fixation.

CO5 understand about the concept of supra molecular chemistry, its applications in drug designing and other Industries.

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3	1	3	2	2	2	2	2	1
CO2	3	3	1	3	2	2	2	2	2	1
CO3	3	3	1	3	2	2	2	2	2	1
CO4	3	3	1	3	2	2	2	2	2	1
CO5	3	3	1	3	2	2	2	2	2	1

#### MCH014A :Inorganic Elective III: ORGANOTRANSITION METAL CHEMISTRY-I

UNIT 1	Alkyls and Aryls of Transition Metals
UNIT 2	Alkylidenes, alkylidyne of Transition Metals
UNIT 3	Compounds of low valent carbenes and carbynes
UNIT 4	Transition Metal p-Complexes
UNIT 5	Transition Metal p-Complexes

**Course outcome:** After the completion of course students will be able to learn about the

CO1- types, routes of synthesis, stability and decomposition pathways organo-copper in organic synthesis. CO2- Compounds of Transition Metal-Carbon Multiple Bonds alkylidenes, alkylidyne and their synthesis. CO-3 Compounds of low valent carbenes and carbynes-synthesis

CO-4 Transition metal p-Complexes with unsaturated organic molecules, alkenes, alkynes, allyl complexes. CO-5 Transition metal p-Complexes with unsaturated organic molecules, diene, dienyl, arene and trienyl complexes.

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

**Specialization: Organic Chemistry**  
**MCH 016A: Organic Elective I: ORGANIC SYNTHESIS**

UNIT 1	Oxidation
UNIT 2	Reduction-I
UNIT 3	Reduction-II
UNIT 4	Rearrangements - I
UNIT 5	Rearrangements - II

**Course Outcome:** After the completion of course, student will be able to  
 CO1:-Understand the nature of different oxidation process.

CO2:-Understand the various steps involved in the reduction process of organic molecules.

CO3:-Understand the specific reaction mechanism in the process of hydrogenolysis.

CO4:-Understand the basic principle involved in various rearrangement processes.

CO5:- Understand the various steps involved in different rearrangement reactions

**Mapping of COs and POs**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3	1	3	2	1	2	1	1	3
CO2	3	3	1	3	2	1	2	1	1	3
CO3	3	3	1	3	2	1	2	1	1	3
CO4	3	3	1	3	2	1	2	1	1	3
CO5	3	3	1	3	2	1	2	1	1	3

**MCH 017A: Organic Elective II: Heterocyclic Chemistry**

UNIT 1	Nomenclature of Heterocycles, Aromatic Heterocycles
UNIT 2	Non-aromatic Heterocycles
UNIT 3	Small Ring Heterocycles
UNIT 4	Benzo-Fused Five-Membered Heterocycles & meso heterocycles
UNIT 5	Six Membered Heterocycles with one heteroatom

**Course Outcome:** After the completion of syllabus, student will be able to learn the  
 CO-1 Nomenclature patterns of heterocyclic compounds, aromaticity and chemical behaviour

CO-2 Nature, confirmation and stability of non aromatic heterocycles

CO-3 Synthesis, and reaction of small ring(3,4,5)membered heterocycles.

CO-4 The synthesis and reaction of benofused and meso-ionic heterocycles.

CO-5 The synthesis and reaction of six membered with one heteroatom and more than one heteroatom

**Mapping of COs and POs**

## MCH 018A: Organic Elective III: NATURAL PRODUCTS-I

UNIT 1	Terpenoids
UNIT 2	Carotenoids
UNIT 3	Alkaloids-I
UNIT 4	Alkaloids-II
UNIT 5	Steroids

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

CO-1 Physical properties, chemical properties, synthesis and uses of terpenoids. It found in various citrus fruits and herbs and is known to have antioxidant properties and is also used in various household products such as detergents and soaps.

CO-2 Classification, nomenclature, isolation and uses of carotenoids. The health benefits of carotenoids generally derive from their vitamin A activity in the body. These benefits include support for the skin, immune system, heart and eyes.

CO-3 Students gain specific knowledge necessary for understanding the structure, isolation and physiological action of alkaloids, their structures, functions, as well as their possible use in human.

CO-4 The general properties of the alkaloids, importance of these compounds to humans. Synthesis and biosynthesis of these natural products are also discussed

CO-5 Nomenclature, basic skeleton, isolation, structure determination and health benefits of steroids

### Mapping of COs and POs

CO1	3	3	1	3	2	2	2	1	2	3
CO2	3	3	1	3	2	2	2	1	2	3
CO3	3	3	1	3	2	2	2	1	2	3
CO4	3	3	1	3	2	2	2	1	2	3
CO5	3	3	1	3	2	2	2	1	2	3

## Specialization: Physical Chemistry

### MCH 020A: PHYSICAL ELECTIVE I: ELECTROANALYTICAL TECHNIQUES

UNIT 1	Introduction of Electroanalytical Techniques
UNIT 2	Errors and Evaluation(Statistical Analysis)
UNIT 3	Conductometry
UNIT 4	Potentiometry
UNIT 5	Coulometry

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

CO-1 Introductory idea of analytical methods and laboratory operations.

CO-2 Errors and evaluation of statistical data and methods of reporting analytical data

CO-3 Conductometric titrations and measurements.

CO-4 Potentiometric methods, pH determination by instruments and its applications

CO-5 principle and applications of colorimetry

### Mapping of COs and POs

## MCH 021A: PHYSICAL ELECTIVE II : ELECTROCHEMISTRY-I

UNIT 1	Electrochemical Energy Storage
UNIT 2	Bioelectrochemistry
UNIT 3	Corrosion and Stability of Metals
UNIT 4	Inhibiting Corrosion
UNIT 5	Kinetics of Electrode Process

**Course outcome:** On completion of the course, student will be able to understand about the

CO-1 Electrochemical batteries

CO-2 role of electrochemical reactions in biological processes.

CO-3 details of the process of corrosion.

CO-4 corrosion inhibition methods

CO-5 Kinetics of electrode process

Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

CO5	3	3		3	2	1	2	1	2	3

## MCH 022A: PHYSICAL – ELECTIVE III :CHEMICAL KINETICS I

UNIT 1	Oscillatory Reactions
UNIT 2	Enzymes and Inhibitions
UNIT 3	Dynamics of Gas-surface Reactions
UNIT 4	Transition State
UNIT 5	Metal Ion catalysis

**Course outcome:** On completion of the course, M.Sc. student will be able to understand:

CO-1 kinetics of oscillatory reactions

CO-2 Kinetics of enzyme inhibition reactions

CO-3 Adsorption-desorption kinetics and importance of Industrial catalysts

CO-4 statistical mechanics and transition state theory, applications in calculation of the second order rate constant for reactions.

CO-5 mechanism of metal ion catalysis

Mapping of COs and POs

**Specialization: Inorganic Chemistry****MCH 024A: Inorganic Elective I: ORGANOTRANSITION METAL CHEMISTRY-II**

UNIT 1	Transition metal compounds with bonds to hydrogen
UNIT 2	Homogeneous Catalysis
UNIT 3	Reactions of CO
UNIT 4	Activation of C-H bond
UNIT 5	Fluxional Organometallic Compounds

**Course outcome: After the completion of course**

CO-1 Students will be able to understand the transition metal compounds with bonds to hydrogen.

CO-2 Students will be able to apply and analyze the basic knowledge of stoichiometric reactions for catalysis.

CO-3 Students will be able to describe the basic concept of catalytic reactions involving carbon monoxide.

CO-4 Students will be able to explain reactions involving activation of C-H bond.

CO-5 Students will be able to understand fluxional Organometallic Compounds and their properties.

**Mapping of COs and POs**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3		3	1	1	2		1	3

**MCH 025A: Inorganic Elective II: INORGANIC POLYMERS**

UNIT 1	Basics
UNIT 2	Polymer Characterization
UNIT 3	Polymers of Boron
UNIT 4	Polymers of silicon
UNIT 5	Polymers of Phosphorous and sulphur

**Course Outcome: After the completion of this course**

CO-1 Students will be able to understand the basic concept of polymers.

CO-2 Students will be able to explain basic knowledge of polymer characterization and poly dispersion concept.

CO-3 Students will be able to describe the structure, properties and applications of polymers based on boron.

CO-4 Students will be able to explain the structure, properties and applications of polymers based on silicon.

CO-5 Students will be able to explain the structure, properties and applications of polymers based on phosphorous.

**Mapping of COs and POs**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3		3	1	1	2	1	2	3
CO2	3	3		3	1	1	2	1	2	3

CO4	3	3		3	1	1	2	1	2	3
CO5	3	3		3	1	1	2	1	2	3

**MCH 026A : Inorganic Elective III: MINERAL BASED INDUSTRIAL CHEMISTRY**

UNIT 1	Industrial chemistry
UNIT 2	Cement
UNIT 3	Ceramics

UNIT 4	Main group elements and their compounds
UNIT 5	Classification of pollutants

Course Outcome: After the completion of this course:

- CO-1 Students will be able to understand general principles applied in studying an industry and manufacture of iron, steels etc.  
 CO-2 Students will be able to explain classification of cement and manufacture of portland cement.  
 CO-3 Students will be able to describe the classification of ceramics and basic raw materials.  
 CO-4 Students will be able to explain the solid industrial poisons and their classification.  
 CO-5 Students will be able to explain the liquid and gaseous industrial poisons and their classification.

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3	1	3	2	1	2	2	3	3
CO2	3	3	1	3	2	1	2	2	3	3

CO5	3	3	1	3	2	1	2	2	3	3

### Specialization: Organic Chemistry

#### MCH 028A: Organic Elective I: Disconnection Approach

UNIT 1	Disconnection Approach
UNIT 2	Protecting Groups, One Group C-C Disconnections
UNIT 3	Two Group C-C Disconnections
UNIT 4	Ring Synthesis-I
UNIT 5	Ring Synthesis-II

Course Outcome: On completion of the course, M.Sc. student will be able to understand:

- CO-1 Synthons and synthetic equivalents, disconnection approach, chemo selectivity, Order of Reactions etc.  
 CO-2 Principle of protection of alcohol, amine, carbonyl and carboxyl groups, Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, use of acetylenes and aliphatic Nitro compounds in organic synthesis.  
 CO-3 Diels-Alder Reaction, 1,3-difunctionalised compounds,  $\alpha,\beta$ -unsaturated carbonyl compounds, control in carbonyl condensations, 1,5-difunctionalised compounds, Michael addition and Robinson annelation.  
 CO-4 Retrosynthesis of Saturated heterocycles, synthesis of 3,4,5 and 6 membered rings, aromatic heterocycles in organic synthesis. General strategy and stereoselectivity, Cyclisation and insertion reaction rearrangement in synthesis,  
 CO-5 Retrosynthesis in Photocycloaddition and use of ketenes, Pericyclic rearrangement and special methods, carbonyl condensation, Diels-Alder reaction and reduction of aromatic compounds as a tool for retrosynthetic analysis.

#### Mapping of COs and POs

CO5	3	3	1	3	2	2	3	1	2	3

#### Organic Elective-II: MCH029A Organic Spectroscopy

UNIT I	Proton magnetic resonance spectroscopy
--------	--

*[Handwritten signatures and marks]*

UNIT 2	<sup>13</sup> C NMR spectroscopy
UNIT 3	Mass Spectrometry
UNIT 4	UV-Visible spectroscopy and ORD
UNIT 5	Structure Elucidation of complex organic molecules

**Course Outcomes:** After the completion of the course, student will be able to-

CO1 Understand the advanced Proton magnetic resonance spectroscopy, complex splitting patterns etc.

CO2 Understand the Principles <sup>13</sup>C spectroscopy, their applications in structure determination and working method of Instrument and two dimensional spectroscopy, 2DNMR inadequate – COSY, NOESY, HETCOR.

CO3 Understand the mass spectrometry in detail.

CO4 Understand the UV spectra of heterocyclic, azulenes and acetylinic compounds, optical rotation, optical rotatory dispersion (ORD), circular dichorism (CD), octant rule and axial halo ketone rule.

CO5 apply the knowledge of various spectroscopic techniques in structure identification of organic compounds.

**Mapping of COs and POs**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

**MCH 030A: Organic Elective III: NATURAL PRODUCTS-II**

UNIT 1	Plant Pigments-I
UNIT 2	Plant Pigments-II
UNIT 3	Porphyrins
UNIT 4	Prostaglandin
UNIT 5	Pyrethroids and Rotenones, Medicinal Chemistry

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand primary function of pigments in plants and and general methods of structure determination.

CO-2 Students will be able to describe biosynthesis of plant pigments and gain knowledge about Acetate pathway and Shikimic acid pathway.

CO-3 Students will be able to describe the Structure, synthesis and binding of Haemoglobin and Structure, synthesis of light absorbing pigment Chlorophyll.

CO-4 Students will be able to explain isolation, nomenclature, classification, biogenesis and physiological effects of Prostaglandins.

CO-5 Students will be able to understand synthesis and structure elucidation of Pyrethroids and Rotenones. Student will also be able to understand the concepts of medicinal chemistry.

## Specialization: Physical Chemistry

### MCH 032A: PHYSICAL ELECTIVE I: CHEMICAL ANALYSIS

UNIT 1	Food analysis
UNIT 2	Analysis of Soil
UNIT 3	Analysis of Fuel
UNIT 4	Analysis of Water
UNIT 5	Clinical Chemistry

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand Food analysis, use of HPLC and TLC in food adulteration etc

CO-2 Students will be able to analyse soil characteristics and quality

CO-3 Students will be able to perform the analysis of solid, liquid and gaseous fuels.

CO-4 Students will be able to perform the analysis of water, various parameters and impurities present in water. CO-5 Students will be able to understand clinical analysis and drug analysis by various physical methods

#### Mapping of COs and POs

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10
CO1	3	3	1	3	2	1	2	2	3	3

CO5	3	3	1	3	2	1	2	2	3	3

### MCH 033A : PHYSICAL ELECTIVE II: ELECTRO CHEMISTRY-II

UNIT 1	Fuel cell
UNIT 2	Electrocatalysis
UNIT 3	Voltammetry
UNIT 4	Electro-organic synthesis
UNIT 5	Controlled Current Techniques

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand the formation and working of fuel cells

CO-2 Students will be able to understand the electrocatalysis in simple redox reactions and biological systems. CO-3 Students

will be able to understand the principles and applications of voltammetry. CO-4 Students will be able to understand the types of

electro organic reaction and their applications in sewage water treatment. CO-5 Students will be able to understand controlled current techniques.

**MCH 034A: PHYSICAL ELECTIVE III : CHEMICAL KINETICS-II**

UNIT 1	Micelles catalysis and inhibition
UNIT 2	Radiation Chemistry
UNIT 3	Induced Phenomenon
UNIT 4	Electron Transfer Reaction in Metal Complexes
UNIT 5	Electron Transfer Reaction in Metal Complexes

**Course Outcome:** After the completion of this course

CO-1 Students will be able to understand the kinetics and mechanism of micelle catalyzed reactions

CO-2 Students will be able to understand the radiation chemistry and photochemistry. Kinetics and mechanism of photochemical and photosensitized reactions, electron transfer reactions.

CO-3 Students will be able to understand the kinetics and mechanism of induced reactions.

CO-4 Students will be able to understand the electron transfer reactions in metal complexes.

CO-5 Students will be able to understand bridged outer-sphere electron transfer mechanism, Nucleophilic and electrophilic catalyst and their mode of action.

**Mapping of COs and POs**

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10

CO4	3	3		3	2	1	1		1	3
CO5	3	3		3	2	1	1		1	3

**Minor Project: MCH 036A**

**Course Outcome:**

Students will be able to

CO-1 search and Identify the relevant problems or topics of research in the field of Chemistry

CO-2 understand the mechanism and process of data collection, experimentation and analysis.

CO-3 correlate and analyze a current topic for innovation and for the benefits of society at large.

CO-4 understand the ethics of research, plagiarism, copyrights etc.

CO-5 develop an ability to present and defend their research work to a panel of experts.
